- Restore our Ocean and Waters by 2030;
- A Soil Deal for Europe: 100 living labs and lighthouses to lead the transition towards healthy soils by 2030.

For each EU Mission, detailed Mission Implementation Plans were drafted, using the Mission criteria of the Horizon Europe legal base as starting point.

The five EU Missions focus on systemic societal transformation, requiring inclusivity, co-design, scaling up, deployment and societal involvement in generating solutions for major societal challenges driven by EU policy considerations. The five EU Missions work by setting clear, measurable, and time-bound targets, thus focusing and integrating actions towards common goals. These actions are clearly presented in the HE Work Programmes 2021-2022 and 2023-2024.

Building on the previous HE Work Programmes, the EU Missions continue to help deliver key EU policy priorities such as the European Green Deal, Europe's Beating Cancer Plan, NextGenerationEU, the EU Industrial Strategy and A Europe fit for the Digital Age, amongst others.

The Missions Work Programme 2025 part contains actions for all the five EU Missions as well as further actions to support the full implementation of EU Missions according to their implementation plans, including synergistic actions between the Missions and other Horizon Europe instruments. The work programme includes activities for the Mission Boards,

¹ Regulation (EU) 2021/695

² COM(2021) 609 final

monitoring, portfolio and an OECD action for evidence-based policy making. Furthermore, the EU Missions Work Programme 2025 is also focusing on the challenges highlighted in the 2023 Commission Communication³ and includes notably public awareness and governance actions as well as actions, which help to leverage other sources of funding.

Furthermore, the five EU Missions will need to be implemented in close synergy with funding, programmes and strategies both at Member State / Associated Country and regional level, as well as with civil society and the private sector.

Please note that legal entities established in China are not eligible to participate in Innovation Actions in any capacity. More details are found in the Annex B of the General Annexes of this Work Programme.

Calls for proposals

Call - Supporting the implementation of the Adaptation to Climate Change Mission

HORIZON-MISS-2025-01

Overview of this call⁴

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ⁵	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025 Deadline(s): 24 Sep 2025				
Adaptation to Climate Change: Supporting the implementation of the EU Mission Adaptation to Climate Change				
HORIZON-MISS-2025-01-CLIMA-01: Supporting regions and local authorities in assessing climate risks	RIA	17.65	Around 17.65	1
HORIZON-MISS-2025-01-CLIMA-02: Supporting regional and local authorities in developing their Action Plans towards climate resilience	RIA	25.00	Around 25.00	1
HORIZON-MISS-2025-01-CLIMA-03: Demonstrating solutions to help hotspots in coastal regions to adapt to climate change	IA	30.00	Around 10.00	3
HORIZON-MISS-2025-01-CLIMA-04: Testing and demonstrating innovative solutions	IA	30.00	Around 10.00	3

⁴ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

⁵ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Horizon Europe - Work Programme 2025
Missions

to improve resilience to extreme heat, including addressing health impacts				
HORIZON-MISS-2025-01-CLIMA-05: Better understanding incentives for private sector financing of adaptation solutions	RIA	6.00	Around 3.00	2
HORIZON-MISS-2025-01-CLIMA-06: Pre-commercial procurement of breakthrough solutions for climate proofing of public buildings	PCP	5.00	Around 5.00	1
Overall indicative budget		113.65		

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Supporting the implementation of the Cancer Mission

HORIZON-MISS-2025-02

Overview of this call⁶

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ⁷	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025 Deadline(s): 16 Sep 2025				
Cancer: Supporting the implementation of the Cancer Mission				
HORIZON-MISS-2025-02-CANCER-01: Sustained collaboration of national and regional cancer funders to support the Cancer Mission through translational research	CSA	5.00	Around 5.00	1
HORIZON-MISS-2025-02-CANCER-02: Understanding the effects of environmental exposure on the risk of paediatric, adolescent and young adult cancers	RIA	30.45	6.00 to 7.00	5
HORIZON-MISS-2025-02-CANCER-03: Innovative surgery as the cornerstone of affordable multi-modal therapeutic interventions benefitting cancer patients with locally advanced or metastatic disease	RIA	31.00	7.00 to 10.00	4
HORIZON-MISS-2025-02-CANCER-04: Investigator-initiated multinational early-stage innovative clinical trials for paediatric cancer	RIA	25.00	6.00 to 8.00	4
HORIZON-MISS-2025-02-CANCER-05: Pragmatic clinical trials to enhance the quality of life of older cancer patients (65 years and	RIA	15.00	3.00 to 5.00	4

⁶ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

⁷ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

EU Missions

Adaptation to Climate Change: Supporting the implementation of the EU Mission Adaptation to Climate Change

Political context

In February 2021, the European Commission adopted an [EU Strategy on Adaptation to Climate Change](#) that sets out how the EU can adapt to the unavoidable impacts of climate change and become climate resilient by 2050. Pushing further on the belief that we must adjust now to tomorrow's climate, the EU has launched, in the same year, the [EU Mission on Adaptation to Climate Change](#) to support at least 150 regions and local authorities to become climate-resilient by 2030.

Since the start of the Mission, the European Commission confirmed its strategic importance and the strength of its approach to accelerate the transformation to a climate-resilient Europe²². It has also acknowledged that the Mission can serve as a best practice for all interested parties, and that it will be further leveraged²³.

In March 2024, the [European Climate Risk Assessment \(EUCRA\)](#), published by the European Environment Agency, has further stressed the need to ramp up adaptation efforts in Europe. The importance of stepping up preparedness and adaptation is also well reflected in the Political Guidelines for the next European Commission²⁴ which call the European Commission to develop a European Climate Adaptation Plan in the coming years.

In this context, the Mission appears to be the perfect vehicle to support climate adaptation at the regional and local levels and to develop and facilitate the take-up of ready-to-use knowledge and tools for climate action.

A regional approach

Regional and local authorities are the end-users of the Mission. By signing the Mission Charter, more than [300 regional and local authorities](#) have committed to working together to transition faster to a climate resilient Europe.

Some regional and local authorities in Europe are well prepared to climate change, others are striving for solutions to address their climate risks. The Mission aims to support as a priority less developed regional and local authorities that are more vulnerable to climate impacts and have low adaptive capacity. The Mission fosters, by the mean of the [Mission Implementation Platform](#) and its [Community of Practice](#), the sharing of experiences and lessons learnt from others, accompanying regions and local authorities in finding and possibly reapplying solutions adapted to their climatic situation and socio-economic context.

²² see Commission [Communication on the EU Missions](#), adopted in July 2023

²³ see [Commission Communication on Managing Climate Risks – protecting people and prosperity, adopted in March 2024](#)

²⁴ See [POLITICAL GUIDELINES FOR THE NEXT EUROPEAN COMMISSION](#) 2024-2029

In line with Horizon Europe, all the actions supported by this call are open to actors from EU Member States and Horizon Europe Associated Countries. However, regional and local authorities already engaged in the Mission activities (e.g. Charter Signatories, Community of Practice) have already proven their commitment and motivation to work towards the objectives of the mission and, as such, they provide ideal sites where the testing and demonstration of innovative approaches could take place.

Research and innovation

Rooted in research and innovation, the Mission aims to align towards its concrete objectives all relevant actors and stakeholders to deliver tangible solutions and concrete impacts by 2030.

The R&I support is provided in different ways:

1. Further support European regional and local authorities to better understand, prepare for and manage climate risks and opportunities, especially in view the large need demonstrated in the early phase of the Mission;
2. Step up support towards at least 150 regional and local authorities to accelerate their transformation to a climate resilient future, supporting them in the co-creation of innovation pathways and the testing of solutions;
3. Demonstrate systemic transformations to climate resilience contributing to deliver at least 75 large-scale demonstrations of systemic transformations to climate resilience across European regional and local authorities.

To be successful, the Mission needs to mobilise all relevant actors -- research institutes, industry, investors and citizens -- to create real and lasting impact and to accelerate their transformation to become climate resilient. In the spirit of the Mission, all proposals should also adopt a participatory approach that fully considers the local dimension of climate change and entails collaboration and engagement with the local communities that are affected by climate impacts. Therefore, engagement of citizens should be embedded in the design and/or implementation of the Mission's solutions.

Strategic direction for 2025

As laid out in its implementation plan, the Mission has moved from its initial build-up phase, where it put in motion all its different streams of actions and is now in full deployment.

The goal of the 2025 call is to consolidate the building blocks of the mission, address challenges identified²⁵ and increase concrete support to regions and local authorities, to match the oversubscription to the Mission by the Charter signatories and interested parties.

The actions presented in this call are going to:

²⁵ Some of those challenges have been identified the [evaluation of the mission conducted in 2023](#) and are referred to in the [Communication on Missions in July 2023](#)

- Provide support to regional and local authorities for them to understand better their current and future climate risks and to design more robust adaptation plans.
- Test and demonstrate innovative climate adaptation solutions that will be made available for regional and local authorities, especially for those in hotspots regions. This will enlarge the portfolio of solutions already made available by the previous Mission's calls.
- Develop new knowledge on how to unlock investment from the private sector in adaptation solutions.

Finally, in 2025, the Adaptation Mission is also co-financing the [Climate City Capital Hub](#), which is listed under “Specific Grant Agreement to the FPA to reinforce the operations of the Climate-Neutral and Smart Cities Mission Platform” in the Work Programme Part of the Cities Mission. This action will reinforce synergies between the Adaptation and Cities Missions supporting cities in finding financing solutions for both mitigation as well as adaptation projects.

Proposals are invited against the following topic(s):

HORIZON-MISS-2025-01-CLIMA-01: Supporting regions and local authorities in assessing climate risks

Call: Supporting the implementation of the Adaptation to Climate Change Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 17.65 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 17.65 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Admissibility conditions</i>	The conditions are described in General Annex A. The following exceptions apply: The page limit of the application is 70 pages.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries must provide financial support to third parties. The

	<p>support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 200,000²⁶, to allow regional and local authorities to conduct a comprehensive climate risk assessment.</p> <p>Eligible third parties are regional and local authorities in EU Member States and Horizon Europe Associated Countries (and/or other entities acting on their behalf), provided that they did not receive financial support under the CLIMAAX²⁷ project nor the concerned territories were already covered by CLIMAAX.</p>
<i>Other requirement</i>	The multi-risk and multi-sector assessment framework used to conduct the climate risk assessments must be open source.

Expected Outcome: In support of the European Green Deal, the EU Adaptation Strategy, the EU Mission on Adaptation to Climate Change and the [EU Disaster Resilience Goals](#), the successful proposal will accelerate adaptation efforts of regional and local authorities. The project is expected to contribute to **all of** the following outcomes:

- The [regional multi-risk assessment framework](#) and the [supporting toolbox](#) already developed in the context of the Mission are further improved and their use is mainstreamed. As a result, scientific knowledge on climate risk assessments at the regional and local levels is strengthened.
- Regions and local authorities have conducted a comprehensive climate risk assessment and are therefore better equipped to reduce their vulnerability and exposure to climate change and to improve their climate resilience.
- Closer links between climate adaptation and disaster risk management policy actors, communities, scientists and civil society are established.
- Current and future climate risks are communicated more clearly to non-specialist audiences, boosting the buy-in and support for a wide range of actions for climate resilience at the regional and local levels and fighting climate disinformation.

Scope: The first [European Climate Risk Assessment](#) (EUCRA) concluded that Europe is not prepared for rapidly growing climate risks. Assessing climate risks is one the first steps that regional and local authorities need to undertake in the adaptation planning²⁸. This step is key

²⁶ Due to the complex nature of climate impacts, EUR 60,000 - the usual amount maximum amount that can be paid to a third party - is an insufficient amount for a regional or local authority to conduct a comprehensive climate risk assessment. Instead, and based on previous experience and review of the market for this type of study, it is considered that EUR 200,000 is more appropriate to cover various costs such as, data collection and analysis, expert and labor cost and stakeholder engagement and communication. This is especially true for bigger regions.

²⁷ This information is or will be publicly available on the website of CLIMAAX. For instance, here are the beneficiaries of the first call: <https://www.climaax.eu/first-regions-started-climate-risk-assessment/>

²⁸ See step 2 ‘Step 2 Assessing climate risks and vulnerabilities’ of the [regional adaptation support tool](#)

to provide robust adaptation plans that respond to the needs of the regional and local authorities.

From the [survey](#) conducted by the Mission with its Charter signatories, it emerged clearly that only 66% of the regional and local authorities had already assessed their climate risks and, in some cases, their climate risk assessments require update and further work to increase their robustness. Using these results as proxy for all regional and local authorities, there is an evident need for more robust regional and local climate risk assessments in Europe.

With its call HORIZON-MISS-2021-CLIMA-02-01, the Mission on Adaptation to Climate Change mandated the development of a methodological framework and toolbox for climate risk assessments at the regional and local levels and to provide direct support to regional and local authorities to use those tools. This topic aims to build upon the achievements of the project [CLIMAAX](#), funded HORIZON-MISS-2021-CLIMA-02-01 :

1) by consolidating and further mainstreaming its regional climate risk assessment [framework](#) and supporting [toolbox](#) (1st objective thereafter)

2) by supporting additional regional and local authorities (not supported by CLIMAAX) to conduct regional climate risk assessments and to develop or revise community-based emergency and risk management plans (2nd objective thereafter).

Both objectives detailed below should be addressed by the proposals. By doing so, this topic directly contributes to the follow-up of the [Commission Communication on managing climate risks](#), where, in its response to EUCRA, the European Commission committed to improving tools that support regions and local authorities better prepare for climate risks.

1st objective- Consolidating and further mainstreaming the framework and toolbox for climate risk assessments.

Further developments of the framework and toolbox for regional climate risk assessment should keep their initial requirements, namely:

- The improved toolbox and framework should be for multi-risk and multi-sector and include exposure and vulnerability.
- The improved toolbox should be broadly applicable in EU Member States (including Outermost Regions) and Associated Countries of Horizon Europe.
- The improved toolbox and related IT tools should be made open source, free and open licensed.

Further refinements of the methodological framework and supporting toolbox should aim to address emerging knowledge and data gaps and could reflect but are not limited to the following elements:

- Incorporating tailored ‘responses’ as a key part of the risk framework, as introduced in the [sixth assessment report](#) of the Intergovernmental Panel on Climate Change;

- Considering, cascading and compounding risks and/or risks from other crises such as biodiversity loss and pollution;
- Accounting for the dynamic nature of climate risk that changes with time;
- Exploring how to translate future scenarios, designed at the global scale, into local risks;
- Incorporating supporting tools for regional climate risk management planning to effectively use the results of the climate risk assessments as basis for community-based emergency and risk management plans.
- Exploring ways to integrate the developments for multi-risk by previous and ongoing Horizon 2020 and Horizon Europe projects²⁹

Those refinements to the framework and supporting toolbox should be co-designed and co-produced with regional/local authorities and practitioners from several EU Member States/Associated Countries, to ensure that their needs and constraints are addressed in a practical way. The improved framework and associated toolbox should benefit from a built-in mechanism for continuous feedback and iterative improvements, ensuring that the tools and assessments remain relevant as climate science and policy evolve.

The consolidated version of the toolbox should strive to include newly produced datasets, in particular those coming from other EU programmes and initiatives such as Copernicus and Destination Earth or from EURO-CORDEX. Exploiting digital technologies such as artificial intelligence (AI) in the tool to better quantify and assess climate risks is encouraged. Proposals are also encouraged to consider -- where relevant -- the services offered by European research infrastructures³⁰ as well as related projects such as [IRISCC](#).

An effective, timely and targeted communication of climate risks is key to drive climate action. The proposals should dedicate efforts to make the improved toolbox and its results more accessible and understandable by non-experts and to combat climate disinformation. This toolbox should include a simple Graphical User Interface to facilitate the dissemination of risk information across the European Union and Associated countries. These efforts to increase accessibility should occur in parallel to the developments of the toolbox for more advanced/expert users.

2nd objective- Using the improved framework and toolbox to support regional and local authorities in assessing their climate risks, as a basis for development or revision of local adaptation, risk management, disaster prevention plans (cascade funding).

The proposals must provide financial support to third parties in the form of grants to allow **at least 50 regional and local authorities** to conduct a comprehensive climate risk assessment.

²⁹ This includes but is not limited to [MYRIAD-EU](#) projects funded under the topics [HORIZON-MISS-2021-CLIMA-02-03](#) , [HORIZON-CL3-2021-DRS-01-02](#), [HORIZON-CL5-2022-D1-01-02-two-stage](#) and [HORIZON-CL3-2021-DRS-01-03](#), [GOBEYOND](#), [ANYWHERE](#), [C2IMPRESS](#)

³⁰ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

The grants for third parties should be used for conducting comprehensive climate risk assessments or refining existing ones, using the framework and toolbox developed under the 1st objective of this topic.

Eligible third parties are regional and local authorities in EU Member States and Horizon Europe Associated Countries (and/or other entities acting on their behalf), provided that they did not receive financial support under the CLIMAAX³¹ project nor the concerned territories were already covered by CLIMAAX.

At least 60% of the total amount of the EU requested contribution should be for financial support to third parties. Preferably, the (first) cascade call should be launched in the first 12 months of the project.

Proposals must describe how they intend to provide financial support to third parties, in accordance with the FSTP Annex provided with the application form. They should also specifically take account of provisions on ‘financial support to third parties’ set out in General Annex B and incorporate them into the proposal. While remaining as simple as possible, proposals should specifically consider elements within the FSTP scheme to address geographical balance and inclusivity/equity.

To this purpose, learning from the experience of projects with financial support to third parties/cascading funding could be considered: on top of consulting publicly available information on lessons learnt, the project retained for granting is expected to hold dedicated exchanges with the projects CLIMAAX, Pathways2Resilience and the Mission Secretariat during the preparation of the cascade funding call.

Moreover, the project should collaborate with the Mission National Hubs³² also in view of facilitating good practice sharing and replicability at National level.

General considerations

During its duration, the project should include an open support line or helpdesk to assist European regional and local authorities that are not financially supported by the project (2nd objective) but are nevertheless interested in using the toolbox to assess their climate risks.

The project is expected to identify and support ways by which the framework and toolbox may be applied more widely, including by the disaster risk management community (e.g. emergency responders, national civil protection agencies, disaster risk planners, Union [Civil Protection Knowledge Network](#)). To this end, the awarded project should collaborate with the Mission National Adaptation Hubs³³ to share best practices from regional and local authorities receiving the third-party grants and foster replicability at the national level. These could entail co-design, co-production, stakeholder involvement or similar activities so that the results of the project are beneficial for the mentioned policymakers or operational/rescue bodies.

³¹ This information is or will be publicly available on the website of CLIMAAX. For instance, here are the beneficiaries of the first call: <https://www.climaax.eu/first-regions-started-climate-risk-assessment/>

³² Established under topic HORIZON-MISS-2024-CLIMA-01-02

³³ Established by the project funded under topic HORIZON-MISS-2024-CLIMA-01-02

The proposals should explore ways to harvest the data generated as part of the project to increase the resolution and quality of European-wide climate risk datasets, assessments and responses. The assessments conducted under the project should be made available for any future reference and use through the Joint Research Centre's Risk Data Hub³⁴, the recognized Hub of climate risk knowledge as indicated by the EU Adaptation Strategy.

As an important contributor to the Adaptation Mission, the project awarded should cooperate with the Mission Implementation Platform³⁵, including (but not limited to) actively inform and engage with the regions and local authorities already involved in the Mission (e.g. Charter Signatories, Community of Practice), as those have shown their commitment to accelerate action on climate resilience. The project is also expected to contribute to the monitoring of the Mission and proposals are encouraged to link up their monitoring to the framework developed by the project stemming from HORIZON-MISS-2024-CLIMA-01-03 and dedicate appropriate resources to this task.

Finally, operational links and collaboration should be established with the [Climate-ADAPT platform](#); the relevant projects from the Mission³⁶; or other parts of Horizon Europe such as clusters 3 and 5 or other relevant EU programmes such as [LIFE](#) or the [Technical Support Instrument](#).

Applicants should acknowledge these requests and already account for them in their proposal, making adequate provisions in terms of resources and budget to engage and collaborate with the Mission.

HORIZON-MISS-2025-01-CLIMA-02: Supporting regional and local authorities in developing their Action Plans towards climate resilience

Call: Supporting the implementation of the Adaptation to Climate Change Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 25.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 25.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Admissibility conditions</i>	The conditions are described in General Annex A. The following exceptions apply:

³⁴ <https://drmkc.jrc.ec.europa.eu/risk-data-hub#/>

³⁵ Currently managed by MIP4Adapt under the contract CINEA/2022/OP/0013/SI2.884597 funded by the European Union. [About MIP4Adapt \(europa.eu\)](#)

³⁶ e.g. the projects from topics [HORIZON-MISS-2021-CLIMA-02-03](#), HORIZON-MISS-2025-01-CLIMA-02

	The page limit of the application is 70 pages.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries must provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 250,000³⁷, to allow regional and local authorities to develop their action plans that address the locally relevant climate risks.</p> <p>Eligible third parties are regional and local authorities in EU Member States and Horizon Europe Associated Countries (and/or other entities acting on their behalf), provided that they did not receive financial support under the Pathways2Resilience³⁸ project nor the concerned territories were already covered by Pathways2Resilience.</p>

Expected Outcome: In support of the European Green Deal, the Adaptation Strategy and the EU Mission on Adaptation to climate change, the successful proposal will accelerate adaptation efforts of regional and local authorities.

The project is expected to contribute to **all of** the following outcomes:

- Each Action Plan that regional and local authorities have developed sets in motion the implementation of a concrete list of actions to advance towards climate resilience.
- The implementation of the developed Action Plans is ensured thanks to the fact that each Action Plan includes a tailored analysis (or options list) of how the costs of each action can be addressed.
- The relevant government departments, citizens, academia, social partners, the private sector and other stakeholders are mobilised to contribute to local climate adaptation.

Scope: This topic relates to the Mission's first and second objectives³⁹ and aims to have **at least 70 regional and local authorities that will have formulated their climate adaptation Action Plans.**

³⁷ EUR 60,000 - the usual amount maximum amount that can be paid to a third party - is insufficient for a region or a local authority to develop action plans that fully address the complex nature of climate risks. Instead, and based on previous experience and review of the market for this type of work, it is considered that EUR 250,000 is more appropriate to cover various costs such as extensive stakeholder engagement and analysis, cost analysis and prioritization, monitoring activities. This is especially true for bigger regions.

³⁸ This information is or will be publicly available on the website of Pathways2Resilience. For instance, here are the beneficiaries of the first call: <https://www.pathways2resilience.eu/40-regions-unite-to-build-climate-resilience-for-53-million-europeans/>

³⁹ Specific objective 1: Preparing and planning for climate resilience; Specific objective 2: Accelerating transformations to climate resilience. Link to the Mission Implementation Plan: https://research-and-innovation.ec.europa.eu/system/files/2021-09/climat_mission_implementation_plan_final_for_publication.pdf

As described by the first European Climate Risk assessment and addressed by the Commission's [Communication on Managing Climate Risks](#), asymmetrical exposure to climate impacts exacerbates the already existing disparities between regions in terms of need for climate adaptation, risk prevention and preparedness.

This action supports the very heart of Mission Adaptation: since climate impacts and adaptive capacities differ greatly across regions, tailor-made responses and measures, at the regional or local levels, are required for positive and just transitions towards climate resilience. This action will provide the necessary tailored knowledge, expertise, and services to support regions and local authorities in the formulation of such Action Plans, as well as preparing the ground for the swift implementation needed to accelerate the transition.

Description of the Action Plans

The Action Plans should include:

- The analysis of different possible future scenarios and probabilities of impacts, including different solutions and innovations for relevant sectors, that are robust and cost-effective across these possible futures.
- A set of concrete actions to be implemented at the regional/local level (identifying the regional/local actors in charge of their implementation), including innovation activities and their quantified effects wherever possible.
- A timeline of implementation, including possible intermediate milestones.
- An indication of the expected costs for the region/local authority related to each action put forward by the Action Plan and for the entire Plan, and the estimated avoided losses.
- An analysis on how such costs can be addressed in particular by leveraging additional funding at regional, national, European levels⁴⁰ (including via private funding sources) and -where appropriate- other relevant non-financial considerations to facilitate implementation.
- A framework to monitor the implementation of the actions, based on the common framework developed by the project while facilitating synergies between such framework and the one created to monitor the implementation of Mission Adaptation.

The Action Plans should also include innovative solutions developed and tested in the context of Mission Adaptation, in view of enabling further replication: to do so, collaboration with the project stemming from HORIZON-MISS-2024-CLIMA-01-01 will be key.

While remaining fully centred around climate adaptation, the Action Plans – where appropriate and depending on the regional/local needs – are encouraged to address the nexus mitigation/adaptation by looking at co-benefits, including the interlinkage with other crisis

⁴⁰ Such as the CAP, Horizon Europe, LIFE, ERDF and Cohesion Fund, ESF+, Digital Europe Programme, Technical Support Instrument, InvestEU, Just Transition Fund, Erasmus+ programme.

(pollution and biodiversity loss). To avoid maladaptive practice, regions and local authorities are encouraged to conduct ex-ante evaluation of the actions planned.

The Action Plans should take into account the findings of the European Environment Agency's [European Climate Risk Assessment Report](#), as well as the information, outcomes and priorities identified in the national climate change adaptation strategies and in other relevant programmes or legal frameworks⁴¹.

The Action Plans should also include considerations on their social impacts and ways to overcome them, including by considering the 2030 Agenda for Sustainable Development.

To do so, the process of developing the Action Plans should be inclusive and participatory, engaging all relevant stakeholders, including public authorities from different levels of government, private sector, universities, civil society, social partners, and in particular citizens and vulnerable groups.

Financial support to third parties

Regional and local authorities will lead the development of their respective Action Plans.

Proposals should develop a common framework of intervention, setting-up the blueprint for the modular Action Plans that will need to be subsequently tailored to each beneficiary's context. Such general framework should also include the analysis of the possible additional sources of income that can be further leveraged in individual Action Plans.

The proposals must provide **financial support to third parties** in the form of grants to **allow at least 70 regional and local authorities** to develop their Action Plans to address the locally relevant climate risks.

Eligible third parties are regional and local authorities in EU Member States and Horizon Europe Associated Countries (and/or other entities acting on their behalf), provided that they did not receive financial support under the Pathways2Resilience⁴² project nor the concerned territories were already covered by Pathways2Resilience.

At least 70% of the total amount of the EU requested contribution should be for financial support to third parties. The (first) cascade call should be launched in the first 12 months of the project.

Proposals must describe how they intend to provide financial support to third parties, in accordance with the FSTP Annex provided with the application form. They should also

⁴¹ Such as the information provided by the European Climate and Health Observatory, the Copernicus Climate Change Service (C3S) National Collaboration Programme, as well as the outcomes and priorities of regional smart specialisation strategies established under Cohesion Policy, the Common Agricultural Policy, the Common Fisheries Policy, and the revised TEN-T Regulation (to be published). Moreover, the body of environmental law under the European Green Deal should be considered (including but not limited to the Nature Restoration Law under the Biodiversity Strategy).

⁴² This information is or will be publicly available on the website of Pathways2Resilience. For instance, here are the beneficiaries of the first call: <https://www.pathways2resilience.eu/40-regions-unite-to-build-climate-resilience-for-53-million-europeans/>

specifically take account of provisions on ‘financial support to third parties’ set out in General Annex B and incorporate them into the proposal. While remaining as simple as possible, proposals should specifically consider elements within the FSTP scheme to address geographical balance and inclusivity/equity.

To this purpose, learning from the experience of projects with financial support to third parties/cascading funding could be considered: on top of consulting publicly available information on lessons learnt, the project retained for granting is expected to hold dedicated exchanges with the projects CLIMAAX, Pathways2Resilience and the Mission Secretariat during the preparation of the cascade funding call.

Moreover, the project should collaborate with the Mission National Hubs⁴³ also in view of facilitating good practice sharing and replicability at National level.

Proposals & general considerations

Proposals should describe how the consortium would:

- Define and adopt a common framework guiding the assistance to the regional and local authorities.
- Structure and organise the selection of regional and local authorities and their local partner organisations.
- Support the regional and local authorities in the various steps of the process developing their Action Plans.
- Describe how it intends to integrate its work into the Mission and its activities so that knowledge and good practices can inspire others and be further replicated.

In fact, as an important contributor to the Adaptation Mission, the project should closely cooperate with the Mission Implementation Platform⁴⁴, including (but not limited to) actively inform and engage with the regions and local authorities already involved in the Mission (e.g. Charter Signatories, Community of Practice), as those have shown their commitment to accelerate action on climate resilience. The project is also expected to contribute to the monitoring of the Mission and proposals are encouraged to link up their monitoring to the framework developed by the project stemming from HORIZON-MISS-2024-CLIMA-01-03 and dedicate appropriate resources to this task.

Finally, operational links and collaboration should be established with [the Climate-ADAPT platform](#), and the relevant projects from the Mission, other parts of Horizon Europe or other relevant EU programmes⁴⁵ and initiatives⁴⁶.

⁴³ Established under topic HORIZON-MISS-2024-CLIMA-01-02

⁴⁵ Such as Destination Earth.

Applicants should acknowledge these requests and already account for these obligations in their proposal, making adequate provisions in terms of resources and budget to engage and collaborate with the Mission.

HORIZON-MISS-2025-01-CLIMA-03: Demonstrating solutions to help hotspots in coastal regions to adapt to climate change

Call: Supporting the implementation of the Adaptation to Climate Change Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 30.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Demonstration activities must take place in the territory of at least 3 different coastal regional or local authorities, each established in a different Member States or Associated Country.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6 to 8 by the end of the project – see General Annex B.

Expected Outcome: In support of the European Green Deal, the EU Adaptation Strategy and the EU Mission on Adaptation to Climate Change, successful proposals will support adaptation efforts in regional and local authorities located in coastal areas and identified as hotspot to climate change.

Projects results are expected to contribute to **all of** the following expected outcomes:

- Climate resilience solutions to protect citizens and activities in coastal regions have been demonstrated and are made largely available for upscaling. This includes social, governance, nature-based and digital solutions.
- Coastal regions, cities and local authorities (in the projects and beyond) have increased their climate resilience and are better prepared to adapt to climate change.

⁴⁶ For example, the project could look at lessons learnt from the Technical Support Instrument, which could provide support in the implementation of the Action Plans, while ensuring there are no overlaps or double funding.

Scope:

Rationale

As highlighted in the first [European Climate Risk assessment](#) by the European Environment Agency: Southern Europe, low-lying coastal regions (including many densely populated cities) and EU outermost regions are geographical ‘hotspots’ concentrating climate risks with high severity and demanding urgent action. On the other hand, the IPCC sixth assessment report recognised sea level rise as an “existential threat for coastal communities and their heritage, particularly beyond 2100”⁴⁷, also highlighting the urgency for increasing adaptation efforts. This is why **this topic specifically addresses coastal resilience in hotspot regions.**

Solutions sought

Proposals should identify approaches and demonstrate innovative solutions to increase climate resilience in coastal areas. They should explore, in a systemic way, how to best adapt to different pressures -- ranging from sea level rise (e.g., coastal floods, coastal erosion, saltwater intrusion) and invasive species to changing physical and chemical properties of the waters. Proposals should outline how the innovative solutions they put forward avoid maladaptation, consider equity and inclusivity and address long-term climate impacts (i.e. 2100 and beyond).

Nature-based solutions and ecosystem-based adaptation should be explored as a priority, in line with the [Mission Implementation Plan](#) and the [Nature Restoration Law](#) recently adopted. Blue-green infrastructures (as opposed to grey) may represent multipurpose, “no regret” solutions, which simultaneously provide environmental, social and economic benefits and help build climate resilience.

As coastal areas will likely need to undergo significant transformations to become climate-resilient (i.e. transformational adaptation is needed), proposals should integrate stakeholder and citizen engagement. In other words, the solutions put forward in the proposals are expected to be co-designed with regional and local stakeholders and tailored to their needs. To achieve this, the proposals should consider socio-economic impacts (including on vulnerable groups), social acceptability and expected population response to the proposed coastal adaptation measures and solutions. When assessing socio-economic impacts, trade-offs and co-benefits should be considered to ensure coherent and systemic approaches. Thus, this topic requires the effective contribution of social sciences and humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

⁴⁷ See Bednar-Friedl et al, 2022: Europe. In: Climate Change 2022: Impacts, Adaptation and Vulnerability. Contribution of Working Group II to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change
Cambridge University Press, Cambridge, UK and New York, NY, USA, pp. 1817–1927, doi:10.1017/9781009325844.015.

Looking into the potential of digital solutions for adaptation could be part of the proposals and would support the digital transition. This includes connecting climate adaptation measures to early-warning systems to limit the effects of extreme-weather events in near-real time.

Demonstration sites and related activities

The Mission encourages collaborations between coastal regional and local authorities facing similar challenges and considers this to be a very efficient approach to secure a large impact.

Proposal should address **all** the following aspects:

- Demonstration activities must take place in the territory of at least **3 different coastal regional or local authorities**, each established in a different Member States or Associated Country, with the involvement of these regional or local authorities (preferably participating in the consortium as a beneficiary or associated partner).
- The territory of **at least one** of those 3 demonstration activities **should be located in a “EUCRA hotspot area” -- i.e. Southern Europe⁴⁸, low-lying coastal area⁴⁹, or EU Member State outermost regions.**
- The proposals should already identify at least **3 “replicating” coastal regional or local authorities from 3 different Member States or Associated Countries**, interested in reapplying the lessons learnt (totally, partially or with the required adjustments) in their territories. For the replication, the consortium could include one or more partners that would provide support for the technical exchanges and the knowledge uptake in the “replicating” regions or local authorities. Replicating regions are not expected to conduct a demonstration or carry out on the ground activities already in the course of the project. However, replicating regions should at least prepare the theoretical framework for replicating the successful solutions (through exchanges with the demonstration regions), and explore means to fund the implementation of those solutions.

Links to the Mission and to other projects and initiatives

Proposals should build (when relevant) on existing knowledge and adaptation solutions, developed by previous projects and explore synergies with ongoing projects funded by EU and national programmes. The most relevant EU programmes and initiatives include Horizon 2020, Horizon Europe⁵⁰, Interreg, LIFE, and Copernicus⁵¹ and the EU Mission Restore our Oceans and Waters. Additionally, if any part of the proposal involves assessing climate risks,

⁴⁸ See [EUCRA’s definition](#) of Southern Europe

⁴⁹ Following the [IPCC](#), low elevation coastal zones are defined as ‘coastal areas below 10 m of elevation above sea level that are hydrologically connected to the sea.’

⁵⁰ Projects that could be particularly relevant include [R4C](#), [RESIST](#), [NBRACER](#), [TransformAr](#), [CLIMAREST](#), the Adapt4Coast cluster - [SCORE](#), [CoCliCo](#), [PROTECT](#), [REST-COAST](#), other [nature-based solutions projects](#), and projects funded under the topics HORIZON-CL6-2025-02-COMMUNITIES-03, HORIZON-MISS-2025-03-OCEAN-04, HORIZON-MISS-2025-03-OCEAN-05, HORIZON-MISS-2025-03-OCEAN-06.

⁵¹ Within the Copernicus Programme, particularly relevant to the proposals are the Copernicus [Marine Service](#) and [Coastal Thematic Hub](#).

then the risk assessment module should be fully compatible with the developments of the [CLIMAAX framework](#) (and, if applicable, its possible updates under topic ‘HORIZON-MISS-2025-01-CLIMA-01’).

Synergies with other funding sources (EU and national) should be sought to support the transfer of knowledge and innovative solutions to other regional and local authorities. This ranges from identifying opportunities to scaling up the solutions demonstrated and fostering their broad deployment across Europe. These funding sources could be public, private or a mix of both. Relevant public funding includes the LIFE programme, and its integrated projects in particular, the European Regional Development and European Maritime, Fisheries and Aquaculture Funds.

Proposals should include a mechanism and the resources to establish operational links and collaboration with the Mission Implementation Platform⁵², and other relevant knowledge platforms such as [Climate-ADAPT](#). Projects funded under this topic will get direct access to and will be expected to participate in the exchanges of the Mission’s Community of Practice, to the networking activities supported by the Mission Implementation Platform, and to share relevant knowledge to feed the work of the project stemming from HORIZON-MISS-2024-CLIMA-01-01. These networking and joint activities could, for example, involve the participation in joint workshops, the exchange of knowledge, the development and adoption of best practices, or joint communication activities.

In addition, projects will be requested to feed their results and contribute to the monitoring in place under the leadership of the Mission Implementation Platform on the progress towards the objectives of the Mission and provide information and data to contribute to the visualisation of the Mission progress in Europe. To that end, proposals are encouraged to (dedicate resources to) link up their monitoring to the framework developed by the project stemming from HORIZON-MISS-2024-CLIMA-01-03.

Applicants should acknowledge these requests and already account for them in their proposal, making adequate provisions in terms of resources and budget to engage and collaborate with the Mission.

HORIZON-MISS-2025-01-CLIMA-04: Testing and demonstrating innovative solutions to improve resilience to extreme heat, including addressing health impacts

Call: Supporting the implementation of the Adaptation to Climate Change Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

Missions

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 30.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Demonstration activities must take place in the territory of at least 3 different regional or local authorities, each established in a different Member States or Associated Country.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6 to 8 by the end of the project – see General Annex B.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).⁵³.</p>

Expected Outcome: In support of the European Green Deal, the EU Adaptation Strategy, the EU Mission on Adaptation to Climate Change and the EU Disaster Resilience Goals, project results are expected to improve adaptative capacities of European regional and local authorities to extreme heat and reduce the impacts on human health and well-being.

Projects results are expected to contribute to **all of** the following expected outcomes:

- Regional and local authorities are better prepared to withstand the impacts of extreme heat, therefore protecting their citizens (in particular, vulnerable groups), their health and well-being.
- Regional and local authorities are taking a leading role and actively involved in the development and testing of innovative solutions to deal with extreme heat.
- Regional and local authorities are actively exploring funding opportunities beyond Horizon Europe for the deployment of adaptation measures.

⁵³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Scope:

Rationale

With more frequent and intense heatwaves, extreme heat is the deadliest manifestation of climate change in Europe. It is estimated that, in the summer of 2022, heat was responsible for 60,000-70,000 premature deaths in Europe.

In fact, the [European Climate Risk Assessment](#) identifies heat as the largest and most urgent climate hazard for human health. Heat risks to the general population are already at critical levels in Southern Europe. More and urgent action is needed to reduce health risks, both from heat indoors and outdoors.

Extreme heat does not strike all the locations and all the population groups in the same way. For instance, Southern and Western-Central Europe and urban areas are more exposed to heatwaves. Areas away from the sea are also more exposed, as they are lacking any mitigation effect from the water. Similarly, extreme heat does not affect all groups in a specific location equally and this needs to be considered in the adaptation policies. Extreme heat is especially impacting the most vulnerable people due to a range of socio-economic and physiological factors, such as income (less capacity to invest in heat mitigating solutions), social exclusion, gender, age, disability, health conditions. As many vulnerable people spend a large part of their time indoors, ensuring heat resistant housing becomes of even more critical importance.

The goal of this topic is to accelerate the implementation of solutions that increase resilience to extreme heat and protect the health and well-being of the citizens, particularly in the built environment.

Solutions sought

Proposals should test and demonstrate effective solutions against the effects of extreme heat in the territories of regional / local authorities by addressing **all of** the following areas:

- Develop, demonstrate and evaluate **systemic** measures to **reduce and manage heat stresses in public and private spaces and in the built environment** also while avoiding maladaptation. This could include, but is not limited to, renovating/improving the design of buildings, redesigning the public spaces and/or implementing nature-based solutions (in line with the Nature Restoration Law).
- Develop and demonstrate **ready-to-go actions** for emergency services, public transport and utilities (water and energy) in case of extreme heat events, as well as support disaster preparedness and prevention planning (e.g., civil protection agencies).
- Explore and evaluate options for **innovative funding schemes** to implement the proposed heat resilience solutions for regions/local authorities, which are all operating in different contexts (e.g. jurisdiction, governance and local stakeholders).

Associated challenges, such as institutional and political bottlenecks, multi-level governance challenges, and the politics and justice dimensions of implementing innovative solutions all

fall within the remit of this topic. As a result, this topic requires the effective contribution of Social Sciences and Humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

For the successful implementation of the solutions and to ensure their sustainability beyond the duration of the project, the development and testing of the proposed solutions should be embedded, as much as possible in the adaptation planning of the regional or local authority participating in the project and/or in national plans.

Demonstration sites and related activities

The Mission encourages collaborations between regional and local authorities facing similar challenges and considers this to be a very efficient approach to secure a large impact. Therefore, the demonstration activities of the proposals:

- Must take place in the territory of **at least 3 different regional or local authorities**, each established in a different Member States or Associated Country, with the involvement of these regional or local authorities (preferably participating in the consortium as a beneficiary or associated partner).
- Should already identify at least **3 “replicating” regional or local authorities from 3 different Member States or Associated Countries**, interested in reapplying the lessons learnt (totally, partially or with the required adjustments) in their territories. For the replication, the consortium could include one or more partners that would provide support for the technical exchanges and the knowledge uptake in the “replicating” regions or local authorities. Replicating regions are not expected to conduct a demonstration or carry out on the ground activities already in the course of the project. However, replicating regions should at least prepare the theoretical framework for replicating the successful solutions (through exchanges with the demonstration regions), and explore means to fund the implementation of those solutions.

Links to the Mission and to other projects and initiatives

Proposals should build (when relevant) on existing knowledge and adaptation solutions developed by previous projects and explore synergies with ongoing projects funded by EU and national programmes. The most relevant EU programmes and initiatives include Horizon 2020, Horizon Europe⁵⁴, Interreg, LIFE programmes, the EU Mission Climate-Neutral and Smart Cities, Copernicus, Destination Earth and the New European Bauhaus.

Synergies with other funding sources (EU and national) should be sought, to support common approach towards climate adaptation, carbon neutrality, sustainability, transfer of knowledge and innovative solutions. This will also allow to identify opportunities to scale up the solutions demonstrated and to foster their broad deployment across Europe through other

⁵⁴ This includes but is not limited to projects funded by under the following topics [LC-GD-9-2-2020](#); [HORIZON-MISS-2023-CLIMA-01-03](#); [HORIZON-MISS-2024-CLIMA-01-08](#); [HORIZON-CL3-2024-DRS-01-03](#)

programmes such as the LIFE programme, and its integrated projects in particular, the Social Climate Fund, the European Regional Development Fund or the Just Transition Fund.

Proposals should include a mechanism and the resources to establish operational links and collaboration with the Mission Implementation Platform⁵⁵, and other relevant knowledge platforms such as [Climate-ADAPT](#), the [European Climate and Health Observatory](#) and the [Copernicus Health Hub](#). Projects funded under this topic will get direct access and will be expected to participate in the exchanges of the Mission Community of Practice, to the networking activities supported by the Mission Implementation Platform, and to share relevant knowledge to feed the work of the project stemming from HORIZON-MISS-2024-CLIMA-01-01. These networking and joint activities could, for example, involve the participation in joint workshops, the exchange of knowledge, the development and adoption of best practices, or joint communication activities.

In addition, projects will be requested to feed their results and contribute to the monitoring in place under the leadership of the Mission Implementation Platform on the progress towards the objectives of the Mission and provide information and data to contribute to the visualisation of the Mission progress in Europe. To that end, proposals are encouraged to (dedicate resources to) link up their monitoring to the framework developed by the project stemming from HORIZON-MISS-2024-CLIMA-01-03.

Applicants should acknowledge these requests and already account for them in their proposal, making adequate provisions in terms of resources and budget to engage and collaborate with the Mission.

HORIZON-MISS-2025-01-CLIMA-05: Better understanding incentives for private sector financing of adaptation solutions

Call: Supporting the implementation of the Adaptation to Climate Change Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the

⁵⁵ Currently managed by MIP4Adapt under the contract CINEA/2022/OP/0013/SI2.884597 funded by the European Union. [About MIP4Adapt \(europa.eu\)](#)

	Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ⁵⁶ .
--	--

Expected Outcome: In support of the European Green Deal, the Adaptation Strategy and the EU Mission on Adaptation to Climate Change, project results are expected to pioneer ways to mobilise the private sector to finance adaptation solutions.

Project results are expected to contribute to **all of** the following expected outcomes:

- The private sector (in the broadest sense, including the business or financial sector, private investors, those that have available corporate social responsibility budget to invest, etc) is increasingly financing adaptation solutions. This can be for instance thanks to increased and improved range of investment concepts, financing mechanisms and/or business models.
- The private sector engagement with the Adaptation Mission is stepped up, from a few businesses having signed the Mission Charter as Mission's friends to businesses and the financial sector taking an active role in accelerating climate adaptation, including feeding knowledge to the Mission Community of Practice on best approaches.

Scope: Financing was highlighted by 93% of the Mission Charter signatories as the biggest challenge their region or local authority face⁵⁷. This was not unexpected and financing for adaptation is also one of the key enabling conditions identified by the [Mission Implementation Plan](#).

Adapting to the impacts of climate change requires mobilising significant resources, which can only be achieved by mobilising private and public funding alike. So far, the private sector involvement in financing implementation of adaptation measures and solutions has been quite limited. At this stage, climate adaptation generally relies to a large extent on some kind of public support.

As the impacts of climate change are expected to trigger significant economic losses and damages, which will affect the private sector in terms of increased financial strains and considerable risk (short-term and long-term), it is imperative that the private sector, including the financial sector, are part of the mind shift into acting for and funding climate preparedness. In this, the private sector needs to invest much more actively in climate adaptation efforts. This new mindset should include rethinking and redefining risk and

⁵⁶ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

⁵⁷ Analysis of information provided by the signatories of the charter of the Mission Adaptation to Climate Change, [70488a33-37b9-40f6-8b74-daca0f048f47_en \(europa.eu\)](#)

responsibility for adverse effects, considering risk allocation and obligations across public and private actors.

The proposal should identify economic (non-financial) incentives for the private sector to finance adaptation solutions. The proposal should address **all of** the following aspects:

- **Developing calculations and the most appropriate methodologies for calculating the economic rationale** for financing adaptation solutions, aimed at convincing the private sector to finance them. This could include, but is not limited to, the following: (i) calculations of the risks/losses caused by climate change; (ii) calculations of the economic benefits of the adaptation solutions across different time horizons (e.g. with new or retained revenues/contributions that the implementation of the adaptation solution could generate, avoided costs/losses, cost of inaction, lower insurance costs, attribution and monetisation of co-benefits (including social and environmental co-benefits)); and (iii) calculations of the overall cost/benefit.

Ideally, if all benefits are calculated, they can outweigh the costs. Such calculations and economic rationales may need to be different for the different climate risks and key community systems.

- **Identifying how to overcome in innovative ways the main barriers** to the financing of climate adaptation solutions by the private sector (both from the investor and investee point of view) and how to improve the economic rationale and **developing and test innovative ways to economically incentivise (in non-financial ways)** the private sector to finance them. This could include an increased and improved range of investment concepts or strategies, financing mechanisms and/or business models, etc. These innovative ways may need to be different for the different climate risks and key community systems.
- Testing the above by developing minimum 8 case studies, in 3 different Member States / Associated Countries. The case studies should work on adaptation solutions that require financing but have not yet found financing. Each case study should explicitly encompass a calculation of the economic rationale for financing (as per above) and, where in this calculation all benefits taken together do not exceed the cost and hence this is not a sufficient incentive, propose and test innovative ways to economically incentivise (in non-financial ways) the private sector to finance the proposed adaptation solutions. In at least 3 of the cases the adaptation solutions should be nature-based adaptation solutions. It will be considered as a positive element if the case studies cover a variety of climate hazards and key community key community systems identified in the [Mission Implementation Plan](#), namely critical infrastructure, health & well-being, water management, land use & food systems, ecosystems.

To reasonably achieve the expected outcomes, the project consortia should include participation of relevant private sector actors from the business and financial sectors and their commitment to further contribute to the deployment of the solutions identified in the cases

studies or to support the development of the business plan for the climate resilience investments beyond the duration of the project.

Due to its nature, this topic requires the effective contribution of social sciences and humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

In addition to the standard dissemination obligations, the results of this action should be promoted towards the Mission's Community of Practice, to allow broad replication. The format should be adapted to the target audience being the private sector, so presenting the case studies and the lessons learnt in a practical and attractive manner.

Proposals should include a mechanism and the resources to establish operational links and collaboration with the Mission Implementation Platform⁵⁸, and other relevant knowledge platforms such as [Climate-ADAPT](#). Projects funded under this topic will get direct access to and will be expected to participate in the exchanges of the Mission's Community of Practice, to the networking activities supported by the Mission Implementation Platform, and to share relevant knowledge to feed the work of the project stemming from HORIZON-MISS-2024-CLIMA-01-01. These networking and joint activities could, for example, involve the participation in joint workshops, the exchange of knowledge, the development and adoption of best practices, or joint communication activities.

In addition, projects will be requested to feed their results and contribute to the monitoring in place under the leadership of the Mission Implementation Platform on the progress towards the objectives of the Mission and provide information and data to contribute to the visualisation of the Mission progress in Europe.

Applicants should acknowledge these requests and already account for them in their proposal, making adequate provisions in terms of resources and budget to engage and collaborate with the Mission.

Finally, proposals should, also through the Mission Implementation Platform, build on knowledge from and connect to the other relevant projects funded by Horizon Europe⁵⁹, LIFE and Technical Support Instrument (TSI) and other EU and national funding programmes.

HORIZON-MISS-2025-01-CLIMA-06: Pre-commercial procurement of breakthrough solutions for climate proofing of public buildings

Call: Supporting the implementation of the Adaptation to Climate Change Mission
Specific conditions

⁵⁸ Currently managed by MIP4Adapt under the contract CINEA/2022/OP/0013/SI2.884597 funded by the European Union. [About MIP4Adapt \(europa.eu\)](#)

⁵⁹ The projects [CLIMATEFIT](#), [P2R](#), [FARCLIMATE](#), [PIISA](#), [SOTERIA](#), [NATURE DEMO](#), e.g. [BIOFIN](#) and [GoNaturePositive](#) and [EuropaBON](#) and projects funded under HORIZON-MISS-2024-CLIMA-01-06 could particularly relevant

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Pre-commercial Procurement
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The specific conditions for actions with PCP/PPI procurements in section H of the General Annexes apply to grants funded under this topic.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: PCP/PPI procurement costs are eligible.

Expected Outcome: The successful proposal will contribute to the implementation of the EU Mission on Adaptation to Climate Change, allowing local and regional authorities to address their climate risks and accelerate preparedness and resilience to the changing climate.

Proposals are expected to contribute to **all of** the following outcomes:

- Customisation/pre-operationalisation of customer-tailored solutions in the area of climate adaptation of **public buildings**, that respond to the common needs and beyond state-of-the-art performance targets of the buyers group.
- Reduction of fragmentation of demand for innovative solutions by enabling public procurers to collectively implement a Pre-Commercial Procurement (PCP) in the area of climate proofing of buildings, aggregating demand in an area subject to legislation and procedures that, due to its nature, is better/more efficiently addressed jointly, or which they would not have been able to tackle independently.
- New opportunities for wide market uptake and economies of scale for the supply side through the use of joint specifications, wide publication of results and – where relevant – contribution to standardization, regulation or certification to remove barriers for introduction of innovations into the market and creation of new products, processes and/or services ready for market uptake, leading to viable new businesses, jobs and sustainable economic growth.

Scope:

Rationale and background

Buildings are vulnerable to climate change in different ways. For example, climate change can increase their risk of collapse, damage their construction materials, and even threaten their structural integrity. It can also cause significant loss of value because of more storms, snow or subsidence damage, water encroachment, deteriorating indoor climate and reduced building lifetime.

Besides impacting the structural features of a building, climate change can influence the conditions under which people live, work and interact indoors. An inability to properly regulate indoor temperatures may lead to thermal discomfort for users, potentially negatively impacting health, well-being, and productivity. In most places, users need to use heating and cooling systems to cope with thermal discomfort brought about by temperature extremes.

The [EU Strategy on Adaptation to Climate Change](#) includes several actions tackling the climate risk of the built environment, while being mindful of the cross-cutting relevance of buildings within the European climate policy. The Strategy flags the need to improve the preparedness of buildings to climate change. Furthermore, the Strategy is mindful of buildings' role in large-scale adaptation, for instance in curbing the urban heat island effect by means of green roofs and walls, and of the need for more accurate predictions of climate change stresses on the built environment. At the building level, investment policy decisions need to be underpinned with solid climate data - including household-scale decisions on whether to renovate. In terms of buildings' insurance, a key priority of the Strategy is to close the climate protection gap for infrastructure and for the built environment. The water-energy nexus is also crucial, and the building sector can help tackling the related vulnerabilities.

The Strategy, and the Adaptation Mission which is a key implementing vehicle of the Strategy at the local level, gives priority to [nature-based solutions](#) such as green roofs and walls. In buildings, for instance, nature-based solutions can be a sustainable alternative to the sole use of air conditioning for cooling. [Green infrastructure measures](#) (green corridors, green urban areas, trees in cities as well as green roofs and walls) can increase resilience of the built environment particularly when integrated in urban planning and coupled with nature-based solutions. The PCP should look at nature-based solutions as priority; other approaches or combination with those are not excluded, when duly justified.

The 2020 [Renovation Wave Communication](#) explicitly envisaged at doubling renovation rates in the European building stock, ensuring higher energy and resource efficiency. It also pointed to the importance of standards for heating and cooling in buildings, while considering vulnerable people and improving society's readiness towards heatwaves. The revision of the [Green Public Procurement criteria for office buildings](#) has covered climate resilience criteria, based on indicators developed within the new [European framework for sustainable buildings](#).

The [Directive on Energy Performance of Buildings](#) and the [Energy Efficiency Directive](#) provide guidance on how buildings should be taking into account climate related considerations. In addition, the European Commission has also produced [EU-level guidance on the climate resilience of buildings](#) in March 2023.

The EU has been supporting the advancement of knowledge on how to increase the resilience of the built environment regularly, supporting through various research programmes the development of innovative ideas. This is also an area of potential synergies with Mission Cities and the New European Bauhaus initiative.

Supported Activities:

This PCP – i.e. a joint procurement of research and development services - is launched to **reinforce public demand-driven innovation in developing solutions to climate proof public buildings**. PCP has the potential to be an effective demand side action and a useful tool to close the gap between supply and demand for innovative solutions.

The PCP should deliver successful innovative and fully tested product(s) and/or service(s) that meet the common needs of the buyers' group (consortium of procurers) to procure research, develop innovative marketable solutions, speed up the time-to-market and provide best value for money.

This action supports the follow up to the July 2023 Communication⁶⁰ on EU Missions assessment.

Activities should include:

- Preparation of the relevant documentation needed to launch and implement the procurement procedure;
- Joint research activities relating to the customisation/pre-operationalisation of prototypes end-user services in the area of climate change adaptation and mitigation validating the PCP strategy;
- Activities for the follow-up of the joint procurement, such as activities for awareness raising, networking, training, evaluation, validation and dissemination of results.

The core of the consortium should be a qualified “buyers’ group” (public procurement consortium), able to implement the action. Additional partners such as business/SME support organisations, innovation agencies or sectoral organisations may be included to assist procurers in knowing what is available on the market through market consultations. The project is expected to have a maximum estimated duration of 3 years.

The proposal should describe the jointly identified challenge, indicating how it fits into the mid-to-long-term plans of the consortium partners to improve climate resilience in their territories, why solutions currently available on the market or under development are not meeting their needs, and put forward concrete targets for the desired functionality/performance improvement in the quality and efficiency of the required solutions.

⁶⁰ Commission Communication: EU Missions two years on: assessment of progress and way forward [COM\(2023\) 457 final](#) and Commission Staff Working Document: COMMISSION STAFF WORKING DOCUMENT EU Missions two years on: An assessment of progress in shaping the future we want and reporting on the review of Mission Areas and areas for institutionalised partnerships based on Articles 185 and 187 TFEU [SWD\(2023\) 260 final](#)

The proposal should also explain clearly how the creation of jobs, sustainable economic growth and new businesses will be assessed as an integral part of the successful application.

Links to the Mission

Proposals should include a mechanism and the resources to establish operational links and collaboration with the Mission Implementation Platform⁶¹, the Mission's [Community of Practice](#), and other relevant knowledge platforms such as [Climate-ADAPT](#) or Copernicus.

Applicants should acknowledge these requests and already account for them in their proposal, making adequate provisions in terms of resources and budget to engage and collaborate with the Mission.

Adaptation to Climate Change: Other Actions

1. Sustaining the Mission Implementation Platform for the Adaptation to Climate Change Mission

Under this public procurement, the following services are expected to be provided:

- Well-coordinated support to the general operation and activities of the Adaptation to Climate Change Mission, as valid service to the European Commission in the broad range of activities involved with the implementation of the Mission;
- Coordination and facilitation of the Mission Community of Practice, in all its articulations (such as virtual and physical events, thematic working groups etc.), proving engaging involvement and opportunities for exchanges for all involved actors and regions, in relation to the actions they are undertaking in the field of climate resilience building;
- Continuous and ad hoc monitoring and assistance to the European Commission in relation to any Mission evaluation, by maintaining and improving the current monitoring framework, further refining monitoring tools and KPI for the Mission, producing timely reporting on progress.
- Assistance to the Commission with the overall communication on the Mission, through the different relevant channels including the Mission Portal, broadly towards citizens and also specific target audiences, helping to identify and create synergies and add value to communication, dissemination and exploitation activities of individual projects of the Mission's portfolio, and boost scientific, societal and economic impacts.
- Organisation of the annual forum, catering for all related logistics and communication
- On the ground support to regions and local authorities participating in the Mission in organising regional and local events involving citizens and stakeholders.

⁶¹ Currently managed by MIP4Adapt under the contract CINEA/2022/OP/0013/SI2.884597 funded by the European Union. [About MIP4Adapt \(europa.eu\)](#)

This action supports the follow-up to the July 2023 Communication⁶² on EU Missions assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 of 2025

Indicative budget: EUR 6.00 million from the 2025 budget

2. Studies, conferences, events and outreach activities

Subject matter of the contracts envisaged: studies, conferences, events and outreach activities within the scope of the EU Mission on Adaptation to Climate Change.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: 2025

Indicative budget: EUR 0.14 million from the 2025 budget

3. Support regional and local authorities in their efforts to conduct climate risks assessments

Provide guidance and support to EU regions and local authorities that have engaged with the Mission on Adaptation to Climate Change and beyond, by the provision of authoritative climate data at different granularity scale, including the local one.

Make available to EU regions and local authorities that have engaged with the Mission on Adaptation to Climate Change and beyond the [Risk Data Hub](#) entire potential, by creation of ad-hoc and plug in modules, users guidelines and digital interfaces designed for the target audience, to allow easy and user-friendly access to the entire realm of the Risk Data Hub functionalities.

Facilitate the development of specific synergetic actions in relation to data management and data reporting in the area of climate adaptation among the Mission on Adaptation to Climate Change and other Horizon Europe, EU and national programmes and policies implementation (such as on risk reduction and management).

The action will be implemented by a service level-agreement (Article 59 of the Financial Regulation).

⁶² Commission Communication: “EU Missions two years on: assessment of progress and way forward” [COM\(2023\) 457 final](#) and Commission Staff Working Document: “EU Missions two years on: An assessment of progress in shaping the future we want and reporting on the review of Mission Areas and areas for institutionalised partnerships based on Articles 185 and 187 TFEU” [SWD\(2023\) 260 final](#)

Type of Action: Provision of technical/scientific services by the Joint Research Centre

Indicative timetable: Second quarter of 2025

Indicative budget: EUR 0.50 million from the 2025 budget

DRAFT

Cancer: Supporting the implementation of the Cancer Mission

The goal of the Mission on Cancer is to improve the lives of more than 3 million people by 2030, through prevention, cure and for those affected by cancer including their families, to live longer and better. The four Cancer Mission objectives are: Understand; Prevent what is preventable; Optimise diagnosis and treatment; Support quality of life. Its five transversal priorities are: ensure equitable access in all aforementioned areas, innovation, childhood cancer, personalised medicine and citizen engagement. The Mission on Cancer will address all cancers including poorly-understood cancers⁶³ in men and women, cancers in children, adolescents and young adults as well as in the elderly, cancers in socio-economically vulnerable populations, living in either cities, rural or remote areas, across all Member States and Associated countries.

The Mission on Cancer is implemented using a health-in-all policies approach;⁶⁴ through infrastructure support; regional, social and citizen community development; through investments; support and commitments from public and private sources, including from Member States, Associated countries and industry; through cooperation with third countries; and through synergies with other EU programmes including EU4HEALTH, EURATOM, Digital Europe (for example the Genomics Data Infrastructure⁶⁵ and the Cancer Image Europe initiative⁶⁶), Erasmus+, the EU Strategic Framework on Health and Safety at Work 2021-2027, and other initiatives related to health and cancer.

It also relates to the European Green Deal, including the Zero Pollution Action Plan⁶⁷ and the Farm to Fork strategy⁶⁸. The mission proposes research, innovation and policy directions and objectives to identify effective strategies for the development and implementation of cancer prevention, including on environmental and behavioural factors (e.g. exposure to carcinogens, air pollution, unhealthy diet, nutrition, and low physical activity).

Furthermore, it is also in line with the industrial⁶⁹ and digitalisation strategy⁷⁰. The Mission proposes a further upscaling and digitalisation of services, innovation in diagnostics and interventions, and establishing living labs, contributing to the positive impact of efforts by industry and SMEs on the health of citizens. Envisaged opportunities are in the fields of cancer biomarkers, cloud computing and digital applications, and smart apps/sensors. The Mission also supports the integration of AI, machine learning and deep learning approaches to

⁶³ Includes refractory cancers or cancer subtypes, at any stage of the disease in any age group and part of society with a 5-year overall survival that is less than 50% from time of diagnosis.

⁶⁴ Health in All Policies is an approach to public policies across sectors that systematically takes into account the health implications of decisions, seeks synergies, and avoids harmful health impacts in order to improve population health and health equity.

⁶⁶ <https://cancerimage.eu/>

⁶⁷ Particularly the Flagship 1 of the Zero Pollution Action Plan: “Reducing health inequalities through zero pollution”

⁶⁸ https://ec.europa.eu/food/farm2fork_en

⁶⁹ https://ec.europa.eu/info/strategy/priorities-2019-2024/europe-fit-digital-age/european-industrial-strategy_en

⁷⁰ https://ec.europa.eu/info/strategy/priorities-2019-2024/europe-fit-digital-age_en

facilitate a better understanding of cancer, to improve prevention screening and early detection, diagnosis, clinical decision-making, administration of combinational therapies, and clinical management of patients living with and after cancer.

Calls for proposals under this Mission should contribute to setting out a credible pathway for implementing the Mission on Cancer, thereby contributing to mission objectives.

Successful proposals under this Mission should set out a credible pathway to contribute to improving cancer control, and more specifically to all of the following impacts:

- Improve understanding of cancer in the context of the environment, work, and lifestyle in the broadest possible sense;
- Enhance cross-policy cancer prevention, screening and early detection strategies;
- Optimise the diagnosis and treatment of cancer based on the principle of equitable access;
- Improve the quality of life of cancer patients, survivors and their families through widely analysing all key factors and needs that are related to the quality of life;
- Accelerate the digital transformation of research, innovation and health systems.

The implementation plan specifies the goal and four main objectives as well as implementation details of the Mission on Cancer⁷¹.

In the call for proposals described below, the Commission envisages several actions⁷²:

Work programme 2025

For 2025, on the Cancer Mission objective *Understanding*, the Commission envisages to foster collaboration of national and regional funders on translational cancer research and will support an action to better understand the effects of environmental exposure on the risk of paediatric, adolescent and young adult cancers.

On the Cancer Mission objective *Prevention and early detection*, the Commission envisages – in collaboration with the Cities Mission – to boost prevention through cycling and walking while reducing greenhouse gas emissions from transport.

On the Cancer Mission objective *Diagnosis and treatment*, the Commission will support actions to innovative surgery, targeting cancer patients with metastatic disease and investigator-initiated multinational early-stage clinical trials for paediatric cancer.

⁷¹

https://ec.europa.eu/info/sites/default/files/research_and_innovation/funding/documents/cancer_implementation_plan_for_publication_final_v2.pdf

⁷²

The listed areas for potential actions are tentative and non-binding

On the Cancer Mission objective *Quality of life*, the Commission envisages to support pragmatic clinical trials to enhance the quality of life of older cancer patients (65 years and older) through nutrition.

Lastly, the Commission will support the network of National Cancer Mission Hubs (NCMHs).

Proposals are invited against the following topic(s):

HORIZON-MISS-2025-02-CANCER-01: Sustained collaboration of national and regional cancer funders to support the Cancer Mission through translational research

Call: Supporting the implementation of the Cancer Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Award criteria</i>	The criteria are described in General Annex D. The following exceptions apply: The thresholds for each criterion will be 4 (Excellence), 4 (Impact) and 4 (Implementation). The cumulative threshold is 12.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁷³ .

Expected Outcome: The successful proposal should aim to deliver results that are directed and tailored towards and contribute to all the following expected outcomes:

⁷³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- National and regional cancer funders across Europe (i.e. representing Northern, Southern, Central, Eastern and Western Europe), based on a common strategic research and innovation agenda, deliver:

1. At least four transnational calls for proposals addressing translational cancer research, resulting in collaborative grants to academic investigator-led third parties;
2. Streamlined national, regional and foundation-based or charity-based practices in organising peer-reviewed translational cancer research and innovation funding between the partners, with attention to exploring novel funding schemes and initiatives as well as sustainability of a network of funders where appropriate;

Scope: Common challenges in translational cancer research require effective transnational cooperation on prioritised efforts, leveraging national, regional and charity-based resources and appropriate funding schemes. Important achievements of translational cancer research funding by long-term collaboration of national and philanthropy funding organisations have been obtained by the TRANSCAN network under the Seventh Framework Programme for Research and Innovation (2007-2013) and Horizon 2020 (2014-2020)⁷⁴.

More efforts are warranted to address the potential for sustainable coordination, the access to and sharing of research data to enhance the understanding of cancer as well as to further the alignment of national, regional and foundation or charity-based cancer research and innovation programmes and activities in Member States and Associated Countries. The EU contribution will **not** be used to co-fund the grants to third parties described hereunder.

The proposal should address all the following:

- Align, coordinate and support efforts from and between national and regional public and private research funding programmes on translational cancer research to issue at least four joint transnational calls which are integrated with the Cancer Mission and the Europe's Beating Cancer Plan;
- Pool the necessary financial resources from the participating national and regional research programmes as well as, where appropriate, leverage resources from pertinent foundations, charities and transnational initiatives, to support at least four joint transnational calls for proposals which are integrated with the Cancer Mission and the Europe's Beating Cancer Plan, while avoiding overlaps with EU-funded research under Horizon Europe;
- Demonstrate the potential impact of collaboration between national and regional transnational research and innovation programmes, as well as demonstrate a leverage effect on European and national research and competitiveness using key indicators;

⁷⁴

<https://transcan.eu/>

- Consider novel funding schemes and joint activities such as analyses of research and innovation funding programmes, impact, dissemination, citizen (including cancer patients), engagement, and training;
- Datasets produced by collaborative grants to academic investigator-led third parties should be made FAIR whenever possible, while tools and models should follow the principles of open science, taking advantage of current European research infrastructures and supporting the future UNCAN.eu research data platform.

This action supports the follow-up to the July 2023 Communication on EU Missions assessment⁷⁵.

HORIZON-MISS-2025-02-CANCER-02: Understanding the effects of environmental exposure on the risk of paediatric, adolescent and young adult cancers

Call: Supporting the implementation of the Cancer Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 6.00 and 7.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 30.45 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Award criteria</i>	<p>The criteria are described in General Annex D. The following exceptions apply:</p> <p>The thresholds for each criterion will be 4 (Excellence), 4 (Impact) and 4 (Implementation). The cumulative threshold is 12.</p>

Expected Outcome: Project results are expected to contribute to some of the following expected outcomes:

- Researchers and health professionals will advance our understanding on how environmental, genetic and epigenetic, omics and other factors interact in determining

⁷⁵

eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52023DC0457

the onset and development of cancers in children, adolescents and young adults and how they impact health outcomes in young cancer patients.

- Policymakers and public health authorities have scientific evidence to improve prevention strategies to minimise the impacts of environmental factors on the development and progression of paediatric, adolescent and young adult cancers.
- Researchers, innovators, and professionals from across different disciplines and sectors will support and contribute to the future UNCAN.eu research data platform by ensuring interoperability of data, new digital tools and models.

Scope: This topic contributes to the Cancer Mission objectives by improving the understanding of the impact of environmental exposures⁷⁶ including, their interaction with other relevant factors on cancer onset⁷⁷ and progression and/or other relevant health outcomes along the cancer patient journey. The age group of interest for this topic includes children, adolescents and young adults (less than 40 years of age at first cancer diagnosis).

Applicants should take advantage of technological advances which have opened up new opportunities to collect, combine and analyse large datasets of diverse types, offering new possibilities to design epidemiological studies to understand the mechanistic contribution of environmental factors, in combination with other individual and contextual factors⁷⁸ as appropriate. Innovative and data intensive approaches are expected for the identification of time windows of susceptibility⁷⁹ and of robust biomarkers of cumulative environmental exposure.

Proposals may envisage the creation of large cohort(s) by pooling and integrating existing retrospective studies in the areas of clinical research, exposome research, cancer registries and complementing with the new collection of other relevant data where needed (other omics data, digital pathology, behavioural and socio-economic data, clinical records etc.). Sex and gender differences should be duly considered. The use of causal interference, computational modelling and/or artificial intelligence tools are encouraged for the analysis and management of big, complex and heterogeneous data sets. All datasets produced should be described with metadata records in the EU dataset catalogue of the future European Health Data Space⁸⁰ while all tools and models should follow the principles of open science and be made available through the future UNCAN.eu platform.

The applicants should address several of the following activities:

- Identify, validate and document different types (and/or combinations) of biomarkers for the development of robust quantitative measures of the effects of cumulative environmental exposures associated with cancer onset;

⁷⁶ The exposure to potentially harmful chemical, physical or biological agents in the environment

⁷⁷ Including early onset cancer

⁷⁸ Examples are genetic, epigenetic and -omic characteristics, lifestyle, socio-economic factors, clinical status and clinical circumstances

⁷⁹ In utero exposures might be included if relevant

⁸⁰ <https://healthcat-ap.github.io/>

- Elaborate and test cost effective approaches for measuring biomarkers of cumulative environmental exposure in large paediatric, adolescent and young adult populations, also by applying new analytical tools and novel methods of analysis;
- Identify individual signatures (e.g. based on genetic, epigenetic, multi-omic characteristics), and time windows conferring susceptibility to environmental hazards associated with cancer onset and progression in children, adolescent and young adults at different stages of the life course;
- Identify clinical states, lifestyle and socio-economic factors and circumstances that increase the risk of adverse health outcomes associated with exposure to environmental hazards in different time windows in young cancer patients;
- Develop new tools and methods to combine and analyse multimodal data, including the application of novel data-intensive methods of analysis, while ensuring interoperability with the future UNCAN.eu research platform and taking advantage of current European research infrastructures.

Advantage should be taken to the extent possible of data and experience gained under current large-scale initiatives such as: the European Human Exposome Network (EHEN)⁸¹, the European Partnership for the Assessment of Risks from Chemicals (PARC)⁸², the clusters of projects under the environment, climate and health research portfolio⁸³ and the projects under the 'Understanding' project cluster of the Cancer Mission⁸⁴. The relevant EU research and health infrastructures should be exploited for available digital tools and services for dataset creation, standardisation, data discovery, secure access, management, visualization, harmonization, analysis and other functions as appropriate. Successful proposals are expected to establish appropriate collaborations with HORIZON-MISS-2024-CANCER-01-01 'Use cases for the UNCAN.eu research data platform'.

The Commission will facilitate coordination with other EU initiatives. Proposals should include a budget for networking, attendance at meetings and joint activities⁸⁵ of the 'Understanding' project cluster of the Cancer Mission⁸⁶.

Proposals should consider the involvement of the European Commission's JRC regarding its experience in this field and with respect to the value it could bring in providing an effective

⁸¹ <https://www.humanexposome.eu/>

⁸² <https://www.eu-parc.eu/>

⁸³ https://research-and-innovation.ec.europa.eu/research-area/health/environment-and-health_en

⁸⁴ https://research-and-innovation.ec.europa.eu/funding/funding-opportunities/funding-programmes-and-open-calls/horizon-europe/eu-missions-horizon-europe/eu-mission-cancer/implementation-page/cancer-mission-objectives_en#understanding-of-cancer.

⁸⁵ Examples of these activities are research or research capacity, organising joint workshops, establishing best practices, joint communication or citizen engagement activities with projects funded under other clusters and pillars of Horizon Europe, or other EU programmes, as appropriate. Proposals are not required to include details of these activities, as they will be defined during the grant agreement preparation and during the life of the project.

⁸⁶ In order to address the objectives of the Cancer Mission, participants will collaborate in project clusters to leverage EU-funding, increase networking across sectors and disciplines, and establish a portfolio of Cancer Mission R&I and policy actions.

interface between research activities and pre-normative science as well as strategies and frameworks that address regulatory requirements. In that respect, the JRC will consider collaborating with any successful proposal and this collaboration, when relevant, should be established after the proposal's approval.

Applicants envisaging to include clinical studies should provide details in the dedicated annex using the template provided in the submission system.

HORIZON-MISS-2025-02-CANCER-03: Innovative surgery as the cornerstone of affordable multi-modal therapeutic interventions benefitting cancer patients with locally advanced or metastatic disease

Call: Supporting the implementation of the Cancer Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 7.00 and 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 31.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Award criteria</i>	The criteria are described in General Annex D. The following exceptions apply: The thresholds for each criterion will be 4 (Excellence), 4 (Impact) and 4 (Implementation). The cumulative threshold is 12.

Expected Outcome:

Proposals under this topic should aim to deliver results that are directed and tailored towards, and to contribute to all of the following expected outcomes:

- Patients have access to tailored, affordable, effective and—when appropriate—minimally-invasive surgery-centred, multi-modal treatment interventions targeting locally advanced or metastatic disease;
- Researchers, innovators⁸⁷, SMEs and other professionals from different disciplines and sectors have access to innovative surgery-centred treatment technology and medical devices for further improvements and validation;
- National healthcare providers, policymakers and authorities in European regions, Member States and Associated Countries have the evidence to implement affordable

⁸⁷ Innovators turn research results into new and better services and products, to remain competitive in a global marketplace and to improve the quality of life of Europe's citizens

surgery-centred treatment solutions that benefit cancer patients with locally advanced or metastatic disease in their healthcare systems;

Scope: Cancer surgery⁸⁸ represents the main first line treatment for solid tumours. While cancer patients with locally advanced or metastatic disease across Europe are often excluded from clinical studies, they would benefit from access to tailored, affordable, innovative, surgery-centred interventions, which are adapted to an increasingly precision oncology healthcare landscape.

Proposals should address all of the following:

- Validate innovative surgery-centred, multi-modal treatment interventions to treat cancer patients with locally advanced or metastatic disease. When appropriate, investigators should consider minimally-invasive surgical treatment interventions combined with either relevant medical devices or other multimodal treatment interventions⁸⁹;
- The chosen surgery-centred intervention(s) should be validated through academic investigator-initiated clinical trials. Translational research is limited to supporting the conduct and analyses of the proposed clinical trial(s);
- The chosen surgery-centred treatment intervention(s) should be adapted to the needs of the target population and the specificities of healthcare provision at local, regional, or national level, duly reflecting the (cultural) diversity and available resources across Member States and Associated Countries. Data should be disaggregated by sex, gender, age and other relevant variables, such as by measures of socio-economic status or ethnicity;
- The primary and secondary endpoints of the clinical trial(s) should support overall survival, patient-reported outcomes and quality of life issues. Such endpoints should be defined together with patients and their caregivers through research that stimulates social innovation and supports end-user engagement using participative research models;
- Affordability of the chosen surgery-centred treatment intervention(s) should be demonstrated via a cost-effectiveness analysis.
- Include an appropriate mix of stakeholders from various disciplines and sectors, such as physicians, academia, patients and their caregivers, patient representatives, SMEs, insurance companies, engineers, physicists, charities, foundations, research and innovation organisations, civil society, regional as well as national health authorities;

⁸⁸ A non-exhaustive list of types of surgeries: open surgery, minimally-invasive surgery using laparoscopy or endoscopy, robotic surgery, laser surgery, cryosurgery, radiosurgery (such as ‘gammaknife’, cyberknife, radiofrequency and microwave ablation).

⁸⁹ A non-exhaustive list of other treatment interventions to combine with innovative surgery may include: intra-operative radiotherapy, chemotherapy, electro-chemotherapy, photodynamic therapy, radiotherapy, targeted therapy, immunotherapy, hyperthermia or thermal ablation, transplantation or any other combination

- All datasets produced should be described with metadata records in the EU dataset catalogue of the European Health Data Space while all tools and models should take advantage of current European research infrastructures, should follow the principles of open science and be made available through the future UNCAN.eu platform⁹⁰.

This topic requires the effective contribution of Social Sciences and Humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise in the successful proposal, to produce meaningful and significant effects enhancing the societal impact of the related research activities.

The successful proposals are expected to build on resources made available by the Knowledge Centre on Cancer (KCC)⁹¹ to foster EU alignment and coordination.

The Commission will facilitate coordination. Therefore, successful proposals will be asked to join the 'Diagnosis and Treatment' cluster for the Cancer Mission⁹² and should include a budget for networking, attendance at meetings, and joint activities⁹³.

Applicants should provide details of the clinical studies in the dedicated annex using the template provided in the submission system.

HORIZON-MISS-2025-02-CANCER-04: Investigator-initiated multinational early-stage innovative clinical trials for paediatric cancer

Call: Supporting the implementation of the Cancer Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 6.00 and 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 25.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility</i>	The conditions are described in General Annex B. The following

⁹⁰ <https://healthdcap.github.io/>

⁹¹ Hosted by the European Commission's Joint Research Centre (JRC). Especially through the 'European Guidelines and Quality Assurance Schemes for Breast, Colorectal and Cervical Cancer Screening and Diagnosis', and the 'European Cancer Information System (ECIS)' and the 'European Cancer Inequalities Registry (ECIR)', see https://knowledge4policy.ec.europa.eu/cancer_en

⁹² In order to address the objectives of the Cancer Mission, participants will collaborate in project clusters to leverage EU-funding, increase networking across sectors and disciplines, and establish a portfolio of Cancer Mission R&I and policy actions.

⁹³ Examples of those activities are research or research capacity, organising joint workshops, establishing best practices, joint communication or citizen engagement activities with projects funded under other clusters and pillars of Horizon Europe, or other EU programmes, as appropriate. Proposals are not required to include details of these activities, as they will be defined during the grant agreement preparation and during the life of the project.

<i>conditions</i>	<p>exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Award criteria</i>	<p>The criteria are described in General Annex D. The following exceptions apply:</p> <p>The thresholds for each criterion will be 4 (Excellence), 4 (Impact) and 4 (Implementation). The cumulative threshold is 12.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio covering children and adolescents, grants will be awarded not only in order of ranking but also to at least:</p> <ul style="list-style-type: none"> • one highest ranked application that targets the age group 0-14 (children); and • one highest ranked application that targets the age group 15-19 (adolescents) <p>provided that these applications attain all thresholds. Applications targeting both age groups (0-14 and 15-19) will be considered to be within both age groups for the purposes of the application of the condition above.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁹⁴.</p>

Expected Outcome:

Proposals under this topic should aim to deliver results that are directed and tailored towards and contribute to all of the following expected outcomes:

- Children and adolescents with cancer have access to innovative, more effective, less toxic treatments—both in terms of acute toxicity and long-term late effects—and care solutions;

⁹⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- National healthcare providers, policymakers and authorities in European regions, Member States and Associated Countries have the scientific evidence to accelerate the implementation of affordable and accessible treatment and care solutions in their healthcare systems;
- Researchers, innovators, and professionals from different disciplines and sectors ensure accessibility and re-usability of relevant trial data, to support the future UNCAN.eu research data platform, which is currently in preparation.

Scope: This topic will contribute to the achievement of the Mission's objective to provide better treatments for cancer. The focus is on children (0-14 years of age, e.g. age of first cancer diagnosis) and/or adolescent (15-19 years of age, e.g. age of first cancer diagnosis) cancer patients.

Paediatric oncology has made considerable progress, increasing patient survival rates up to 80%; yet cancer remains the leading cause of death in children and adolescents. Progress in R&I to support the development of targeted cancer treatments for children has been rather limited. Over the past 20 years, less than 10% of new anti-cancer drugs have received marketing authorization for paediatric use, resulting in limited availability of innovative therapies to treat paediatric cancers. This is even more striking when cancers with poor prognosis are considered.

Most of the treatments currently used for paediatric cancers have been developed to treat adult cancers; in addition, young cancer patients and survivors very often experience adverse late-effects⁹⁵ due to the high toxicity of treatments. Clinical tools used to evaluate treatment outcomes (e.g. tools to assess toxicity, radiological response, quality of life etc.), are also derived from adult oncology and therefore suboptimal;

This situation mostly reflects the fact that paediatric cancers are rare, and their biology is different to adult cancers. The relatively low number of cases warrants the implementation of multinational academic-initiated clinical trials to accelerate the development of innovative, more effective and less toxic treatments.

Proposals should address all of the following:

- Design and conduct innovative investigator-initiated multinational early-stage clinical trials, (phase 1 and 1/2) to accelerate the development of safe, effective, targeted cancer treatments⁹⁶ for children and/or adolescents with cancer. Focus should be on cancers with poor prognosis (e.g. with a 5-year overall survival less than 50% from time of diagnosis) at any stage of the disease and for any type. Trials should take into account

⁹⁵ Late-effects range from cardiovascular disease, organ and skin alterations, fertility problems, cognitive impairment, and mental health issues such as depression and anxiety etc. The 2024 Cancer Mission annual work programme includes a topic (HORIZON-MISS-2024-CANCER-01-05) to improve the understanding and management of late-effects in Adolescent and Young Adults, cancer patients and survivors

⁹⁶ Including but not limited to new and repurposed drugs, innovative radiation and immunotherapy approaches, advanced therapies, combination of treatments and/or with other interventions etc

socio-economic and biological stratification. All data should be disaggregated by sex, gender, age and other relevant variables;

- Develop innovative clinical tools (companion diagnostics) to assess tumour response, tailored to childhood and adolescent cancers, enabling an accurate evaluation of treatment outcomes, monitoring of long-term effects of treatment, and identification of potential risks such as second cancers, thereby improving overall patient care;
- Ultimately, provide scientific evidence to deliver affordable and accessible treatments for children and adolescents with cancer to be implemented by healthcare systems at the level of local communities, European regions, Member States and Associated Countries;
- All datasets produced should be described with metadata records in the EU dataset catalogue of the European Health Data Space, while all tools and models should take advantage of current European research infrastructures, should follow the principles of open science and made available through the future UNCAN.eu platform⁹⁷.

The topic is designed to fill a gap in terms of knowledge, expertise, tools, data and resources in paediatric oncology, to be achieved through multinational, cross-sectoral and multidisciplinary cooperation.

For that purpose, projects should bring together a diverse range of stakeholders and organizations from across Europe and beyond, including academia, data scientists, paediatric oncology centers, hospitals, healthcare practitioners, liquid biopsy companion diagnostics experts, cancer patients and survivors, caregivers, patients and survivors organisations, regulators, and industry etc., to foster collaboration and accelerate the development of innovative cancer treatments and therapeutic approaches including companion diagnostics. Timely contact with regulatory authorities should be foreseen to inform the trial design and feasibility. Use of artificial intelligence tools is encouraged, whenever relevant. Existing resources such as paediatric cancer registries should be appropriately exploited.

This topic requires the effective contribution of Social Science and Humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise in the successful proposal, to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Successful proposals are expected to build on the support of the Knowledge Centre on Cancer (KCC)⁹⁸ to foster EU alignment and coordination. Due consideration should be given to existing EU-funded initiatives (and if relevant other initiatives), including PedCRIN/ECRIN⁹⁹

⁹⁷ <https://healthdcap.github.io/>

⁹⁸ Hosted by the European Commission's Joint Research Centre (JRC). Especially through the 'European Guidelines and Quality Assurance Schemes for Breast, Colorectal and Cervical Cancer Screening and Diagnosis', and the 'European Cancer Information System (ECIS)' and the 'European Cancer Inequalities Registry (ECIR)', see https://knowledge4policy.ec.europa.eu/cancer_en

⁹⁹ [PedCRIN | Ecrin](#)

relevant initiatives supported by the Innovative Health Initiative, such as ITCC4¹⁰⁰, c4c¹⁰¹, EU PEARL¹⁰² or the European Reference Network for Paediatric Oncology, ERN PaedCan¹⁰³

The Commission will facilitate coordination. Proposals should include a budget for networking, attendance at meetings, and potential joint activities¹⁰⁴ and will be asked to join the 'Diagnosis and Treatment' cluster for the Cancer Mission¹⁰⁵

Applicants should provide details of the clinical studies in the dedicated annex using the template provided in the submission system.

HORIZON-MISS-2025-02-CANCER-05: Pragmatic clinical trials to enhance the quality of life of older cancer patients (65 years and older) through nutrition

Call: Supporting the implementation of the Cancer Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 3.00 and 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Award criteria</i>	<p>The criteria are described in General Annex D. The following exceptions apply:</p> <p>The thresholds for each criterion will be 4 (Excellence), 4 (Impact) and 4 (Implementation). The cumulative threshold is 12.</p>

Expected Outcome: Proposals under this topic should aim to deliver results that are directed and tailored towards, and to contribute to all of the following expected outcomes:

- Older cancer patients have access to and benefit from tailored nutritional care-oriented interventions as part of routine treatment or care interventions, which improves treatment

¹⁰⁰ [ITCC-P4 GmbH Paediatric Preclinical Proof of Concept Platform \(itccp4.com\)](https://itccp4.com)

¹⁰¹ [connect4children is a pan-European clinical trial network](https://connect4children.eu)

¹⁰² <https://eu-pearl.eu/>

¹⁰³ [Home - ERN PaedCan \(ern-net.eu\)](https://ern-net.eu)

¹⁰⁴ Examples of these activities are research or research capacity, organising joint workshops, establishing best practices, joint communication or citizen engagement activities with projects funded under other clusters and pillars of Horizon Europe, or other EU programmes, as appropriate. Proposals are not required to include details of these activities, as they will be defined during the grant agreement preparation phase and during the life of the project.

¹⁰⁵ In order to address the objectives of the Cancer Mission, participants will collaborate in project clusters to leverage EU-funding, increase networking across sectors and disciplines, and establish a portfolio of Cancer Mission R&I and policy actions.

outcomes, alleviates disease symptoms and side effects and enhances their survival and quality of life;

- National healthcare providers, policymakers and authorities in European regions, Member States and Associated Countries have the evidence to implement tailored nutritional care as part of routine cancer treatment or care interventions in their healthcare systems, including in everyday medical practice.

Scope: Nutrition is of particular concern in older cancer patients due to issues like malabsorption, which is linked to adverse outcomes (such as mortality and decreased quality of life). Moreover, cancer incidence and mortality and prevalence predictions¹⁰⁶ suggest a considerable increase of older cancer patients, who are also underrepresented in clinical studies. Hence, older cancer patients across Europe would benefit from access to optimised nutritional care-oriented interventions, to improve treatment outcomes, alleviate disease symptoms and side effects¹⁰⁷, thereby enhancing their survival and quality of life.

Pragmatic clinical trials address treatment optimisation by evaluating treatment effectiveness, i.e. the effect of treatment in routine (real-world) clinical practice¹⁰⁸

Proposals should address all of the following:

- Conduct randomised or cluster-randomised academic investigator-initiated pragmatic clinical trials to validate tailored nutritional care-oriented interventions as part of routine cancer treatment or care, which could include physical activity or psychosocial support, **for older cancer patients (65 years and older)**;
- Translational research is limited to supporting the conduct and analyses of the proposed clinical trial(s). Trials should consider biological stratification of the patient population to be enrolled. All data should be disaggregated by sex, gender, age, and other relevant variables, such as by measures of socio-economic status or ethnicity;
- The chosen nutritional care-centred intervention(s) should be adapted to the needs of older cancer patients and to the specificities of the provision of care at local, regional, or national level, duly reflecting the (cultural) diversity across Member States and Associated Countries. Furthermore, affordability and accessibility should be considered;
- The primary and secondary endpoints of the pragmatic clinical trial(s) should support overall survival, patient-reported outcomes and quality of life issues. Such endpoints should be defined together with older patients and their caregivers through research that

¹⁰⁶ Globocan, ECIS

¹⁰⁷ For example: insufficient caloric intake; anorexia; cachexia, frailty, malfunctioning of the digestive tract such as difficulties with swallowing, indigestion, malabsorption, placement of a stoma, treatment-induced intolerance or allergy, inflammation, immune suppression, complications due to antimicrobial drug treatment and/or resistance, bowel dysfunction, changes to the oral, skin, lung, urethral, genital, gut, or other microbiota, fatigue, or, mental health issues.

¹⁰⁸ Examples include treatment versus active surveillance in patient management, a combination of treatment interventions, determination of optimal dose and dose schedules, de-escalation of treatment interventions, comparative effectiveness of different treatment interventions.

stimulates social innovation and supports end-user engagement using participative research models;

- Include an appropriate mix of stakeholders from various disciplines and sectors, such as physicians, academia, patients and their caregivers, patient representatives, dietitians, nutritionists, behavioural scientists, SMEs, insurance companies, charities and foundations, research organisations, civil society, regional and national health authorities;
- All datasets produced should be described with metadata records in the EU dataset catalogue of the European Health Data Space¹⁰⁹ while all tools and models should take advantage of current European research infrastructures, should follow the principles of open science and be made available through the future UNCAN.eu platform.

This topic requires the effective contribution of Social Sciences and Humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise in the successful proposal, to produce meaningful and significant effects enhancing the societal impact of the related research activities.

The Commission will facilitate coordination. Therefore, successful proposals will be asked to join the 'Quality of Life' cluster for the Cancer Mission, established in 2023, and should include a budget for networking, attendance at meetings, and joint activities¹¹⁰.

Applicants should provide details of the clinical studies in the dedicated annex using the template provided in the submission system.

HORIZON-MISS-2025-02-CANCER-06: Support to the network of National Cancer Mission Hubs (NCMHs)

Call: Supporting the implementation of the Cancer Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 11.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 11.00 million.
<i>Type of Action</i>	Coordination and Support Actions

¹⁰⁹ <https://healthdcap.github.io/>

¹¹⁰ Examples of those activities are research or research capacity, organising joint workshops, establishing best practices, joint communication or citizen engagement activities with projects funded under other clusters and pillars of Horizon Europe, or other EU programmes, as appropriate. Proposals are not required to include details of these activities, as they will be defined during the grant agreement preparation and during the life of the project.

<i>Award criteria</i>	The criteria are described in General Annex D. The following exceptions apply: The thresholds for each criterion will be 4 (Excellence), 4 (Impact) and 4 (Implementation). The cumulative threshold is 12.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹¹¹ .

Expected Outcome: This topic will ensure the continuation of the work of supporting the creation of a Network of National Cancer Mission Hubs (NCMHs) in Member States and Associated Countries. NCMHs in each Member State and Associate Country are to operate for the whole duration of the Cancer Mission and beyond. It was envisaged that there would be a second phase of support to build on the achievements and needs identified under the ECHoS project¹¹² during the first phase.

Proposals under this topic should aim to deliver results that are directed and tailored towards and contribute to all of the following expected outcomes:

- The Network and NCMHs are supported to ensure the integration of Cancer Mission activities at national, regional, and local levels;
- Stakeholders, including patients and citizens, in national, regional or local health and research and innovation systems engage in policy dialogues on cancer;
- Citizens, including patients, are involved in citizen engagement activities, including their design and development, which will lead to recommendations being made to governments, helping to implement and adapt strategies to national and regional needs;
- Regional and national policy makers and authorities benefit from activities carried out in the implementation of Cancer Mission actions.

Scope: Building on the first phase of NCMHs, the Mission's activities will be coordinated with relevant national, regional or local actors with a view to facilitate their integration and alignment with EU and national initiatives such as Europe's Beating Cancer Plan and national

¹¹¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹¹² [Establishing of Cancer Mission Hubs: Networks and Synergies | ECHoS | Project | Fact sheet | HORIZON | CORDIS | European Commission](#)

cancer strategies and/or national cancer control plans. The Network and NCMHs will be strengthened, including through expanding its capacities, outreach and type of activities the Network will carry out, while ensuring its sustainability.

In this regard the proposal should support the operation of the Network and activities carried out by it.

The proposal should address all of the following:

- Enhance the capacity of NCMHs in the Member States and Associated Countries, through knowledge exchange and training, and expanding the geographical outreach of the NCMHs activities in each country;
- Support the Networks' work such as coordination of joint activities of NCMHs and awareness raising of the Cancer Mission activities including coordination of EU cancer research activities and policy actions;
- Develop a methodology on mission-driven implementation of Mission actions with a view to building synergies at national and regional levels;
- Support the engagement of relevant national, regional or local actors, including civil society as well as business and legal advisors, including those who haven't been involved previously, in regular thematic policy dialogues and country-specific dialogues on cancer to increase the impact of EU cancer-related R&I and policies at national, regional and local level;
- Organise regular citizen engagement activities, at least one per year related to the objectives of the Mission, such as on prevention or screening and/or organise activities for a country or a number of countries using tools and materials developed by the European Observatory on Health Systems and Policies¹¹³ in each Member State and Associated Country, with a view to increase awareness and participation in policy discussions;
- Develop strategies for NCMHs to reach long-term sustainability and to create a level of interest from stakeholders including from philanthropy, to attract private funding beyond EU programmes in support of NCMHs;
- Disseminate the results of NCMHs Networks' activities, through organisation of a yearly conference and development of policy reports;
- Provide a yearly summary report of national Mission-related activities to contribute to the monitoring of progress of the Mission implementation at national and regional levels;
- Organise regular exchanges of best practices between the NCMHs and hubs of the other four missions, e.g. in the area of stakeholder and citizen engagement, long-term sustainability of mission hubs, and building of synergies;

¹¹³ [European Observatory on Health Systems and Policies \(who.int\)](https://www.euro.who.int/en/about-us/partners/european-observatory-on-health-systems-and-policies)

- Work closely with Horizon Europe National Contact Points to enhance their activities, such as raising awareness about Cancer Mission funding activities through information events (e.g. info-days, conferences, mutual-learning events, brokerage events, and fairs) and communication tools. Collaborate closely with Cancer Mission Board members to engage new stakeholders, and to mobilise and align additional funding in support of NCMHs;
- Work closely with relevant international institutions and initiatives addressing science-policy interaction relevant to the Cancer Mission, including relevant OECD initiatives aiming at strengthening evidence-informed policy making for mission-oriented innovation (e.g. contributing to the Community of Practice through mutual learning, workshops and networking initiatives);
- Establish appropriate collaboration with the consortium implementing HORIZON-MISS-2024-CANCER-01-06 for joint activities¹¹⁴ such as dissemination and outreach related to the national nodes of the European Cancer Patient Digital Centre (ECPDC)¹¹⁵.

This action supports the follow-up to the July 2023 Communication on EU Missions assessment¹¹⁶.

Cancer: Other Actions

1. Continuation of bus roadshow with focus on cancer prevention

Community-based initiatives, such as the pilot EU Cancer Mission Bus Roadshow, currently implemented in Lithuania, Poland and Romania, have shown effectiveness in increasing awareness and initiating behavioural changes towards cancer prevention.

This procurement action will support a further implementation of the initiative, in other EU countries.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative budget: EUR 3.00 million from the 2025 budget

2. Develop a monitoring system for all Mission objectives – technical assistance

This action will support the continuous monitoring of the Mission and logistical support to meetings of expert groups and events with stakeholders, including Mission project clusters

¹¹⁴ Examples of those activities are the hosting of national web pages of the ECPDC information portal, engagement with users, assessment of their experiences and provision of feedback to the ECPDC steering board, etc.

and international partners and other actions launched under the EU Cancer Mission funded under Horizon Europe.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative budget: EUR 0.84 million from the 2025 budget

DRAFT

Supporting the implementation of the Restore our Ocean and Waters Mission

The Mission ‘Restore our ocean and waters by 2030’ will provide a systemic approach to restore, protect and preserve the health of our ocean, seas and waters. The Mission is designed to deliver on the European Union’s 2030 quantified and measurable targets for protecting and restoring ecosystems and biodiversity, for achieving zero pollution, and for decarbonising and reducing net greenhouse gas emissions from the blue economy towards climate-neutrality, within the EU’s seas and waters. The Mission will support many Sustainable Development Goals (SDGs): in particular restoring our ocean and waters related actions will directly contribute to SDG 14 - Life below water and SDG 6 - Clean water and sanitation, as well as to SDG13 - Climate action.

The Mission will also contribute to the UN Decade of Ocean Science for Sustainable Development¹¹⁷ by fostering research and cooperation across European sea basins, including the EU Outermost Regions and beyond, and mobilise scientists, as well as citizens for a sustainable and healthy ocean, seas and waters.

The implementation plan specifies the goal and objectives as well as implementation details of the Mission “Restore our Ocean and waters by 2030”¹¹⁸.

The Mission Work Programme, under Horizon Europe, will contribute to the recovery of our ocean and waters by 2030 and more specifically to the following objectives:

1. Protect and restore marine and freshwater ecosystems and biodiversity, in line with the EU Biodiversity Strategy 2030¹¹⁹ and the Nature Restoration Law¹²⁰;
2. Prevent and eliminate pollution of our ocean, seas and waters, in line with the EU Action Plan Towards Zero Pollution for Air, Water and Soil¹²¹;
3. Make the sustainable blue economy carbon-neutral and circular, in line with the European Climate Law¹²² and the holistic vision enshrined in the Communication on a new approach for a Sustainable Blue Economy¹²³.

The Mission is implemented in two phases:

- In the first ‘development and piloting’ phase (2022-2025), research and innovation activities lay the foundations for implementing the three Mission objectives and enabling actions, paving the way to further citizens participation and engagement.

¹¹⁷ <https://www.oceandecade.org/>

¹¹⁸ https://ec.europa.eu/info/sites/default/files/research_and_innovation/funding/documents/ocean_and_waters_implementation_plan_for_publication.pdf

¹¹⁹ COM/2020/380 final

¹²⁰ Regulation (EU) 2024/1991 of the European Parliament and of the Council of 24 June 2024 on nature restoration and amending Regulation (EU) 2022/869 (Text with EEA relevance), OJ L, 2024/1991

¹²¹ COM/2021/400 final

¹²² Regulation(EU)2021/1119

¹²³ COM/2021/240 final

- In the second ‘deployment and upscaling’ phase (2026-2030), the solutions will be further deployed, replicated and scaled up. Activities aim at supporting transformative and innovative solutions to be demonstrated in view of their deployment. Enabling activities will continue generating new knowledge, observation and monitoring data.

To foster synergies between R&I funding instruments (European and national), align R&I investments, ensure access to excellence and translate research results for the benefit of the society and the economy, applicants should consider and actively seek complementarities with, and where appropriate possibilities for further funding from other R&I-relevant EU, national or regional programmes for a sustainable blue economy, notably EMFF/EMFAF, LIFE, ERDF, ESF+, JTF, CEF Inland Waterways or Maritime and InvestEU, as well as private funds or financial instruments. All actions of the Mission are expected to share and disseminate their results according to FAIR (findable, accessible, interoperable, reusable) principles compatible with ongoing EU initiatives such as the European Marine Observation and Data Network (EMODnet) and the European Open Science Cloud (EOSC). In line with this approach, specific actions within the Mission will be devoted to widening access to data and knowledge of ocean, seas and freshwater through the Digital Twin Ocean ¹²⁴ (a key deliverable of the Mission Ocean and waters digital knowledge system).

All proposals submitted to the topics listed below are expected to show how their proposed activities and results will achieve the Mission’s objectives, in line with the timeframe of the Mission phases, i.e.: by 2025 for the ‘development and piloting’ phase and 2030 for the ‘deployment and upscaling phase’.

The 2025 work programme is structured around the following activities:

- Evidence-based approaches and solutions to support the establishment of Marine Protected Areas (**Blue Parks**);
- A toolbox for public authorities to address plastic litter by implementing **land-to-river-to-sea** approaches;
- Uptake of innovative solutions to support the digital **transition in fisheries and aquaculture** and improve energy efficiency;
- Place-based and people-centred **restoration** (in the sense of the Mission, i.e. contributing to the three objectives of the Mission) of a number of **regions** and their coastal and riparian zones, **waterfront cities and islands**;
- Consolidation of the core infrastructure of the **European Digital Twin Ocean (DTO)** and integration of additional models;
- Consolidation of **national and regional hubs** mobilizing national and regional funds as well as private financing, to support the replication of innovative solutions.

¹²⁴ https://research-and-innovation.ec.europa.eu/funding/funding-opportunities/funding-programmes-and-open-calls/horizon-europe/eu-missions-horizon-europe/restore-our-ocean-and-waters/european-digital-twin-ocean-european-dto_en

Activities to support communities to achieve the objectives of the Mission Ocean and Waters, to develop an Ocean Observation Platform, to improve accounting of blue carbon within the wetlands and to support a conference under the Danish Presidency are also covered.

Proposals are invited against the following topic(s):

HORIZON-MISS-2025-03-OCEAN-01: Blue Parks - Towards a coherent European network of strictly protected areas for restoring healthy and productive marine ecosystems

Call: Supporting the implementation of the Restore our Ocean and Waters Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 4.00 and 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Improved knowledge on the distribution and condition of marine habitats, as well as on key ecosystem services provided by these habitats;
- Support to, and acceleration of the designation by Member States/Associated Countries of new strictly protected areas, contributing to the EU Biodiversity Strategy and the UN Convention on Biological Diversity;
- Measurable contributions to achieving the Mission ocean and waters' Objective 1 on the Protection and restoration of marine ecosystems and biodiversity.

Scope: The EU Biodiversity Strategy for 2030 sets a target to legally protect at least 30% of EU seas and to strictly protect 10% of EU seas by 2030. Member States have supported this target and have started the scientific and technical work to identify new areas to be (strictly) protected. Strictly protected areas are also expected to play a role in the implementation of obligations to restore habitats listed in the Regulation on Nature Restoration (habitat types in Annex II¹²⁵ and habitats of species covered by the regulation) through passive restoration. There are however many data gaps concerning the distribution and condition of habitats and potential different strategies in Member States to find suitable areas for strict protection that may hinder the creation of a truly coherent EU network of strictly protected areas. There is a need for science-based conservation planning at a sea basin or sub-basin scale which would

¹²⁵ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32024R1991&qid=1722240349976>

also take into account potential trade-offs due to the main uses of the sea as well as maximise benefits for climate and fisheries. While there are ongoing projects that should support the planning of future EU Marine Protected Areas (MPAs) networks, none of them is currently focusing on the specific target of strictly protected areas and delivering benefits for climate and fisheries, as well as explicitly addressing potential spatial trade-offs with offshore renewables and other activities.

This topic addresses Mission ocean and waters' Objective 1 on the protection and restoration of marine ecosystems and biodiversity, in line with the aims of the Biodiversity Strategy¹²⁶ as well as on the objectives of the Regulation on Nature Restoration¹²⁷. They should also contribute to the aims of the Marine Action Plan¹²⁸ and to the implementation of the Birds, Habitats[[Council Directive 92/43/EEC; Directive 2009/147/EC]] and Marine Strategy Framework¹²⁹ Directives, as well as the common fisheries policy and climate policy and legislation.

Proposals should focus on prioritising areas for strict protection in European seas by providing a scientific basis for Member States/Associated Countries to designate new strictly protected areas, whilst delivering benefits for fisheries and climate.

Projects should identify potential areas and coherent networks of strictly protected areas covering in particular the habitat types listed in Annex II of the Regulation on nature restoration and habitats of species covered by the regulation, prioritising those habitats which are spawning, nursery and feeding areas for fish populations and species protected by the nature legislation, capturing and storing carbon as well as enhancing coastal protection. Projects should also include mapping and assessing conditions of these habitats, contributing to the implementation of Article 5 of the Regulation and providing data to EMODnet and the Digital Twin Ocean

Projects should promote trans-boundary joint actions, as national borders are most often inaccurate for reflecting natural boundaries (resource stocks, fluxes of organisms, habitats distribution). The project should also promote inter-disciplinary research (including legal sciences, economy, ecology etc.) and inter-sectorial, transdisciplinary approaches (practitioners, decision makers, scientists).

Compatibility of optimal network(s) of strictly protected areas as well as potential trade-offs with marine/maritime activities, (e.g.: fisheries, offshore wind energy and maritime transport), should be addressed.

All following activities should be covered:

- Review and compile data about the distribution and condition of habitat types listed in Annex II of Regulation on nature restoration, including by compiling data currently not available from public repositories, and collecting new data where necessary.

¹²⁶ COM(2020) 380 final

¹²⁷ REGULATION (EU) 2024/1991

¹²⁸ COM/2023/102

¹²⁹ Directive 2008/56/EC

- Review and compile data, collecting new data where necessary, about spawning, nursery and feeding areas of fish species and species protected by nature legislation, as well as areas with habitats which play a key role in carbon capture and storage and for coastal protection, including by compiling data currently not available from public repositories.
- Based on the ecological needs of those habitats and their typical species (including for example connectivity of habitats or life cycles of species), determine optimal network(s) of strictly protected areas, contributing to the 10% target of the Biodiversity Strategy, that would best support the protection of habitats and the delivery of significant benefits for fisheries and climate, for example through spill-over effects or by ensuring undisturbed capture and storage of carbon and coastal resilience and preventive measures for protection.
- Address the compatibility with and potential trade-offs in relation to planned marine/maritime activities, (e.g.: fisheries, offshore wind energy, coastal development and maritime transport) that may overlap with the identified optimal network(s) of strictly protected areas. Relevant Marine Spatial Planning plans should be taken into account.

The project(s) is/are expected to deliver a blueprint for the establishment of optimal network(s) of marine strict protected areas, whose scale and range should be ecologically relevant and impactful. Close cooperation with the relevant public authorities and stakeholders is encouraged.

The project(s) should build on existing knowledge and projects funded by the EU and national programmes, which are relevant for MPAs and maritime spatial planning, including data collected by the Joint Research Centre and the European Environment Agency, as well as on projects supported by the European Union Framework programmes for Research and Innovation (such as Horizon 2020 and Horizon Europe), EMFAF, LIFE and Interreg programmes, the Partnership Biodiversa+ and JPI Oceans. Project(s) should support Member States' cooperation on the establishment of coherent networks of strictly protected areas.

Projects should cooperate closely with projects funded under Mission ocean and waters topics HORIZON-MISS-2021-OCEAN-02-01, HORIZON-MISS-2022-OCEAN-01-01, and HORIZON-MISS-2023-OCEAN-01-01 and avoid overlaps with regard to the geographical coverage of the projects already funded. Projects should build links with the Mission Implementation Platform and with the Blue Parks community.

Proposals addressing the EU Outermost Regions¹³⁰ are encouraged, given these regions' natural assets.

¹³⁰

https://ec.europa.eu/regional_policy/policy/themes/outermost-regions_en

HORIZON-MISS-2025-03-OCEAN-02: A toolbox for public authorities to address marine plastics and litter from river-to-ocean

Call: Supporting the implementation of the Restore our Ocean and Waters Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 4.50 and 5.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 22.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio covering the 4 different Mission basins¹³¹ (1. Atlantic and Arctic sea basin, 2. Mediterranean Sea basin, 3. Baltic and North Sea basin, 4. Danube River basin, including Black Sea), grants will be awarded to applications not only in order of ranking but at least also to one proposal that is the highest ranked within each sea basin, provided that the applications attain all thresholds.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries will be subject to the following additional obligations regarding open science practices: if projects collect in-situ data and marine observations, beneficiaries must make them openly available through the European Marine Observation and Data network (EMODnet), based on the FAIR (Findable, Accessible, Interoperable, Reusable) principles.</p>

¹³¹ For the purposes of Mission Ocean and waters, Member States/Associated Countries, are considered to be part of a given sea/river basin if they have a coast/riverbank on the relevant sea/river or contain river basins flowing into the relevant sea.

	Beneficiaries may provide financial support to third parties. The support to Third Parties can only be provided in the form of grants. The Financial Support to Third Parties may only be awarded to local and/or regional authorities/public bodies located in Member States/Associated Countries. The maximum amount to be granted to each Third Party is EUR 100,000, aiming at showcasing the effectiveness of the toolbox and develop a replication plan for its uptake in an ‘associated region’ ¹³² . The Financial Support to a Third Party is provided only once for the entire duration of the project.
--	--

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Public authorities and relevant stakeholders have access to a toolbox to address marine plastic litter from land-to-river-to-ocean;
- Reduced plastic litter pollution in European rivers and seas according to a land-to-river-to-sea approach at basin level;
- Accelerated uptake of innovative solutions to prevent and remove litter, including plastic pollution reaching the sea in the Mission basins;
- Enhanced knowledge on marine litter, including plastics in line with the new guidelines for a common approach to tackle marine litter of the Marine Strategy Framework Directive (MSFD) Technical Group on Marine Litter;
- Measurable contributions to achieve the Mission ocean and waters and the EU Zero Pollution targets to reduce by at least 50% plastic in the sea;
- Contribution to the Mission’s Digital ocean and water Knowledge system through marine observations and open data and knowledge sharing.

Scope: Understanding and tackling the inland sources, pathways, distribution and cumulative impacts of marine litter and plastic pollution into the ocean is fundamental to reduce the overall anthropogenic impact on our ecosystems and to guide the process towards the Mission’s 50% plastic litter reduction target in European water systems.

The overall aim of the activities under this topic is to co-design with relevant public authorities and public service providers, as well as other interested parties the most appropriate tools and solutions to address marine litter and plastic pollution according to a land-to-river-to-sea approach at basin level.

The main deliverable of funded projects under this topic will be a toolbox providing evidence-based data and information on sources, pathways, distribution and cumulative impacts of marine litter on ecosystems and water quality, including plastics and information on related

¹³² Regional or local authorities established as public bodies by national law and governed by public law

hotspots and areas of accumulation, together with a set of demonstrated, sustainable and environmentally sound removal solutions, as well as measures to prevent litter and plastics reaching the sea.

Work should focus on inland waters (including deltas and coastal areas), where, in the absence of systematic monitoring of plastic litter, data and standardised methodological tools and techniques for collection, identification, classification and quantification of plastic pollution are most urgently needed. Activities are also expected to enhance cross-border cooperation and coordination at different levels, national, regional, local.

All following components are expected to be embedded in the toolbox:

- Marine litter monitoring and data collection to detect, identify and characterise major sources and pathways, hotspots and areas of accumulation of riverine litter, as well as cost-effective quantification of litter presence and fluxes, both above and below water. Relevant data collected through these actions should follow the [New guidelines for a common approach to tackle marine litter](#) of the MSFD Technical Group on Marine Litter and be made openly available through the European Marine Observation and Data Network (EMODnet);
- A set of suitable and cost-effective innovative solutions for the sustainable and environmentally sound removal of plastics litter in rivers and inland waters, leading to reduction of litter in sea basins, without harming living organisms;
- Measures to engage with society and relevant industrial sectors, including the fishing industry, to prevent plastic litter reaching the sea (e.g.: good practices; awareness raising campaigns, community-led actions, education schemes, audio-visual campaigns, proper waste management) and to support the uptake of innovative solutions, thus driving environmental improvements and transformative changes.

Each proposal should identify explicitly the basin being addressed, i.e.: 1. Atlantic and Arctic sea basin or 2. Mediterranean Sea basin or 3. Baltic and North Sea basin or 4. Danube River basin, including Black Sea. Only one basin per proposal should be addressed. Activities should be tailored to address regional/sea basin specificities.

The effectiveness and efficiency of the toolbox should be demonstrated through at least 3 use-cases in three different countries per basin, in the most relevant identified sites, such as river deltas, important source-sites of litter or other strategic points for litter removal and with the involvement of different users (e.g.: regional authorities, municipalities, entities managing waterbodies) .

To address the impact-driven approach of the Mission and the nature of Innovation Actions, projects are expected to work with and engage at least 3 ‘associated regions’ to showcase the effectiveness of the toolbox and develop a replication plan for its uptake in the associated regions. For this reason, beneficiaries may provide Financial Support to Third Parties (see the Specific Conditions table for this topic) to implement the 'Associated regions' scheme. An ‘Associated region is represented by local/regional authorities/public bodies. The aim of the Associated Region scheme is to support the replication of innovative solutions and/or to build

capacity at local level in order to address plastic litter according to a land-to-river-to-sea approach. The projects should ensure that the 'Associated regions' are not already involved in the use cases covered by the projects. The partners should proactively reach out to the 'associated regions' to enable them to follow closely the project and its activities. The projects should continuously share their outcomes and knowledge with those 'associated regions' and provide them with technical assistance to build capacity and to implement in their territory the approach they developed. Proposals must outline the selection process of the third parties to which financial support would be granted in accordance with the specific conditions of this topic, the requirements of the Financial Support to Third Parties application template and part B of the General Annexes to this work programme. The involvement of 'Associated regions' through the Financial Support to Third Parties, as described above, is a key element of the proposed action.

Should the actions include the development of digital tools, to support the monitoring, data collection, forecasting and decision-making regarding marine litter at local level, interoperability with the work done in the EU Digital Twin of the Ocean and storage in the digital platform are required, as a means of continuity, creating synergies and exchanges and ensuring legacy.

The projects selected under this topic are expected to cooperate and exchange among themselves as well as with relevant projects arising from previous topics implemented under Mission ocean and waters (e.g.: HORIZON-MISS-2022-OCEAN-01-04), the Plastic Pirates project, with the WATER4ALL partnership, relevant Interreg projects as well as projects that will be funded under the topic HORIZON-CL6-2025-01-ZEROPOLLUTION-05: Towards a comprehensive European strategy to assess and monitor aquatic litter including plastic and microplastic pollution and HORIZON-CL4-SPACE-2025-01-46: Innovative Earth observation services in support of maritime litter detection and ship source pollution policies. Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures¹³³.

Cooperation with the EU Outermost Regions¹³⁴ is encouraged, given these regions' natural assets.

HORIZON-MISS-2025-03-OCEAN-03: Digital technologies and energy transition in fisheries and/or aquaculture

Call: Supporting the implementation of the Restore our Ocean and Waters Mission	
Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of between EUR 5.00 and 5.825 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

	Reusable) principles.
--	-----------------------

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Energy efficiency is enhanced and CO₂ emissions are reduced in fisheries and/or aquaculture, without harming the ecosystem and biodiversity;
- Measurable reduction in energy use and the costs associated with energy-intensive operations in the fisheries and aquaculture sector, increasing resilience and leading to improved economic sustainability and operational safety;
- Wider adoption and application of digital solutions, including artificial intelligence and data analytics, for efficient energy management and decision-making in the fisheries and aquaculture industries;
- Improved understanding of technical, social, legal, regulatory and policy barriers to the uptake of digital solutions for a sustainable energy transition of the sector;
- Establishment of best practices for enhanced fisheries and/or aquaculture management and contribution to the development of standard;
- Enhanced digital and energy efficiency related skills.

Scope: The fisheries and aquaculture sectors, including algae, are critical components of the global food system, contributing significantly to food supply, food security and sustainable economic growth. Energy, specifically fuel consumption, is one of the major cost items in the European fisheries and aquaculture sector, putting the economic viability of the European fleet and aquaculture activities under tremendous pressure during periods of high energy prices. Moreover, this fuel usage contributes to CO₂ and other emissions, including underwater noise. Innovative solutions are needed to transform the energy landscape of the fisheries and aquaculture, making these critical industries more sustainable, resilient, and economically viable.

Projects under this topic will demonstrate how digital technologies can address the need to reduce energy consumption and associated economic and environmental costs in European fisheries and/or aquaculture and provide real-time, accurate, and actionable data and information to reduce energy use. This can include the use of advanced (remote) sensing technologies and monitoring devices, Internet of Things, artificial intelligence, data-driven approaches and data analytics, robotics and automation.

Each proposal should identify explicitly the basin being addressed, i.e.: 1. Atlantic and Arctic sea basin or 2. Mediterranean Sea basin or 3. Baltic and North Sea basin or 4. Danube River basin (including its delta and the Black Sea). Only one basin per proposal should be addressed. Activities should be tailored to address regional/sea basin specificities.

Projects should carry out demonstration activities, proving in real conditions, the operational feasibility and economic viability of digital solutions to enhance energy efficiency in operation at sea (including fishing, farming, offshore aquaculture, onboard processing, vessel operations) or inland aquaculture production and in relation to infrastructure requirements. Projects should provide evidence that these solutions do not harm ecosystems and biodiversity and can contribute to a better treatment of animals.

The consortium must carry out demonstration activities in at least 3 different countries of the basin addressed by the proposal (i.e. one of the following basins: 1. Atlantic and Arctic sea basin, 2. Mediterranean Sea basin, 3. Baltic and North Sea basin, 4. Danube River basin, including Black Sea, involving and including as beneficiaries, legal entities established in these respective countries.)¹³⁷

Demonstration activities are expected to focus on relevant segments of the value chain and address different types of fisheries/aquacultures. Similarly, fishing operations, encompassing activities from route optimisation to catch handling, also present significant opportunities for energy efficiency improvements.

The implementation of the demonstration activities should also include an analysis of the obstacles and opportunities for the uptake of the solutions (technical, social, legal, regulatory and policy, including those linked to skills, the labour market and the attractiveness of the sector for young talents). Safety and well-being of workers as well as digital security related issues should also be considered.

This topic requires an integrated, holistic and transdisciplinary approach. Proposals should therefore ensure the involvement of relevant stakeholders with complementary expertise, including SMEs and of other relevant maritime sectors. The active involvement of end-users (fishers, aquaculture operators, sea-farmers) in the demonstration activities will be crucial to tailor the solutions to specific needs and conditions.

Dedicated training and user-centric activities taking place in the demonstration sites are expected to be included, to build capacity and support skill development and a workforce adapted to a sustainable energy transition.

Specific actions should be included to support the replication potential of the solutions, accelerate the uptake by other potential users of the solutions demonstrated in the project. Roadmaps for the uptake of digital solutions to support the energy transition in fisheries and/or aquaculture are also expected.

Projects should consider the provision of advisory support to the end-users to enhance energy monitoring and energy management to facilitate informed decision-making to reduce energy use, lower costs, and mitigate environmental impacts or to support the shift to renewable energy.

¹³⁷ For the purposes of Mission Ocean and waters, Member States/Associated Countries, are considered to be part of a given sea/river basin if they have a coast/riverbank on the relevant sea/river or contain river basins flowing into the relevant sea.

The projects are expected to cooperate and exchange with relevant projects implemented under the Sustainable Blue Economy Partnership¹³⁸, the Zero Emission Waterborne Transport Partnership¹³⁹, as well as projects funded under the topic HORIZON-MISS-2023-OCEAN-01-05: Lighthouse in the Baltic and the North Sea basins - Lighthouse in the Baltic and the North Sea basins - Green and energy-efficient small-scale fishing fleets. Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures as well as related projects such as AQUASERV¹⁴⁰.

HORIZON-MISS-2025-03-OCEAN-04: Restoring Ocean and Waters in Regions

Call: Supporting the implementation of the Restore our Ocean and Waters Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 15.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Other conditions</i>	The proposed actions should implement their activities in at least [8] different regions, aiming for an equal distribution across the four lighthouses ¹⁴¹ , as defined in the Mission Implementation Plan: 1. Atlantic and Arctic Sea basin, 2. Mediterranean Sea basin, 3. Baltic and North Sea basin, 4. Danube River basin, including Black Sea. Regions are defined according to Eurostat Nomenclatures, NUTS levels 2.
<i>Evaluation</i>	The evaluation committee might be composed partially by representatives

¹³⁸ <https://www.bluepartnership.eu/>

¹³⁹ <https://www.waterborne.eu/projects>

¹⁴⁰ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>; AQUASERV – research infrastructure services for sustainable aquaculture, fisheries and the blue economy <https://cordis.europa.eu/project/id/101131121>

¹⁴¹ For the purposes of the Mission Ocean and Waters, Member States/Associated Countries, are considered to be part of a given sea/river basin if they have a coast/riverbank on the relevant sea/river or contain river basins flowing into the relevant sea.

<i>Procedure</i>	of EU institutions
------------------	--------------------

Expected Outcome: This topic aims at directly engaging and supporting regional authorities in demonstrating and accelerating the transitions needed for achieving one or several objectives of the Mission Restore our Ocean and Waters in their coastal and riparian areas. The participation of regional authorities¹⁴² as full partners of the consortium is strongly encouraged.

Projects should work with regional authorities and other relevant competent authorities (e.g. authorities responsible for river, water and coastal management) in carrying out restoration activities in coastal zones¹⁴³ and riparian zones¹⁴⁴ on land, in the land-sea continuum as well as in their surface waters (rivers, lakes, transitional and coastal waters), which will contribute to achieving the Mission objectives.

Project results are expected to contribute to all the following expected outcomes:

- Measurable, quantifiable, verifiable and ambitious progress towards reaching one or several interlinked objectives and targets of the Mission “Restore our Ocean and Waters by 2030”, as set out in the Mission Implementation Plan¹⁴⁵ through implementation of effective and well-managed place-based and people-centred actions.
- Involvement and increased readiness of regional and other competent authorities for testing, deploying and upscaling systemic innovative solutions for restoring their coastal and riparian areas, incl. by strengthening synergies with their own programmes and resources.
- Increased number of regional authorities and other competent authorities taking concrete measures to protect and restore marine and freshwater ecosystems and biodiversity, prevent and eliminate pollution of our ocean, seas and waters, and make the blue economy carbon-neutral and circular, supporting programmes of measures of relevant EU legislation.
- Increased resilience of coastal and riparian communities to extreme climate events and sea-level rise.
- Public and private investment is encouraged and leveraged at regional level to protect and restore degraded ecosystems, to prevent and eliminate pollution, and make the blue economy carbon-neutral and circular.

¹⁴² In the context of this topic, regional authorities refer to legal entities responsible for managing regions, geographical areas at sub-national level, defined as NUTS 2 and 3, corresponding to actual administrative units with their own representation/government. For more information about NUTS (Nomenclature of territorial units for statistics).

¹⁴³ <https://land.copernicus.eu/en/products/coastal-zones>

¹⁴⁴ <https://land.copernicus.eu/en/products/riparian-zones>

¹⁴⁵ See section 1.2. of the Mission Ocean and Waters Implementation Plan: https://research-and-innovation.ec.europa.eu/system/files/2021-09/ocean_and_waters_implementation_plan_for_publication.pdf

Scope: The project should test and demonstrate effective solutions to achieve the Mission's specific objectives and targets in coastal and riparian areas. The project should thus test and demonstrate solutions that contribute to:

1. protecting and restoring marine and freshwater ecosystems and biodiversity, in line with the EU Biodiversity Strategy 2030 and Nature Restoration Regulation, and/or
2. preventing and eliminating pollution of our ocean, seas and waters, in line with the EU Action Plan Towards Zero Pollution for Air, Water and Soil and/or
3. making the sustainable blue economy carbon-neutral and circular, in line with the European Climate Law and the holistic vision enshrined in the Sustainable Blue Economy Strategy.

Demonstration activities are expected to take place in at least [8] regions with at least [2] in each of the four sea and river basins 1. Atlantic and Arctic Sea basin, 2. Mediterranean Sea basin, 3. Baltic and North Sea basin, 4. Danube River basin, including Black Sea, with strong and meaningful involvement of relevant authorities.

Projects under this topic would be place-based and people-centred, with their activities implementing a systemic transition across all Mission objectives and enablers, in all lighthouses. Special emphasis should be placed on nature-based solutions, land-sea interactions, and transboundary actions. The projects should support the blue economy by integrating sustainable and environmentally friendly methods that are both ecologically and economically beneficial. Resilience of coastal and riparian communities to climate related extreme events, sea-level rise and water resilience aspects should also be addressed.

The project should:

- Assess the economic, social and ecological impacts as well as the societal acceptance of the proposed measures to achieve the Mission objectives and targets in coastal regions and riparian areas;
- Identify, test and adapt innovative solutions to restore coastal and riparian areas, making a tangible and measurable contribution to one or several of the specific Mission objectives and targets;
- Encourage citizen and stakeholder involvement and uptake through active participation in the restoration initiatives of coastal regions and riparian zones (e.g. through living labs), and through the follow-up of the restoration process with citizen science initiatives;
- Develop new innovative funding approaches to implement innovative solutions for the restoration of the ocean and waters;
- Monitor with measurable parameters the effectiveness of the proposed solutions in relation to the Mission objectives and targets;

- Facilitate synergies with other R&I-relevant EU, national or regional programmes and leverage of funds through interactions with regional/local authorities and the private sector where relevant.

For the successful implementation of the solutions and to ensure their sustainability beyond the duration of the project, the testing and demonstration of the proposed solutions should support the implementation of River Basin Management Plans under the Water Framework Directive, the Programme of Measures under the Marine Strategy Framework Directive, future national Nature Restoration Plans under the Nature Restoration Regulation, as well as, wherever already in place, existing mechanisms such as *coastal restoration contracts*¹⁴⁶, *river contracts*¹⁴⁷ or *Integrated Coastal Zone Management (ICZM)*, etc. Proposed solutions should be based on good knowledge about coastal and riparian ecosystems to be restored. If necessary, projects may include mapping and assessment of condition of related habitats and species.

Under the Mission approach, collaborations between regional authorities and other competent authorities facing similar challenges are highly encouraged and considered as a means to secure a larger impact. To facilitate replication of the solutions, the proposals should already identify other suitable regions/local areas, where the solutions and approaches could be replicated. Projects should also systematically assess the potential barriers to their implementation and how these can be overcome. This would help enhancing the transferability of the knowledge and experiences to other regions.

Regional and other competent authorities participating in the project are encouraged to pool and enhance synergies¹⁴⁸ with other sources of funding (e.g. structural, cohesion funds such as ERDF, or LIFE) for implementing and deploying innovative solutions, through e.g., the conclusion of a Cooperation Working Arrangement¹⁴⁹. This will support a common approach towards coastal and river restoration, and sustain the implementation of solutions, transfer knowledge and innovative solutions, and identify opportunities to scale up the solutions demonstrated and to foster their broad deployment across Europe.

The project should build (when relevant) on previously developed or existing solutions by other projects, funded by EU and national programmes, in particular the European Union Framework programmes for Research and Innovation (such as Horizon 2020 and Horizon Europe under their different pillars and clusters), as well as EMFAF, INTERREG and LIFE programmes. Proposals should also establish links with “HORIZON-MISS-2024-OCEAN-02-01: Community-led actions to restore our ocean, seas and waters” and “HORIZON-MISS-2024-OCEAN-02-02: Support for the Coalition of waterfront cities, regions and islands for

¹⁴⁹ https://research-and-innovation.ec.europa.eu/news/all-research-and-innovation-news/eu-mission-ocean-and-waters-signs-first-cooperation-working-arrangement-eu-region-2024-12-17_en

Mission Ocean and Waters” are encouraged to consider, where relevant, the services offered by European research infrastructures¹⁵⁰.

The funded project should share experiences and good practices with the projects selected under the topics of the EU Mission Climate Change Adaptation “Supporting regions and local authorities in assessing climate risks” (HORIZON-MISS-2025-01-CLIMA-01) and “Support to regions and local authorities in developing local Action Plans towards climate resilience” (HORIZON-MISS-2025-01-CLIMA-02).

Proposals should include a mechanism and the resources to establish operational links and collaboration with the Lighthouse CSAs and the Mission Implementation Platform, notably to contribute to tracking progress towards the objectives of the Mission.

HORIZON-MISS-2025-03-OCEAN-05: Restoring Ocean and Waters in waterfront Cities and their Ports

Call: Supporting the implementation of the Restore our Ocean and Waters Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 15.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Other conditions</i>	The proposed actions should implement their activities in at least [8] waterfront cities and ports, aiming for an equal distribution across the four lighthouses ¹⁵¹ as defined in the Mission Implementation Plan: 1. Atlantic and Arctic Sea basin, 2. Mediterranean Sea basin, 3. Baltic and North Sea basin, 4. Danube River basin, including Black Sea.

¹⁵⁰ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

¹⁵¹ For the purposes of Mission Ocean and Waters, Member States/Associated Countries, are considered to be part of a given sea/river basin if they have a coast/riverbank on the relevant sea/river or contain river basins flowing into the relevant sea.

<i>Evaluation Procedure</i>	The evaluation committee might be composed partially by representatives of EU institutions
-----------------------------	--

Expected Outcome: This topic aims at directly engaging and supporting waterfront cities¹⁵² and their ports in demonstrating and accelerating the transitions needed for achieving one or several objectives of the Mission “Restore our Ocean and Waters”. The participation of relevant public bodies managing waterfront cities and port authorities as full partners of the consortium is strongly encouraged.

The project should work with public bodies managing waterfront cities, and port authorities in carrying out activities which will contribute to achieving the Mission objectives in the coastal zones¹⁵³ and riparian zones¹⁵⁴ of any city as well as in their surface waters (rivers, lakes, transitional and coastal waters). This covers both coastal and inland cities.

Project results are expected to contribute to all of the following expected outcomes:

- Measurable, quantifiable, verifiable and ambitious progress towards reaching one or several interlinked objectives and targets of the Mission “Restore our Ocean and Waters by 2030”, as set out in the Mission Implementation Plan¹⁵⁵ through implementation of effective and well-managed place-based and people-centred actions.
- Involvement and increased readiness cities and port authorities for testing, deploying and upscaling systemic innovative solutions for restoring their urban waterfront ecosystems and preventing their degradation, incl. by strengthening synergies with their own programmes and resources.
- Increased number cities and port authorities taking concrete measures to protect and restore marine and freshwater ecosystems and biodiversity, prevent and eliminate pollution of our ocean, seas and waters, and make the blue economy carbon-neutral and circular.
- Increased resilience of waterfront communities to extreme climate events and sea-level rise.

¹⁵² The term city is used to refer to a geographical subnational jurisdiction (“local administrative unit”) such as a town or a city that is governed by a local government as the legal entity of public administration, understanding that the institutions of local governments may vary from country to country and terminology used in national contexts may differ. Cities must have at least 50 000 inhabitants. For countries with a lower number of larger cities, this population threshold is lowered to 10 000 inhabitants. Those countries are: Croatia (HR), Cyprus (CY), Estonia (EE), Ireland (IE), Latvia (LV), Lithuania (LT), Luxembourg (LU), Malta (MT), Slovenia (SI) and Slovakia (SK).

¹⁵³ <https://land.copernicus.eu/en/products/coastal-zones>

¹⁵⁴ <https://land.copernicus.eu/en/products/riparian-zones>

¹⁵⁵ See section 1.2. of the Mission Ocean and Waters Implementation Plan: https://research-and-innovation.ec.europa.eu/system/files/2021-09/ocean_and_waters_implementation_plan_for_publication.pdf

Public and private investment is encouraged and leveraged at urban level to protect and restore degraded ecosystems, to prevent and eliminate pollution, and make the blue economy carbon-neutral and circular, and mitigate the impact of climate change on urban communities.

Scope: The goal of this topic is to accelerate the implementation of innovative solutions to achieve Mission objectives and targets in waterfront cities and ports.

The project should test and demonstrate effective solutions to achieve the Mission's specific objectives and targets in waterfront cities. The project should thus test and demonstrate solutions that contribute to:

1. protecting and restoring marine and freshwater ecosystems and biodiversity, in line with the EU Biodiversity Strategy 2030 and Nature Restoration Regulation, and/or
2. preventing and eliminating pollution of our ocean, seas and waters, in line with the EU Action Plan Towards Zero Pollution for Air, Water and Soil and/or
3. making the sustainable blue economy carbon-neutral and circular, in line with the European Climate Law and the holistic vision enshrined in the Sustainable Blue Economy Strategy.

Demonstration activities are expected to take place in at least [8] waterfront cities or ports with at least [2] in each of the four sea and river basins: 1. Atlantic and Arctic Sea basin, 2. Mediterranean Sea basin, 3. Baltic and North Sea basin, 4. Danube River basin, including Black Sea, with strong and meaningful involvement of public bodies managing waterfront cities and port authorities.

Projects under this topic would be place-based and people-centred, with their activities implementing a systemic transition across all Mission objectives and enablers, in all lighthouses. Special emphasis should be placed on nature-based solutions, land-sea interactions, and transboundary actions. The projects should support the blue economy by integrating sustainable and environmentally friendly methods that are both ecologically and economically beneficial. Resilience of waterfront communities to climate related extreme events, sea-level rise and water resilience should also be addressed.

The project should:

- Assess the economic, social and ecological impacts as well as the societal acceptance of the proposed measures to achieve the Mission objectives and targets in waterfront cities and ports;
- Identify, test and adapt innovative solutions to restore cities and ports by addressing one or several of the specific Mission objectives and targets;
- Facilitate citizen and stakeholder involvement and uptake through active participation in the restoration initiatives of coastal regions and riparian zones (e.g. through living labs), and through the follow-up of the restoration process with citizen science initiatives;

- Develop new innovative funding approaches to implement innovative solutions for the restoration of the ocean and waters in cities which are all operating in different jurisdictions and governance contexts;
- Monitor the effectiveness of the proposed solutions in relation to the Mission objectives and targets;
- Facilitate synergies with other R&I-relevant EU, national or regional programmes and leverage of funds through interactions with regional/local authorities and the private sector where relevant.

Under the Mission approach, collaborations to demonstrate, test and deploy effective innovative solutions between cities and ports facing similar challenges are highly encouraged and considered as a means to secure a larger impact. To facilitate replication of the solutions, proposals should already identify other suitable cities and ports where the solutions and approaches could be replicated. Projects should also systematically assess the potential barriers to their implementation and how these can be overcome. This would help enhancing the transferability of the knowledge and experiences to other cities and ports.

For the successful implementation of the solutions and to ensure their sustainability beyond the duration of the project, the testing and demonstration of the proposed solutions should support the River Basin Management Plans under the Water Framework Directive, the Programme of Measures under the Marine Strategy Framework Directive, future national Nature Restoration Plans under the Nature Restoration Regulation, as well as, wherever already in place, existing mechanisms such as *coastal restoration contracts*¹⁵⁶, *river contracts*¹⁵⁷ or *Integrated Coastal Zone Management (ICZM)*, etc. Proposed solutions should be based on good knowledge about coastal and riparian ecosystems to be restored. If necessary, projects may include mapping and assessment of condition of related habitats and species.

Public bodies managing cities and port authorities participating in the project are encouraged to pool and enhance synergies¹⁵⁸ with other sources of funding (e.g. structural, cohesion funds such as ERDF, or LIFE) for implementing and deploying innovative solutions, through e.g. the conclusion of a Cooperation Working Arrangement¹⁵⁹. This will support a common approach towards urban waterfront ecosystem restoration, and sustain the implementation of solutions, transfer of knowledge and innovative solutions, and identify opportunities to scale up the solutions demonstrated and to foster their broad deployment across Europe.

The project should build (when relevant) on previously developed or existing solutions by other projects, funded by EU and national programmes, in particular the European Union Framework programmes for Research and Innovation (such as Horizon 2020 and Horizon

¹⁵⁹ https://research-and-innovation.ec.europa.eu/news/all-research-and-innovation-news/eu-mission-ocean-and-waters-signs-first-cooperation-working-arrangement-eu-region-2024-12-17_en

Europe under their different pillars and clusters and from the EU Mission on Cities), as well as EMFAF, INTERREG and LIFE programmes. Proposals should also establish links with “HORIZON-MISS-2024-OCEAN-02-01: Community-led actions to restore our ocean, seas and waters” and “HORIZON-MISS-2024-OCEAN-02-02: Support for the Coalition of waterfront cities, regions and islands for Mission Ocean and Waters”, and are encouraged to consider, where relevant, the services offered by European research infrastructures¹⁶⁰.

The funded project should share experiences and good practices with the projects selected under the joint topic of the EU Mission Cities and Zero Emission Waterborne Transport Partnership on “Real time monitoring of regulated and non-regulated emissions in order to enforce emission limits in waterfront cities (HORIZON-MISS-CIT-CL5-2025-0X-0X).

Proposals should include a mechanism and the resources to establish operational links and collaboration with the Lighthouses CSAs and the Mission Implementation Platform, notably to contribute to tracking progress towards the objectives of the Mission.

HORIZON-MISS-2025-03-OCEAN-06: Restoring Ocean and Waters on Islands

Call: Supporting the implementation of the Restore our Ocean and Waters Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 13.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 13.50 million.
<i>Type of Action</i>	Innovation Actions
<i>Other conditions</i>	The proposed actions should implement their activities in at least [6] islands, aiming for an equal distribution across the following lighthouses ¹⁶¹ of the Mission Ocean and Waters: Baltic/North Sea, Atlantic/Arctic and Mediterranean.
<i>Evaluation Procedure</i>	The evaluation committee might be composed partially by representatives of EU institutions

Expected Outcome: This topic aims at directly engaging and supporting islands¹⁶² and their managing public authorities in demonstrating and accelerating the transitions needed for

¹⁶⁰ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

¹⁶¹ For the purposes of Mission Ocean and Waters, Member States/Associated Countries, are considered to be part of a given sea/river basin if they have a coast/riverbank on the relevant sea/river or contain river basins flowing into the relevant sea.

¹⁶² In the context of this topic, islands are defined as territories within the European Union and Associated Countries surrounded by water.

achieving one or several objectives of the Mission “Restore our Ocean and Waters”. The participation of relevant island managing authorities¹⁶³ as full partners of the consortium is strongly encouraged.

Project results are expected to contribute to all of the following expected outcomes:

- Measurable, quantifiable, verifiable and ambitious progress towards reaching one or several interlinked objectives and targets of the Mission “Restore our Ocean and Waters by 2030”, as set out in the Mission Implementation Plan¹⁶⁴ through implementation of effective and well-managed place-based and people-centred actions.
- Involvement and increased readiness of islands in testing, deploying and upscaling systemic innovative solutions for restoring islands, incl. by strengthening synergies with their own programmes and resources.
- Increased number of islands taking concrete measures to protect and restore marine and freshwater ecosystems and biodiversity, prevent and eliminate pollution of our ocean, seas and waters, and make the blue economy carbon-neutral and circular.
- Increased resilience of island communities to extreme climate events and sea-level rise.
- Public and private investment is encouraged and leveraged on islands to protect, conserve and restore degraded ecosystems.

Scope: The goal of this topic is to work with public authorities to accelerate the implementation of innovative solutions to achieve Mission objectives and targets on islands, including small ones.

The project should test and demonstrate effective solutions to achieve the Mission’s specific objectives and targets on islands. The project should thus test and demonstrate solutions contribute to:

1. protecting and restoring marine and freshwater ecosystems and biodiversity, in line with the EU Biodiversity Strategy 2030 and Nature Restoration Regulation, and/or
2. preventing and eliminating pollution of our ocean, seas and waters, in line with the EU Action Plan Towards Zero Pollution for Air, Water and Soil and/or
3. making the sustainable blue economy carbon-neutral and circular, in line with the European Climate Law and the holistic vision enshrined in the Sustainable Blue Economy Strategy.

Demonstration activities are expected to take place on at least [6] islands with at least [2] in each of the following basin lighthouses: 1. Atlantic and Arctic Sea basin, 2.

¹⁶³ Regional or local authorities managing islands

¹⁶⁴ See section 1.2. of the Mission Ocean and Waters Implementation Plan: https://research-and-innovation.ec.europa.eu/system/files/2021-09/ocean_and_waters_implementation_plan_for_publication.pdf

Mediterranean Sea basin, 3. Baltic and North Sea basin, with strong and meaningful involvement of relevant public authorities.

Projects under this topic would be place-based and people-centred, with their activities implementing a systemic transition across all Mission objectives and enablers, in all lighthouses. Special emphasis should be placed on nature-based solutions, land-sea interactions, and transboundary actions. The projects should support the blue economy by integrating sustainable and environmentally friendly methods that are both ecologically and economically beneficial. They will also address resilience of island communities to climate related extreme events and sea-level rise.

The project should support islands (and are encouraged to work with islands that have small but growing populations, limited resources, remoteness, susceptibility to natural disasters, vulnerability to external shocks, excessive dependence on external resources, and fragile environments, so that the projects help addressing their vulnerability to environmental changes, economic size, and isolation challenges. Furthermore, small islands and their communities offer the opportunity to function as models and living labs for piloting the needed transitions in a reasonably small-scale context. Following and expanding the example of the EU green energy pilot islands¹⁶⁵, the project should help small islands to implement the ecological, socio-economic and circular transitions needed to ensure their ecosystems restoration, energy- and water-security, a sustainable and circular blue economy, and climate resilience, along the Mission objectives.

The project should:

- Assess the economic, social and ecological impacts as well as the societal acceptance of the proposed measures to achieve the Mission objectives and targets on islands;
- Identify, test and adapt innovative solutions to restore islands by addressing one or several of the specific Mission objectives and targets;
- Develop new innovative funding approaches to implement innovative solutions for the restoration of the ocean and waters on islands, which are all operating in different jurisdictions and governance contexts;
- Encourage citizen and stakeholders involvement and uptake through active participation in the restoration initiatives of islands (e.g. through living labs), and through the follow-up of the restoration process with citizen science initiatives;
- Monitor the effectiveness of the proposed solutions in relation to the Mission objectives and targets;

¹⁶⁵ [The Journey Begins 30 Renewable Islands for 2030 - Ready, Set, 30! | Clean energy for EU islands \(europea.eu\)](https://europea.eu)

- Facilitate synergies with other R&I-relevant EU, national or regional programmes and leverage of funds through interactions with regional/local authorities and the private sector where relevant.

Under the Mission approach, collaborations to demonstrate, test and deploy innovative solutions between islands facing similar challenges are highly encouraged and considered as a means to secure greater impact. To facilitate replication of the solutions, proposals should already identify other suitable islands, where the solutions and approaches could be replicated. Projects should also systematically assess the potential barriers to their implementation and how these can be overcome. This would help enhancing the transferability of the knowledge and experiences to other islands and beyond.

For the successful implementation of the solutions and to ensure their sustainability beyond the duration of the project, the testing and demonstration of the proposed solutions should support the River Basin Management Plans under the Water Framework Directive, the Programme of Measures under the Marine Strategy Framework Directive, future national Nature Restoration Plans under the Nature Restoration Regulation, as well as, wherever already in place, existing mechanisms such as *coastal restoration contracts*¹⁶⁶, *river contracts*¹⁶⁷ or *Integrated Coastal Zone Management (ICZM)*, etc. Proposed solutions should be based on good knowledge about coastal and riparian ecosystems to be restored. If necessary, projects may include mapping and assessment of condition of related habitats and species.

Island authorities participating to the project are encouraged to pool and enhance synergies¹⁶⁸ with other sources of funding (e.g. structural, cohesion funds such as ERDF, or LIFE) for implementing and deploying innovative solutions through e.g., the conclusion of a Cooperation Working Arrangement¹⁶⁹. This will support a common approach towards island restoration, sustain the implementation of solutions, transfer of knowledge and innovative solutions, and identify opportunities to scale up the solutions demonstrated and to foster their broad deployment across Europe.

The project should build (when relevant) on previously developed or existing solutions by other projects, addressing island restoration and funded by EU and national programmes, in particular the European Union Framework programmes for Research and Innovation (such as Horizon 2020 and Horizon Europe under their different pillars and clusters), as well as EMFAF, INTERREG and LIFE programmes. Proposals should also establish links with “HORIZON-MISS-2024-OCEAN-02-01: Community-led actions to restore our ocean, seas and waters” and “HORIZON-MISS-2024-OCEAN-02-02: Support for the Coalition of

¹⁶⁶ Cf HE2020 RESTCOAST project

¹⁶⁷ Cf example <http://environnement.wallonie.be/contrat%5Ffriviere/>

¹⁶⁸ C(2022) 4747 final

¹⁶⁹ https://research-and-innovation.ec.europa.eu/news/all-research-and-innovation-news/eu-mission-ocean-and-waters-signs-first-cooperation-working-arrangement-eu-region-2024-12-17_en

waterfront cities, regions and islands for Mission Ocean and Waters”, and are encouraged to consider, where relevant, the services offered by European research infrastructures¹⁷⁰.

To foster synergies between R&I funding instruments (European, national and regional), align R&I investments, ensure access to excellence and translate research results for the benefit of the society and the economy, applicants should consider and actively seek complementarities with, and where appropriate possibilities for further funding from other R&I-relevant EU, national or regional programmes for a sustainable blue economy, notably EMFF/EMFAF, LIFE, ERDF, ESF+, JTF, CEF Inland Waterways or Maritime and InvestEU, as well as private funds or financial instruments.

Proposals should include a mechanism and the resources to establish operational links and collaboration with the Lighthouse CSAs and the Mission Implementation Platform, notably to contribute to tracking progress towards the objectives of the Mission.

Cooperation with the EU Outermost Regions¹⁷¹ is encouraged, given these regions’ natural assets.

HORIZON-MISS-2025-03-OCEAN-07: Mission Lighthouses coordination and support activities

Call: Supporting the implementation of the Restore our Ocean and Waters Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 3.00 and 3.55 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 14.20 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio covering the 4 different Mission basins¹⁷² (1. Atlantic and Arctic sea basin, 2. Mediterranean Sea basin, 3. Baltic and North Sea basin, 4. Danube River basin, including Black Sea), grants will be awarded to applications not only in order of ranking but at least also to one proposal that is the highest ranked within each</p>

¹⁷⁰ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

¹⁷² For the purposes of Mission Ocean and waters, Member States/Associated Countries, are considered to be part of a given sea/river basin if they have a coast/riverbank on the relevant sea/river or contain river basins flowing into the relevant sea.

	sea basin, provided that the applications attain all thresholds.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁷³ .
<i>Evaluation Procedure</i>	The evaluation committee might be composed partially by representatives of EU institutions

Expected Outcome: The ‘lighthouse’ basin approach designed for the first phase of the Mission will be enhanced, through the support to basin-specific activities implementing all Mission objectives and developing further solutions needed for replication and scale-up during the second phase, and thus strengthening basin-scale cooperation and governance. Project results are expected to contribute to all the following expected outcomes:

- Structuring effect to advance and/or consolidate the national and regional *hubs* supporting the implementation of all Mission Ocean and waters’ objectives at basin level and to ensure coherence and alignment of policies, initiatives and actions at EU, national and local level;
- Well-coordinated activities underpinned by a consistent monitoring framework to assess the implementation and achievement of the Mission objectives;
- Effective provision to local stakeholders of technical services, governance and business models to support and guarantee a sustainable socio-economic development of the basins;
- A well-functioning basin scale innovation ecosystem attractive to investors and businesses;
- Increased and effective awareness about the Mission and involvement of citizens in its implementation at sea/river basin scale;
- Increased coordination and collaboration between the various lighthouses (sea/ river basins);
- Greater involvement from public procurement bodies in the innovation cycle and accelerated uptake of innovative solutions;

¹⁷³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- The regional implementation of the UN Decade of Ocean Science for Sustainable Development 2021-30 is strengthened.

Scope: In the context of the Mission Ocean and waters, 'lighthouses' are defined as "*hubs and platforms supporting the development and deployment of transformative innovative solutions in all forms – technological, social, business, governance, ensuring fast progress towards the achievement of Mission objectives and important impact on society in the river and sea basins through science and technology*".

The Mission supports regional engagement and cooperation through four area-based 'lighthouses' in the major basins, the Atlantic-Arctic, Mediterranean Sea, Baltic-North Sea, and Danube River-Black Sea basins, and applies a systemic approach addressing the inland waters-sea continuum.

Proposals under this topic are expected to bring together complementary public and/or private organisations and networks, and integrate heterogeneous expertise to support the continuity of the four existing Lighthouses, expanding their scope to all mission objectives to facilitate the implementation of the second phase of the mission.

Actions should provide a broad portfolio of support measures to relevant stakeholders at basin level, ensuring the replication and upscale of innovative solutions addressing all objectives of the Mission Ocean and waters in a given lighthouse area.

Due to the transboundary nature of waters, basin-scale coordination and cooperation across regions is required for solutions to be effectively implemented and to resolve shared problems.

Proposals are expected to show how their activities and results will achieve the Mission's objectives, in line with the timeframe of the Mission phases, i.e. by 2030 for the 'deployment and upscaling phase'. Proposals are encouraged to consider, where relevant, cooperation with European research infrastructures¹⁷⁴.

Building on and bringing together existing governance structures and networks and relevant existing activities, proposals are expected to address all following activities:

- Support the replication and upscale of innovative solutions in the specific basin lighthouse:
 - o disseminate and raise awareness about suitable, impactful innovative and transformative solutions to progress towards the objectives of the mission;
 - o organise demonstration and testing activities for the innovative solutions;

¹⁷⁴ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

- o support access to finance and mobilise suitable investors, through e.g.: pitching events, networks of investors, venture capital funds, local Entrepreneurial Discovery processes, etc.;
- o support knowledge and technology transfer, including through training and skill development;
- o support the involvement and cooperation of 'associated regions', essential actors for the implementation of the mission objectives at basin scale;
- Design and carry out at basin scale relevant actions to promote Mission ocean and waters and its activities targeting different stakeholders and the general public, both at basin scale and at the regional/local level: disseminate information, exchange knowledge and good practices on the deployment of innovative solutions, on European and national procurement processes as well as on regulatory issues;
- Support the mobilisation of national and regional funds as well as private financing around common objectives:
 - o design joint initiatives under the Mission Ocean and waters, such as joint programmes or calls for R&I actions between the national and the EU level (based on the current programme co-fund actions) to address priorities of common interest at trans-regional/national level and ensure critical mass and effective use of resources;
 - o support the alignment and test synergies between Regional Smart Specialisation Strategies and other relevant European programmes;
 - o target relevant funding organisations such as investment funds, banks and philanthropists at national/regional levels to facilitate mobilisation of the funding;
 - o support Pre-Commercial Procurements (PCP) and/or Public Procurement of Innovative solutions (PPI) by bringing together procurement agencies or departments in charge of the acquisition of innovative solutions at European, national, regional or local level to share investment plans and/or to plan common procurements of research services or of innovative solutions or products in the domains covered by Mission ocean and waters.
- Contribute to the overall monitoring of the Mission implementation by providing relevant information in relation to each basin lighthouse area and liaising with Mission projects to collect relevant data and information;
- Strengthen lighthouse governance and networking:
 - o liaise with the Mission secretariat to ensure a coherent and timely implementation of the Mission deployment and upscaling phase in the lighthouse basin;

- o bring relevant new actions and initiatives under the Mission charter to promote their visibility and possible replication/uptake, including by connecting with other relevant initiatives in the basin such as Ocean Decade Actions and partners;
- o support an effective and participatory governance structure for the basins lighthouse involving key multi-sectoral stakeholders at sea/river basin level covering both marine and inland waters as well as the land-sea continuum and ensure cooperation and networking for achieving the three objectives of the Mission Ocean and waters by 2030;
- o liaise with the UN Ocean Decade actions and initiatives and promote international cooperation (e.g.: UN ECOP, OECD, etc.);
- o consolidate existing national and regional mission *hubs* or support their set up if not in place already, to provide the framework for coordinating and aligning policies, initiatives and actions at EU, national and local level, including cooperation with the National Contact Points (NCPs) and Mission Board members, where relevant;
- o Organise regular exchanges of best practices between *hubs* of this Mission and of the other four EU Missions, e.g. in the area of stakeholder and citizen engagement, long-term sustainability of mission hubs, and building of synergies..

The proposals should build on and enhance the outcomes stemming from the actions implemented in previous Mission work programmes such as Prep4Blue¹⁷⁵, BlueMissionAA¹⁷⁶, BlueMissionMed¹⁷⁷, BlueMissionBANOS¹⁷⁸ and EcoDaLLi¹⁷⁹ or actions supporting networking and engagement.

This topic supports the follow up to the July 2023 Communication on EU Missions assessment¹⁸⁰.

HORIZON-MISS-2025-03-OCEAN-08: EU Digital Twin Ocean: Contribution to the EU DTO core infrastructure through applications for sustainable ocean management

Call: Supporting the implementation of the Restore our Ocean and Waters Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

¹⁷⁵ <https://prep4blue.eu>

¹⁷⁶ <https://bluemissionaa.eu/>

¹⁷⁷ <https://bluemissionmed.eu/>

¹⁷⁸ <https://bluemissionbanos.eu/>

¹⁷⁹ <https://ecodalli.eu/>

¹⁸⁰ COM(2023) 457 final and SWD(2023) 260 final

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries will be subject to the following additional obligations regarding open science practices: if projects collect in-situ data and marine observations, beneficiaries must make them openly available through the European Marine Observation and Data network (EMODnet), based on the FAIR (Findable, Accessible, Interoperable, Reusable) principles.</p> <p>Grants awarded under this topic will be linked to the following action(s):</p> <p>HORIZON-MISS-2024-OCEAN-IBA-01 EU Public Infrastructure for the European Digital Twin Ocean, phase 2</p>

Expected Outcome: The European Digital Twin of the Ocean core infrastructure (EDITO)¹⁸¹ is the platform that consolidates European Marine Knowledge, bringing together marine observation and data, an extended variety of ocean models (covering all the dimensions, from physics to social-ecological), digital applications and tools as well as advanced computing capabilities. The goal is to enable the development of multiple verified virtual representations of the marine and coastal systems, including transitional waters (e.g.: land-sea continuum), which will simulate the complex and dynamic nature of oceanic systems and test their evolution under different future scenarios, offering insights and capabilities that go beyond traditional models or simulations.

By integrating real-time and historical observations with advanced numerical modelling, artificial intelligence and high-performance computing, digital twins of the ocean can provide ocean stakeholders (scientists, business operators, regulatory authorities, policy makers and civil society) with an innovative set of user-driven and interactive digital tools to support their activities. In particular, they will support decision making, allowing to monitor and continuously refine the assessment of the impacts of decisions, in terms of sustainability, efficiency, effectiveness and durability under different possible future scenarios (climate change, ecosystems adaption, anthropogenic pressures, etc.). Interactive visualisation tools

¹⁸¹ <https://www.edito.eu/>

will allow users to explore and interact with simulated ocean environments in intuitive ways, enhancing understanding and facilitating communication of complex oceanic phenomena.

EDITO is conceived, and being built, as a public service and open co-working environment to support and facilitate the development of specific sectorial and/or local digital twin ocean applications. The objective of this topic is to develop specific user-driven digital twin ocean applications, relying on the EU DTO core infrastructure (EDITO) capabilities but also contributing to its development by enriching the array of open data, models and services it provides.

Project results are expected to contribute to all following expected outcomes:

- Digital Twin Ocean applications, co-designed through appropriate stakeholder engagement along the marine knowledge value chain, and in particular the final users (local and regional authorities, business, etc).
- Improved FAIR (Findable, Accessible, Interoperable and Reusable) dataflows and best practices across the data value chain: harmonisation and standardisation of data formats (including units), acquisition, collection, quality assurance and sharing.
- Increased availability of models and related best practices on the EU DTO core infrastructure (EDITO) and development of relevant applications directly on the EDITO infrastructure, using the offered capabilities. Models availability enhancement could therefore relate, for instance, to bio-geochemical, species distribution, ecosystem and integrated coastal and marine models, coupled models incorporating environmental, social, economic and policy considerations, and more.
- Improved data assimilation processes and interconnections between models, including land use, hydrological (water quality and quantity) and marine models in a source-to-sea perspective. The resolution of the models should be adequate to properly resolve the requirements of each application, while identifying and quantifying the impact of increased availability of data in the quality and scope of the applications.
- Improved and increased amount of digital twin intermediate and final open services, directly developed into the EU DTO core infrastructure (EDITO).

Scope: Proposals should target at least two new Digital Twin Ocean (DTO) domain applications, either addressing policy or regulatory implementation¹⁸² or sustainable marine or

¹⁸² Marine Strategy Framework Directive - MSFD, Maritime Spatial Planning Directive - MSPD, Common Fisheries Policy, design of Marine Protected Areas - MPAs and design of Other Effective Conservation Measures (OECMs), sea level rise, coastal resilience and adaptation, pollution monitoring and reduction, cumulative impact across multiple sectors, frameworks for assessing opportunities for sustainable growth in marine industries, etc., compatibility of future offshore developments to reach climate targets and 2030 Biodiversity Strategy and Nature Restoration Law, etc. Proposals addressing offshore energy renewables or marine litter should ensure complementarity with the scope addressed by, respectively, HORIZON-CL5-2025-05-D3-08: Understand and minimise the environmental impacts of offshore wind energy and HORIZON-CL6-2025-01-ZEROPOLLUTION-05: Towards a comprehensive European strategy to assess and monitor aquatic litter including plastic and

maritime business operations (aquaculture and fisheries, sustainable tourism, etc.), with demonstrated usability at different geographical scales, for ocean and coastal management and planning, policy or regulatory implementation and decision-making or sustainable marine and maritime business operations. Each verified use cases (implementation of the domain applications at different geographic settings, including the relevant data, models, tools and interactions with stakeholders) should be demonstrated in at least 3 different sea basins (amounting to 6 use cases in total), with each of the 4 EU sea basins (1. Atlantic and Arctic Sea basin, 2. Baltic and North Sea, 3. Mediterranean Sea basin and 4. Danube River basin and Black Sea) covered at least by one use-case.

Importantly, while these digital twin ocean applications are the desired end-product, they have an integrative function: to transform the available knowledge into actionable information for use from policy, industry and/or civil society. When designing a specific application, the whole knowledge value chain should be considered by the proposals, with a multi-actor approach, to ensure the involvement of the appropriate actors, including implementing authorities in the appropriate level of jurisdiction (national and/or regional authorities), at each step:

- Co-creation with stakeholders: include the end-users of these applications, for each sea-basin use-case, along the full process of the digital twins' development, ensuring incorporating their needs, promoting common understanding and ensuring ownership of the outcomes (what scenarios are relevant, what policy alternatives are feasible, what are the limitations, for instance on uncertainties created by data gaps, etc.). The relevant stakeholders may evolve throughout each development phase/step.
- Data: identification of data needs to verify the credibility of each application; identification of gaps and their impact on the quality of results; potential for improvements (if data is to be made available).
- Models and what-if scenarios: primary data processing and analysis, model developments, refinements and downscaling; model coupling to serve targeted needs and development of what-if and policy scenarios (together with relevant stakeholders), quality of modelled assessment data products.
- Interactive visualisation tools. Specific attention to the design of appropriate interfaces with and for end-users, utilising new technologies as artificial intelligence, gaming interfaces, virtual reality and more.
- Quality assurance processes and appropriate quality labelling should accompany all steps of development to provide guarantee to the end-users of the applications: labelling of applications, comparative analysis, characterisation and communication of uncertainties in particular in the context of decision-making support, etc.

Proposals are encouraged to cooperate with actors such as the European Commission's Joint Research Centre (JRC) on model scenarios (as for the Blue2MF) in support of marine policies.

Proposals should favour open data, open source, and public-use models and algorithms with open-source licensing and must develop the applications directly into the EU Digital Twin of the Ocean core infrastructure (EDITO).

Proposals should leverage the data and services available through EMODnet and through the European Open Science Cloud, as well as data from relevant Data Spaces in the data-driven analyses and should also demonstrate clear links to Copernicus Marine and associated Member State Coastal Systems (MSCS). Proposals are encouraged to consider, where relevant, the data, expertise and services offered by European research infrastructures. The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website¹⁸³.

Proposals are expected to build on the outcomes of EDITO-Infra and EDITO-Model Lab and to contribute to the enrichment of the portfolio of biogeochemical, ecosystem marine and integrated coastal models, beyond those already integrated by EDITO-model lab.

While proposals are free to address the application domains of their choice, aiming for the greatest possible impacts, specific aspects should be followed for applications relating to the implementation of EU legislation, as indicated below:

- Models targeting MSFD implementation at the regional and national levels should implement a multi-descriptor approach including possible connectivity between descriptors and propose methodological frameworks for the design of effective measures to achieve Good Environmental Status (GES), based on the requirements of the Directive.
- Applications relevant to Descriptors 1, 2, 3, 4 and 6 of the MSFD should address multispecies systems (group of species), according to the requirements of Commission Decision (EU) 2017/848 and the 2021 ICES advice sr.2021.14.2.
- The what-if scenarios of applications to implement marine nature based-solutions for climate change adaptation and mitigation, should also address the achievement of Good Environmental Status.
- Applications for decision support tools on the planning and management of marine space (MSPD) should include environmental, social, economic and policy considerations and take into account climate change impacts through appropriate scenarios.
- Applications targeting the CFP should support the assessment of Essential Fish Habitats and Vulnerable Marine Ecosystems (also relevant for Regional Fisheries Management Organisations - RFMOs, Biodiversity Strategy and more), while also addressing the

¹⁸³ <https://ri-portfolio.esfri.eu/>

sustainability of the fisheries sector through scenarios related to fishing gear, decarbonisation of the sector and more.

Restore our Ocean and Waters by 2030: Other Actions

1. Presidency event - Mission Ocean and Waters conference

Expected outcome:

The proposed conference in Nyborg, Denmark 23-24 September 2025 under the Danish Presidency will address the restoration of the Ocean and Waters. This conference is expected to contribute to all of the following expected outcomes:

- challenges facing the Ocean and waters are explored and the solutions and opportunities offered by the Mission to address these problems;
- the focus and priorities for the Mission's deployment phase are discussed and key stakeholders are mobilised.

Scope:

The conference should address the following activities:

- discuss the new political context of Ocean and Waters and how to support the deployment of the Mission;
- provide a space for a presentation of the key achievements of the Mission Ocean and Waters and explore priorities for reaching the 2030 Mission objectives and targets;
- Further strengthen the governance of the Mission at EU, lighthouse and national level.

Specific conditions:

The starting date of the grant awarded under this action may be as of the submission date of the application.

Subcontracting is not restricted to a limited part of this action.

The evaluation committee will be composed fully by representatives of EU institutions.

Legal entities:

University of Southern Denmark, Campusvej 55, 5230 Odense M, Denmark

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: As of second quarter 2025

Indicative budget: EUR 0.16 million from the 2025 budget

2. Services to Communities to support the achievement of the objectives of the Mission Ocean and Waters.

The specific objective of this contract is to organize and manage the identification and selection process, aiming at selecting a minimum of 50 applicants from targeted communities of regional, local and other competent authorities, which are managing programmes and activities related to the Mission objectives, and provide services to them. The services provided consist of technical assistance and support for the preparation of transition agendas for their planned projects, programmes or initiatives that will support the achievement of the objectives of the Mission Ocean and Waters. In particular, the targeted authorities include: i) regions ii) cities, including small municipalities iii) rivers and water management authorities and iv) port authorities. These services should ultimately facilitate synergies with regional/local authorities to facilitate and speed up the achievement of the Mission's objectives at local level, with the involvement of local communities and possible leverage of funds.

Services include:

1. Technical assistance to competent authorities for planned initiatives, projects, or activities that are defined to achieve the Mission's objectives within a specific community or geographical area. Such assistance should address the needs of the Mission communities of actors in the particular basin and may include support and advice needed for the preparation of business plans, feasibility studies, impact assessments, and needs assessment, as well as long-term sustainability planning to help the competent authorities develop sustainable financing strategies to ensure longevity of the efforts to achieve healthy oceans, seas and waters; capacity building to empower competent authorities with the knowledge and skills needed to undertake effective pollution prevention and elimination, conservation and restoration initiatives, as well as making the sustainable blue economy carbon-neutral and circular; and other Mission-related actions that would require direct counselling, written guidance, online materials, webinars, in-depths sessions, deep dives, peer-to-peer support, twinning etc. It is essential to tailor the support provided to the specific needs and context of each community of actors, including through the use of local languages, as well as fostering a participatory approach that empowers local stakeholders and encourages their long-term commitment to the protection and restoration of our ocean, seas and waters.
- Support the preparation of transition agendas intended as a strategic roadmap towards reaching all objectives and targets of the Mission 'Restore our ocean and waters by 2030', with a particular focus on the objectives that are most relevant to the specific local

context and communities. The roadmaps could cover processes needed to ensure the protection and restoration of marine/coastal/inland waters, biodiversity and ecosystems, the reduction/elimination of pollution and the achievement of decarbonisation and circularity targets, as well as resilience and preparedness taking into account the impacts of climate change and extreme events. They should include a plan for a defined number of years concerning the objectives set, covering, for example, expected outcomes, results, impact, ways to achieve them and ways to bring in financing to support the achievement of these objectives. The transition agenda should indicate how specific results and ideally also their impacts are expected to materialise in order to ensure the actual achievements of the objectives. These agendas would serve as a basis for further planning of follow-up activities by the authorities involved, particularly actions to meet the Mission Ocean and Waters objectives/targets, to be subsequently implemented with the financial support of various funds (e.g., EU structural funds/national/regional funds).

- Overall, these services should accelerate the achievement of the Mission's objectives, including through facilitated synergies and access to EU, national, regional programmes and funds, in interaction with managing authorities (e.g. ERDF, EMFAF, LIFE, Interreg, RRF, S3, etc). Regional authorities a Cooperation Working Arrangement with the Commission on this Mission¹⁸⁴ and managing authorities having adhered to the Mission Charter will be considered for services in priority.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: As of Q2 2025

Indicative budget: EUR 3.98 million from the 2025 budget

3. Ocean Observation Platform

Ocean observation is currently undertaken independently for different purposes including fisheries management, safe navigation, coastal protection, environmental impact assessment and research. In order to avoid duplication, identify gaps and reduce administrative burden, a digital platform will be further developed and maintained and building on existing observation initiatives, such as EuroGoos and European Research Infrastructures. The digital platform will collect observation campaign plans prepared by the responsible public bodies following common standards. This platform will reinforce EmodNet and the European Digital Twin Ocean by ensuring structured reliable data provision that will allow it to fulfil its potential as a tool underpinning a competitive and sustainable blue economy.

Form of Funding: Procurement

¹⁸⁴ https://research-and-innovation.ec.europa.eu/news/all-research-and-innovation-news/eu-mission-ocean-and-waters-signs-first-cooperation-working-arrangement-eu-region-2024-12-17_en

Type of Action: Public procurement

Indicative timetable: 4th Quarter 2026

Indicative budget: EUR 1.50 million from the 2025 budget

4. Study to provide evidence for EU actions on wetlands

Wetlands contribute to all three objectives of Mission “Restore our Ocean and Waters”. If managed appropriately they can enhance biodiversity, improve water quality and sequester carbon. From 2026 they should be included in EU Member State inventories of greenhouse gases in the EU’s Land Use, Land Use Change and Forestry Regulation (LULUCF) ¹⁸⁵.

Their ecosystems must meet the 2030 targets set out in the Nature Restoration Law¹⁸⁶. Under the IPCC’s 2013 guidelines for reporting national inventories¹⁸⁷, saltmarsh, seagrass and mangroves are classed as coastal wetlands. Coastal wetlands are also referred to as coastal blue carbon. This study covers freshwater and coastal wetlands.

A study under Mission Ocean has shown that (1) some Member States already report greenhouse gas inventories for wetlands to LULUCF although there are differences in how it is done (2) no Member State has indicated an intention to include a separate accounting of blue carbon within the wetland landuse category (3) finding, access, and harmonising the necessary data is a barrier to providing reliable inventories. The reporting requirements for wetlands habitats under the Nature Restoration Law will face the same data challenges. Measures to resolve these data issues would not only contribute to more accurate inventories but also provide a solid foundation for enabling authorities to certify blue carbon under the EU certification framework for carbon removals by carbon farming¹⁸⁸. The EU has already taken measures to improve the evidence base for monitoring forests¹⁸⁹. The aim of this study is to understand what would be required to achieve the same for wetlands and provide the knowledge base necessary to implement existing legislation and to underpin future actions at EU level.

The study will (1) identify current and upcoming EU legislation and intergovernmental agreements requiring data on both freshwater and coastal wetlands extent and functioning (2) develop a set of indicators that would meet the reporting requirements of each of these agreements taking into account any ongoing efforts at an international level (3) identify the data required to estimate these indicators. This should use a common nomenclature of wetland ecosystems, distinguish between classifications of 2006 and 2013 IPCC guidelines and between data that can be acquired from earth-orbiting satellites and those that require

¹⁸⁵ Regulation (EU) 2018/841 as amended by Regulation (EU) 2023/839

¹⁸⁶ Regulation (EU) 2024/199

¹⁸⁷ 2013 Supplement to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories: Wetlands

¹⁸⁸ Proposal for a regulation establishing a Union certification framework for carbon removals, COM/2022/672

¹⁸⁹ Proposal for a regulation on a monitoring framework for resilient European forests COM/2023/728

measurements made by other means (4) determine the adequacy and completeness of the data provided from existing European or international data services including the Copernicus Land Service, EMODnet and European Soil Data Centre and whether it can be enhanced (5) interview national authorities to determine the feasibility and cost of assembling data in a common interoperable format in order to estimate the indicators defined, (6) structure the results and insights of this study in an Access database, (7) validate the results at a workshop of recognised international experts and (8) provide the knowledge base for future actions at EU level.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative budget: EUR 0.90 million from the 2025 budget

5. Communication actions and events for Mission Ocean and Waters

The objective is to organise Mission Ocean and Waters events that will give visibility to the achievement of the Mission and its activities including Info Days, bring together key stakeholders and Mission partners, including Member States, regions, research bodies and academia, civil society and organisations and promote the Mission activities and projects among key Mission partners, stakeholders and citizens.

The action is expected to lead to:

- Increased knowledge and awareness of the Mission and its activities among Member States, regions and communities and key Mission partners and general public;
- Increased support and acceleration of the implementation of Mission activities, such as Mission lighthouses;
- Provide cooperation and networking opportunities among key Mission partners, Member States authorities, regions and communities for the implementation of the Mission;
- Support ocean and water literacy, citizen science and public and stakeholder mobilisation and engagement with regard to Mission activities.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: As of Q3 2025

Indicative budget: EUR 0.20 million from the 2025 budget

100 Climate-Neutral and Smart Cities by 2030

The Work Programme 2025 of the Climate-Neutral and Smart Cities Mission, in line with the [Implementation Plan of the Cities Mission](#), supports the implementation of the Mission by providing strong and direct support to cities committed to climate-neutrality, enabling them to implement their climate action plans and achieve climate-neutrality by 2030. The cities benefitting from these actions will act as experimentation and innovation hubs for other European cities aiming to become climate-neutral by 2050.

Cities' green and digital transformation with the aim of climate-neutrality is associated with important co-benefits and urban qualities such as reduced air and noise pollution, more sustainable mobility, improved health and well-being, reduced urban environmental footprints, enhanced urban greening, more efficient use of energy and infrastructures, as well as improved waste and water management. It also improves policy coherence across sectors and stimulates participatory and inclusive decision-making.

Therefore, in addition to a significant contribution to the objective of the [European Green Deal](#) to make Europe climate-neutral by 2050 at the latest, the supported actions will also contribute to the [UN Agenda 2030](#), the [Urban Agenda for the EU](#), the [New Leipzig Charter](#), the [Fit for 55 strategy](#), the [EU Industrial Strategy](#), the [Green Deal Industrial Plan](#) and the [Net-Zero Industry Act](#), the [EU Zero Pollution Action Plan](#), the [Circular Economy Action Plan](#), the [Smart and Sustainable Mobility Strategy](#) and the related new EU urban mobility framework, the [Biodiversity Strategy for 2030](#), [Europe's Digital Decade](#) and the [EU Strategy on adaptation to climate change](#).

The topics of the Work Programme 2025 reflect the cross-cutting nature of the Cities Mission and most of them have been designed as joint activities with other parts of the Horizon Europe programme, namely Clusters 4, 5, 6, other Missions, co-programmed partnerships, as well as in close coordination with other topics, such as one under the Ocean Mission (HORIZON-MISS-2025-03-OCEAN-05). The envisaged actions will aim at:

- Coupling circularity and climate mitigation in industrial sites and their cities and regions through a **joint action with the Circular Cities and Regions Initiative (CCRI)**;
- Innovative, AI-based solutions for urban planning and management through a **joint action with Horizon Europe Cluster 4**;
- Boosting the transformation towards climate-neutral cities, the net-zero economy and open strategic autonomy through Pre-Commercial Procurement (PCP);
- **Joint call “Cancer Mission – Cities Mission”**: Increasing the modal share of walking and cycling to reap health benefits and emission reductions and integrating active mobility and micro-mobility devices, with smart technologies and infrastructure.

Not listed in detail in this section of the Work Programme, but co-financed by the Cities Mission budget, is the following topic located in Cluster 5, Destination 5 under the transport-related health and environment part of the programme:

- **Joint topic “Zero-Emission Waterborne Transport (ZEWT) Partnership – Cities Mission”:** Real time monitoring of regulated and non-regulated emissions to enforce emission limits in waterfront cities.

Moreover, the prize “Renewable energy technology (RET) solutions in energy communities” in Cluster 5 under other actions, links to the Cities Mission. Energy communities can play a pivotal role in achieving climate neutrality at the city level. Embedding their activities in existing strategic and systematic approaches to climate neutrality in the city, such as the Climate City Contracts, will be weighted in the evaluation for the prize.

The operational capacity of the Mission Platform established through a Framework Partnership Agreement (HORIZON-MISS-2021-CIT-02-03) will be strengthened in order to: (1) reinforce activities aimed at supporting the implementation of the Climate City Contracts (CCCs) of the cities selected to participate in the Mission through the Call for Expression of Interest; (2) provide activities targeted at cities falling under the second objective of the Mission as well as cities that applied to the Call for Expression of Interest, committed to the climate-neutrality target by 2030 but were not eventually selected in the final list.

Support for financial advisory services to be provided to help cities implement their investment strategy for becoming climate-neutral will also be addressed under this Work Programme.

Proposals should demonstrate, as appropriate to their scope and size, how they internalise the principles of the Cities Mission, notably: (1) the contribution of the action to an overarching strategy aiming at climate-neutrality for cities, (2) the place of the action within a holistic and cross-sectoral approach to climate neutrality, and (3) diversity in terms of geographical location and size of cities.

Applicants are encouraged to show how their proposals take into account and build upon existing programmes and/or the results of previous R&I projects. Where applicable, they should consider the services offered by the EU-funded European Research Infrastructures¹⁹⁰; these services range from data sets in human behaviour to modelling or experimental techniques.

Strong synergies contributing to the implementation of the objectives of the Cities Mission is expected also from other relevant Horizon Europe partnerships such as the European Partnership for People-centric Sustainable Built Environment (Built4People) and on Driving Urban Transitions to a Sustainable Future (DUT). Topics under the Cities Mission Work Programme are also relevant for the Cancer Mission, in particular when addressing co-benefits generated by achieving climate-neutrality such as reduced pollution, improved health and wellbeing, increased active mobility contributing then to cancer prevention. Similarly, actions funded under the Cancer Mission focusing on behavioural change can contribute to the objectives of the Cities Mission especially when targeting actions at urban level. In addition, synergies are expected with the [Regional Innovation Valleys](#), which, in line with the

¹⁹⁰ ri-portfolio.esfri.eu/ri-portfolio/table/

[New European Innovation Agenda](#), bring together less and more innovative regions with a view to addressing the most burning challenges facing the EU, namely reducing the reliance on fossil fuels, increasing global food security, mastering the digital transformation (including cybersecurity), improving healthcare and achieving circularity. Moreover, strong synergies exist with the [LIFE Programme](#), a main EU funding instrument for environmental and climate action plans, particularly through its Climate Change Mitigation and Adaptation sub-programme, which aligns closely with the Cities Mission's objectives by supporting innovative efforts to reduce GHG emissions, enhance urban resilience, and promote climate change awareness.

Proposals should set out a credible pathway to contributing to the Climate-Neutral and Smart Cities Mission, and more specifically to one or several of the following impacts:

- Increased capacity among European cities, with particular attention to those selected under the Cities Mission, to implement their CCCs and to achieve climate-neutrality.
- Cities are taking action to increase energy and resource efficiency, promote circular economy, encourage urban regeneration and resilience, and they accelerate the uptake of innovative systemic solutions and clean tech in key areas (e.g., energy, mobility, construction, industry, spatial planning, environment, digitization, and data handling).
- Cities are engaging their citizens in the technologies developed and actions taken to achieve climate-neutrality, in order to guarantee acceptance, adherence and adoption, while paying particular attention to vulnerable groups.
- Cities are increasingly employing data and digital technologies to enhance decision-making, improve the efficiency of service delivery, and reduce emissions through open standards and shared technical specifications.
- Cities embrace innovative and inclusive cross-sectorial collaborative governance models, facilitating multi-level and multi-stakeholder engagement in decision-making and joint planning, as well as the CCC implementation in collaboration with citizens and local stakeholders.
- The CCCs identify and pool the demands of the cities in the Cities Mission across sectors, providing scalability and predictability for industry and investors, thus strengthening the competitiveness of European industry and SMEs.

Proposals are invited against the following topic(s):

HORIZON-MISS-2025-04-CIT-01: Coupling circularity and climate mitigation in industrial sites and their cities and regions

Call: Supporting the implementation of the Climate-Neutral and Smart Cities Mission
Specific conditions

Horizon Europe - Work Programme 2025
Missions

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 17.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply:</p> <p>Activities must be deployed in at least three different ‘demonstration sites’ and at least three different ‘replication sites’¹⁹¹. Each of the demonstration and replication sites must be located in different Member States or Associated Countries.</p> <p>Related to each demonstration and replication site, beneficiaries must include the cities that host or are in the proximity of these sites, including at least one of the 112 cities selected for the EU Mission on Climate-Neutral and Smart Cities¹⁹². In addition, beneficiaries must also comprise at least another CCRI city, region or territorial cluster¹⁹³.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Grants awarded under this topic will be linked to the following action(s):</p> <p>HORIZON-MISS-2021-CIT-02-03</p> <p>Collaboration with the Cities Mission Platform¹⁹⁴ is essential and projects must ensure that appropriate provisions for activities and</p>

¹⁹¹ In this context, ‘demonstration sites’ possess experience and expertise in developing and integrating circularity and climate mitigation planning. ‘Replication sites’, on the other hand, are those with less experience in this area, aiming to replicate and build upon the successful approaches and best practices of demonstration sites.

¹⁹² The EU Mission on Climate-Neutral and Smart Cities aims to deliver 100 climate-neutral and smart cities by 2030 and ensure that these cities act as experimentation and innovation hubs to enable all European cities to follow suit by 2050. On 28 April 2022, the Commission announced the 100 EU cities that will participate in the Mission. In addition, 12 cities have been selected from countries associated or expected to be associated the Horizon Europe programme.

¹⁹³ As listed on the [CCRI Map | Circular Cities and Regions Initiative](#) (official website).

¹⁹⁴ Set up by Horizon 2020 project NetZeroCities - Accelerating cities' transition to net zero emissions by 2030, Grant Agreement n. 101036519, and scaled up through topic *HORIZON-MISS-2021-CIT-02-03: Framework Partnership Agreement (FPA) for the Climate-Neutral and Smart Cities Mission Platform*.

	<p>resources aimed at enforcing this collaboration are included in the work plan of the proposal. The collaboration with the Cities Mission Platform must be formalized through a Memorandum of Understanding to be concluded as soon as possible after the project starting date.</p> <p>This action will also be part of the demonstration projects for the implementation of the European Commission's Circular Cities and Regions Initiative (CCRI) and must be carried out in close cooperation with it. This means that proposals must cooperate with CCRI and its Coordination and Support Office by means of sharing with this initiative knowledge and experiences developed during the project lifetime. Applicants must integrate explicitly these obligations into their proposal's work plan.</p>
--	--

Expected Outcome: Projects are expected to contribute to all the following outcomes:

- Significant advances in climate mitigation and resource circularity, with associated reduction in pollution and waste, in industrial ecosystems at urban and peri-urban scale.
- Increased local and regional competitiveness and strengthened capacity for innovation of EU industries.
- Long-term change towards sustainable, flexible and responsive local and regional industrial ecosystems that connect key circular economy and climate mitigation stakeholders throughout planning, interventions and value chains.

Relevant indicators and metrics for the 2030 horizon, with baseline values, should be clearly stated in the proposal.

Scope: Climate mitigation and circularity are key building blocks for achieving industrial and urban futures that are climate-neutral and sustainable. While mitigation and circularity performance are typically modelled at the global or national level, a gap persists in action plans and practice at local level where the coupling of decarbonisation and circularity against the background of industrial-urban symbiosis and of the sharing economy (energy and materials) could yield significant ecological, economic and social benefits. There is therefore a pressing need to overcome the lack of coordination among industrial, circularity and urban activities and actors that yields sub-optimal outcomes in terms of climate mitigation, energy efficiency, resource use (including water), environmental pollution, material valorisation and waste reduction.

Proposals must involve at least three different demonstration sites and at least three replication sites. The consortia should involve key circular economy and mitigation actors from both local public authorities and industries in a certain region. Demonstration sites are expected to cover at least two different economic sectors, value chains and/or services.

Proposed projects should:

- Set up and deploy innovative governance and business models as well as ‘joint actions’¹⁹⁵ on climate mitigation¹⁹⁶ and circularity (such as circular supply models, collaborative consumption models, service system models, hire or leasing models, joint public procurements etc.) in the 3 demonstration sites as defined above.
- Assess and quantify the climate and other benefits of proposed joint mitigation and circularity actions including but not limited to: reduction of greenhouse gas emissions, pollution and water use; reduction of costs for secondary raw materials and waste management; new revenues generated from end-of-life and by-products, waste diversion from landfill and incineration; performance of mitigation infrastructure; industrial-urban symbiosis; creation of new business opportunities; development of green skills and strengthening of environmental profiles.
- Quantify and assess the co-benefits, constraints and trade-offs of coupling circularity and climate mitigation, considering social, economic and environmental aspects, as well as links with key sectors such as energy, buildings and transport. Complementary actions in terms of spatial planning (e.g. more sustainable and efficient uses of land and building stock), digitalisation and data enhancement should also be considered as appropriate.
- Define for each demonstration and replication site the strategies, processes and actions needed to underpin the climate-neutral and circular transition through a systemic, multi-sectoral multi-stakeholder approach. This should include the engagement of relevant stakeholders such as policymakers, research bodies and academia, the civil society and the private sector (industry, entrepreneurs, start-ups, SMEs etc).
- Based on the lessons learned, deliver guidelines and recommended approaches (including innovative methods) to integrate circularity in the cities’ mitigation strategies and vice versa.
- Implement activities to develop and secure long-term support from the national and regional public authorities, which may include the establishment of inter-institutional multi-level governance partnerships, the introduction of binding rules, regulations, subsidies and/or other economic incentives.

Proposals should plan for early financing follow-up by linking with the [Climate City Capital Hub](#) of the NetZeroCities Mission Platform and the Circular Cities and Regions Initiative financial advisory services (including the Horizon Europe funded [Project Development Assistance Projects](#) and the [European Investment Bank’s Circular City Centre](#)). This should serve to further scale-up and deploy at city/region scale the innovative activities/measures/business models through a combination of funding sources and financial instruments beyond the duration of the proposed action.

¹⁹⁵ In this context, the term ‘joint actions’ refers to actions that address both climate mitigation and circularity challenges.

¹⁹⁶ As defined in the Info Kit for Cities: [cb258381-77d5-435a-8b25-9a590795dc9e_en \(europa.eu\)](https://ec.europa.eu/info/kit-cities/circular-city-centre_en)

Proposals should envisage clustering activities with other projects selected under this topic, which could be in the form of cooperation, consultations as well as joint activities on cross-cutting issues such as sharing results, lessons learned and ways to address barriers and mitigate risks, joint communication, dissemination and capacity building activities, or assessing and evaluating impacts. Dedicated tasks with appropriately earmarked resources should be planned to this end. These tasks may also include collaboration with relevant CCRI-related projects¹⁹⁷ and relevant projects funded under the Cities Mission.

As part of the broader European Green Deal framework, proposals should link as relevant with the objectives of the new [Circular Economy Action Plan](#) of 2020¹⁹⁸ (that recognises the interlinkage between the circular economy and climate policies, presenting ‘circularity as a prerequisite for climate neutrality’) and the [Green Deal Industrial Plan](#) of 2023¹⁹⁹ (that, together with the [2020 Industrial Strategy](#)²⁰⁰ and its [2021 update](#)²⁰¹, sets the framework for the transformation of the EU’s industry for the net-zero age). Projects should also link as relevant with the objectives of the [Net Zero Industry Act](#)²⁰², the [Critical Raw Materials Act](#)²⁰³ and the [Clean Transition Dialogues](#)²⁰⁴ that highlight the importance of circularity in the green transition. In addition, actions should consider and promote synergies with pollution reduction measures, with reference to the [Zero Pollution Action Plan](#)²⁰⁵ and the [Industrial Emissions Directive](#)²⁰⁶. Synergies are expected with other relevant EU initiatives, such as the [Hubs for Circularity](#)²⁰⁷ and the [Regional Innovation Valleys](#)²⁰⁸, which foster industrial circularity hubs and support circularity transition at a local and regional level.

This action supports the follow-up to the July 2023 Communication on EU Missions assessment²⁰⁹.

HORIZON-MISS-2025-04-CIT-02: Innovative, AI-based solutions for urban planning and management

Call: Supporting the implementation of the Climate-Neutral and Smart Cities Mission

	<p>HORIZON-MISS-2021-CIT-02-03</p> <p>Collaboration with the Cities Mission Platform²¹² is essential and projects must ensure that appropriate provisions for activities and resources aimed at enforcing this collaboration are included in the work plan of the proposal. The collaboration with the Cities Mission Platform must be formalized through a Memorandum of Understanding to be concluded as soon as possible after the project starting date.</p>
--	---

Expected Outcome: Projects are expected to contribute to the following outcomes:

- Digital Twin models with their associated tools, that use Artificial Intelligence (including generative AI), developed in line with the requirements defined in the scope, which are tested, calibrated, and implemented in each city participating in the proposal;
- Guidelines and recommended approaches on the integration and orchestration of developed models, applications and tools in urban planning and management and the subsequent decision-making process, considering synergies with the open sand-boxing infrastructure provided by the LDT-CitiVERSE-EDIC²¹³;
- Capacity building, for instance, making available software in relevant platforms (such as AI on Demand platform²¹⁴, open source, EU LTD toolbox, etc.), and peer learning for potential replication in other cities;
- Plans for the exploitation of the project result(s) through relevant Smart Cities networks specifically of the Digital Twins developed, including a market analysis for replicability and scalability of solutions;
- Visualisation component of the Digital Twin promoting participatory urban planning and management and facilitating communication between different stakeholders, while enabling citizens to provide well-informed feedback and solutions;
- Creation of multidisciplinary communities, bringing together IT developers, urban planners, designers, local authorities, and other relevant actors. This will facilitate future activities for adaptation, enhancement and integration of existing and future AI-based applications and solutions, including Digital Twins, applied in different urban domains (e.g. infrastructure planning, including nature-based solutions, urban logistics, network and traffic management, climate neutrality, safe and inclusive streets, health and wellbeing urban space, etc.). This could be achieved through synergies with the LDT-

²¹² Set up by Horizon 2020 project NetZeroCities - Accelerating cities' transition to net zero emissions by 2030, Grant Agreement n. 101036519, and scaled up through topic *HORIZON-MISS-2021-CIT-02-03: Framework Partnership Agreement (FPA) for the Climate-Neutral and Smart Cities Mission Platform*.

²¹³ https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=OJ:L_202400459

²¹⁴ <https://www.ai4europe.eu/>

CitiVERSE-EDIC²¹⁵ and with other funded projects under this topic and under topics covering similar themes and aspects.

Scope: Urban planning and management require the analysis and integration of data ranging from zoning laws and buildings to overground infrastructure (street networks and their amenities, rail networks, etc.) and underground infrastructure (sewage, gas, electricity, heat, and water supply networks). Besides this complex physical urban fabric, urban planning and management cover intangible features such as administrative organisation, flows of goods and services, environmental determinants, demographic, social, and economic trends, evolving social values, behaviours, and local cultures.

Since the 1980-ties, Geographic Information Systems (GIS) integrating urban information within layers of data and translating them into tables, graphs, and maps, were introduced in urban planning with the purpose to allow a more efficient data collection, analysis, aggregation, and management, enabling planning and decision-making for increasingly sustainable and innovative cities. However, given the rapid digitalisation of almost every aspect of urban life and the increase in complexity and variety of data over the last decades, the field of Artificial Intelligence (AI) opens promising, new opportunities for embedding sustainability and climate-neutrality concepts in urban planning and management. AI-based applications (including generative AI) and tools such as machine learning (ML), neural networks (NNs), deep learning, autonomous systems, pattern recognition, simulation modelling – Digital Twins, Internet of Things (IoT), etc. can be harnessed to guide decision-making, predict trends, develop scenarios, optimize resource allocation, engage citizens, and further enhance and promote human creativity, inclusiveness and well-being in urban planning and design.

This topic explores the use and integration of AI-based applications and tools, particularly of Digital Twins, in urban planning and management.

Proposals should contain a comprehensive state-of-the-art of existing AI applications and tools for urban planning and management and evidence of relevant skills for the development of Digital Twins.

Proposals are invited to develop a Digital Twin model that complies with the following requirements:

- Integrates within the urban planning process and practice and supports the development of medium- and long-term strategic visions at city level for achieving a climate-neutral city.
- Supports decision-making and prioritization of policies and investment for sustainable, energy-efficient, and climate-neutral measures and solutions through visualization, prediction, diagnosis, assessment and prevention.

²¹⁵ <https://living-in.eu/news/ldt-citiverse-edic-fact>

- Incorporates static physical urban characteristics such as topography, buildings, overground, underground, blue-green infrastructures, energy and heat grid, also considering the EU buildings dataset from the EU_LDT toolbox and at least two of the following urban features as variables:
 - o Urban functions – zoning, land-use.
 - o Mobility modes and services, including freight transport and logistics.
 - o Energy generation and consumption, including energy generation from RES and energy storage infrastructure (e.g., heat grid).
 - o Weather forecast and reduction of pollutant emissions.
 - o Socio-demographic, economic and cultural trends.
- Provides different scenarios for achieving climate-neutrality as well as the possibility to simulate the impacts when prioritizing the implementation of specific policies, measures, or solutions for the other areas/sectors, and for the city as a whole. When defining climate-neutral scenarios, both forecasting and backcasting methodologies could be employed.
- Evaluates potential use cases, and assesses the potential of replication of developed Digital Twins, in other cities.
- Allows, using its flexible features, the estimation of the resources needed to implement the different projected scenarios.

Proposals should explore the development and use of Digital Twins that incorporate real-time monitoring and response, with the purpose to support city authorities, operators, service providers and citizens to strengthen city's resilience and its coping and response mechanisms when confronted with unexpected events or hazards.

Proposals should promote the possibility of joint policy coordination such as clustering activities guidelines, synergies from the start of the project.

The AI-based Digital Twin to be developed for each city could cover a city-wide area – the urban core but can extend as far as the functional urban areas with well-defined characteristics (in terms of morphology, density, socio-demographic and/or economic features)". The involved cities should promote complementarity in terms of climatic conditions, city typologies and geographical balance.

This topic requires proposals from consortia that include at least three cities, each from a different Member State or Associated Country, participating as beneficiaries. At least one of the three cities must be one of the 112 cities selected for the EU Mission on Climate-neutral and Smart Cities. The consortia should include local authorities, urban planners, IT developers, operators, service providers and other relevant actors to jointly develop, test and integrate Digital Twins in urban planning and management.

A demonstrated contribution to the implementation and delivery of the Climate City Contracts and/or Sustainable Energy Action Plans, Sustainable Energy and Climate Action Plans and/or Sustainable Mobility Plans is expected.

Synergies with the Driving Urban Transitions partnership²¹⁶ and the Urban Transitions Mission²¹⁷ under Mission Innovation, would be of added value, as well as synergies with the Local Digital Twin Toolbox that will be composed of open AI-based tools to foster the adoption of digital twins across rural and urban.

Proposals should also demonstrate that the proposed approaches and developed AI-Based applications and tools are built on the results from previous research and innovation actions funded under Horizon 2020 and Horizon Europe calls/topics. Moreover, proposals are encouraged to explore the support of the Digital Europe Programme and its EU Toolbox for Local Digital Twins helping cities to combine data from different domains. In the same context, actions to be funded under this topic could liaise with projects funded under the third call for proposals EUI-Innovative Actions²¹⁸, notably the topic “Technology in Cities”.

Proposals are encouraged to seek synergies, concerning the data collected and used, with the Common European Data Spaces²¹⁹, especially the Data Spaces that are relevant such as the EU Smart Communities Data Space, the mobility Data Space, Tourism Data Space, the Green Deal Data Space etc. To plan for interoperability and compatibility with the Common European Data Spaces, proposals are invited to consider engaging with the SIMPL project²²⁰. Proposals are invited to consult the Staff Working Document on the Common European Data Spaces²²¹.

Proposals are expected to demonstrate the robustness of the AI-based systems and/or techniques that will be used. For instance, they should be technically robust, reliable, and able to provide a suitable explanation of its decision-making process.

Proposers should demonstrate that appropriate security measures are in place to ensure that the data collected and used in the projects are secured from unauthorised access and cannot be used for purposes other than the project.

Data Management actions should be included in the Data Management Plan part of the proposals to ensure that data used in the Digital Twins are of good quality and data generated are well documented and can be reused in future projects.

Proposals should briefly describe the environmental footprint of the AI tools in the project. If the footprint is significant (e.g., at a scale that could raise questions on the usefulness of the project), a short cost-benefit analysis should be included in the proposal, along with corresponding mitigation actions that will be taken during the project. Finally, proposals are

²¹⁶ <https://dutpartnership.eu/>

²²⁰ <https://simpl-programme.ec.europa.eu/>

²²¹ <https://digital-strategy.ec.europa.eu/en/library/staff-working-document-data-spaces>

expected to assess potential risks in the project and if relevant, describe solutions that mitigate those risks.

This action supports the follow-up to the July 2023 Communication on EU Missions assessment²²².

HORIZON-MISS-2026-04-PCP-CIT-01: Boosting the transformation towards climate-neutral cities, the net-zero economy and open strategic autonomy through Pre-Commercial Procurement (PCP)

Call: Supporting the implementation of the Climate-Neutral and Smart Cities Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 7.00 and 12.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 37.00 million.
<i>Type of Action</i>	Pre-commercial Procurement
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The specific conditions for actions with PCP/PPI procurements in section H of the General Annexes apply to grants funded under this topic.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>PCP/PPI procurement costs are eligible.</p> <p>Grants awarded under this topic will be linked to the following action(s):</p> <p>HORIZON-MISS-2021-CIT-02-03</p> <p>Collaboration with the Cities Mission Platform²²³ is essential and projects must ensure that appropriate provisions for activities and resources aimed at enforcing this collaboration are included in the work plan of the proposal. The collaboration with the Cities Mission Platform must be formalized through a Memorandum of Understanding to be</p>

²²² COM(2023) 457 final and SWD(2023) 260 final

²²³ Conceived through the Horizon 2020 project NetZeroCities - Accelerating cities' transition to net zero emissions by 2030, Grant Agreement n. 101036519, and scaled up through the topic *HORIZON-MISS-2021-CIT-02-03: Framework Partnership Agreement (FPA) for the Climate-Neutral and Smart Cities Mission Platform*.

	<p>concluded as soon as possible after the project starting date.</p> <p>The Cities Mission Platform should in particular support cities with the preparatory work for the PCP and facilitate the upscaling as well as the replicability of the solutions that will be developed through the PCP²²⁴.</p> <p>The beneficiaries may provide financial support to third parties to provide financial incentives to final end-users to adopt the solutions. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 200 000 to ensure the deployment and impact of the project outcomes.</p>
--	--

Expected Outcome: Projects are expected to contribute to the following outcomes:

- Public procurers stimulate from demand side the competitive development of market ready innovative solutions to reduce greenhouse gas emissions that can contribute to the transition of local communities towards climate neutrality, whilst strengthening EU open strategic autonomy;
- Public procurers leverage PCP to bring to the market innovative solutions in sectors relevant for climate change mitigation (such as energy efficiency in buildings, production and use of renewable energy, sustainable and smart mobility, digitalisation etc.) and implement those innovative solutions in the participant cities to reduce greenhouse gas emissions;
- Public procurers drive innovation and increase resilience in the supply chain by opening up opportunities for innovative companies established in the European Union's Member States and Horizon Europe Associated Countries, in particular SMEs and Startups, to access the public procurement market and scale up their business;
- Increased opportunities for wide market uptake and economies of scale for the supply side through increased demand for innovative solutions to reduce greenhouse gas emissions at the local level, wide publication of results and where relevant contribution to standardisation, regulation or certification;
- Present the expected greenhouse gas emission reduction in the participating cities by 2030 and 2050, in comparison to a baseline established at the beginning of the project.

Scope: By closing the gap between supply and demand in a way that reinforces EU open strategic autonomy, PCPs can make a key contribution to enhancing the European Union's economy and competitiveness²²⁵. In order to master the green and digital transition and make

²²⁴ Resources for this are foreseen under the *Specific Grant Agreements to the Framework Partnership Agreement (FPA) for the Climate-Neutral and Smart Cities Mission Platform*.

²²⁵ General Annex H to the work programme provides for specific conditions for PCP such as place of performance and commercialisation conditions that can require the majority of the procured R&D activities and later commercialisation/production of developed solutions to take place in the European Union's Member States and Associated Countries, as well as the possibility to limit the participation to

our cities climate-neutral and liveable places, European public procurers need to lead by example by procuring more solutions to reduce greenhouse gas emissions. This topic therefore focuses on forward looking procurement of R&D to bring to the market new solutions to reduce greenhouse gas emissions that can increase Europe's resilience and preparedness to tackle the climate challenge.

On the road towards climate-neutral cities this topic addresses the lack and fragmentation of public demand for innovative solutions. Europe's companies, in particular SMEs and Startups, are indispensable in delivering the required innovations. As past experience shows that pre-commercial procurement opens up the procurement market for startups and enables the public sector to address societal challenges more effectively, public procurers should make more strategic use of PCP.

This topic supports public procurers, specifically local authorities, to collectively implement PCPs to drive innovation from the demand side and open up wider commercialisation opportunities for companies in Europe to take or maintain international leadership in new markets for net-zero technologies that can deliver solutions to reduce greenhouse gas emissions. The aim is to leverage PCP to encourage the development and to provide a first customer reference for the piloting, installation and validation of breakthrough innovations.

PCP actions target consortia of procurers with similar needs that want to procure together the development of innovative solutions to reduce greenhouse gas emissions in cities. This topic does not provide direct funding to developers, industry or research organisations to perform R&D. They will be able to respond to the call for tenders launched by consortia of procurers funded under this call. Specific guidance on PCP actions and minimum eligibility requirements can be found in General Annexes H of the Horizon Europe work programme.

Continuous dialogue between demand and supply side is required for the success of PCPs, therefore the effective involvement of end users (e.g. cities teams that would need to adopt climate mitigation solutions, regional structures cooperating with cities on climate mitigation, citizens etc.) needs to be considered in the proposal. Furthermore, to stimulate dialogue with the supply side, public procurers are required to organise an open market consultation before launching the procurement and to promote the call for tenders widely across Europe to potentially interested suppliers.

Proposals should demonstrate sustainability of the action beyond the life of the project. They should demonstrate how the project is anchored in a clear strategy to provide climate-neutral cities and enhance the economy in a sustainable way through stronger early adoption of innovative solutions to reduce greenhouse gas emissions. Activities covered should include cooperation with policy makers to reinforce the national policy frameworks and mobilise substantial additional national budgets for PCP and innovation procurement in general beyond the scope of the project.

the PCP procurement to economic operators that are established in the European Union's Member States and Associated Countries if there are sufficient economic operators in these territories that can develop the requested solutions. These conditions apply to this topic.

Involvement of procurement decision makers is needed to ensure that end solution(s) are adopted by local public buyers, increasing the societal impact of the related research activities. Therefore, procurers should declare in the proposal their interest to pursue deployment of solutions resulting from the PCP in case the PCP delivers successful solutions and indicate whether they will (1) procure successful solution(s) as part of the PCP, (2) launch a separate follow-up procurement after the PCP to buy such type of solutions, (3) adopt successful solutions without the need to procure them (e.g. in case of open source solutions), (4) foresee financial or regulatory incentives for others to adopt successful solutions (e.g. in case the final end-users of the solutions are not the procurers but for example citizens). In these four cases, the procurers can implement the project as a fast-track PCP (see general annex H). In the first case, the procurers must foresee the budget in the proposal to purchase at least one solution during the PCP. In the second case, the procurers should include in the proposal a deliverable that prepares the follow-up procurement to purchase such type of solution(s) after the PCP. In the first and third case, the procurers must foresee sufficient time during the project to deploy and validate that the solutions function well after installation. In the fourth case, the procurers can use financial support to third parties to provide financial incentives to final end-users to adopt the solutions, with a maximum budget of EUR 200 000. Projects funded under this topic, which target the higher end of the budget range, should demonstrate a greater degree of ambition in terms of innovation level and/or deployment scope. The selection of the third parties to be supported under the grant will be based on an external review by independent experts of the proposed work.

Projects funded under this topic should include at least three cities of the 112 selected ones for the EU Mission on Climate-Neutral and Smart Cities²²⁶, and the lead procurer from the buyers group should be one of these 112 cities. In addition to the buyers' group that will implement the PCP, projects are encouraged to actively cooperate with an additional group of follower cities in the preparation and follow up of the procurement, including possibly also in the testing of solutions, to smoothen faster uptake of solutions to the wider followers group. Collaboration amongst the projects financed under this topic and with the 'Climate-Neutral Smart cities' Mission Platform is essential to the increase impact and coherence of the action. Appropriate provisions for activities and resources aimed at enforcing this collaboration should be included in the work plan of the proposal. The Mission Platform will support cities with the preparatory work for the PCP. The Mission Platform will also support the upscaling and replicability of the developed solutions, and the monitoring of the impact of the projects using a common methodology and clearly established indicators. The collaboration with the Mission Platform must be formalised through a Memorandum of Understanding to be concluded as soon as possible after the project starting date. To ensure that the new solutions are appropriately identified, the projects should plan for liaising with the different other Horizon funded projects, partnerships and initiatives that promote innovation in the different

²²⁶ The EU Mission on Climate-Neutral and Smart Cities aims to deliver 100 climate-neutral and smart cities by 2030 and ensure that these cities act as experimentation and innovation hubs to enable all European cities to follow suit by 2050. On 28 April 2022, the Commission announced the 100 EU cities that will participate in the Mission. In addition, 12 cities have been selected from countries associated or expected to be associated the Horizon Europe programme.

domains (such as CCAM Partnership, 2ZERO Partnership, and Built4People Partnership, Circular Cities and Regions, and CIVITAS) to avoid overlaps or contradictory conclusions.

This action supports the follow-up to the July 2023 Communication on EU Missions assessment²²⁷.

100 Climate-Neutral and Smart Cities by 2030: Other Actions

1. Specific Grant Agreement to the FPA to reinforce the operations of the Climate-Neutral and Smart Cities Mission Platform

Within the Framework Partnership Agreement (FPA) awarded under topic HORIZON-MISS-2021-CIT-02-03: Framework Partnership Agreement (FPA) for the Climate-Neutral and Smart Cities Mission Platform, the selected consortia will be invited to submit a proposal for a Research and Innovation Action that will contribute to the implementation of the last three years of the action plan defined in the above FPA.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- reinforcing services aimed at supporting the implementation of the Climate City Contracts (CCCs) of the cities selected to participate in the Mission through the Call for Expression of Interest;
- provision of basic services targeted at cities falling under the second objective of the Mission as well as cities that applied to the Call for Expression of Interest, committed to the climate-neutrality target by 2030 but were not eventually selected in the final list;
- Building on the good practices developed in the previous SGAs to support cities in the implementation of their investment plans through tailored advice and assistance offered by the **Climate City Capital Hub** and the **City Finance Specialists**. This activity will reinforce synergies between the Adaptation and Cities Missions, supporting cities in finding financing solutions for both mitigation as well as adaptation projects²²⁸;
- Assistance to cities with **innovative and strategic procurement**, including joint procurement with other cities, bridging with EU mechanisms and collaborating with national platforms on procurement, for example through regulatory sandboxes;
- Support for cities in **monitoring and reporting** on the implementation of the CCC;
- Expand and regularly update the **open-source services of the online platform**, accessible to all cities;
- Carry out a **capacity building and mutual learning programme**, supporting cities' move towards climate neutrality;

²²⁷ COM(2023) 457 final and SWD(2023) 260 final

²²⁸ For this purpose, the Adaptation Mission is financially contributing to the *Climate City Capital Hub*.

- Foster **mutual learning and exchange of good practice** through for instance mentoring and twinning actions;
- **Demonstrators accelerating and sustaining city climate-neutrality solutions**, building on the experience of activity 4 under the *Specific Grant Agreements to the FPA for the Climate-Neutral and Smart Cities Mission Platform* in the Work Programme 2021-2022. This support will enable Mission Cities to catalyse and sustain innovation and accelerate systemic change towards the objectives articulated in their CCC. In particular, it will support Mission Cities to anchor the resulting paradigm shift and embed transformative change over time towards the new normal of carbon neutrality.
 - o Launch and manage calls for proposals to support pilots for the deployment in participating Mission cities;
 - o Establish cooperation and regular exchange with the R&I projects that are and will be funded under the Climate-neutral and smart cities Mission Work Programme in order to identify complementarities, avoid potential overlaps with the pilots supported by the Mission Platform and ensure synergies where relevant, to the benefit of the participating cities. This collaboration should be formalised through a Memorandum of Understanding with the relevant projects and initiatives.

Expected Impact: Proposals should set out a credible pathway to contributing to:

- Supporting the implementation of the Climate-Neutral and Smart Cities Mission.
- Accelerating the transition towards climate-neutral cities.

Scope: This action aims at ensuring the Mission Platform's continued full operational capacity addressing and developing the actions needed to implement the relevant building blocks of the Framework Partnership Agreement (FPA) for the Climate-Neutral and Smart Cities Mission Platform while taking into account the lessons learned and the new priorities that emerged from the first few years of its implementation.

The Mission Platform will assist the cities that were selected²²⁹ as a result of the open Call for Expression of Interest which was launched in November 2021 and resulted in 377 expressions of interest from cities in all 27 EU Member States and from 9 associated countries. These cities respond to the first objective of the Mission to deliver at least 100 climate-neutral and smart European cities by 2030. Cities that are not yet able to commit to the Mission's timeline but are willing to commit to accelerate their transition towards climate neutrality within a longer timeframe following the Cities Mission basic principles, will also receive basic support from the Mission Platform. These cities respond to the second objective of the Mission to ensure that the cities responding to the first objective act as experimentation and innovation hubs to put all European cities in a position to become climate-neutral by 2050.

229

https://ec.europa.eu/commission/presscorner/detail/en/IP_22_2591

The Mission Platform should build on existing actions, including relevant ones developed through Horizon 2020 and Horizon Europe projects. It should collaborate closely with successful ongoing initiatives that have developed knowledge and expertise, in particular with the Covenant of Mayors and their methodologies and processes co-developed with the JRC, and the Covenant Community Group of Cities Practitioners. The assets of the Smart Cities and Communities context (including Energy Communities and Living-in.eu, data space for smart communities), the Smart Cities Marketplace and the Common Services Platform should be factored in, with regard to engaging public, private and civil society stakeholders to support project financing and implementation as well as the promotion of shared standards and technical specifications to facilitate data exchange and to ensure interoperability of solutions. Synergies should be ensured with the European Urban Initiative of the Cohesion Policy and with the Urban Agenda for the EU and with actions funded under the DIGITAL European Programme.

The Mission Platform will coordinate with the European Commission to ensure that advice and support provided to cities remains aligned to the latest policies and initiatives and makes full use of available tools and services provided or supported by the Commission.

In addition, it will draw in national-level support and expertise through close cooperation with the Cities Mission's national networks, established under the calls HORIZON-MISS-2021-CIT-01-01 and HORIZON-MISS-2024-CIT-02-01.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

This action supports the follow-up to the July 2023 Communication on EU Missions assessment²³⁰.

Specific conditions:

The evaluation committee will be partially composed by representatives of EU institutions.

This action allows for the provision of financial support to third parties in line with the conditions set out in General Annex B – Eligibility of the Horizon Europe Work Programme. The activity "Demonstrators accelerating and sustaining city climate-neutrality solutions", includes the launch of open calls for proposals to support pilots for the deployment in participating Mission cities of systemic innovative solutions. For this purpose, beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 1.5 million to increase the impact of the pilot projects to be supported under the call(s) that will address the deployment of systemic innovative solutions and in order to achieve the objectives of this action. The Commission considers that the size of the pilots should range between EUR 0.5 million up to EUR 1.5 million, depending on the expected impact of the

²³⁰ COM(2023) 457 final and SWD(2023) 260 final

proposed projects. The selection of the third parties to be supported under the grant will be based on a review of the proposed work by external independent experts. The scope of these calls will be further defined building on and ensuring complementarities with similar initiatives developed by the projects funded under the Horizon 2020 Green Deal call topic LC-GD-1-2-2020: Towards climate-neutral and socially innovative cities²³¹ as well as the projects funded under the *Specific Grant Agreements to the FPA for the Climate-Neutral and Smart Cities Mission Platform* in the Horizon Europe Missions Work Programme 2021-2022.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Specific grant agreement awarded without call for proposals in relation to a Framework Partnership Agreement

Indicative timetable: Third quarter 2025

Indicative budget: EUR 30.64 million from the 2025 budget

2. Financial advisory services and technical assistance to Mission cities

This action aims at supporting the provision of financial advisory services and technical assistance to the 112 cities selected as part of the Climate-neutral and smart cities Mission through its Call for Expression of Interest with the objective to develop and subsequently implement their investment strategy for becoming climate-neutral. Through a top-up of existing activities and advisory structures such as the European Local Energy Assistance (ELENA), Mission cities will receive targeted support including e.g. technical studies, energy audits, business plans and financial advisory, legal advice, tendering procedure preparation, project bundling, project management.

The action will be implemented through the existing advisory agreement with the EIB Group for the implementation of the InvestEU Advisory Hub.

This action supports the follow-up to the July 2023 Communication on EU Missions assessment²³².

Legal entities:

EIB, 98-100, boulevard Konrad Adenauer L-2950 Luxembourg

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

²³¹ Horizon 2020 Work Programme 2018-2020, Part 20. Cross-cutting activities, Call - Building a low-carbon, climate resilient future: Research and innovation in support of the European Green Deal: <https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/opportunities/topic-details/lc-gd-1-2-2020>. The Horizon 2020 project NetZeroCities - Accelerating cities' transition to net zero emissions by 2030, Grant Agreement n. 101036519, has been selected under the Green Deal call topic "LC-GD-1-2-2020 Towards Climate-Neutral and Socially Innovative Cities" and started its activities on 1 October 2021.

²³² COM(2023) 457 final and SWD(2023) 260 final

Indicative timetable: Third quarter 2025

Indicative budget: EUR 18.65 million from the 2025 budget

DRAFT

A Soil Deal for Europe: Research and Innovation and other actions to support the implementation of Mission 'A Soil Deal for Europe'

As part of the vision to achieve healthy soils by 2050, outlined in the [EU soil strategy for 2030](#), the European Commission proposed a [Directive on Soil Monitoring and Resilience](#), addressing key threats such as erosion, floods and landslides, loss of soil organic matter, salinisation, contamination, compaction, sealing, and loss of soil biodiversity. **The Mission 'A Soil Deal for Europe', the Mission, is recognized as a key instrument for its implementation**, aiming to establish [100 living labs and lighthouses](#) by 2030.

The **Mission** is structured around **four operational objectives**:

- build capacities and the knowledge base for soil stewardship;
- co-create and upscale place-based innovations to improve soil health in all places;
- develop an integrated EU soil monitoring system and track progress towards soil health;
- engage with the soil user community and society at large.

Significant investments via the 2021-2024 Work Programmes have advanced the Mission's objectives, establishing a solid infrastructure to support its projects and objectives. This has led to major progress in the EU soil health monitoring framework, with data and knowledge from Mission projects feeding into the [EU Soil Observatory and the European Soil Data Centre](#) (ESDAC), aiding Member States in implementing the future Directive. The first [EU-wide soil health observatory dashboard](#), launched in March 2023, provides 19 key soil health parameters and maps degradation processes across Europe. Efforts continue to develop cost-effective indicators and methodologies for monitoring soil health at local, regional, and EU levels, leveraging digital and earth observation technologies.

The Mission is empowering a vibrant community of key actors to take action on soils, including researchers, innovators, land managers²³³, advisors, educators, artists, citizens, industry, policymakers and representatives of national, regional and local administrations. Noteworthy is the [Mission Manifesto](#), which has mobilized widespread support across the EU and beyond, with numerous organizations and individuals pledging their commitment to protecting and restoring soil health. Recognizing soil health as a global challenge, the Mission has supported key soil initiatives worldwide and contributes to EU policies and international commitments (e.g., Sustainable Development Goals, United Nations Convention to Combat Desertification, United Nations Convention on Biodiversity, the Long-term Vision for the EU's rural areas and the Common Agricultural Policy).

The **2025 Work Programme** builds on, consolidates and completes the actions initiated in previous programmes.

²³³ The term "land manager" includes farmers, foresters, urban and spatial planners and other decision-makers in the public or private domain with regard to land use and rural areas.

Potential applicants should prepare their proposals considering the aim of the [EU Missions](#) as an instrument, i.e., to bring concrete solutions to the great challenges identified and to deliver results by 2030, and specifically the Mission Soil objectives ([Mission Implementation Plan](#)) and state of play. Proposals for topics under the Mission “A Soil Deal for Europe” Work Programme 2025 should outline credible pathways to contribute to at least one of the three key strategic orientations of the [Strategic Plan 2025-2027](#), and more specifically, to the following long-term impacts:

- Soil health-improving innovative governance, policies, practices, and incentives that integrate the main environmental, social, economic, regulatory, and cultural factors influencing soil management and soil degradation are in place, particularly at regional and local levels.
- Improved and coherent soil health monitoring is adopted by land managers, including farmers and foresters, researchers, and Member States, within and beyond the EU using cost-efficient techniques that harness the potential of remote sensing and digital technologies.
- Researchers, land managers, policymakers, and citizens are aware of soil health issues in the EU and AC, and beyond, and engaged in the design of solutions to protect and restore soil health.

Coordinated contributions to the Mission’s long-term impacts and relevant Mission objectives will be key for the Mission success. Sharing data, knowledge and information, creating synergies and collaborations and avoiding duplications between projects is essential, as well as considering mobilising other resources and actors where relevant and possible. Proposals are therefore encouraged to **build on and collaborate with ongoing Mission projects** and support structures and projects such as [SoilWise](#) and the [Mission Soil Platform](#). Projects are also expected to liaise closely with the **Mission Secretariat** and actively contribute to the development of the **European Soil Observatory (EUSO)**, hosted by the European Commission’s Joint Research Centre (JRC).

Finally, to ensure EU-wide communication in all areas related to the [Common Agricultural Policy \(CAP\) specific objectives](#), in particular agriculture, forestry and rural development, this knowledge must also be summarised in an appropriate number of ‘practice abstracts’ in the common [EIP-AGRI format](#). Where applicable, involvement of interactive innovation groups, such as [EIP-AGRI Operational Groups](#) funded under Rural Development Programmes, is strongly recommended. For areas falling outside the [EU CAP Network](#) and CAP specific objectives remit, other similarly effective solutions ensuring dissemination and interaction with innovation groups at EU level should be sought.

Specific requirements for multi-actor projects:

The multi-actor approach described here, which is a form of responsible research and innovation, aims to make the research and innovation process and its outcomes more reliable, demand-driven, shared and relevant to society. A multi-actor project ensures the genuine and

sufficient involvement of a targeted array of actors. For instance, actors could include but not be limited to researchers, farmers, foresters and representatives of their professional associations, advisors, land managers and owners, spatial planners, food and bioeconomy businesses, consumer associations, local communities, educators, cultural and creative industries, citizens, civil society organizations including NGOs, and government representatives. The choice of the key actors participating in projects will depend on the objectives of the topic and the proposal. The genuine and sufficient involvement of different actors (essentially the (end-) users²³⁴ of the project results backed up by any other useful intermediaries and actors who can contribute with further expertise and innovative ideas) should take place over the whole course of the project: from its inception and planning to implementation, dissemination and possibly exploitation of results. The building blocks of a proposal are expected to come from science as well as from practice in a ‘co-creation’ process. (End-) users and practitioners are to be involved, not as a study-object, but to use their practical and local knowledge and/or entrepreneurial skills to develop solutions and create ‘co-ownership’ of results. This will contribute and speed up the acceptance and up-take of new ideas, approaches, and solutions developed in the project. Proposals submitted for topics requesting to follow the multi-actor approach should describe:

- How the proposed objectives and planned activities are targeting the needs/problems/challenges and opportunities of the (end-)users.
- How the proposed approaches and in particular the composition of the consortium reflects a balanced choice of relevant key actors who have complementary types of knowledge (scientific, practical etc.), and will ensure the delivery of results ready for practice.
- How existing practices and tacit knowledge will be included. This should be illustrated in the proposals with a sufficient number of high-quality knowledge exchange activities indicating the precise and active roles of the different non-scientific actors in the work. The cross-fertilisation of skills, competencies and ideas between actors should generate innovative findings and solutions that are more likely to be applied on a broad scale.
- How the multi-actor engagement process will be facilitated by making use of the most appropriate methods and expertise.
- How practical and ready to use knowledge, approaches, tools or products, that are easily understandable and freely accessible, will be developed.

How results and outputs ready for practice will feed into the existing dissemination channels most consulted by (end-) users across countries and regions.

Proposals are invited against the following topic(s):

²³⁴ An “(end-) user” of project result is a person who is him/herself putting the project results into practice.

HORIZON-MISS-2025-05-SOIL-01: Living Labs for soil remediation and green redevelopment of brownfields

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 12.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Award criteria</i>	<p>The criteria are described in General Annex D. The following exceptions apply:</p> <p>The overall threshold for the second stage evaluation will be 12, with a minimum threshold of 4 for the ‘Excellence’ criterion’.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties to facilitate active involvement of smaller actors (e.g. land managers and owners such as farmers, SMEs or civil society) in one or more of the living labs of the project. The support to third parties can only be provided in the form of grants (further to calls or, if duly justified, without a call for proposals). The maximum amount to be granted to each third party is EUR 200 000.</p>

Expected Outcome: Activities under this topic respond directly to the goal of the Mission ‘[A Soil Deal for Europe](#)’ of setting up 100 living labs and lighthouses by 2027 to lead the transition to healthy soils by 2030. They support the specific objectives of the Mission Soil dealing with urgent soil health challenges (see in particular specific objectives 3, 4, 6 and 8 in the [Mission implementation plan](#)).

Activities should also contribute to meeting the European Green Deal ambitions and targets and more specifically those of the [EU soil strategy for 2030](#) and the [EU Biodiversity Strategy for 2030](#), the [Zero Pollution Action Plan](#), the [Roadmap to a Resource Efficient Europe](#), [the proposal for a Soil Monitoring and Resilience Directive](#), the [Communication on Boosting](#)

[Biotechnology and Biomanufacturing in the EU](#) as well as to Sustainable Development Goal (SDG) 15 on Life on land and SDG 3 on Good health and well-being.

Project results are expected to contribute to the following outcomes:

- Increased capacities for participatory, interdisciplinary and transdisciplinary R&I to co-create, and co-implement economically viable solutions for soil remediation and green redevelopment of brownfields.
- Practice-oriented knowledge and tools are more easily available to land managers and land users resulting in an enhanced consideration and uptake of effective solutions for soil remediation and green redevelopment of brownfields.
- Policymakers are more aware of local needs regarding soil remediation and green redevelopment of brownfields, including the economic sustainability of solutions and use this knowledge to design and implement more effective policies.

Scope: De-industrialisation and abandonment of areas previously developed for industrial or commercial purposes have produced many brownfields²³⁵ all over Europe, representing a major concern at different levels with adverse effects on the economy the environment, human health, social well-being and quality of life in their surroundings. However, many brownfields are located within urban boundaries and as such represent an opportunity for sustainable urban regeneration initiatives and offer competitive alternatives to greenfield developments (in line with the New European Bauhaus initiative).

Projects under this topic are intended to expand and complement the network of Mission Soil living labs and lighthouses initiated with projects funded under Work Programmes 2023 and 2024 of the Mission Soil, with the aim of gradually establishing 100 living labs and lighthouses to lead the transition towards healthy soils by 2030.

The Mission ‘A Soil Deal for Europe’ proposes a novel approach to research and innovation in the area of soil health, including the implementation of living labs. Living labs have the potential to facilitate a green and fair transition by involving multiple actors in real-life sites within a local/regional setting to co-create soil health solutions and achieve large-scale impacts on soil health and soil governance.

Living labs are long-term collaborations between multiple actors to address common soil health challenges in real-life sites at local or regional level (10 to 20 sites in each living lab). Depending on the level at which each living lab operates and the specific context (e.g. land use covered or soil health challenge addressed), applicants can exceptionally propose living labs with fewer sites. Individual sites could be e.g. abandoned commercial and industrial sites, former mining areas or zones with former or current military activities. Sites that are exemplary in their performance in terms of soil health improvement and serve as places for

²³⁵ According to the US Environmental Protection Agency, brownfields are properties that contain or may contain a hazardous substance, pollutant or contaminant, complicating efforts to expand, redevelop or reuse them.

demonstration of solutions, training and communication are lighthouses. Lighthouse sites can be part of a living lab or be situated outside a living lab.

Living labs can address soil health challenges in or across different land uses (agricultural, (peri-)urban, (post)-industrial, forest and (semi-)natural). Projects funded under this topic are expected to kick-start participatory process or build on existing ones. While normally projects run for four years, the duration of the projects should accommodate longer timescales required to establish participatory processes and/or for soils processes to take place. Actors working on common shared soil health challenges within and across the living labs of the same project, will be able to compare results, exchange good practices, validate methodologies, replicate actions and solutions and benefit from cross-fertilisation, thereby accelerating the transition towards the shared objective of improving soil health.

More specifically, the proposals should:

- Support the setup of four to five living labs to work together on soil remediation solutions (practices, tools, strategies, etc.) and green redevelopment of brownfields. The living labs should be located in at least three different Member States and/or Associated Countries. Proposals should explain the rationale and mechanisms for cooperation across the living labs and explain how the work undertaken will contribute to one or more of the Mission's specific objectives²³⁶. Proposals should present a realistic combination of a limited selection of variables which should be clearly described (e.g., number of soil health challenges addressed, pedo-climatic conditions, land uses, Mission objectives addressed).
- Establish an interdisciplinary, participatory, and multi-actor approach in the living labs to co-design, co-develop and co-implement locally adapted solutions for the common soil health challenge(s), taking into account relevant drivers and pressures. Proposed solutions should be adapted to the different environmental, socio-economic and cultural contexts in which the living labs are operating.
- Establish for each living lab a baseline for the relevant soil descriptors/indicators adequate for brownfields, to allow for an accurate co-assessment of the changes in different sites over time. The set of soil health indicators/descriptors presented in the proposal for a [Directive on Soil Monitoring and Resilience](#) should be used as a basis; proposals may complement with additional indicators depending on the soil health challenge(s) addressed, pedoclimatic conditions, land use, etc.
- Propose and assess innovative solutions for soil remediation and potential green redevelopment plans for the sites (brownfields) involved in the living labs that would enhance soil health and related ecosystem services. This should include a demonstration of the viability (technical, social, economic, cultural and environmental) of the solutions.

²³⁶ See the [Mission implementation plan](#)

- Identify sites that demonstrate high performance in terms of their actions and results on soil remediation and green redevelopment of brownfields, and that may be converted into lighthouses. This can be performed both at proposal stage or later on, during the living lab operation.
- Propose strategies (e.g., financial, organisational) to ensure the long-term sustainability of the established living labs beyond the Horizon Europe funding. Strategies should include the identification of possible business models and actions, involving a mix of public or private funding schemes, financial instruments, cooperation with local authorities, engagement of social economy entities, social enterprises, business communities, SMEs, as well as attracting investors and entrepreneurs.

In line with the nature of living labs, projects must adopt the multi-actor approach. The actors involved in each living lab may vary based on its unique characteristics, and may include, among others, researchers, landowners or land managers, industry representatives (e.g. SMEs), public administrators and civil society (e.g. consumers, local residents, environmental NGOs, youth organisations). Care should be taken to describe the capabilities, roles and resources of the different actors involved in the living labs. An effective contribution of social sciences and humanities and the arts (SSHA) is expected to foster social innovation, knowledge transfer and socio-cultural and behavioural change.

To encourage and facilitate the involvement of different types of actors in the living labs, applicants are reminded of the different types of participation possible in a project under Horizon Europe. This includes not only beneficiaries (or their affiliated entities) but also associated partners, third parties giving in-kind contributions, subcontractors and recipients of financial support to third parties²³⁷. Financial support to third parties (FSTP) to facilitate active involvement of small actors (e.g. land managers, landowners, SMEs or civil society) in one or more of the living labs of a project, can be provided through calls or, if duly justified, without a call for proposals. Applicants are advised to consult the standard conditions set out in Annex B of the General Annexes including those that apply to FSTP.

Dedicated tasks and appropriate resources should be envisioned to collaborate with [SOILL](#), the structure created to support soil health living labs and lighthouses which offers significant capacity building opportunities for the living labs actors. Applicants can benefit from the services of [SOILL](#) already during the proposal preparation stage. During implementation, collaboration will include, among others, regular reporting of living labs performance. The details of the collaboration will be further defined during the grant agreement preparation phase.

Proposals are expected to build on existing knowledge (e.g. data from national soil health monitoring, LUCAS) and solutions developed and tested at national scale or in the frame of other Horizon projects including those funded under the Mission ‘A Soil Deal for Europe’.

²³⁷ To explore the full range of options including what type of costs and activities are eligible to be funded under Horizon Europe, applicants should refer to the AGA – Annotated Model Grant Agreement https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/common/guidance/aga_en.pdf

Proposals should therefore include dedicated tasks and appropriate resources for collaboration with relevant projects and initiatives and engage in relevant Mission Soil clustering activities. Proposals are also encouraged to consider, where relevant, the data, expertise and services offered by European research infrastructures ([ESFRI](#)) and if relevant to cooperate with the Horizon Europe Partnerships on [Agroecology](#) and on [Sustainable Food Systems](#) and/or relevant networks active at local level, such as the EIP-AGRI operational groups to promote the involvement of key local stakeholders.

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [EU Soil Observatory](#) (EUSO) and the project [SoilWise](#). In particular, proposals should ensure that relevant data, maps and information can potentially be available publicly through the EUSO maps and information can potentially be available publicly through the EUSO. Concrete efforts should be made to ensure that the data produced in the context of the funded project is FAIR (Findable, Accessible, Interoperable and Re-usable).

HORIZON-MISS-2025-05-SOIL-02: Social, economic and cultural drivers, and costs of land degradation

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 11.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²³⁸ .

²³⁸ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Expected Outcome: Activities under this topic will help to progress EU efforts to better protect soils and reaffirm its commitment to achieve land-based climate neutrality in the EU by 2035 as outlined in the [EU Soil Strategy for 2030](#). Moreover, results under this topic will contribute to progress on all the Mission ‘A Soil Deal for Europe’ objectives as well as on the Sustainable Development Goal (SDG) 15 on Life on land.

Project results are expected to contribute to all the following outcomes:

- Policy makers and relevant stakeholders have an enhanced understanding of the key social, economic, cultural, political, and regulatory factors driving soil management and degradation and the interaction of these factors.
- Policy makers and other relevant stakeholders have access to enhanced estimates of land degradation costs (e.g., GDP losses and negative externalities) and have a better understanding of the consequences of land degradation for food security and other ecosystem services, people’s well-being, markets and finance.
- Policy makers (at EU, national, regional and local level), land-managers, and other stakeholders have increased access to cost-benefit analysis and have improved capacities to develop evidence-based strategies or policies, and integrated approaches to overcome barriers to soil health protection and restoration and facilitate sustainable land management.

Scope: The social, economic, cultural, political, and regulatory factors that drive land management and land degradation and the interaction among these factors has been insufficiently explored. Moreover, there is a knowledge gap in estimating the costs that land degradation generates on-site, directly affecting land users and managers, and offsite, borne by society. Currently, the lack of knowledge on the costs of land degradation hampers the development of cost-benefit scenarios for the adoption and implementation of soil conservation and restoration actions across the EU and Associated Countries. An improved understanding of the social, economic, political, regulatory, and cultural factors, together with quantification of the costs of land degradation, should lead to evidence-based strategies, policies and integrated approaches that support land managers in rural, intermediate, and urban areas to adopt and implement sustainable land management practices that reduce and eventually stop land degradation and enhance soil health.

Proposed activities should:

- Identify the social, economic, cultural, political, and regulatory factors that drive soil management and degradation and are key in the development of strategies, policies and integrated approaches for sustainable land management across different land uses. The analysis should include, among other factors, those related to gender, education, inequalities, and access to land.
- Review existing socio-economic methods and models for assessing land degradation costs and conduct pan-European assessments of the socio-economic costs of different

aspects of land degradation (e.g. soil organic carbon losses, soil erosion, biodiversity decline, nutrient loss, soil contamination, soil sealing, and land subsidence) across all relevant land use types. Such assessments should be based on the integration of soil bio-physico-chemical indicators with socio-economic methods and models.

- Carry out cost-benefit analyses of soil conservation measures and sustainable land management approaches by building on other EU funded projects or initiatives.
- Evaluate the socio-economic impacts of EU Green Deal policies related to land degradation (scenario analysis) and the socio-economic costs and benefits of their implementation.
- Explore how existing patterns of thought and action can be modified to implement sustainable land management. This should include the analysis of successful examples of sustainable human-soil relations, and their replicability should be encouraged among stakeholders through peer-to-peer learning and capacity building.
- Develop a toolbox of policy solutions for different governance levels to promote sustainable land management and avoid land degradation and sealing, considering the diverse cultural, political, and administrative systems, land uses, and geographical and pedo-climatic conditions in the EU and Associated Countries.

In carrying out the activities, consortia should:

- Work in an interdisciplinary way bringing together environmental sciences and social sciences and humanities (SSH) disciplines (including economics, political science, sociology, history, geography, cultural anthropology, behavioural sciences).
- Regularly engage with policy makers and stakeholders to co-create and evaluate strategies to mitigate land degradation and sealing.

Finally, proposals should:

- Include dedicated tasks and appropriate resources for coordination measures and joint activities with the other project funded under this topic, as well as with other relevant projects and initiatives funded under the Mission “A Soil Deal for Europe”, including engagement with the relevant cluster activities.
- Demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [EU Soil Observatory](#) and the [SoilWise](#)²³⁹ project.

²³⁹ See [An open access knowledge and data repository to safeguard soils | SoilWise | Project | Fact sheet | HORIZON | CORDIS | European Commission](#)

HORIZON-MISS-2025-05-SOIL-03: Increasing environmental resilience through a better knowledge and management of the soil-water nexus

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁴⁰.</p>

Expected Outcome: Activities under this topic will help to progress towards the objectives of the Mission ‘A Soil Deal for Europe’. Activities will also contribute to the EU Biodiversity Strategy for 2030 and the Nature Restoration Law, to the EU Soil Strategy for 2030 and the proposed Soil Monitoring and Resilience Directive, EU Water Framework Directive, as well as the EU Action Plan on the Development of Organic Production.

Project results are expected to significantly contribute to all the following outcomes:

- Enhance stakeholders’ (including decision-makers’ and land managers’) understanding of the importance that soil-water interactions play in mitigating risks associated with extreme events such as droughts, wildfires and floods and their virulence.
- Raise stakeholders’ awareness of the relevance of soil biodiversity²⁴¹ to soil characteristics (e.g. water retention capacity, permeability, saturation, etc.) which are relevant for the soil-water nexus.

²⁴⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁴¹ See [Soil Biodiversity - ESDAC - European Commission](#)

- Substantially contribute to increasing environmental resilience to extreme events like floods, droughts, or wildfires, as well as to other undesired soil health processes, through restoration, conservation and integrated management of the soil-water nexus.

Scope: The world is facing an increasing trend in the frequency and virulence of extreme events like droughts, wildfires, and floods, with soil, and more precisely soil-water interactions, playing a key role in their occurrence and impact. A holistic response is necessary to face these events and better manage the risks and impacts they create onto the environment, food security, the economy and human security.

For example, recent studies have shown the significance of soil moisture in wildfire probability and virulence²⁴², the importance of soil-water retention capacity and availability for vegetation and crop possibilities to endure droughts, and the potential for improved retention and infiltration to reduce flood peak flow and its destructive effects²⁴³. Soils, sediments, and water are intimately connected, as soils filter, absorb and buffer water, but can also get eroded and contaminated through water. Healthy soils can help mitigate not only the occurrence, virulence and scope of extreme events, but also other undesired processes like erosion or contamination. But when soils are unhealthy, compacted or sealed, they lose capacity to absorb and store water, which reduces their capability to mitigate the risks and impacts of extreme events.

While soil biodiversity plays an important role with respect to soil properties such as porosity, aggregation or organic matter content, its influence on water dynamics is often complex and indirect, and thus still poorly studied. Therefore, it is necessary to enhance the understanding of the functional role of soil biodiversity for soil-water dynamics, and to develop and validate new models for mainstreaming and integrating soil biodiversity together with other risk assessment parameters.

Proposed activities should:

- Develop and validate one or more indicators for the soil water holding capacity descriptor included in the proposed Soil Monitoring Law, considering the different pedoclimatic areas and land uses in the EU and Associated Countries.
- Identify the soil properties and associated indicators (e.g., structure, bulk density, porosity, depth, organic matter, buffering etc.) and factors (e.g., slope, frost, cover, drainage network, etc.) that determine soil-water dynamics and are relevant for the probability and virulence of extreme events. The use of remote sensing techniques is encouraged for soil factors identification.
- Assess the role of soil biodiversity for the previously identified water-relevant soil properties and the impact of the different soil factors on soil biodiversity, considering

²⁴² See [Measured Soil Moisture is a Better Predictor of Large Growing-Season Wildfires than the Keetch–Byram Drought Index](#); [Satellite-Observed Soil Moisture as an Indicator of Wildfire Risk](#); [Evaluation and calibration of a high-resolution soil moisture product for wildfire prediction and management](#)

²⁴³ See [Building Resilience Against Drought and Floods: The Soil-Water Management Perspective](#)

different pedoclimatic areas and land uses in the EU and Associated Countries. Where relevant, involve soil biodiversity taxonomists to validate methods and expand knowledge.

- Develop and validate new models (or substantially improve existing ones) at watershed/landscape level that mainstream and integrate the functional role of soil biodiversity in soil-water interactions and specially in risk assessment of extreme events.
- Assess and validate strategies and best practices proposed in the context of other relevant EU-funded projects and initiatives (e.g. Living Labs funded under the EU Mission “A Soil Deal for Europe”²⁴⁴ or the Horizon Europe projects [SpongeBoost](#) and [SpongeScapes](#)) to increase environmental resilience by improving the soil-water nexus through restoration, conservation and management of soil and its biodiversity, considering the different pedoclimatic areas and land uses in the EU and Associated Countries.

The proposed activities should duly consider the different pedoclimatic areas and land uses (agricultural, natural, and urban) across the EU and Associated Countries, with enough experiment design robustness to guarantee the meaningfulness of results. In the specific case of agricultural lands, due attention should be given to the impact of the differences between conventional, agroecological and organic production.

Proposals should include dedicated tasks and appropriate resources for coordination measures and joint activities with other relevant EU-funded initiatives, specially under the Mission ‘A Soil Deal for Europe’, in particular for the validation of innovative approaches for increasing environmental resilience, and for engagement with the relevant cluster activities.

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [EU Soil Observatory](#) (EUSO) and [SoilWise](#). Concrete efforts should be made to ensure that the data produced in the context of the funded project is FAIR (Findable, Accessible, Interoperable and Re-usable), particularly in the context of real-time data feeds, exploring workflows that can provide “FAIR-by-design” data, i.e., data that is FAIR from its generation.

When dealing with models, actions should promote the highest standards of transparency and openness, as much as possible going well beyond documentation and extending to aspects such as assumptions, protocols, code and data, that is managed in compliance with the previously mentioned FAIR principles.

Proposals are encouraged to consider, where relevant, the data, expertise and services offered by European research infrastructures in the environment, biological & food domains or imaging capacities²⁴⁵.

²⁴⁴ See <https://mission-soil-platform.ec.europa.eu/>

²⁴⁵ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

HORIZON-MISS-2025-05-SOIL-04: Developing transfer functions for the Soil Monitoring Law

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Activities under this topic will help to progress towards the objectives of the Mission ‘A Soil Deal for Europe’ and the proposed Directive on Soil Monitoring and Resilience (Soil Monitoring Law – SML)²⁴⁶, by integrating different soil monitoring systems for a harmonised soil health assessment in the EU. It will also support the implementation of the EU Carbon Removal and Carbon Farming (CRCF) Regulation²⁴⁷ by facilitating the interoperability of soil organic carbon data across the EU and thus harmonising the production and use of soil datasheets for monitoring, reporting and verification in carbon farming, including statistics and maps.

Project results are expected to significantly contribute to all the following outcomes:

- Stakeholders have access to validated transfer functions for all soil descriptors included in the SML proposal, enabling compatibility, interoperability, and comparability of data for laboratorial and field methods used in the EU that differ from those prescribed in Annex II of the proposal.
- National monitoring programmes, Land Use and Coverage Area frame Survey (LUCAS) and protocols (e.g. ISO/CEN) included in the SML proposal are integrated by interoperability, enabling harmonised soil health assessments across the EU by using the existing monitoring schemes in Member States and at EU level.
- Enhanced understanding of the applicability of statistical methods for combining soil data collected with different protocols, to produce harmonised EU statistics and maps.

Scope: The proposed Directive on Soil Monitoring and Resilience (Soil Monitoring Law – SML) aims to put in place a coherent and integrated soil monitoring framework for all soils across the EU. However, currently there are many different methods in the EU to monitor and assess soil health, from sampling to laboratorial procedures, and some Member States have

²⁴⁶ COM/2023/416 final, see [EUR-Lex - 52023PC0416 - EN - EUR-Lex](#)

²⁴⁷ COM/2024/3012, see [Regulation - EU - 2024/3012 - EN - EUR-Lex](#)

long-standing soil monitoring systems and procedures which they prefer to keep for economic reasons and to safeguard long-term datasets.

Validated transfer functions are therefore needed to reliably convert soil measurements to a common reference method and to facilitate a smooth and cost-effective transition to a harmonized soil health assessment across the EU. Some knowledge on transfer functions is already established for certain soil physical and hydraulic properties, but existing knowledge does not cover the entire combination of laboratorial and field methods available across the EU for all the soil descriptors present in the SML proposal.

Proposed activities should:

- Identify and collect the information available in existing samples archives such as LUCAS.
- Develop and test, together with Member State monitoring bodies, transfer functions for all descriptors proposed in the SML proposal (e.g. soil organic carbon, excess nutrient content, soil acidity, pH, P-Olsen, Electrical conductivity, bulk density, etc.) and for the diverse methods used for field sampling collection (including sampling depth) and analysis different than those prescribed in the SML proposal. Identify conversion factors to transform data from one method to another.
- Compare results obtained by different sampling protocols and laboratorial procedures, and link national monitoring systems with LUCAS outputs and the protocols of ISO/CEN and others included in the SML proposal.
- Determine the most reliable statistical methods for combining soil data collected with different sampling protocols and analytical methodologies to produce harmonised and comprehensive statistics and maps.
- Validate transfer functions by sampling a subset of the LUCAS 2022 locations, covering at least 21 MS and 80% of the EU land surface area and analogous to LUCAS in terms of land cover and climate regions. A minimum of 30% of the budget must be allocated for the sampling and analysing of at least 4000 samples.

A strong collaboration is expected with the Joint Research Centre to identify and access existing samples archives and to make sure that relevant data, maps and information can be used and displayed by the EU Soil Observatory. Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the Joint Research Centre's [EU Soil Observatory](#) (EUSO), [SoilWise](#) project. and the JRC Life Cycle Assessment group²⁴⁸.

Concrete efforts should be made to ensure that the data produced in the context of the funded project is FAIR (Findable, Accessible, Interoperable and Re-usable), particularly in the context of real-time data feeds, exploring workflows that can provide “FAIR-by-design” data,

²⁴⁸ See [European Platform on LCA | EPLCA](#)

i.e., data that is FAIR from its generation. Proposals are encouraged to consider, where relevant, the data, expertise and services offered by European research infrastructures in the environment, biological & food domains or imaging capacities²⁴⁹.

When dealing with transfer functions, actions should promote the highest standards of transparency and openness, as much as possible going well beyond documentation and extending to aspects such as assumptions, protocols, code and data, that is managed in compliance with the previously mentioned FAIR principles.

Proposals should include dedicated tasks and appropriate resources for coordination measures and joint activities with other relevant EU-funded initiatives, specially under the Mission “A Soil Deal for Europe”, including engagement with the relevant cluster activities. Likewise, projects should build on the results and data collected in previous related EU-funded initiatives, such as [EJP SOIL](#).

In this topic, the integration of the gender dimension (sex and gender analysis) in research and innovation content is not a mandatory requirement.

HORIZON-MISS-2025-05-SOIL-05: EU global footprint on soils

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Activities under this topic will help to progress towards the objectives of the Mission ‘A Soil Deal for Europe’, in particular towards its specific objective 7 ‘Reduce the EU global footprint on soils’.

Project results are expected to significantly contribute to all the following outcomes:

- Policy makers and relevant stakeholder have improved access to knowledge and data on the impact of the EU demand for bio-based products (e.g., food, feed, fibre, woods and biomass) on non-EU soils.

²⁴⁹ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

- Enhanced recognition and comprehension by businesses, stakeholders and citizens of the impact of EU producers', traders' and consumers' behaviour and decisions on the soil health and related social issues globally.
- Accelerated uptake of integrated innovative and reproducible approaches and management practices to reduce the global impact on soils due to the EU demand for bio-based products.

Scope: The use of bio-based products (e.g. food, feed, fibre, wood and biomass) by businesses and consumers in the EU has an impact on soil health globally. However, this impact has been poorly studied and understood. The European Commission has developed a Life Cycle Assessment (LCA)-based framework to monitor the evolution of the overall environmental footprint of EU production and consumption and to compare it against planetary boundaries, the “[EU Consumption Footprint Platform](#)”. However, this framework does not sufficiently consider the specific impact on soil health and there is a need to enrich the existing indicators in terms of physical, chemical and biological soil properties.

An EU Global Soil Footprint framework would allow measuring the impact that a given activity has on soil health globally, measured in terms of soil degradation. Such a framework should also address the impact of the EU demand for bio-based products on global trade and the links to GDP and the Human Development Index. A crucial step will be to trace back relevant imported products (for final consumption or as inputs to EU production) to the country where they were originally produced. To this end, work can build upon previous work of the JRC on quantifying the [land footprint of EU consumption](#)²⁵⁰. Moreover, there is also a need to investigate further the carbon emissions produced from EU demand (carbon footprint), the impact of EU imports on ecotoxicity and eutrophication (contamination footprint) and soil biodiversity elsewhere, and the environmental impact and social inequalities due to land use change (in particular the effects on deforestation^[OBJ]).

Proposed activities should:

- Develop and test a robust framework or tool (an EU Global Soil Footprint framework) to track, assess and establish a baseline for the global soil footprint of the EU demand for and import of bio-based products (e.g. food, feed, fibre, wood and biomass).
- Explore the positive and negative social, economic and environmental impacts of improved production systems elsewhere, including soil conservation and restoration actions, in their attempt to reduce the EU global footprint on soils.
- Bring forward policy recommendations aiming at minimising the EU's global soil footprint. Identify obstacles and propose incentives for the uptake and scale-up of measures that can help reduce the EU's global footprint.
- Carry out activities for communication and awareness raising on the EU's global soil footprint and for the demonstration and dissemination of measures that can reduce the

²⁵⁰ See <https://data.europa.eu/doi/10.2760/967058>

EU's global soil footprint, in cooperation with international organisations such as UNCCD bodies, FAO or UNEP.

Cooperation with international partners is highly encouraged to engage a global network of experts in life-cycle analysis. In particular, the involvement of Latin American and Caribbean (LAC) partners is encouraged, as this region encompasses more than 50% of the world biodiversity and is an important trading partner for the EU regarding bio-based products. In this sense, activities to be developed should be in line with the roadmap and action plan of the [EU-CELAC Action Plan on Science, Technology and Innovation](#). Involvement of African partners is also encouraged.

When assessing the impact on soils, proposals should take into account the soil health indicators presented in the Mission Soil Implementation Plan and the soil descriptors in the proposed Directive on Soil Monitoring and Resilience.

Proposals should include dedicated tasks and appropriate resources for coordination measures and joint activities with other relevant projects and initiatives funded under the Mission 'A Soil Deal for Europe', including engagement with the relevant cluster activities. Proposals are expected to build on the results of the [SOLO](#) project and its roadmap on knowledge gaps and opportunities²⁵¹. Moreover, proposals should envision to collaborate with international organisations such as [UNEP](#), [UNCCD bodies](#), FAO and FARA²⁵². Finally, proposals should consider synergies with [SCAR-ARCH](#) and Agricultural Research for Development.

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [European Union Soil Observatory](#) (EUSO) and [Life Cycle Assessment group](#) and the [SoilWise](#) project.

HORIZON-MISS-2025-05-SOIL-06: Quantifying the impact of farming practices on soil health in arable lands

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply:

²⁵¹ See [Preliminary assessment of the knowledge gaps to reduce the EU global footprint on soils](#)
²⁵² Forum for Agricultural Research in Africa – <https://faraafrica.org/>

	<p>Proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p>
--	--

Expected Outcome: Activities under this topic will help to progress towards the objectives of the Mission '[A Soil Deal for Europe](#)', in particular towards its specific objective 2 “Conserve and increase soil organic matter”, 5 ‘Prevent erosion’, 6 ‘Improve soil structure to enhance habitat quality for soil biota and crops’ and 8 ‘Increase soil literacy in society across Member States’ (see [Mission implementation plan](#)). Activities will also contribute to the implementation of the European Green Deal, in particular nutrient related objectives, the EU Action Plan for the Development of Organic Production, and the environmental objectives of the Common Agricultural Policy.

The successful projects are expected to contribute to all of the following outcomes:

- Land managers, advisors, policymakers, researchers, and citizens have access to up-to-date, consolidated scientific knowledge on the impact of farming practices on soil health - both when applied individually, and critically, when combined as part of a holistic strategy.
- Greater adoption of farming practices by land managers that enhance and restore soil health, supported by robust evidence-based policy measures at both EU and national levels, and aligned with relevant CAP measures.
- Member States' competent authorities recognize specific challenges to improve soil health in their agricultural contexts and obstacles to implementing farming practices, ensuring incentives in their CAP Strategic Plans are aligned accordingly.

Scope: Agricultural land covers nearly half of the EU, with two-thirds dedicated to arable crops. Farming practices, especially in combination, are critical for maintaining soil functions such as structure, nutrient cycling, and water retention — key to food production and ecosystem resilience. There is a need to better understand how different farming practices impact the composition and functions of soil biodiversity, carbon capture and storage, GHG emissions, water infiltration and retention. Additionally, more knowledge is needed to understand how multiple threats and farming practices simultaneously interact and affect soil health (e.g. the interplay between various farming practices and climate change).

The Common Agricultural Policy (CAP) supports sustainable resource management to combat climate change and biodiversity loss²⁵³. In the 2023-2027 period, actions to improve soil health are expected to cover nearly 47%²⁵⁴ of EU's agricultural area, backed by an estimated EUR 50.6 million (measured via [Result Indicator 19](#)²⁵⁵) and around 1,000

²⁵³ See [Sustainable agricultural practices and methods - European Commission](#)

²⁵⁴ COM(2023) 707 final, see [EUR-Lex - 52023DC0707 - EN - EUR-Lex](#)

²⁵⁵ RI.19 - 'UAA under supported commitments favourable to soil management to improve soil quality and biota'

Operational Groups under the [EU CAP Network](#) are expected to address soil. CAP also sets baseline standards conditions ([GAEC](#)) to prevent soil degradation and protect biodiversity and water.

Despite these measures, there is a need to build on existing CAP measures (GAEC, CAP Eco-schemes and AECM²⁵⁶ under Pillar II) for stronger and refined incentives for climate- and environment-friendly approaches, such as organic farming, agroecology, and carbon farming. Crucially, there is still a need for robust scientific evidence on the impact of farming practices—individually and in combination—on soil health at both local and EU scales. Quantitative coefficients capturing these impacts across different pedo-climatic conditions and cropping systems over time remain a key research gap.

Proposed activities should:

- Define and map homogeneous soil-use and pedo-climatic regions in EU arable lands, leveraging existing Earth observation datasets and further develop ([iMAP](#)) coefficients linking farming practices to soil health indicators (aligning with the [Soil Mission Implementation Plan](#) and proposed [Directive on Soil Monitoring and Resilience](#)). Work should focus on soil biodiversity, carbon capture and storage, GHG emissions, and water infiltration/retention, considering both CAP-supported and other farming practices.
- Quantify the impact of farming practices on soil health across major pedo-climatic regions and arable crops in the EU. Establish clear links between farming practices, land use (arable, pasture, etc.) and types of crops for each soil use and pedo-climatic region, considering the defining soil and climate properties. Focus should be on identifying synergies and trade-offs among these practices, supported by refined impact estimates under current and potential adoption scenarios at the EU level. Practices should comply with GAEC standards and their integration with other CAP interventions, such as “Eco-Schemes” or/and “Agri-environment-climate measures” under Pillar II, but not exclusively.
- Develop and expand an inventory of farming practices (e.g., organic fertilisation, no-tillage) that support GAECs and Eco-Schemes for soil health, as outlined in national CAP Strategic Plans. Building on the work of the Joint Research Centre²⁵⁷, the inventory should cover various farming systems and alternative approaches, including organic, agroecological, and regenerative practices.
- Select a set of soil health indicators (SOC, water retention capacity, acidity, conductivity, biodiversity, soil erosion, nutrients, diffuse contamination, etc.) considering the Mission Soil Implementation Plan, the SML and the results produced by the Mission portfolio of projects, to quantify farming practices effects.

²⁵⁶ Agri-environment-climate Measures

²⁵⁷ See [Quantifying the impact of sustainable farming practices on environment and climate - Publications Office of the EU](#)

- Enhance and expand existing online databases and visualisations by integrating data from previous activities (e.g., pedo-climatic regions, arable lands, cropping systems) to improve user accessibility. Streamline and automate updates with new knowledge, focusing on EU primary scientific literature, by leveraging AI to accelerate meta-analysis and drive continuous improvement.
- Develop a dynamic, potentially automatically updated model to compare, analyse and evaluate scenarios assessing the impacts of individual farming practices (e.g., conventional tillage vs. no-tillage, organic amendment vs. mineral fertilisation, etc.) as well as integrated farming strategies (e.g., conservation, organic, agroecology, regenerative).
- Identify and analyse the limitations of map, indicators, model, measurements, and results obtained. Produce a gap analysis to address remaining soil health challenges in Member States, considering what is proposed in national CAP Strategic Plans, and which future R&I could fill.

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [European Union Soil Observatory](#) (EUSO) and [SoilWise](#). Particular efforts should be made to ensure that the data produced in the context of this topic is FAIR (Findable, Accessible, Interoperable and Reusable).

Proposals are encouraged to leverage, where relevant, the data, expertise and services provided by European research infrastructures²⁵⁸ and results from prior research projects, such as the [EJP Soil](#) data repositories²⁵⁹. The analysis should build on and align with relevant efforts undertaken by the European Evaluation Helpdesk and the JRC within the frame of the iMAP project. Furthermore, proposals should include consultation with national agricultural organisations and private companies to ensure diverse perspectives and expertise are integrated into the analysis.

Proposals should allocate dedicated tasks and adequate resources for coordination and joint activities with other relevant projects and initiatives funded under the Mission ‘A Soil Deal for Europe.’ This includes active engagement with relevant cluster activities, particularly with projects funded under the [Horizon Europe Partnership on Agroecology](#), and collaboration with the JRC to ensure alignment and synergies.

HORIZON-MISS-2025-05-SOIL-07: Improved land suitability for soil health and sustainable biomass production

Call: Supporting the implementation of the Soil Deal for Europe Mission
Specific conditions

²⁵⁸ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

²⁵⁹ See [Knowledge Sharing Platform](#)

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Activities under this topic contribute to the implementation of the Mission ‘A Soil Deal for Europe’ in particular to its specific objective 4 “Reduce soil pollution and enhance restoration” and 7 “Reduce the EU global footprint on soils”, the [EU Bioeconomy Strategy](#) and the Nature Restoration Law.

Project results are expected to contribute to all of the following expected outcomes:

- Improved soil health, land suitability choice and optimised sustainable production of biomass (both quantity and quality) across different types of land (including agricultural lands, forest and -for paludiculture or nature restoration purposes only- also peatlands and marginal lands²⁶⁰).
- Improved knowledge on the relationships between biomass production, soil biodiversity and ecosystem health, and soil-water interactions (water-holding capacity, drainage patterns, and irrigation requirements).
- Better understanding and assessments of land suitability and land management practices that contribute to soil restoration and sustainable biomass production for food and non-food uses across Europe.
- Increased deployment of sustainable biomass production systems that improve soil health while valorising production systems’ contribution to nature restoration, climate mitigation and climate resilience adaption strategies.

Scope: Soil, as a fundamental component of terrestrial ecosystems, is crucial for biomass²⁶¹ production and its capabilities and limitations. Hence, effective land use planning must consider the requirements and constraints associated with different soil properties. For instance, excessive nutrient export due to biomass removal can negatively impact soil health and the overall ecosystem functioning. Consequently, prioritizing land suitability, alongside other key biophysical aspects such as climate, is essential for maintaining soil health while ensuring sustainable biomass production.

When stakeholders and land managers take land suitability and soil properties into account, they can make more informed decisions about e.g., land use, land management practices, and

²⁶⁰ See [Marginal land | Knowledge for policy](#)

²⁶¹ In this call, biomass refers to organic, non-fossil material of plant biological origin. The biomass in the scope of this call includes biomass of plants used for food, feed, ecosystem restoration and bio-based materials.

environmental protection. This approach ultimately promotes sustainable and efficient land management strategies for biomass production.

Proposed activities should:

- Develop process-based models using various data sources including the EUSO data repository, the European Joint Programme on Agricultural Soil Management (EJP SOIL) Long Term Field Experiment²⁶² and other EJP SOIL data repositories and literature review field results from ongoing EU Mission Soil projects, including the Mission Soil living labs, and other relevant Earth observations datasets. The models should simulate soil properties, land suitability, and their impact on soil health and biomass production for both food and non-food uses.
- Engage with land managers to understand their needs and challenges and develop decision tools to aid them in enhancing biomass production while maintaining soil health.
- Conduct a comprehensive literature review focusing on data to assess the conditions for optimal land suitability that contributes to improving soil health while producing sustainable biomass – considering the dynamics of soil water interactions (water-holding capacity, drainage patterns, and irrigation requirements). The analysis should include social, economic, and environmental aspects of biomass production and use.
- Broaden the scope of the findings by upscaling experimental results and models to larger scales (regional, national, European) and integrate them with social-economic data (e.g. cost, effect on local economies, job creation, social implications).

Proposals should focus the proposed activities in selecting the ten most important annual and perennial agricultural and forest crops and paludicultural plants in Europe, including peatland and marginal land biomass. Multifunctional cropping systems should be considered together with the corresponding value creation and process chains that improve the nexus of soil, water, biodiversity, climate adaption, climate protection, and overall resilience. In the specific case of peatlands, biomass should be adapted to the typical peatland vegetation for each pedoclimatic region, taking into account current and potential future rewetting actions, and never including afforestation, as rewetting is the only long-term alternative for sustainable use and restoration of drained peatlands (for both carbon sequestration and biodiversity objectives).

Proposals should outline a clear pathway towards open access, longevity, sustainability and interoperability of knowledge and outputs – including adoption of standard-based ontologies/vocabularies and data harmonization mechanisms – through close collaboration with the [European Union Soil Observatory](#) (EUSO) and the [SoilWise](#) project. Particular efforts should be made to ensure that the data produced in the context of this topic is FAIR (Findable, Accessible, Interoperable and Reusable).

²⁶²

See [Partner countries with LTEs](#)

Proposals are encouraged to consider, where relevant, the data, expertise and services offered by European research infrastructures²⁶³. Proposals should include dedicated tasks and allocate appropriate resources for coordination measures and joint activities with other relevant projects and initiatives funded under the Mission ‘A Soil Deal for Europe’, including engagement with the relevant cluster activities.

HORIZON-MISS-2025-05-SOIL-08: Support to the operation and further development of soil-health science-policy interfaces and national soil-health hubs

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁶⁴ .

Expected Outcome: Activities under this topic contribute to strengthening science-based policies for soil health across different levels of governance, in particular the implementation of the proposed EU Directive on Soil Monitoring and Resilience (Soil Monitoring Law), and to improved anchoring of R&I activities of the EU Mission “A Soil Deal for Europe” (Mission Soil) at national and regional level.

Project results are expected to contribute to all of the following expected outcomes:

- EU and (sub-)national decision-makers across different sectors have easy and timely access to, and make increasing use of, up-to-date policy-relevant scientific knowledge –

²⁶³ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

²⁶⁴ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

presented in a way that suits their purposes – on drivers of soil degradation, the state of soil health, and sustainable soil management practices.

- Across all EU Member States and interested Horizon Europe Associated Countries, national- and regional-level structures for coordinating soil-health research and policy in the context of Mission Soil are strengthened or, where relevant, newly established, and the commitment from national authorities is strengthened. In addition, exchanges with similar structures established to support other EU Missions are facilitated at national and international level.

Scope: A range of programmes, projects and initiatives have been working at international, EU, and national level to increase and systematise available scientific knowledge on soil health and drivers of soil degradation, and to facilitate the uptake of this knowledge in policies for more sustainable soil management practices. This includes efforts, including under the Mission Soil, to create dedicated structures at national level to facilitate the sharing and transfer of knowledge between science on the one hand, and the designing and implementation of policies on the other. However, linkages between different science-policy interfaces in the European and international landscape remain relatively weak, and their effectiveness is subject to debate, while some do not appear to be fully operational.

There is now a need to systematically take stock and assess the strengths and weaknesses of existing science-policy interfaces in a comparative perspective and, where relevant, to improve their results, outcomes and impacts. Their effectiveness should be evaluated across different contexts, and coordinated action should be taken to make them fully operational, ensure coverage of a broader range of land uses, and address all relevant levels of governance. This should serve also the transposition and implementation of the forthcoming Soil Monitoring Law, for which national authorities and soil stakeholders need to consider the latest scientific and policy developments and have opportunities to exchange with each other and with the scientific community.

Proposed activities should:

- Take stock of past, present and planned soil-health related science-policy mechanisms and activities across different policy areas (covering at least agriculture and forestry, environment including biodiversity, climate, and spatial planning) and governance levels, analyse their purposes and the tools employed, and assess performance (at least in terms of effectiveness, efficiency and long-term sustainability). This should include case studies of real-life science-policy interactions around specific challenges of monitoring and improving soil health, and identification of criteria for – and likely conditions of – success or failure of such interactions.
- Facilitate better connections among existing mechanisms and structures for science-policy dialogue on soil health across sectors and governance levels, so that overlaps and gaps in substantive and territorial coverage are reduced, and overall effectiveness is increased.

- Identify and evaluate options for setting up and operating a functioning science-policy interface for soil health across the EU and its Member States and interested Horizon Europe Associated Countries. Options should include the medium-term establishment of a dedicated science service as a central entry point for support requests from EU and national administrations.
- Develop one or more tools for managing (collecting, organising, synthesising and presenting) existing and emerging soil-health knowledge, in particular (but not exclusively) from EU-funded R&I projects, with a view to integrating the tool(s) into a future EU-wide science-policy interface.
- Taking into account different biogeographic, administrative and cultural contexts and building on relevant existing structures, support the creation or further development and improved operation of national soil-health hubs in all Member States and interested Associated Countries, and coordinate the creation of a functioning Europe-wide network. The hubs should involve all relevant parts of public administrations as well as other stakeholders also from outside the R&I sector (including private sector and philanthropy). They should liaise with relevant national, regional and EU authorities, including National Contact Points for Horizon Europe, and address the full range of land uses impacting on soil health. Among other functions, the hubs and their network should be able to function as, or in close cooperation with, science-policy interfaces and provide regular opportunities for the further development of research agendas in line with evolving policy needs at national and EU level.

Proposals should build on the work of previous and ongoing projects and initiatives addressing horizontal aspects of science-policy interaction and knowledge management in the Mission Soil and other parts of Horizon Europe and other EU-funded programmes.²⁶⁵ They should include a dedicated task and allocate resources for close coordination with other Horizon Europe projects addressing (sub-)national involvement in different missions horizontally, as well as contribute to relevant cluster activities in the context of the Mission Soil Platform. Proposals should also include a task and resources to facilitate regular exchanges with hubs or similar structures set up by other EU Missions, in order to identify and share best practices on science-policy interaction, stakeholder and citizen engagement, the long-term sustainability of the hubs, or collaborations and synergies between them at the national and subnational levels. Additionally, proposals should support and collaborate closely with Soil Mission Board members to engage new stakeholders, mobilise and align additional funding, and promote and support the development of hubs.

Proposals should work closely with the European Commission's Joint Research Centre (JRC) to contribute to the JRC's efforts on soil monitoring and the development of the [European Union Soil Observatory](#) (EUSO), and with international institutions and initiatives addressing

²⁶⁵ Including the project [SoilWise](#); also relevant is the [Mission Soil Platform](#).

science-policy interaction for soil health.²⁶⁶ In particular, proposals should actively engage the national soil-health hubs in relevant OECD initiatives aiming at strengthening evidence-informed policy-making for mission-oriented innovation (e.g. contributing to the community of practice through mutual learning, workshops and networking initiatives).

This action supports the follow-up to the July 2023 [Communication on EU Missions assessment](#).

HORIZON-MISS-2025-05-SOIL-09: Citizen engagement for sustainable land management through local and regional authorities

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: Activities under this topic contribute to the implementation of the Mission ‘A Soil Deal for Europe’, in particular to its specific objective 8 “improve soil literacy in society”, and to strengthening the capacities of local and regional authorities in line with the proposal for a Directive on Soil Monitoring and Resilience.

Activities should also contribute to meeting the Sustainable Development Goal (SDG) 15 on Life on land and SDG 11 on Sustainable Cities and Communities.

Project results are expected to contribute to all of the following expected outcomes:

- Substantially increased awareness and understanding among citizens and local and regional policy makers of the value of soils, soil health challenges and drivers (both bio-physical and socio-economic dimensions) across Europe.

²⁶⁶ International institutions whose relevance should be explored include the Global Soil Partnership’s Intergovernmental Technical Panel on Soils and the Science-Policy Interface of the UN Convention to Combat Desertification (UNCCD).

- An increased number of regions and municipalities across Europe have adopted Territorial Management Agreements²⁶⁷ co-designed with citizens and stakeholders to foster sustainable land management practices.
- Local and regional authorities²⁶⁸ have improved access to capacity building activities on how to implement solutions for the protection and restoration of soil health and enhance citizen engagement in sustainable land management.

Scope: Citizen engagement is one of the building blocks of the Mission Soil but despite the advances in recognising the importance of soil health and the momentum for soil in the political agenda, active participation in soil protection and restoration and understanding of soil health importance often remain limited among non-experts. Activities under this topic should involve local and regional authorities in the protection and restoration of soil health and establish participatory processes that take into account citizens' priorities. Local and regional participatory processes should result in Territorial Management Agreements²⁶⁹ aimed at the protection and restoration of soil health for the provision of ecosystem services, including biodiversity, and climate change mitigation and adaptation.

Proposed activities should:

- Provide training and technical support to public authorities to design and run inclusive and effective participatory processes at local and regional level that lead to the adoption of Territorial Management Agreements to foster sustainable land management and contribute to climate change adaptation and mitigation.
- Launch the implementation of at least 40 Territorial Management Agreements, one per local or regional authority involved, and provide guidelines and resources to sustain and monitor their implementation in the long term.
- Organise capacity-building activities for representatives of local and regional authorities including training, peer-to-peer learning and knowledge-sharing activities to promote the adoption of solutions for the restoration of soil health at their level of governance.

Proposals should actively involve local and regional authorities as beneficiaries or through the use of financial support to third parties. If making use of financial support to third parties, the support should be provided in the form of grants following an open call of European dimension for local or regional authorities to run participatory processes to co-design with

²⁶⁷ Territorial Management Agreements is the terminology used by the Horizon Europe project Healthy Municipal Soils (HuMuS). For consistency, proposals should use the same terminology.

²⁶⁸ In the context of this topic, regional authorities refer to legal entities responsible for managing regions, geographical areas at sub-national level, defined as NUTS 2 and 3, corresponding to actual administrative units with their own representation/government. For more information about NUTS (Nomenclature of territorial units for statistics), see <https://ec.europa.eu/eurostat/web/nuts>

²⁶⁹ Territorial Management Agreements are co-designed pacts between a public authority, relevant stakeholders and citizens aimed at the protection and restoration of soil health. The Agreement should define roles, responsibilities and actions of the parties involved, as well as monitoring and evaluation mechanisms to keep track of the progress made towards the desired results.

citizens Territorial Management Agreements and launch their implementation. The maximum amount to be granted to each third party is EUR 60 000.

The local and regional authorities involved in the project are expected to engage citizens and stakeholders at the local and regional level for the protection and restoration of soil health.

Proposals should bring together expertise on environmental and soil sciences, as well as transdisciplinary expertise on spatial planning and social sciences and humanities (SSH), including gender studies, to design and organise training and successful capacity building activities for local and regional authorities and support them in the implementation of effective participatory processes. The engagement of citizen and stakeholders in the design of Territorial Management Agreements should be representative of the local community and stakeholders and be inclusive. Thus, proposals must incorporate gender perspectives and give attention to the inclusion of people in vulnerable situations.

Proposals should include dedicated tasks and appropriate resources for coordination measures and joint activities with other relevant projects and initiatives funded under the Mission “A Soil Deal for Europe”, including engagement with the relevant cluster activities.

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [European Union Soil Observatory](#) (EUSO) and [SoilWise](#).

HORIZON-MISS-2025-05-SOIL-10: Network on carbon farming and emissions reductions for agricultural and forest lands

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the</p>

	Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁷⁰ .
--	---

Expected Outcome: Activities under this topic contribute to the implementation of the Mission ‘A Soil Deal for Europe’, in particular specific objective 2 “conserve soil organic carbon stocks”. Activities further support the design and implementation of soil health-improving innovative carbon farming practices in Europe, as intended by the implementation of the EU [Carbon Removal and Carbon Farming](#) (CRCF) Regulation²⁷¹ and the European Commission [Communication “A Vision for Agriculture and Food”](#). Activities should also contribute to meeting the Sustainable Development Goal (SDG) 13 on Combating climate change and SDG 15 on Life on land. Carbon farming activities should at least generate co-benefits for the objective of protection and restoration of biodiversity and eco-systems, including soil health as well as avoidance of land degradation, thereby contributing to achieving the nature restoration targets set out in Union law.

Project results should contribute to all of the following expected outcomes:

- Consolidated knowledge and descriptions of the state-of-the-art on practices for carbon farming and for the reduction of emissions from agriculture, forestry and livestock, in support of, but not limited to, the implementation of the CRCF, are available for land managers, farmers and forest owners and the Commission’s [Expert Group on carbon removals](#).
- Enhanced uptake by land managers of carbon farming and practices for the reduction of emissions (mentioned in the previous bullet) in Europe, and development of standards to support these practices.
- Increased capacities of land managers for measuring, monitoring and standardising carbon fluxes, in particular at landscape level, through a robust network for data collection and facilitated improvement of (new) data collection.

Scope: The success of carbon farming in Europe will be judged on the quantity and quality of the sequestration of carbon in plants and soils and the reduction of greenhouse gas (GHG) emissions from agricultural soils, as well as on the benefits for sustainability objectives (notably biodiversity) of the activities leading to such carbon sequestration or emission reductions, in a context of increasing impacts from climate change. To upscale carbon farming successfully and to establish long-term business perspectives, it is essential to standardise the methodologies and rules for monitoring, reporting and verifying (MRV) the gains or losses in carbon sequestered. Currently, private schemes apply very different benchmarks and rules to the carbon credits placed on the voluntary markets. With a high degree of transparency, environmental integrity, and methodology standardisation, buyers

²⁷⁰ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁷¹ [Regulation - EU - 2024/3012 - EN - EUR-Lex](#)

should have more trust in the quality of the offered carbon farming credits, land managers should also be able to more easily estimate their potential revenues, and policy makers should be keener to allow the use of such credits to warrant compliance with the EU climate regulatory framework, including currently existing 2030 targets (Effort-Sharing Regulation, Regulation on land use, land use change and forestry - LULUCF) and the 2050 climate neutrality goal. Therefore, such a regulated framework should contribute to develop a successful market for carbon farming.

The CRCF was adopted by the EU co-legislators in December 2024. Following the legislative process, the scope of carbon farming was extended to cover the certification of emission reductions from the improved use of fertilisers, in addition to carbon removals and the reduction of carbon release. With the CRCF adopted, it is now a priority for the Commission to advance work on preparing (and also updating in the future) the specific high-quality carbon farming certification methodologies, such as from rewetting of drained peatlands or agroforestry, with the continued assistance of the Commission's Expert Group on carbon removals. As part of the legislative review of the CRCF in 2026, the Commission will also prepare a pilot methodology for the certification of practices that reduce emissions from livestock management.

The Expert Group is assisting the Commission in the preparation of policy initiatives and non-legislative proposals and covers all carbon removal topics (permanent storage, carbon farming and storage in products). To develop its work, the Expert Group needs the continuous support of a network of key stakeholders to collect and aggregate views on best practice for standards for carbon farming and emissions reductions and to synthesise the state-of-the-art on existing related certification methodologies. Currently, [the CREDIBLE project](#) (foreseen to end in June 2026) is building and coordinating this network, developing a platform for knowledge sharing, and establishing data collection networks. The network should remain in a key position to provide input for the discussions as well as to contribute to increased capacities for measuring, monitoring and standardising carbon fluxes, in particular at landscape level, through a robust network for data collection. There is also a need to accompany the implementation of the CRCF by enhancing the uptake of its methodologies and by getting feedback from the actors applying them on how to update these methodologies.

Proposed activities should:

- Coordinate the continuation and expansion of the existing network of key stakeholders drawn from European research facilities, systems developers, solution providers, administrations, farm advisors and managers and others, involved in soils programmes linked to carbon sequestration and emission reductions, in particular at the landscape scale.
- Support the work of the Expert Group on carbon removals by providing concrete, operational and solution-oriented recommendations, based on best practice and identifying the actors (European/national/regional authorities, certification bodies, land managers, etc.) which should implement each specific recommendation.

- Continue developing a platform for networking, knowledge sharing, exchange of experiences, mutual learning, best practices and support to facilitate the development (design, implementation and evaluation) of result-based schemes for carbon farming and the reduction of emissions from agricultural soils and livestock.
- Underpin the expansion of data collection networks (such as carbon flux measurements stations, ground sampling campaigns, etc.), continuing to promote the practice of data sharing and standardisation, retrieval and aggregation of information.
- Identify gaps and opportunities at the landscape level in ecosystem monitoring and soil carbon flux mitigation practices, leveraging EU level geographically-explicit monitoring systems and solutions.
- Support and establish pathways to improve national GHG inventories with the data received from projects (e.g. carbon farming).
- Propose and adopt strategies to ensure that the above-mentioned activities are self-sustainable at the end of the project.

Proposals should cover **carbon removals and GHG emission reductions** (e.g. due to fertilisers) **in all relevant LULUCF categories**²⁷², including at least croplands and grasslands under various farming systems management / approaches (e.g. agroforestry, agroecology, organic farming), and forest land categories, regardless of their accountability in either the Agriculture or LULUCF sectors of the GHG inventories. Activities must contribute to supporting the knowledge base for addressing emissions from livestock through inter alia improved farm management and stocking densities. A systemic approach considering both removals and emission reductions by implementing whole-farm management approaches, including livestock, would be desirable. Proposals should aim to cover emissions reductions in the different nutrient and mass-flow chains (e.g. crop, feed, stable, biogas plant, fertilisers, root and crop residues, biogas, root uptake of nutrients, humus reproduction, etc.) as well as value creation chains (including processes, business options, carbon storage and multifunctional ecologic aspects).

A substantial part of the budget should be dedicated to co-creating with stakeholders the project's tools and services, enhancing communication, raising awareness and engaging with stakeholders, thereby ensuring co-ownership of the project's results and outputs and supporting the interest in, knowledge about and uptake of carbon farming.

Special attention should be given to the promotion and integration of existing databases and datasets, the application of digital technologies, and the combination of Earth observation techniques (drones, airborne, satellite based) with in-situ monitoring for (enhancing) the provision of robust, timely and accurate GHG removals/emissions' estimates.

²⁷² Article 2 of 2023 revision of EU Regulation (EU) 2018/841 of the European Parliament and of the Council on the inclusion of greenhouse gas emissions and removals from land use, land use change and forestry (LULUCF) in the 2030 climate and energy framework, see <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:02018R0841-20230511>.

Proposals must include dedicated tasks and appropriate resources for:

- Building on other relevant EU programmes, projects and initiatives (which will have finished at the start of the project) on carbon farming and soil carbon monitoring: e.g. [CREDIBLE](#); [MRV4SOC](#); [EJP Soil](#)- including the project [Road4Schemes](#)-; [ClieNFarms](#); [HOLISOILS](#); [ORCASA](#); [SEPLA](#) and the work of the JRC within the Administrative Arrangement “Carbon Removal on Land”; relevant [LIFE](#) projects; relevant data from [the Farm Sustainability Data Network \(FSDN\) initiative](#) as well as from [countries GHG inventories](#).
- Collaborating on measures and joint activities with other relevant projects and initiatives (or build on them, if they have finished by the start of the project): e.g. [MARVIC](#); [ESA World Soils](#); [LILAS4SOILS](#); [HORIZON-MISS-2024-SOIL-01-07: Development of high spatial-resolution monitoring approaches and geographically-explicit registry for carbon farming](#); [HORIZON-CL6-2024-CLIMATE-02-1: New knowledge and innovations for climate-smart farming - connecting research stations](#); [HORIZON-CL6-2025-02-CLIMATE-04: Monitoring, reporting, verification and mitigation of non-CO2 greenhouse gas emissions and related air pollutants from agriculture](#); [Climate Farm Demo](#); [OrganicClimateNET](#); [the Horizon Europe Partnership on Agroecology](#); relevant [LIFE](#) projects.
- Engaging with the relevant Mission Soil cluster activities and ultimately feeding into the Expert Group.

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [European Union Soil Observatory](#) (EUSO) and [SoilWise](#).

HORIZON-MISS-2025-05-SOIL-11: Soil Salinity in Europe: Drivers, indicators, current levels and temporal changes

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the

	Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁷³ .
--	---

Expected Outcome: Activities under this topic will help progress towards the objectives and targets of the Mission ‘A Soil Deal for Europe’, in particular towards its target 4.6 ‘Halt and reduce secondary salinization’. Activities will also contribute to the Sustainable Development Goal (SDG) 13 on climate action and SDG 15 on Life on Land.

The successful projects are expected to contribute to all of the following outcomes:

- Policy makers and relevant stakeholders have access to improved indicators and to knowledge and quantitative data on the current levels of soil salinity in Europe and its impact on ecosystem services provided by soils (such as providing food, clean water and a habitat for biodiversity).
- Policy makers and relevant stakeholder have an enhanced understanding of the primary drivers and mechanisms of soil salinization across different pedo-climatic regions in Europe.
- Policy makers and relevant stakeholder have improved access to knowledge and quantitative data on temporal shifts in soil salinity levels over the past decades and to projections for future trends across Europe under varying scenarios.
- Accelerated uptake in land use planning practices of innovative and reproducible sustainable land management strategies to prevent, minimise and remediate soil salinization in Europe.

Scope: Excessive soil salinity is a significant environmental issue in Europe, negatively impacting soil fertility, plant growth, soil biodiversity, the soil microbiome, and overall ecosystem functioning. Climate change, coupled with increased evaporation and irrigation, is likely to exacerbate salinization, potentially leading to uncertain consequences for carbon storage and water cycling because of soil degradation induced by salinity. Salinity is one of the descriptors in the proposal for a Directive on Soil Monitoring and Resilience and is recognized as one of the major drivers of soil degradation. The extent of soil salinization in Europe remains uncertain. Currently, there is no quantitative model capable of predicting future soil salinization in Europe under changing climate conditions at the resolution necessary for local management action and policy development.

Proposed activities should:

²⁷³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Investigate the relationship between soil salinity, vegetation, soil biodiversity and drought (climate conditions) across all relevant land use types, and in the specific case of agricultural lands also including the relationship between crop production, plant adaptation mechanisms and crop resilience.
- Develop a harmonised assessment of soil salinity in Europe. This should include integration of high-resolution remote sensing data (earth observation techniques) with quantification techniques to enhance spatial resolution and accuracy in soil salinity monitoring, harmonisation of laboratorial procedures and monitoring systems, and testing the feasibility of statistical methods to combine soil salinity data collected by different protocols.
- Develop a quantitative model to predict future soil salinization in Europe under changing climate conditions.
- Assess the impact of saltwater intrusion on soil salinity and soil health in coastal regions to gauge vulnerability within climate change and rising sea levels.
- Identify hotspots of soil salinization and areas at risk across Europe to inform policy formulation, action planning, and sustainable land management strategies.
- Formulate innovative land management strategies that address both mitigation and adaptation to soil salinization, in co-creation with relevant stakeholders.

Proposals should include dedicated tasks and appropriate resources for coordination measures and joint activities with other relevant projects and initiatives funded under the Mission ‘A Soil Deal for Europe’, including engagement with the relevant cluster activities.

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [European Union Soil Observatory](#) (EUSO) and [SoilWise](#). Particular efforts should be made to ensure that the data produced in the context of this topic is FAIR²⁷⁴. Proposals are encouraged to consider, where relevant, the data, expertise and services offered by European research infrastructures²⁷⁵.

HORIZON-MISS-2025-05-SOIL-01-two-stage: Living labs to enhance soil health in Continental, Boreal and Alpine biogeographical regions

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of around EUR 12.00 million would allow these outcomes to be addressed

²⁷⁴ Findable, Accessible, Interoperable and Reusable

²⁷⁵ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

Horizon Europe - Work Programme 2025
Missions

<i>project</i>	appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 36.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Award criteria</i>	<p>The criteria are described in General Annex D. The following exceptions apply:</p> <p>The overall threshold for the second stage evaluation will be 12, with a minimum threshold of 4 for the ‘Excellence’ criterion’.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>Proposals must focus on one of three biogeographical regions: Continental, Boreal or Alpine, i.e., the majority of the living labs of each proposal must be located in one of these three biogeographical regions. Proposals must clearly indicate which biogeographical region they focus on. To ensure that all three biogeographical regions are covered, grants will be awarded to applications not only in order of ranking but also to at least one project focusing on each of the mentioned biogeographical regions, provided that proposals attain all thresholds.</p> <p>* Biogeographical regions in Europe according to the European Environmental Agency.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties to facilitate active involvement of smaller actors (e.g. land managers and owners such as farmers, SMEs or civil society) in one or more of the living labs of the project. The support to third parties can only be provided in the form of grants (further to calls or, if duly justified, without a call for proposals). The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: Activities under this topic respond directly to the goal of the Mission ‘[A Soil Deal for Europe](#)’ (Mission Soil) to set up 100 living labs and lighthouses to lead the

transition to healthy soils by 2030. They support the specific objectives 1 to 8 of the Mission Soil (see the [Mission implementation plan](#)).

Activities should also contribute to meeting the European Green Deal ambitions and targets and more specifically those of the [EU Biodiversity Strategy for 2030](#), the [EU soil strategy for 2030](#) and the [proposal for a Soil Monitoring and Resilience Directive](#), the [Zero Pollution Action Plan](#), the [Communication on Boosting Biotechnology and Biomanufacturing in the EU](#), as well as to Sustainable Development Goals 15 on Life on land and 3 on Good health and well-being.

Project results are expected to contribute to all of the following outcomes:

- Increased capacities for participatory, interdisciplinary and transdisciplinary R&I to co-create, and co-implement economically viable soil health solutions.
- Improved soil health monitoring and increased availability of high-quality, standardized soil data at both local and regional levels.
- Practice-oriented knowledge and tools are more easily available to land managers and land users resulting in an enhanced consideration and uptake of effective soil health solutions.
- Policy makers are more aware of local needs regarding soil health including the economic sustainability of solutions, and use this knowledge to design and implement more effective policies to enhance soil health.

Scope: The Mission Soil proposes the deployment of living labs as a novel approach to research and innovation in soil health²⁷⁶. Living labs have the potential to facilitate a green transition by involving multiple actors in real-life sites within a local/regional setting to co-create soil health solutions and achieve large-scale impacts on soil health and soil governance. Projects funded under this topic should deploy a number of living labs to expand and complement the network of soil health living labs initiated in previous Mission Soil topics to gradually establish 100 living labs and lighthouses to lead the transition towards healthy soils by 2030²⁷⁷.

Soil health living labs are long-term collaborations between multiple actors to address common soil health challenges in real-life sites at local or regional level²⁷⁸ (10 to 20 sites in each living lab). Depending on the level at which each living lab operates and the specific context (e.g. land use covered or soil health challenge addressed), applicants can exceptionally propose living labs with fewer sites. Living labs can address soil health challenges in or across different land uses (agricultural, (peri-)urban, (post-)industrial, forest

²⁷⁶ [Implementation Plans for the EU Missions - European Commission](#)

²⁷⁷ [Catalogue 2024 - Mission Soil Living Labs and Lighthouses](#) | [Mission Soil Platform](#)

²⁷⁸ In this topic, it is recommended to define the living labs location using the NUTS2 division ([Eurostat Statistical Atlas](#)).

and (semi-)natural). Individual sites can be farms, forest holdings, urban green²⁷⁹ areas, industrial areas, etc., where work is carried-out and monitored under real-life conditions. Sites that are exemplary in their performance in terms of soil health improvement and serve as places for demonstration of solutions, training and communication are lighthouses. Lighthouse sites can be part of a living lab or be situated outside a living lab. Projects funded under this topic are expected to kick-start participatory process or build on existing ones. While normally projects run for four years, the duration of the projects should accommodate longer timescales required to establish participatory processes and/or for soils processes to take place.

Actors working on common shared soil health challenge(s) within and across the living labs of the same project, will be able to compare results, exchange good practices, validate methodologies, replicate actions and solutions and benefit from cross-fertilisation, thereby accelerating the transition towards the shared objective of improving soil health.

More specifically, each of the proposals should:

- Support the setup of four to five living labs at regional or local level in the Continental, Boreal or Alpine biogeographical region²⁸⁰, to work together on common shared soil health challenge(s). Proposals should clearly indicate which of one of these three biogeographical regions they focus on, and should establish the majority of the living labs within the chosen biogeographical region. However, the remaining living labs can be still located in other biogeographical regions outside of the one selected. The living labs should work on relevant soil health challenges in the selected biogeographical region. The living labs should be located in at least three different Member States and/or Associated Countries. Proposals should explain the rationale and mechanism for cooperation within and across the living labs and explain how the work undertaken will contribute to one or more of the Mission's specific objectives²⁸¹. Proposals with all living labs located in brownfield areas²⁸² are excluded from this topic as a dedicated topic is opened in this work programme (HORIZON-MISS-2025-SOIL-01-02: Living Labs for soil remediation and green redevelopment of brownfields).
- Establish an interdisciplinary, participatory and multi-actor approach in the living labs to co-design, co-develop, and co-implement locally adapted solutions for the common shared soil health challenge(s) taking into account relevant soil health drivers and

²⁷⁹ By urban green areas, we refer to green spaces in cities such as parks, gardens, green roofs or walls, green corridors, squares, recreational areas, etc.

²⁸⁰ [Biogeographical regions in Europe](#) according to the European Environmental Agency.

²⁸¹ Mission Soil specific objectives: reduce land degradation relating to desertification; conserve and increase soil organic carbon stocks, no net soil sealing and increase the reuse of urban soils; reduce soil pollution and enhance restoration; prevent erosion; improve soil structure to enhance habitat quality for soil biota and crops; reduce the EU global footprint on soils; increase soil literacy in society.

²⁸² See definition of brownfield areas under topic HORIZON-MISS-2025-SOIL-01-02

pressures²⁸³. Proposed solutions should be adapted to the different environmental, socio-economic and cultural contexts in which the living labs are operating.

- Establish for each living lab a baseline of the soil conditions to allow for an accurate co-assessment of the changes in the different sites over time, and to monitor soil health improvements. The set of soil health indicators/descriptors presented in the proposal for a [Directive on Soil Monitoring and Resilience](#) should be used, as a basis; proposals may complement with additional indicators depending on the soil health challenge(s) addressed, pedoclimatic conditions, land use, etc.”
- Monitor and evaluate the effects of the proposed solutions on soil health and associated ecosystem services, demonstrating their viability - technical, social, economic, cultural and environmental - scalability and transferability to diverse contexts.
- Identify sites that demonstrate high performance and that may be converted into lighthouses. This can be performed both at proposal stage or later on, during the living lab operation.
- Propose strategies (e.g., financial, organisational) to ensure the long-term sustainability of the established living labs beyond the Horizon Europe funding. Strategies should include the identification of possible business models and actions involving a mix of public or private funding schemes, financial instruments, cooperation with local authorities, engagement of social economy entities, social enterprises, business communities, SMEs, as well as attracting investors and entrepreneurs.

In line with the nature of living labs, projects must adopt the multi-actor approach. The actors involved in each living lab may vary, based on its unique characteristics and may include, among others, researchers, landowners or land managers, industry representatives (e.g., SMEs), public administrators and civil society representatives (e.g., consumers, local residents, environmental NGOs, youth organisations). Care should be taken to describe the capabilities, roles and resources of the different actors involved in the living labs. An effective contribution of social sciences and humanities and the arts (SSHA) is expected to foster social innovation, knowledge transfer and socio-cultural and behavioural change.

To encourage and facilitate the involvement of different types of actors in the living labs, applicants are reminded of the different types of participation possible under Horizon Europe. This includes not only beneficiaries (or their affiliated entities) but also associated partners, third parties giving in-kind contributions, subcontractors, and recipients of financial support to third parties. Financial support to third parties (FSTP) to facilitate active involvement of small actors (e.g. land managers and landowners such as farmers, SMEs or civil society) in one or more of the living labs of a project, can be provided through calls or, if duly justified, without a call for proposals. Applicants are advised to consult the standard conditions set out in Annex B of the General Annexes including those that apply to FSTP.

²⁸³ See [Soil Needs and Drivers of Change Across Europe and Land Use Types - Booklet](#) from PREPSOIL project

Dedicated tasks and appropriate resources should be envisaged to collaborate with [SOILL](#), the structure created to support soil health living labs and lighthouses which offers significant capacity building opportunities for the living labs actors. Applicants can benefit from the services of [SOILL](#) already during the proposal preparation stage. During implementation, collaboration will include, among others regular reporting on living labs performance. The details of the collaboration will be further defined during the grant agreement preparation phase.

Proposals are expected to build on existing knowledge (e.g. data from national soil health monitoring, LUCAS) and solutions developed and tested at national scale or in the frame of other Horizon projects including those funded under the Mission ‘A Soil Deal for Europe’. Proposals should therefore include dedicated tasks and appropriate resources for collaboration with relevant projects and initiatives and engage in relevant Mission Soil clustering activities. Proposals are also encouraged to consider, where relevant, the data, expertise and services offered by European research infrastructures ([ESFRI](#)) and if relevant to cooperate with the Horizon Europe Partnerships on [Agroecology](#) and on [Sustainable Food Systems](#) and/or relevant networks active at local level, such as the EIP-AGRI operational groups to promote the involvement of key local stakeholders.

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the European Union Soil Observatory (EUSO) and the project [SoilWise](#). In particular, proposals should ensure that relevant data, maps and information can potentially be available publicly through the EUSO. Concrete efforts should be made to ensure that the data produced in the context of the funded project is FAIR (Findable, Accessible, Interoperable and Re-usable).

To ensure that all three biogeographical regions are covered (Continental, Boreal and Alpine), grants will be awarded to applications not only in order of ranking but also to at least one project focusing on each of the above mentioned biogeographical region, provided that proposals attain all thresholds.

HORIZON-MISS-2025-05-SOIL-02-two-stage: Broadening the living labs approach for soil health in Africa and Latin America and the Caribbean (LAC)

Call: Supporting the implementation of the Soil Deal for Europe Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Horizon Europe - Work Programme 2025
Missions

<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Due to the scope of this topic, all legal entities established in: (i) all African Union member states*; or (ii) in all member states of the Community of Latin American and Caribbean States (CELAC)** are exceptionally eligible for Union funding (i.e., even if they are not established in a low-middle income country, following the ‘List of Participating Countries in Horizon Europe’, which are directly eligible for funding).</p> <p>In addition, international organisations with headquarters in an EU Member State, an Associated Country, an African Union member state* or a CELAC member state** are exceptionally eligible for funding.</p> <p>* "African Union member states" includes countries whose membership has been temporarily suspended.</p> <p>** The member countries of CELAC.</p> <p>Proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Award criteria</i>	<p>The criteria are described in General Annex D. The following exceptions apply:</p> <p>The overall threshold for the second stage evaluation will be 12, with a minimum threshold of 4 for the ‘Excellence’ criterion’.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure that both regions (Africa and LAC) are covered, grants will be awarded to applications not only in order of ranking but at least also to one project focusing on Africa that is the highest ranked, and one project highest ranked within LAC, provided that the applications attain all thresholds. Proposals must clearly indicate the region (Africa or LAC) they are applying to.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 300 000. At least 60% of the total requested EU contribution must be allocated to this purpose. EUR 300 000 is considered necessary to meet the requirements of the topic, cover costs to set up participatory initiatives in real-life sites, engage with and consult extensively stakeholders, and</p>

	demonstrate solutions to soil health challenges.
--	--

Expected Outcome: Activities under this topic contribute to the eight specific objectives of the Mission ‘A Soil Deal for Europe’. Activities will also contribute to the EU-Africa Partnership on Food and Nutrition Security and Sustainable Agriculture (FNSSA), African Union strategies, the ‘Declaration of the EU-CELAC Summit 2023’²⁸⁴, the LAC Communication²⁸⁵, as well as other initiatives and action plans relevant for soil health and the support of global commitments such as the United Nations Sustainable Development Goals (SDGs), in particular in the areas of sustainable agriculture, food and nutrition security, biodiversity, and climate.

Project results are expected to contribute to all of the following expected outcomes:

- Soil degradation is minimized or reversed, and soil health is enhanced in rural, urban and peri-urban areas of Africa or Latin America and the Caribbean (LAC).
- Local communities and small land managers and land users in Africa or LAC have increased access to scalable practice-oriented tools and learning mechanisms for soil health, including monitoring, based on participatory research.
- Establishment of a recognised mechanism for exchange of soil health knowledge, of learning experiences and tools that can be replicated and that can attract additional finance to support human-centred design and testing of solutions for soil health.
- Policy makers can put in place an effective framework to support continuous generation and adoption of knowledge-based, context-specific solutions for soil health and sustainable land management in Africa or LAC.

Scope: Living labs have the potential to empower the transition towards healthy soils by closing the gap between science and practice. Three components are recognizable within the now well-established living labs research concept: (a) co-creation of solutions with a large set of stakeholders, (b) carried out in real-life settings and (c) involving the end-users. Living labs are thus collaborations between multiple actors that operate and undertake experiments on individual sites such as farms, forest stands, urban green or industrial areas, enterprises and other locations, where the work is carried out and monitored under real-life conditions.

Soil health gains require adapted, site-specific practices. However, providing millions of (small) land managers with access to regional or field-specific solutions and tailored advisory, remains challenging and requires new approaches. In particular, as the lack of feedback loops between land managers and researchers may lead to the development or implementation of inappropriate solutions or hinder the adaptation of solutions to local contexts.

Building on the abovementioned living labs principles, this topic aims to support the development of human-centred initiatives for research, development, education, extension and

²⁸⁴ See [Declaration of the EU-CELAC Summit 2023](#)

²⁸⁵ See [New Agenda to strengthen EU's partnership with LAC](#)

support sustainable soil management, with the final goal of accelerating and expanding the adoption of context-specific solutions for soil health protection and restoration in Africa and LAC. The Mission Soil living labs concept (see topic HORIZON-MISS-2025-05-SOIL-01: Co-creating solutions for soil health in Living Labs) is not expected to be replicated as such, but rather to inspire the exploration of new models and participatory initiatives that, based on the same principles, emerge from African and LAC soil-related communities as drivers of change in soil management.

Proposals should:

- Support the set-up of at least 12 participatory initiatives in real-life sites in at least 5 to 6 countries in each region (Africa or LAC). The participatory initiatives should co-design, co-develop and co-implement with all relevant actors, locally adapted solutions and holistic approaches to key soil health challenge(s) related with one or more of the Mission Soil specific objectives. The initiatives should cover a diversity of environmental, socio-economic and cultural contexts across the regions (Africa or LAC) and the proposed solutions should be adapted to these contexts. The initiatives should integrate knowledge and expertise from SSH disciplines.
- Support the participatory initiatives to monitor and assess the progress on soil health and socio-economic resilience derived from the implementation of the solutions. For this, adequate indicators (new or existing) should be used, and a baseline established.
- Support land managers, land users, advisers as well as any relevant actors involved in the participatory initiatives, to co-implement the solutions, by providing training, capacity building, knowledge exchange, etc. (e.g. sharing best practices, organising demonstration activities or cross-visits). Actors involved in the participatory initiatives should not be partners of the successful proposals funded under this topic.
- Identify initiatives that are exemplary in their performance on soil health improvement and can act as places for demonstration of solutions (similar to the Mission Soil lighthouse concept) to efficiently disseminate knowledge and accelerate the adoption, scale up and transferability of solutions and increase the impact on the ground.
- Develop an inclusive exchange mechanism among the established initiatives to enable a rapid peer-to-peer learning and a toolbox to support the adaptation and replication of these initiatives in other contexts by others. The exchange mechanism should operate as an incubator of new initiatives in at least 5 to 6 countries in each region (Africa or LAC) and be designed to allow geographical expansion and sustainability.
- Ensure long-term ambition, continuity, and sustainability of the established mechanism beyond the Horizon Europe funding, including through attracting other funding and identifying possible business models and actions involving local authorities, social economy entities and social enterprises business communities, SMEs, investors, entrepreneurs and philanthropic organisations.

Proposals should include expertise in human centred design, capacity to operate at regional level and deep understanding of the different environmental, socio-economic and cultural contexts as well as existing soil health needs and management practices in Africa or LAC. An effective contribution of social sciences and humanities (SSH) disciplines is essential to implement strong participatory initiatives, foster social innovation and enhance social, cultural and behavioural change.

Proposals must provide financial support to third parties to set up participatory initiatives addressing soil health in real-life sites in Africa or LAC. The recipients of the financial support must be the group of actors involved in the participatory activities in each initiative and include, for example, research organisations, land-managers, start-ups, SMEs, civil society organisations and/or other interdisciplinary actors. Recipients of financial support within one participatory initiative cannot be recipients of financial support in another participatory initiative under this same topic.

Proposals should define a transparent selection criterion for the FSTP calls. These criteria should consider: the recipients' ability to advise on or contribute to innovative, inclusive, agile research and implementation approaches; their expertise in human centred design; their capacity to operate at regional level; and their deep understanding of the context and existing soil health needs as well as soil health management practices in Africa or LAC.

Proposals should include a dedicated task, appropriate resources and a plan on how they will build on the results of and/or collaborate with related projects funded by philanthropic entities and other relevant actions under Horizon Europe (e.g. [Soils4Africa](#) and projects to be financed under topic 'HORIZON-CL6-2025-02-FARM2FORK-19: Developing agroecology living labs and lighthouses for climate action under the Food and Nutrition Security and Sustainable Agriculture (FNSSA) partnership', or 'HORIZON-MISS-2024-SOIL-01-09: Assessment of Soil Health in Africa').

Proposals should demonstrate a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the [European Union Soil Observatory](#) (EUSO) and the project [SoilWise](#). In particular, proposals should ensure that the data produced in the context of this topic is FAIR²⁸⁶ and that relevant data, maps and information can potentially be available publicly through the EUSO.

A Soil Deal for Europe: Other Actions

1. Mission Implementation platform²⁸⁷

The main tasks are to assist the European Commission (in particular the Mission Secretariat in DG AGRI) in implementing the Mission Soil. This will include:

- Supporting the overall coordination of activities under the various building blocks of the Mission.

²⁸⁶ Findable, Accessible, Interoperable and Reusable
²⁸⁷ **Mission Implementation platform**

- Providing support and opportunities to Mission Soil projects to create synergies and collaborate on relevant topics (e.g. via clustering activities).
- Monitoring and assessing activities funded under the Mission Soil and other relevant activities in quantitative and qualitative terms, including their impacts, and tracking progress towards the achievement of the Mission's targets, objectives and overall goal.
- Enhancing communication, outreach, and engagement with citizens and stakeholders in Member States, Associated Countries, and globally through events, training and knowledge exchange, maintenance and update of the Mission Soil Platform website, and communication products.
- Providing financial advisory and technical assistance to the European Commission, leveraging and scaling private funding, including philanthropy.

The contractor should ensure the continuity of activities developed under the service contract REA/2022/OP/0001 and its amendment.

This action supports the follow-up to the July 2023 [Communication on EU Missions assessment](#).

Form of Funding: Procurement

Type of Action: Public procurement

Indicative budget: EUR 9.93 million from the 2025 budget

2. Specific Grant Agreement for a Living Lab Support Structure

Within the Framework Partnership Agreement (FPA) awarded under topic HORIZON-MISS-2022-SOIL-01-08: Framework Partnership Agreement (FPA) for a living lab network support structure, the selected consortium is invited to submit a proposal for a Specific Grant Agreement (SGA). This SGA will cover two years of the FPA (2026-2027). One single proposal should be submitted. **The evaluation committee will be composed fully by representatives of EU institutions.**

The support structure under this SGA should continue to implement the action plan presented under the FPA while building on the needs and gaps identified by the first SGA (SOILL-Startup), which is currently running (2024-2025) and the European Commission.

Proposed activities should:

- Give continuity to SOILL-Startup activities in terms of tailored support to Mission Soil funded living labs and lighthouses (LL & LH), in the form of advice in their day-to-day operations (including on technical, networking and communication aspects), capacity building, training and harmonized monitoring. The SGA should also provide selected services to other LL & LH working on soil health issues, created by other projects or by other programmes. Finally, the SGA should expand its activities to support emerging

soil health initiatives (including existing on the ground experiments), showing potential to develop in mature LL & LH.

- Facilitate the exchange of knowledge, data, findings and experiences within and across LL & LH (with a focus on, but not limited to, those funded under the Mission Soil) and with key stakeholders and other projects, where co-design, testing and evaluation of innovative soil management practices and technologies will take place. To this end, the SGA should continue identifying common areas of interest between funded LL & LH - particularly those operating in the same biogeographical regions-to engage them in concrete actions that create synergies and capitalise on the wealth of existing experiences and resources. Activities should result in the creation of working groups, in the production of learning material and tools addressing specific technical themes (e.g. particular soil challenges or land uses) as well as transversal aspects (e.g. data management, monitoring, use of digital tools, integration of social sciences and humanities (SSH) in research and innovation). The participation in or collaboration with working groups or project clusters, should be foreseen. In addition to enhancing operational capacities of living lab partners, the exchange of experiences should serve to promote a wider dialogue between the various living labs on their contribution to the Mission's objectives and to discuss possibilities for scaling up activities beyond the living lab areas.
- Support LL & LH projects in establishing a route towards open access, longevity, sustainability and interoperability of knowledge and outputs through close collaboration with the European Union Soil Observatory (EUSO) and the project [SoilWise](#). In particular, the SGA should contribute to the continuous flow of high-quality information on local soil health conditions to support Member States in implementing the future Soil Monitoring Law. Likewise, the SGA will help identify and disseminate sustainable soil management practices and solutions created, tested and demonstrated in LL & LH, so that these are widely known and can be accessed by potential users beyond the living lab areas. The SGA should also flag opportunities for the living labs to make use of data and services available from European Research Infrastructures federated under the European Open Science Cloud (EOSC) or from relevant Data Spaces, as indicated in the Soil Mission implementation plan.
- Promote the creation of new LL & LH by providing potential applicants with information, guidelines, recommendations and dedicated services (such as a helpdesk, a capacity building, mentoring programme and matchmaking tools) on the Mission's living lab concept and its implementation as well as with ideas for collaboration. To reach a wide audience and engage new stakeholders, the support structure should widely publicise its information, amongst others by organising targeted match-making events as a follow up to those carried out under the project [NATI00NS](#), notably in biogeographical regions with under-representation of living labs. Due attention shall be given to ensuring a balanced coverage of the growing network of LL & LH (from a thematic, biogeographic as land use point of view).

- Help LL & LH in developing strategies to sustain their activities beyond the lifetime of each project. This will include assisting living lab partners in the development of financial strategies and long-term management plans, as well as strengthening connections with local business communities, in particular SMEs, investors and other commercial stakeholders as well as social economy entities and social enterprises. To this end, the support structure should also assist applicants to LL topics to explore new public or private funding schemes and financial instruments, involving, where relevant, finance providers such as financial institutions and investors.
- Apply the “quality standards” developed under SOILL-Startup for the validation of LL & LH depending on their level of development and advance towards an acknowledgment certification. This should support harmonisation and comparability of approaches across LL & LH working in different settings and on different themes. Conduct a specific assessment of activities in sites that can potentially develop into lighthouses. Assist LL & LH in their transition towards acknowledgment by the Mission Soil providing the corresponding certification.
- Continue monitoring and assessing the performance of the LL & LH in a systematic way and report the main trends, achievements, experiences and challenges encountered when working within a living lab approach. The periodicity of the quantitative reporting should be agreed with the Mission Secretariat. A detailed qualitative evaluation of the progress of the funded living lab projects should be reported in a yearly basis. These reports should bring together and complement the information arising from monitoring activities performed by each of the funded living lab projects on their proposed solutions to identified soil health challenges. Close cooperation with the MSP regarding the reporting and monitoring requirements is essential to feed into their overall monitoring of the Mission, as the SGA will be the main contact point for the MSP to obtain high quality information and data on the performance of the living lab projects.
- Maintain and further develop the web-portal initiated by SOILL-Startup and other tools and services for information, dissemination, exchange of experiences and outreach, integrating and further developing existing information and resources. Through the provision of a collaborative space for LL & LH partners, the web-portal should support the establishment of a dynamic and inclusive community of practice.
- Maintain and further develop an interactive map of LL & LH initiatives building on and integrating the maps set-up by the project PREPSOIL and by SOILL-Startup. The map will contain all three categories of LL & LH above-mentioned: 1) those LL & LH funded under dedicated topics of the Mission Soil; 2) other soil health LL & LH created under other projects or other programmes that are aligned to the Mission Soil criteria; and 3) emerging and growing soil health initiatives (including existing on the ground experiments) showing potential to develop in mature LL & LH.
- Produce regular newsflashes and a 3-monthly electronic newsletter to support the evolving community of practice of LL. Communication and outreach should benefit LL

& LH operating as part of the Mission Soil or outside, as well as a wide range of stakeholders and the wider public.

- Offer training activities and capacity building for soil managers, landowners, advisors and relevant authorities on sustainable soil management practices, as well as activities to support soil education and citizen engagement, in line with and in support of the objectives of the future Soil Monitoring Law.
- Activities performed by the SGA should support all emerging and established LL & LH on soil health, regardless of their land use, biogeographical and thematic coverage.

Specific Conditions:

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the [General Annexes](#).

This action will be implemented through a Coordination and Support Action (CSA). Legal entities established in non-associated third countries may exceptionally participate in this coordination and support action.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Specific grant agreement awarded without call for proposals in relation to a Framework Partnership Agreement

Indicative budget: EUR 4.25 million from the 2025 budget

EU Missions' Joint Calls

Proposals are invited against the following topic(s):

HORIZON-MISS-2025-06-CIT-CANCER-01: Increasing walking and cycling: to reap health benefits, emission reductions and integrate active mobility and micro-mobility devices, with smart technologies and infrastructure

Call: Joint Call between the Climate-Neutral and Smart Cities Mission and the Cancer Mission	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply:</p> <p>At least five legal entities which are ‘lead cities’ and five legal entities which are ‘follower cities’²⁸⁸ must participate, as beneficiaries, each established in a different Member State or Associated Country. In addition, at least half of the ‘lead and follower’ city beneficiaries must be among the 112 cities selected for the EU Mission on Climate-neutral and Smart Cities²⁸⁹.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B.

²⁸⁸ Lead cities and follower cities: In this context, lead cities possess experience and expertise in developing and integrating active mobility policies into sustainable mobility planning. Follower cities, on the other hand, are those with less experience in this area, aiming to replicate and build upon the successful approaches and best practices of the lead cities.

²⁸⁹ The EU Mission on Climate-Neutral and Smart Cities aims to deliver 100 climate-neutral and smart cities by 2030 and ensure that these cities act as experimentation and innovation hubs to enable all European cities to follow suit by 2050. On 28 April 2022, the Commission announced the 100 EU cities that will participate in the Mission. In addition, 12 cities have been selected from countries associated or expected to be associated the Horizon Europe programme.

<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ²⁹⁰.</p> <p>Grants awarded under this topic will be linked to the following action(s): HORIZON-MISS-2021-CIT-02-03</p> <p>Collaboration with the Cities Mission Platform ²⁹¹ is essential and projects must ensure that appropriate provisions for activities and resources aimed at enforcing this collaboration are included in the work plan of the proposal. The collaboration with the Mission Platform must be formalized through a Memorandum of Understanding to be concluded as soon as possible after the project starting date.</p> <p>In grants awarded under this topic, eligible costs for major infrastructure works related to the deployment/installment of the walking and cycling solutions should not constitute more than 20% of the total eligible costs. Beneficiaries' own resources and/or mobilisation and leverage of additional investments from other EU programs and initiatives (such as EU Structural and Investment Funds) and/or other sources, private or public, could make up the remaining investment costs to secure the economic and financial sustainability of the project.</p>
---	---

Expected Outcome: Projects are expected to contribute to all the following outcomes:

- Cities advance in **achieving their climate neutrality targets** and reducing greenhouse gas emissions from transport by at least 15%, by promoting and implementing walking and cycling and by incorporating walking, cycling and micro-mobility infrastructure and services (e.g. bicycles, e-bikes and e-scooters) in multimodal transport networks;
- **Increased modal share** of walking and cycling in follower cities, in particular increased number of daily trips on foot and by bike, by at least 30%;

²⁹⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁹¹ Set up by Horizon 2020 project NetZeroCities - Accelerating cities' transition to net zero emissions by 2030, Grant Agreement n. 101036519, and scaled up through topic *HORIZON-MISS-2021-CIT-02-03: Framework Partnership Agreement (FPA) for the Climate-Neutral and Smart Cities Mission Platform*.

- Increased **integration** of (e)bikes and -e-scooters (and other “intelligent” micromobility vehicles) through the **digital and green** road infrastructure by extending the work on Cooperative Intelligent Transport Systems (C-ITS) to them in order to increase their modal share as well as their safety;
- As a feedback to EU research, health and transport policy, a comprehensive EU guidance on increasing (1) walking, (2) cycling, and (3) micro-mobility in cities is developed, including:
 - o concrete measures for improving the quality, safety, quantity, continuity and attractiveness of pedestrian/walking and cycling infrastructure;
 - o improved integration of walking, cycling and micro-mobility in transport models and traffic management urban systems/traffic light management at local/regional/national level;
 - o concrete measures for industry and city planners to use smart technologies to bring about healthy behavioural change for getting more people into active modes of transport;
 - o support and guidance for urban transport authorities to establish partnerships with the relevant local/regional/national health authorities to promote active mobility projects and solutions that demonstrate quantified health benefits for the city population. In particular through implementation research on cancer prevention by increasing physical activity and reducing obesity and how walking and cycling can improve symptoms and side effects of cancer patients.

The expected outcomes should be supported by clear indicators with baselines and quantified targets which are monitored for each city. The expected outcomes should take into account expected technological and policy developments.

Scope: Mobility and transport are key components in every citizen’s life, especially in cities, regardless of their size and population density. However, transport is still a significant source of greenhouse gas emissions, air, noise, soil and water pollution. Congestion and scarcity of public space remain serious challenges to the efficiency of transport systems and reduce the liveability of affected areas at a considerable cost to society and the economy.

Active mobility modes, such as walking and cycling, represent a sustainable and healthy means of mobility, with considerable potential to support the decarbonisation of urban transport and help achieve the EU-wide target of reducing net greenhouse gas emissions by at least 55% by 2030, compared to 1990, and climate neutrality by 2050 in line with the European Climate Law²⁹².

²⁹² REGULATION (EU) 2021/1119 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 30 June 2021 establishing the framework for achieving climate neutrality and amending Regulations (EC) No 401/2009 and (EU) 2018/1999 (‘European Climate Law’)

According to the WHO, physical inactivity, overweight and obesity are linked to many types of cancer²⁹³; regular physical activity, maintaining both a healthy body weight and diet can reduce the risk. Similarly, air pollution has been linked to several malignancies²⁹⁴, especially lung cancer²⁹⁵; an increase in the uptake of cycling and walking is a promising, low-cost, and equitable route to more physical activity, thus reducing the risk of cancer. Engaging patients in physical activity during or after cancer treatment can assist in recovery, reduce the incidence of second cancers and other chronic diseases, and improve survival²⁹⁶, thus improving their quality of life.

With the increase in numbers of active mobility users as well as the increasing use of micro-mobility devices²⁹⁷, improvements towards high-quality infrastructure, effective planning and preparation are required. This includes the preparation of cycling and walking infrastructure network plans, raising standards in design guidance documents, linking cycling and walking with other modes of transport, in particular public transport, and improvements in how the transport system and traffic flows are managed.

While cars are becoming more (inter-)connected, more work is needed to test how to bring e-bikes, e-scooters and micro-mobility devices, into the design of “smart” infrastructure through the measures of digitalization and connectivity of vehicles and infrastructure in the intelligent transport systems. Connected mobility / Cooperative Intelligent Transport Systems (C-ITS) are being developed but other road users of (e-)bicycles and e-scooters are yet to be integrated. Although some European cities have already tested use cases of bicycles in intelligent transport systems sector²⁹⁸, more efforts are needed to extend the work on C-ITS to them. Additional efforts should lead to increased safety via the digital road infrastructure and an increase in their modal share.

Proposals are therefore expected to address all of the following:

1) improve the quality, safety, quantity, accessibility, continuity and attractiveness of walking and cycling infrastructure by:

²⁹³ E.g. oesophagus, colorectal, breast, endometrial and kidney cancer. Excess body mass was responsible for 3.4% of cancers in 2012, including 110,000 cases of breast cancer per year.

²⁹⁴ Including lung cancer, urinary bladder cancer and acute leukaemia: the evidence is most abundant for lung cancer, for which several causal factors are well established (Samet JM, Cohen AJ (2006). Air pollution In Schottenfeld D, Fraumeni JF Jr, eds Cancer Epidemiology and Prevention, 3rd ed New York: Oxford University Press, pp 355-381)

²⁹⁵ Recent studies published in the AACR journal Cancer Epidemiology, Biomarkers and Prevention have demonstrated that fine particulate matter in the air may increase cancer-specific mortality in adult patients with early breast cancer and in paediatric and young adult patients with various cancers. Globally about 300,000 lung cancer deaths in 2019 were attributed to exposure to fine particulate matter, known as PM2.5 contained in air pollution.

²⁹⁶ McTiernan A, Friedenreich CM, Katzmarzyk PT, Powell KE, Macko R, Buchner D, Pescatello LS, Bloodgood B, Tennant B, Vaux-Bjerke A (2019) Physical activity in cancer prevention and survival: a systematic review. Med Sci Sports Exerc 51:1252–1261

²⁹⁷ Micro-mobility refers in this context to a growing range of small, lightweight vehicles options operating at speeds typically below 25km/h and mostly used for trips up to 10km. Micro-mobility vehicles can be personally owned or shared; electric or manual

²⁹⁸ [MegaBITS MegaBITS | Interreg North Sea](#); [Final Remarks on the BITS Project, Interreg VB North Sea Region Programme](#)

- Providing an updated state of the art of the uptake of walking and cycling policies, programmes and projects in urban, transport, research, and health strategies and plans as well as of their socio-economic, environmental and health benefits resulting from their demonstrated potential in emission reduction.
- Preparing cycling and walking infrastructure network plans which foster multimodality by linking cycling and walking with other modes of transport, in particular public transport, and by improving network and traffic flow management.
- Develop case studies and identify best practices particularly focused on quality, safety, quantity, accessibility, continuity and attractiveness of walking/pedestrian and cycling infrastructure.

2) improve integration and modal share of active mobility:

- Developing a case study to identify how walking and cycling can help to improve symptoms and quality of life of cancer patients.
- Looking at the integration of walking and cycling policies and projects in urban development, transport-research and health strategies and plans through a comparative analysis across at least 10 EU cities, selected by taking into account geographical balance, size and population as well as different levels in the uptake of active mobility.
- Demonstrating in new and/or existing living labs innovative solutions to increase the modal share of active mobility, including through testing tactical urbanism measures in real-life urban spaces.
- Test behavioural change regarding the uptake of walking and cycling among different populations through implementation research. Identify and address specific bottlenecks and barriers that prevent the uptake of behavioural change.
- Fostering the exchange of knowledge, experience and best practices about the implementation and upscale of innovative solutions for walking and cycling that could be replicated and upscaled among cities.
- Supporting the development of local, regional and national active mobility policies, and their implementation across cities participating in the action, leading at least to a 30% increase in the modal share of walking and cycling within follower cities and thus contributing to the implementation of related EU policies and in particular of the European Declaration on Cycling²⁹⁹.

3) use smart technologies and integration in traffic management systems/traffic light management at local/regional/national level, including in the new “smart” infrastructure:

- Exploring conditions and infrastructure requirements for the integration of e-bikes and micro-mobility devices in traffic management systems/traffic light management.

²⁹⁹

[EUROPEAN DECLARATION ON CYCLING \(C/2024/2377\)](#)

- Identifying and testing use cases to extend connected vehicles technology (C-ITS) to cycling, micro-mobility, bike sharing etc. to enhance the contribution of these transport modes to a sustainable urban mobility system.
- Exploring conditions for a wider uptake of smart technologies in the cycling/micromobility sector taking into account the latest legislative developments³⁰⁰ and building on results from previous European R&I projects³⁰¹.

4) coordination/exchange/capacity building for increasing the uptake of active mobility by:

- Supporting further coordination, exchange of experience and best practices, including training and capacity building activities, as well as co-creation and citizens engagement activities, taking into account the different levels of experience and development of walking and cycling strategies across Europe.
- Involve a variety of actors, including e.g. local/regional/national transport, research and health authorities, cancer charities, academia, public transport authorities and operators, urban mobility practitioners, shared mobility service providers, citizen associations, stakeholder organisations, and industry associations and representatives.

The topic requires proposals from consortia that include at least five ‘lead cities’ and five ‘follower cities’, each established in a different Member State or Associated Country, reflecting a sound geographical balance. The consortia should bring together local authorities and other relevant stakeholders to jointly test and implement packages of technological and non-technological innovations and policy-based measures.

This topic requires the effective contribution of social sciences and humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Projects selected through this topic will contribute to the implementation of EU policies and strategies fostering sustainable urban mobility such as the European Green Deal³⁰², Sustainable and Smart Mobility Strategy³⁰³, New Urban Mobility Framework³⁰⁴, Recommendation on national SUMP support programme³⁰⁵ and in particular active mobility, including the EU Declaration on Cycling³⁰⁶, as well as contributing to the implementation of

³⁰⁰ E.g. revised Delegated Regulation on EU-wide multimodal travel information service (MMTIS: https://ec.europa.eu/commission/presscorner/detail/en/qanda_23_6112); ongoing work on building the European Mobility Data Space ([Passenger Mobility Package - European Commission \(europa.eu\)](#)) and the revised ITS Directive ([Directive - EU - 2023/2661 - EN - EUR-Lex \(europa.eu\)](#))

³⁰¹ E.g. BITS – Bicycle and ITS: [BITS, Interreg VB North Sea Region Programme](#)

³⁰² The European Green Deal, COM(2019) 640 final

³⁰³ Sustainable and Smart Mobility Strategy – putting European transport on track for the Future, COM(2020) 789 final

³⁰⁴ The New EU Urban Mobility Framework, COM(2021) 811 final

³⁰⁵ COMMISSION RECOMMENDATION (EU) 2023/550 of 8 March 2023 on National Support Programmes for Sustainable Urban Mobility Planning (notified under document C(2023) 1524)

³⁰⁶ EUROPEAN DECLARATION ON CYCLING (C/2024/2377)

the Mission on Cancer³⁰⁷ and Europe's Beating Cancer Plan³⁰⁸ in particular promoting active mobility as effective mean of cancer and obesity prevention and to the implementation of the Zero Pollution Action Plan³⁰⁹, its targets for 2030 and the relevant Flagship Initiatives, in particular the reduction by more than 55% the health impacts (premature deaths) of air pollution and by 30% the share of people chronically disturbed by transport noise, with numerous co-benefits in other areas.

Proposals should plan for an active collaboration amongst the projects selected under this topic - for dissemination, evaluation and coordination - facilitated by and within the CIVITAS³¹⁰ initiative through the signature of a Memorandum of Understanding. Proposals should ensure that appropriate provisions for activities and resources aimed at enforcing this collaboration are included in the work-plan. Detailed description of the specific activities and common actions that will be undertaken is not required at proposal stage and can be further defined during the grant agreement phase. Collaboration with the Mission Platform (HORIZON-MISS-2021-CIT-02-03) is essential and should take place through the CIVITAS initiative. The latter should establish, through a collaboration agreement, clear links with the Mission portfolio for synergies and complementarities. The Commission will facilitate Mission-specific coordination through future actions, notably fostering exchanges with other proposals. Hence, successful applicants will be asked to join the 'Prevention' cluster for the Mission on Cancer, established in 2022³¹¹. In this regard, the Commission will take on the role of facilitator, including with relevant initiatives and stakeholders, if appropriate. Collaboration with the Driving Urban Transitions (DUT) partnership is recommended.

Proposals should take stock of existing work developed in relevant EU and/or national projects, build on the results of existing studies³¹². In order to ensure complementarity in particular on road safety related aspects, projects awarded under this topic will be invited to liaise and collaborate with the projects that will be selected under topic Horizon-2025-D6-12 "Safety of Cyclists, Pedestrians and Users of other Micro-mobility Devices".

³¹¹ In order to address the objectives of the Mission on Cancer, participants will collaborate in project clusters to leverage EU-funding, increase networking across sectors and disciplines, and establish a portfolio of Cancer Mission R&I and policy actions.

³¹² E.g. results from projects funded under the calls: [MG-4.1-2017](#); [LC-MG-1-3-2018](#); [MG-7-2-2017](#); [MG-5.3-2014](#) as well results from the study supported through the call for tender "[THE DEVELOPMENT OF CROSS-BORDER CYCLING LANE INFRASTRUCTURE - EC-MOVE/2024/OP/0029](#)"

EU Missions' Cross-cutting activities

EU Missions aim to address some of the greatest challenges facing our society. They are bold and inspirational with clear objectives that are time-bound, realistic, measurable and targeted. Grounded in research and innovation, EU Missions drive systemic solutions and societal transformation. Achieving these goals often requires broad societal engagement—moving beyond dialogue to concrete action. This includes the active participation of citizens, academics, entrepreneurs, social partners, and public administrators as co-designers, co-developers, and co-implementers.

To support these efforts, cross-cutting activities play a fundamental role by fostering synergies across different mission areas, responding to emerging needs, and testing innovative approaches. These activities are not confined to a single EU Mission but instead provide strategic, horizontal support, accelerating progress and addressing societal challenges at scale.

In this context, proposals for topics under this call should outline a credible pathway to contributing to the overarching objectives of EU Missions, ensuring impactful and transformative outcomes. These cross-cutting activities are complemented by other actions not subject to calls for proposals and cross-cutting policy priorities in Horizon Europe.

The three topics included act on the objective to move towards scaling-up at this stage of EU Missions implementation. Among the expected impacts, they include:

- A better understanding of the skills needed to implement the EU Missions' objectives, and strengthened institutional capacity to create a favourable environment to deploy the most relevant solutions
- A clearer overview of the factors hampering the deployment of EU Mission-produced solutions, and explore ways to overcome them
- The creation of lead markets for mission-driven technologies that also support economic competitiveness, fostered by demand-driven innovation and integrating Social Sciences and Humanities (SSH) in defining strategic pathways

The instruments used are multiple to support more than one way to achieve societal impact. Combining a Coordination and Support Action (CSA), an Innovation Action (IA), and a Research and Innovation Action (RIA) ensures that all stages of the innovation process are covered and taken into account and that the outputs of projects reach many stakeholders. The diversity of approaches can also be leveraged to cross-feed the proposed activities, using the created insights to complement each foreseen actions.

Proposals are invited against the following topic(s):

HORIZON-MISS-2026-07-CROSS-01: Strengthening skills and capacity for the deployment of EU Missions

Call: Cross-cutting activities	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 1.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>

Expected Outcome:

- Local authorities, including those not directly participating in the action, have a better understanding of required skill sets and expertise to more effectively participate in EU Missions and accelerating the deployment of solutions.
- Increased uptake and scaling of innovations, fostering a culture of experimentation and impact-driven action.
- Enhanced collaboration and knowledge exchange across regions, strengthening the overall implementation of the EU Missions.

Scope: This call aims to strengthen research-driven capacity-building and institutional readiness to accelerate the deployment of innovative solutions in support of the five EU Missions. By identifying skills gaps, enhancing capacity within local authorities, and fostering experimentation and innovation at the local level, this action will empower key actors to fully leverage the Missions' potential.

Proposals should address the following key areas:

- **Skills inventory and gap analysis:** conduct a comprehensive assessment of required and desirable skills and capacities relevant to the implementation of the EU Missions. Develop and promote methods to identify gaps, barriers and training needs across sectors and stakeholders, ensuring alignment with the specific challenges of diverse missions.

- Specific capacity building activities with local authorities should be undertaken to co-create and validate the methods and materials to be developed related to skills mapping and skills gap analysis for the deployment of innovative solutions. Such capacity building activities may take the form of targeted training programmes, peer-learning networks, and mentoring schemes for local authorities to build up skills and knowledge necessary to deploy innovative solutions, engage stakeholders, and mobilize funding for Mission-related activities.

HORIZON-MISS-2026-07-CROSS-02: Understanding and overcoming barriers to the scale-up of innovations supporting EU Missions

Call: Cross-cutting activities	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>

Expected Outcome:

- The missions' stakeholder communities are better aware of the diversity of risk perception and risk management strategies related to technological and non-technological innovations among them.
- European, national, regional and philanthropic funders can better address barriers (socio-technical, economic, cultural, and regulatory) to the achievement of mission objectives by strengthening stakeholder groups' specific risk management strategies.
- Improved understanding and removal of barriers to scaling up innovative solutions relevant to EU Missions.

Scope:

This call aims to identify and address the barriers preventing the scaling and deployment of innovative technologies and non-technological innovations that support the five EU Missions in achieving their objectives. The analysis should notably consider how the risk perception and risk management strategies of diverse stakeholder groups affects the scalability of innovations in the context of EU Missions. By integrating insights from Social Sciences, and Humanities, projects will explore socio-technical, economic, cultural, and regulatory challenges to unlock the full potential of existing, performant but underutilised solutions.

This call invites research-led interdisciplinary consortia to investigate the barriers (socio-technical, economic, cultural, and regulatory) that impede the scaling of technological and non-technological solutions. The projects activities shall cover all five EU Missions.

- Proposals should create a better understanding of socio-technical barriers based on investigations of risk perception and risk management related to technological and non-technological innovations. This shall include risk perception and risk management in regulatory and governance bodies, and the identification of socio-technical path dependencies in the context of missions. This shall include, without being limited by: Exemplary assessment of stakeholders perception of the social, economic, and environmental effects of innovations in missions settings.
- Exemplary assessment of examples of behavioural and systemic change as a result of shifting patterns of thought of risk and risk management and action, and experiment with new ways to drive transformation.
- Analyses of the role of experimentation (including by ‘culturally aware and emotional nudging’) to change risk perception and management as means of knowledge production and communication.

Projects should feed their insights to other EU mission projects, including those working on the topic “Advancing lead markets and proof-of-concept for deep tech solutions contributing to EU Missions.”

HORIZON-MISS-2026-07-CROSS-03: Advancing lead markets and proof-of-concept for deep tech solutions contributing to EU Missions

Call: Cross-cutting activities	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Innovation Actions

<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The specific conditions for actions with PCP/PPI procurements in section H of the General Annexes apply to grants funded under this topic.</p>
-------------------------------	---

Expected Outcome: **Expected outcomes:**

- Stakeholders in Missions on European, national and regional level embrace their roles as actors in ‘*lead markets for innovative products and services with a purpose*’ that are provided by public investments in mission objectives.
- Some cutting-edge technologies at lower technology levels (i.e. not yet at product development stage) potentially relevant to EU Missions are advanced towards market entry by appropriate tools (for example ‘proof concept’, ‘procurement of innovation’ or others)
- A better alignment between public procurement, private investment, and missions’ requirement fosters favourable conditions for creation of lead markets.

Scope:

This call aims to accelerate the scaling and deployment of innovative technologies by leveraging EU Missions as catalysts for lead markets. It will support both public and private stakeholders in fostering demand-driven innovation while developing proof-of-concept for deep tech solutions relevant to the Missions. By integrating Social Sciences and Humanities insights, the call will also address barriers to market uptake, risk perception, and stakeholder engagement to create enabling conditions for investment in high-impact technologies.

Proposals should aim at:

- Scaling up innovations: develop proof-of-concept for deep tech solutions that have the potential to address EU Mission challenges (up to TRL 7).
- Enabling lead markets for mission-driven technologies: identify and test models that mobilise public and private stakeholders to create demand for emerging solutions, ensuring alignment with public interests (e.g., workplace safety, risk management, procurement strategies).
- Mobilising resources to experiment innovative procurement and financing models - like procurement of innovation, competitive dialogue or other innovation friendly procurement methods - to develop and test innovative regulatory, policy, and financial

mechanisms to accelerate the uptake of high-risk, high-reward technologies in public services markets.

Maximum 50% of the grant awarded can be used to support actual procurement of solutions by public service companies preferentially in small projects and supporting maximum of 25% of the procurement. Prior agreement with EU commission services is required in due time.

Projects should take into account relevant insights from the projects working on the topic “Understanding and overcoming barriers to the scale-up of technologies supporting EU Missions.”

Projects should cover ideally all missions, and preference will be given to proposals covering several missions.

DRAFT

Other Actions ³¹³

Public procurements

1. Strengthen EU Missions as a policy instrument

The objective of this action is to ensure the follow up to the July 2023 Communication on EU Missions assessment³¹⁴. It contributes to addressing the challenges still faced by EU Missions in the following areas identified in the exercise, particularly in improving EU Missions' monitoring and governance. Additionally, it focuses on raising awareness and enhancing engagement among citizens and stakeholders in the EU Missions.

Action may include:

- Strengthening the monitoring of all EU Missions, including supporting the preparation of the next assessment of EU Missions e.g. via data collection, data analysis, data visualisation, reporting on results and other relevant activities.
- Developing a dedicated joint portal for all EU Missions that would provide the public with a single-entry point to access key elements for each Mission in a harmonised format;
- Further exploiting the Horizon Results Platform and results from other EU programmes for EU Missions, including by providing advisory services that would help connecting results owners to missions' actors;
- Developing series of communication and dissemination activities to inform citizens and stakeholders on the activities of the EU Missions;
- Organising interactive in person and online events to engage citizens in the development of Missions' initiatives in the Member States and Associated countries.

Up to 4 procurements, possibly under existing framework contracts, might be funded under this topic.

This action supports the follow-up to the July 2023 Communication on EU Missions assessment.³¹⁵

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3-Q4 2025

³¹³ The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

³¹⁴ COM(2023) 457 final and SWD(2023) 260 final

³¹⁵ COM(2023) 457 final and SWD(2023) 260 final

Indicative budget: EUR 4.00 million from the 2025 budget

Indirectly managed actions

1. Strengthen evidence-informed policy making for mission-oriented innovation

Expected outcomes:

The action would be expected to provide:

- Mission-oriented innovation policies' theory and policy recommendations;
- Support to the EU Missions implementation;
- A Missions community of practice.

Expected impact:

- Evidence-informed policy for EU Missions and potential future mission-oriented policy initiatives;
- Stronger eco-system for sustained mission performance.

Scope:

Public policy should be equipped with a sound system of evidence collection and dissemination, which is the basis of continuous learning, improvement and ultimately evidence-informed policy making. As EU Missions are focused mainly on the implementation and delivery against their objectives, a feedback loop providing the latest evidence and state of the art on the theories and practices is needed to support these new instruments.

This includes:

- Providing regular reports on mission-oriented innovation policies' theory and good practices,
- Supporting the European Commission in indicator development, data collection and analysis, notably on evolutions in policies and relevant measures of progress and impact,
- Helping to develop new methodologies for pooling, processing and analysing the large amounts of information that are at the basis of portfolio management and link to monitoring,
- Building a community of practice (including mutual learning, workshops, forums and skills development) around mission-oriented innovation,
- Providing policy recommendations for EU Missions and potential future mission-oriented policy initiatives.

The Commission will cooperate with the OECD to set up this system to underpin evidence-informed policy making. The OECD has unique access to countries where missions have been developed and expertise in the mission-oriented innovation policies. The proposed action would build on the recently completed study³¹⁶, and engage with the national EU Missions support structures, notably via the community of practice.

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative timetable: Q3 2025-Q4 2029

Indicative budget: EUR 4.00 million from the 2025 budget

Other budget implementation instruments

1. Commission expert groups: Mission Boards

The Mission Boards experts provide advice, which supports the work of the European Commission in the implementation phase of EU Missions for Horizon Europe.

The experts included in the Mission Boards are required to provide advice based on deep knowledge on fields corresponding to the implementation of mission oriented programmes corresponding to those of the missions, including knowledge in business, economic, cultural, social and environmental programmes, research and innovation and expertise in cross-sector/cross-border collaboration, governance, citizen engagement etc., as well as country and regional interests. It includes advice on achieving synergies between Horizon Europe missions and other EU programmes and policy areas, and with similar style missions at the national level, taking into account the international research and innovation field.

The advisory role of the Mission Boards is very closely managed in support of the dialogue with the Member States and countries associated to Horizon Europe, and prevent conflict of interest and respect confidentiality notably when pertaining to the Horizon Europe work programme and on evaluation aspects.

The Mission Boards provide high-level advice to the Commission of such a nature that without their input the implementation of missions would not achieve the desired large scale and breadth of impact. In light of this, and as highly qualified, specialised, independent experts, it is justified that the members of the Mission Boards are remunerated for the services they offer pursuant Article 21 of the Commission's horizontal rules on expert groups ('the horizontal rules')³¹⁷.

A special allowance of EUR 450/day will be paid to the Mission Board experts appointed in their personal capacity who act independently and in the public interest. This amount is

³¹⁶ European Commission Decision C(2022)2975 of 10 May 2022, OECD Benchmarking Study on Missions Implementation, Horizon Europe Work Programme 2021-2022, 12. Missions

³¹⁷ C(2016) 3301

considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work³¹⁸.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q2 2025

Indicative budget: EUR 1.50 million from the 2025 budget

2. Use of individual experts: Mission Board Chairs

The Mission Boards Chairs (one Chair per Mission Board) have been appointed by the Director-General of DG RTD in agreement with other relevant Commission services, in order to maintain a degree of continuity with the previous Mission Boards. They are required to provide advice based on deep knowledge on fields corresponding to the implementation of mission oriented programmes corresponding to those of the missions above, including knowledge in business, economic, cultural, social and environmental programmes, research and innovation and expertise in cross-sector/cross-border collaboration, governance, citizen engagement etc., as well as country and regional interests. It includes advice on achieving synergies between Horizon Europe missions and other EU programmes and policy areas, and with similar style missions at the national level, taking into account the international research and innovation field.

The Chairs support and coordinate the work of the Mission Boards. The Chairs are also in charge of steering the work of the Mission Board according to its specific mandate. The Mission Board Chairs do not have a decision-making or executive role.

The advisory role of the Chairs is very closely managed in support of the dialogue with the Member States and countries associated to Horizon Europe, and to respect conflict of interest and confidentiality notably when pertaining to the Horizon Europe work programme and on evaluation aspects.

The Mission Boards Chairs provide high-level advice to the Commission of such a nature that without their input the implementation of missions would not achieve the desired large scale and breadth of impact.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 2025

³¹⁸

IMPORTANT NOTICE:

This draft has not been adopted or endorsed by the European Commission. Any views expressed are the views of the Commission services and may not in any circumstances be regarded as stating an official position of the Commission.

This draft is made public before the adoption of the work programme to provide potential participants with the currently expected main lines of this work programme. Only the adopted work programme will have legal value.

The adoption of the work programme will be announced on the Horizon Europe website and on the Funding and Tenders Portal.

Information and topic descriptions indicated in this draft may not appear in the final work programme; and likewise, new elements may be introduced at a later stage. Any information disclosed by any other party shall not be construed as having been endorsed by or affiliated to the Commission.

The Commission expressly disclaims liability for any future changes of the content of this document.

HORIZON-NEB-2025-01-REGEN-03: Sufficiency measures in the built environment	38
HORIZON-NEB-2025-01-REGEN-04: Innovative approaches for sustainable, inclusive and beautiful social and affordable housing	40
Destination - Innovative funding and new business models for the transformation of neighbourhoods	44
HORIZON-NEB-2025-01-BUSINESS-01: Renovating the built environment through design for adaptability and disassembly	45
HORIZON-NEB-2025-01-BUSINESS-02: Bottom-up social entrepreneurship for the co-creation of neighbourhoods in line with the New European Bauhaus	48
HORIZON-NEB-2025-01-BUSINESS-03: Reverse local construction supply chains for the beautiful re-assembly of reclaimed construction products	50

Other actions not subject to calls for proposals 54

1. Commission expert group for advice on the NEB Facility 54

Budget 56

DRAFT

Introduction

The [New European Bauhaus](#) (NEB) was launched in 2021, striving to translate the European Green Deal¹ into tangible change on the ground. This policy and funding initiative was further strengthened in the political guidelines for the European Commission 2024-2029 under the goal *Supporting people, strengthening our societies and our social model*.

The political guidelines² highlight that the NEB can bring sustainability together with inclusion and affordability, and creativity with innovation. Challenges like the housing crisis or the green transformation are addressed by putting people's needs first, with the goal to improve their lives. The NEB also contributes to creating lead markets for the Clean Industrial Deal by considering embodied greenhouse gas emissions. To this end, the NEB fosters the development of innovative solutions in the built environment³ and beyond.

Against this backdrop, the NEB Facility is a multi-annual (2025-2027) and cross-cutting tool to revitalise European neighbourhoods with design for sustainability and inclusion. It will support projects on the sustainable transformation of the built environment. The NEB Facility aims to make the inhabitants of the built environment partners of change.

Activities under the NEB Facility should contribute to the wider social acceptance of the innovative solutions developed, accelerating the just green and digital transformation and strengthening and restoring citizens' trust in democracy. They should also explore the built environment's function in the conservation and restoration of natural ecosystems, its relation to historical urban, peri-urban or rural areas, the improvement of social cohesion as well as people's health and well-being. The NEB Facility is composed of a research and innovation (R&I) component and a roll-out component.

The R&I component will cover fundamental research, testing and demonstration. It will be implemented as a cross-cluster issue in the Horizon Europe Work Programmes with an indicative budget of €120 million per year for the period 2025-27. The roll-out component of the NEB Facility will seek to facilitate the uptake, further development and deployment of new knowledge, methods, approaches and technologies developed under the R&I component. The roll out component will also include all actions delivered under EU programmes that contribute to the goals of the Facility and particularly the implementation of the NEB values and principles⁴ at the neighbourhood level. It will build further on the projects and experiences from the first three years of the NEB.

¹ The targets of the European Green Deal were established in the [European Climate Law](#) (Regulation 2021/1119), the [Renovation Wave](#) (COM/2020/662 final), the [EU's new circular economy action plan](#) (COM/2020/98 final), the [EU zero pollution action plan](#) (COM/2021/400 final), the [EU industrial strategy](#) (COM/2020/102 final), the [EU bioeconomy strategy](#) (COM/2018/673 final), and the [EU Bioeconomy Strategy Progress Report: Stocktaking and future developments](#).

² European Commission: Directorate-General for Communication & Luyen, U. (2024). *Europe's choice : political guidelines for the next European Commission 2024–2029*, Publications Office of the European Union. <https://data.europa.eu/doi/10.2775/260104>

³ See definition in the glossary.

⁴ See definitions in the glossary.

The commitment and the support of innovative solutions are rooted in the three intertwined NEB values: **sustainable**, **inclusive** and **beautiful**.⁵ Sustainability is about prioritising the needs of all life forms and of the planet by ensuring that human activity does not exceed planetary boundaries⁶ which define a safe operating space for humanity based on the intrinsic biophysical processes that regulate the stability of the Earth system.⁷ Inclusion means granting and securing equal access to opportunities and resources for all and encouraging exchanges across cultures, genders, ages, and socioeconomic groups. Beautiful refers to projects that are genuinely attentive to their context which includes arts and culture, quality, diversity and heritage.

In addition to these three values, a NEB project should embrace three working principles: **participatory process**, **multi-level engagement** and **transdisciplinary approach**. All three working principles should foster co-creation and co-development. Participatory processes ensure that stakeholders have a voice in projects that affect them in addressing transformational change. Multi-level engagement implements an effective exchange between public and private peers and others who operate on a different scale, bridging the local and global dimension. Transdisciplinary approaches aim for higher integration of formal and informal knowledge and go beyond technical disciplines. They address in particular social, artistic and design expertise. They should ground scientific expertise in society by drawing on the knowledge of non-academics, the public, and public administrations. Architects or designers, for instance, can play a role of facilitators to integrate different actors and disciplines. Within the scientific field, the social sciences, arts and humanities (SSAH) will play an important role in the R&I component of the NEB Facility to emphasise the holistic nature.

In order to foster dialogue, collaboration, and creativity, bringing together different disciplines and different stakeholders, the NEB relies on **four thematic axes**⁸ which link the initiative to the people and their interests, needs and motivations. The first axis is about **reconnecting with nature** and going beyond a human-centred to a life-centred perspective. The second one is about regaining a **sense of belonging** and magnifying and linking collective and private experiences and building bridges between people. The third axis is about prioritising the **places and people most in need** and ensuring that beauty and sustainability are **affordable and accessible to all**. The fourth axis is about the need for **long-term, lifecycle thinking** in the circular economy and tackling unsustainable use of resources, including obsolete buildings or infrastructures, and waste.

⁵ See the definitions of the three NEB values in the glossary and, for more detailed information on the values, principles and axes, the and the [NEB Investment Guidelines](#), [NEB Compass](#) and the [NEB Investment Guidelines](#).

⁸ See definition in the glossary.

By adopting the NEB's integrated approach, the NEB Facility seeks to contribute to new solutions and potentially new ways of policymaking: bottom-up and closer to people's needs. This approach fosters the active participation of inhabitants and the integration of arts and culture in transformation processes. The focus is on neighbourhoods, which are close to people's surroundings and daily experiences. Incorporating neighbourhood specificities in planning initiatives and decision-making processes helps to effectively address local-level problems.⁹

The knowledge produced by NEB projects, the NEB Community and other relevant NEB actions will be collected, centralised, managed and monitored in a New European Bauhaus Hub. This will give an overview of all the knowledge produced, the progress made, the challenges faced and the research gaps yet to overcome. Thereby, the Hub will contribute to informing the implementation of the NEB Facility and will help to increase its impact. In the upcoming years and following work programmes after 2025, the Hub will be essential to facilitate potential synergies and joint actions between the NEB Facility and other projects.

NEB Facility: R&I component

Activities under the NEB Facility's R&I component in this work programme will contribute to all Key Strategic Orientations (KSOs) defined by the Horizon Europe Strategic Plan 2025-2027.¹⁰

- *KSO 1: Green transition:* Horizon Europe R&I activities must support Europe to become the world's first climate-neutral continent by 2050 and to tackle biodiversity loss and pollution. At least 35% of Horizon Europe's resources are committed to be spent on climate action and 10% for 2025-2027 on biodiversity action.
- *KSO 2: Digital transition:* Investment in R&I in key digital technologies is crucial for improving Europe's competitiveness in the digital value chain. The green and digital transitions are intertwined and expected to mutually benefit each other. In 2021-2027, it is agreed to invest at least EUR 13 billion from Horizon Europe in core digital technologies.
- *KSO 3: A more resilient, competitive, inclusive, and democratic Europe:* Europe's social rights and democratic values and principles need a strong foundation so they can be promoted globally. Horizon Europe research activities will help provide this foundation. This includes research on civil security, on a fair and environmentally-friendly economic model, on health and wellbeing and on democratic participation.

To contribute to these programme-level KSOs, the NEB Facility's R&I component will deliver on several specific expected impacts as defined in the Horizon Europe Strategic Plan 2025-2027. In this part of the 'main' work programme 2025, each destination of the R&I

¹⁰ European Commission, Directorate-General for Research and Innovation (2024). *Horizon Europe strategic plan 2025-2027*. Publications Office of the European Union. <https://data.europa.eu/doi/10.2777/092911>

component will deliver on three to four expected impacts as outlined in the list below. This destination-based work programme structure follows a thematic centre-of-gravity approach, but activities within a destination may be of cross-cutting nature and will often contribute to several expected impacts. The specific contribution to the overall expected impacts is explained in the introductory text of each destination, as well as now outlined below.

1. Connecting the green transformation, social inclusion and local democracy

Efforts to address socio-economic inequalities, environmental challenges, and improve transparency of public authorities must go hand in hand with engaging and fostering an open dialogue to rebuild citizens' trust in local democracy.

Reestablishing a strong connection between people and democratic institutions will be key to implement changes required by the green transition and avoid a “geography of discontent”. Places that are stuck in a development trap and where inhabitants feel left behind are faced with disengagement and discontent in the long term.¹¹

This Destination especially embraces activities that address sustainability and inclusiveness, paying particular attention to vulnerable groups. It aims at increasing the trust of people in the green transition and democracy through innovative participatory processes and governance models that balance public and private interests. Culture, cultural diversity, and identities possess a key role and potential in this process by enabling the involvement and participation of all.

This Destination delivers on the expected impacts 8 *Realising the full potential of cultural heritage, arts, and cultural and creative sectors*, 10 *Boosting inclusive growth and reducing vulnerabilities*, 31 *Sustainably developing rural, urban and coastal areas*, and 32 *Developing innovative governance models and tools enabling sustainability and resilience* in the Strategic Plan 2025-2027.

2. Circular and regenerative approaches for the built environment

The development of a European circular and regenerative ecosystem for the built environment is key to reach our climate goals, support the competitiveness of the sector and the EU's strategic autonomy. At the same time, it is crucial to ensure peoples' acceptance of, support for, and active engagement in the necessary transformations.

This Destination aims to make the built environment more sustainable, circular, regenerative, climate-resilient and less polluting. To this end, innovative and regenerative designs¹², architecture, products, materials and approaches will be developed, considering also the role digital technologies can play. Efforts will be made to make solutions beautiful and respectful of the local perspectives and cultures, contributing to increase inhabitants' acceptance of the transformative innovations developed.

¹¹ Rodríguez-Pose, A., Dijkstra, L., & Poelman, H. (2023). The geography of EU discontent and the regional development trap. *Working Papers*, 3. <https://doi.org/10.2776/164290>

¹² See definition in the glossary.

This Destination delivers on the expected impacts 2. Living and working in a health-promoting environment, 15 *Achieving global leadership in climate-neutral, circular and digitised industrial and digital value chains*, 28 *Putting biodiversity on a path to recovery, and protecting and restoring ecosystems and their services*, and 31 *Sustainably developing rural, urban and coastal areas* in the Strategic Plan 2025-2027.

3. Innovative funding and new business models for the transformation of neighbourhoods

The built environment faces diverse challenges that hinder its transition towards greater sustainability, circularity, and social inclusion. For the sector to overcome established norms, practices, and conservative mindsets and adapt towards greater circularity and sustainability, the demand and appropriate incentives must be ensured. New business and funding models provide a framework to rethink how public and private projects are conceived, planned and executed for greater circularity and sustainability.

This Destination aims to better understand the market with its demand and supply sides as well as the related policy and regulatory aspects. Actions under this destination will develop new business and social economy models and innovative funding schemes (on different governance levels) to attract more capital and drive positive change in neighbourhoods. The uptake of new values, including social and aesthetic values, will be encouraged.

This Destination delivers on the expected impacts 8 *Realising the full potential of cultural heritage, arts, and cultural and creative sectors*, 9 *Strengthening social and economic resilience and sustainability*, and 15 *Achieving global leadership in climate-neutral, circular and digitised industrial and digital value chains* in the Strategic Plan 2025-2027.

Under the R&I component of the NEB Facility, applicants are encouraged to explore complementarities with topics and activities in Horizon Europe partnerships (in particular: Built4People, Circular Bio-based Europe and Driving Urban Transition, Forests and Forestry for a Sustainable Future, Innovative Materials for the EU, Processes4Planet, Resilient Cultural Heritage, Social Transformations and Resilience, and Textile of the Future), Missions (in particular the Climate-Neutral and Smart Cities Mission and the Adaptation to Climate Change Mission) and Clusters (in particular Cluster 2 on Culture, Creativity, and Inclusive Society, Cluster 3 on Civil Security for Society, Cluster 5 on Climate, Energy and Mobility, and Cluster 6 on Food, Bioeconomy, Natural Resources, Agriculture & Environment). Opportunities for collaboration and synergies should also be explored and, as appropriate, pursued with other relevant initiatives such as the innovation ecosystems or the Knowledge and Innovation Communities (KICs) of the European Institute of Innovation and Technology (EIT). Additionally, Horizon Europe grantees are invited to consider possible collaborations and cross-fertilisation between their project and other projects selected under the same or other relevant calls.

NEB Facility: roll-out component

The deployment of innovative solutions will be supported by the roll-out component of the NEB Facility through various sources of funding, including EU funds (except Horizon Europe), but also national or private ones. Applicants are encouraged to identify areas of convergence between the NEB Facility and national priorities, as well as possible funding opportunities at national, regional or local levels or from private sources, including philanthropic. Applicants are also encouraged to develop new collaborations or to build on and expand existing collaborations under the roll-out component with other EU programmes, like the Cohesion policy funds, European Regional Development Fund (ERDF), European Social Fund (ESF+), the Just Transition Fund (JTF), Single Market Programme, Digital Europe Programme, Creative Europe, Erasmus+, European Solidarity Corps, Structural Reform Support Programme (SRSP), the Programme for the Environment and Climate Action (LIFE), the European Maritime, Fisheries and Aquaculture Fund (EMFAF). Applicants could enhance the reach and impact of their projects for instance through broader stakeholder cooperation and follow-on activities.

Glossary

Beautiful is one of the three core values of the NEB. Beautiful means aesthetically pleasing, emphasising the quality of experience, beyond mere functionality. Projects are in line with this value if they are genuinely attentive to their context, which includes arts and culture, quality, diversity and heritage. They contribute to people's physical and mental health and well-being, foster a sense of belonging and quality of individual and collective experience. These projects promote a high-quality living environment and activate the cultural, social and natural qualities of a place.

Bio-based products are wholly or partly derived from materials of biological origin (such as plants and trees, animals, enzymes, and microorganisms, including bacteria, fungi and yeast).¹³ For example, bio-based plastics, as defined by the European Union, are made from biomass. This biomass originates mainly from plants grown specifically to be used as feedstock to substitute fossil resources. Other sources are organic waste and by-products, such as used cooking oil, bagasse and tall oil.¹⁴

Bio-fabricated materials are made by growing living cells and microorganisms such as bacteria, yeast, and mycelium. There are two categories of bio-fabricated materials: the first are materials made with ingredients that are bio-fabricated. The ingredients are bio-fabricated but need further mechanical or chemical processing to make a macroscale material structure. The second are bio-assembled materials which are macroscale structures directly grown from living microorganisms, such as an acoustic panel that is entirely made of mycelium.¹⁵ Bio-fabricated materials have more specific requirements towards their production processes than bio-based products (see the respective entry in this glossary).

Built environment refers to human-made buildings and infrastructures that provide physical settings for human activities. This includes, but is not limited to, public and private buildings, streets, transport and energy infrastructure, common spaces, public places, and green open spaces¹⁶. The built environment plays an essential role in addressing the basic needs of society, such as having places to live, work, learn, consume, travel and entertain. The built environment can contribute to a more just society by accommodating the needs of different

individuals and groups.¹⁷ It influences the physical health of inhabitants¹⁸ (e.g. by encouraging physical exercise) as well as their mental health (e.g. by helping reduce stress).

Circular economy is a business concept aiming to create a closed-loop system and maintain the value of products, materials, and resources for as long as possible by returning them into the product cycle at the end of their use, while minimising the generation of waste. In this economic system, ‘waste’ can become a feedstock source for another process or value chain.¹⁹ Resource value retention options (R-strategies) form one of the circular economy fundamental principles. The 10 R strategies can be classified with three clusters: 1. R-strategies closely related to consumer/customer alternatives (refuse, reduce, resell/reuse, repair); 2. R-strategies referring to various forms of upgrading used products on the side of users but dominantly carried out by business actors (refurbish, remanufacture, repurpose); 3. R-strategies referring to aggregate material flows, often resulting in downcycling (recycle, recover, re-mine).²⁰

Common spaces are spaces that are brought into being through common practices.²¹ These common practices are linked to a physical public, semi-public or private place that is accessible by all.²² This physical public place is demarcated by the built environment, which can facilitate or hinder social activities.

Community is a social unit. Interactions that occur in the built environment can foster a sense of community and belonging in many ways.²³ Interaction enables people to build communities, commit themselves to each other, and knit the social fabric (see the respective entry in this glossary). The perception of being part of a collective²⁴ and locally-based social relationship beyond the household and family²⁵ are essential to define a coherent social group

as a community. The coherence of a social unit, that is a community, includes the capacity to act, a shared social reality, and a relatively stable culture and identity.²⁶

Construction ecosystem covers contractors for building and infrastructure projects, construction product manufacturers, engineering and architectural services, urban planners, construction workers, engineers as well as other relevant actors and economic activities (e.g., rental and leasing of machinery and equipment, employment agencies)²⁷ involved in the design, construction, maintenance, refurbishment, and demolition of buildings and infrastructure.²⁸²⁹

Green gentrification is defined as new or intensified urban socio-spatial inequities produced by urban greening agendas and interventions, such as greenways, parks, community gardens, ecological corridors, or green infrastructure.³⁰ While urban greening has diverse climate, health, and socio-economic benefits, it can under certain circumstances also contribute to green gentrification processes and thus to new social, racial, and health inequalities that eventually undermine climate equity and justice.³¹

Green transition is a concept of moving from a carbon-based economy to a more sustainable economy while transforming environmental challenges and climate related difficulties into prosperous opportunities that benefit everyone in society. The green transition fosters welfare and well-being through a new sustainable economic model, while ensuring socioeconomic systems remain within ecological planetary boundaries.

Inclusive is a core value of the NEB that revolves around the essential idea of granting and securing equal access to opportunities and resources for all and encouraging exchanges across cultures, genders and ages. The basic ambition addresses the physical, social and economic inclusion of all members of the society which also includes affordability for all and accessibility. The second level targets the broader concept of social justice, to be achieved not only by specific, temporary solutions at project level but through institutional setups, governance and business models, and structural safeguards. The third and highest level of ambition refers to fundamentally equitable societal models based on solidarity and cooperation. A part of these ideas and ambitions is directly linked to the physical characteristics of the built environment.

Indigenous knowledge focuses on the plurality of ways of knowing the environment and explores the importance of understanding how knowledge production is tied to place and culture.³² Indigenous knowledge is locally developed over centuries and has been transmitted orally from generation to generation. Indigenous knowledge systems are fundamentally important to indigenous identity, culture, languages, heritage, and livelihoods.³³ Some issues of indigenous knowledge, such as a more-than-human approach, continue to intersect with questions about the authority of science and its representations of nature, about the politics of science and technology as interpreted by institutions and policymakers at all levels, and about the role of technology and development in the forging of a more equitable world.³⁴

Multi-level engagement refers to the implementation of an effective exchange between peers and others who operate on a different scale or level of governance, bridging the local, regional, federal, European and global dimension.

Nature-based solutions are inspired and supported by nature. They are cost-effective, simultaneously provide environmental, social and economic benefits and help improving building's resilience and climate adaptability. Implementing nature-based solutions such as green infrastructure, water-efficient landscaping, and erosion control will enhance soil, thus ecosystem stability, which will bring more and more diverse, nature and natural features and processes into cities, landscapes and seascapes, through locally adapted, resource-efficient and systemic interventions.³⁵

NEB thematic axes³⁶ link the initiative to the people and their interests, needs and motivations in order to foster dialogue, collaboration, creativity, bringing together different disciplines and different stakeholders. The first axis is about reconnecting with nature and going beyond a human-centred to a life-centred perspective. This reflects widespread awareness and willingness to address climate change (mitigation and adaptation) and to reduce exposure to pollution. In this context, education and culture play a key role in the shift of paradigm towards new behaviours and values. The second axis is about regaining a sense of belonging and magnifying and linking collective and private experiences and building bridges between people. This path ranges from intergenerational solidarity over cultural heritage to proximity economy. The third axis is about prioritising the places and people that need it the most and ensuring that beauty and sustainability are affordable and accessible to all. Exclusion, segregation, or poverty are real threats in many built environments, which the NEB must encounter and help to overcome. The fourth axis is about the need for long-term, lifecycle thinking in the industrial ecosystem and tackling unsustainable use of resources, including obsolete buildings or infrastructures, and waste. NEB projects promote a thorough

³⁶ For more detailed information, see the [NEB Compass](#) and the [NEB Investment Guidelines](#).

circular economy mindset and address these challenges in terms of design, materials, technologies, processes and behaviours.

NEB core values: The commitment and the support of innovative solutions are rooted in the three intertwined NEB values **sustainable, inclusive** and **beautiful**³⁷. See their respective entries in this glossary.

NEB working principles are an addition to the three NEB core values. They describe the process through which a project should operate and work to achieve the highest level of ambition in the three core values. A NEB project should embrace three working principles: **participatory process, multi-level engagement** and **transdisciplinary approach**³⁸. See their respective entries in this glossary.

Neighbourhoods are understood as comprehensive residential systems in rural, peri-urban or urban areas with mixed functions. A neighbourhood ideally includes public and private functions and infrastructures such as education institutions (e.g. kindergartens, primary schools), cultural facilities, community centres, youth centres, retirement homes, post offices, banks, stores, parks, and workplaces. Neighbourhoods are where people live, socialise and find services to meet a substantial part of their daily needs. In contrast to communities, which are social units, neighbourhood refers to a physical unit where one can address local-level challenges through planning initiatives. For the purpose of the NEB Facility implementation, a neighbourhood will be understood as an area that either has a maximum of 25 km² or a maximum of 10,000 inhabitants. A neighbourhood should also be part of or represent the lowest level of a public administration or elected body such as a quarter, borough or district.

Participatory process consists of concrete steps and activities that are an integral part of a project's preparation and operation. Participatory processes ensure that stakeholders have a voice in projects that affect them in addressing transformational change. Participatory processes require a careful implementation in order to ensure that they are genuinely inclusive and impactful. Successful participatory processes strengthen social cohesion and foster a sense of co-ownership and co-responsibility.

Regenerative design aims to actively restore, revitalise and enhance ecosystems and create sustainable, thriving environments for local communities and nature.³⁹ It is based on a holistic worldview that sees humans and economies as an integral part of nature. It is about sustaining qualitative growth for the well-being of all life on Earth in cooperation with nature. Applied to the built environment and following regenerative design criteria,⁴⁰ regenerative design

³⁷ For more detailed information, see the [NEB Compass](#) and the [NEB Investment Guidelines](#).

⁴⁰ European Commission: Directorate-General for Research and Innovation, Schellnhuber, H., Widera, B., Kutnar, A., Organschi, A., Hafner, A., Hillebrandt, A., Murphy, O., & Nakicenovic, N. (2022). *Horizon Europe and new European Bauhaus NEXUS report : conclusions of the High-Level Workshop on 'Research and Innovation for the New European Bauhaus'*, jointly organised by DG Research and

offers pathways to develop construction and renovation methods and designs that go beyond conventional approaches. Regenerative designs will contribute to long-term ecosystem resilience and improved soil quality in urban and rural NEB neighbourhoods, creating a more harmonious coexistence between the built environment and nature, while saving and sustainably producing resources and making the built environment more resilient, sustainable, inclusive and beautiful.⁴¹

Social fabric is knitted through interactions between people and within communities (see the entry for *Community*). It is crucial for a sense of belonging. The interplay between economic and social factors drives the improvement or deterioration of the social fabric of a place. Therefore, social fabric requires actions to take place at local or community level, rather than regional or national level.⁴²

Social infrastructure refers to the institutional and spatial frameworks that support collective civic life, including community facilities and public spaces that foster social interaction, community development, and social cohesion.

Social sciences and humanities (SSH) conduct broader research on societies and the members and their interactions within societies. The sustainable societal impacts sought by policy makers often depend on the contributions of SSH researchers working in multi- and/or interdisciplinary scientific collaborations. SSH encompasses a broad range of disciplines such as sociology, economics, political sciences, anthropology, ethnology, philosophy, linguistics, psychology, communication sciences, law, the arts, history and more.⁴³ Within the scientific field, SSH will play an important role in the R&I component of the NEB Facility to emphasise the holistic nature of the initiative.

Street furniture refers to functional and beautiful objects and installations placed in common spaces (see the respective entry in this glossary), to support various activities and improve the quality of the public environment. Examples include benches, bus shelters, sun or rain shelters, trash bins, plant trough or signage but also small-scale energy infrastructure. Overall, elements of street furniture enhance functionality, comfort, inclusiveness and aesthetics in outdoor spaces.⁴⁴

Sufficiency is a set of policy measures and daily practices which avoid the demand for energy, materials, land, water, and other natural resources, while delivering wellbeing for all

within planetary boundaries.⁴⁵ Sufficiency measures applied to the built environment are designed to optimise the use of existing buildings, limiting their under-occupation rates and leading to the reduction of demand for new built floor space and, thereby, to the reduction of resource and land consumption and environmental impact by the built environment.⁴⁶ Applied to neighbourhoods, sufficiency measures should also be understood in terms of a high mix of functions, aiming to reduce the need for car trips or long-distance travel. This means ensuring that children can attend schools within or close to their neighbourhood, providing a certain number of jobs, and incorporating functions that meet the daily needs of residents (e.g. 15min-city approach).

Sustainable is a core value of the NEB. In alignment with the European GreenComp framework, sustainability is about prioritising the needs of all life forms and of the planet by ensuring that human activity does not exceed planetary boundaries⁴⁷ which define a safe operating space for humanity based on the intrinsic biophysical processes that regulate the stability of the Earth system.⁴⁸ Particularly, construction methods and materials that are resource-efficient and avoid damaging local soils, while using bio-fabricated materials or recycled components, minimizing waste and reducing the need for extracting raw resources, should be encouraged. The basic sustainability ambition is concerned with conventional features like the ability to preserve or prolong usability, and the next level considers the entire system of a project. The highest ambition is to regenerate and reconnect to nature (see additionally the entry for *regenerative design*).

Transdisciplinary approaches aim for higher integration of formal and informal knowledge and go beyond technical disciplines while addressing in particular social, artistic and design expertise. They should ground scientific expertise in society by drawing on the knowledge of non-academics, the public and public administrations. This contributes to the construction of knowledge and solution of social problems that go beyond disciplinary boundaries and provide a systemic, global and integrated perspective.⁴⁹ Within the scientific field, the social sciences and humanities (SSH) will play an important role in the R&I component of the NEB Facility to emphasise the holistic nature of the initiative.

Calls

Call - A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods

HORIZON-NEB-2025-01

Overview of this call⁵⁰

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ⁵¹	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025 Deadline(s): 12 Nov 2025				
Destination - Connecting the green transformation, social inclusion and local democracy				
HORIZON-NEB-2025-01-PARTICIPATION-01: The impact of common space on neighbourhood communities	RIA	10.50	Around 3.50	3
HORIZON-NEB-2025-01-PARTICIPATION-02: Fostering and maintaining the social fabric for the green transition in neighbourhoods	RIA	9.00	Around 3.00	3
HORIZON-NEB-2025-01-PARTICIPATION-03: Beautiful, sustainable and inclusive street furniture for the transformation of neighbourhoods	IA	10.40	Around 5.20	2
HORIZON-NEB-2025-01-PARTICIPATION-04: Network of neighbourhoods for innovative	CSA	2.50	Around 2.50	1

⁵⁰ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

⁵¹ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Horizon Europe - Work Programme 2025
New European Bauhaus Facility

policies on gentrification				
Destination - Circular and regenerative approaches for the built environment				
HORIZON-NEB-2025-01-REGEN-01: Applying regenerative design to the built environment in neighbourhoods	IA	16.00	Around 8.00	2
HORIZON-NEB-2025-01-REGEN-02: Bio-fabricated materials for sustainable and beautiful construction	RIA	10.00	Around 5.00	2
HORIZON-NEB-2025-01-REGEN-03: Sufficiency measures in the built environment	RIA	8.00	Around 4.00	2
HORIZON-NEB-2025-01-REGEN-04: Innovative approaches for sustainable, inclusive and beautiful social and affordable housing	IA	16.00	Around 8.00	2
Destination - Innovative funding and new business models for the transformation of neighbourhoods				
HORIZON-NEB-2025-01-BUSINESS-01: Renovating the built environment through design for adaptability and disassembly.	IA	12.00	Around 6.00	2
HORIZON-NEB-2025-01-BUSINESS-02: Bottom-up social entrepreneurship for the co-creation of neighbourhoods in line with the New European Bauhaus	IA	12.00	Around 4.00	3
HORIZON-NEB-2025-01-BUSINESS-03: Reverse local construction supply chains for the beautiful re-assembly of reclaimed construction products	RIA	12.00	Around 4.00	3
Overall indicative budget		118.40		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and</i>	The criteria are described in General Annex

Horizon Europe - Work Programme 2025
New European Bauhaus Facility

<i>exclusion</i>	C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Destinations

Destination - Connecting the green transformation, social inclusion and local democracy

To make the green transition happen, social fairness needs to be at its heart. Inhabitants have to have the opportunity to influence the green transition and feel ownership of the measures to reach climate neutrality and circularity⁵², zero pollution and restore biodiversity. It is also important to better anticipate and manage climate-related risks across society, and to interact with inhabitants to build new concepts. All of this requires a closer understanding of people and how they experience their everyday lives. A recent Eurobarometer demonstrates that 88% of EU citizens think that the green transition should be fair and leave no one behind. Yet only 46% of Europeans are confident that by 2050 sustainable⁵³ energy, products and services will be affordable for everyone, including poorer people⁵⁴.

Vulnerable and marginalised groups are often more exposed to climate risks and pollution and affected by adverse impacts (e.g. health, energy poverty), while being least responsible and having lower capacity to adapt. The inclusion⁵⁵ of different types of ownership (e.g. private, social, retirement, student housing, etc.) as well as various building typologies (e.g. high-rise buildings, slab blocks, villa blocks, terraced houses, etc.) in the planning of new neighbourhoods⁵⁶ or the transformation of existing ones can also facilitate a quicker integration of marginalized and vulnerable groups - particularly younger generations, which should have equal opportunities and conditions for education regardless of their background - and fosters higher social intelligence among privileged groups.

In Work Programme 2025, this Destination contributes to the following expected impacts set out on the Horizon Europe Strategic Plan 2025-2027:

- 8. Realising the full potential of cultural heritage, arts, and cultural and creative sectors
- 10. Boosting inclusive growth and reducing vulnerabilities effectively
- 31. Sustainably developing rural, urban and coastal areas.
- 32. Developing innovative governance models and tools enabling sustainability and resilience.

This Destination seeks to reinforce ownership and a sense of belonging through more active, engaged and inclusive communities⁵⁷ in neighbourhoods for the sustainable, inclusive, and

⁵² See definition in the Glossary section of the NEB part of the HE WP25.

⁵³ See definition in the Glossary section of the NEB part of the HE WP25.

⁵⁴ [Fairness perceptions of the green transition - October 2022 - - Eurobarometer survey \(europa.eu\)](https://ec.europa.eu/eurobarometer/surveys/trend/1000000000-fairness-perceptions-of-the-green-transition-october-2022)

⁵⁵ See definition in the Glossary section of the NEB part of the HE WP25.

⁵⁶ See definition in the Glossary section of the NEB part of the HE WP25.

⁵⁷ See definition in the Glossary section of the NEB part of the HE WP25.

beautiful⁵⁸ transformation of neighbourhoods along the values⁵⁹ and principles⁶⁰ of the New European Bauhaus. This Destination will pay particular attention to the inclusion of different sociodemographic groups – such as families, women, children, youth, and older adults as well as vulnerable groups, including LGBTIQ+, people with physical and psychological functional variations, homeless, migrants and refugees, minorities, etc. – in design, creation and decision-making processes that affect them and the built environment⁶¹ they live in.

Cultural participation, cultural heritage, cultural and linguistic diversity, and the inclusion of indigenous⁶² and marginalised forms of knowledge can help enable this by offering a broader menu of interpretations and therefore different ways of making sense and assigning meaning to surroundings. The Destination will also foster social and ecological co-benefits to enable environmentally friendly, healthy and inclusive behaviours, and beautiful and environmentally friendly, healthy, inclusive environments.

More specifically, this Destination aims to:

- Understand how individual and collective mind-sets, habits and behaviours can change into more sustainable and inclusive ones in urban, peri-urban, and rural areas and how to promote interconnections between these diverse realities, turning the limitations and constraints stemming from the green and digital transitions into economic, cultural and social opportunities.
- Further explore the transformative potential of participatory practices and governance models (at local, national and regional levels), notably how culture, the arts and creative industry as well as the socio-cultural work sector can enhance transformation processes for the green transition, help address vulnerability and social equity concerns, and contribute to social inclusion, democracy, and sense of belonging in communities.

Proposals are invited against the following topic(s):

HORIZON-NEB-2025-01-PARTICIPATION-01: The impact of common space on neighbourhood communities

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately.

⁵⁸ See definition in the Glossary section of the NEB part of the HE WP25.

⁵⁹ See the definitions of 'beautiful', 'inclusive' and 'sustainable' in the Glossary section of the NEB part of the HE WP25.

⁶⁰ See the definitions of 'multi-level engagement', 'participatory process' and 'transdisciplinary approaches' in the Glossary section of the NEB part of the HE WP25.

⁶¹ See definition in the Glossary section of the NEB part of the HE WP25.

⁶² See definition in the Glossary section of the NEB part of the HE WP25.

<i>project</i>	Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁶³ .

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- Better understanding of the effects of the design, aesthetics and other features of common spaces⁶⁴ on inhabitants' behaviour (including e.g. their social interactions and recognition, civic participation, use of spaces and buildings), health, sense of belonging, diversity and inclusion, security, resilience, and opportunities to produce social, cultural and local economic value.
- Enhanced capacities of relevant stakeholders to integrate insights in policies, strategies, plans and measures for the regeneration of common spaces in neighbourhoods⁶⁵.

Scope:

One of the core NEB values⁶⁶ is inclusion⁶⁷. The regeneration of common spaces can facilitate inclusiveness and social interaction in neighbourhoods by providing a safe, accessible, and attractive environment. Attractive, well-designed, well-maintained, and secure common spaces can bring people together for commercial, cultural, and leisure activities. A safe environment can also create a sense of trust and community⁶⁸ among inhabitants. Recognising a neighbourhood's diversity “not only improves social and spatial cohesion but also

⁶³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

⁶⁴ See definition in the Glossary section of the NEB part of the HE WP25.

⁶⁵ See definition in the Glossary section of the NEB part of the HE WP25.

⁶⁶ See definition in the Glossary section of the NEB part of the HE WP25.

⁶⁷ See definition in the Glossary section of the NEB part of the HE WP25.

⁶⁸ See definition in the Glossary section of the NEB part of the HE WP25.

contributes to democratic, peaceful coexistence⁶⁹”. Social, economic, and cultural services and amenities that reflect this diversity and allow for people to come together and interact, can have a particular impact on inclusion and can lead to new forms of collaboration, solidarity and social recognition.

Better knowledge of how common spaces affect social relations is required to scale up successful common space initiatives across Europe. This topic seeks to produce insights on the impacts of common spaces (new, redesigned or redeveloped) on neighbourhoods and their communities.

Proposals are expected to address all of the following:

- Study a range of common space projects in at least three EU Member States or Associated Countries, collecting data and drawing on evidence, to better understand:
 - o The medium and long-term impacts of common spaces on community cohesion, social interactions, active civic participation, resilience, diversity, as well as sense of security and belonging. This includes identifying if and to what extent these impacts vary in neighbourhoods with different characteristics, for example, in terms of social infrastructure, economy, housing ownership patterns, services, etc.
 - o How the design and maintenance of common spaces (including the process, for example relying on participatory approaches), the degradation of the bordering built environment, and the preservation of cultural heritage, influences the above identified effects of common space.
 - o How the integration of the three core NEB values in the design of common spaces impacts the above identified effects of common space.
 - o How the different groups of people (such as women, children, youth, older adults, people with disabilities, underrepresented, vulnerable and marginalised groups, LGBTIQ+) make use of and experience common spaces.
 - o How variations in the use of common spaces in different periods of the year influence community cohesion, social interactions, and civic participation.
- Based on the research evidence, provide recommendations for public administrations and other stakeholders involved in the regeneration of common spaces in neighbourhoods.

Proposals are expected to follow a participatory and transdisciplinary approach⁷⁰ through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, civil society, private owners, cultural institutions, etc.) and disciplines (such as architecture or design, arts, (civil) engineering).

⁶⁹ Report of the EU Member State Expert Group 2021 Towards a shared culture of architecture investing in a high-quality living environment for everyone.

⁷⁰ See definition on NEB working principles in the Glossary section of the NEB part of the HE WP25

This topic requires the effective contribution of social sciences and humanities⁷¹ (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

HORIZON-NEB-2025-01-PARTICIPATION-02: Fostering and maintaining the social fabric for the green transition in neighbourhoods

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 9.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025)⁷².</p>

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- Better evidence is made available to public authorities and not-for-profit organisations of the conditions under which cultural participation may reinforce the social fabric and

⁷¹ See definition in the Glossary section of the NEB part of the HE WP25

⁷² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

civic engagement in neighbourhoods and contribute to the green transition in neighbourhoods⁷³.

- Improved understanding of the role of cultural and creative sectors in contributing to participatory decision-making processes, community engagement strategies and activities for the green transition in neighbourhoods.
- Improved methods and strategies to increase neighbourhood inhabitants' sense of belonging as well as their collective engagement and ownership (and that of other stakeholders) in the green transition of neighbourhoods.

Scope:

Social connections and cultural participation are core features of individual well-being. Evidence shows a strong association between participation in cultural activities and civic behaviour (such as voting and volunteering), empathy, tolerance, security and social cohesion⁷⁴. Conversely, low interpersonal trust, heightened risk-taking, and disengaged civic attitudes are correlated with an increased sense of loneliness⁷⁵ – the lack of meaningful social interactions. Cultural organisations and artistic practices with a social purpose or dimension can help to better connect people, strengthen social fabric⁷⁶, and overcome social boundaries.

This topic aims to study the interplay between cultural participation, social connections and civic engagement. The resulting insights can be used to foster and maintain the social fabric of neighbourhoods and support their green transition while addressing other challenges such as the decline in social connections⁷⁷.

Proposals are expected to address all of the following:

- Study the conditions under which cultural participation may reinforce the social fabric and civic engagement in neighbourhoods and contribute to the green transition:
 - o Review existing evidence and collect relevant data in a systematic, comparable way (at least in relation to some territories or dimensions) and identifying trends, gaps and correlations.
 - o Explore the wider benefits of cultural participation for individuals and communities (including those feeling left behind, all risk groups vulnerable and/or marginalised, etc.). Where possible, establish correlations, causal links, detailed descriptions, etc., depending on the proposed methodology.

⁷³ See definition in the Glossary section of the NEB part of the HE WP25.

⁷⁴ [New report: participation in cultural activities strengthens democracy and social cohesion | Culture and Creativity \(europa.eu\)](#)

⁷⁵ https://publications.jrc.ec.europa.eu/repository/bitstream/JRC136823/JRC136823_01.pdf

⁷⁶ See definition in the Glossary section of the NEB part of the HE WP25.

⁷⁷ Robert D. Putnam described in his book *Bowling Alone: The Collapse and Revival of American Community* (2000) the decline in face-to-face social interactions in America, arguing that this weakens active civic engagement, which is strongly connected to democracy.

- Provide a comprehensive analysis of relevant variables, such as socio-demographic characteristics, context-specific aspects, the presence (or absence) of meeting spaces / social infrastructure, digital literacy, local innovation capacity, polarisation, wellbeing and mental health, safety and crime, loneliness, etc.
- Propose at least three methods or strategies to foster and maintain the social fabric of neighbourhoods and support their green transition. These strategies, approaches or methodologies have to be guided by evidence. They are demonstrated and monitored in at least three neighbourhoods in different Member States or Associated Countries to analyse their effectiveness and their potential for sustained effects in time, in particular as regards community and civic engagement (in particular of the most marginalised and underrepresented).
- Based on the research evidence, propose recommendations for public authorities and not-for-profit organisations on how to facilitate cultural participation, including the skills, competencies and partnerships needed for their implementation.

Proposals are expected to follow a participatory and transdisciplinary approach⁷⁸ through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, civil society, private owners, cultural operators, etc.) and disciplines.

This topic requires the effective contribution of social sciences and humanities⁷⁹ (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

HORIZON-NEB-2025-01-PARTICIPATION-03: Beautiful, sustainable and inclusive street furniture for the transformation of neighbourhoods

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.20 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.40 million.

⁷⁸ See definition on NEB working principles in the Glossary section of the NEB part of the HE WP25
⁷⁹ See definition in the Glossary section of the NEB part of the HE WP25.

<i>Type of Action</i>	Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties and can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 100 000 to allow for the prototyping and demonstration of the innovative designs.</p>

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- Improved integration of public authorities (for compliance with regulations, strategies, etc.), social actors as well as the arts, especially cultural and creative sectors and industries (including local crafters and manufacturers), into the design and development of innovative street furniture⁸⁰.
- Better evidence on the uses of street furniture and the role of the co-creation in the design of street furniture informs procurement processes to improve quality of experience, safety, security⁸¹, sustainability⁸², resilience to the impact of climate change⁸³ and inclusiveness in neighbourhoods through street furniture.

Scope:

Infrastructural decay, unequal access to essential public amenities (e.g., seating elements, facilities for people with disabilities such as ramps and lifts, etc.) and safety concerns (e.g., related to insufficient lighting or hazardous spatial conditions) represent just some of the challenges that especially older and poorer European neighbourhoods face.

The design of street furniture in neighbourhoods can have a positive impact on people's lives by enhancing comfort, safety, well-being, health, and accessibility. It can also foster social interaction, cohesion, a sense of belonging, cultural identity and community⁸⁴, respect for common spaces⁸⁵, etc.⁸⁶

Furthermore, the attention to aesthetic values in the design of street furniture can contribute to local economies by attracting new visitors (e.g. developing creative tourism) and supporting

⁸⁰ See definition in the Glossary section of the NEB part of the HE WP25.

⁸⁵ See definition in the Glossary section of the NEB part of the HE WP25.

⁸⁶ As discussed in several studies, such as: Mehta, V. (2014). *Evaluating Public Space*. *Journal of Urban Design*, 19(1), 53-88; Cozens, P. M., & Love, T. (2015). *A Review and Current Status of Crime Prevention through Environmental Design (CPTED)*. *Journal of Planning Literature*, 30(4), 393-412; Gehl, J. (2011). *Life Between Buildings: Using Public Space*; Carmona, M. (2019). *Principles for Public Space Design, Planning to Do Better*. *Urban Design International*, 24(1), 47-59; Whyte, W. H. (1980). *The Social Life of Small Urban Spaces*.

local businesses, cultural and creative sectors and industries, and social economy entities and enterprises.

More prototyping and demonstration are essential to speed up the integration of innovative street furniture, that offer more attractive, sustainable, and inclusive design solutions for common spaces, following the values and principles of the New European Bauhaus⁸⁷.

Proposals are expected to address all of the following:

- Develop and demonstrate innovative designs for sets of street furniture which:
 - o Contribute to a functional common space throughout the year that includes relevant features such as resilience to vandalism and weather, protection from the effects of climate change, consideration of local specificities (such as coastal areas), and low maintenance cost.
 - o Improve the environmental performance of street furniture and, where relevant, integrate nature-based solutions⁸⁸, and sustainable, secondary (bio-based), recycled or upcycled materials as well as a digital dimension.
 - o Strengthen the aesthetic and cultural integrity of the history of the common space and the neighbourhoods.
 - o Meet the needs of different population groups throughout time (through modular and adaptive designs, and considering age, gender, mobility, etc.) by improving comfort, safety, accessibility, social interaction and well-being.
- Apply participatory methods while co-designing and prototyping innovative street furniture.
- Based on the research insights, produce recommendations to inform procurement processes for street furniture.

To achieve this, project consortia may provide financial support to SMEs, education or research institutions, and other relevant actors (such as not-for profit entities) in the form of Financial Support to Third Parties (FSTP). Given the type of action and its level of ambition, the amount to be granted to each third party may be a maximum of EUR 100 000 to allow for the prototyping and demonstration of the innovative designs.

Proposals are expected to follow a participatory and transdisciplinary approach through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, civil society, actors from the cultural and creative sectors) and disciplines (such as architecture or design, arts and crafts, (civil) engineering, health).

⁸⁷ See definitions for NEB values and NEB working principles in the Glossary section of the NEB part of the HE WP25.

⁸⁸ See definition in the Glossary section of the NEB part of the HE WP25

This topic requires the effective contribution of social sciences and humanities⁸⁹ (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

HORIZON-NEB-2025-01-PARTICIPATION-04: Network of neighbourhoods for innovative policies on gentrification

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025)⁹⁰.</p>

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

⁸⁹ See definition in the Glossary section of the NEB part of the HE WP25.

⁹⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Increased use of policies to mitigate the negative consequences of gentrification and enhance its positive impacts (e.g. revitalization, sustainable economic growth, diversity and integration) in urban, peri-urban, and rural neighbourhoods⁹¹.
- Increased capacity of local policymakers to anticipate and mitigate the negative consequences of gentrification when designing and implementing policies in alignment with the New European Bauhaus.
- Empowered local communities⁹² engaging in decision-making processes to mitigate the negative consequences of gentrification due to the regeneration of neighbourhoods.

Scope:

Strategies and interventions to regenerate neighbourhoods may lead to gentrification, a process that can bring revitalization, sustainable economic growth, diversity and integration but also segregation, insecurity, exclusion, displacement, loss of cultural identity, and socio-economic inequality. Mitigating the negative consequences of gentrification cannot be achieved without policy innovation.

This topic supports informal networking among neighbourhoods to exchange knowledge and experiences, build their capacity, facilitate innovation in policymaking to mitigate the negative consequences of gentrification – including green gentrification⁹³ – that may result from interventions aligned with the New European Bauhaus.

Proposals are expected to address all of the following:

- Create a bottom-up network of neighbourhoods with a (potential) risk of gentrification, to facilitate peer exchange among all relevant stakeholders. Proposals should aim for the participation of at least 15 neighbourhoods located in urban, peri-urban and rural areas from different Member States and Associated Countries.
- Map neighbourhoods' needs, challenges, trends and opportunities to inform policies and interventions that mitigate the negative consequences of gentrification and of integrating the New European Bauhaus values and principles⁹⁴.
- Identify, document, and disseminate current knowledge, evidence, policy design, tools, and best practices for tackling gentrification and translate the results into useful tools that address the identified needs, challenges and opportunities.
- Support local decision makers in better understanding:
 - o The main drivers of gentrification (such as overtourism, interim use and short term rental markets).

⁹¹ See definition in the Glossary section of the NEB part of the HE WP25.

⁹² See definition in the Glossary section of the NEB part of the HE WP25

⁹³ See definition in the Glossary section of the NEB part of the HE WP25.

⁹⁴ See definitions of NEB values and NEB working principles in the Glossary section of the NEB part of the HE WP25.

- o The effect of housing market speculation, rental agreements and (lack of) housing policies (e.g. fiscal measures, funding instruments, legislative measures) on gentrification.
- o The effects of gentrification on different socio-demographic groups, as well as on local identities and cultural heritage.
- o The interplay between urban, peri-urban and rural gentrification.
- Address the issue of gentrification in the participating neighbourhoods through at least one of the following actions:
 - o Develop or revise local policies (such as those on social/economic/urban development, housing, planning, mobility, green transition) to mitigate the negative consequences of gentrification.
 - o Develop neighbourhood regeneration strategies that include measures to mitigate the negative consequences of gentrification.

Proposals are expected to follow a participatory and transdisciplinary approach⁹⁵ through the integration of different actors (such as local or regional public authorities, local actors from the targeted neighbourhoods, civil society, private owners, cultural institutions, etc.) and disciplines (such as architecture, urban design, design, arts, (civil) engineering).

This topic requires the effective contribution of social sciences and humanities⁹⁶ (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

⁹⁵ See definition on NEB working principles in the Glossary section of the NEB part of the HE WP25

⁹⁶ See definition in the Glossary section of the NEB part of the HE WP25.

Destination - Circular and regenerative approaches for the built environment

The development of a circular and regenerative European construction ecosystem⁹⁷ is key to support the sustainable competitiveness of the sector, and to achieve our climate, environmental and social ambitions. This implies more sustainable materials but also better use and re-purposing of existing buildings. However, this cannot be achieved without ensuring that people understand, accept and support the necessary transformations.

Although considerable research efforts are underway on this matter, there remain significant gaps. Innovation spreads slowly in the construction ecosystem in the context of construction materials, methods and approaches. For instance, renovations are still not correctly targeted, too expensive, too slow, and often of insufficient quality, resulting in renovation rates that are too low; buildings are inefficiently used and undermine people's well-being; a lack of awareness of sustainable⁹⁸, circular and innovative approaches amongst the different actors of the construction ecosystem; and a market that remains very attached to low costs in the short-term.

In Work Programme 2025, this Destination contributes to the following expected impacts set out in the Horizon Europe Strategic Plan 2025-2027:

- 2. Living and working in a health-promoting environment
- 15. Achieving global leadership in climate-neutral, circular and digitised industrial and digital value chains
- 28. Putting biodiversity on a path to recovery, and protecting and restoring ecosystems and their services
- 31. Sustainably developing rural, urban and coastal areas

The Destination aims to address certain gaps and make the construction ecosystem more sustainable, resilient, circular and regenerative, while also ensuring it is inclusive⁹⁹, accessible and contributes to the health and wellbeing of all living beings. The Destination aims to deliver on this objective by:

- Making buildings, building elements, construction materials and products more sustainable, adaptable, multi-purpose, durable and re-usable, increase their recycling rate and expand their lifespan, leading to a more circular construction ecosystem and a more efficient use of resources. This will contribute to limiting the extraction of new materials and waste generation in the construction ecosystem, thus strengthening the EU's strategic autonomy and contributing to the European Green Deal's objectives, the EU's Zero-Pollution vision for 2050, the new Circular Economy Action Plan, and intergenerational justice. Concepts and solutions that serve the above-mentioned

⁹⁷ See definition in the Glossary section of the NEB part of the HE WP25.

⁹⁸ See definition in the Glossary section of the NEB part of the HE WP25.

⁹⁹ See definition in the Glossary section of the NEB part of the HE WP25.

objectives such as, among others, sufficiency¹⁰⁰, regenerative design¹⁰¹, nature-based solutions¹⁰² or circular bio-fabricated materials¹⁰³ should be explored.

- Improving the climate adaptability¹⁰⁴ and resilience of private or public buildings and common spaces¹⁰⁵ through, for instance, regenerative designs and nature-based solutions that contribute to longevity, resource and energy efficiency, natural ecosystem restoration and overall climate resilience in the face of the environmental evolution.
- Collecting, processing and using data and making use of technologies such as Artificial intelligence (AI) in combination with Building Information Modelling (BIM) and digital fabrication to significantly reduce costs, optimise resource utilisation, and enhance efficiency of renovation and construction processes and make construction and renovation more sustainable, circular, regenerative, affordable and culturally sensitive.
- Ensuring that the solutions developed are user-centred and place-based, connect with local cultural identity, historical knowledge and cultural heritage, and answer the needs of and are accepted by people on the ground - including minorities, vulnerable and underrepresented groups -, strengthening the sense of belonging and societal resilience.

This Destination considers neighbourhoods¹⁰⁶ in urban, peri-urban or rural environments.

Proposals are invited against the following topic(s):

HORIZON-NEB-2025-01-REGEN-01: Applying regenerative design to the built environment in neighbourhoods

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.00 million.
<i>Type of Action</i>	Innovation Actions

¹⁰⁰ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁰¹ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁰² See definition in the Glossary section of the NEB part of the HE WP25.

¹⁰³ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁰⁴ See EU-level technical guidance on adapting buildings to climate change. Best practice guidance, March 2023 (<https://build-up.ec.europa.eu/en/resources-and-tools/publications/best-practice-guidance-buildings-adaptability-climate-change>) .

¹⁰⁵ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁰⁶ See definition in the Glossary section of the NEB part of the HE WP25.

<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- Tested and proven principles of regenerative design¹⁰⁷ in the design, construction and renovation of the built environment¹⁰⁸ are available to the actors from the construction ecosystem¹⁰⁹.
- Improved tools and technologies enable actors from the construction ecosystem to apply regenerative design to the built environment.
- The application of regenerative design to the built environment in neighbourhoods¹¹⁰ contributes to the regeneration of natural ecosystems and biodiversity while benefiting human health and well-being.

Scope:

Regenerative design¹¹¹ aims to actively restore, revitalise and enhance ecosystems, contributing to both human and planetary health, in line also with the ‘One Health’ approach¹¹². Regenerative design thus contributes to creating sustainable¹¹³, thriving environments for local communities and ecosystems. This involves principles such as circularity, waste reduction, resource and energy efficiency, promoting biodiversity, and the use of carbon-storing materials.

Regenerative design offers pathways to develop construction and renovation methods and designs that go beyond conventional approaches. However, the potential and application of regenerative design in the built environment is still under-explored due to the novelty of the

¹¹³ See definition in the Glossary section of the NEB part of the HE WP25.

solutions, the complexity of inter-related factors, the limited understanding of their impacts, and insufficient knowledge exchange and technology transfer.

Proposals are expected to address all of the following:

- Analyse in depth the success factors, challenges, and impacts of at least 10 existing examples of regenerative designs applied to constructed or renovated buildings. Measure the restoration of the environment as well as sustainability performance of the building, using existing sustainable building assessment methods such as [Level\(s\), the Living Community Challenge](#) and other third-party certification schemes or emerging methodologies such as the Carbon Removal and Carbon Farming (CRCF) in buildings certification. The selected buildings are expected to:
 - o Be located in contexts as diverse as possible (geographical, environmental, climate, social or economic).
 - o Generate renewable energy to meet the buildings' energy demand. The buildings can also employ, but are not limited to: nature-based solutions¹¹⁴; water collection, purification and reuse; water efficiency methods; building solutions achieving cleaner air; carbon-storing architecture and design; medium and long-term energy storage (e.g. using phase-change materials).
 - o Have used collaborative, inclusive approaches to engage local communities and inhabitants.
 - o Have overcome legislative and regulatory barriers, if any, thanks to active collaboration with different levels of government and public authorities.
- Develop and demonstrate at least one innovative solution (tool or technology) that facilitate the application of regenerative design to the built environment. The solution(s) is (are) expected to transform the construction and renovation processes at all stages, by adopting a lifecycle perspective, encouraging the use of natural resources, materials, products, processes and by considering the impact on people and nature. Proposers should reflect on the role of local/indigenous crafts and knowledge¹¹⁵ in the construction and renovation processes.
- Demonstrate the innovative solution(s) in at least three neighbourhoods from urban, peri-urban and rural areas located in at least three Member States or Associated Countries.

The topic includes the possibility to provide financial support to third parties to provide direct support for the development and implementation of the demonstrator. A maximum of EUR 60 000 per third party might be granted.

¹¹⁴ See definition in the Glossary section of the NEB part of the HE WP25.

¹¹⁵ See definition in the Glossary section of the NEB part of the HE WP25.

Proposals are expected to follow a participatory and transdisciplinary approach¹¹⁶ through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, civil society, private owners, etc.) and disciplines (such as architecture, urban design, design, arts, (civil) engineering, health, etc.).

This topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

HORIZON-NEB-2025-01-REGEN-02: Bio-fabricated materials for sustainable and beautiful construction

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- Bio-fabricated construction materials¹¹⁷ and their beneficial properties are better known and accepted by construction ecosystem¹¹⁸ professionals.
- Innovative, sustainably sourced, beautiful¹¹⁹ bio-fabricated construction materials can be produced at mass-scale at competitive costs.

¹¹⁶ See definition on NEB working principles in the Glossary section of the NEB part of the HE WP25

¹¹⁷ See definition in the Glossary section of the NEB part of the HE WP25.

¹¹⁸ See definition in the Glossary section of the NEB part of the HE WP25.

¹¹⁹ See definition in the Glossary section of the NEB part of the HE WP25.

Scope:

Along with the current paradigm shift towards a sustainable¹²⁰ and circular bioeconomy and the use of circular design principles in the built environment, new materials and innovative technologies are emerging to help reach zero-waste goals and the lowest environmental impact. Bio-fabricated materials open new avenues for reaching higher ambitions in terms of sustainability, especially if associated with high-technological solutions that can accelerate and simplify their manufacturing, retrofitting and renewal.

Bio-fabricated materials and their potential as an alternative to conventional materials are still underexplored. The widespread integration of bio-fabricated materials in the built environment¹²¹ faces several barriers, from technical and regulatory hurdles to high production costs, limited knowledge and expertise among construction professionals, and low acceptance by the construction ecosystem. Bio-fabricated materials and their potential as an alternative to conventional materials are underexplored.

Research is required to investigate new ways to address the main technical challenges of bio-fabricated materials.

Proposals are expected to address all of the following:

- Develop and test at least two innovative sustainable bio-fabricated construction materials that:
 - o Have innovative features compared to current materials on the market (such as, but not limited to, the capacity to self-repair, to adapt to an evolving environment, to store carbon or act as a carbon sink, to heat and/or cool buildings, extended lifespan, etc.).
 - o Can be used for interior, exterior or structural purposes.
 - o Comply with relevant EU standards and regulatory frameworks.
- For each material developed:
 - o Assess its properties, benefits, as well as design and construction applications. This should cover at least the structural, mechanical, thermal, acoustic, health-related, durability and aesthetic properties and take into consideration the variations within a changing environment (e.g. weather conditions).
 - o Study the feasibility for mass-scale production to increase production volumes and affordability. This should consider the use of high-technological manufacturing techniques and processes (such as 3D printing, robotics, building information modelling (BIM), parametric design, high-performance sensor, artificial intelligence (AI), etc.).

¹²⁰ See definition in the Glossary section of the NEB part of the HE WP25.

¹²¹ See definition in the Glossary section of the NEB part of the HE WP25.

- o Analyse the environmental footprint of the bio-fabricated materials following a life cycle assessment (LCA) approach to validate their contribution to the reduction of the whole life carbon emissions in the built environment.
- o Analyse the social and economic impacts throughout the material's whole life cycle, for example using social life-cycle assessment (SLCA) and life-cycle costing (LCC) approaches.

Proposals are expected to follow a participatory and transdisciplinary approach¹²² through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, civil society, private owners, etc.) and disciplines (such as architecture or design, arts, (civil) engineering, etc.). Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

HORIZON-NEB-2025-01-REGEN-03: Sufficiency measures in the built environment

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- Vacant and under-utilised spaces in buildings and other physical spaces in the built environment¹²³ are easier to map, enabling better informed and effective decision-making in the built environment.

¹²² See definition on NEB working principles in the Glossary section of the NEB part of the HE WP25.
¹²³ See definition in the Glossary section of the NEB part of the HE WP25.

- Sufficiency measures¹²⁴, their non-technical barriers as well as their environmental, economic and social impacts are better understood by the built environment professionals such as real estate actors, urban planners or designers.
- Validated sufficiency measures, integrating circular economy¹²⁵ principles, lead to an absolute reduction in demand of the built environment for energy, raw materials, land, water, floor space, and other resources; while extending the lifecycle of spaces, buildings, and infrastructures.

Scope:

Sufficiency is a set of policy measures and practices which reduce the demand for energy, materials, land, water, and other natural resources, while delivering well-being for all within planetary boundaries¹²⁶. It represents an integrated approach to sustainability and circularity, acknowledging and balancing the interplay of decarbonisation and equity¹²⁷.

In the built environment, floor space is considered as a resource. Sufficiency measures seek to optimise the use of existing (vacant and under-utilised) spaces, buildings, and infrastructures¹²⁸. These measures lead to an absolute reduction in demand for new-built floor space¹²⁹, reducing resource consumption, embodied and operational carbon emissions, and other environmental impacts in the built environment¹³⁰. By alleviating strain on land resources, sufficiency measures can help address social issues, such as housing shortages, and reduce infrastructure costs for municipalities.

The potential of sufficiency measures in the built environment is yet under-explored due to data constraints, limited understanding of their impacts, and insufficient knowledge exchange.

Proposals are expected to address all of the following:

- Test and validate an approach to map and quantify vacant and under-utilised spaces with high sufficiency potential in the built environment.
- Test and validate at least two sufficiency measures that optimise, repurpose, or expand the use and functionality of space. Proposals are expected to test the proposed

¹²⁴ This is unlike efficiency where resource reduction is relative to any output.

¹²⁵ See definition in the Glossary section of the NEB part of the HE WP25.

¹²⁶ Intergovernmental Panel on Climate Change (IPCC) 2022

¹²⁷ European Commission: Directorate-General for Environment, Le Den, X., Steinmann, J., Kovacs, A., Kockat, J. et al., *Supporting the development of a roadmap for the reduction of whole life carbon of buildings – Final technical report*, Publications Office of the European Union, 2024, <https://data.europa.eu/doi/10.2779/849252>

¹²⁸ According to Eurostat, 38% of buildings in the EU (28) are underoccupied, with a rate higher than 60% in 4, and higher than 50% in 7 Member States. (Eurostat (2018) [Overcrowded and under-occupied dwellings - Products Eurostat News - Eurostat \(europa.eu\)](#))

¹²⁹ Unlike efficiency, the resource reduction achieved through sufficiency is absolute and not relative to any output.

¹³⁰ Muench, S., Stoermer, E., Jensen, K., Asikainen, T., Salvi, M. and Scapolo, F., *Towards a green and digital future*, EUR 31075 EN, Publications Office of the European Union, Luxembourg, 2022, ISBN 978-92-76-52451-9, doi:10.2760/977331, JRC129319.

sufficiency measures in at least three neighbourhoods¹³¹ in urban, peri-urban and rural areas located in at least three Member States or Associated Countries.

- Quantify the potential for the proposed sufficiency measures to contribute to an absolute reduction in demand for floor space and resources (including, as a minimum, energy, raw materials, land, and water) in the built environment.
- Propose and validate solutions to overcome non-technical barriers in the built environment towards sufficiency measures (e.g. regulatory barriers or acceptance).

Proposals are expected to follow a participatory and transdisciplinary approach¹³² through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, civil society, private owners, etc.) and disciplines (such as architecture or design, arts, (civil) engineering, etc.).

This topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

HORIZON-NEB-2025-01-REGEN-04: Innovative approaches for sustainable, inclusive and beautiful social and affordable housing

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial</i>	The rules are described in General Annex G. The following

¹³¹ See definition in the Glossary section of the NEB part of the HE WP25.

¹³² See definition on NEB working principles in the Glossary section of the NEB part of the HE WP25.

<i>set-up of the Grant Agreements</i>	exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.
---------------------------------------	---

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- Reduced costs for both the construction and renovation of social and affordable housing¹³³ without sacrificing quality.
- Increased availability and affordability of quality housing for diverse and vulnerable populations across Europe.
- Significantly reduced energy consumption, carbon emissions, and resource use in social and affordable housing as well as improved climate adaptability and resilience to climate change of social and affordable housing.
- Higher awareness of the construction ecosystem¹³⁴ and the real estate sector of innovative approaches that increase affordability and sustainability of housing.

Scope:

An increasing number of new building technologies and construction methods became available on the market in recent years that can make construction and renovation more sustainable¹³⁹. Current policies and regulations set ambitious standards (e.g., in terms of energy efficiency and carbon footprint), which come with higher initial investment costs, making the provision of sustainable, high-quality social and affordable housing in many European neighbourhoods a challenge.

Innovative approaches are necessary to make the best use of available building technologies and construction methods to improve climate adaptability and resilience and reduce energy consumption, carbon emissions and resource use in social and affordable housing while delivering housing that is affordable, inclusive¹⁴³ and improves well-being, in line with the European Commission's Affordable Housing Initiative¹⁴⁴.

Proposals are expected to address all of the following:

- Develop innovative approaches for the construction of new buildings and the renovation or retrofitting of existing buildings in the social and affordable housing sector. These innovative approaches must relate to how construction and renovation services are defined, procured, delivered, financed and/or managed.

¹³³ This topic also considers social care homes, elderly houses, and other form of inclusive housing with residential function complemented with social welfare as forms of social and affordable housing.

¹³⁴ See definition in the Glossary section of the NEB part of the HE WP25.

- Define and implement in two social and affordable housing projects two ambitious packages of measures that comprise building technologies and construction methods already on the market. One package of measures must be applied to a new construction and the other to a building renovation or retrofitting. They will address all of the following:
 - o Use existing building technologies and construction methods that improve the efficiency and speed of construction and renovation or retrofitting (such as off-site construction, modular building systems, smart meters, big data analysis, sensors, and predictive maintenance).
 - o Use environmentally sustainable practices, such as nature-based solutions¹³⁵ or carbon-storing materials to reduce energy consumption, carbon footprint, pollution, and resource use throughout the building's life cycle while also possibly increasing buildings' resilience and adaptability to natural, including climate change-induced, and human-made hazards.
 - o Ensure that social and affordable housing is aesthetically pleasing and contributes positively to the landscape of the place where it is located, while also respecting local context and the architectural heritage.
 - o Improve the well-being, inclusion and general living conditions of all inhabitants.
 - o For renovations or retrofitting only: minimise and mitigate, where possible, disruptions for residents and improve accessibility of buildings.

Social care homes, elderly houses, and other forms of inclusive housing with residential function complemented with social welfare are also considered as eligible for development and testing of cross-cutting innovative solutions developed by the projects.

To achieve this, project consortia may provide financial support to SMEs and social housing actors in the form of Financial Support to Third Parties (FSTP). The amount to be granted to each third party may be a maximum of EUR 60 000.

Proposals are expected to follow a participatory and transdisciplinary approach¹³⁶ through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, civil society, private owners, etc.) and disciplines (such as architecture or design, arts, (civil) engineering, health, etc.).

This topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

¹³⁵ See definition in the Glossary section of the NEB part of the HE WP25.

¹³⁶ See definition on NEB working principles in the Glossary section of the NEB part of the HE WP255.

Horizon Europe - Work Programme 2025
New European Bauhaus Facility

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

DRAFT

Destination - Innovative funding and new business models for the transformation of neighbourhoods

The built environment¹³⁷ faces diverse challenges that hinder its transition towards greater sustainability¹³⁸, circularity¹³⁹, and social inclusion¹⁴⁰. It has traditionally been resistant to change due to established norms, practices, and a conservative mindset, especially regarding the renovation of existing buildings and infrastructures. For the built environment to change and adapt, appropriate market conditions and business demand and incentives must be in place.

New business models can disrupt the status quo by providing a framework to rethink how renovation projects are designed, planned, and executed and how they contribute to shaping and re-shaping neighbourhood¹⁴¹ structures and spaces and support initiatives such as the EU Renovation Wave¹⁴². Demonstrating their economic, environmental, societal, and cultural feasibility and benefits can drive the built environment and other related ecosystems (e.g. financial, insurance, social economy) towards circular and sustainable practices that are resilient to natural, including climate change-induced, and human-made hazards. At the same time, new business models can promote new values such as affordability, inclusion, diversity, functionality, and beauty¹⁴³.

Developing new business models and coupling them with innovative funding mechanisms is crucial to encourage the uptake of new practices and approaches that do not only ensure cost-effectiveness and efficiency but align with and contribute to larger societal goals and values, driving positive cultural, social, and environmental change in the built environment and enhancing the ecosystem's long-term sustainability and competitiveness.

In Work Programme 2025, this Destination contributes to the following expected impacts set out in the Horizon Europe Strategic Plan 2025-2027:

- 8. Realising the full potential of cultural heritage, arts, and cultural and creative sectors
- 9. Strengthening social and economic resilience and sustainability
- 15. Achieving global leadership in climate-neutral, circular and digitized industrial and digital value chains

Proposals for topics under this Destination should set out a credible pathway to contributing to innovative funding and new business models for the transformation of neighbourhoods, and more specifically to one or several of the following impacts:

¹³⁷ See definition in the Glossary section of the NEB part of the HE WP25.

¹³⁸ See definition in the Glossary section of the NEB part of the HE WP25.

¹³⁹ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁴⁰ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁴¹ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁴² Additional information at: https://energy.ec.europa.eu/topics/energy-efficiency/energy-efficient-buildings/renovation-wave_en

¹⁴³ See definition in the Glossary section of the NEB part of the HE WP25.

- Innovative supply chains and new incipient business models in the built environment are based on circular economy¹⁴⁴ principles, life cycle thinking, and sustainable practices and are economically attractive. They reclaim, reuse, and re-assemble construction products at local and regional scales, reducing resource consumption, waste and litter generation, environmental footprint, and reliance on resource-intensive, linear practices.
- Innovative processes, methods, and techniques for the renovation of buildings and infrastructures leverage design innovation, creativity, cultural heritage, economies of scale, and cost-effective technologies. They are economically attractive and affordable and contribute to the high-quality, sustainable, inclusive, and resilient revitalisation of neighbourhoods in urban, peri-urban and rural environments.
- Public authorities, investors, construction developers, inhabitants and community¹⁴⁵ groups, and other relevant neighbourhood and built environment stakeholders overcome perceived barriers and risks (e.g. market demand, consumer preferences, and price sensitivity) associated with renovation projects in line with the New European Bauhaus. Incentives, including financial rewards, regulatory advantages, and positive public perception are in place and contribute to the wider adoption of innovative funding and new business models for the sustainable, inclusive and beautiful revitalisation of neighbourhoods.
- Inhabitants and other neighbourhood stakeholders, including marginalised and vulnerable groups, engage in public decision-making, co-create their neighbourhoods in response to local needs and specificities, and benefit from increased well-being and living conditions.
- Increased investment in neighbourhood transformation projects in line with the New European Bauhaus. Projects generate and investors receive returns beyond financial capital, including environmental, aesthetic, social, and cultural value.

This Destination considers neighbourhoods in urban, peri-urban, and rural environments.

Proposals are invited against the following topic(s):

HORIZON-NEB-2025-01-BUSINESS-01: Renovating the built environment through design for adaptability and disassembly.

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods

Specific conditions

Expected EU contribution per

The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately.

¹⁴⁴ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁴⁵ See definition in the Glossary section of the NEB part of the HE WP25.

<i>project</i>	Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁴⁶ .

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- More sustainable¹⁴⁷ and inclusive¹⁴⁸ renovation of existing buildings and common spaces and/or infrastructures based on design for adaptability and disassembly.
- Processes, methods, and/or techniques are available for the modular adaptation and repurposing of existing buildings, common spaces, and infrastructures, drawing on historical knowledge and assessments of their past and present condition and functions to inform renovation strategies.
- Public authorities, investors, construction project owners, developers, architects, designers, and SSH actors have access to evidence of the economic, environmental, social, cultural, financial, and regulatory impacts and understand the business case for design for adaptability and disassembly-based renovation processes, methods, and/or techniques compared to conventional renovations.

Scope:

Design for adaptability and disassembly is a concept for the design of buildings, common spaces¹⁴⁹, and infrastructures integrating circular economy¹⁵⁰ principles for greater economic, environmental and social sustainability. It presents significant potential for the renovation of

¹⁴⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁴⁷ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁴⁸ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁴⁹ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁵⁰ See definition in the Glossary section of the NEB part of the HE WP25.

the built environment by allowing for easy adaptation of spaces and structures to changing needs and uses or technological advancements.

Renovating with modular components and elements that can be dis- and re-assembled and thereby repurposed across different applications further supports the long-term use, adaptation, and repurposing of buildings, common spaces, and infrastructures. This maximises their economic value (by retaining the embedded value of construction materials, components, and elements), improves their environmental performance (by reducing waste and the extraction of new raw materials and resources), and avoids their demolition as well as the construction of new structures.

The application of design for adaptability and disassembly has focused on new constructions. However, most structures and spaces in urban, peri-urban and rural areas have already been built and require adaptation and repurposing for new and updated uses and functions. Therefore, research should address design for adaptability and disassembly for the renovation of existing buildings, common spaces, and infrastructures.

Proposals are expected to address all of the following:

- Develop at least two renovation processes, methods, and/or techniques based on design for adaptability and disassembly that enable the future adaptation and repurposing of buildings, common spaces, and infrastructures with minimal usage disruption.
- Demonstrate the developed solutions in at least two pilots in at least two Member States or Associated Countries. At least one of the pilots must target a building and at least one of the pilots must target a common space and/or an infrastructure.
- Assess the barriers (including economic, environmental, cultural, social (including related to human capital and skills), and regulatory) to the market uptake of the developed solutions compared to conventional renovation processes, methods, and techniques, and propose solutions to overcome them.
- Quantify, wherever feasible, the environmental (including whole life carbon assessments, carbon pricing, energy efficiency¹⁵¹, ecosystem services), economic (including reduced resource consumption costs), social (including the response to changing neighbourhood¹⁵² needs), cultural (including the regeneration of cultural meanings and heritage in neighbourhoods), financial and regulatory impacts of the processes, methods, and techniques, while considering the specificities of the local context.
- Use and build on indicators provided in the European framework for sustainable buildings ‘Level(s)’¹⁵³.

¹⁵¹ Using tools or frameworks such as the [Energy Performance of Buildings Directive](#).

¹⁵² See definition in the Glossary section of the NEB part of the HE WP25.

¹⁵³ For additional information: https://environment.ec.europa.eu/topics/circular-economy/levels_en

Proposals are expected to follow a participatory and transdisciplinary approach¹⁵⁴ through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, construction project owners, developers, investors, etc.) and disciplines (such as architecture or design, (civil) engineering, etc.).

This topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

HORIZON-NEB-2025-01-BUSINESS-02: Bottom-up social entrepreneurship for the co-creation of neighbourhoods in line with the New European Bauhaus

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁵⁵ .

Expected Outcome:

¹⁵⁴ See definition on NEB working principles in the Glossary section of the NEB part of the HE WP25.

¹⁵⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Project results are expected to contribute to all of the following expected outcomes:

- New scientific evidence of how bottom-up social entrepreneurship shapes and contributes to the co-creation of neighbourhoods in line with the values of the New European Bauhaus¹⁵⁶.
- Inhabitants (including marginalised and vulnerable groups) and civil society actors share knowledge and experiences and have the capacity to cooperate and engage in bottom-up social entrepreneurship.
- Bottom-up social entrepreneurship increases inhabitants' quality of life and well-being, fosters social cohesion, and creates new economic impulses and employment opportunities in neighbourhoods.

Scope:

Bottom-up social entrepreneurship¹⁵⁷ can act as a key driver of sustainable¹⁵⁸ and inclusive¹⁵⁹ neighbourhood co-creation in line with the values of the New European Bauhaus. Bottom-up social entrepreneurship leverages local expertise to tackle local social and environmental challenges. It can generate local economic value, create new and inclusive employment opportunities, leverage cultural and creative industries, and address the segregation of different community and civil society groups, including marginalised and vulnerable inhabitants.

Research is required on the various aspects of using bottom-up social entrepreneurship for the co-creation of neighbourhoods.

Proposals are expected to address all of the following:

- Deliver at least 3 bottom-up social entrepreneurship pilots in at least 3 Member States or Associated Countries to explore how bottom-up social entrepreneurship can shape and contribute to the co-creation of neighbourhoods in line with the values of the New European Bauhaus¹⁶⁰.
- Analyse for each pilot the local social, cultural, economic, financial, regulatory, and legal barriers and drivers and how they can shape the market uptake and competitiveness of bottom-up social enterprises and initiatives.
- Assess for each pilot the business case and the potential for bottom-up social entrepreneurship to create impact and attract (impact) investment opportunities.

¹⁵⁶ See definitions in the Glossary section of the NEB part of the HE WP25.

¹⁵⁷ Social entrepreneurship encompasses different formats and types of organisations such as small businesses, collectively owned companies, cooperatives, civil society and community-building initiatives, neighbourhood associations, grassroots initiatives, community land-trusts, etc.

¹⁵⁸ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁵⁹ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁶⁰ See definition in the Glossary section of the NEB part of the HE WP25.

- Demonstrate how cooperations between inhabitants and civil society actors can foster the exchange of knowledge and experiences and build their capacity to engage in bottom-up social entrepreneurship. These cooperations should take into consideration place-based specificities and be grounded in strong public-private partnerships including grassroots neighbourhoods associations, public authorities, local businesses, and the social economy, etc.
- Demonstrate how bottom-up social entrepreneurship can increase the quality of life and well-being of inhabitants, strengthen social cohesion, and foster a shared sense of belonging in neighbourhoods.
- Assess how the above may impact future co-creation and decision-making in the development of neighbourhoods in line with the New European Bauhaus.

Proposals are expected to follow a participatory and transdisciplinary approach¹⁶¹ through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, including from the social economy and civil society, investors etc.) and disciplines (such as architecture or design, arts, business, economics, finance, etc.).

This topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

HORIZON-NEB-2025-01-BUSINESS-03: Reverse local construction supply chains for the beautiful re-assembly of reclaimed construction products

Call: A research agenda for a beautiful, inclusive and sustainable transformation of neighbourhoods	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial</i>	The rules are described in General Annex G. The following exceptions

¹⁶¹ See definition on NEB working principles in the Glossary section of the NEB part of the HE WP25.

<i>set-up of the Grant Agreements</i>	apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁶² .
---------------------------------------	--

Expected Outcome:

Project results are expected to contribute to all of the following expected outcomes:

- Innovative approaches, methods, and techniques for the safe and sustainable ¹⁶³ re-assembly of construction products in ways that increase the aesthetic and cultural value of the built environment in line with the New European Bauhaus.
- Increased re-assembly of construction products at neighbourhood ¹⁶⁴, local, and regional level.
- New scientific evidence on the social, cultural, economic, and environmental (including reduced resource consumption, reduced waste and litter generation, including microplastic pollution, and carbon storage ¹⁶⁵) benefits, on new business opportunities and models, and on value and revenue streams for the beautiful re-assembly of reclaimed construction products at neighbourhood, local, and regional level.

Scope:

The move towards increased renovation and the greater reuse of construction products in the built environment ¹⁶⁶ has created a growing interest in new business models and approaches centred on modularity, adaptability, disassembly, and sufficiency ¹⁶⁷. Whereas significant research and practice has focused on the disassembly, collection, sorting, and re-processing of construction products, less attention has been directed so far to their later re-assembly.

The re-assembly stage is key for the re-integration of increasing quantities of reclaimed ¹⁶⁸ construction products into new applications. Concurrently, the endeavour to transform the

¹⁶² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁶³ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁶⁴ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁶⁵ Considering tools such as Carbon Removals and Carbon Farming (CRCF) certification for buildings.

¹⁶⁶ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁶⁷ See definition in the Glossary section of the NEB part of the HE WP25.

¹⁶⁸ Reclaimed construction products are understood to include secondary ones that are auxiliary to the primary structural construction components, such as insulation, cladding, tiles, nails, bolts, decorative elements, etc.

built environment along the New European Bauhaus values¹⁶⁹ of sustainability, inclusion, and beauty creates opportunities to re-think how to re-assemble reclaimed construction products safely and creatively in ways that increase the aesthetic and cultural value of buildings and infrastructures, enhancing inhabitants' well-being and living conditions.

The re-assembly of safe and sustainable reclaimed construction products requires solid knowledge of their historical uses and characteristics as well as traceability of their condition and displacement. Digital tools and technologies such as Digital Product Passports and reverse construction supply chains¹⁷⁰, following the circular economy's¹⁷¹ cascading principle for bio-based materials¹⁷² and 10R-Strategies (refuse, reduce, resell/reuse, repair, refurbish, remanufacture, repurpose, recycle, recover, re-mine)¹⁷³ for non-biobased materials, are key for the effective management, movement and reuse of safe reclaimed construction products.

Local reverse construction supply chains that re-circulate safe construction products as locally as possible have the potential to maximise economic value and resource utilisation, reduce waste, pollution, energy use, procurement costs, and the environmental footprint of construction and renovation activities, and foster creativity and innovation towards greater circularity and the regeneration of social and cultural meanings in the built environment.

Proposals are expected to address all of the following:

- Explore at least one innovative approach, method, or technique to re-assemble construction products in ways that increase their embedded economic and environmental value and the aesthetic value of buildings and building ensembles by exploring existing aesthetic and cultural standards in the built environment.
- The proposed innovative solution(s) should consider the reassembled construction products' environmental footprint and the availability of reclaimed construction materials and components at neighbourhood, local or regional level. Proposals should build, where possible, on existing circular construction product pooling networks and platforms, construction logistics hubs as well as informal markets for reused construction products.
- Validate how the proposed innovative solution(s) create new value, revenue streams and business opportunities, building, wherever possible, upon existing research on related business models in the field.

Proposals are expected to follow a participatory and transdisciplinary approach¹⁷⁴ through the integration of different actors (such as public authorities, local actors from the targeted neighbourhoods, civil society, private owners, material suppliers, etc.) and disciplines (such

as architecture, urban design, design, arts, (civil) engineering, economics, finance, business, etc.).

Proposals are expected to dedicate at least 0.2% of their total budget to share their intermediate and final results and findings with the Coordination and Support Action 'New European Bauhaus hub for results and impact' (HORIZON-MISS-2024-NEB-01-03).

DRAFT

Other actions not subject to calls for proposals

1. Commission expert group for advice on the NEB Facility

Objective and scope:

The members of the Commission expert group for the New European Bauhaus¹⁷⁵ provide advice to support the work of the European Commission in the implementation phase of the research and innovation and roll-out components of the NEB Facility.

The members of the Commission expert group are required to provide advice based on deep knowledge in fields corresponding to the implementation of the NEB Facility such as business, public administration, science, climate change mitigation and adaptation, research and innovation, arts, culture, citizen engagement, and integrated urban development, and expertise in cross-sector/cross-border collaboration, governance, etc. It includes advice on achieving synergies between Horizon Europe and other EU programmes and policy areas as well as with national initiatives.

Considering the advisory role of the expert group, conflict of interest must be prevented and confidentiality must be respected notably when pertaining to work programme and other EU initiatives it will work on and to evaluation aspects.

The expert group provides high-level advice to the Commission of such a nature that, without their input, the implementation the NEB Facility would not achieve the desired large scale and breadth of impact. In light of this, and as highly qualified, specialised, independent experts, it is justified that the members of the expert groups are remunerated for the services they offer pursuant to Article 21 of the Commission's horizontal rules on expert groups ('the horizontal rules')¹⁷⁶.

A special allowance of 450 EUR /day will be paid to the members of the expert group appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work¹⁷⁷.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: 2nd Quarter 2025

Indicative budget: EUR 0.28 million from the 2025 budget¹⁷⁸

¹⁷⁵ [Register of Commission expert groups and other similar entities \(europa.eu\)](https://european-council.europa.eu/media/en/press-communications/pages/Press-communication-14247.aspx)

¹⁷⁶ C(2016) 3301

¹⁷⁷ C(2016) 3301

¹⁷⁸ The contribution from each Cluster to the NEB Facility for the year 2025 is the following: EUR 23 549 608 for Cluster 1, EUR 3 063 844 for Cluster 2, EUR 2 099 596 for Cluster 3, EUR 18 376 009 for Cluster 4, EUR 43 620 527 for Cluster 5 and EUR 27 971 031 for Cluster 6.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.28 million from the 2025 budget

DRAFT

Budget^{179 180}

	2025 Budget (EUR million)

Horizon Europe
Work Programme 2025

14. General Annexes

IMPORTANT NOTICE:

This draft has not been adopted or endorsed by the European Commission. Any views expressed are the views of the Commission services and may not in any circumstances be regarded as stating an official position of the Commission.

This draft is made public before the adoption of the work programme to provide potential participants with the currently expected main lines of this work programme. Only the adopted work programme will have legal value.

The adoption of the work programme will be announced on the Horizon Europe website and on the Funding and Tenders Portal.

Information and topic descriptions indicated in this draft may not appear in the final work programme; and likewise, new elements may be introduced at a later stage. Any information disclosed by any other party shall not be construed as having been endorsed by or affiliated to the Commission.

The Commission expressly disclaims liability for any future changes of the content of this document.

INTRODUCTION

These General Annexes set out the general conditions applicable to calls and topics for grants and other forms of funding under the Horizon Europe main work programme. They also describe the evaluation and award procedures and other criteria for Horizon Europe funding. In particular, the General Annexes outline the:

- admissibility and eligibility criteria for participation and for receiving funding, the criteria for having the financial and operational capacity and for exclusion (Annexes A-C);
- award criteria, mandatory documents and evaluation procedure (Annexes D-F);
- legal and financial set-up of the grant agreements (Annex G);
- specific conditions applying to actions which include pre-commercial procurement or procurement of innovative solutions (Annex H).

If a topic deviates from the general conditions or includes additional conditions, this is explicitly stated under the specific conditions for the topic.

Applicants are invited to read the call documentation on the topic page of the Funding & Tenders Portal (‘Portal’) carefully, and particularly these General Annexes, the [Horizon Europe Programme Guide](#)¹, the [EU Funding & Tenders Portal Online Manual](#)² and the [EU Grants AGA — Annotated Grant Agreement](#)³. These documents provide clarifications and answers to questions on preparing the application.

 Please note that calls launched by the European Research Council (ERC), the European Innovation Council (EIC), the European Institute of Innovation and Technology (EIT), the Institutionalised European Partnerships based on Articles 185 and 187 of the Treaty on the Functioning of the European Union (TFEU), calls under the Euratom Research and Training Programme and the activities of the European Commission Joint Research Centre (JRC) are subject to separate work programmes and thus not covered by these General Annexes.

¹ The Horizon Europe Programme Guide outlines the detailed guidance on the structure, budget and political priorities of Horizon Europe.

² The Online Manual outlines the procedures to register and submit applications online via the EU Funding & Tenders Portal and recommendations on preparing the application.

³ The AGA — Annotated Grant Agreement contains detailed annotations on all the provisions in the grant agreement that must be signed to obtain the grant.

GENERAL CONDITIONS

A — Admissibility

Admissibility

Applications must be submitted before the **call deadline**.

Applications must be submitted **electronically** via the Funding & Tenders Portal electronic submission system (accessible via the topic page in the [Search Funding & Tenders](#) section). Paper submissions are NOT possible.

Applications must be submitted using the forms provided *inside* the electronic submission system (not the templates available on the topic page, which are only for information). The structure and presentation must correspond to the instructions given in the forms.

Applications must be **complete** and contain all parts and mandatory Annexes and supporting documents (*see Annex E below*).

Applications must be **readable, accessible and printable**.

Applications must include **a plan for the exploitation and dissemination of results including communication activities**, unless provided otherwise in the specific call/topic conditions. The plan is not required for applications at the first stage of two-stage procedures. If the expected exploitation of the results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan must include a strategy for such exploitation. If the plan provides for exploitation of the results primarily in non-associated third countries, the applicants must explain how that exploitation is to be considered in the EU's interest.

Where provided for in the specific call/topic conditions, applicants submitting a proposal under the blind evaluation pilot (*see Annex F below*) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (*see Annex E below*).

Page limits

In addition to the above admissibility conditions, page limits will apply to parts of applications. The page limits, and sections subject to limits, will be clearly shown in the application templates in the Funding & Tenders Portal electronic submission system.

Unless provided otherwise in the specific call/topic conditions, **the limit for a full application is 45 pages** (except for 'Coordination and support' actions, where the limit is 30 pages, and for 'Programme co-fund' actions, where the limit is 70 pages). For topics using lump sum funding, the limit for 'Research and Innovation' actions and 'Innovation' actions is 50 pages and the limit for 'Coordination and support' action is 33 pages.

The limit for a first-stage application is 10 pages.

If an application exceeds the limits, there will be an automatic warning and invitation to re-submit a version that conforms to these limits. After the call deadline, excess pages will be automatically made invisible, and will not be taken into consideration by the evaluators.

B — Eligibility

Entities eligible to participate

Any legal entity, regardless of its place of establishment, including legal entities from non-associated third countries or international organisations (including international European research organisations⁴) is eligible to participate (whether it is eligible for funding or not), provided that the conditions laid down in the Horizon Europe Regulation⁵ have been met, along with any other conditions laid down in the specific call/topic.

A ‘legal entity’ means any natural or legal person created and recognised as such under national law, EU law or international law, which has legal personality and which may, acting in its own name, exercise rights and be subject to obligations, or an entity without legal personality⁶.

Beneficiaries and affiliated entities must register in the [Participant Register](#) before submitting their application, in order to get a participant identification code (PIC) and be validated by the Central Validation Service before signing the grant agreement. For the validation, they will be asked to upload the necessary documents showing their legal status and origin during the grant preparation stage. A validated PIC is not a prerequisite for submitting an application.

 For more information, see [Rules for Legal Entity Validation, LEAR Appointment and Financial Capacity Assessment](#).

Specific cases:

Affiliated entities — Affiliated entities (i.e. entities with a legal or capital link to a beneficiary⁷ which participate in the action with similar rights and obligations to the beneficiaries, but which do not sign the grant agreement and therefore do not become beneficiaries themselves) are allowed, if they are eligible for participation and funding.

Associated partners — Associated partners (i.e. entities which participate in the action without signing the grant agreement, and without the right to charge costs or claim contributions) are allowed, subject to any specific call/topic conditions.

Entities without legal personality — Entities which do not have legal personality under their national law may exceptionally participate, provided that their representatives have the capacity

⁴ ‘International European research organisation’ means an international organisation, the majority of whose members are Member States or Associated Countries, and whose principal objective is to promote scientific and technological cooperation in Europe.

⁵ Regulation (EU) 2021/695 of the European Parliament and of the Council of 28 April 2021 establishing Horizon Europe (OJ L 170 , 12.5.2021, p. 1).

⁶ See Article 200(2)(c) EU Financial Regulation [2024/2509](#).

⁷ See Article 190 EU Financial Regulation [2024/2509](#).

to undertake legal obligations on their behalf, and offer guarantees to protect the EU's financial interests equivalent to those offered by legal persons⁸.

EU bodies — Legal entities created under EU law including decentralised agencies may be part of the consortium, unless provided for otherwise in their basic act.

Joint Research Centre ('JRC') — Where provided for in the specific call/topic conditions, applicants may include in their proposals the possible contribution of the JRC but the JRC will not participate in the preparation and submission of the proposal. Applicants will indicate the contribution that the JRC could bring to the project based on the scope of the topic text. After the evaluation process, the JRC and the consortium selected for funding may come to an agreement on the specific terms of the participation of the JRC. If an agreement is found, the JRC may accede to the grant agreement as beneficiary requesting zero funding or participate as an associated partner, and would accede to the consortium as a member.

Associations and interest groupings — Entities composed of members (e.g. European research infrastructure consortia (ERICs)) may participate as 'sole beneficiaries' or 'beneficiaries without legal personality'⁹. However, if the action is in practice implemented by the individual members, those members should also participate either as beneficiaries or as affiliated entities (otherwise their costs will NOT be eligible).

Restrictions on participation in Innovation Actions — In accordance with the 2019 "EU-China – A Strategic outlook" communication, the 2021 "Global Approach to Research and Innovation" communication, and the joint conclusions of the 4th EU-China Innovation Cooperation Dialogue of 2019, an exercise to develop a Joint Roadmap for the future of EU-China cooperation in science, technology, and innovation (Roadmap) has been established between the EU and China. It has the objective to develop a level playing field for engagement between the EU and China in the areas of science, technology, and innovation (STI) that is respectful of fundamental research and innovation values and principles. This endeavor is to be achieved through an agreement on the framework conditions contained in the Roadmap and their monitoring and evaluation. As progress so far has mainly taken place on the framework conditions linked to research rather than on those related to innovation, and taking into account the nature and objectives in particular of Innovation Actions, cooperation with entities established in China needs to be calibrated accordingly.

Legal entities established in China are therefore not eligible to participate in Horizon Europe Innovation Actions in any capacity. This includes participation as beneficiaries, affiliated entities, associated partners, third parties giving in-kind contributions, subcontractors or recipients of financial support to third parties (if any). Exceptions may be granted on a case-by-case basis for justified reasons. The above eligibility criteria may be reviewed in the future in accordance with policy developments. This exclusion is justified under Article 22(6) of the Horizon Europe Regulation given the substantive concerns regarding the use of intellectual property generated under this publicly funded programme, and the ongoing discussions

⁸ See Article 200(2)(c) EU Financial Regulation [2024/2509](#).

⁹ See Articles 190(2) and 200(2)(c) EU Financial Regulation [2024/2509](#).

between China and the EU on the Joint Roadmap for the future of EU-China cooperation in science, technology, and innovation.

Restrictions for the protection of European communication networks — The protection of European communication networks has been identified as an important security interest of the Union and its Member States¹⁰. In line with the Commission Recommendation on the cybersecurity of 5G networks of 2019¹¹ and the subsequent report on the EU coordinated risk assessment of the cybersecurity of 5G networks of 2019,¹² the EU Toolbox on 5G cybersecurity,¹³ the second report on Member States' progress in implementing the EU toolbox on 5G cybersecurity of 2023,¹⁴ and the related Communication on the implementation of the 5G cybersecurity toolbox of 2023,¹⁵ the Commission together with the Member States has worked to jointly identify and assess cyberthreats and security risks for 5G networks¹⁶. The toolbox also recommends adding country-specific information (e.g. threat assessment from national security services, etc.). This work is an essential component of the Security Union Strategy and supports the protection of electronic communications networks and other critical infrastructures.

Entities assessed as “high-risk suppliers”, are currently set out in the second report on Member States' progress in implementing the EU toolbox on 5G cybersecurity of 2023¹⁷ and the related Communication on the implementation of the 5G cybersecurity toolbox of 2023¹⁸.

The toolbox also underlines that further developing European capacities in the area of 5G and post-5G technologies by leveraging EU Research & Innovation Funding programmes is a strategic risk mitigating measure. This entails the need to avoid the participation of high-risk supplier entities in the development of other technologies linked to the evolution of European communication networks to prevent technology transfer and the persistence of dependencies in materials, semiconductor components (including processors), computing resources, software tools and virtualisation technologies, as well as related cybersecurity.

In order to protect the specific policy requirements of the Union and/or its Member States, it is therefore appropriate that the following additional eligibility criteria apply to actions identified as “subject to restrictions for the protection of European communication networks” and to proposals within the Marie Skłodowska-Curie Actions (MSCA) part¹⁹ that concern the evolution of European communication networks (5G, post-5G and other technologies linked to the evolution of European communication networks):

¹⁰ European Council conclusions of 1 and 2 October 2020 (EUCO 13/20), point 11; Council Conclusions on the significance of 5G to the European Economy and the need to mitigate security risks linked to 5G, 14517/19.

¹¹ Commission Recommendation (EU) 2019/534 of 26 March 2019 Cybersecurity of 5G networks, L 88/42.

¹² NIS Cooperation Group, Report on EU coordinated risk assessment of the cybersecurity of 5G networks, 9 October 2019.

¹³ NIS Cooperation Group, EU Toolbox on 5G Cybersecurity, 29 January 2020.

¹⁴ NIS Cooperation Group, Second report on Member States' progress in implementing the EU Toolbox on 5G Cybersecurity, June 2023.

¹⁵ Communication from the Commission: Implementation of the 5g cybersecurity Toolbox, Brussels, 15.6.2023 C(2023) 4049 final.

¹⁶ Within the NIS framework NIS 1 + 2 (Directive - 2022/2555 - EN - EUR-Lex (europa.eu))

¹⁷ NIS Cooperation Group, Second report on Member States' progress in implementing the EU Toolbox on 5G Cybersecurity, June 2023.

¹⁸ Communication from the Commission: Implementation of the 5G cybersecurity Toolbox, Brussels, 15.6.2023 C(2023) 4049 final.

¹⁹ Doctoral Networks, Postdoctoral Fellowships, Staff Exchanges, Cofund.

Entities that are assessed as high-risk suppliers of mobile network communication equipment (and any entities they own or control) are not eligible to participate as beneficiaries, affiliated entities and associated partners.

The assessment is based on the following criteria:

- likelihood of interference from a non-associated third country, for example due to:
 - the characteristics of the entity's ownership or governance (e.g. state-owned or controlled, government/party involvement);
 - the characteristics of the entity's business and other conduct (e.g. a strong link to a third country government);
 - the characteristics of the respective third country (e.g. legislation or government practices likely to affect the implementation of the action, including an offensive cyber/intelligence policy, pressure regarding place of manufacturing or access to information).
- (cyber-)security practices, including throughout the entire supply chain;
- risks identified in relevant assessments of Member States and third countries as well as other EU institutions, bodies and agencies, if relevant.

Exceptions may be requested from the granting authority and will be assessed case-by-case, taking into account the criteria provided for in the 5G cybersecurity toolbox, the security risks and availability of alternatives in the context of the action.

Restrictions on participation or control — In line with Article 22(5) of the Horizon Europe Regulation, for actions related to EU strategic assets, interests, autonomy or security, the specific call/topic conditions may limit participation to legal entities established only in EU Member States or in EU Member States and specific associated or non-associated third countries. In this case, the eligible countries will be identified in the specific call/topic conditions. In addition, for duly justified and exceptional reasons, to guarantee protection of the strategic interests of the EU and its Member States, the specific call/topic conditions may also exclude the participation of legal entities directly or indirectly controlled by non-eligible third countries or by legal entities of non-eligible third countries (or make their participation subject to specific conditions).

EU restrictive measures — Entities subject to [EU restrictive measures](#) under Article 29 of the Treaty on the European Union (TEU) and Article 215 of the Treaty on the Functioning of the EU (TFEU)²⁰ as well as Article 75 TFEU²¹, are not eligible to participate in any capacity, including as beneficiaries, affiliated entities, associated partners, third parties giving in-kind contributions, subcontractors or recipients of financial support to third parties (if any).

²⁰ Please note that the EU Official Journal contains the official list and, in case of conflict, its content prevails over that of the [EU Sanctions Map](#).

²¹ Please note that the EU Official Journal contains the official list and, in case of conflict, its content prevails over that of the [EU Sanctions Map](#).

Special rules also apply to entities covered by Commission Guidelines No 2013/C 205/05²².

Legal entities established in Russia, Belarus, or in non-government controlled territories of Ukraine — Given the illegal invasion of Ukraine by Russia and the involvement of Belarus, there is currently no appropriate context allowing the implementation of the actions foreseen in this programme with legal entities established in Russia, Belarus, or in non-government controlled territories of Ukraine. Therefore, even where such entities are not subject to EU restrictive measures, such legal entities are not eligible to participate in any capacity. This includes participation as beneficiaries, affiliated entities, associated partners, third parties giving in-kind contributions, subcontractors or recipients of financial support to third parties (if any). Exceptions may be granted on a case-by-case basis for justified reasons.

With specific regard to measures addressed to Russia, following the adoption of the Council Regulation (EU) 2024/1745 of 24 June 2024²³ (amending Council Regulation (EU) No 833/2014 of 31 July 2014) concerning restrictive measures in view of Russia's actions destabilising the situation in Ukraine, legal entities established outside Russia but whose proprietary rights are directly or indirectly owned for more than 50% by a legal person, entity or body established in Russia are also not eligible to participate in any capacity.

Measures for the protection of the Union budget against breaches of the principles of the rule of law in Hungary — Following the [Council Implementing Decision \(EU\) 2022/2506](#), as of 16 December 2022, no legal commitments can be entered into with Hungarian public interest trusts established under the Hungarian Act IX of 2021 or any entity they maintain. Affected entities may continue to apply to calls for proposals and can participate without receiving EU funding, as associated partners, if allowed by the call conditions. However, as long as the Council measures are not lifted, such entities are not eligible to participate in any funded role (beneficiaries, affiliated entities, subcontractors, recipients of financial support to third parties, etc.). In case of multi-beneficiary grant calls, applicants will be invited to remove or replace that entity in any funded role and/or to change its status into associated partner. Tasks and budget may be redistributed accordingly.

Entities eligible for funding

To become a beneficiary, legal entities must be eligible for funding.

To be eligible for funding, applicants must be established in one of the following countries:

- the Member States of the European Union, including their outermost regions:

Austria, Belgium, Bulgaria, Croatia, Cyprus, Czechia, Denmark, Estonia,
Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania,

²² Commission guidelines No [2013/C 205/05](#) on the eligibility of Israeli entities and their activities in the territories occupied by Israel since June 1967 for grants, prizes and financial instruments funded by the EU from 2014 onwards (OJEU C 205 of 19.07.2013, pp. 9-11).

²³ (OJ L 229, 31.7.2014, p. 1-11).

Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden.

- the Overseas Countries and Territories (OCTs) linked to the Member States:

Aruba (NL), Bonaire (NL), Curaçao (NL), French Polynesia (FR), French Southern and Antarctic Territories (FR), Greenland (DK), New Caledonia (FR), Saba (NL), Saint Barthélemy (FR), Sint Eustatius (NL), Sint Maarten (NL), St. Pierre and Miquelon (FR), Wallis and Futuna Islands (FR).

- countries associated to Horizon Europe²⁴;

Albania, Armenia, Bosnia and Herzegovina, Canada, Faroe Islands, Georgia, Iceland, Israel, Kosovo²⁵, Moldova, Montenegro, New Zealand, North Macedonia, Norway, Serbia, Tunisia, Türkiye, Ukraine, United Kingdom²⁶. Other third countries may become associated to Horizon Europe during the programme. For the purposes of the eligibility conditions, applicants established in other third countries negotiating association to Horizon Europe will be treated as entities established in an Associated Country, if the Horizon Europe association agreement with the third country concerned applies at the time of signature of the grant agreement.

- the following low- and middle-income countries:²⁷.

Afghanistan, Algeria, Angola, Argentina, Azerbaijan, Bangladesh, Belarus, Belize, Benin, Bhutan, Bolivia, Botswana, Burkina Faso, Burundi, Cabo Verde, Cambodia, Cameroon, Central African Republic, Chad, Colombia, Comoros, Congo (Democratic Republic), Congo (Republic), Costa Rica, Côte d'Ivoire, Cuba, Djibouti, Dominica, Dominican Republic, Ecuador, Egypt (Arab Republic), El Salvador, Equatorial Guinea, Eritrea, Eswatini, Ethiopia, Fiji, Gabon, Gambia, Ghana, Grenada, Guatemala, Guinea, Guinea-Bissau, Guyana, Haiti, Honduras, Indonesia, Iran (Islamic Republic), Iraq, Jamaica, Jordan, Kazakhstan, Kenya, Kiribati, Korea (Democratic People's Republic), Kyrgyz Republic, Lao (People's Democratic Republic), Lebanon, Lesotho, Liberia, Libya, Madagascar, Malawi, Malaysia, Maldives, Mali, Marshall Islands, Mauritania, Mauritius, Micronesia (Federated States), Mongolia, Morocco, Mozambique, Myanmar, Namibia, Nepal, Nicaragua, Niger, Nigeria, Niue,

²⁴ The list is correct at the time of adoption of this Work Programme. Please see the [Horizon Europe List of Participating Countries](#) on the Portal for up-to-date information on the current list and on the position for Associated Countries.

²⁵ This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

²⁶ The United Kingdom is associated to the entire Horizon Europe Programme, with the only exception of the EIC fund (which is part of the EIC Accelerator of Horizon Europe that provides investment through equity or other repayable form), for award procedures implementing Union budget for the year 2024 and onwards.

²⁷ The list is correct at the time of adoption of this Work Programme. See the [Horizon Europe List of Participating Countries](#) on the Portal for a up-to-date list of these countries.

Pakistan, Palau, Palestine²⁸, Papua New Guinea, Paraguay, Peru, Philippines, Rwanda, Samoa, São Tomé and Príncipe, Senegal, Sierra Leone, Solomon Islands, Somalia, South Africa, South Sudan, Sri Lanka, St. Lucia, St. Vincent and the Grenadines, Sudan, Suriname, Syrian Arab Republic, Tajikistan, Tanzania, Thailand, Timor-Leste, Togo, Tonga, Turkmenistan, Tuvalu, Uganda, Uzbekistan, Vanuatu, Venezuela (Bolivarian Republic), Vietnam, Yemen Republic, Zambia, Zimbabwe.

Legal entities which are established in countries not listed above will be eligible for funding if provided for in the specific call/topic conditions, or if their participation is considered essential for implementing the action by the granting authority.

Specific cases:

Affiliated entities — Affiliated entities are eligible for funding if they are established in one of the countries listed above, or in a country identified in the specific call/topic conditions.

Associated partners — Entities not eligible for funding (and therefore not able to participate as beneficiaries) may participate as associated partners, unless specified otherwise in the specific call/topic conditions.

Coordination and Support Actions — To be eligible to participate as beneficiaries (or affiliated entities) in ‘Coordination and support’ actions, legal entities must be established in a Member State or Associated Country, unless the specific call/topic conditions provide otherwise (in which case the general rules for eligibility for funding apply). Legal entities established in a non-associated third country may, however, participate in ‘Coordination and support’ actions as associated partners, unless this is explicitly excluded by the specific call/topic conditions.

EU bodies — Legal entities created under EU law may also be eligible to receive funding, unless their basic act states otherwise.

International organisations — International European research organisations are eligible to receive funding. International organisations with headquarters in a Member State or Associated Country are eligible to receive funding for ‘Training and mobility’ actions or when provided for in the specific call/topic conditions. Other international organisations are not eligible to receive funding, unless provided for in the specific call/topic conditions, or if their participation is considered essential for implementing the action by the granting authority.

Consortium composition

Unless otherwise provided for in the specific call/topic conditions, only legal entities forming a consortium are eligible to participate in actions provided that the consortium includes, as beneficiaries, three legal entities independent from each other and each established in a different country as follows:

²⁸ This designation shall not be construed as recognition of a State of Palestine and is without prejudice to the individual positions of the Member States on this issue.

- at least one independent legal entity established in a Member State; and
- at least two other independent legal entities, each established in different Member States or Associated Countries.

As affiliated entities do not sign the grant agreement, they do not count towards the minimum eligibility criteria for consortium composition (if any).

The Joint Research Centre, international European research organisations and legal entities created under EU law are deemed to be established in a Member State other than those in which the other legal entities participating in the action are established.

Applications for ‘Training and mobility’ actions and for ‘Programme co-fund’ actions may be submitted by one or more legal entities, provided that one of those legal entities is established in a Member State or an Associated Country.

Applications for ‘Coordination and support’ actions may be submitted by one or more legal entities, which may be established in a Member State, Associated Country or, in exceptional cases and if provided for in the specific call/topic conditions, in another third country.

Applications for ‘Pre-commercial procurement’ actions and ‘Public procurement of innovative solutions’ actions must also fulfil the eligibility criteria of three independent legal entities as beneficiaries as explained above, out of which a minimum of two beneficiaries must be independent legal entities that are public procurers²⁹, each established in a different Member State or Associated Country and with at least one of them established in a Member State.

Eligible activities

Eligible activities are the ones described in the call conditions. Applications will only be considered eligible if their content corresponds, wholly or in part, to the topic description for which it is submitted.

Projects must focus exclusively on civil applications and must not:

- aim at human cloning for reproductive purposes;
- intend to modify the genetic heritage of human beings which could make such changes heritable (except for research relating to cancer treatment of the gonads, which may be financed);
- intend to create human embryos solely for the purpose of research, or for the purpose of stem cell procurement, including by means of somatic cell nuclear transfer.

Projects must, moreover, comply with EU policy interests and priorities (environment, social, security, industrial policy, etc.).

The following activities are generally eligible for grants under Horizon Europe:

²⁹ ‘Public procurers’ are organisations that are contracting authorities or contracting entities as defined in EU public procurement directives 2014/24/EU, 2014/25/EU, and 2009/81/E.

Research and innovation actions (RIA) — Activities that aim primarily to establish new knowledge or to explore the feasibility of a new or improved technology, product, process, service or solution. This may include basic and applied research, technology development and integration, testing, demonstration and validation of a small-scale prototype in a laboratory or simulated environment.

Innovation actions (IA) — Activities that aim directly to produce plans and arrangements or designs for new, altered or improved products, processes or services. These activities may include prototyping, testing, demonstrating, piloting, large-scale product validation and market replication.

Coordination and support actions (CSA) — Activities that contribute to the objectives of Horizon Europe. This excludes research and innovation (R&I) activities, except those carried out under the ‘Widening participation and spreading excellence’ component of the programme (part of ‘Widening participation and strengthening the European Research Area’). Also eligible are bottom-up coordination actions which promote cooperation between legal entities from Member States and Associated Countries to strengthen the European Research Area, and which receive no EU co-funding for research activities.

Programme co-fund actions (CoFund) — A programme of activities established or implemented by legal entities managing or funding R&I programmes, other than EU funding bodies. Such a programme of activities may support: networking and coordination; research; innovation; pilot actions; innovation and market deployment; training and mobility; awareness raising and communication; and dissemination and exploitation. It may also provide any relevant financial support, such as grants, prizes and procurement, as well as Horizon Europe blended finance³⁰ or a combination thereof. The actions may be implemented by the beneficiaries directly or by providing financial support to third parties.

Innovation and market deployment actions (IMDA) — Activities that embed an innovation action and other activities necessary to deploy an innovation on the market. This includes the scaling-up of companies and Horizon Europe blended finance.

Training and mobility actions (TMA) — Activities that aim to improve the skills, knowledge and career prospects of researchers, based on mobility between countries and, if relevant, between sectors or disciplines.

Pre-commercial procurement actions (PCP) — Activities that aim to help a transnational buyers’ group to strengthen the public procurement of research, development, validation and, possibly, the first deployment of new solutions that can significantly improve quality and efficiency in areas of public interest, while opening market opportunities for industry and researchers active in Europe. Eligible activities include the preparation, management and follow-up, under the coordination of a lead procurer, of one joint PCP and additional activities to embed the PCP into a wider set of demand-side activities.

³⁰ ‘Horizon Europe blended finance’ means financial support for innovation and market deployment activities, consisting of a specific combination of a grant or reimbursable advance and an investment in equity or any other repayable form of support.

Public procurement of innovative solutions actions (PPI) — Activities that aim to strengthen the ability of a transnational buyers' group to deploy innovative solutions early by overcoming the fragmentation of demand for such solutions and sharing the risks and costs of acting as early adopters, while opening market opportunities for industry. Eligible activities include preparing and implementing, under the coordination of a lead procurer, one joint or several coordinated PPI by the buyers' group and additional activities to embed the PPI into a wider set of demand-side activities.

Technology Readiness Levels

Where the specific call/topic conditions require a Technology Readiness Level (TRL), the following definitions apply, unless otherwise specified:

- TRL 1 — Basic principles observed
- TRL 2 — Technology concept formulated
- TRL 3 — Experimental proof of concept
- TRL 4 — Technology validated in a lab
- TRL 5 — Technology validated in a relevant environment (industrially relevant environment in the case of key enabling technologies)
- TRL 6 — Technology demonstrated in a relevant environment (industrially relevant environment in the case of key enabling technologies)
- TRL 7 — System prototype demonstration in an operational environment
- TRL 8 — System complete and qualified
- TRL 9 — Actual system proven in an operational environment (competitive manufacturing in the case of key enabling technologies, or in space)

Ethics

Projects must comply with ethical principles (including the highest standards of research integrity) and applicable EU, international and national law.

Applicants must have completed the ethics self-assessment as part of their application.

 For more information, see [How to complete your ethics self-assessment](#).

Projects involving ethics issues will have to undergo an ethics review to authorise funding and may be made subject to specific ethics requirements. These requirements become part of the grant agreement as ethics deliverables, e.g. ethics committee opinions/authorisations required under national or EU law.

Security — EU classified and sensitive information

Projects involving classified and/or sensitive information will have to go through the security appraisal process to authorise funding and may be made subject to specific security rules (detailed in the Security Section, which is annexed to the grant agreement). Specific provisions for EU classified information (EUCI) and sensitive information (SEN) will be included in the grant agreement, as necessary and appropriate.

The rules for protecting EU classified information (governed by Commission Decision (EU, Euratom) [2015/444](#)³¹ and/or national rules) provide for instance that:

- projects involving information classified as TRES SECRET UE/EU TOP SECRET (or equivalent) can NOT be funded;
- EU classified information must be marked in accordance with the applicable security instructions in the Security Classification Guide appendix of the Security Aspects Letter (SAL), which is contained in the Security Section of the grant agreement;
- generation of, or access to, information with classification levels CONFIDENTIEL UE/EU CONFIDENTIAL or above (and RESTREINT UE/EU RESTRICTED, if required by national rules) may take place only on the premises of entities which have been granted a facility security clearance (FSC) issued by the competent national security authority (NSA);
- handling of information classified CONFIDENTIEL UE/EU CONFIDENTIAL or above (and RESTREINT UE/EU RESTRICTED, if required by national rules) may take place only in a secured area accredited by the competent NSA;
- access to and handling of information classified CONFIDENTIEL UE/EU CONFIDENTIAL or above may be granted only to individuals with a valid personnel security clearance (PSC) and an established need-to-know, who have been briefed on the applicable security rules;
- access to, and handling of, information classified RESTREINT UE/EU RESTRICTED may be granted only to individuals who have a need-to-know and have been briefed on the applicable security rules;
- at the end of the grant, the classified information must either be returned or continue to be protected according to the applicable rules;
- subcontracting of tasks involving EU classified information is subject to prior written approval by the European Commission, which is the originator of EU classified information. It is only possible to subcontract these tasks to entities established in an EU Member State or in a non-EU country with a security of information agreement with the EU (or an administrative arrangement with the Commission);

³¹ See Commission Decision (EU, Euratom) 2015/444 of 13 March 2015 on the security rules for protecting EU classified information (OJ L 72, 17.3.2015, p. 53).

- disclosure of EU classified information is subject to prior written approval by the European Commission.

Depending on the type of activity, FSCs may have to be provided before the grant is signed. The granting authority will assess this for each case and fix the delivery date during the grant preparation stage. It is not possible to sign any grant agreement before at least one of the beneficiaries in the consortium has an FSC.

In certain cases, the project results might not require classification, but they might be sensitive and require restricted disclosure or limited dissemination for security reasons, according to the applicable instructions in the Security Section. This means that, in principle, third parties should have no access to results subject to this type of restriction. Disclosure of this information is subject to prior written approval by the European Commission.

Further security recommendations may be added to the grant agreement in the form of security deliverables (e.g. establishing a security advisory board, appointing a project security officer, limiting the level of detail, using a fake scenario, etc.).

In addition, beneficiaries must ensure that their projects are not subject to national/third-country security requirements that could affect implementation or put into question the award of the grants (e.g. technology restrictions, national security classification, etc.). Any potential security issues must be notified immediately to the granting authority.

Gender equality plans and gender mainstreaming

Beneficiaries must take all measures to promote equal opportunities between men and women in implementing the action and, where applicable, in line with their gender equality plan. They must aim to achieve, to the extent possible, a gender balance at all levels of personnel assigned to the action, including at supervisory and managerial level.

In addition, to be eligible, legal entities from Member States and Associated Countries that are public bodies, research organisations or higher education establishments (including private research organisations and higher education establishments) must have a gender equality plan, covering the following minimum process-related requirements:

- publication: a formal document published on the institution's website and signed by the top management;
- dedicated resources: commitment of resources and expertise in gender equality to implement the plan;
- data collection and monitoring: sex/gender disaggregated data on personnel (and students, for the establishments concerned) and annual reporting based on indicators;
- training: awareness raising/training on gender equality and unconscious gender biases for staff and decision-makers.

Content-wise, it is recommended that the gender equality plan addresses the following areas, using concrete measures and targets:

- work-life balance and organisational culture;
- gender balance in leadership and decision-making;
- gender equality in recruitment and career progression;
- integration of the gender dimension into research and teaching content;
- measures against gender-based violence, including sexual harassment.

A self-declaration will be requested at proposal stage. If all the above-mentioned mandatory requirements are met through another strategic document, such as a development plan or an inclusion or diversity strategy, it can be considered as an equivalent. This eligibility criterion does not apply to other categories of legal entities, such as private for-profit organisations, including SMEs, non-governmental or civil society organisations

Financial support to third parties

Where the specific call/topic conditions allow for financial support to third parties, the applicants must clearly describe in their proposal the objectives and the expected results, including the elements listed in the application template. The following conditions must also be fulfilled:

- projects must publish their open calls widely and adhere to EU standards of transparency, equal treatment, conflict of interest and confidentiality;
- all calls for third parties and all calls that are implemented by third parties must be published on the Funding & Tenders Portal, and on the beneficiaries' websites;
- the calls must remain open for at least 2 months;
- if submission deadlines are changed, this must immediately be announced and registered applicants must be informed of the change;
- projects must publish the outcome of the calls without delay, including a description of third-party projects, the date of the award, the duration, and the legal name of the third party and country of establishment;
- the calls must have a clear European dimension.

Further conditions may be stipulated in the specific conditions for the topic.

 For more information, see AGA — *Annotated Model Grant Agreement*, Articles 6.2.D.1 and 9.4.

OTHER TYPES OF ACTIONS AND FORMS OF FUNDING

The following types of action and forms of funding are also used in Horizon Europe. They are usually placed in the 'Other Actions' section of the work programme parts and are not all subject to calls for proposals.

- **Grants to identified beneficiaries** — Exceptionally, a grant may be awarded to legal entities without a prior call for proposals in accordance with the exceptions set out in Article 198 of the Financial Regulation (including to entities explicitly named in the work programme). The beneficiaries of such actions must nevertheless submit a proposal to benefit from funding. This proposal will be evaluated and must meet the required threshold. The funding rates will correspond to the type of action indicated.
- **Prizes** — Prize means a financial contribution given as a reward following a contest. *Inducement prizes*: a prize to stimulate investment in a given area, by specifying a goal prior to the work being performed. Contests for inducement prizes must address technological and/or societal challenges. The award criteria will define a goal, but without prescribing how to achieve it. Contests for inducement prizes are split into awards for the contestant that first meets the specific goal defined in the rules of the contest, and awards for the best contestant within a given period. *Recognition prizes*: a prize to reward past achievements and outstanding work after it has been performed. Recognition prizes must help to raise public awareness of EU policies, create role models and support best practice exchange. The Rules of the contest of a specific prize provide for the admissibility, eligibility, exclusion and award criteria, the prize amount and categories (if applicable) the evaluation procedure, the indicative timetable and the modalities of payment. The rules are found on the call topic page on the Funding & Tenders Portal.
- **Framework partnerships and specific grant agreements** — Framework partnerships are formalised long-term cooperation mechanisms involving several or recurring grants. They must be based on jointly agreed action plans and agreements that set out the terms and conditions for receiving grants to implement the actions, framework partnership agreements (FPA) and specific grant agreements (SGA). The FPA will set out the framework conditions governing potential grants to beneficiaries on the basis of an action plan and jointly agreed general objectives. The SGA will set out the specific obligations and conditions to implement the specific action. The FPA will have no budget; the budget and rules on funding will be set out in each SGA and depend on the specific type of action. The establishment of an FPA must take place following a call for proposals. Beneficiaries will be identified from the evaluation of the proposals. In a subsequent step, beneficiaries may be invited to submit their proposals for the SGA. Framework partnerships do not give the partners (i.e. potential beneficiaries) exclusive rights to be awarded the grants covered by the FPAs. SGAs must only be signed if the FPA has been signed, and before the end date of the FPA.
- **Operating grants** — Operating grants provide financial support for the functioning of a body to enable it to carry out specific activities set out in the agreed work programme. Operating grants do not support the implementation of a specific action, but rather the annual operating budget (or part of it) for certain bodies whose statutory activities serve the strategic objectives of EU policies. Operating grants will always be mono-beneficiary grants supporting the work programme of only one organisation. Operating grants must follow the same rules as described in Annex G, but they do not differentiate between direct and indirect costs. Receiving an operating grant may make beneficiaries ineligible to receive indirect costs in all other EU action grants.
- **Public procurement** — In a public procurement action, the granting authority purchases works, supplies or services, or acquires or rents land, buildings or other immovable property. This is done by entering into a contract with an economic operator chosen by the granting authority. Before the granting authority enters into a procurement contract, a call for tender is published on the Funding & Tenders Portal.
- **Expert contract actions** — Expert contracts are used to appoint independent expert(s) to advise or assist us. Experts are used for evaluating proposals, for evaluating the programme, for ethics screenings and assessments, for advisory bodies, and for expertise related to the objectives of Horizon Europe.
- **Subscription actions** — Subscription actions are used to pay contributions to bodies in which the EU is a member or an observer.
- **Scientific and technical services by the Joint Research Centre** — Scientific and technical services cover research and innovation activities undertaken by the Joint Research Centre of the Commission.
- **Indirectly managed actions** — Indirectly managed actions refer to actions implemented by entities which are entrusted with implementing EU funds or budgetary guarantees through a contribution agreement.
- **Service level agreement actions** — These are actions implemented through a service level agreement. Service level agreements include agreements between Commission departments or, agreements that the Commission may conclude with another Union institution, Union body, or European office involving the provision of services.

C — Financial and operational capacity and exclusion

Financial capacity

Applicants must have **stable and sufficient resources** to successfully implement the projects and contribute their share. Organisations participating in several projects must have sufficient capacity to implement all these projects.

The financial capacity check will be done on the basis of the documents uploaded in the [Participant Register](#) during the grant preparation stage (e.g. profit and loss account and balance sheet, business plan, audit report produced by an approved external auditor, certifying the accounts for the last closed financial year, etc.). The analysis will be based on neutral financial indicators, but will also take into account other aspects, such as dependency on EU funding and deficit and revenue in previous years.

The check will normally be done for the coordinator if the requested grant amount is equal to or greater than EUR 500 000, except for:

- public bodies (entities established as a public body under national law, including local, regional or national authorities) or international organisations; and
- cases where the individual requested grant amount is not more than EUR 60 000 (low-value grant).

If needed, it may also be done for the other applicants, including affiliated entities. If the financial capacity is structurally guaranteed by another legal entity, the financial capacity of that legal entity will be verified.

If the granting authority considers that the financial capacity is not satisfactory, they may require:

- further information;
- an enhanced financial responsibility regime, i.e. joint and several responsibility of affiliated entities (*see Annex G below*); and
- prefinancing paid in instalments;

or

- propose no prefinancing;
- request that the applicant concerned is replaced or, if needed, reject the entire proposal.

i For more information, see [Rules on Legal Entity Validation, LEAR Appointment and Financial Capacity Assessment](#).

Operational capacity

Applicants must have the **know-how, qualifications and resources** to successfully implement their tasks in the project and contribute their share (including, when appropriate, sufficient experience in EU/transnational projects of comparable size).

This assessment of operational capacity will be carried out during the evaluation of the award criterion ‘Quality and efficiency of the implementation’. It will be based on the competence and experience of the applicants and their project teams, including their operational resources (human, technical and other) or, exceptionally, the measures proposed to obtain the necessary competence and experience by the time the tasks are implemented.

If the evaluation of this award criterion leads to a score above the applicable threshold, then the applicants are considered to have sufficient operational capacity.

For this assessment, applicants will be required to provide the following information in the application form:

- description of the consortium participants; and
- for each participant:
 - identity of researchers involved in the proposal (through the researchers table);
 - up to five most relevant publications, widely-used datasets, software, goods, services, or any other achievements relevant to the call content;
 - up to five most relevant previous projects or activities, connected to the subject of this proposal; and
 - description of any significant infrastructure and/or any major items of technical equipment, relevant to the proposed work.

Additional supporting documents may be requested if they are needed to confirm the operational capacity of any applicant.

Public bodies, Member State organisations and international organisations are exempted from the operational capacity check.

Exclusion

Applicants that are subject to **EU administrative sanctions** (i.e. exclusion)³² or are in one of the following **exclusion situations**³³ that bar them from receiving EU grants can NOT participate:

- bankruptcy, winding up, affairs administered by the courts, arrangement with creditors, suspended business activities or other similar procedures (including procedures for persons with unlimited liability for the applicant’s debts);

³² See Article 138 EU Financial Regulation [2024/2509](#).

³³ See Articles 138 and 141 EU Financial Regulation [2024/2509](#).

- they are in breach of social security or tax obligations (including if done by persons with unlimited liability for the applicant's debts);
- they are guilty of grave professional misconduct (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant);
- they are guilty of fraud, corruption, having links to a criminal organisation, money laundering, terrorism-related crimes (including terrorism financing), child labour or human trafficking (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant);
- they have shown significant deficiencies in complying with their main obligations under an EU procurement contract, grant agreement, prize, expert contract, or similar (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant);
- they are guilty of irregularities within the meaning of Article 1(2) of Regulation No [2988/95](#)³⁴ (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant); or
- they have created under a different jurisdiction an entity with the intent to circumvent fiscal, social or other legal obligations in the country of origin or created another entity with this purpose (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant).

Applicants will also be refused if they³⁵:

- have misrepresented the information required as a condition for participating in the procedure or have failed to supply that information; or
- were previously involved in the preparation of documents used in the award procedure where this entails a breach of the principle of equality of treatment, including distortion of competition, that cannot be remedied otherwise.

³⁴ Council Regulation (EC, Euratom) No 2988/95 of 18 December 1995 on the protection of the European Communities financial interests, (OJ L 312, 23.12.1995, p. 1).

³⁵ See Article 143 EU Financial Regulation [2024/2509](#).

D — Award criteria

Award criteria

If admissible and eligible, the proposals will be evaluated and ranked against the following **award criteria**³⁶, depending on the type of action:

	Excellence (The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme)	Impact	Quality and efficiency of the implementation
Research and innovation actions (RIA) Innovation actions (IA)	<ul style="list-style-type: none"> - Clarity and pertinence of the project’s objectives, and the extent to which the proposed work is ambitious and goes beyond the state of the art. - Soundness of the proposed [for the first stage: overall(*)] methodology, including the underlying concepts, models, assumptions, inter-disciplinary approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society 	<ul style="list-style-type: none"> - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project. - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities. 	<ul style="list-style-type: none"> - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall. - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

³⁶ For two-stage submission procedures, only the aspects in bold are considered for the evaluation of first-stage applications. See “Two-stage calls” below in this General Annex.

Horizon Europe - Work programme 2025
General Annexes

	<p>and end-users where appropriate.</p> <p>(*) Including all aspects mentioned in the first stage proposal template, which also include the integration of the gender dimension in research and innovation content as well as open science practices.</p>		
Coordination and support actions (CSA)	<ul style="list-style-type: none"> - Clarity and pertinence of the project's objectives. - Quality of the proposed coordination and/or support measures, including soundness of methodology. 	<ul style="list-style-type: none"> - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project. - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities. 	<ul style="list-style-type: none"> - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall. - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.
Programme co-fund actions (CoFund)	<ul style="list-style-type: none"> - Clarity and pertinence of the project's objectives, and the extent to which the proposed work is ambitious, and goes beyond the state of the art. - Soundness of the proposed methodology, including the underlying concepts, models, assumptions, inter-disciplinary 	<ul style="list-style-type: none"> - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project. - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and 	<ul style="list-style-type: none"> - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall. - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

Horizon Europe - Work programme 2025
General Annexes

	approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society and end-users where appropriate.	exploitation plan, including communication activities.	
Training and mobility actions (TMA)	<i>See the Marie Skłodowska-Curie Actions Work Programme part 2.</i>		
Pre-commercial procurement actions (PCP) Public procurement of innovative solutions actions (PPI)	<ul style="list-style-type: none"> - Clarity and pertinence of the objectives and the extent to which they are ambitious, and go beyond the state of the art in terms of the degree of innovation that is needed to satisfy the procurement need. - Soundness of the proposed methodology, taking into account the underlying concepts and assumptions. 	<ul style="list-style-type: none"> - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme. - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation* plan, including communication activities. <p style="font-size: small;">* For PCP actions and PPI actions, the exploitation of results by the beneficiaries means primarily the use that is made of the innovative solutions by the procurers/end-users. The manufacturing and sale of the innovative solutions are performed by the suppliers of the solutions, which are not beneficiaries but subcontractors.</p>	<ul style="list-style-type: none"> - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall. - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

Framework Partnership Agreements (FPA)	<ul style="list-style-type: none">- Clarity and pertinence of the project's objectives.	<ul style="list-style-type: none">- Credibility of the action plan of the FPA to achieve the expected outcomes and impacts specified in the work programme.	<ul style="list-style-type: none">- Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.- Potential for long-term cooperation among participants.
---	---	---	---

Scores and weighting

Evaluation scores will be awarded for the criteria, and not for the different aspects listed in the table. For full applications, each criterion will be scored out of 5. The threshold for individual criteria will be 3. The overall threshold, applying to the sum of the three individual scores, will be 10.

To determine the ranking for 'Innovation actions', the score for 'Impact' will be given a weight of 1.5.

Proposals that pass the individual threshold AND the overall threshold will be considered for funding, within the limits of the available call budget. Other proposals will be rejected.

Two-stage calls

For the evaluation of first-stage applications under a two-stage submission procedure, only the 'Excellence' and 'Impact' criteria will be evaluated. Within these criteria, only the aspects in **bold** will be considered.

The threshold for both individual criteria will be 4. For each indicative budget-split in the call conditions, the overall threshold applying to the sum of the two individual scores will be set at a level that ensures the total requested budget of proposals admitted to stage 2 is as close as possible to two times the available budget, and not less than one and a half times the available budget. The actual level will therefore depend on the volume of proposals received. The threshold is expected normally to be set at 8 or 8.5.

The evaluation procedure is explained further in *Annex F below*.

E — Documents

Submission

All proposals must be submitted **electronically** via the Funders & Tenders Portal electronic submission system (accessible via the topic page in the [Search Funding & Tenders](#) section). Paper submissions are NOT possible.

Proposals must be **complete** and contain all parts and mandatory annexes and supporting documents.

The application form will have two parts:

- **Part A** (to be filled in directly online) contains administrative information about the applicant organisations (future coordinator and beneficiaries and affiliated entities), the summarised budget for the proposal and call-specific questions;
- **Part B** (to be downloaded from the Portal submission system, completed and then assembled and re-uploaded as a PDF in the system) contains the technical description of the project.

Annexes and supporting documents will be directly available in the submission system and must be uploaded as PDF files (or other formats allowed by the system).

Proposals should be designed to stay as close as possible to the award criteria (*see Annex D above*). The application form will help to achieve this.

When submitting the proposal, the coordinator will have to confirm that they have the mandate to act for all applicants. Moreover, they will have to confirm that the information in the application is correct and complete and that all participants comply with the conditions for receiving EU funding (especially eligibility, financial and operational capacity, exclusion, etc.). Proposals not complying with these requirements will be rejected. Before signing the grant, each participant will have to confirm this again by signing a declaration of honour.

For lump sum grant proposals, the estimated budget must be described in a detailed budget table. This will be used as a basis for justifying and/or fixing the lump sum amount. As the lump sum must be an approximation of the costs actually incurred, the costs included in this detailed budget table must comply with the basic eligibility conditions for EU actual cost grants (*see AGA — Annotated Grant Agreement, Article 6*). This is particularly important for purchases and subcontracting, which must ensure best value for money (or, if appropriate, the lowest price) and be free from any conflicts of interest. If the budget table contains ineligible costs, the grant may be reduced (even later on during implementation of the project or after its end). Exceptionally, the Decision authorising the use of lump sum funding for a specific action might specify that a detailed budget table is not required.

 Applicants may be asked at a later stage for further documents (for legal entity validation, financial capacity check, bank account validation, etc.).

F — Procedure

Evaluation procedure and ranking

Calls may be subject to either a **single-stage submission procedure** or a **two-stage submission procedure**. The **evaluation procedure** may be organised in one (standard) or several steps.

In the first stage of a two-stage submission, applicants will be requested to submit only an outline application (which will be evaluated against only two award criteria: ‘Excellence’ and ‘Impact’). Successful applicants will be invited to submit a full application for the second stage (which will be evaluated against the full set of award criteria).

Proposals will be checked for formal requirements (admissibility and eligibility) and then evaluated (for each topic separately) for operational capacity and award criteria (*see Annexes C and D above*) by an **evaluation committee** composed of independent external experts and then ranked according to their quality score.

For lump sum grant proposals, comments on the detailed lump sum budget table will be provided in the Evaluation Summary Report only for proposals invited to grant agreement preparation (or placed in the reserve list) and ones rejected (in part) due to significant overestimation or underestimation of costs.

Exceptionally, where indicated in the specific call/topic conditions, the evaluation committee may be composed partially or, in the case of ‘Coordination and support actions’, partially or fully of representatives of EU institutions.

For proposals with the same score within a single budget envelope (with the exception of the first stage of two-stage submissions) a method to establish the **priority order** will be determined, taking into consideration the objectives of the specific topic. In the absence of special arrangements in the specific call/topic conditions, the following method will apply:

For each group of proposals with the same score, starting with the group achieving the highest score and continuing in descending order:

- 1) Proposals that address aspects of the call that have not otherwise been covered by more highly ranked proposals will be considered to have the highest priority.
- 2) The proposals identified under 1), if any, will themselves be prioritised according to the scores they have been awarded for ‘Excellence’. When these scores are equal, priority will be based on scores for ‘Impact’. In the case of ‘Innovation actions’, priority will be given to the score for ‘Impact’, followed by that for ‘Excellence’.
- 3) If necessary, the gender balance among the researchers with a leading role named in the researchers table in the proposal, will be used as a factor for prioritisation.
- 4) If necessary, any further prioritisation will be based on geographical diversity, defined as the number of Member States or Associated Countries represented in the proposal, not otherwise receiving funds from projects higher up the ranking list (and if equal in number, then by budget).

- 5) If a distinction still cannot be made, the panel may decide to further prioritise by considering other factors related to the objectives of the call, or to Horizon Europe in general. These may include, for example, enhancing the quality of the project portfolio through synergies between projects or, where relevant and feasible, involving SMEs. These factors will be documented in the panel report.
- 6) The method described in 1), 2), 3) and 4) will then be applied to the remaining equally ranked proposals in the group.

At the end of the evaluation, all applicants will be informed of the result in an evaluation result letter. Successful proposals will be invited to the next stage, ‘grant preparation’; the other proposals will be put on the reserve list or rejected.

 **No commitment to provide funding** — Invitation to the grant preparation stage does NOT constitute a formal commitment to funding. Various legal checks are still needed before the grant can be awarded, such as legal entity validation, financial capacity verification, exclusion check, etc.

 If indicated in the specific call/topic conditions, proposals which were judged to deserve funding but did not succeed because of budget limits will receive a **Seal of Excellence**³⁷. With prior authorisation from the applicant, the granting authority may share information concerning the proposal and the evaluation with interested financing authorities, subject to the conclusion of confidentiality agreements.

 **Strategic Technologies for Europe Platform (STEP)**³⁸ — If provided for in the specific call/topic conditions, proposals that have been assessed positively and comply with the minimum quality requirements (including eligibility, exclusion, and award criteria) may be awarded a ‘**STEP Seal**’, if the project contributes to any of the STEP objectives. Information about the project will be, upon consent, displayed in the STEP Portal with the aim of enhancing the visibility of the project, which may help it attract public or private funding by certifying its quality and contribution to the STEP objectives.

 **Budget flexibility** — The budgets set out in the calls and topics are indicative. Unless otherwise stated, final budgets may change following evaluation. The final figures may change by up to 20% compared to the total budget indicated in each individual part of the work programme. Changes within these limits will not be considered substantial within the meaning of Article 110(5) of Regulation (EU, Euratom) No [2024/2509](#).

 **Joint calls for proposals** — In cases of applications for **joint calls** with third countries (including scientific and technological organisations or agencies from third countries), international organisations or non-profit legal entities, the joint selection and evaluation procedures will be indicated in the specific call/topic conditions.

³⁷ https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/seal-excellence_en.

³⁸ Regulation (EU) 2024/795 of the European Parliament and of the Council of 29 February 2024 establishing the Strategic Technologies for Europe Platform (STEP) (OJ L, 2024/795, 29.2.2024).

 **Blind evaluation pilot** – If indicated in the specific call/topic conditions, first-stage proposals of two-stage submissions will be evaluated blindly³⁹ and applicants must not disclose their identity in the proposal abstract and Part B of their proposal (*see Annex A above*).

Evaluation review procedure

If the consortium believes that the evaluation procedure was flawed, the coordinator can submit a **complaint** (following the deadlines and procedures also set out in the evaluation result letter).

Only the procedural aspects of an evaluation may be the subject of a request for an evaluation review. The evaluation of the merits of a proposal will not be the subject of an evaluation review.

A request for an evaluation review must relate to a specific proposal and must be submitted within 30 days after the beneficiary accesses the evaluation results. The deadlines will be counted from the date of opening/access. The maximum size limit of the request is 7 000 characters. Notifications of evaluation results which have not been opened in the Funding & Tenders Portal within 10 days after sending are considered to have been accessed (*see also [Funding & Tenders Portal Terms and Conditions](#)*).

An evaluation review committee will provide an opinion on the procedural aspects of the evaluation. The evaluation review committee may recommend a re-evaluation of the proposal, to be carried out primarily by evaluators who were not involved in the previous evaluation, or a confirmation of the initial evaluation.

Indicative timetable for evaluation and for signature of the grant agreement

Unless otherwise stated in the specific call/topic conditions, the timing for evaluation and grant preparation is as follows:

- information on the outcome of the evaluation: around 5 months from the deadline for submission;
- indicative date for the signing of grant agreements: around 8 months from the deadline for submission.

For two-stage calls, the timing is different (for the evaluation result: around 3 months from the deadline for submission for the first stage, and around 5 months from the deadline for submission for the second stage, for signature of the grant agreement around 8 months from the second stage deadline for submission).

G — Legal and financial set-up of the grant agreements

During the grant preparation stage, the consortium will be asked to prepare the [grant agreement](#), together with the EU project officer.

This grant agreement will set out the framework for the grant and its terms and conditions, particularly concerning deliverables, reporting and payments. The applicable model with the complete text of the provisions is available on the topic page, together with the other call documentation.

Starting date & project duration

The project starting date and duration will be fixed in the grant agreement (*see Data Sheet, point 1*). Normally, the starting date will be after the grant has been signed. A starting date before the date the grant is signed (retroactive) can be granted exceptionally for duly justified reasons, if agreed with the granting authority⁴⁰.

The project duration is provided in months (extensions will be possible only exceptionally, for duly justified reasons and if the granting authority agrees).

Milestones and deliverables

The milestones and deliverables for each project will be managed through the grant management system in the Portal and are reflected in Annex 1 of the grant agreement.

The standard deliverables will be set out in the specific call/topic conditions.

Form of grant, funding rate and maximum grant amount

The grant parameters (maximum grant amount, funding rate, total eligible costs, etc.) will be fixed in the grant agreement (*Data Sheet, point 3 and Article 5*).

The project budget is provided in EUR. The amount of the grant awarded may be lower than the amount requested.

For **actual cost grants**, the grant will be a budget-based, mixed actual cost grant. This means that it will reimburse **ONLY** certain types of costs (eligible costs) and **ONLY** those costs *actually* incurred for the project (NOT the *budgeted* costs).

The costs will be reimbursed at the funding rate fixed in the specific call/topic conditions and in the grant agreement.

Such grants may NOT produce a profit. If there is a profit (i.e. surplus of revenues + EU grant over costs), it will be deducted from the final grant amount.

Moreover, the final grant amount may be reduced in case of non-compliance (e.g. improper implementation, breach of obligations, etc.).

⁴⁰ See Article 196 EU Financial Regulation [2024/2509](#).

The maximum Horizon Europe funding rates are as follows:

- Research and innovation action: 100%
- Innovation action: 70% (except for non-profit legal entities, where a rate of up to 100% applies)
- Coordination and support action: 100%
- Programme co-fund action: between 30% and 70%
- Innovation and market deployment: 70% (except for non-profit legal entities, where a rate of up to 100% applies)
- Training and mobility action: 100%
- Pre-commercial procurement action: 100%
- Public procurement of innovative solutions action: 50%

Other funding rates may be set out in the specific call/topic conditions.

For **lump sum and unit grants**, the funding rate is already applied as part of the methodology for fixing the amounts and is therefore not shown in the grant agreement.

Budget categories and cost eligibility rules

The budget categories and cost eligibility rules are fixed in the grant agreement (*see Data Sheet, point 3 and Article 6*).

Budget categories:

- actual costs (i.e. costs which are real and not estimated or budgeted) for:
 - personnel costs (unless declared as a unit cost; see below);
 - subcontracting costs;
 - purchase costs (unless declared as a unit cost; see below); and
 - costs of providing financial support to third parties (if provided for in the specific call conditions);
- units (i.e. an amount per unit) for:
 - personnel unit costs
 - personnel costs of SME owners/natural persons not receiving a salary;
 - personnel costs calculated by the beneficiaries according to their usual cost accounting practices (average personnel costs);

- costs of internally invoiced goods and services calculated by the beneficiaries according to their usual cost accounting practices; and
- specific unit costs (if provided for in the specific call/topic conditions; see also Annex 2a of the grant agreement);
- flat-rate (i.e. costs calculated by applying a percentage fixed in advance to other types of eligible costs) for:
 - indirect costs (25% flat-rate of the total eligible direct costs, excluding eligible direct costs for subcontracting, financial support to third parties and any unit costs or lump sums which include indirect costs);
- lump sum (i.e. a global amount deemed to cover all costs of the action or a specific category of costs, if provided for in the specific call/topic conditions).

Within a grant, different forms of costs can be used.

Costs can also be declared under several EU Synergy grants, if the cumulative funding under the grants does not exceed 100% of the eligible costs and the contributions declared to them.

Reporting & payment arrangements

The reporting and payment arrangements are fixed in the grant agreement (*Data Sheet, point 4 and articles 21 and 22*).

After the grant has been signed, the consortium will normally receive a float to start working on the project (normally, pre-financing of 160% of the average EU funding per reporting period (i.e. maximum grant amount/number of periods); exceptionally, less or no pre-financing). For actions with only one reporting period, it will be less, since 100% would mean the totality of the grant amount.

Programme co-fund actions may receive additional pre-financing payments.

Payments will be automatically lowered if one of the consortium members has outstanding debts towards the EU (granting authority or other EU bodies). Such debts will be offset by the granting authority, in line with the conditions set out in the grant agreement (*see Article 22*).

At the moment of the prefinancing payment, an amount ranging from 5% to 8% of the maximum grant amount will be deducted from the prefinancing payment and transferred to the mutual insurance mechanism. This mechanism covers the risks associated with non-recovery of sums due from the beneficiaries.

There will be one or several interim payments linked to a periodic report, depending on the duration of the project.

At the end of the project, the consortium will be invited to submit a report on the basis of which the final grant amount will be calculated. If the total of earlier payments is higher than the final grant amount, the beneficiaries concerned (or the coordinator) will be asked to pay back the difference (recovery).

Certificates

Depending on the size of the grant amount and on the type of beneficiaries, beneficiaries may be required to submit a certificate on the financial statements. The thresholds for this certificate are fixed in the grant agreement (*Data Sheet, point 4 and Article 24*).

Liability regime for recoveries

The liability regime for recoveries is that of individual financial responsibility. Each beneficiary is liable only for their own debt (and those of its affiliated entities, if any) (*Data Sheet point 4.4 and Article 22*).

Provisions concerning project implementation

- Proper implementation of the action (*Article 11*).
- Conflict of interest (*Article 12*).
- Confidentiality and security (EU classified information) (*Article 13 and Annex 5*).
- Ethics (research integrity) and values (gender mainstreaming) (*Article 14 and Annex 5*).
- Data protection (*Article 15*).
- Intellectual Property Rights (IPR), background and results, access rights and rights of use (*Article 16 and Annex 5*).

In addition to the standard provisions, the following specific provisions in the model grant agreement will apply to all grants awarded under this work programme:

Additional exploitation obligations in case of a public emergency: If requested by the granting authority, beneficiaries must grant non-exclusive licences to their results – for a limited period of time specified in the request and on fair and reasonable conditions – to legal entities that need the results to address the public emergency. These legal entities must commit to rapidly and broadly exploiting the resulting products and services on fair and reasonable conditions. This provision will apply up to 4 years after the end of the action.

Additional information obligation relating to standards: Unless stated otherwise in the specific call conditions, beneficiaries must, up to 4 years after the end of the action, inform the granting authority if the results could reasonably be expected to contribute to European or international standards.

Where provided for in the specific call conditions, the granting authority may, up to 4 years after the end of the action, object to a transfer of ownership or to the exclusive licensing of results, as set out in the specific provision of Annex 5.

- Communication, dissemination, open science and visibility (*Article 17 and Annex 5*). In addition to the standard provisions, the following specific provisions in the model grant agreement will apply to all grants awarded under this work programme:

Open science - additional practices, validation of scientific publications:

Beneficiaries must provide (digital or physical) access to data or other results needed to validate the conclusions of scientific publications, to the extent that their legitimate interests or constraints are safeguarded (and unless they already provided the (open) access at publication).

Open science - additional practices, public emergency: In case of a public emergency, if requested by the granting authority, beneficiaries must immediately deposit any research output in a repository and provide open access to it under a CC BY licence, a public domain dedication (CC 0) or equivalent.

As an exception, if providing open access would be against the beneficiaries' legitimate interests, the beneficiaries must grant non-exclusive licences, on fair and reasonable conditions, to legal entities that need the research output to address the public emergency. These legal entities must commit to rapidly and broadly exploiting the resulting products and services on fair and reasonable conditions. This exception is limited to 4 years after the end of the action.

- Specific rules for carrying out the action (*Article 18 and Annex 5*).

Other provisions may be set out in the specific call/topic conditions.

Non-compliance and breach of contract

The grant agreement (*Chapter 5*) provides for the measures that may be taken in case of breach of contract (and other violations of law).

 For more information, see the [AGA — Annotated Grant Agreement](#).

IMPORTANT

- **Do not wait until the end** — Complete the application sufficiently in advance of the deadline to avoid any last minute **technical problems**. Problems due to last-minute submissions (*e.g. congestion, etc.*) will be entirely at applicants' own risk. Call deadlines can NOT be extended at the request of applicants.
- **Consult** the topic page on the Portal regularly. The granting authority will use it to publish updates and additional information on the call (call updates).
- **Funding & Tenders Portal electronic exchange system** — By submitting the application, all applicants **accept** to use the electronic exchange system in accordance with the [Portal Terms & Conditions](#).
- **Registration** — Before submitting the application, all beneficiaries, affiliated entities and associated partners must be registered in the [Participant Register](#). The participant identification code (PIC) (one per participant) is mandatory for the application form. For validation, beneficiaries and affiliated entities will be requested to upload the necessary documents showing their legal status and origin during the grant preparation stage. Associated partners do not need validation.
- **Consortium roles** — When setting up the consortium, applicants should think of organisations that can help them reach objectives and solve problems.

The roles should be attributed according to the degree of participation of each participant in the project. Main participants should participate as beneficiaries or affiliated entities; other entities may participate as associated partners, subcontractors, or third parties giving in-kind contributions, provided that the related conditions are fulfilled. Associated partners and third parties giving in-kind contributions should bear their own costs (they will not become formal recipients of EU funding). Subcontracting should normally constitute a limited part and must be performed by third parties (not by one of the beneficiaries/affiliated entities, *see section G*).

- **Coordinator** — In multi-beneficiary grants, the beneficiaries participate as a consortium (group of beneficiaries). They will have to choose a coordinator among them, who will manage and coordinate the project and will represent the consortium towards the granting authority. In mono-beneficiary grants, the single beneficiary will automatically be the coordinator.
- **Affiliated entities** — Applicants may participate with affiliated entities. Affiliated entities will get a part of the EU funding and must therefore comply with all the call conditions (just like beneficiaries). But they do not sign the grant agreement and do not count towards the minimum eligibility criteria for consortium composition (if any).
- **Associated partners** — Applicants may participate with associated partners. They participate without funding and without signing the grant agreement and therefore do not need to be validated.
- **Consortium agreement** — For practical and legal reasons, participants must conclude a written consortium agreement to ensure the smooth and successful implementation of the action and to deal with exceptional or unforeseen circumstances, unless otherwise provided for in the specific call conditions. The consortium agreement also gives the possibility to redistribute the EU funding according to internal consortium principles and arrangements (for instance, one beneficiary can reattribute their grant share to another beneficiary). The consortium agreement thus allows the grant to be customised to the needs of the consortium and can also help to protect the members in case of disputes. Consortium agreements are not required for mono-beneficiary projects.
- **Completed/ongoing projects** — Applications for projects that have already been completed will be rejected. Applications for projects that have already started will be assessed on a case-by-case basis (in such cases, no costs can normally be reimbursed for activities that took place before the application was submitted).

Horizon Europe - Work programme 2025
General Annexes

- **No-profit rule** — Grants may NOT give a profit (i.e. surplus of revenues + EU grant over costs). This will be checked by the granting authority at the end of the project.
 - **No double funding** — There is strict prohibition of double funding from the EU budget. Any given action may receive only ONE grant from the EU budget (except for EU Synergy grants) and same costs may under NO circumstances be declared to two different EU actions.
 - **Combination with EU operating grants** — Combination with EU operating grants is possible, if the project remains outside the operating grant work programme and the beneficiary makes sure that cost items are clearly separated in its accounting and NOT declared twice (see [AGA — Annotated Model Grant Agreement, Article 6.2.E](#)).
 - **Multiple applications** — Applicants may submit more than one application for *different* projects under the same call (and be awarded funding for them).
Organisations may participate in several applications.
BUT: if there are several applications for the *same/very similar* project, only one application will be accepted and evaluated.
 - **Language** — Applicants can submit their application in any official EU language. However, for reasons of efficiency, it is strongly advised to use English. If applicants need the call documentation in another official EU language, they must submit a request within 10 days after publication of the call (for the contact information, see *topic page*).
 - **Rejection** — By submitting the application, all applicants accept the general call conditions set out in the General Annexes and the specific call conditions set out in the topics. Applications that do not comply with all the call conditions will be **rejected**. This applies also to applicants: all applicants need to fulfil the criteria; if any one of them does not, they must be replaced or the entire application will be rejected.
 - **Cancellation** — There may be circumstances which may require the cancellation of the call or topic. In this case, applicants will be informed via a call or topic update. Cancellations are without entitlement to compensation.
 - **Transparency** — In accordance with Article 38 of the [EU Financial Regulation 2024/2509](#), information about EU grants awarded is published each year on the [Europa website](#).
This includes:
 - beneficiaries' names;
 - beneficiaries' addresses;
 - the purpose for which the grant was awarded;
 - the maximum amount awarded.
- Publication can exceptionally be waived (following a reasoned and duly substantiated request), if there is a risk that disclosure could jeopardise applicants' rights and freedoms under the EU Charter of Fundamental Rights or harm its commercial interests.
- **Data protection** — The submission of an application under this call involves the collection, use and processing of personal data. This data will be processed in accordance with Regulation [2018/1725](#). It will be processed solely for the purpose of evaluating the application (and subsequent management of the grant and, if needed, programme monitoring, evaluation and communication). Details are explained in the Funding & Tenders Portal privacy statement.

SPECIFIC CONDITIONS FOR ACTIONS WITH PCP/PPI

H — Specific conditions for actions implementing pre-commercial procurement or procurement of innovative solutions

This Annex applies to all types of actions implementing pre-commercial procurement (PCP) and procurement of innovative solutions (PPI). It applies to both PCP/PPI actions and other types of actions which prepare and/or execute a PCP or PPI, for instance through subcontracting activities.

Requirements for all types of actions supporting PCP or PPI

The PCP/PPI must be prepared and executed by one of the following:

- by one or more public procurer(s), plus possibly one or more private and/or NGO procurer(s) that provide similar services of public interest, that is (are) responsible for the acquisition and/or regulatory strategy of the relevant innovative solutions and aim to obtain ambitious quality and efficiency improvements in the area of the PCP/PPI; or
- by entities with a mandate from one or more of these procurers to act on their behalf in the procurement (e.g. central purchasing bodies).

Other entities (e.g. end-users) that do not have a conflict of interest with the PCP/PPI, and whose participation in the action is well justified, may participate in ‘additional activities’ to prepare, manage and follow-up the PCP/PPI and embed it into a wider set of demand-side activities. This includes disseminating results, removing obstacles to introducing the solutions onto the market (e.g. contributing to standardisation, regulation and certification), awareness raising, experience sharing/training, and preparing further cooperation among stakeholders and procurers for future PCP or PPI.

For PCP executed by a group of procurers, the buyers’ group must jointly prepare and implement the pre-commercial procurement so that there is one joint call for tender, one joint evaluation of offers, and a lead procurer⁴¹ awarding the research and development (R&D) service contracts in the name and on behalf of the buyers’ group. The PCP must address one concrete procurement need identified as a common challenge⁴², which requires new R&D and is described in the common specifications of the joint PCP call for tender. Each procurer in the buyers’ group must contribute financially to the total budget necessary to jointly finance the PCP, enabling the procurers to share the costs of procuring R&D services from a number of providers and comparing the merits of the alternative solutions pursued by these competing providers to address the common challenge.

⁴¹ The ‘lead procurer’ is a public procurer and is the beneficiary appointed by the buyers’ group to coordinate and lead the procurement activities. They can be either one of the procurers in the buyers’ group or another beneficiary in the action who is established or designated by the procurers in the buyers’ group to act as lead procurer.

⁴² Addressing the common challenge in different countries may require, beyond the common core functionality, the development and testing of additional local functionality or adaption of solutions by each procurer due to differences in the local context. A PCP that addresses a challenge consisting of several facets (sub-challenges or building blocks) is considered one joint PCP, as long as all procurers in the buyers’ group share the need for - and are willing to co-finance - all the facets of the common challenge.

For PPI executed by a group of procurers, the lead procurer must coordinate the preparation and implementation of one joint or several coordinated public procurements of innovative solutions, based on common specifications defined jointly by the buyers' group. Each PPI must focus on one concrete need identified as a common challenge that requires the deployment of innovative solutions⁴³.

Projects that aim to implement a PCP/PPI must contain a preparation and execution stage.

Preparation stage

The expected outcomes for the preparation stage, to be included as deliverables/milestones, are:

- a prior information notice for the open market consultation: 5 days before submission for publication to the OJEU, i.e. a minimum of 50 days before the start of the first meeting;
- a report on the result of the open market consultation, prior market analysis and its impact on the tender documents; in addition, for PPI, feedback from activities to verify market readiness before deployment (e.g. conformance testing, certification, quality labelling);
- completed tender documents based on the Horizon Europe PCP/PPI model contract documents, including the contract notice: 30 days before its submission to the OJEU;
- for PCP/PPI executed by a group of procurers: the signed joint procurement agreement confirming the final means of cooperation, including the financial commitment of the buyers' group for the PCP/PPI, and final confirmation of the lead procurer.

Execution stage

The expected outcome of the execution stage is the implementation of the procurement procedure and of the PCP/PPI contracts. For PCP, this includes validating and comparing the performance of the competing PCP solutions to verify if they can be converted into permanent service. For PPI, this includes deploying the innovative solutions and evaluating the results in real-life operating conditions, with a duration that allows for appropriate evaluation of the potential impact of these solutions if converted into permanent service.

Deliverables/milestones to be included in the description of work for the execution stage are:

- a copy of the contract award notice published in TED: 48 days after the award of contracts;
- at the end of the tender evaluation (for PCP, also after the evaluations of each phase):
 - information on the total number of bids received, particularly the data on the winning tenderer(s) and abstracts of the winning tenders for publication and evaluation purposes;
 - final ranking list of the selected projects, final scores and qualitative assessment per criterion for each bid received, along with minutes of the evaluation meeting;

⁴³ Addressing the common challenge in different countries may require deployment and, where applicable, conformance testing, of local functionality or adaption of solutions for each procurer due to differences in the local context.

- for PCP: assessing the results achieved by each tenderer in the previous phase;
- at the end of the action, give a demonstration to the granting authority:
 - for PCP: of the tested solutions resulting from the PCP;
 - for PPI: of the deployed innovative solution(s).

Where the WTO Government Procurement Agreement (GPA) does not apply, participation in tendering procedures must be open on equal terms to bidders from EU Member States and all countries with which the EU has an agreement in the field of public procurement under the conditions laid down in that agreement, including all Horizon Europe Associated Countries. Where the WTO GPA applies, tendering procedures must also be open to bidders from states that have ratified this agreement, under the conditions laid down therein.

If the specific call conditions restrict participation or control for security reasons, participation in the PCP/PPI procedure must also be limited to bidders meeting this restriction. If the specific conditions for the topic impose a place of performance obligation, the place of performance of the contract must comply with this obligation.

Specific requirements for pre-commercial procurement (PCP)

The following requirements apply to ensure that the provisions for PCP in the Horizon Europe rules for participation, the conditions for the R&D services exemption of the EU Directives on public procurement⁴⁴, the EU Treaty principles⁴⁵ and the competition rules⁴⁶ are fully respected.

Definitions

PCP must comply with the Horizon Europe definition: ‘*Pre-commercial procurement*’ means procurement of R&D services involving risk-benefit sharing under market conditions and competitive development in phases, where there is a clear separation between the procurement of the R&D services procured from the deployment of commercial volumes of end-products⁴⁷.

‘*Risk-benefit sharing under market conditions*’ refers to the PCP approach in which procurers share with suppliers at market price the risks and benefits related to the intellectual property rights (IPR) resulting from the R&D.

‘*Competitive development in phases*’ refers to buying the R&D from several competing R&D providers in parallel and to comparing and identifying the best-value-for-money solutions on the market to address the PCP challenge. To reduce the investment risk for the procurer, reward the most competitive solutions and facilitate the participation of smaller innovative companies, the R&D is also split into phases (solution design, prototyping, original development and

⁴⁴ See Article 14 of Directive 2014/24/EU, Article 32 of Directive 2014/25/EU and Article 13(f)(j) of Directive 2009/81/EC.

⁴⁵ In particular, the fundamental Treaty principles on the free movement of goods and workers, the freedom to provide services, the freedom of establishment and the free movement of capital, as well as the principles deriving therefrom, such as the principles of non-discrimination, transparency and equal treatment.

⁴⁶ See, in particular, Article 2.3 of the 2014 R&D&I State aid framework.

⁴⁷ See the Horizon Europe Regulation and the PCP Communication COM/2007/799 and associated SEC(1668)2007. Note that PCPs can include the purchase of the first end-products that were developed, installed and tested during the PCP, but not the purchase of larger commercial volumes of end-products requiring quantity production beyond delivering the first products for the PCP.

validation/testing of the first products), with the number of competing R&D providers being reduced after each phase.

‘Separation from the deployment of commercial volumes of end-products’ refers to the complementarity of PCP, which focuses on the R&D phase before wide commercialisation, and PPI, which does not focus on R&D but on wide commercialisation/diffusion of solutions. Procurers can, but are not obliged, to procure R&D results from a PCP.

Preparation and publication of the open market consultation and call for tender

To prepare the call for tender, an open market consultation⁴⁸ with potential tenderers and end-users must be held to broach the views of the market on the intended scope of the R&D. The results of this open market consultation must be taken into account to fine-tune the tender specifications, so that the gap between state-of-the-art industry development and the procurement needs justifies the procuring of R&D⁴⁹ services.

The PCP contract notice must be published EU-wide⁵⁰ in at least English. Offers must be accepted and communication with stakeholders must be enabled at all stages in at least English. All offers must be evaluated according to the same objective criteria, regardless of the geographical location, size of organisation or governance structure of the tenderers.

The prior information notice for the open market consultation and the contract notice must be advertised widely, using in particular Horizon Europe internet sites and national contact points. The Commission must be informed at least 5 days before the expected date of publication of the prior information notice for the open market consultation and 30 days before the expected date of publication of the PCP contract notice. The PCP call for tenders must remain open for at least 60 days.

Tender documentation, procurement and implementation of the contract

The PCP contract that will be concluded with each selected tenderer must take the form of one single framework agreement covering all PCP phases, without contract renegotiations after the award. This framework agreement must contain information on the procedures for implementing the different phases (through specific contracts), including the format of the intermediate evaluations (including evaluation criteria and weightings) for each phase.

⁴⁸ The open market consultation should be organised in a way not to preclude or distort competition. In respect of the Treaty principles, the open market consultation must be announced well in advance and widely - via a prior information notice that is published at least 45 days before the first open market consultation meeting in the Official Journal of the EU - and enable potential tenderers regardless of their geographic location to participate at least in English. All information given in answers to questions from participants in the dialogue should be documented and published.

⁴⁹ In line with WTO GPA 2014 Article XIII(1)(f), R&D can cover activities such as solution exploration and design, prototyping, up to the original development of a limited volume of first products or services in the form of a test series. Original development of a first product or service may include limited production or supply to incorporate the results of field testing and demonstrate that the product or service is suitable for production or supply in quantity to acceptable quality standards. R&D does not include quantity production or supply to establish commercial viability or to recover R&D costs, nor commercial development activities such as incremental adaptations or routine or periodic changes to existing products, services, production lines, processes or other operations in progress, even if such changes may represent improvements.

⁵⁰ Through the Official Journal of the EU, using the TED (Tenders Electronic Daily) web portal.

For PCP executed by a group of procurers, the R&D service contracts are awarded by the lead procurer and all selected tenderers can be paid by the lead procurer, or pro rata by each procurer in the buyers' group according to their share in the total PCP budget.

The PCP contract notice must contain information on the intended number of R&D providers that will be selected (minimum of three providers) to start the PCP, the number of PCP phases and the expected duration and budget for each PCP phase. The PCP must cover the full PCP life cycle of solution design, prototyping, and original development, including installation and testing of a limited volume of test series products/services in the procurer's/end-user's premises. Each of the three PCP phases can be split up into further phases if appropriate.

The following simplified and/or accelerated PCP procedures may be used: for PCP that require fast deployment⁵¹, one specific contract may cover both the second and third PCP phase; if fewer than two tenderers are capable of performing the R&D services in the EU Member States or Associated Countries (for security contracts, this may be restricted to the Member States), the phase 1 contracts may be awarded to a minimum of two tenderers.

Procurers must avoid the use of selection criteria based on disproportionate qualification and financial guarantee requirements (e.g. with regard to prior customer references and minimum turnover). Functional/performance-based specifications must be used to formulate the object of the PCP call for tender as a problem to be solved, without prescribing a specific approach to be followed. Evaluation of the tenders must be based on best-value-for-money criteria, not just lowest price.

The PCP process must be organised to avoid any conflicts of interest, including in the use of external experts. Providers cannot be beneficiaries in an action during which the PCP is planned or undertaken.

The PCP process must require selected providers to locate the majority of the R&D activities, including the principal researcher(s) working for the PCP contract in particular, in the Member States or Associated Countries⁵².

The PCP procurers must not reserve the R&D results exclusively for their own use. The providers generating results must own the attached IPR, and the procurers must enjoy at least royalty-free access rights to use the R&D results for their own use. The procurers must also enjoy the right to grant (or to require the granting of) non-exclusive licences to third parties, to exploit the results under fair and reasonable market conditions, without any right to sublicense. A call-back provision must ensure that, in case the providers fail to commercially exploit the results within a given period after the PCP, or use the results to the detriment of the public interest, including security interests, the procurers can require transfer of the ownership of the results.

The procurers must inform tenderers of the right to publish public summaries of the results of the PCP project, including information about key R&D results attained and lessons learnt (e.g.

⁵¹ Especially where a budgetary commitment for deployment is already available at the start of the PCP (fast-track PCP).

⁵² For duly justified reasons of public security, this may be limited to the EU Member States.

on the feasibility of the solution approaches to meet the requirements and lessons learnt for potential future deployment of solutions). Details that would be contrary to the public interest, would harm legitimate business interests (e.g. regarding IPR-protected specificities of their individual approaches to solutions) or could distort fair competition may not be disclosed.

To enable the procurers to establish the correct (best value for money) market price for the R&D service, in which case the presence of State aid can in principle be excluded, the PCP call for tender must be carried out in a competitive and transparent way in line with Treaty principles. In addition, the distribution of rights and obligations between procurers and providers (including the allocation of IPR) must be published in the PCP call for tender documents, to obtain a price according to market conditions (and rule out State aid). PCP contracts with providers must contain financial compensation according to market conditions⁵³, compared to the exclusive development price, for assigning IPR to the providers.

Specific requirements for public procurement of innovative solutions (PPI)

Definition

PPI must comply with the relevant Horizon Europe definitions.

'Public procurement of innovative solutions (PPI)' means procurement where contracting authorities act as a launch customer for innovative goods or services which are not yet available on a large-scale commercial basis, and may include conformity testing.

'Launch customers', also called early adopters, refer to the first 20% of customers on the EU's internal market that buy innovative solutions. The solutions have to be new to the procurers in the project, the procurers' market segment or new to the EU's internal market, and relevant to procurers in other Member States and/or Associated Countries.

'Innovative solutions' are new or significantly improved products, services or processes that have already been (partially) demonstrated on a small scale, and may be nearly or already available in small quantities on the market, but which have not been widely adopted yet. Typically, owing to the residual risk of market uncertainty, they have not been produced at a large enough scale to meet mass market price/quality requirements. This also includes existing solutions that are to be utilised in a new and innovative way; PPI does not include the procurement of R&D.

Preparation and publication of the open market consultation and call for tender

Unless the PPI is undertaken as a follow-up to an FP7, Horizon 2020 or Horizon Europe PCP⁵⁴, or unless the situation is a low-value PPI below national procurement thresholds, the following obligations apply:

⁵³ The market price should reflect the benefits allocated to the R&D provider (e.g. commercialisation opportunities opened up by the IPR) and the risks assumed by the R&D provider (e.g. the cost of maintaining the IPR and commercialising the products).

⁵⁴ In the case of a PPI following a PCP that was implemented according to the conditions described in Annex I, the negotiated procedure without publication foreseen in the EU public procurement directives can then be used

- To prepare the call for tenders, an open market consultation with potential tenderers and end-users must be held to inform the market well in advance of the upcoming PPI and broach the views of the market on the PPI's intended scope. Information retrieved from this consultation about the gap between perceived procurement needs and on-going industry developments must be taken into account in the PPI tender specifications, so that the PPI duly focuses on 'early adoption' of 'innovative' solutions.
- The market must be informed well in advance⁵⁵ of the target date for publishing the PPI call for tenders. Market readiness prior to deployment can be verified through the organisation of e.g. conformity testing, certification or quality labelling of solutions.
- The PPI contract notices must be published EU-wide in at least English, offers must be accepted and communication with stakeholders must be enabled at all stages in at least English. All offers must be evaluated according to the same objective criteria, regardless of the geographical location, size of organisation or governance structure of the tenderers.
- The prior information notices for the open market consultation, early announcements of the expected publication date of the PPI call for tender, and the PPI contract notice must be promoted and advertised widely, using Horizon Europe internet sites and national contact points in particular. The Commission must be informed at least 5 days before the expected date of publication of the PIN for the open market consultation and 30 days before the expected date of publication of the PPI contract notice. The PPI call for tenders must remain open for at least 60 days.

Tender documentation, procurement and implementation of the contract

Procurement procedures covered by the EU public procurement directives that do not involve procurement of R&D can be used. Restricted procedures with shortened timeframes for the submission of offers for reasons of urgency must not be used. Framework contracts/agreements with lots can be used.

For PPI implemented by a group of procurers, the specific contracts for procuring specific quantities of goods/services for each procurer can be awarded and the selected tenderers can either all be paid by the lead procurer, or by each procurer in the buyers' group individually, for their quantity of goods/services procured.

Procurers must avoid the use of selection criteria based on disproportionate qualification and financial guarantee requirements (e.g. with regard to prior customer references and minimum turnover). Functional/performance-based specifications must be used to formulate the object of the PPI call for tenders as a problem to be solved, without prescribing a specific approach to be followed. Evaluation of the tenders must be based on best-value-for-money criteria, not just lowest price.

(Article 32(3)(a) of Directive 2014/24/EU, Article 50(b) of Directive 2014/25/EU and Article 13(j) of Directive 2009/81/EC). At least three offers must be requested, including from the R&D providers that successfully completed the preceding PCP.

⁵⁵ By means of a prior information notice in the Official Journal of the EU.

Procurers must organise their procurement to avoid any conflicts of interest, including in the use of external experts. Potential providers cannot be beneficiaries in an action during which the PPI is planned or undertaken.

To encourage fair and wide exploitation of results, ownership of IPR rights should be assigned to the party generating the IPR, except in duly justified cases (e.g. when that party is not able to exploit them).

The PPI call for tender must be carried out in a competitive and transparent way in line with Treaty principles. The distribution of rights and obligations between procurers and providers (including the allocation of IPR) must be published in the PPI call for tender documents, to obtain a price according to market conditions (and rule out State aid).

DRAFT

EN

Horizon Europe

Work Programme 2023-2025

2. Marie Skłodowska-Curie Actions

IMPORTANT NOTICE:

This amended draft has not been adopted or endorsed by the European Commission. Any views expressed are the views of the Commission services and may not in any circumstances be regarded as stating an official position of the Commission.

This amended draft is made public before the adoption of the amended work programme to provide potential participants with the currently expected main lines of this amended work programme. Only the adopted amended work programme will have legal value.

The adoption of the amended work programme will be announced on the Horizon Europe website and on the Funding and Tenders Portal.

Information and topic descriptions indicated in this amended draft may not appear in the final amended work programme; and likewise, new elements may be introduced at a later stage. Any information disclosed by any other party shall not be construed as having been endorsed by or affiliated to the Commission.

The Commission expressly disclaims liability for any future changes of the content of this document.

DRAFT

Introduction

The European Union needs a strong, resilient, flexible and creative human resource base, with the right combination of skills to match the future needs of the labour market, to innovate and to convert knowledge and ideas into products and services for economic and social benefit. The Covid-19 crisis has highlighted once more the importance of the Union's reliance on a **highly skilled research-based human capital** that is able to detect and tackle upcoming challenges, to communicate scientific evidence to policy-makers and the public at large, and to work across disciplines.

In this context, the Union must reinforce its efforts to encourage more young women and men to make a career in research, promote its attractiveness for top talents from around the world, retain its own researchers and reintegrate those working elsewhere. The Marie Skłodowska-Curie Actions (MSCA) are the main instrument at Union-level to do so. Since their launch in 1996, they have become the **Union's reference programme for doctoral education and postdoctoral training**. Between 2014 and 2020, in the context of Horizon 2020, the MSCA have supported 65 000 researchers in Europe and beyond, both doctoral candidates and more experienced researchers, and have funded over **1 000 excellent international doctoral networks**.

The MSCA strongly contribute to excellent research, boosting jobs, growth and investment by equipping researchers with **new knowledge and skills, including transferable ones**¹ and providing them with **an international as well as inter-sectoral exposure** (including through academia-business collaboration), to fill the top positions of tomorrow.

The MSCA do not only have a positive impact on individual researchers, they also contribute to the development of **excellent doctoral programmes, postdoctoral training programmes and collaborative research projects**. They have a **structuring impact** on higher education institutions and other entities way beyond academia by widely spreading excellence and setting standards for high-quality researcher education and training, not only across the European Research Area (ERA), but also worldwide. Positive structuring effects on organisations include:

- increasing the quality of researchers' training and supervision offered;
- strengthening research capacity (e.g. ability to attract funding);
- improving human resources practices and procedures, and providing fairer and more attractive working conditions for researchers, including through career guidance and development;

¹ As an illustration, Eurodoc published a list of such transferable skills at: <http://eurodoc.net/skills-report-2018.pdf>; see also the European Competence Framework for Researchers, ResearchComp at: ec_rtd_research-competence-presentation.pdf (europa.eu)

- building new and sustainable international and inter-sectoral partnerships and networks; better transfer of knowledge between sectors and disciplines, enhancing their global reputation and visibility.

Main principles applying to the MSCA

Excellence

The MSCA focus on **excellence** in various aspects: excellence does not only apply to the individual fellows supported or the collaborations fostered and knowledge transferred, but also to the R&I methodologies applied, the research conducted as well as the training, supervision and career guidance provided. Long-term investment in people pays off, as indicated *inter alia* by the number of Nobel Prize winners who have been either former MSCA fellows or supervisors.

Mobility

The MSCA are based on the principle of **physical mobility**: researchers who receive funding have to move from one country to another to acquire new knowledge, skills and competences, and develop their research career. Researchers are also strongly encouraged to move between sectors and disciplines.

While **virtual mobility** does not have the same multifaceted impact on the development of individuals and sustainable cooperation among organisations as physical mobility, it can however complement it, facilitate long-distance collaboration and be an effective means to faster achieving research and training objectives. In this regard, all MSCA proposals are encouraged to explore opportunities offered by e-infrastructures and related services, in particular those provided through GEANT², the pan-European research and education network.

Bottom-up and open to the world

The MSCA are **open to all domains** of research and innovation, chosen freely by the applicants in a fully bottom-up manner, addressed under the Treaty on the Functioning of the European Union. In addition, Postdoctoral Fellowships can also address domains covered by the Treaty establishing the European Atomic Energy Community (Euratom Research and Training Programme 2021-2025). All MSCA will complement top-down collaborative research activities, notably contributing to the EU Missions.

The MSCA have also a **strong international dimension**: international cooperation is particularly encouraged as it allows institutions to set-up strategic collaborations worldwide, attracts foreign talents to Europe and provides European researchers with access to unique expertise, facilities, testing environments or data available only outside Europe.

Recruitment, working/employment conditions and inclusiveness

²

<http://www.geant.org>

The principles of the **European Charter for Researchers** ([Charter](#)) promoting open, merit-based and transparent recruitment and attractive working and employment conditions are a cornerstone of the MSCA and all funded host organisations must put effort into applying them. The MSCA pay particular attention to **equal opportunities and inclusiveness**. In line with the Charter, all MSCA-funded projects are encouraged to embrace diversity and take measures to facilitate mobility and counter-act gender and disability-related barriers to it.

MSCA projects are also encouraged to facilitate access by **researchers at risk**³, through tailored support and career services, including job search assistance in the researcher's new geographical area.

Supervision

The MSCA promote effective supervision, which contribute to creating a supportive environment for the researchers to conduct their work. In line with the principles set out in the Charter, MSCA beneficiaries must ensure **adequately supervision or mentoring and appropriate career guidance**. Supervision is one of the crucial elements of successful research. Guiding, supporting, directing, advising and mentoring are key factors for a researcher to pursue his/her career path. In this context, all MSCA-funded projects are encouraged to follow the recommendations outlined in the **Guidelines for MSCA supervision**⁴.

Open Science and Responsible Research and Innovation

The MSCA endorse **Open Science** and **Responsible Research and Innovation** (RRI) through engaging society at large, integrating the gender and ethical dimensions, promoting Open Science practices through targeted training activities, ensuring open access to research outcomes, including FAIR⁵ data handling, encouraging formal and informal science education and feeding back research results into teaching and education.

The European Commission has also signed the **Agreement on Reforming Research Assessment**⁶, which establishes a common direction for research assessment reforms, while respecting organisations' autonomy.

European Green Deal

The MSCA support **bottom-up and frontier/applied research** contributing directly to the European Commission's commitment to tackling climate and environmental-related challenges. Under Horizon Europe, the MSCA will significantly contribute to promote sustainable research in line with the European Green Deal, the United Nation's 2030 Agenda and the Sustainable Development Goals. All MSCA-funded projects are encouraged to

³ The term 'researcher at risk' refers to researchers at all stages of their career who are experiencing threats to their life, liberty, or research career, and those who are forced or have been forced to flee because of such threats.

⁴ <https://ec.europa.eu/msca/supervision>. While the Guidelines for MSCA supervision are non-binding, funded-projects are strongly encouraged to take them into account.

⁵ FAIR = Findable, Accessible, Interoperable, Reusable.

⁶ [agreement_final.pdf \(coara.eu\)](#)

address the principles of the **MSCA Green Charter**⁷ and implement measures to minimise the environmental footprint of their activities.

Synergies

The MSCA promote the creation of strong links with the cohesion policy funds⁸ and the Recovery and Resilience Facility (RRF)⁹, notably by creating synergies through its COFUND action and enabling complementarities via awarding a Seal of Excellence¹⁰ certificate to proposals submitted to mono-beneficiary MSCA calls. The Seal is awarded to proposals that exceed all the evaluation thresholds set out in this work programme but cannot be funded due to lack of budget. The MSCA also encourage complementarities with other parts of Horizon Europe, such as the European Innovation Council¹¹ and European Institute of Innovation and Technology (EIT)¹², and synergies with other Union programmes, notably Erasmus+¹³, including its European Universities Initiative.

MSCA Intervention areas

There are five main MSCA intervention areas as set out in the Council Decision establishing the specific programme implementing Horizon Europe (Annex 1, page 11-13). All individual Marie Skłodowska-Curie Actions contribute to these intervention areas to one extent or the other:

1. Nurturing Excellence through Mobility of Researchers across Borders, Sectors and Disciplines;
2. Fostering new Skills through Excellent Training of Researchers;
3. Strengthening Human Capital and Skills Development across the European Research Area;
4. Improving and Facilitating Synergies;

⁷ https://ec.europa.eu/msca/green_charter. While the MSCA Green Charter is non-binding, funded projects are strongly encouraged to take into account the principles it sets out.

⁸ “Synergies between Horizon Europe and ERDF programmes (Draft Commission Notice)” C(2022) 4747 final. https://research-and-innovation.ec.europa.eu/news/all-research-and-innovation-news/synergies-guidance-out-2022-07-06_en

⁹ The Recovery and Resilience Facility supports reforms and investments undertaken by Member States. The aim is to mitigate the economic and social impact of the coronavirus pandemic and make European economies and societies more sustainable, resilient and better prepared for the challenges and opportunities of the green and digital transitions.

¹⁰ https://research-and-innovation.ec.europa.eu/funding/funding-opportunities/seal-excellence/funding-opportunities-under-msca_en

¹¹ See particularly “Next generation Innovation Talents” under “Other actions” of the 2023 Work Programme of the EIC.

¹² “Synergies between the Marie Skłodowska-Curie actions and the European Institute of Innovation and Technology”. <https://op.europa.eu/en/publication-detail/-/publication/40f1a820-2cc2-11ed-975d-01aa75ed71a1/language-en>

¹³ “Synergies between the Marie Skłodowska-Curie Actions and Erasmus+ in the area of higher education”. <https://op.europa.eu/en/publication-detail/-/publication/f4d7d733-19ba-11ec-b4fe-01aa75ed71a1/language-en/>

5. Promoting Public Outreach.

The following Actions within the MSCA are implementing these intervention areas:

Action	Main Objective
MSCA Doctoral Networks	The MSCA Doctoral Networks aim to train creative, entrepreneurial, innovative and resilient doctoral candidates, able to face current and future challenges and to convert knowledge and ideas into products and services for economic and social benefit. The MSCA Doctoral Networks will raise the attractiveness and excellence of doctoral training in Europe. They will equip researchers with the right combination of research-related and transferable competences and provide them with enhanced career perspectives in both the academic ¹⁴ and non-academic sectors through international, inter-sectoral and interdisciplinary mobility combined with an innovation-oriented mind-set.
MSCA Postdoctoral Fellowships	The goal of MSCA Postdoctoral Fellowships is to enhance the creative and innovative potential of researchers holding a PhD, wishing to acquire new skills through advanced training, international, inter-sectoral and interdisciplinary mobility. MSCA Postdoctoral Fellowships are open to excellent researchers of any nationality, including researchers wishing to reintegrate in Europe, researchers who are displaced by conflict as well as researchers with high potential aiming for a career restart in research. The scheme also encourages researchers to work on research and innovation projects in the non-academic sector.
MSCA Staff Exchanges	MSCA Staff Exchanges promote innovative international, inter-sectoral and interdisciplinary collaboration in research and innovation through exchanging staff and sharing knowledge and ideas at all stages of the innovation chain. The scheme fosters a shared culture of research and innovation that welcomes and rewards creativity and entrepreneurship and helps turn ideas into innovative products, services or processes. It is open to research, technical, administrative and managerial staff.
MSCA COFUND	MSCA COFUND co-finances new or existing doctoral programmes and postdoctoral fellowship schemes at national, regional or international level with the aim to spread the best practices of the MSCA including international, inter-sectoral and interdisciplinary research training, as well as international and cross-sectoral mobility of researchers at all stages of their career.
MSCA and Citizens	MSCA and Citizens , through the European Researchers' Night, aims to bring research and researchers closer to the public at large, to increase

¹⁴

See definitions at the end of the Work Programme part

	awareness of research and innovation activities and to boost public recognition of science and research education. It will also show the role of the researcher for the society and economy, as well as the impact of researchers' work on citizens' daily lives, and aim at raising young people's interest for research and scientific careers.
--	---

DRAFT

MSCA Doctoral Networks

The MSCA Doctoral Networks aim to train creative, entrepreneurial, innovative and resilient doctoral candidates, able to face current and future challenges and to convert knowledge and ideas into products and services for economic and social benefit.

The MSCA Doctoral Networks will raise the attractiveness and excellence of doctoral training in Europe. They will equip researchers with the right combination of research-related and transferable competences and provide them with enhanced career perspectives in both the academic and non-academic sectors through international, inter-sectoral and interdisciplinary mobility combined with an innovation-oriented mind-set.

Expected impact

Proposals under this Action should contribute to the following expected impacts:

- Strengthen Europe's human capital base in R&I by training highly-skilled doctoral candidates;
- Improve the attractiveness of researchers' careers notably through better working and employment conditions of doctoral candidates in Europe;
- Enhance talent and knowledge circulation across the R&I landscape, through international, inter-sectoral and interdisciplinary mobility;
- Increase Europe's attractiveness as a leading research destination;
- Enhance the quality of R&I contributing to Europe's sustainable competitiveness;
- Establish sustainable collaboration between academic and non-academic organisations;
- Foster the culture of open science, innovation and entrepreneurship.

The following call(s) in this work programme contribute to this Action:

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million)	Indicative number of projects expected to be funded
		2023		
Opening: 30 May 2023 Deadline(s): 28 Nov 2023				
HORIZON-MSCA-2023-DN-01-01	TMA Doctoral Networks	434.80		Not relevant
HORIZON-MSCA-2023-DN-01-01	TMA Doctoral Networks - Industrial Doctorates			Not relevant
HORIZON-MSCA-2023-DN-01-01	TMA Doctoral Networks - Joint Doctorates			Not relevant
Overall indicative budget		434.80		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A. See exceptions and specific conditions at the end of this work programme part.
<i>Eligibility conditions</i>	The general conditions are described in General Annex B. See exceptions and specific conditions at the end of this work programme part.
<i>Financial and</i>	The criteria are described in General Annex C.

¹⁵ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

<i>operational capacity and exclusion</i>	
<i>Award criteria</i>	For application of the general award criteria, including weighting and thresholds, see the specific conditions at the end of this Work Programme part.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The general procedure is described in General Annex F. See exceptions and specific conditions at the end of this work programme part.
<i>Expected EU contribution per project</i>	The expected EU contribution depends on the number of person-months requested. For the applicable unit contributions, see specific conditions for MSCA at the end of this Work Programme part.
<i>Legal and financial set-up of the Grant Agreements</i>	The general conditions are described in General Annex G. See exceptions and specific conditions at the end of this Work Programme part.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2023-DN-01-01: MSCA Doctoral Networks 2023

Expected Outcome: Project results are expected to contribute to the following outcomes:

For supported doctoral candidates

- New research and transferable skills and competences, leading to improved employability and career prospects within and outside academia;
- New knowledge allowing the conversion of ideas into products and services, where relevant;
- Enhanced networking and communication capacities with scientific peers, as well as with the general public that will increase and broaden the research and innovation impact.

For participating organisations

- Improved quality, relevance and sustainability of doctoral training programmes and supervision arrangements;
- Enhanced cooperation and transfer of knowledge between sectors and disciplines;
- Increased integration of training and research activities between participating organisations;

- Boosted R&I capacity;
- Increased internationalisation and attractiveness;
- Regular feedback of research results into teaching and education at participating organisations.

Scope: MSCA Doctoral Networks will implement doctoral programmes, by partnerships of universities, research institutions and research infrastructures, businesses including SMEs, and other socio-economic actors from different countries across Europe and beyond. MSCA Doctoral Networks are indeed open to the participation of organisations from third countries, in view of fostering strategic international partnerships for the training and exchange of researchers.

These doctoral programmes will respond to well-identified needs in various R&I areas, expose the researchers to the academic and non-academic sectors, and offer training in research-related, as well as transferable skills¹⁶ and competences relevant for innovation and long-term employability (e.g. entrepreneurship, commercialisation of results, Intellectual Property Rights, communication). Proposals for doctoral networks can reflect existing or planned research partnerships among the participating organisations.

The selection procedure for doctoral candidates must be open, transparent and merit-based, in line with the Code of Conduct for the Recruitment of Researchers. The vacancy notice (to be widely advertised internationally, including on the EURAXESS¹⁷ website) must mention if the published rates include all employer and employee's taxes and contributions. If possible, the gross salary (net salary + employee's taxes and contributions) should be published.

MSCA Doctoral Networks are encouraged to lead to Industrial or Joint Doctorates.

Industrial Doctorates

Through Industrial Doctorates, doctoral candidates will step outside academia and develop skills in industry and business by being jointly supervised by academic and non-academic organisations, both of which can be established in the same EU Member State or Horizon Europe Associated Country.

Joint Doctorates

Joint Doctorates represent a highly integrated type of international, inter-sectoral and multi/interdisciplinary collaboration in doctoral training. They lead to the delivery of joint, double or multiple doctoral degrees¹⁸ recognised in at least two EU Member States or Horizon Europe Associated Countries.

¹⁶ As an illustration, Eurodoc published a list of such transferable skills at: <http://eurodoc.net/skills-report-2018.pdf>

¹⁷ <https://euraxess.ec.europa.eu/>

¹⁸ Every time this Work Programme part refers to doctoral degrees, this means that the degrees have to be recognised as such by the relevant authorities of the country or countries concerned.

Supervisory Board

Each MSCA Doctoral Network should have a clearly identified supervisory board co-ordinating network-wide training, research and in particular supervision activities in line with the Guidelines for MSCA supervision, while establishing continuous communication and exchange of best practice among the participating organisations to maximise the benefits of the partnership.

Training activities

MSCA Doctoral Networks should exploit complementarities between participating organisations and foster sharing of knowledge and networking activities for example through the organisation of workshops and conferences. Proposed training activities should respond to well identified needs in various R&I areas, with appropriate references to inter- and multidisciplinary fields and follow the EU Principles for Innovative Doctoral Training¹⁹. They should be primarily focused on developing new scientific knowledge through original research on personalised projects.

Inter-sectoral secondments of researchers to other participating organisations, including in third countries, are encouraged when relevant, feasible and beneficial for the researchers and in line with the project objectives. This will increase the employability of the researchers outside academia.

Doctoral Networks should develop substantial training modules, including digital ones, addressing key transferable skills and competences common to all fields and fostering the culture of Open Science, innovation and entrepreneurship as well as good scientific conduct such as research integrity. In particular, Doctoral Networks should adequately prepare doctoral candidates for increased research collaboration and information-sharing made possible by new (digital) technologies (e.g. collaborative tools, opening access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science, etc.).

Supervision

Particular attention is paid to the quality of supervision and mentoring arrangements as well as career guidance. Joint supervision of the researchers is mandatory for Industrial and Joint Doctorates.

Career Development Plan

A Career Development Plan must be established jointly by the supervisor and each recruited doctoral candidate. In case of joint supervision, such a plan should be established involving all supervisors. In addition to research objectives, this plan comprises the researcher's training and career needs, including training on transferable skills, teaching, planning for publications and participation in conferences and events aiming at opening science and research to

¹⁹ [principles_for_innovative_doctoral_training.pdf](#)

citizens. The plan, established at the beginning of the recruitment, should be revised (and updated where needed) within 18 months.

Overall indicative budget		597.80		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A. See exceptions
---------------------------------	---

²⁴ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

	and specific conditions at the end of this work programme part.
<i>Eligibility conditions</i>	The general conditions are described in General Annex B. See exceptions and specific conditions at the end of this work programme part.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	For application of the general award criteria, including weighting and thresholds, see the specific conditions at the end of this Work Programme part.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The general procedure is described in General Annex F. See exceptions and specific conditions at the end of this work programme part.
<i>Expected EU contribution per project</i>	The expected EU contribution depends on the number of person-months requested. For the applicable unit contributions, see specific conditions for MSCA at the end of this Work Programme part.
<i>Legal and financial set-up of the Grant Agreements</i>	The general conditions are described in General Annex G. See exceptions and specific conditions at the end of this Work Programme part.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2025-DN-01-01: MSCA Doctoral Networks 2025

Expected Outcome: Project results are expected to contribute to the following outcomes:

For supported doctoral candidates

- New research and transferable skills and competences, leading to improved employability and career prospects within and outside academia;
- New knowledge allowing the conversion of ideas into products and services, where relevant;
- Enhanced networking and communication capacities with scientific peers, as well as with the general public that will increase and broaden the research and innovation impact.

For participating organisations

- Improved quality, relevance and sustainability of doctoral training programmes and supervision arrangements;
- Enhanced cooperation and transfer of knowledge between sectors and disciplines;
- Increased integration of training and research activities between participating organisations;
- Boosted R&I capacity;
- Increased internationalisation and attractiveness;
- Regular feedback of research results into teaching and education at participating organisations.

Scope: MSCA Doctoral Networks will implement doctoral programmes, by partnerships of universities, research institutions and research infrastructures, businesses including SMEs, and other socio-economic actors from different countries across Europe and beyond. MSCA Doctoral Networks are indeed open to the participation of organisations from third countries, in view of fostering strategic international partnerships for the training and exchange of researchers.

These doctoral programmes will respond to well-identified needs in various R&I areas, expose the researchers to the academic and non-academic sectors, and offer training in research-related, as well as transferable skills and competences relevant for innovation and long-term employability (e.g. entrepreneurship, commercialisation of results, Intellectual Property Rights, communication). Proposals for doctoral networks can reflect existing or planned research partnerships among the participating organisations.

The selection procedure for doctoral candidates must be open, transparent and merit-based, in line with the Code of Conduct for the Recruitment of Researchers. The vacancy notice (to be widely advertised internationally, including on the EURAXESS²⁵ website) must mention if the published rates include all employer and employee's taxes and contributions. If possible, the gross salary (net salary + employee's taxes and contributions) should be published.

MSCA Doctoral Networks are encouraged to lead to Industrial or Joint Doctorates.

Industrial Doctorates

Through Industrial Doctorates, doctoral candidates will step outside academia and develop skills in industry and business by being jointly supervised by academic and non-academic organisations, both of which can be established in the same EU Member State or Horizon Europe Associated Country.

Joint Doctorates

²⁵ <https://euraxess.ec.europa.eu/>

Joint Doctorates represent a highly integrated type of international, inter-sectoral and multi/interdisciplinary collaboration in doctoral training. They lead to the delivery of joint, double or multiple doctoral degrees²⁶ recognised in at least one EU Member State or Horizon Europe Associated Country.

Supervisory Board

Each MSCA Doctoral Network should have a clearly identified supervisory board co-ordinating network-wide training, research and in particular supervision activities in line with the Guidelines for MSCA supervision, while establishing continuous communication and exchange of best practice among the participating organisations to maximise the benefits of the partnership.

Training activities

MSCA Doctoral Networks should exploit complementarities between participating organisations and foster sharing of knowledge and networking activities for example through the organisation of workshops and conferences. Proposed training activities should respond to well identified needs in various R&I areas, with appropriate references to inter- and multidisciplinary fields and follow the EU Principles for Innovative Doctoral Training²⁷. They should be primarily focused on developing new scientific knowledge through original research on personalised projects.

Inter-sectoral secondments of researchers to other participating organisations, including in third countries, are encouraged when relevant, feasible and beneficial for the researchers and in line with the project objectives. This will increase the employability of the researchers outside academia.

Doctoral Networks should develop substantial training modules, including digital ones, addressing key transferable skills and competences common to all fields and fostering the culture of Open Science, innovation and entrepreneurship as well as good scientific conduct such as research integrity. In particular, Doctoral Networks should adequately prepare doctoral candidates for increased research collaboration and information-sharing made possible by new (digital) technologies (e.g. collaborative tools, opening access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science, etc.).

Supervision

Particular attention is paid to the quality of supervision and mentoring arrangements as well as career guidance. Joint supervision of the researchers is mandatory for Industrial and Joint Doctorates.

Career Development Plan

²⁶ Every time this Work Programme part refers to doctoral degrees, this means that the degrees have to be recognised as such by the relevant authorities of the country or countries concerned.

²⁷ [principles_for_innovative_doctoral_training.pdf](#)

A Career Development Plan must be established jointly by the supervisor and each recruited doctoral candidate. In case of joint supervision, such a plan should be established involving all supervisors. In addition to research objectives, this plan comprises the researcher's training and career needs, including training on transferable skills, teaching, planning for publications and participation in conferences and events aiming at opening science and research to citizens. The plan, established at the beginning of the recruitment, should be revised (and updated where needed) within 18 months.

DRAFT

MSCA Postdoctoral Fellowships

The goal of MSCA Postdoctoral Fellowships is to enhance the creative and innovative potential of researchers holding a PhD and who wish to acquire new skills through advanced training, international, inter-sectoral and interdisciplinary mobility. MSCA Postdoctoral Fellowships will be open to excellent researchers of any nationality. The scheme also encourages researchers to work on research and innovation projects in the non-academic sector and is open to researchers wishing to reintegrate in Europe, to those who are displaced by conflict, as well as to researchers with high potential who are seeking to restart their careers in research.

Through the implementation of an original and personalised research project, MSCA Postdoctoral Fellowships aim to foster excellence through training and mobility and to equip researchers with new skills and competences in order to identify solutions to current and future challenges. Postdoctoral researchers are encouraged to engage with society at large to make the results of their research visible to citizens and to involve citizens, civil society and end-users in co-creation of research content when relevant.

Expected impact

Proposals under this Action should contribute to the following expected impacts:

- Enhance the creative and innovative potential of researchers holding a PhD and wishing to diversify their individual competences and skills through advanced training, international, interdisciplinary and inter-sectoral mobility while implementing excellent research projects across all sectors of research;
- Strengthen Europe's human capital base in R&I with better trained, innovative and entrepreneurial researchers;
- Enhance the quality of R&I contributing to Europe's competitiveness and growth;
- Contribute to Europe's attractiveness as a leading destination for R&I and for good working conditions of researchers;
- Facilitate knowledge transfer and brain circulation across the ERA;
- Foster the culture of open science, innovation and entrepreneurship.

The following call(s) in this work programme contribute to this Action:

Call	Budgets (EUR million)			Deadline(s)
	2023	2024	2025

Overall indicative budget		260.47		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A. See exceptions and specific conditions at the end of this work programme part.
<i>Eligibility conditions</i>	The general conditions are described in General Annex B. See exceptions and specific conditions at the end of this work programme part.
<i>Financial and operational capacity</i>	The criteria are described in General Annex C.

²⁸

The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.

The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

<i>and exclusion</i>	
<i>Award criteria</i>	For application of the general award criteria, including weighting and thresholds, see the specific conditions at the end of this Work Programme part.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The general procedure is described in General Annex F. See exceptions and specific conditions at the end of this work programme part.
<i>Expected EU contribution per project</i>	The expected EU contribution depends on the number of person-months requested. For the applicable unit contributions, see specific conditions for MSCA at the end of this Work Programme part.
<i>Legal and financial set-up of the Grant Agreements</i>	The general conditions are described in General Annex G. See exceptions and specific conditions at the end of this Work Programme part.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2023-PF-01-01: MSCA Postdoctoral Fellowships 2023

Specific conditions	
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 221.40 million.
<i>Type of Action</i>	TMA Postdoctoral Fellowships - European Fellowships
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 39.07 million.
<i>Type of Action</i>	TMA Postdoctoral Fellowships - Global Fellowships

Expected Outcome: Project results are expected to contribute to the following outcomes:

For supported postdoctoral fellows

- Increased set of research and transferable skills and competences, leading to improved employability and career prospects of MSCA postdoctoral fellows within academia and beyond;
- New mind-sets and approaches to R&I work forged through international, inter-sectoral and interdisciplinary experience;
- Enhanced networking and communication capacities with scientific peers, as well as with the general public that will increase and broaden the research and innovation impact.

For participating organisations

- Increased alignment of working conditions for researchers in accordance with the principles set out in the European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers;
- Enhanced quality and sustainability of research training and supervision;
- Increased global attractiveness, visibility and reputation of the participating organisation(s);
- Stronger R&I capacity and output among participating organisations; better transfer of knowledge;
- Regular feedback of research results into teaching and education at participating organisations.

Scope: Fellowships will be provided to excellent researchers undertaking international mobility. Applications will be made jointly by the researcher and a beneficiary in the academic or non-academic sector.

Postdoctoral Fellowships either can take place in Europe (i.e. in an EU Member State or a Horizon Europe Associated Country) or in a Third Country not associated to Horizon Europe:

- European Postdoctoral Fellowships are open to researchers of any nationality who wish to engage in R&I projects by either coming to Europe from any country in the world or moving within Europe. The standard duration of these fellowships must be between 12 and 24 months.
- Global Postdoctoral Fellowships are open to European nationals or long-term residents²⁹ who wish to engage in R&I projects with organisations outside EU Member States and Horizon Europe Associated Countries. These fellowships require an outgoing phase of minimum 12 and maximum 24 months in a non-associated Third Country, and a mandatory 12-month return phase to a host organisation based in an EU Member State or a Horizon Europe Associated Country.

Specific eligibility conditions apply to MSCA Postdoctoral Fellowships in the research areas covered by the Euratom Research and Training Programme 2021-2025³⁰.

Secondments

Researchers receiving a Postdoctoral Fellowship may opt to include a secondment phase, within the overall duration of their fellowship in any country worldwide. The secondment phase can be a single period or be divided into shorter mobility periods.

²⁹ See eligibility conditions at the end of this Work Programme part.

³⁰ See eligibility conditions at the end of this Work Programme part.

For European Postdoctoral Fellowships, secondments cannot exceed one third of the requested duration of the action (excluding from the duration of the action any additional period for a non-academic placement) and should be in line with the project objectives, adding significant value and impact to the fellowship.

For Global Postdoctoral Fellowships, optional secondments are permitted for up to one third of the outgoing phase. A maximum of three months of such secondments can be spent at the start of the project at the beneficiary (or associated partners linked to the beneficiary), allowing the researcher to spend time there before going to the associated partner in the Third Country. This period of maximum three months will be considered as part of the outgoing phase.

Secondments cannot take place during the mandatory twelve-month return period to the host organisation in an EU Member State or Horizon Europe Associated Country.

Placements in the non-academic sector

Postdoctoral Fellowships can provide an additional period of up to six months to support researchers opting for a placement at the end of the project to work on R&I projects in an organisation from the non-academic sector established in an EU Member State or Horizon Europe Associated Country³¹. While this possibility is also available to fellows recruited in the non-academic sector, such a placement must be implemented at a different non-academic host organisation established in an EU Member State or Horizon Europe Associated Country³². The request for such a non-academic placement must be an integral part of the proposal, explaining the added-value for the project and for the career development of the researcher, and will be subject to evaluation. This incentive aims at promoting career moves between sectors and organisations and thereby stimulate innovation and knowledge transfer while expanding career opportunities for researchers.

If the placement does not meet the requirements (taking place in an academic organisation or in a Third Country), the proposal will be evaluated without taking into account the placement. This might affect the final score.

Training activities

The training activities implemented under the Postdoctoral Fellowships should include training for key transferable skills³³, foster innovation and entrepreneurship, (e.g. commercialisation of results, Intellectual Property Rights, communication, public engagement and citizen science), foster good scientific conduct such as research integrity and promote Open Science practices (open access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science etc.).

³¹ For proposals in the research areas covered by the Euratom Research and Training Programme, the organisation from the non-academic sector must be established in an EU Member State or a country associated to the Euratom Research and Training Programme 2021-2025

³² idem

³³ As an illustration, Eurodoc published a list of such transferable skills at: <http://eurodoc.net/skills-report-2018.pdf>

Career Development Plan

In order to equip MSCA postdoctoral fellows with skills that enhance and expand their career opportunities inside and outside academia, a Career Development Plan should be established jointly by the supervisor(s) and the researcher. In addition to research objectives, this plan should comprise the researcher's training and career needs, including training on transferable skills, teaching, planning for publications and participation in conferences and events aiming at opening science and research to citizens. The Plan will have to be submitted as a project deliverable at the beginning of the action and can be updated when needed.

Euratom

Aiming to enhance nuclear expertise and excellence as well as synergies between Programmes, organisations active in nuclear research established in one of EU Member States or countries associated to the Euratom Research and Training programme 2021-2025, are eligible to participate³⁴. MSCA Postdoctoral Fellowships in this area of research will be supported by the Euratom Research and Training Programme 2021-2025 through an indicative annual financial contribution of EUR 1 million to the MSCA Postdoctoral Fellowships call³⁵.

ERA Fellowships

The ERA Fellowships implemented through Work Programme Annex 11, Widening Participation and Strengthening the European Research Area, provide specific support to researchers to undertake their fellowship in a widening country³⁶. This will help spread excellence and contribute to fostering balanced brain circulation in widening countries.

-----------------------------------	--

Proposals are invited against the following topic(s):

HORIZON-MSCA-2024-PF-01-01: MSCA Postdoctoral Fellowships 2024

Specific conditions	
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 354.60 million.
<i>Type of Action</i>	TMA Postdoctoral Fellowships - European Fellowships
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 62.58 million.
<i>Type of Action</i>	TMA Postdoctoral Fellowships - Global Fellowships

Expected Outcome: Project results are expected to contribute to the following outcomes:

For supported postdoctoral fellows

- Increased set of research and transferable skills and competences, leading to improved employability and career prospects of MSCA postdoctoral fellows within academia and beyond;
- New mind-sets and approaches to R&I work forged through international, inter-sectoral and interdisciplinary experience;
- Enhanced networking and communication capacities with scientific peers, as well as with the general public that will increase and broaden the research and innovation impact.

For participating organisations

- Increased alignment of working conditions for researchers in accordance with the principles set out in the European Charter for Researchers;
- Enhanced quality and sustainability of research training and supervision;
- Increased global attractiveness, visibility and reputation of the participating organisation(s);
- Stronger R&I capacity and output among participating organisations; better transfer of knowledge;
- Regular feedback of research results into teaching and education at participating organisations.

Scope: Fellowships will be provided to excellent researchers undertaking international mobility. Applications will be made jointly by the researcher and a beneficiary in the academic or non-academic sector.

Postdoctoral Fellowships either can take place in Europe (i.e. in an EU Member State or a Horizon Europe Associated Country) or in a Third Country not associated to Horizon Europe:

- European Postdoctoral Fellowships are open to researchers of any nationality who wish to engage in R&I projects by either coming to Europe from any country in the world or moving within Europe. The standard duration of these fellowships must be between 12 and 24 months.
- Global Postdoctoral Fellowships are open to European nationals or long-term residents³⁸ who wish to engage in R&I projects with organisations outside EU Member States and Horizon Europe Associated Countries. These fellowships require an outgoing phase of minimum 12 and maximum 24 months in a non-associated Third Country, and a mandatory 12-month return phase to a host organisation based in an EU Member State or a Horizon Europe Associated Country.

Specific eligibility conditions apply to MSCA Postdoctoral Fellowships in the research areas covered by the Euratom Research and Training Programme 2021-2025³⁹.

Secondments

Researchers receiving a Postdoctoral Fellowship may opt to include a secondment phase, within the overall duration of their fellowship in any country worldwide. The secondment phase can be a single period or be divided into shorter mobility periods.

For European Postdoctoral Fellowships, secondments cannot exceed one third of the requested duration of the action (excluding from the duration of the action any additional period for a non-academic placement) and should be in line with the project objectives, adding significant value and impact to the fellowship.

For Global Postdoctoral Fellowships, optional secondments are permitted for up to one third of the outgoing phase. A maximum of three months of such secondments can be spent at the start of the project at the beneficiary (or associated partners linked to the beneficiary), allowing the researcher to spend time there before going to the associated partner in the Third Country. This period of maximum three months will be considered as part of the outgoing phase.

Secondments cannot take place during the mandatory twelve-month return period to the host organisation in an EU Member State or Horizon Europe Associated Country.

Placements in the non-academic sector

³⁸ See eligibility conditions at the end of this Work Programme part.

³⁹ See eligibility conditions at the end of this Work Programme part.

Postdoctoral Fellowships can provide an additional period of up to six months to support researchers opting for a placement at the end of the project to work on R&I projects in an organisation from the non-academic sector established in an EU Member State or Horizon Europe Associated Country⁴⁰. While this possibility is also available to fellows recruited in the non-academic sector, such a placement must be implemented at a different non-academic host organisation established in an EU Member State or Horizon Europe Associated Country⁴¹. The request for such a non-academic placement must be an integral part of the proposal, explaining the added-value for the project and for the career development of the researcher, and will be subject to evaluation. This incentive aims at promoting career moves between sectors and organisations and thereby stimulate innovation and knowledge transfer while expanding career opportunities for researchers.

If the placement does not meet the requirements (taking place in an academic organisation or in a Third Country), the proposal will be evaluated without taking into account the placement. This might affect the final score.

Training activities

The training activities implemented under the Postdoctoral Fellowships should include training for key transferable skills, foster innovation and entrepreneurship, (e.g. commercialisation of results, Intellectual Property Rights, communication, public engagement and citizen science), foster good scientific conduct such as research integrity and promote Open Science practices (open access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science etc.).

Career Development Plan

In order to equip MSCA postdoctoral fellows with skills that enhance and expand their career opportunities inside and outside academia, a Career Development Plan should be established jointly by the supervisor(s) and the researcher. In addition to research objectives, this plan should comprise the researcher's training and career needs, including training on transferable skills, teaching, planning for publications and participation in conferences and events aiming at opening science and research to citizens. The Plan will have to be submitted as a project deliverable at the beginning of the action and can be updated when needed.

Euratom

Aiming to enhance nuclear expertise and excellence as well as synergies between Programmes, organisations active in nuclear research established in one of EU Member States or countries associated to the Euratom Research and Training programme 2021-2025, are eligible to participate⁴². MSCA Postdoctoral Fellowships in this area of research will be supported by the Euratom Research and Training Programme 2021-2025 through an

Scope: Fellowships will be provided to excellent researchers undertaking international mobility. Applications will be made jointly by the researcher and a beneficiary in the academic or non-academic sector.

Postdoctoral Fellowships either can take place in Europe (i.e. in an EU Member State or a Horizon Europe Associated Country) or in a Third Country not associated to Horizon Europe:

- European Postdoctoral Fellowships are open to researchers of any nationality who wish to engage in R&I projects by either coming to Europe from any country in the world or moving within Europe. The standard duration of these fellowships must be between 12 and 24 months.
- Global Postdoctoral Fellowships are open to European nationals or long-term residents⁴⁶ who wish to engage in R&I projects with organisations outside EU Member States and Horizon Europe Associated Countries. These fellowships require an outgoing phase of minimum 12 and maximum 24 months in a non-associated Third Country, and a mandatory 12-month return phase to a host organisation based in an EU Member State or a Horizon Europe Associated Country.

⁴⁶ See eligibility conditions at the end of this Work Programme part.

Specific eligibility conditions apply to MSCA Postdoctoral Fellowships in the research areas covered by the Euratom Research and Training Programme 2021-2025⁴⁷.

Secondments

Researchers receiving a Postdoctoral Fellowship may opt to include a secondment phase, within the overall duration of their fellowship in any country worldwide. The secondment phase can be a single period or be divided into shorter mobility periods.

For European Postdoctoral Fellowships, secondments cannot exceed one third of the requested duration of the action (excluding from the duration of the action any additional period for a non-academic placement) and should be in line with the project objectives, adding significant value and impact to the fellowship.

For Global Postdoctoral Fellowships, optional secondments are permitted for up to one third of the outgoing phase. A maximum of three months of such secondments can be spent at the start of the project at the beneficiary (or associated partners linked to the beneficiary), allowing the researcher to spend time there before going to the associated partner in the Third Country. This period of maximum three months will be considered as part of the outgoing phase.

Secondments cannot take place during the mandatory twelve-month return period to the host organisation in an EU Member State or Horizon Europe Associated Country.

Placements in the non-academic sector

Postdoctoral Fellowships can provide an additional period of up to six months to support researchers opting for a placement at the end of the project to work on R&I projects in an organisation from the non-academic sector established in an EU Member State or Horizon Europe Associated Country⁴⁸. While this possibility is also available to fellows recruited in the non-academic sector, such a placement must be implemented at a different non-academic host organisation established in an EU Member State or Horizon Europe Associated Country⁴⁹. The request for such a non-academic placement must be an integral part of the proposal, explaining the added-value for the project and for the career development of the researcher, and will be subject to evaluation. This incentive aims at promoting career moves between sectors and organisations and thereby stimulate innovation and knowledge transfer while expanding career opportunities for researchers.

If the placement does not meet the requirements (taking place in an academic organisation or in a Third Country), the proposal will be evaluated without taking into account the placement. This might affect the final score.

Training activities

⁴⁷ See eligibility conditions at the end of this Work Programme part.

⁴⁸ For proposals in the research areas covered by the Euratom Research and Training Programme, the organisation from the non-academic sector must be established in an EU Member State or a country associated to the Euratom Research and Training Programme 2021-2025

⁴⁹ idem

The training activities implemented under the Postdoctoral Fellowships should include training for key transferable skills, foster innovation and entrepreneurship, (e.g. commercialisation of results, Intellectual Property Rights, communication, public engagement and citizen science), foster good scientific conduct such as research integrity and promote Open Science practices (open access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science etc.).

Career Development Plan

In order to equip MSCA postdoctoral fellows with skills that enhance and expand their career opportunities inside and outside academia, a Career Development Plan should be established jointly by the supervisor(s) and the researcher. In addition to research objectives, this plan should comprise the researcher's training and career needs, including training on transferable skills, teaching, planning for publications and participation in conferences and events aiming at opening science and research to citizens. The Plan will have to be submitted as a project deliverable at the beginning of the action and can be updated when needed.

Euratom

Aiming to enhance nuclear expertise and excellence as well as synergies between Programmes, organisations active in nuclear research established in one of EU Member States or countries associated to the Euratom Research and Training programme 2021-2025, are eligible to participate⁵⁰. MSCA Postdoctoral Fellowships in this area of research will be supported by the Euratom Research and Training Programme 2021-2025 through an indicative annual financial contribution of EUR 1 million to the MSCA Postdoctoral Fellowships call⁵¹.

ERA Fellowships

The ERA Fellowships implemented through Work Programme Annex 11, Widening Participation and Strengthening the European Research Area, provide specific support to researchers to undertake their fellowship in a widening country⁵². This will help spread excellence and contribute to fostering balanced brain circulation in widening countries.

⁵⁰ See eligibility conditions at the end of this Work Programme part

⁵¹ As indicated in the Euratom Work Programme

⁵² These countries are aligned with Work Programme part 11, Widening Participation and Strengthening the European Research Area

MSCA Staff Exchanges

MSCA Staff Exchanges promote innovative international, inter-sectoral and interdisciplinary collaboration in research and innovation through exchanging staff and sharing knowledge and ideas at all stages of the innovation chain. The scheme fosters a shared culture of research and innovation that welcomes and rewards creativity and entrepreneurship and helps turn ideas into innovative products, services or processes. It is open to research, technical, administrative and managerial staff supporting R&I activities.

Expected impact

Proposals under this Action should contribute to the following expected impacts:

- Increase international, inter-sectoral and interdisciplinary mobility of research staff within Europe and beyond through collaborative research networks and activities;
- Strengthen the R&I human capital base in Europe and beyond;
- Increase Europe's attractiveness as a leading destination for R&I;
- Contribute to Europe's competitiveness and growth through high-quality R&I;
- Foster the culture of open science, innovation and entrepreneurship.

The following call(s) in this work programme contribute to this Action:

Overall indicative budget		78.50		

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A. See exceptions and specific conditions at the end of this work programme part.
<i>Eligibility conditions</i>	The general conditions are described in General Annex B. See exceptions and specific conditions at the end of this work programme part.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	For application of the general award criteria, including weighting and thresholds, see the specific conditions at the end of this Work Programme part.

⁵³ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The general procedure is described in General Annex F. See exceptions and specific conditions at the end of this work programme part.
<i>Expected EU contribution per project</i>	The expected EU contribution depends on the number of person-months requested. For the applicable unit contributions, see specific conditions for MSCA at the end of this Work Programme part.
<i>Legal and financial set-up of the Grant Agreements</i>	The general conditions are described in General Annex G. See exceptions and specific conditions at the end of this Work Programme part.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2023-SE-01-01: MSCA Staff Exchanges 2023

Expected Outcome: Project results are expected to contribute to the following outcomes:

For staff members

- Increased set of research and transferable skills and competences, leading to improved employability and career prospects within and outside academia;
- More knowledge and innovative ideas converted into products, processes and services;
- More entrepreneurial mind-sets, testing new and innovative ideas;
- Increased international exposure leading to extended networks and opportunities;
- Enhanced networking and communication capacities with scientific peers, as well as with the general public that will increase and broaden the research and innovation impact.

For participating organisations

- Innovative ways of cooperation and transfer of knowledge between sectors and disciplines;
- Strengthened and broader international, inter-sectoral and interdisciplinary collaborative networks;
- Boosted R&I capacity.

Scope: MSCA Staff Exchanges involve organisations from the academic and non-academic sectors (including SMEs) from across the globe.

Support is provided for international, inter-sectoral and interdisciplinary mobility of R&I staff leading to knowledge transfer between participating organisations.

Mobility through secondments

The organisations constituting the partnership contribute directly to the implementation of a joint R&I project by seconding and/or hosting eligible staff members. Such a project must explore activities that can be based on previous work but should go beyond and generate or strengthen long-term collaborations. Secondments must involve physical mobility⁵⁴ of the eligible staff members and must always take place between legal entities independent from each other.

MSCA Staff Exchanges can address three dimensions of mobility: international, inter-sectoral and interdisciplinary⁵⁵. While exchanges between organisations within EU Member States and Horizon Europe Associated Countries should mainly be inter-sectoral, same-sector exchanges⁵⁶ are also possible under the condition that they are interdisciplinary. Interdisciplinarity is not required for same-sector exchanges with non-associated Third Countries.

Secondments between institutions established in non-associated Third Countries or within the same EU Member State or Horizon Europe Associated Country are not eligible.

The collaborative approach of MSCA Staff Exchanges should exploit complementary competences of the participating organisations and create synergies between them. The secondments should be essential to achieve the joint project's R&I activities. The project should *inter alia* enable networking activities and the organisation of workshops and conferences, to facilitate sharing of knowledge and testing of innovative approaches for specific R&I topics.

Skills' development

For participating staff members, the project should offer new skills acquisition and career development perspectives. Participating organisations must ensure that the seconded staff are adequately mentored.

Call - MSCA Staff Exchanges 2024

HORIZON-MSCA-2024-SE-01

⁵⁴ Virtual mobility is not allowed for secondments.

⁵⁵ Interdisciplinarity means the integration of information, data, techniques, tools, perspectives, concepts or theories from two or more scientific disciplines (see definitions at the end of this Work Programme part).

⁵⁶ See specific conditions at the end of this Work Programme part.

For participating staff members, the project should offer new skills acquisition and career development perspectives. Participating organisations must ensure that the seconded staff are adequately mentored.

⁶³ Interdisciplinarity means the integration of information, data, techniques, tools, perspectives, concepts or theories from two or more scientific disciplines (see definitions at the end of this Work Programme part).

⁶⁴ See specific conditions at the end of this Work Programme part.

MSCA Co-funding of regional, national and international programmes

MSCA COFUND co-finances new or existing doctoral programmes and postdoctoral fellowship schemes with the aim of spreading the best practices of the MSCA including international, inter-sectoral and interdisciplinary research training, as well as international and cross-sectoral mobility of researchers at all stages of their career.

In practice, MSCA COFUND provides complementary funding for doctoral or postdoctoral programmes managed by entities established in EU Member States or Horizon Europe Associated Countries. Those co-funded programmes must follow MSCA's good practice in terms of international recruitment and minimum standard of employment for the recruited fellows as described in the European Charter for Researchers.

Expected impact

Proposals under this Action should contribute to the following expected impacts:

- Enhance talent and knowledge circulation across the R&I landscape, through international, inter-sectoral and interdisciplinary mobility, including by supporting regional or national smart specialisation strategies when appropriate;
- Align practices with MSCA policies based on the European Charter for Researchers;
- Improve the attractiveness of researchers' careers notably through better working and employment conditions;
- Strengthen Europe's human capital base in R&I by training highly-skilled researchers;
- Increase Europe's attractiveness as a leading R&I destination;
- Enhance the quality of R&I contributing to Europe's sustainable competitiveness;
- Establish sustainable collaboration between academic and non-academic organisations;
- Foster the culture of open science, innovation and entrepreneurship.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2023-COFUND-01-01: MSCA COFUND 2023

Expected Outcome: Projects results are expected to contribute to the following outcomes:

For supported doctoral candidates or postdoctoral researchers

- Deeper and more diverse set of research-related and transferable skills and competences;
- Improved employability and career prospects both within academia and beyond;
- New mind-sets and approaches to R&I work forged through international, inter-sectoral and interdisciplinary experience;
- Enhanced networking and communication capacities with scientific peers, as well as with the general public that will increase and broaden the research and innovation impact.

For participating organisations

- Enhanced quality and sustainability of research training;
- Increased global attractiveness, visibility and reputation of the participating organisation(s);
- Stronger R&I capacity and output among participating organisations;
- Increased contribution of the participating organisations to the local, regional and/or national socio-economic ecosystems;

- Regular feedback of research results into teaching and education at participating organisations.

Scope: Applicants submit proposals for new or existing doctoral or postdoctoral programmes with an impact on the enhancement of human resources in R&I at regional, national or international level. These programmes will be co-funded by MSCA COFUND.

Proposed programmes can cover any research disciplines ("bottom-up"), but exceptionally can also focus on specific disciplines, notably when they are based on national or regional Research and Innovation Strategies for Smart Specialisation (RIS3 strategies). In this case, the range of covered disciplines should allow reasonable flexibility for the researchers to define their topic.

Funding synergies with Cohesion policy funds and the Recovery and Resilience Facility (RRF) are strongly encouraged^{66,67}.

A Career Development Plan must be jointly established by the supervisor and each recruited researcher upon recruitment. In addition to research objectives, this Plan comprises the researcher's training and career needs, including training on transferable skills, teaching, planning for publications and participation in conferences and events aimed at opening science and research to citizens. The Plan must be established at the beginning of the recruitment and should be revised (and updated where needed) within 18 months.

COFUND takes the form of:

A) Doctoral programmes

Doctoral programmes offer research training activities to allow doctoral candidates to develop and broaden their skills and competences. They will lead to the award of a doctoral degree in at least one EU Member State or Horizon Europe Associated Country. The training activities should be based on the [EU Principles on Innovative Doctoral Training](#).

Substantial training modules, including digital ones, addressing key transferable skills and competences common to all fields, fostering good scientific conduct such as research integrity, and fostering the culture of Open Science, innovation and entrepreneurship will be supported. They will include, *inter alia*, training on the use of collaborative tools and approaches, opening access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science.

On top of compulsory international mobility, applicants are encouraged to include elements of cross-sectoral mobility and interdisciplinarity into their programmes. Collaboration with a wider set of associated partners, including from the non-academic sector, will be positively

⁶⁶ <https://ec.europa.eu/research/regions/index.cfm?pg=synergies>

⁶⁷ The Recovery and Resilience Facility supports reforms and investments undertaken by Member States. The aim is to mitigate the economic and social impact of the coronavirus pandemic and make European economies and societies more sustainable, resilient and better prepared for the challenges and opportunities of the green and digital transitions.

taken into account during the evaluation. These organisations may provide hosting or secondment opportunities or training modules in research or transferable skills.

Particular attention is paid to the quality of supervision and mentoring arrangements as well as career guidance. The selection procedure for doctoral candidates must be open, transparent and merit-based, in line with the Code of Conduct for the Recruitment of Researchers. The vacancy notice (to be widely advertised internationally, including on the EURAXESS⁶⁸ website) must mention if the published rates include all employer and employee's taxes and contributions. If possible, the gross salary (net salary + employee's taxes and contributions) should be published.

B) Postdoctoral Programmes

Postdoctoral Programmes fund individual advanced research training and career development fellowships for postdoctoral researchers. The programmes should offer training to develop key transferable skills and competences common to all fields, foster good scientific conduct such as research integrity, foster innovation and entrepreneurship and promote and (where appropriate) reward Open Science practices (open access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science, etc.).

Postdoctoral Programmes should have regular selection rounds following fixed deadlines or regular cut-off dates, allowing fair competition between researchers. The selection procedure for postdoctoral candidates must be open, competitive, merit-based and with a transparent international peer review, in line with the Code of Conduct for the Recruitment of Researchers. The vacancy notice (to be widely advertised internationally, including on the EURAXESS website) must mention if the published rates include all employer and employee's taxes and contributions. If possible, the gross salary (net salary + employee's taxes and contributions) should be published.

On top of compulsory international mobility, applicants are encouraged to include elements of cross-sectoral mobility and interdisciplinarity into their programmes. Researchers will be able to freely choose a research topic and the appropriate organisation to host them, fitting their individual needs.

Doctoral programmes offer research training activities to allow doctoral candidates to develop and broaden their skills and competences. They will lead to the award of a doctoral degree in at least one EU Member State or Horizon Europe Associated Country. The training activities should be based on the [EU Principles on Innovative Doctoral Training](#).

Substantial training modules, including digital ones, addressing key transferable skills and competences common to all fields, fostering good scientific conduct such as research integrity, and fostering the culture of Open Science, innovation and entrepreneurship will be supported. They will include, *inter alia*, training on the use of collaborative tools and approaches, opening access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science.

On top of compulsory international mobility, applicants are encouraged to include elements of cross-sectoral mobility and interdisciplinarity into their programmes. Collaboration with a wider set of associated partners, including from the non-academic sector, will be positively taken into account during the evaluation. These organisations may provide hosting or secondment opportunities or training modules in research or transferable skills.

Particular attention is paid to the quality of supervision and mentoring arrangements as well as career guidance. The selection procedure for doctoral candidates must be open, transparent and merit-based, in line with the Code of Conduct for the Recruitment of Researchers. The vacancy notice (to be widely advertised internationally, including on the EURAXESS⁷² website) must mention if the published rates include all employer and employee's taxes and contributions. If possible, the gross salary (net salary + employee's taxes and contributions) should be published.

B) Postdoctoral Programmes

⁷⁰ <https://ec.europa.eu/research/regions/index.cfm?pg=synergies>

⁷¹ The Recovery and Resilience Facility supports reforms and investments undertaken by Member States. The aim is to mitigate the economic and social impact of the coronavirus pandemic and make European economies and societies more sustainable, resilient and better prepared for the challenges and opportunities of the green and digital transitions.

⁷² <https://euraxess.ec.europa.eu/>

Postdoctoral Programmes fund individual advanced research training and career development fellowships for postdoctoral researchers. The programmes should offer training to develop key transferable skills and competences common to all fields, foster good scientific conduct such as research integrity, foster innovation and entrepreneurship and promote and (where appropriate) reward Open Science practices (open access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science, etc.).

Postdoctoral Programmes should have regular selection rounds following fixed deadlines or regular cut-off dates, allowing fair competition between researchers. The selection procedure for postdoctoral candidates must be open, competitive, merit-based and with a transparent international peer review, in line with the Code of Conduct for the Recruitment of Researchers. The vacancy notice (to be widely advertised internationally, including on the EURAXESS website) must mention if the published rates include all employer and employee's taxes and contributions. If possible, the gross salary (net salary + employee's taxes and contributions) should be published.

On top of compulsory international mobility, applicants are encouraged to include elements of cross-sectoral mobility and interdisciplinarity into their programmes. Researchers will be able to freely choose a research topic and the appropriate organisation to host them, fitting their individual needs.

Call - MSCA COFUND 2025

HORIZON-MSCA-2025-COFUND-01

Conditions for the Call

Indicative budget(s)⁷³

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million)	Indicative number of projects expected to be funded
		2025		
Opening: 23 Jan 2025				
Deadline(s): 24 Jun 2025				

⁷³ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

HORIZON-MSCA-2025-COFUND-01-01	TMA-Cofund-Doctoral	105.56		Not relevant
HORIZON-MSCA-2025-COFUND-01-01	TMA-Cofund-Postdoctoral			Not relevant
Overall indicative budget		105.56		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A. See exceptions and specific conditions at the end of this work programme part.
<i>Eligibility conditions</i>	The general conditions are described in General Annex B. See exceptions and specific conditions at the end of this work programme part.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	For application of the general award criteria, including weighting and thresholds, see the specific conditions at the end of this Work Programme part.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The general procedure is described in General Annex F. See exceptions and specific conditions at the end of this work programme part.
<i>Expected EU contribution per project</i>	The expected EU contribution depends on the number of person-months requested. For the applicable unit contributions, see specific conditions for MSCA at the end of this Work Programme part.
<i>Legal and financial set-up of the Grant Agreements</i>	The general conditions are described in General Annex G. See exceptions and specific conditions at the end of this Work Programme part.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2025-COFUND-01-01: MSCA COFUND 2025

Expected Outcome: Projects results are expected to contribute to the following outcomes:

For supported doctoral candidates or postdoctoral researchers

- Deeper and more diverse set of research-related and transferable skills and competences;
- Improved employability and career prospects both within academia and beyond;
- New mind-sets and approaches to R&I work forged through international, inter-sectoral and interdisciplinary experience;
- Enhanced networking and communication capacities with scientific peers, as well as with the general public that will increase and broaden the research and innovation impact.

For participating organisations

- Enhanced quality and sustainability of research training;
- Increased global attractiveness, visibility and reputation of the participating organisation(s);
- Stronger R&I capacity and output among participating organisations;
- Increased contribution of the participating organisations to the local, regional and/or national socio-economic ecosystems;
- Regular feedback of research results into teaching and education at participating organisations.

Scope: Applicants submit proposals for new or existing doctoral or postdoctoral programmes with an impact on the enhancement of human resources in R&I at regional, national or international level. These programmes will be co-funded by MSCA COFUND.

Proposed programmes can cover any research disciplines ("bottom-up"), but exceptionally can also focus on specific disciplines, notably when they are based on national or regional Research and Innovation Strategies for Smart Specialisation (RIS3 strategies). In this case, the range of covered disciplines should allow reasonable flexibility for the researchers to define their topic.

Funding synergies with Cohesion policy funds and the Recovery and Resilience Facility (RRF) are strongly encouraged^{74,75}.

A Career Development Plan must be jointly established by the supervisor and each recruited researcher upon recruitment. In addition to research objectives, this Plan comprises the researcher's training and career needs, including training on transferable skills, teaching, planning for publications and participation in conferences and events aimed at opening

74

<https://ec.europa.eu/research/regions/index.cfm?pg=synergies>

75

The Recovery and Resilience Facility supports reforms and investments undertaken by Member States. The aim is to mitigate the economic and social impact of the coronavirus pandemic and make European economies and societies more sustainable, resilient and better prepared for the challenges and opportunities of the green and digital transitions.

science and research to citizens. The Plan must be established at the beginning of the recruitment and should be revised (and updated where needed) within 18 months.

COFUND takes the form of:

A) Doctoral programmes

Doctoral programmes offer research training activities to allow doctoral candidates to develop and broaden their skills and competences. They will lead to the award of a doctoral degree in at least one EU Member State or Horizon Europe Associated Country. The training activities should be based on the [EU Principles on Innovative Doctoral Training](#).

Substantial training modules, including digital ones, addressing key transferable skills and competences common to all fields, fostering good scientific conduct such as research integrity, and fostering the culture of Open Science, innovation and entrepreneurship will be supported. They will include, *inter alia*, training on the use of collaborative tools and approaches, opening access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science.

On top of compulsory international mobility, applicants are encouraged to include elements of cross-sectoral mobility and interdisciplinarity into their programmes. Collaboration with a wider set of associated partners, including from the non-academic sector, will be positively taken into account during the evaluation. These organisations may provide hosting or secondment opportunities or training modules in research or transferable skills.

Particular attention is paid to the quality of supervision and mentoring arrangements as well as career guidance. The selection procedure for doctoral candidates must be open, transparent and merit-based, in line with the Code of Conduct for the Recruitment of Researchers. The vacancy notice (to be widely advertised internationally, including on the EURAXESS⁷⁶ website) must mention if the published rates include all employer and employee's taxes and contributions. If possible, the gross salary (net salary + employee's taxes and contributions) should be published.

B) Postdoctoral Programmes

Postdoctoral Programmes fund individual advanced research training and career development fellowships for postdoctoral researchers. The programmes should offer training to develop key transferable skills and competences common to all fields, foster good scientific conduct such as research integrity, foster innovation and entrepreneurship and promote and (where appropriate) reward Open Science practices (open access to publications and to other research outputs including data, FAIR data management, societal engagement and citizen science, etc.).

Postdoctoral Programmes should have regular selection rounds following fixed deadlines or regular cut-off dates, allowing fair competition between researchers. The selection procedure

⁷⁶ <https://euraxess.ec.europa.eu/>

for postdoctoral candidates must be open, competitive, merit-based and with a transparent international peer review, in line with the Code of Conduct for the Recruitment of Researchers. The vacancy notice (to be widely advertised internationally, including on the EURAXESS website) must mention if the published rates include all employer and employee's taxes and contributions. If possible, the gross salary (net salary + employee's taxes and contributions) should be published.

On top of compulsory international mobility, applicants are encouraged to include elements of cross-sectoral mobility and interdisciplinarity into their programmes. Researchers will be able to freely choose a research topic and the appropriate organisation to host them, fitting their individual needs.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2025-COFUND-02-01: MSCA Choose Europe 2025

Expected Outcome:

For supported researchers:

- Concrete career prospects and increased career stability
- Access to diverse career pathways in and outside academia
- Deeper and more diverse set of research-related, academic and transferable skills and competences, leading to greater autonomy

For participating organisations:

- Better alignment of research and Human Resources practices, including recruitment, career accession and progression systems, at participating organisation(s) with the European Charter for Researchers and the Council Recommendation of 18 December 2023 on a European framework to attract and retain research, innovation and

entrepreneurial talents in Europe and the Agreement on Reforming Research Assessment;

- Increased global attractiveness, visibility and reputation of the participating organisation(s);
- Stronger R&I and teaching capacity and output;
- Increased contribution to the local, regional and/or national socio-economic ecosystems;
- Stronger synergies across institutional research, management and teaching structures.

Scope: The objective of this new scheme is to tackle brain drain and precarity of researchers' careers to make Europe more attractive to the most promising young talents. Applicants submit proposals for talent recruitment programmes that will provide researchers holding a doctoral degree with excellent research and academic opportunities, potentially coupled with management activities, to lead them to concrete and attractive career prospects. This will have an impact on the enhancement of human resources in R&I at institutional, regional, national or international level. These programmes will be co-funded by MSCA Choose Europe.

The programmes will be divided into two phases. A first phase (24-36 months) in which the EU funding is equivalent to the minimum gross salary for the recruited researcher during this phase and a second phase (24 months) in which the applicant is expected to continue to employ the researcher, set salaries attractive at a national level and ensure availability of the necessary internal or external funds.

Proposed programmes can cover any research disciplines. The selection procedure for candidates must be open, competitive, merit-based and with a transparent international peer-review in line with the European Charter for Researchers⁷⁸. Alignment with the principles outlined in the Agreement on Reforming Research Assessment⁷⁹ is also encouraged. Selection criteria should be based primarily on excellence. Additional selection criteria require clear alignment with local human resources needs identified in the relevant institutional, regional or national strategies. These must be described in the proposal and must be listed in the vacancy notice (to be widely advertised internationally, including on the EURAXESS website⁸⁰) alongside the gross salaries applicable to the two programme phases (net salary + employee's taxes and contributions). Selected fellows will be able to work in research, teaching or management positions and, where relevant, define their own research topic at their host institution(s). The programmes should aim at offering excellent working conditions to researchers, including salary, professional resources, and career development.

The career development should incorporate transversal skills but also job-specific skills and, where relevant, language courses to ensure that the training is in line with the career opportunities offered following the fellowship. These opportunities must include concrete and

⁷⁸ [Council Recommendation of 18 December 2023 on a European framework to attract and retain research, innovation and entrepreneurial talents in Europe](#)

⁷⁹ [agreement_final.pdf \(coara.eu\)](#)

⁸⁰ [EURAXESS](#)

attractive long-term career prospects, such as pathways towards open-ended contracts, which can be subject to assessment and evaluation. There must be a fair, equal, inclusive, transparent, structured career accession and progression system providing access to these opportunities in line with the Council Recommendation of 18 December 2023 on a European framework to attract and retain research, innovation and entrepreneurial talents in Europe, the European Charter for Researchers in its annex and the Agreement on Reforming Research Assessment.

A Career Development Plan must be maintained throughout the period of the Choose Europe programme. In addition to research objectives, this Plan comprises the researcher's career development needs, including training on languages, transferable skills, teaching, planning for publications and participation in conferences and events. The Plan should outline the projected career progression paths in the host institution.

MSCA and Citizens

MSCA and Citizens⁸¹ aims to bring research and researchers closer to the public at large, to increase awareness of research and innovation activities and to boost public recognition of science and research education. It will show the role of the researcher for the society and economy, as well as the impact of researchers' work on citizens' daily lives. It also aims to raise the interest of young people in research and scientific careers.

MSCA and Citizens will address the general public, attracting people regardless of the level of their scientific background, with a specific focus on families, pupils, students, and notably those who do not have easy access to, and thus are less inclined to engage in, STEAM fields (science, technology, engineering, arts and mathematics) or research activities. Inclusiveness should be key, in view of broadening access to science and research to all.

MSCA and Citizens should also promote gender balance and inclusiveness in science, Open Science, and Responsible Research and Innovation.

These objectives will be pursued through the organisation of the European Researchers' Night and the implementation of the Researchers at Schools initiative.

The European Researchers' Night is the largest research communication and promotion event taking place across EU Member States and Horizon Europe Associated Countries. A wide geographic coverage that reflects the European nature of this initiative is key.

The Researchers at Schools initiative aims to strengthen the connection between research and education. It brings school classes to research facilities and researchers to schools or other pedagogical and educational centres, encouraging interaction with pupils at all levels of education. Researchers and pupils will meet to talk about current and future challenges of our societies and the related key role of research. Pupils will learn directly about research projects and activities addressing the EU priorities and main orientations.

Expected impact

Proposals under this Action should contribute to the following expected impacts:

- Enhance engagement with citizens on R&I;
- Increase awareness among the general public of the importance and benefits of R&I, especially EU-funded research, and its concrete impact on citizens' daily life;
- Contribute to the diffusion and the promotion of excellence research projects across Europe and beyond by reaching citizens in as many participating countries as possible;

⁸¹ The below objectives and expected impact apply to the HORIZON-MSCA-2025-CITIZENS-01 Call only, and have been revised from those that applied to the HORIZON-MSCA-2023-CITIZENS-01 Call, see the initial MSCA Work Programme part 2023-2024 adopted by the European Commission Decision C(2022)7550 of 6 December 2022

- Raise the interest of young people in science and research careers;

Support school teachers and educators in developing a scientific approach around priority topics and creating a learning opportunity for pupils through a direct interaction with researchers.

The following call(s) in this work programme contribute to this Action:

Call	Budgets (EUR million)		Deadline(s)
	2023	2025

⁸² The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.

The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

⁸³ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

	Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2023-CITIZENS-01-01: European Researchers' Night and Researchers at Schools 2024-2025

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.10 and 0.30 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.42 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Project results are expected to contribute to the following outcomes:

For researchers

- Enhanced opportunities to interact with citizens and local, regional and national authorities;
- Improved communication skills and competences to interact with a non-research audience, notably with pupils and students.

For organisations

- Increased reputation and visibility of participating organisations in terms of hosting excellence research projects towards the general public and possible future students;
- Researchers' work made more tangible, concrete, accessible, and thus opening research and science to all;
- Improved outreach to all audiences, and notably those who do not have an easy access to science and research activities;
- Better communication of R&I results and activities to society, increased and strengthened opportunities for citizens' engagement.

Scope: Proposals should cover both the organisation of the European Researchers' Night and the implementation of the Researchers at Schools initiative.

The European Researchers' Night takes place every year, on the last Friday of September⁸⁴. It supports events that can last up to two days: they can start on Friday and continue the following day. Pre-events, prior to the main event, and related post-events, such as wrap-up meetings or small-scale follow-up events, can also be organised. It is the occasion for a Europe-wide public and media event for the promotion of research careers.

The European Researchers' Night targets the general public, addressing and attracting people regardless of the level of their scientific background, with a special focus on young people and their families, pupils and students, and notably those who do not have easy access to, and thus are less inclined to engage in STEAM fields (science, technology, engineering, arts and mathematics) or research activities.

The Researchers at Schools initiative brings researchers to schools and other pedagogical and educational centres to interact with pupils on societal challenges and on the key role of research to address them. Pupils will thus also learn directly about research projects and initiatives related to EU main priorities.

Types of activities

European Researchers' Night activities can combine education with entertainment, especially when addressing young audiences. They can take various forms, such as exhibitions, hands-on experiments, science shows, simulations, debates, games, competitions, quizzes, etc. Where appropriate, engagement with educational institutions should be sought in order to encourage formal and informal science education with the aim of improving the scientific knowledge base. The European Researchers' Night should be highlighted as a European (and Europe-wide) event, and each proposal should promote the European Union and its impact on citizens' daily life in the most appropriate way, according to the set-up and the configuration of the event, its location and its activities.

Researchers at Schools activities will allow researchers to showcase their work and interact with pupils. Researchers will engage with teachers, educators and pupils on challenges related to climate change, sustainable development, health and other issues related to the European Commission priorities and main orientations, such as the European Green Deal or the EU Missions. The Researchers at Schools activities should take place at any time during the project duration and should be subject to a dedicated promotion, particularly towards schools and other pedagogical and educational centres.

Involvement of researchers funded by Horizon Europe or previous Framework Programmes, notably by the Marie Skłodowska-Curie Actions, is highly encouraged.

⁸⁴ Except for countries which for strong cultural reasons would be prevented from organising any action addressing the public at large on such a date.

Both the European Researchers' Night and Researchers at Schools initiative should promote gender balance, diversity and inclusiveness in science in terms of planned activities and researchers involved.

The European Commission has defined priorities, notably through the EU Missions, which aim to tackle challenges faced by our societies. Applicants are encouraged to focus on, and include activities relating to these priorities identified by the Missions in their events.

Partnerships and coordination at regional, national or cross-border levels will be strongly encouraged aiming at a good geographical spread and avoiding overlaps. Activities carried-out in non-associated third countries are not eligible for funding.

High-quality applications not retained due to lack of funding may be granted the status of associated events.

Eligible costs will take the form of lump sum contributions as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.

Applicants are encouraged to submit proposals covering activities for both 2024 and 2025, including the organisation of two successive editions⁸⁵ (2024 and 2025) of the European Researchers' Night and implementation of Researchers at Schools activities during the project duration.

Call - MSCA and Citizens 2025

HORIZON-MSCA-2025-CITIZENS-01

Conditions for the Call

Indicative budget(s)⁸⁶

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ⁸⁷	Indicative number of projects expected to be
		2025		

⁸⁵ The expected contribution for projects covering two editions of the European Researchers' Night and Researchers at Schools activities is between EUR 0.1 and 0.3 million, but this does not preclude submission and selection of proposals requesting different amounts.

⁸⁶ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.

The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

⁸⁷ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

				funded
Opening: 17 Jun 2025 Deadline(s): 22 Oct 2025

<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2025-CITIZENS-01-01: European Researchers' Night and Researchers at Schools 2026-2027

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.10 and 0.35 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.25 million.
<i>Type of Action</i>	Coordination and Support Actions

<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: Activities carried-out in non-associated third countries are not eligible for funding.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio covering the widest geographical coverage with events and activities held in as many eligible countries as possible, grants will be awarded to applications not only in order of ranking but at least also to each application that is highest ranked per country based on where the coordinator is established (including trans-national consortia), provided that the applications attain all thresholds.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs may take form of lump sum contributions as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie Actions under the Horizon Europe Programme.</p>

Expected Outcome: Project results are expected to contribute to the following outcomes:

For researchers

- Enhanced opportunities to interact with citizens and local, regional and national authorities;
- Improved communication skills and competences to interact with a non-research audience, notably with pupils and students.

For organisations

- Increased reputation and visibility of participating organisations in terms of hosting excellent research projects towards the general public and possible future students;
- Researchers' work made more tangible, concrete, accessible, and thus opening research and science to all;
- Improved outreach to all audiences across Europe, and notably those who do not have an easy access to science and research activities;
- Better communication of R&I results and activities to society, increased and strengthened opportunities for citizens' engagement.

Scope: Proposals should cover both the organisation of the European Researchers' Night and the implementation of the Researchers at Schools initiative.

The European Researchers' Night takes place every year, on the last Friday of September⁸⁸. It supports events that can last up to two days: they can start on Friday and continue the following day. Pre-events, prior to the main event, and related post-events, such as wrap-up meetings or small-scale follow-up events, can also be organised. It is the occasion for a Europe-wide public and media event for the promotion of research careers.

The European Researchers' Night targets the general public, addressing and attracting people regardless of the level of their scientific background, with a special focus on young people and their families, pupils and students, and notably those who do not have easy access to, and thus are less inclined to engage in STEAM fields (science, technology, engineering, arts and mathematics) or research activities.

The Researchers at Schools initiative brings school classes to research facilities and researchers to schools or other pedagogical and educational centres. This allows researchers to interact with pupils on societal challenges and on the key role of research to address them. Pupils will thus also learn directly about research projects and initiatives related to EU main priorities.

Types of activities

European Researchers' Night activities can combine education with entertainment, especially when addressing young audiences. They can take various forms, such as exhibitions, hands-on experiments, science shows, simulations, debates, games, competitions, quizzes, etc. Where appropriate, engagement with educational institutions should be sought in order to encourage formal and informal science education with the aim of improving the scientific knowledge base. The European Researchers' Night should be highlighted as a European and Europe-wide event. Additionally, each proposal should promote the European Union, EU-funded research and its impact on citizens' daily life in the most appropriate way, according to the set-up and the configuration of the event, its location and its activities.

Researchers at Schools activities will allow researchers to showcase their work and interact with pupils. They can take various forms, such as presentations, discussions, speed-dating, citizen science, science shows, summer schools, nature walks or visits to research facilities. Where appropriate, researchers should receive training ahead of the activities on science communication, especially targeting a young audience. The Researchers at Schools activities should take place at any time during the project duration and should be subject to a dedicated promotion, particularly towards schools and other pedagogical and educational centres.

Involvement of researchers funded by Horizon Europe or previous Framework Programmes, notably by the Marie Skłodowska-Curie Actions, is highly encouraged.

Both the European Researchers' Night and Researchers at Schools initiative should promote gender balance, diversity and inclusiveness in science in terms of planned activities and researchers involved.

⁸⁸ Except for countries which for strong cultural reasons would be prevented from organising any action addressing the public at large on such a date.

Partnerships and coordination at regional, national or cross-border levels will be strongly encouraged aiming at a good geographical spread and avoiding overlaps.

Where appropriate, synergies should be sought with the newly created Science Comes To Town initiative⁸⁹.

High-quality applications not retained due to lack of funding may be granted the status of associated events.

Eligible costs will take the form of lump sum contributions as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.

The maximum requested EU contribution per proposal should not exceed EUR 350 000. All proposals are encouraged to bring additional sources of funding. The budget will be evaluated under the criterion 3 “Quality and efficiency of the implementation”. Proposals that exceed this maximum EU contribution might be penalised during the evaluation unless a strong justification is provided.

Applicants are encouraged to submit proposals covering activities for both 2026 and 2027, including the organisation of two successive editions (2026 and 2027) of the European Researchers’ Night and implementation of Researchers at Schools activities during the project duration.

⁸⁹ <https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/opportunities/topic-details/HORIZON-WIDERA-2024-ERA-02-02>

MSCA Support

MSCA Support includes a set of activities organised through calls for proposals to promote, support and complement the MSCA implementation. They will cover:

- the exploitation of the MSCA contribution to EU policies and priorities;
- the facilitation of cooperation between MSCA National Contact Points (NCPs);
- the promotion of the MSCA at international level;
- the support to European and national initiatives and programmes in support of researchers at risk.

Expected impact

Proposals under MSCA Support should contribute to some of the following expected impacts:

- Ensure a coordinated and strategic monitoring, assessment and dissemination of the MSCA results and best practices vis-à-vis relevant EU priorities (including EU Missions) and ERA objectives;
- Improve and further professionalise MSCA NCP services allowing a wider diffusion of the programme, lowering entry barriers for newcomers and increasing the overall quality of submitted proposals;
- Contribute to a more strategic international cooperation in MSCA in line with R&I mutual interests and EU external policies;
- Strengthen co-operation between European and national initiatives and programmes in support of researchers who are experiencing threats to their life, liberty, or research career, and those who are forced or have been forced to flee because of such threats.

The following call(s) in this work programme contribute to this Action:

Overall indicative budget		2.00		

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General

⁹⁰ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.

The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

⁹¹ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

	Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2023-FTP-01-01: MSCA Feedback To Policy 2023

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Procedure</i>	The procedure is described in General Annex F. The following exceptions apply: The granting authority can fund a maximum of one project. The evaluation committee will be composed partially or fully by representatives of EU institutions.

Expected Outcome: Project results are expected to contribute to the following outcomes:

- Coordinated monitoring and exploitation of the contribution of Horizon 2020 and Horizon Europe MSCA projects⁹² to the EU Missions⁹³;
- Enhanced interaction between MSCA beneficiaries, researchers and policymakers, on research results and their contribution to policy developments, and greater collaboration

⁹² This refers to MSCA Innovative Training Networks, Individual Fellowships, Research and Innovation Staff Exchanges, COFUND, NIGHT in Horizon 2020, and MSCA Doctoral Networks, Postdoctoral Fellowships, Staff exchanges, COFUND, MSCA and Citizens in Horizon Europe.

⁹³ [EU Missions in Horizon Europe | European Commission \(europa.eu\)](https://european-commission.europa.eu/eu-missions-in-horizon-europe)

among MSCA beneficiaries and researchers themselves particularly in view of possible follow-up partnerships and funding opportunities⁹⁴;

- Detailed MSCA portfolio analysis in the EU Missions areas;
- Recommendations for strengthening the policy impact of the MSCA;
- Assessment of the contribution of the MSCA to the ERA policy objectives related to support for researchers' training and skills development, and intersectoral cooperation;
- Strengthened synergies and complementarities between the MSCA and other relevant EU-funded initiatives and programmes linked to the EU Missions, researchers' training, skills and career development and related intersectoral cooperation.

Scope: While the bottom-up nature of the MSCA is and will remain its core principle, there is a need to have an overview of the funded research portfolio and make stronger thematic links between MSCA projects, raise visibility of their impact on ERA priority areas and gather stakeholder feedback on ways to maximise the MSCA impact. Given the thematic diversity of MSCA-funded projects, the scope of this call cannot cover all the areas to which the MSCA contribute. It should be seen as a pilot to map areas and types of intervention for possible similar actions in the future that will support a broader policy feedback process.

One of the objectives of this action is to support ongoing and planned Commission initiatives⁹⁵ which focus on exploiting and assessing the impact of Horizon 2020 and Horizon Europe projects results in relation to thematic and cross-cutting priorities, including the EU Missions.

It also aims to assess the extent to which MSCA projects achieve two of the core horizontal policy objectives of the programme: the development of researchers' training, skills and career and the related promotion of intersectoral collaboration.

Activities should therefore include the contribution and impact of MSCA projects in relation to:

- The EU Missions and societal challenges they address;
- Researchers' skills development, including but not limited to the skills needed to tackle the thematic areas of the Missions;
- Cooperation between academic and non-academic organisations⁹⁶, with the emphasis on the business sector.

⁹⁴ E.g. by following up outcomes and feedback received from MSCA cluster events through ensuring interaction with and between stakeholders

⁹⁵ E.g. Horizon Results Platform, Horizon Results Booster

⁹⁶ See definitions at the end of this Work Programme part

The activities should contribute to strengthening complementarities between ongoing MSCA projects, especially with a view to better exploiting their results and maximising their impact vis-à-vis the thematic and cross-cutting priorities mentioned above.

The proposed activities should include:

- Consolidating the ongoing EU Missions cross-portfolio analysis to make full use of MSCA projects results and analyse their contribution to each individual Mission;
- Identifying good practice examples of cooperation between academic and non-academic organisations, with a special emphasis on the business sector as well as the main obstacles for stronger intersectoral cooperation in MSCA;
- Identifying researchers' training, skills and career development needs (both research-related and transferable) to tackle societal challenges, including those covered by the Missions;
- Exploring ways to consolidate the available training material developed in MSCA projects, especially on transferrable skills, and exploring how to make it more broadly accessible for further exploitation;
- Following up the existing policy feedback activities under the MSCA, particularly through coordination with the ongoing Commission activities (cluster events, studies and analyses) and through regular consolidation of the outcomes and deliverables of policy feedback activities;
- Supporting/complementing existing communication and dissemination efforts by the European Commission⁹⁷ to promote and share MSCA success stories and examples of good practice in the thematic and horizontal priorities of this call (EU Missions, intersectoral cooperation, researchers' training, skills and career development);
- Identifying good practice of synergies between MSCA projects and other relevant programmes and initiatives;
- Providing practical recommendations on how to better exploit MSCA project results and enhance impact in the areas of EU Missions, intersectoral cooperation and researchers' skills and career development in line with the call's objectives.
- Analysing trends in research to feed back into the MSCA and Commission R&I policy. Due to their bottom-up nature, the MSCA provide a valuable resource for tracking changing research trends and can provide an evidence base for any changes in the latter stages of Horizon Europe as well as the design of subsequent framework programmes;

The expected deliverables should include a combination of analytical reports, *ad hoc* policy briefs, stakeholders' events and meetings, policy roundtables and different communication and dissemination support actions, such as:

⁹⁷ E.g.: Horizon Results Platform and Booster, Euraxess

- Studies, analyses, reports looking into trends and developments in MSCA relevant to:
 - The EU Missions, including citizens' engagement activities;
 - Researchers' skills and career development and training;
 - Intersectoral cooperation between academia and other sectors (businesses, industry, SMEs, public administration, civil society organisations, etc.), as well as motivation and obstacles to engage in such cooperation;
 - Examples of synergies and complementarities with other EU/national/regional programmes and frameworks.
- Consolidation of projects results for policy feedback and communication and dissemination purposes;
- Dissemination and networking activities using the results of cluster events and communities of practice identified for the events; consulting project beneficiaries on policy needs, dissemination based on reports and feedback from cluster events; providing input into coordination of cluster events (e.g. suggesting themes, format and structure of cluster events);
- Synthesis of coordination activities linked to policy feedback and the improved exploitation of MSCA projects results: e.g. preparatory briefings, follow-up reports, feedback consolidation linked to MSCA cluster events, *ad hoc* policy briefs and monitoring of exploitation opportunities.

The maximum duration of the action is 48 months.

Call - Trans-national cooperation among Marie Skłodowska-Curie National Contact Points (NCP) 2024

HORIZON-MSCA-2024-NCP-01

Conditions for the Call

Indicative budget(s)⁹⁸

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR	Indicative number of

 The Director-General responsible may delay the deadline(s) by up to two months.
 All deadlines are at 17.00.00 Brussels local time.
 The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

		2024	million) ⁹⁹	projects expected to be funded
<p>Opening: 16 May 2024</p> <p>Deadline(s): 04 Sep 2024</p>				
HORIZON-MSCA-2024-NCP-01-01	CSA	2.00	1.50 to 2.00	1
Overall indicative budget		2.00		

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2024-NCP-01-01: Trans-national cooperation among Marie Skłodowska-Curie National Contact Points (NCP) 2024

Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹⁹ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

<i>project</i>	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: Participants other than associated partners must be Horizon Europe national support structures (e.g. NCP) responsible for MSCA and officially nominated to the Commission, from a Member State or Associated Country.</p> <p>Only if and for as long as Horizon Europe structures have not been officially nominated when the call opens, will national support structures responsible for MSCA nominated for Horizon 2020 be eligible.</p> <p>Due to the scope of this topic, legal entities established in non-associated third countries are exceptionally eligible for Union funding.</p> <p>Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action in a capacity other than as an associated partner.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The evaluation committee will be composed partially or fully by representatives of EU institutions.</p> <p>The granting authority can fund a maximum of one project.</p>

Expected Outcome: Projects are expected to contribute to the following outcomes:

- An improved and professionalised NCP service across Europe, thereby helping simplify access to Horizon Europe calls, lowering the entry barriers for newcomers, and raising the average quality of proposals submitted;
- Harmonised and improved trans-national cooperation between NCPs;
- More consistent level of NCP support services across Europe and beyond, notably in widening countries;
- Increased participation of third-country NCPs in the activities of the action.

Scope: The objective is to facilitate the trans-national co-operation between National Contact Points (NCPs) for the MSCA, including those established in Third Countries, with a view to identifying and sharing good practices and raising the general standard of support to applicants, taking into account the diversity of actors and experiences.

Support will be given to a consortium of formally nominated MSCA NCPs. The activities will be tailor-made to the needs and priorities of the NCPs concerned and may include benchmarking, joint workshops, enhanced cross-border brokerage events, training sessions linked to the MSCA and wider R&I priorities and tools, twinning and mentoring schemes. Special attention will be given to enhancing the competence of MSCA NCPs, including helping newcomers and less experienced NCPs to rapidly acquire the know-how accumulated by their peers. Cooperation with other EU networks such as Euraxess Worldwide, Enterprise Europe Network, COST, will be encouraged to increase the visibility to potential beneficiaries, especially in the non-academic sector.

Addressing the R&I gap

There still is a research and innovation gap across Europe and discrepancies remain between European countries in their capacity to attract funding and researchers. This gap is observed in the MSCA as well, and specific measures to support the NCPs in “widening countries,” such as training and mentorship schemes, should be organised to stimulate more high-quality applications with beneficiaries in these countries and increase their success rate in MSCA.

Attract researchers from third countries

The MSCA are the main EU instrument to attract researchers from Third Countries to Europe. Specific measures to encourage Third-Country NCPs to create contacts and participate in the activities of the project (e.g. training, twinning, mentoring, and other capacity building and networking activities) should be foreseen.

The focus throughout should be on issues specific to the MSCA and should not duplicate actions foreseen in the NCP network under “Widening participation and strengthening the European Research Area”.

The consortium should have a good representation of experienced and less experienced NCPs and include NCPs from widening countries.

Submission of a single proposal is encouraged. NCPs choosing not to participate as a member of the consortium are nevertheless invited and encouraged to participate in the project activities (e.g. workshops).

The expected duration of the action will be 36 months.

Call - MSCA International Cooperation 2024

HORIZON-MSCA-2024-INCO-01

Conditions for the Call

Indicative budget(s)¹⁰⁰

¹⁰⁰ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.

Proposals are invited against the following topic(s):

The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

¹⁰¹ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

HORIZON-MSCA-2024-INCO-01-01: MSCA International Cooperation 2024

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The granting authority can fund a maximum of one project.</p> <p>The evaluation committee will be composed partially or fully by representatives of EU institutions.</p>

Expected Outcome: Project results are expected to contribute to the following outcomes:

- Broader and more strategic promotion of international cooperation opportunities offered through MSCA;
- Monitoring progress, opportunities and challenges in MSCA bilateral and bi-regional cooperation with main international partner countries and regions;
- Strengthening complementarities with other relevant promotion and cooperation initiatives funded through Horizon Europe or other EU programmes.

Scope: The objective is to foster international cooperation in MSCA in Horizon Europe, through a dedicated support action to complement and ensure coordination between existing promotion channels at local level, and ensure consistency with formal R&I policy dialogues at bilateral and regional levels. Focus should be given:

- At bilateral level on countries having concluded bilateral Science and Technology Agreements with the EU (Algeria, Argentina, Australia, Brazil, Canada, Chile, China, Egypt, India, Japan, Jordan, Korea, Mexico, Morocco, New Zealand, South Africa, Switzerland, Tunisia, Ukraine and the United States).
- At regional level, on bi-regional research and innovation policy dialogues, established notably with the African Union, ASEAN, LAC, Mediterranean partner countries, Eastern Partnership countries and Western Balkans.

Based on the outcomes of a study¹⁰² on the MSCA international dimension in Horizon 2020, activities to be implemented should include:

- Policy support to bilateral/bi-regional cooperation: assessing main cooperation trends, opportunities and challenges related to local developments in the R&I/higher education domain; identifying possible gaps versus joint priorities and participation of prominent local stakeholders; reviewing existing cooperation mechanisms (info relays, training, co-funding schemes) relevance and efficiency for MSCA; identifying main existing or planned cooperation initiatives to build upon, as well as major local players, networks and associations to be prioritized; qualitative monitoring of the participation in the different MSCA calls; preparing background reports ahead of joint committee meetings and regional dialogues; providing contributions to newsletters and periodic reports from existing information relays, e.g. Euraxess Worldwide, EU Delegations.
- Promotion of MSCA cooperation opportunities: identifying main local/bilateral or bi-regional events to target for MSCA promotion and opportunities for ad-hoc events co-located with bilateral/regional policy dialogues; liaising with local MSCA info relays, including local NCPs, Euraxess Worldwide offices, EU Delegations/S&T Counsellors, National Erasmus+ Offices, Enterprise Europe Network and other stakeholders/association representatives to identify coordinated promotion plans; organising MSCA promotion and training sessions (including through the physical participation of EU trainers when relevant); liaising with the EU NCP coordination platform to coordinate promotion activities with MSCA NCPs
- Cross cutting activities: analysing consistency with EU R&I bilateral and bi-regional, cooperation roadmaps and action plans, people-to-people dialogues, synergies with promotion events and activities related to Horizon Europe, including ERC or COST and other EU programmes (in particular Erasmus+).

The expected duration of the action is 36 months.

Call - MSCA for Researchers at Risk 2024

¹⁰³ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025.

	of Action	(EUR million)	contribution per project (EUR million) ¹⁰⁴	number of projects expected to be funded
		2024		
Opening: 12 Sep 2024 Deadline(s): 14 Jan 2025				
HORIZON-MSCA-2024-RR-01-01	CSA	1.50	1.00 to 1.50	1
Overall indicative budget		1.50		

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2024-RR-01-01: MSCA Researchers at Risk 2024

Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of between EUR 1.00 and 1.50 million would allow these outcomes to be addressed

¹⁰⁴ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

<i>project</i>	appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 1.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The granting authority can fund a maximum of one project.</p> <p>The evaluation committee will be composed partially or fully by representatives of EU institutions.</p>

Expected Outcome: Project results are expected to contribute to the following outcomes:

- More targeted and customised support for researchers at risk at European, national and institutional level;
- Improved support to researchers at risk through the provision of policy recommendations, as well as advice and assistance on their implementation;
- A more sustainable and professionalised support network/structure/system for researchers at risk across Europe, facilitating access to funding and networking opportunities, creating level playing field for applicants to European and national R&I programmes, and raising the quality of submitted proposals;
- More synergies between initiatives supporting researchers at risk funded by EU programmes (such as Horizon Europe and Erasmus+) and national or institutional actors;
- Increased exposure of researchers at risk to the industry and to the non-academic sector notably through targeted networking events, professional training, mentoring and guidance;
- Greater awareness in Europe and beyond on why researchers are at risk and ways to support them.

Scope: Building on the available results of past and on-going Researchers at Risk initiatives¹⁰⁵ which have strengthened support structures across the EU and provided some form of guidance for researchers at risk, further support is envisaged for scaling up and moving towards more customised support for researchers at risk based on the needs already identified in the national and EU initiatives implemented so far.

Lack of regular needs-based training and targeted networking activities remains a challenge for many researchers at risk in Europe without professional networks and direct sources of information addressing their specific needs.

¹⁰⁵ Eg. Inspireurope ([Inspireurope - SAR Europe](#)) ; Inspireurope+ ; MSCA4Ukraine

Moving further from solely identifying researchers' needs, this action should aim at delivering the best possible solutions to the challenges faced by researchers.

The support action should be aligned with the general objectives of the MSCA, in particular scientific excellence, skills and career development, inter-sectoral mobility, equal opportunities and inclusiveness, attractive working conditions, work/life balance, while fostering open science, innovation and entrepreneurship. This action will place a specific focus on training and networking activities for researchers, in line with the MSCA priorities and as a step further in providing sustainable and needs-based professional development support for researchers at risk across Europe.

It should not duplicate other actions foreseen under Horizon Europe or other EU-funded programmes such as Erasmus+, but rather build synergies between these programmes. The activities carried out under this support action should complement actions in EU Member States and third countries associated to Horizon Europe.

The expected duration of the action is 36 months.

Call - MSCA Feedback to Policy 2024

HORIZON-MSCA-2024-FTP-01

Conditions for the Call

HORIZON-MSCA-2024-FTP-01-01: MSCA Feedback To Policy 2024

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Procedure</i>	The procedure is described in General Annex F. The following exceptions apply: The granting authority can fund a maximum of one project.

Expected Outcome: Project results are expected to contribute to the following outcomes:

- Coordinated monitoring and exploitation of the contribution of Horizon 2020 and Horizon Europe MSCA projects¹⁰⁸ to the EU Missions¹⁰⁹;
- Enhanced interaction between MSCA beneficiaries, researchers and policymakers, on research results and their contribution to policy developments, and greater collaboration among MSCA beneficiaries and researchers themselves particularly in view of possible follow-up partnerships and funding opportunities¹¹⁰;
- Detailed MSCA portfolio analysis in the EU Missions areas;
- Recommendations for strengthening the policy impact of the MSCA;
- Assessment of the contribution of the MSCA to the ERA policy objectives related to support for researchers' training and skills development, and intersectoral cooperation;
- Strengthened synergies and complementarities between the MSCA and other relevant EU-funded initiatives and programmes linked to the EU Missions, researchers' training, skills and career development and related intersectoral cooperation.

Scope: While the bottom-up nature of the MSCA is and will remain its core principle, there is a need to have an overview of the funded research portfolio and make stronger thematic links between MSCA projects, raise visibility of their impact on ERA priority areas and gather stakeholder feedback on ways to maximise the MSCA impact. Given the thematic diversity of MSCA-funded projects, the scope of this call¹¹¹ cannot cover all the areas to which the MSCA contribute. It should be seen as a pilot to map areas and types of intervention for possible similar actions in the future that will support a broader policy feedback process.

One of the objectives of this action is to support ongoing and planned Commission initiatives¹¹² which focus on exploiting and assessing the impact of Horizon 2020 and Horizon Europe projects results in relation to thematic and cross-cutting priorities, including the EU Missions.

It also aims to assess the extent to which MSCA projects achieve two of the core horizontal policy objectives of the programme: the development of researchers' training, skills and career and the related promotion of intersectoral collaboration.

Activities should therefore include the contribution and impact of MSCA projects in relation to:

- The EU Missions and societal challenges they address;

¹⁰⁸ This refers to MSCA Innovative Training Networks, Individual Fellowships, Research and Innovation Staff Exchanges, COFUND, NIGHT in Horizon 2020, and MSCA Doctoral Networks, Postdoctoral Fellowships, Staff exchanges, COFUND, MSCA and Citizens in Horizon Europe.

¹⁰⁹ [EU Missions in Horizon Europe | European Commission \(europa.eu\)](#)

¹¹⁰ E.g. by following up outcomes and feedback received from MSCA cluster events through ensuring interaction with and between stakeholders

¹¹¹ This call is a relaunch of the call HORIZON-MSCA-2023-FTP-01

¹¹² E.g. Horizon Results Platform, Horizon Results Booster

- Researchers' skills development, including but not limited to the skills needed to tackle the thematic areas of the Missions;
- Cooperation between academic and non-academic organisations¹¹³, with the emphasis on the business sector.

The activities should contribute to strengthening complementarities between ongoing MSCA projects, especially with a view to better exploiting their results and maximising their impact vis-à-vis the thematic and cross-cutting priorities mentioned above.

The proposed activities should include:

- Consolidating the ongoing EU Missions cross-portfolio analysis to make full use of MSCA projects results and analyse their contribution to each individual Mission;
- Identifying good practice examples of cooperation between academic and non-academic organisations, with a special emphasis on the business sector as well as the main obstacles for stronger intersectoral cooperation in MSCA;
- Identifying researchers' training, skills and career development needs (both research-related and transferable) to tackle societal challenges, including those covered by the Missions;
- Exploring ways to consolidate the available training material developed in MSCA projects, especially on transferrable skills, and exploring how to make it more broadly accessible for further exploitation;
- Following up the existing policy feedback activities under the MSCA, particularly through coordination with the ongoing Commission activities (cluster events, studies and analyses) and through regular consolidation of the outcomes and deliverables of policy feedback activities;
- Supporting/complementing existing communication and dissemination efforts by the European Commission¹¹⁴ to promote and share MSCA success stories and examples of good practice in the thematic and horizontal priorities of this call (EU Missions, intersectoral cooperation, researchers' training, skills and career development);
- Identifying good practice of synergies between MSCA projects and other relevant programmes and initiatives;
- Providing practical recommendations on how to better exploit MSCA project results and enhance impact in the areas of EU Missions, intersectoral cooperation and researchers' skills and career development in line with the call's objectives.

¹¹³ See definitions at the end of this Work Programme part

¹¹⁴ E.g.: Horizon Results Platform and Booster, Euraxess

- Analysing trends in research to feed back into the MSCA and Commission R&I policy. Due to their bottom-up nature, the MSCA provide a valuable resource for tracking changing research trends and can provide an evidence base for any changes in the latter stages of Horizon Europe as well as the design of subsequent framework programmes;

The expected deliverables should include a combination of analytical reports, *ad hoc* policy briefs, stakeholders' events and meetings, policy roundtables and different communication and dissemination support actions, such as:

- Studies, analyses, reports looking into trends and developments in MSCA relevant to:
 - The EU Missions, including citizens' engagement activities;
 - Researchers' skills and career development and training;
 - Intersectoral cooperation between academia and other sectors (businesses, industry, SMEs, public administration, civil society organisations, etc.), as well as motivation and obstacles to engage in such cooperation;
 - Examples of synergies and complementarities with other EU/national/regional programmes and frameworks.
- Consolidation of projects results for policy feedback and communication and dissemination purposes;
- Dissemination and networking activities using the results of cluster events and communities of practice identified for the events; consulting project beneficiaries on policy needs, dissemination based on reports and feedback from cluster events; providing input into coordination of cluster events (e.g. suggesting themes, format and structure of cluster events);
- Synthesis of coordination activities linked to policy feedback and the improved exploitation of MSCA projects results: e.g. preparatory briefings, follow-up reports, feedback consolidation linked to MSCA cluster events, *ad hoc* policy briefs and monitoring of exploitation opportunities.

The maximum duration of the action is 48 months.

Call - MSCA4Ukraine Fellowships 2025

HORIZON-MSCA-2025-MSCA4UA-01

Conditions for the Call

Indicative budget(s)¹¹⁵

¹¹⁵ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ¹¹⁶	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025				
Deadline(s): 16 Sep 2025				
HORIZON-MSCA-2025-MSCA4UA-01-01	CSA	10.00	9.50 to 10.00	1
Overall indicative budget		10.00		

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Proposals are invited against the following topic(s):

HORIZON-MSCA-2025-MSCA4UA-01-01: MSCA4Ukraine Fellowships 2025

Specific conditions

¹¹⁶ The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for years 2023, 2024 and 2025. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 9.50 and 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Procedure</i>	The procedure is described in General Annex F. The following exceptions apply: The granting authority can fund a maximum of one project.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants based on unit contributions, as stipulated in the Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for the Marie Skłodowska-Curie Actions under the Horizon Europe programme. The same unit contributions as in MSCA Doctoral Networks and MSCA Postdoctoral Fellowships, under the same eligibility conditions, will be applied for doctoral candidates and postdoctoral researchers respectively. Consequently, and given the need to act rapidly in the context of the crisis caused by the war in Ukraine and the uncertainty related to its resolution, the maximum amount to be granted to each third party is EUR 2.00 million (covering the recruitment of several researchers).

Expected Outcome: Through the provision of fellowships to displaced researchers from Ukraine, the grant is expected to contribute to the following expected outcomes:

- Protection of displaced researchers from Ukraine to continue their research in academic or non-academic organisations¹¹⁷ in EU Member States or Horizon Europe Associated Countries through dedicated fellowships and facilitate their reintegration to Ukraine when safe conditions for return are met.
- Strengthened integration between the EU and Ukrainian research and innovation communities.

At the level of individual researchers to be supported, the following outcomes are expected:

¹¹⁷ See definitions at the end of this Work Programme

- New research and transferable skills and competences, leading to improved employability and career prospects within and outside academia and contributing to rebuilding Ukraine's R&I sector once the conditions allow.
- New knowledge allowing the conversion of ideas into products and services, where relevant.
- Enhanced networking and communication capacities with scientific peers, as well as with the general public that will increase and broaden the research and innovation impact.

Scope: Given that the ongoing Russia's war of aggression against Ukraine has caused and continues to cause significant damage to Ukraine's R&I landscape as well as to force researchers based in Ukraine to flee the country, the need for support remains. The objective of the grant is to provide this support in the form of fellowships to displaced researchers from Ukraine to continue or resume their research activities at host organisations established in EU Member States or Horizon Europe Associated Countries.

Support to individual researchers should be open to all domains of research and innovation and aligned with the general objectives and principles of the MSCA, including scientific excellence, skills and career development, inter-sectoral mobility, equal opportunities and inclusiveness, attractive working conditions, work/life balance, while fostering open science, innovation and entrepreneurship.

Support will include training activities that should respond to well-identified needs in various research and innovation areas, with appropriate references to inter- and multidisciplinary fields. They should be primarily focused on developing new scientific knowledge through original research on personalised projects. Complementary training should also be provided to develop key transferable skills and competences common to all fields, foster innovation and entrepreneurship, and promote and (where appropriate) reward Open Science practices.

Short-term secondments of researchers to other organisations than those recruiting them, especially based in Ukraine if conditions allow, and including in third countries non-associated to Horizon Europe, are encouraged when relevant, feasible and beneficial for the researchers and in line with the research objectives. Inter-sectoral secondments are particularly encouraged to increase the employability of the researchers outside academia.

Particular attention will be paid to the quality of supervision and mentoring arrangements as well as career guidance.

Supported researchers can be either doctoral candidates (i.e. already enrolled in a doctoral programme leading to the award of a doctoral degree) or postdoctoral researchers (i.e. in possession of a doctoral degree). They must be either Ukrainian nationals, stateless persons, or nationals from third countries other than Ukraine, residing in Ukraine, who have been displaced on or after 24 February 2022.

Eligible third parties that will recruit researchers include any academic or non-academic organisations established in an EU Member State or Horizon Europe Associated Country. Other organisations, including those established in non-associated third countries can host researchers for short-term secondments.

If conditions allow, organisations based in Ukraine are encouraged to host displaced researchers thus supporting their reintegration back into the country.

The duration of each individual fellowship is to be determined by the beneficiaries in agreement with the recruiting organisations, with a maximum duration of 2 years.

Secondments to other organisations are eligible for up to one third of the fellowship duration.

The expected duration of the action is 36 months.

Expected Impact:

- Allow the EU to respond to the crisis faced by displaced researchers from Ukraine in line with its core values, and academic freedom in particular.
- Sustain Ukrainian research and innovation capacities by allowing displaced researchers from Ukraine to continue their research activities and enable them to contribute to restoring Ukraine's R&I sector.
- Reinforcement of the EU research and innovation cooperation with Ukraine.

Other Actions not subject to calls for proposals

Grants not subject to calls for proposals

1. Presidency event: MSCA Spanish Presidency Conference 2023¹¹⁸

The challenges the world is facing require a joint response from policymakers, society, academia, and industry. We have witnessed how science and scientists have become, more than ever, fundamental in the global response to current crisis. Moreover, science is also a key dimension of the EU digital and green transitions. However, much needs to be done in order to make even more of scientific knowledge and highly skilled professionals with a scientific background towards addressing EU's vision.

The role of MSCA in the following areas will be discussed in the MSCA Conference: How to foster knowledge interfaces that better connect science, policy making, industry and society and how to diversify scientific career paths while ensuring to nurture these interfaces, keeping in mind the relevance of gender equality in the European Research & Innovation Area (ERA).

The Conference will target the following expected outcomes:

- MSCA towards addressing global challenges
- MSCA fostering the connection between science, policy making, industry and society
- How MSCA can contribute to diversify scientific career paths
- How MSCA can contribute to gender equality in the European Research & Innovation Area (ERA)

Legal entities:

FECYT F.S.P. (Spanish Foundation for Science and Technology), C/Pintor Murillo, 15 – 28100 Alcobendas (Madrid)

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

Indicative timetable: Third quarter 2023

Indicative budget: EUR 0.15 million from the 2023 budget

2. Presidency event: MSCA Belgian Presidency Conference 2024¹¹⁹

The Conference will address the following subjects:

¹¹⁸ MSCA Presidency Conference 2023: MSCA towards addressing global challenges
¹¹⁹ Research careers in and outside academia

- A reworked Charter and Code, the competence framework, career observatory (incl. Open Science) and the reforming of research assessment of researchers;
- Showcasing excellent open science practices from the first running Horizon Europe MSCA projects;
- Scientific impact: how to rhyme the long term impact of the research (as requested in the proposal) with MSCA also supporting fundamental bottom-up science where the outcome and its applications may still be unknown?
- Societal/economic impact: the importance of the MSCA and its bottom-up nature for innovation;
- Sharing the perspectives of fellows, supervisors, institutions and policy makers on two novelties of HE: the Green Charter and Guidelines on Supervision;
- Synergies between European instrument to support R&I: do transnational alliances of European universities integrate MSCA calls in their strategy and what are the results so far?
- Gender inequalities in careers and the issue of precarious careers, in particular the tension between sustainable careers versus unsustainable funding: what role can universities and funders play in supporting long-term career opportunities in a context of short-term funding?

Legal entities:

Service Public de Wallonie, Place Joséphine Charlotte 2 5100 Namur

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

Indicative timetable: Second quarter 2024

Indicative budget: EUR 0.15 million from the 2024 budget

3. Presidency event: MSCA Danish Presidency Conference 2025

European universities and societies are dependent on excellent researchers in academia, now and in the future. A number of articles and surveys point out challenges in academic working life which cause distress and health problems especially among young researchers. This may lead to loss of excellence in academia.

The MSCA programme with its scope of excellent research and career development can contribute to increased focus on well-being amongst and retention of young researchers in academia by addressing different aspects affecting the working life of PhD students and postdocs.

The conference will address:

- Career development, including funding and job opportunities in academia
- General working conditions, including working hours and job security
- Well-being, including recognition, academic fairness, independence, and management and collegial support
- Gender/equality, including a diverse and safe work environment and equal opportunities free of bias
- Future generations, including a view to demands from future research generations, which may have new and untraditional expectations to working life and hence challenge the current set-up of the academic job market and working conditions.

Legal entities:

Technical University of Denmark (DTU), Anker Engellundsvej 1, 2800 Kgs. Lyngby, Denmark

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

Indicative timetable: fourth quarter 2025

Indicative budget: EUR 0.15 million from the 2025 budget

4. Support to the Marie Curie Alumni Association

Expected Outcome: This coordination and support action is expected to contribute to the following outcomes:

- A well-functioning MCAA, providing useful services to its members;
- Relevant policy feedback to the European Commission;
- An expanded network of MSCA alumni;
- Improved networking and cooperation among MSCA alumni;
- Improved visibility, sustainability, reach, relevance and impact of the MSCA.

Expected Impact:

- Increase the impact of the Marie Skłodowska-Curie actions through greater networking and cooperation between MSCA fellows (current and past);
- Promote the outreach and visibility of the MSCA at European and Global level;

- Promote Europe as an excellent research destination;
- Enhance the policy feedback to the European Commission on the MSCA and EU policies more broadly.

Scope:

This grant will be awarded without a call for proposals according to Article 195(e) of the Financial Regulation and Article 24(3)(b) of the Horizon Europe Regulation. The use of a grant to identified beneficiary is justified by the particular role and purpose of the MCAA, its unique nature and the fact that the association gathers around 20.000 MSCA alumni.

This action should support the MCAA in achieving the following objectives:

- Supporting the functioning of the MCAA, foster its expansion and growth on the European and international stage;
- Facilitating professional networking and career development of former and current MSCA fellows;
- Encouraging networking and cooperation among members from different countries, sectors of the economy and across scientific disciplines;
- Enabling alumni to act as MSCA ambassadors and promoters within the global research and innovation community, but also for the European Commission and EU Delegations throughout the world;
- Provide feedback to the European Commission on the MSCA to constantly improve its success, relevance and impact; and provide feedback on relevant EU policies.

At least 30% and no more than 50% of the maximum grant amount must be allocated to individual members of the MCAA as well as Working Groups and Chapters for their activities including travel, development and production of media materials related to the MCAA.

Eligible activities under this grant include *inter alia*:

- Organisation of physical and virtual MCAA governance body meetings according to the need of the MCAA;
- Organisation of General Assembly meetings of the MCAA and annual MCAA Conference;
- Support for Alumni, Chapters and Working groups;
- Maintenance and continuous development of the MCAA's IT infrastructure and website, including the membership database;
- Data collection and provision of structured feedback on the MSCA, including online surveys, in agreement with the Commission, to obtain feedback on EU policy topics, on

the MSCA, on the development of the network or any other topic of interest to both parties.

The following deliverables will have to be submitted:

- Yearly work plans on the functioning and growth of the MCAA submitted at month 6 and updated at month 18;
- A long-term plan for the evolution of the MCAA submitted at month 6, and updated at month 18;
- A communication plan to be submitted 6 months after the beginning of the grant;
- A progress report at month 6 and month 18.

The expected duration of the action is 36 months.

The evaluation committee will be composed fully by representatives of EU institutions. The evaluation committee can be assisted by external experts if required.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: second quarter 2024

Legal entities:

MCAA-Marie Curie Alumni Association, MCAA, c/o Inovamais, Avenue des Arts, 24, B-1000 Brussels, Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

Indicative budget: EUR 4.00 million from the 2024 budget

5. MSCA Special Needs Allowances to Horizon 2020 legacy projects

The MSCA pay particular attention to accessibility and inclusiveness and foresee financial support for the additional costs entailed by recruited or seconded researchers/staff members with disabilities whose long-term physical, mental, intellectual or sensory impairments¹²⁰ are as such that their participation in MSCA would not be possible without extra financial support.

¹²⁰ See Article 1 of the UN Convention on the Rights of Persons with Disabilities.

Beneficiaries of Horizon 2020 ITN, IF, RISE and COFUND grants can continue to apply for a dedicated special needs grant. This grant will cover the additional costs that researchers/staff members with disabilities face due to the increased costs of their mobility. It can also be used to ensure necessary assistance by third persons or for adapting their work environment¹²¹. It cannot cover costs which are already covered by another source, such as social security or health insurance.

The support will be granted based on the request submitted by the coordinator of the MSCA grant (Horizon 2020 ITN, IF, RISE and COFUND grants) to the granting authority. The request can be submitted at any moment during the implementation of the MSCA grant, when the need arises. The request should contain a description of the special needs, the type of support and the budget requested. The request will be evaluated by the granting authority and, if needed, an assistance by external experts may be requested.

Once agreed, the MSCA grant agreement will be formally amended and the requested amount for the special needs will be covered by the increase of the budget in the Management cost category. This extra amount will be paid together with the payment of the balance. The support will be limited to a maximum of EUR 60 000 per researcher/staff member.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

Indicative timetable: Throughout 2023, 2024 and 2025

Indicative budget: EUR 0.20 million from the 2023 budget

6. MSCA4Ukraine

As part of the EU's response to the war in Ukraine and the need for rapid action, a grant was awarded under the Horizon Europe Work Programme 2021-2022 without a call for proposals in accordance with Article 195(b)¹²² of the Financial Regulation (pursuant to HORIZON-MSCA-2022-Ukraine-ART195-IBA).

Given that the ongoing Russia's war of aggression against Ukraine has caused and continues to cause significant damage to Ukraine's research and innovation landscape as well as to force researchers based in Ukraine to flee the country, the need for support remains essential.

As Ukraine's R&I infrastructure continues to be severely damaged and destroyed, it is crucial to support researchers who will be able help rebuild the country's R&I capacity upon their return.

¹²¹ See Article 5 of the Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation.

¹²² Article 195(b) of the Financial Regulation 2018/1046 "Grants may be awarded without a call for proposals only in the following cases: [...] (b) in other exceptional and duly substantiated emergencies".

Expected outcome

Through the provision of additional fellowships to displaced researchers from Ukraine, the current action will further strengthen integration between the EU and Ukrainian research and innovation communities and support Ukraine's research and innovation capacity by allowing displaced researchers from Ukraine to continue their research activities and expand their expertise.

Through the provision of fellowships, training and networking opportunities to displaced researchers from Ukraine, the grant is expected to contribute to the following expected outcomes:

- Protection of displaced researchers from Ukraine to continue their research in academic or non-academic organisations¹²³ in EU Member States or Horizon Europe Associated Countries through dedicated fellowships and facilitate their reintegration to Ukraine when safe conditions for return are met.
- Strengthened integration between the EU and Ukrainian research and innovation communities.

At the level of individual researchers to be supported, the following outcomes are expected:

- New research and transferable skills and competences, leading to improved employability and career prospects within and outside academia.
- New knowledge allowing the conversion of ideas into products and services, where relevant.
- Enhanced networking and communication capacities with scientific peers, as well as with the public that will increase and broaden the research and innovation impact upon their return to Ukraine.

Expected impact

- Allow the EU to continue to support displaced researchers from Ukraine in line with its core values, including academic freedom.
- Sustain Ukrainian research and innovation capacities by allowing displaced researchers from Ukraine to continue their research activities and maintain their network in Ukraine.
- Reinforcement of the EU research and innovation cooperation with Ukraine

Scope

This grant will be awarded without a call for proposals according to Article 195(e) of the Financial Regulation and Article 24(3)(b) of the Horizon Europe Regulation to the legal entities identified below. These legal entities have a unique experience in assisting researchers

¹²³ See definitions at the end of this Work Programme

at risk in general and researchers affected by Russia's war of aggression against Ukraine in particular. This includes providing direct financial support to researchers, giving them access to a large network of host organisations in EU Member States and Associated countries and building on experience acquired during the implementation of the MSCA4Ukraine grant awarded under HORIZON-MSCA-2022-Ukraine-ART195-IBA call.

The objective of this action is to continue to provide rapid support in the form of fellowships to displaced researchers from Ukraine to resume their research activities at host organisations established in EU Member States or Horizon Europe Associated Countries. For this purpose, proposals should foresee a new open call to provide support with the funding from this action, which should follow the financial support to third parties scheme already agreed and stipulated in the grant agreement concluded pursuant to HORIZON-MSCA-2022-Ukraine-ART195-IBA call (and which should only differ if justified).

The beneficiaries will provide financial support to third parties in the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for the Marie Skłodowska-Curie Actions under the Horizon Europe programme. The same unit contributions as in MSCA Doctoral Networks and MSCA Postdoctoral Fellowships will be applied for doctoral candidates and postdoctoral researchers respectively. Eligible third parties that will recruit researchers include any academic or non-academic organisations established in an EU Member State or Horizon Europe Associated Country. Other organisations, including those established in non-associated third countries can host researchers for short-term secondments.

This action is intended to be implemented, following an award decision, in the form of an amendment of the grant agreement concluded pursuant to HORIZON-MSCA-2022-Ukraine-ART195-IBA call.

The expected duration of the action is 36 months.

The evaluation committee will be composed fully by representatives of EU institutions. The evaluation committee can be assisted by external experts if required.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Legal entities:

Beneficiaries of the grant awarded under the call HORIZON-MSCA-2022-Ukraine-ART195-IBA

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

Indicative timetable: Second quarter 2024

Indicative budget: EUR 10.00 million from the 2024 budget

Procurements

1. Public Procurement for Events and Outreach

During 2023, 2024 and 2025, the Commission will organise several events (conferences and workshops) dedicated to the Marie Skłodowska-Curie Actions and to contribute to leading research conferences. Moreover, a dedicated campaign will be organised to ensure the visibility of the Marie Skłodowska-Curie Actions and funded projects to the general public.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative budget: EUR 0.50 million from the 2023 budget and EUR 0.50 million from the 2024 budget and EUR 0.50 million from the 2025 budget

Other budget implementation instruments

1. External Expertise

This action will support the use of appointed independent experts for the monitoring of ongoing actions (grant agreements, grant decisions, public procurement actions, financial instruments) funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks, as well as compliance checks regarding the Gender Equality Plan eligibility criterion.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.50 million from the 2023 budget and EUR 0.50 million from the 2024 budget and EUR 0.50 million from the 2025 budget

Estimated total budget		889.10	1252.70	1255.27

Specific conditions for the Marie Skłodowska-Curie Actions¹²⁵

DEFINITIONS

The following definitions apply:

'Academic sector' means public or private higher education establishments awarding academic degrees, public or private non-profit research organisations¹²⁶ and International European Research Organisations (IERO)¹²⁷.

'Non-academic sector' means any socio-economic actor not included in the academic sector and fulfilling the requirements of the Horizon Europe Rules for Participation.

'Associated partners' are entities which participate in the action, but without the right to charge costs or claim contributions. They contribute to the implementation of the action, but do not sign the grant agreement. Associated partners may not employ the researchers under the action¹²⁸.

'Associated partners linked to a beneficiary' are organisations with an established capital or legal link with the beneficiary, which is not limited to the action nor specifically created for its implementation. These entities implement action tasks described in Annex 1 of the grant agreement, i.e. hosting and training of researchers in Doctoral Networks and Postdoctoral Fellowships and hosting and seconding staff in Staff Exchanges. The associated partners linked to a beneficiary do not have the right to claim unit contributions and may not employ the researcher under the action. In addition, they must fulfil the eligibility conditions¹²⁹ for participation and funding applicable to the beneficiary they are linked to. The type of link and involvement of such entities must be clearly described in the proposal and will be assessed as part of the evaluation.

'Beneficiaries' are the legal entities that sign the grant agreement (either directly or through an accession form) and have the responsibility for the proper implementation of the action. They contribute directly to the implementation of the research, transfer of knowledge and training activities. Depending on the type of MSCA action, this involves recruiting,

¹²⁵ These conditions only apply to the 2024 and 2025 calls of this Work Programme. For the conditions applying to the 2023 calls, please see the Work Programme version adopted on 6 December 2022 (European Commission Decision C(2022)7550).

¹²⁶ If requested by the granting authority, institutions with self-declared research organisations status must provide evidence that their main objective is to carry out research and/or technological development. An assessment will be made on the basis of indicators such as share of research budget, volume of scientific publications and/or registered patents.

¹²⁷ 'International European Research Organisation' (IERO) means an international organisation, the majority of whose members are EU Member States or Horizon Europe Associated Countries, and whose principal objective is to promote scientific and technological cooperation in Europe (see Article 2(15) of the Regulation establishing Horizon Europe - the Framework Programme for Research and Innovation, laying down its rules for participation and dissemination).

¹²⁸ For Global Postdoctoral Fellowships and COFUND Postdoctoral Programmes outgoing phase, this restriction does not apply. The associated partner hosting the outgoing phase can conclude an additional employment contract with the researcher to ensure adequate medical/social insurance in the outgoing country.

¹²⁹ See specific conditions at the end of this Work Programme part.

supervising, hosting, training or seconding researchers/research staff or managing and/or funding programmes.

‘Implementing partners’ means third parties implementing the MSCA COFUND Doctoral or Postdoctoral programmes by recruiting researchers. Implementing partners can receive financial support from the beneficiary. Implementing partners that are identified in the proposal must include a letter of commitment before the signature of the grant agreement to ensure their active participation in the action. The involvement of any implementing partner for which no such evidence of commitment is submitted will not be taken into account.

‘Interdisciplinarity’ means the integration of information, data, techniques, tools, perspectives, concepts or theories from two or more scientific disciplines. The term discipline refers to the first level of MSCA keywords¹³⁰.

1. MSCA DOCTORAL NETWORKS

1.1. Applicable unit contributions¹³¹

The EU contribution for MSCA Doctoral Networks will take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme¹³².

The following budget categories apply:

MSCA Doctoral Networks	Contributions for recruited researchers					Institutional unit contributions	
	per person-month					per person-month	
	Living allowance	Mobility allowance	Family allowance (if applicable)	Long-term leave allowance (if applicable)	Special needs allowance (if applicable)	Research, training and networking contribution	Management and indirect contribution
	EUR 4010	EUR 710	EUR 660	EUR 4720 x % covered by the beneficiary	requested unit ¹³³ x (1/number of months)	EUR 1600	EUR 1200

¹³⁰ [MSCA Keywords.pdf \(europa.eu\)](#)

¹³¹ These conditions only apply to the 2024 and 2025 calls of this Work Programme. For the conditions applying to the 2023 calls, please see the Work Programme version adopted on 6 December 2022 (European Commission Decision C(2022)7550).

¹³² The indicative budget includes budget provisions for the increase of the maximum EU contribution for grants funded under Horizon Europe MSCA Doctoral Networks calls in line with the provisions of the decision authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.

¹³³ The pre-defined categories are as follows: EUR 3 000, EUR 4 500, EUR 6 000, EUR 9 500, EUR 13 000, EUR 18 500, EUR 27 500, EUR 35 500, EUR 47 500 and EUR 60 000.

A country correction coefficient applies to the living allowance in order to ensure equal treatment and purchasing power parity for all researchers. This coefficient is the one applicable to the country of the recruiting beneficiary (see Table 1 at the end of this Work Programme part). The living allowance is a gross amount, including compulsory deductions under national law, such as employer and employee social security contributions and direct taxes. The beneficiary must recruit each eligible doctoral candidate under an employment contract or equivalent direct contract, including an instrument of appointment (e.g., for permanent staff and/or officials), with full social security coverage (including sickness, parental, unemployment and invalidity benefits, pension rights, benefits in respect of accidents at work and occupational diseases). An exemption from this rule can be accepted only in cases where national legislation or the equivalent internal regulations of International European Research Organisations (IERO), entities created under Union law, or an international organisation, prohibit this possibility and subject to the prior agreement of the granting authority.

When an employment contract or instrument of appointment cannot be provided, the beneficiary may exceptionally recruit the doctoral candidate under a 'fixed-amount fellowship'. In this case, the living allowance will be halved, and the beneficiary must ensure that the doctoral candidate enjoys minimum social security coverage (including sickness, parental and invalidity benefits, and benefits for accidents at work and occupational diseases).

The beneficiary must pay to the doctoral candidates at least the amount of the **living allowance** (minus all compulsory deductions under national legislation). A top-up may be paid to the researchers in order to complement this contribution. In addition to the living allowance, all doctoral candidates must receive a **mobility allowance**. This allowance covers their additional, private mobility-related costs (e.g. travel and accommodation costs), not their professional costs under the action, which are covered by the research, training and networking contribution.

If the recruited doctoral candidate has or acquires family obligations during the action duration, i.e. persons linked to him/her by (i) marriage, or (ii) a relationship with equivalent status to a marriage recognised by the legislation of the country or region where this relationship was formalised; or (iii) dependent children who are actually being maintained by the researcher, the **family allowance** must be paid to him/her as well.

The **long-term leave allowance** contributes to the personnel costs incurred by the beneficiaries in case of the researchers' leave, including maternity, paternity, parental, sick or special leave, longer than 30 consecutive days. The **special needs allowance** contributes to the additional costs for the acquisition of special needs items and services for researchers with disabilities, whose long-term physical, mental, intellectual or sensory impairments¹³⁴ are certified by a competent national authority, and of such nature that their participation in the action may not be possible without them (e.g. assistance by third persons, adaptation of work environment, additional travel/transportation costs). These special needs items or services

¹³⁴ See Article 1 of the UN Convention on the Rights of Persons with Disabilities.

must not have been funded from another source (e.g. social security or health insurance). Both long-term leave and special needs allowances should be requested when the need arises. The **research, training and networking contribution** should cover, for example, costs for training and networking activities that contribute directly to the researchers' career development (e.g. participation in conferences, trips related to work on the action, training, language courses, seminars, lab material, books, library records, publication costs), research expenses, visa-related fees and travel expenses, additional costs arising from each secondment of six months or less, which require mobility from the place of residence (e.g. travel and accommodation costs).

The **management and indirect contribution** should cover the beneficiary's additional costs in connection with the action (e.g. personnel costs for project management/coordination, indirect costs).

The above rates apply to doctoral candidates devoting themselves to their project on a full-time basis. Researchers may, in agreement with the supervisor and beneficiary and with prior approval by the granting authority, implement their project on a part-time basis. Such a request is limited to personal or family reasons. In cases of part-time work, the doctoral candidates must work at least 50% of the full working time in their recruiting organisation for the action funded by the MSCA¹³⁵. The recruiting beneficiary should report costs as pro rata of the applicable full-time unit contributions.

1.2. Admissibility

The following exception to the General Annex A applies:

- The page limit of the application is 30 pages (excluding annexes).

1.3. Eligibility

Given the specific nature of MSCA Doctoral Networks, the following exceptions and additional eligibility criteria apply. This section also contains eligibility conditions, which apply during action implementation but cannot be verified at proposal stage.

- All proposals must indicate if they are resubmitted from the previous MSCA Doctoral Networks call under Horizon Europe.
- Proposals submitted to the previous call of MSCA Doctoral Networks under Horizon Europe and having received a score of less than 80% must not be resubmitted the following year.
- Any proposal involving 70% or more of the same recruiting organisations as in another proposal submitted to the previous call of the MSCA Doctoral Networks under Horizon Europe that has received a score of less than 80% will be assessed for whether it is a resubmission, irrespectively of the applicants' self-declaration. The assessment will be carried out by external expert evaluators based on the similarity of

¹³⁵ An exception to this limit may be granted for medical reasons.

objectives as well as on the similarity of the scientific approach proposed to reach such objectives.

1.3.1. Participating organisations

- Applications must be submitted by a consortium including at least three independent legal entities, each established in a different EU Member State or Horizon Europe Associated Country and with at least one of them established in an EU Member State. Should none of them be entitled to award a doctoral degree, a university or a consortium/grouping of academic/research institutions entitled to award a doctoral degree must be added to the project as an associated partner or an associated partner linked to a beneficiary.
- Not more than 40.0% of the EU contribution may be allocated to beneficiaries in the same country or to a single International European Research Organisation (IERO) or international organisation.
- International organisations with headquarters in an EU Member State or Horizon Europe Associated Country will be deemed to be established in this Member State or Associated Country.
- Affiliated entities are not allowed to participate as they cannot claim costs in MSCA Doctoral Networks.
- All beneficiaries must recruit at least one doctoral candidate. They are required to host at their premises and supervise recruited researchers, or use associated partners linked to them to do so¹³⁶.
- In order to reach the objectives of Joint Doctorates, at least three independent legal entities must be entitled to award doctoral degrees. At least one¹³⁷ of the institutions conferring a joint, double or multiple doctoral degree must be established in an EU Member State and/or Horizon Europe Associated Country. An applicant from the academic sector, which has transferred the right of awarding a doctoral degree to a consortium/grouping of academic/research institutions to which it belongs to, is also eligible. Applicants must provide, at the time of the submission of the proposal, a pre-agreement to award a joint, double or multiple degree to the doctoral candidate(s). The proposal should indicate from which institutions a researcher is expected to receive the degree(s).
- Joint Doctorates must set up a joint governance structure with joint admission, selection, supervision, monitoring and assessment procedures.

¹³⁶ In exceptional cases, where a beneficiary is established in a country different from the place where the recruited researcher is hosted, the country correction coefficient of the hosting entity is taken into account during the grant agreement preparation process, in order to ensure the correct budget calculation.

¹³⁷ These conditions only apply to the 2024 and 2025 calls of this Work Programme. For the conditions applying to the 2023 call, please see the Work Programme version adopted on 6 December 2022 (European Commission Decision C(2022)7550).

1.3.2. Recruited researchers

- Supported researchers must be **doctoral candidates**, i.e. not already in possession¹³⁸ of a doctoral degree at the date of the recruitment.
- Researchers must be enrolled in a doctoral programme leading to the award of a doctoral degree in at least one EU Member State or Horizon Europe Associated Country.
- Recruited researchers can be of any nationality and must comply with the following **mobility rule**: they must not have resided or carried out their main activity¹³⁹ (work, studies, etc.) in the country of the recruiting beneficiary for more than 12 months in the 36 months immediately before their recruitment date.

For 'International European Research Organisations' (IERO), 'international organisations', or entities created under Union law, the researchers must not have spent more than 12 months in the 36 months immediately before their recruitment in the same appointing organisation.

Compulsory national service, short stays such as holidays and time spent by the researcher as part of a procedure for obtaining refugee status under the Geneva Convention¹⁴⁰ are not taken into account.

- Secondments are eligible for up to one third of the actual months spent implementing the research training activities under the action. This limitation does not apply in the case of Industrial Doctorates and Joint Doctorates.
- In case of industrial doctorates, doctoral candidates must spend at least 50% of their fellowship duration in the non-academic sector.

1.3.3. Duration of the action

- The duration of the action must not exceed 48 months from the starting date set out in the grant agreement (including the time needed to recruit and select the doctoral candidates), except in the case of joint doctorates where this maximum duration is 60 months.
- The duration of each fellowship (on the basis of full-time employment) is minimum 3 and maximum 36 months, except in the case of joint doctorates, where this maximum duration is 48 months.
- The overall EU contribution for MSCA Doctoral Networks actions is limited to a maximum of 540 person-months.

¹³⁸ Researchers who have successfully defended their doctoral thesis but who have not yet formally been awarded the doctoral degree will not be considered eligible.

¹³⁹ Country of the main activity: the country where the researcher is physically based when carrying out the main activity and the country of the institution for which the main activity is performed (e.g., employer)

¹⁴⁰ 1951 Refugee Convention and the 1967 Protocol.

1.4. Award criteria

- Proposals will be evaluated by experts on the basis of the **award criteria** 'excellence', 'impact' and 'quality and efficiency of the implementation'.
- Evaluation scores will be awarded for each of these criteria, and not for the different aspects listed in the table below. Each criterion will be scored out of 5. Scores will be awarded with a resolution of one decimal place and will be subject to a weighting factor as indicated in the table below.
- Proposals scoring equal to or above 70% will be considered for funding — within the limits of the available call budget. Other proposals will be rejected.

Excellence	Impact	Quality and efficiency of the implementation
Quality and pertinence of the project's research and innovation objectives (and the extent to which they are ambitious, and go beyond the state of the art)	Contribution to structuring doctoral training at the European level and to strengthening European innovation capacity, including the potential for: a) meaningful contribution of the non-academic sector to the doctoral training, as appropriate to the implementation mode and research field b) developing sustainable elements of doctoral programmes	Quality and effectiveness of the work plan, assessment of risks and appropriateness of the effort assigned to work packages
Soundness of the proposed methodology (including interdisciplinary approaches, consideration of the gender dimension and other diversity aspects if relevant for the research project, and the quality of open science practices)	Credibility of the measures to enhance the career perspectives and employability of researchers and contribution to their skills development	Quality, capacity and role of each participant, including hosting arrangements and extent to which the consortium as a whole brings together the necessary expertise

Excellence	Impact	Quality and efficiency of the implementation
Quality and credibility of the training programme (including transferable skills, inter/multidisciplinary inter-sectoral and gender as well as other diversity aspects)	Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities	
Quality of the supervision (including mandatory joint supervision for industrial and joint doctorate projects)	The magnitude and importance of the project's contribution to the expected scientific, societal and economic impacts	
50%	30%	20%
Weighting		

1.5. Procedure

- Proposals must be submitted to only one of eight 'main evaluation panels': Chemistry (CHE), Social Sciences and Humanities (SOC), Economic Sciences (ECO), Information Science and Engineering (ENG), Environment and Geosciences (ENV), Life Sciences (LIF), Mathematics (MAT), Physics (PHY). Industrial and joint doctorates will be ranked in the scientific panel of submission. Each panel will establish a ranked list.
- The distribution of the indicative budget of the call will be proportional to the number of eligible proposals received in each panel. If the budget allocated to any panel exceeds the requirements of all proposals positively evaluated¹⁴¹ in that panel, the excess budget will be reallocated to the other panels based on the distribution described above. Equally, if the allocated funding to a panel is insufficient to fund the highest ranked proposal in that panel, the necessary budget will be transferred from the other panels based on the distribution described above, in order to ensure that the highest ranked proposal can be funded. In order to ensure budget optimisation and an equitable success rate across panels, the excess budget remaining after the initial allocation of funding to the proposals in the panels may be transferred between panels.

Ex-aequo Proposals

- When the total scores of two or more proposals are equal (ex-aequo cases), the priority order will be established as follows:

¹⁴¹ Measured as proposals having passed all relevant evaluation thresholds.

1. The proposals will be prioritised according to the scores they have been awarded for the criterion ‘Excellence’. When these scores are equal, priority will be based on scores for the criterion ‘Impact’.
2. If necessary, the gender balance among the supervisors named in the proposal will be used as a factor for prioritisation.
3. If a distinction still cannot be made, the panel may decide to further prioritise by considering other factors such as environmental considerations in line with the MSCA Green Charter, gender and other diversity aspects in the research activities, participation of the non-academic sector (including involvement of SMEs), geographical diversity¹⁴², international cooperation, favourable employment and working conditions or relationship to the Horizon Europe objectives in general. These factors will be documented in the panel report.

1.6. Legal and financial set-up of the Grant Agreements

The following exceptions and additional conditions apply:

- Eligible costs must take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.
- When associated partners are involved, beneficiaries are encouraged to sign a partnership agreement with them to regulate the internal relationship between all participating organisations. The partnership agreement(s) must comply with the grant agreement.
- Beneficiaries must ensure full access — on a royalty-free basis — for the recruited researchers to background and results needed for their activities under the action.
- The following deliverables will have to be submitted for grants awarded under this topic:
 - establishment of a **supervisory board** of the network;
 - **progress report** submitted within 30 days after one year from the starting date of the action;
 - **mid-term meeting** organised between the participants and the granting authority;
 - **mobility declaration** submitted within 20 days after the recruitment of each researcher and updated (if needed) via the Funding & Tenders Portal Continuous Reporting tool;
 - **career development plan**: a document describing how the individual Career Development Plans have been established (listing also the researchers for whom such plans have been put in place), submitted before the mid-term meeting;

¹⁴² Defined as the number of EU Member States or Associated Countries represented in the proposals, not otherwise receiving funds from projects higher up the ranking list (and if equal in number, then by budget).

- **evaluation questionnaire** completed by each recruited researcher and submitted at the end of the research training activity; a **follow-up questionnaire** submitted two years later;
- **data management plan** submitted at mid-term and an update towards the end of the project if needed;
- **plan for the dissemination and exploitation of results, including communication activities**, submitted at mid-term and an update towards the end of the project.

2. MSCA POSTDOCTORAL FELLOWSHIPS

2.1. Applicable unit contributions¹⁴³

The EU contribution for MSCA Postdoctoral Fellowships will take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme¹⁴⁴.

The following budget categories apply:

MSCA Postdoctoral Fellowships	Contributions for the recruited researcher per person-month					Institutional unit contributions per person-month	
	Living allowance	Mobility allowance	Family allowance (if applicable)	Long-term leave allowance (if applicable)	Special needs allowance (if applicable)	Research, training and networking contribution	Management and indirect contribution
	EUR 5990	EUR 710	EUR 660	EUR 6700 x % covered by the beneficiary	requested unit ¹⁴⁵ x (1/number of months)	EUR 1000	EUR 650

¹⁴³ These conditions only apply to the 2024 and 2025 calls of this Work Programme. For the conditions applying to the 2023 calls, please see the Work Programme version adopted on 6 December 2022 (European Commission Decision C(2022)7550).

¹⁴⁴ The indicative budget includes budget provisions for the increase of the maximum EU contribution for grants funded under Horizon Europe MSCA Postdoctoral Fellowships calls in line with the provisions of the decision authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.

¹⁴⁵ The pre-defined categories are as follows: EUR 3 000, EUR 4 500, EUR 6 000, EUR 9 500, EUR 13 000, EUR 18 500, EUR 27 500, EUR 35 500, EUR 47 500 and EUR 60 000.

A country correction coefficient applies to the living allowance in order to ensure equal treatment and purchasing power parity for all researchers¹⁴⁶. For European Postdoctoral Fellowships, this coefficient is the one applicable to the country of the beneficiary. For the Global Postdoctoral Fellowships two different country correction coefficients apply:

- For the outgoing phase: the coefficient of the country where the postdoctoral researcher is hosted (i.e. the country of the associated partner hosting the outgoing phase);
- For the return phase: the coefficient of the country where the postdoctoral researcher returns to (i.e. the country of the beneficiary).

The country correction coefficients are listed in Table 1 at the end of this Work Programme part. The living allowance is a gross amount, including compulsory deductions under national law, such as employer and employee social security contributions and direct taxes.

The beneficiary must recruit the postdoctoral researcher under an employment contract or equivalent direct contract, including an instrument of appointment (e.g., for permanent staff and/or officials), with full social security coverage (including sickness, parental, unemployment and invalidity benefits, pension rights, benefits in respect of accidents at work and occupational diseases). An exemption from this rule can be accepted only in cases where national legislation or the equivalent internal regulations of International European Research Organisations (IERO), entities created under Union law, or an international organisation, prohibit this possibility and subject to the prior agreement of the granting authority.

When an employment contract or instrument of appointment cannot be provided, the beneficiary may exceptionally recruit the postdoctoral researcher under a 'fixed-amount fellowship'. In this case, the living allowance will be halved, and the beneficiary must ensure that the postdoctoral researcher enjoys minimum social security coverage (including sickness, parental and invalidity benefits, and benefits for accidents at work and occupational diseases).

The beneficiary must pay to the postdoctoral researcher at least the amount of the **living allowance** (minus all compulsory deductions under national legislation). A top-up may be paid to the researcher in order to complement this contribution. In addition to the living allowance, the postdoctoral researcher must receive a **mobility allowance**. This allowance covers his/her additional, private mobility-related costs (e.g. travel and accommodation costs), not professional costs under the action, which are covered by the research, training and networking contribution.

If the postdoctoral researcher has or acquires family obligations during the action duration, i.e. has persons linked to him/her by (i) marriage, or (ii) a relationship with equivalent status

¹⁴⁶ In exceptional cases, where a beneficiary is established in a country different from the place where the recruited researcher is hosted, the country correction coefficient of the hosting entity is taken into account during the grant agreement preparation process, in order to ensure the correct budget calculation.

to a marriage recognised by the legislation of the country or region where this relationship was formalised; or (iii) dependent children who are actually being maintained by the researcher, the **family allowance** must be paid to him/her as well.

The **long-term leave allowance** contributes to the personnel costs incurred by the beneficiary in case of the researcher's leave, including maternity, paternity, parental, sick or special leave, longer than 30 consecutive days. The **special needs allowance** contributes to the additional costs for the acquisition of special needs items and services for researchers with disabilities, whose long-term physical, mental, intellectual or sensory impairments¹⁴⁷ are certified by a competent national authority, and of such nature that their participation in the action may not be possible without them (e.g. assistance by third persons, adaptation of work environment, additional travel/transportation costs). These special needs items or services must not have been funded from another source (e.g. social security or health insurance). Both long-term leave and special needs allowances should be requested when the need arises.

The **research, training and networking contribution** should cover, for example, costs for training and networking activities that contribute directly to the researchers' career development (e.g. participation in conferences, trips related to work on the action, training, language courses, seminars, lab material, books, library records, publication costs), research expenses, visa-related fees and travel expenses, additional costs arising from optional secondments (e.g. travel and accommodation costs).

The **management and indirect contribution** should cover the beneficiary's additional costs in connection with the action (e.g. personnel costs for project management, indirect costs).

The above rates apply to postdoctoral researchers devoting themselves to their project on a full-time basis. Researchers may, in agreement with the supervisor and beneficiary and with prior approval by the granting authority, implement their project on a part-time basis. In addition to the possibility to request part-time work for personal or family reasons, postdoctoral fellows may opt to work part-time for professional reasons. These might include creating a company, pursuing another research project¹⁴⁸, or engaging in advanced studies not related to the MSCA grant. Part-time work for professional reasons is not allowed during the outgoing phase of the Global Postdoctoral Fellowships. Any professional activities carried out part-time in parallel with the MSCA action must be agreed upon by the researcher and the beneficiary and approved by the granting authority.

If the action is implemented on a part-time basis, the researcher must dedicate at least 50% of his/her working time to the action funded by the MSCA¹⁴⁹. The beneficiary should report costs as pro rata of the applicable full-time unit contributions.

2.2. Admissibility

The following exceptions to the General Annex A apply:

¹⁴⁷ See Article 1 of the UN Convention on the Rights of Persons with Disabilities.

¹⁴⁸ Part-time work cannot be requested in order to participate in another MSCA grant at the same time.

¹⁴⁹ An exception to this limit may be granted for medical reasons.

- The page limit of the application is 10 pages (excluding annexes).

2.3. Eligibility

Given the specific nature of MSCA Postdoctoral Fellowships, the following exceptions and additional eligibility criteria apply. This section also contains eligibility conditions, which apply during action implementation but cannot be verified at proposal stage.

- All domains of research and technological development are eligible for funding (including areas of research covered by the Euratom Research and Training Programme 2021-2025).
- Proposals involving the same recruiting organisation (and for Global Postdoctoral Fellowships also the associated partner hosting the outgoing phase) and individual researcher submitted to the previous call of MSCA Postdoctoral Fellowships under Horizon Europe and having received a score of less than 70% must not be resubmitted the following year.
- Only one proposal per individual researcher can be submitted. In case of several proposals involving the same individual researcher, only the last submitted one will be considered eligible.
- If proposals with the same research objectives and work plan are submitted for different researchers, only the first submitted one will be considered eligible.

2.3.1. Participating organisations

- Applications must be submitted by a single independent legal entity, established in an EU Member State or Horizon Europe Associated Country. This is a mono-beneficiary action.
- The associated partner hosting the outgoing phase in Global Postdoctoral Fellowships must include a letter of commitment in the proposal to ensure their active participation in the action.
- Applications in the research areas of research covered by the Euratom Research and Training Programme 2021-2025 must be submitted by a single independent legal entity, established in an EU Member State or a country associated to the Euratom Research and Training Programme 2021-2025. Nuclear-related proposals submitted by entities established in other countries will be ineligible¹⁵⁰.
- Affiliated entities are not allowed to participate as they cannot claim costs in MSCA Postdoctoral Fellowships.

¹⁵⁰ See Euratom Work Programme 2021-2025 and the Horizon Europe Programme guide available on the Funding and Tender Opportunities Portal (<https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/how-to-participate/reference-documents;programCode=HORIZON>) for up-to-date information on the current list of countries associated to the Euratom Programme.

- International organisations with headquarters in an EU Member State or Horizon Europe Associated Country will be deemed to be established in this Member State or Associated Country.
- The beneficiary must employ and supervise the researcher during the action.

2.3.2. *Recruited researchers*

- Supported fellows must be **postdoctoral researchers** at the date of the call deadline, i.e. in a possession of a doctoral degree¹⁵¹. Applicants who have successfully defended their doctoral thesis but who have not yet formally been awarded the doctoral degree will also be considered as postdoctoral researchers and will be considered eligible to apply. The successful defence must be unconditional (no further requirements/corrections that need to be addressed) and take place before the call deadline. Supporting documentation may be requested.
- At the call deadline, supported researchers must have a **maximum of 8 years full-time equivalent experience in research**, measured from the date of award of the doctoral degree. Years of experience outside research and career breaks (e.g. due to parental leave¹⁵²), will not count towards the amount of research experience. For nationals or long-term residents of EU Member States or Horizon Europe Associated Countries who wish to reintegrate to pursue their research career in EU Member States or Horizon Europe Associated Countries, years of experience in research in third countries will not be considered in the above maximum.
- Recruited researchers must comply with the following **mobility rule**: they must not have resided or carried out their main activity¹⁵³ (work, studies, etc.) in the country of the beneficiary (for European Postdoctoral Fellowships), or the host organisation for the outgoing phase (for Global Postdoctoral Fellowships) for more than 12 months in the 36 months immediately before the call deadline.

Researchers wishing to reintegrate from a third country must either be based in a third country at the call deadline or have moved directly from a third country to an EU Member State or Horizon Europe Associated Country within the last 12 months before the call deadline.

¹⁵¹ A medical doctor degree will be accepted only when it corresponds to a doctoral degree or if the researcher can demonstrate his/her appointment in a position that requires doctoral equivalency (e.g. professorship appointment). Medical doctor degrees corresponding to basic medical training as defined in Annex V of Directive 2005/36/EC will not be considered a doctoral degree

¹⁵² Maternity: for each child born within the above-mentioned eligibility period of 8 years, 18 months will be deducted from the experience in research unless the applicant can document a longer parental leave prior to the call deadline. Paternity: for each child born within the above-mentioned eligibility period of 8 years, the documented time of parental leave taken until the call deadline will be deducted from the experience in research.

¹⁵³ Country of the main activity: the country where the researcher is physically based when carrying out the main activity and the country of the institution for which the main activity is performed (e.g., employer).

For 'International European Research Organisations' (IERO), 'international organisations', or entities created under Union law, the researchers must not have spent more than 12 months in the 36 months immediately before the call deadline, in the same appointing organisation.

Compulsory national service, short stays such as holidays and time spent as part of a procedure for obtaining refugee status under the Geneva Convention¹⁵⁴ are not taken into account.

- Supported **researchers can be of any nationality**. However, researchers going to a third country ('Global Postdoctoral Fellowship) or researchers who wish to reintegrate to Europe (i.e. in an EU Member State or Horizon Europe Associated Country), must be nationals or long-term residents of EU Member States or Horizon Europe Associated Countries. Long-term residence means a period of legal and continuous residence within EU Member States or Horizon Europe Associated Countries of at least five consecutive years. Absences of less than six consecutive months and no more than ten months over the whole period are permitted when calculating the five years.

Researchers who are refugees in an EU Member State or Horizon Europe Associated Country according to the Geneva Convention may also apply to both European and Global Postdoctoral Fellowships, irrespective of whether they are long-term residents or not, if they fulfil the other eligibility conditions.

- Applicants in the research areas covered by the Euratom Research and Training Programme 2021-2025 must recruit nationals or long-term residents of an EU Member State or a country associated to the Euratom Research and Training Programme 2021-2025

2.3.3. Duration of the action

- European Postdoctoral Fellowships should last between 12 and 24 months. Global Postdoctoral Fellowships should last between 24 and 36 months, consisting of 12 to 24 months for the outgoing phase and 12 months for the return phase.
- If requested and justified in the proposal, an **additional period of up to six months at the end of the project** can be awarded to researchers who will spend that period in a non-academic organisation established in an EU Member State or Horizon Europe Associated Country.

2.4. Award criteria

- Proposals will be evaluated by experts on the basis of the **award criteria** 'excellence', 'impact' and 'quality and efficiency of the implementation'.

¹⁵⁴ 1951 Refugee Convention and the 1967 Protocol.

- Evaluation scores will be awarded for each of these criteria, and not for the different aspects listed in the table below. Each criterion will be scored out of 5. Scores will be awarded with a resolution of one decimal place and will be subject to a weighting factor as indicated in the table below.
- Proposals scoring equal to or above 70% will be considered for funding — within the limits of the available call budget. Other proposals will be rejected.

Excellence	Impact	Quality and efficiency of the implementation
Quality and pertinence of the project's research and innovation objectives (and the extent to which they are ambitious, and go beyond the state of the art)	Credibility of the measures to enhance the career perspectives and employability of the researcher and contribution to his/her skills development	Quality and effectiveness of the work plan, assessment of risks and appropriateness of the effort assigned to work packages
Soundness of the proposed methodology (including interdisciplinary approaches, consideration of the gender dimension and other diversity aspects if relevant for the research project, and the quality of open science practices)	Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities	Quality and capacity of the host institutions and participating organisations, including hosting arrangements
Quality of the supervision, training and of the two-way transfer of knowledge between the researcher and the host	The magnitude and importance of the project's contribution to the expected scientific, societal and economic impacts	
Quality and appropriateness of the researcher's professional experience, competences and skills		
50%	30%	20%
Weighting		

2.5. Procedure

In Postdoctoral Fellowships, proposals will be evaluated by one of eight 'main evaluation panels': Chemistry (CHE), Social Sciences and Humanities (SOC), Economic Sciences (ECO), Information Science and Engineering (ENG), Environment and Geosciences (ENV), Life Sciences (LIF), Mathematics (MAT), Physics (PHY). Each panel will establish two ranked lists, one for European and one for Global Postdoctoral Fellowships.

European and Global Postdoctoral Fellowships will have separate budgets. The distribution of respective available funds will be proportional to the number of eligible proposals received in each main evaluation panel. If the budget allocated to any panel exceeds the requirements of all proposals positively evaluated¹⁵⁵ in that panel, the excess budget will be reallocated to the other panels based on the distribution as above. Equally, if the allocated funding to a panel is insufficient to fund the highest ranked proposal in that panel, the necessary budget will be transferred from the other panels based on the distribution as above, in order to ensure that the highest ranked proposal can be funded. In order to ensure budget optimisation and an equitable success rate across panels, the excess budget remaining after the initial allocation of funding to the proposals in the panels may be transferred between panels.

Ex-aequo Proposals

- When the total scores of two or more proposals are equal (ex-aequo cases), the priority order will be established as follows:
 1. The proposals will be prioritised according to the scores they have been awarded for the criterion 'Excellence'. When these scores are equal, priority will be based on scores for the criterion 'Impact'.
 2. If necessary, the gender balance among successful applicant researchers will be used as a factor for prioritisation.

If a distinction still cannot be made, the panel may decide to further prioritise by considering other factors such as environmental considerations in line with the MSCA Green Charter, gender and other diversity aspects in the research activities, participation of the non-academic sector (including involvement of SMEs), geographical diversity¹⁵⁶, favourable employment and working conditions or relationship to the Horizon Europe objectives in general. These factors will be documented in the panel report.

Seal of Excellence

- Seals of Excellence will be awarded to applications with a total score **equal to or higher than 85%**, but which cannot be funded due to lack of budget available to the call.

¹⁵⁵ Measured as proposals having passed all relevant evaluation thresholds.

¹⁵⁶ Defined as the number of EU Member States or Associated Countries represented in the proposal, not otherwise receiving funds from projects higher up the ranking list (and if equal in number, then by budget).

2.6. Legal and Financial set-up of the Grant Agreements

The following exceptions and additional conditions apply:

- Eligible costs must take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.
- When associated partners are involved, the beneficiary is encouraged to sign a partnership agreement with them to regulate the internal relationship between all participating organisations. The partnership agreement(s) must comply with the grant agreement.
- The beneficiary must ensure full access — on a royalty-free basis — for the recruited researcher to background and results needed for his/her activities under the action.
- The following deliverables will have to be submitted for grants awarded under this topic:
 - **mobility declaration** submitted within 20 days of the start of the research training activities and updated (if needed) via the Funding & Tenders Portal Continuous Reporting tool;
 - **career development plan** of the recruited researcher, submitted at the beginning of the action (not later than 6 months after its start) and updated if needed throughout the project;
 - **evaluation questionnaire** completed by the recruited researcher and submitted at the end of the research training activity; a **follow-up questionnaire** submitted two years later;
 - **data management plan** submitted within the first 6 months of the project;
 - **plan for the dissemination and exploitation of results** submitted towards the end of the project.

3. MSCA STAFF EXCHANGES

3.1. Applicable unit contributions¹⁵⁷

The EU contribution for MSCA Staff Exchanges will take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme¹⁵⁸.

¹⁵⁷ These conditions only apply to the 2024 and 2025 calls of this Work Programme. For the conditions applying to the 2023 calls, please see the Work Programme version adopted on 6 December 2022 (European Commission Decision C(2022)7550).

¹⁵⁸ The indicative budget includes budget provisions for the increase of the maximum EU contribution for grants funded under Horizon Europe MSCA Staff Exchanges calls in line with the provisions of the

The following budget categories apply:

MSCA Staff Exchanges	Contributions for seconded staff members per person-month		Institutional contributions per person-month	
	Top-up allowance	Special needs allowance (if applicable)	Research, training and networking contribution	Management and indirect contribution
	EUR 2710	requested unit ¹⁵⁹ x (1/number of months)	EUR 1300	EUR 1000

The **top-up allowance** for the seconded staff member contributes to travel, accommodation and subsistence costs related to the secondment.

The **special needs allowance** contributes to the additional costs for the acquisition of special needs items and services for staff members with disabilities, whose long-term physical, mental, intellectual or sensory impairments¹⁶⁰ are certified by a competent national authority, and of such nature that their participation in the action may not be possible without them (e.g. assistance by third persons, adaptation of work environment, additional travel/transportation costs). These special needs items or services must not have been funded from another source (e.g. social security or health insurance). The special needs allowance should be requested when the need arises.

The **research, training and networking contribution** should cover costs for training, transfer of knowledge and networking activities, as well as research expenses.

The **management and indirect contribution** should cover the beneficiary's additional costs in connection with the action (e.g. personnel costs for project management/coordination, indirect costs).

3.2. Admissibility

The following exception to the General Annex A applies:

- The page limit of the application is 30 pages (excluding annexes).

decision authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.

¹⁵⁹ The pre-defined categories are as follows: EUR 3 000, EUR 4 500, EUR 6 000, EUR 9 500, EUR 13 000, EUR 18 500, EUR 27 500, EUR 35 500, EUR 47 500 and EUR 60 000.

¹⁶⁰ See Article 1 of the UN Convention on the Rights of Persons with Disabilities.

3.3. Eligibility

Given the specific nature of MSCA Staff Exchanges, the following exceptions and additional eligibility criteria apply. This section also contains eligibility conditions, which apply during action implementation but cannot be verified at proposal stage.

3.3.1. *Participating organisations*

- Applications must be submitted by a consortium including at least three independent legal entities in three different countries, two of which established in a different EU Member State or Horizon Europe Associated Country.
- International organisations with headquarters in an EU Member State or Horizon Europe Associated Country will be deemed to be established in this Member State or Associated Country.
- The European Commission Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
- Affiliated entities are not allowed to participate as they cannot claim costs in MSCA Staff Exchanges.
- Only legal entities that are established in EU Member States or Horizon Europe Associated Countries can be beneficiaries.
- If all participating organisations are from the same sector (i.e. either only academic or only non-academic), there must be at least one organisation from a non-associated Third Country.
- Secondments within EU Member States or Horizon Europe Associated Countries must be between different sectors (academic and non-academic), except for interdisciplinary secondments, which must be limited to a maximum of one third of the total months spent under the action.
- For secondments from associated partners linked to a beneficiary, only the sector (academic or non-academic) of the beneficiary counts; the linked associated partners will be considered to belong to the same sector as their beneficiary.
- Secondments must be between different countries¹⁶¹; secondments between non-associated third countries are not eligible.

¹⁶¹ Secondments to and from branches and departments without separate legal personality that are part of legal entities established in EU Member States or Horizon Europe Associated Countries can take place with entities established in any country other than the country where they are physically located and the country of their mother legal entity.

- Secondments must be performed on a full-time basis.

3.3.2. *Seconded staff members*

- Secondments are open for researchers at any career stage (from doctoral candidates to postdoctoral researchers¹⁶²), as well as administrative, managerial and technical staff supporting R&I activities under the action.
- Supported staff members must be actively engaged in or linked to R&I activities for at least one month (full-time equivalent) at the sending institution before the first period of secondment.
- After the period of secondment, seconded staff should return to their sending institution, thus maximising the impact of the action for knowledge sharing and long-term collaboration.

3.3.3. *Duration of the action*

- The maximum duration of the project is 48 months from the starting date set out in the grant agreement.
- The overall EU contribution for MSCA Staff Exchanges amounts to a maximum of 360 person-months per project.
- Secondments must last at least one month and cannot be longer than 12 months for the same staff member (independently of the number of organisations the staff is seconded to).
- The secondment of a staff member may be split into several stays with one or several beneficiaries or associated partners.
- Secondments beyond the project duration cannot be funded.

3.4. Award criteria

- Proposals will be evaluated by experts on the basis of the **award criteria** 'excellence', 'impact' and 'quality and efficiency of the implementation'.
- Evaluation scores will be awarded for each of these criteria, and not for the different aspects listed in the table below. Each criterion will be scored out of 5. Scores will be awarded with a resolution of one decimal place and will be subject to a weighting factor as indicated in the table below.
- Proposals scoring equal to or above 70% will be considered for funding — within the limits of the available call budget. Other proposals will be rejected.

¹⁶² In possession of a doctoral degree. Possession of a doctoral degree is defined as a successfully defended doctoral thesis, even if the doctoral degree has yet to be awarded.

Excellence	Impact	Quality and efficiency of the implementation
Quality and pertinence of the project's research/innovation objectives (and the extent to which they are ambitious, and go beyond the state of the art)	Developing new and lasting research collaborations, achieving transfer of knowledge between participating organisations and contributing to improving research and innovation potential at the European and global level	Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages
Soundness of the proposed methodology (including international, inter-sectoral and interdisciplinary approaches, consideration of the gender dimension and other diversity aspects if relevant for the research project, and the quality of open science practices)	Credibility of the measures to enhance the career perspectives of staff members and contribution to their skills development	Quality, capacity and role of each participant, including hosting arrangements and extent to which the consortium as a whole brings together the necessary expertise
Quality of the proposed interaction between the participating organisations in light of the research and innovation objectives.	Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities	
	The magnitude and importance of the project's contribution to the expected scientific, societal and economic impacts.	
50%	30%	20%
Weighting		

3.5. Procedure

- Proposals will be evaluated by one of eight 'main evaluation panels': Chemistry (CHE), Social Sciences and Humanities (SOC), Economic Sciences (ECO), Information Science and Engineering (ENG), Environment and Geosciences (ENV),

Life Sciences (LIF), Mathematics (MAT), Physics (PHY). Each panel establishes a ranked list.

- The distribution of the indicative budget of the call will be proportional to the number of eligible proposals received in each panel. If the budget allocated to any panel exceeds the requirements of all proposals positively evaluated¹⁶³ in that panel, the excess budget will be reallocated to the other panels based on the distribution as above. Equally, if the allocated funding to a panel is insufficient to fund the highest ranked proposal in that panel, the necessary budget will be transferred from the other panels based on the distribution as above, in order to ensure that the highest ranked proposal can be funded. In order to ensure budget optimisation and an equitable success rate across panels, the excess budget remaining after the initial allocation of funding to the proposals in the panels may be transferred between panels.

Ex-aequo Proposals

- When the total scores of two or more proposals are equal (ex-aequo cases), the priority order will be established as follows:
 1. The proposals will be prioritised according to the scores they have been awarded for the criterion ‘Excellence’. When these scores are equal, priority will be based on scores for the criterion ‘Impact’.
 2. If a distinction still cannot be made, the panel may decide to further prioritise by considering other factors such as environmental considerations in line with the MSCA Green Charter, gender and other diversity aspects in the research activities, participation of the non-academic sector (including involvement of SMEs), geographical diversity¹⁶⁴, international cooperation, favourable working/secondment conditions or relationship to the Horizon Europe objectives in general. These factors will be documented in the panel report.

3.6. Legal and financial set-up of the Grant Agreements

The following exceptions and additional conditions apply:

- Eligible costs must take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.
- When associated partners are involved, beneficiaries are encouraged to sign a partnership agreement with them to regulate the internal relationship between all participating organisations. The partnership agreement(s) must comply with the grant agreement.

¹⁶³ Measured as proposals having passed all relevant evaluation thresholds.

¹⁶⁴ Defined as the number of EU Member States or Associated Countries represented in the proposal, not otherwise receiving funds from projects higher up the ranking list (and if equal in number, then by budget).

- Grants awarded under this topic might be linked to other actions funded by Horizon 2020 or Horizon Europe.
- Beneficiaries must ensure full access — on a royalty-free basis — for the staff members to background and results needed for their activities under the action.
- The following deliverables will have to be submitted for grants awarded under this topic:
 - **mid-term meeting** organised between the participants and the granting authority;
 - **progress report** submitted within 30 days after one year from the starting date of the action;
 - **mobility declaration** submitted within 20 days of the secondment of each seconded staff member, and updated (if needed) via the Funding & Tenders Portal Continuous Reporting tool;
 - **evaluation questionnaire** completed by the seconded staff members and submitted at the end of their secondments; a follow-up questionnaire submitted two years later;
 - **data management plan** submitted at mid-term and an update towards the end of the project if needed;
 - **plan for the dissemination and exploitation of results, including communication activities** submitted at mid-term and an update towards the end of the project.

4. MSCA COFUND

4.1. Applicable unit contributions¹⁶⁵

The EU contribution for MSCA COFUND will take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme¹⁶⁶.

The following budget categories apply:

MSCA COFUND	Contributions for recruited researchers and institutional contributions per person-month		
	COFUND allowance	Long-term leave allowance (if	Special needs allowance

¹⁶⁵ These conditions only apply to the 2024 and 2025 calls of this Work Programme. For the conditions applying to the 2023 calls, please see the Work Programme version adopted on 6 December 2022 (European Commission Decision C(2022)7550).

¹⁶⁶ The indicative budget includes budget provisions for the increase of the maximum EU contribution for grants funded under Horizon Europe MSCA COFUND calls in line with the provisions of the decision authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.

			applicable)	(if applicable)
	Doctoral programmes	EUR 3300	EUR 3300 x % covered by the beneficiary	requested unit ¹⁶⁷ x (1/number of months)
	Postdoctoral programmes	EUR 4700	EUR 4700 x % covered by the beneficiary	

The **COFUND allowance** contributes to:

- costs of the researchers including the remuneration payable to the individual doctoral or postdoctoral researchers recruited under an employment contract/equivalent direct contract with full social security coverage and complying with the applicable social security legislation, as well as the mobility costs and, if applicable, the family costs, and/or
- costs related to the training, research expenses, transfer of knowledge and networking activities of researchers, costs of managing the action and indirect costs.

The **long-term leave allowance** contributes to the personnel costs incurred by the employer in case of the researchers' leave, including maternity, paternity, parental, sick or special leave, longer than 30 consecutive days. The **special needs allowance** contributes to the additional costs for the acquisition of special needs items and services for researchers with disabilities, whose long-term physical, mental, intellectual or sensory impairments¹⁶⁸ are certified by a competent national authority, and of such nature that their participation in the action may not be possible without them (e.g. assistance by third persons, adaptation of work environment, additional travel/transportation costs). These special needs items or services must not have been funded from another source (e.g. social security or health insurance). Both long-term leave and special needs allowances should be requested when the need arises.

The beneficiary or implementing partner must recruit each eligible researcher under an employment contract or 'equivalent direct contract' with full social security coverage (including sickness, parental, unemployment and invalidity benefits, pension rights, benefits in respect of accidents at work and occupational diseases). An exemption from this rule can be accepted only in cases where national legislation or the equivalent internal regulations of International European Research Organisations (IERO), entities created under Union law, or an international organisation, prohibit this possibility and subject to the prior agreement of the granting authority.

When an employment contract cannot be provided, the beneficiary or the implementing partner may exceptionally recruit the researcher under a 'fixed-amount fellowship'. In this

¹⁶⁷ The pre-defined categories are as follows: EUR 3 000, EUR 4 500, EUR 6 000, EUR 9 500, EUR 13 000, EUR 18 500, EUR 27 500, EUR 35 500, EUR 47 500 and EUR 60 000.

¹⁶⁸ See Article 1 of the UN Convention on the Rights of Persons with Disabilities.

case, the COFUND allowance will be halved and the beneficiary must ensure that the researcher enjoys minimum social security coverage (including sickness, parental and invalidity benefits, and benefits for accidents at work and occupational diseases).

In principle, researchers should be employed full-time. The above rates apply to researchers devoting themselves to their project on a full-time basis. Researchers may, in agreement with the supervisor and beneficiary and with prior approval by the granting authority, implement their project on a part-time basis. Part-time work due to professional reasons can be requested by COFUND postdoctoral researchers only.

In cases of part-time work, researchers must work at least 50% of the full working time in their recruiting organisation for the action co-funded by the MSCA, whether they are working part-time for family or other reasons¹⁶⁹. The beneficiary should report costs as pro rata of the applicable full-time unit contributions.

The EU contribution is limited to EUR 10 million per beneficiary per call. If an applicant submits two or more successful applications totalling more than EUR 10 million within one call, the applicant will be required to decide which of these proposals to implement.

The table above specifies the unit contributions for the co-funding of regional, national and international programmes. The EU contribution can be used to support any cost items of the programme (remuneration costs, mobility costs, family costs, research, training and networking costs, management and indirect costs). Individual cost items may be fully or partially funded through other resources including EU programmes other than Horizon 2020 or Horizon Europe, such as the Cohesion policy funds, provided that double funding is avoided.

Applicants must specify in their proposal the total cost of their proposed programme and in particular the amounts that will be provided for the benefit of the researchers and for the organisation(s) that will implement the programme. This information will be needed to evaluate the adequateness of employment and working conditions of the researchers. The monthly gross remuneration, i.e. salaries, social security contributions, taxes and other costs or compulsory deductions under national legislation linked to in the remuneration, and the mobility costs for the benefit of the researchers must be:

- For researchers recruited under an employment contract: not lower than EUR 3300 (for doctoral candidates) and EUR 4700 (for postdoctoral researchers);
- For researchers recruited under a fixed-amount fellowship: not lower than EUR 1650 (for doctoral candidates) and EUR 2350 (for postdoctoral researchers).

4.2. Admissibility

The following exceptions to the General Annex A apply:

- The page limit of the application is 30 pages (excluding annexes).

¹⁶⁹ An exception to this limit may be granted for medical reasons.

- Where doctoral or postdoctoral programmes are implemented as financial support to third parties through implementing partners, applications do not need to include a plan for the exploitation and dissemination of results, including communication activities, because the scope of these activities will not be known at application stage.

4.3. Eligibility

Given the specific nature of MSCA COFUND, the following exceptions and additional eligibility criteria apply. This section also contains eligibility conditions, which apply during action implementation but cannot be verified at proposal stage.

4.3.1. Participating organisations

- Applications must be submitted by a single entity established in an EU Member State or Horizon Europe Associated Country.
- Affiliated entities are not allowed to participate as they cannot claim costs in MSCA COFUND.
- The conditions for financial support to third parties defined in General Annex B do not apply.
- International organisations with headquarters in an EU Member State or Horizon Europe Associated Country will be deemed to be established in this Member State or Associated Country.
- The beneficiary will be responsible for the availability of the necessary complementary funds to implement the proposal.
- In each COFUND action, a minimum of three researchers must be recruited. COFUND proposals foreseeing research training for fewer than three researchers will be deemed ineligible.
- Implementing partners must be established in one of the countries eligible for funding listed in the General Annexes.

4.3.2. Recruited researchers

- Recruited researchers can be of any nationality (see also specific condition for COFUND Postdoctoral Programmes below) and must comply with the following **mobility rule**¹⁷⁰: they must not have resided or carried out their main activity¹⁷¹ (work, studies, etc.) in the country of the recruiting beneficiary or implementing

¹⁷⁰ Existing programmes with international mobility applying for COFUND can deviate from this rule if duly justified in the proposal by the applicant. The existing mobility rule will be evaluated by the independent experts to judge if it is in the spirit of the MSCA mobility rule.

¹⁷¹ Country of the main activity: the country where the researcher is physically based when carrying out the main activity and the country of the institution for which the main activity is performed (e.g., employer)

partner for more than 12 months in the 36 months immediately before the deadline of the co-funded programme's call.

For International European Research Organisations' (IERO), 'international organisations' or entities created under Union law, the researchers must not have spent more than 12 months in the 36 months immediately before the deadline of the co-funded programme's call, in the same appointing organisation.

Compulsory national service, short stays such as holidays and time spent as part of a procedure for obtaining refugee status under the Geneva Convention¹⁷² are not taken into account.

- Supported researchers must be either doctoral candidates or postdoctoral researchers, depending on the action:
 - For COFUND Doctoral Programmes, researchers must be doctoral candidates, i.e. not already in possession¹⁷³ of a doctoral degree at the deadline of the co-funded programme's call.

Researchers must be enrolled in a doctoral programme leading to the award of a doctoral degree in at least one EU Member State or Horizon Europe Associated Country.
 - For COFUND Postdoctoral Programmes, researchers must be in possession of a doctoral degree¹⁷⁴ at the deadline of the co-funded programme's call. Researchers who have successfully defended their doctoral thesis but who have not yet formally been awarded the doctoral degree will also be considered as postdoctoral researchers and will be considered eligible to apply. The successful defence must be unconditional (no further requirements/corrections that need to be addressed) and take place before the call deadline. Supporting documentation may be requested.
- For COFUND Postdoctoral Programmes: researchers must be nationals or long-term residents of an EU Member State or Horizon Europe Associated Country, in case the main part of the research training activities is carried out in a country other than an EU Member State or Horizon Europe Associated Country.
- Limitations regarding the researchers' origin and destination should be avoided. Researchers who are already permanently employed by the organisation hosting them cannot be funded by COFUND.

¹⁷² 1951 Refugee Convention and the 1967 Protocol.

¹⁷³ Researchers who have successfully defended their doctoral thesis but who have not yet formally been awarded the doctoral degree will not be considered eligible.

¹⁷⁴ A medical doctor degree will be accepted only when it corresponds to a doctoral degree or if the researcher can demonstrate his/her appointment in a position that requires doctoral equivalency (e.g. professorship appointment). Medical doctor degrees corresponding to basic medical training as defined in Annex V of Directive 2005/36/EC will not be considered a doctoral degree.

4.3.3. Duration of the action

- The maximum duration of the action must be 60 months from the starting date set out in the grant agreement. It also includes the time that is needed to select and recruit the researchers.
- The minimum duration of each fellowship (on the basis of full-time employment) must be three months.
- For Postdoctoral Programmes where the main part of the research training activity does not take place in an EU Member State or a Horizon Europe Associated Country (i.e. outgoing phase), the researcher should carry out a mandatory return period of 12 months at the premises of the beneficiary or the recruiting implementing partner. A maximum of three months can be spent at the start of the action at the beneficiary (or any other organisation mentioned in the description of the action), allowing the researcher to spend time there before the outgoing phase. Secondments cannot take place during the mandatory twelve-month return period to the host organisation in an EU Member State or Horizon Europe Associated Country.
- The duration of the secondments should be limited to a maximum of one third of the actual months spent implementing the research training activities under the action or, if applicable, of the duration of the outgoing phase for Postdoctoral Programmes.

4.4. Award criteria

- Proposals will be evaluated by experts on the basis of the **award criteria** 'excellence', 'impact' and 'quality and efficiency of the implementation'.
- Evaluation scores will be awarded for each of these criteria, and not for the different aspects listed in the table below. Each criterion will be scored out of 5. Scores will be awarded with a resolution of one decimal place and will be subject to a weighting factor as indicated in the table below.
- Proposals scoring equal to or above 70% will be considered for funding — within the limits of the available call budget. Other proposals will be rejected.

Excellence	Impact	Quality and efficiency of the implementation
Quality and novelty of the selection / recruitment process for the researchers (transparency, composition and organisation of selection committees, evaluation criteria, equal opportunities, the gender	Strengthening human resources good practices at institutional, regional, national, or international level, in particular through aligning the practices of participating organisations with the principles set out by the EU for human resources	Quality and effectiveness of the work plan, management structures, assessment of risks and appropriateness of the effort assigned to work packages

Excellence	Impact	Quality and efficiency of the implementation
dimension and other diversity aspects) and quality and attractiveness of the appointment conditions, including competitiveness of the salary for the standards of the hosting countries.	development in research and innovation	
Quality and novelty of the research options offered by the programme in terms of science, interdisciplinarity, inter-sectorality and level of international mobility. Quality of open science practices	Credibility of the proposed measures to enhance the career perspectives and employability of researchers and contribution to their skills development	Quality and capacity of the host institution(s) and participating organisations (where appropriate), including hosting arrangements and extent to which they bring together the necessary expertise to successfully implement the research training programme
Quality, novelty and pertinence of the research training programme (including transferable skills, inter/multidisciplinary, inter-sectoral and gender as well as other diversity aspects)	Suitability and quality of the measures to maximise the expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities	
Quality, novelty and pertinence of the supervision, career guidance and career development arrangements		
50%	30%	20%
Weighting		

4.5. Procedure

- In COFUND, the evaluation will be organised in two different panels, Doctoral Programmes and Postdoctoral Programmes, but a single ranking list will be produced.

Ex-aequo Proposals

- When the total scores of two or more proposals are equal (ex-aequo cases), the priority order will be established as follows:

The proposals will be prioritised according to the scores they have been awarded for the criterion 'Excellence'. When these scores are equal, priority will be based on scores for the criterion 'Impact'. If a distinction still cannot be made, the panel may decide to further prioritise by considering other factors such as environmental considerations in line with the MSCA Green Charter, gender and other diversity aspects in the research activities, participation of the non-academic sector (including involvement of SMEs), geographical diversity ¹⁷⁵, synergies with Cohesion policy funds, support to Smart Specialisation Strategies, or relationship to the Horizon Europe objectives in general. These factors will be documented in the panel report.

Seal of Excellence

Seals of Excellence will be awarded to applications with a total score **equal to or higher than 85%**, but which cannot be funded due to lack of budget available to the call.

4.6. Legal and financial set-up of the Grant Agreements

The following exceptions and additional conditions apply:

- Eligible costs must take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.
- When associated partners are involved, the beneficiary is encouraged to sign a partnership agreement with them to regulate the internal relationship between all participating organisations. The partnership agreement(s) must comply with the grant agreement.
- The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants, based on the MSCA unit contributions.

¹⁷⁵ Defined as the number of EU Member States or Associated Countries represented in the proposal, not otherwise receiving funds from projects higher up the ranking list (and if equal in number, then by budget).

- Grants awarded under this topic may be linked to actions funded under the Cohesion policy funds.
- The beneficiary must ensure full access — on a royalty-free basis — for the recruited researchers to background and results needed for their activities under the action.
- The following deliverables will have to be submitted for grants awarded under this topic:
 - **mid-term meeting** organised between the participants and the granting authority;
 - **mobility declaration** submitted within 20 days of the start of the research training activities, for each researcher, and updated (if needed) via the Funding & Tenders Portal Continuous Reporting tool;
 - **career development plan:** a document describing how the individual Career Development Plans have been established (listing also the researchers for whom such plans have been put in place), submitted towards the end of the project;
 - **evaluation questionnaire** completed by each recruited researcher and submitted at the end of the research training activity; a follow-up questionnaire submitted two years later;
 - **data management plan** submitted at mid-term and an update towards the end of the project if needed;
 - **plan for the dissemination and exploitation of results, including communication activities** submitted at mid-term and an update towards the end of the project.

5. MSCA CHOOSE EUROPE

5.1. Applicable unit contributions

The EU contribution for MSCA Choose Europe will take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme¹⁷⁶.

The following budget categories apply:

MSCA Choose Europe			
	Choose Europe allowance	Long-term leave allowance (if	Special needs allowance (if

¹⁷⁶ The indicative budget includes budget provisions for the increase of the maximum EU contribution for grants funded under Horizon Europe MSCA Choose Europe calls in line with the provisions of the decision authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.

		applicable)	applicable)
	EUR 6700 per person-month for the duration of the initial phase (24 or 36 months)	EUR 6700 x % covered by the beneficiary	requested unit ¹⁷⁷ x (1/number of months)

The **Choose Europe allowance** can be used during the first phase¹⁷⁸ to cover:

- costs of the researchers throughout the fellowship duration including the remuneration payable to the researchers recruited under an employment contract with full social security coverage and complying with the applicable social security legislation, as well as the mobility costs and, if applicable, the family costs, and/or
- costs related to the training, research expenses, activities related to networking of researchers and transfer of knowledge, costs of managing the action and indirect costs.

During the first phase, the monthly gross remuneration, i.e. salaries, social security contributions, taxes and other costs or compulsory deductions under national legislation linked to remuneration must be no lower than EUR 6700 (i.e. the Choose Europe allowance).

During the second phase, the monthly gross remuneration can differ from the initial phase but must remain attractive and competitive at national level. The beneficiary will be responsible for the availability of the necessary funds to cover the monthly gross remuneration during this phase. This phase should contribute to the longer-term career prospects and employability of the recruited researcher following the project period.

The monthly gross remuneration for both phases, as well as the costs or compulsory deductions under national legislation, such as employer and employee' social security contributions and direct taxes, must be clearly communicated in the vacancy notice.

The **long-term leave allowance** contributes to the personnel costs incurred by the employer in case of the researchers' leave, including maternity, paternity, parental, sick or special leave, longer than 30 consecutive days. The **special needs allowance** contributes to the additional costs for the acquisition of special needs items and services for researchers with disabilities, whose long-term physical, mental, intellectual or sensory impairments¹⁷⁹ are certified by a competent national authority, and of such nature that their participation in the action may not be possible without them (e.g. assistance by third persons, adaptation of work environment, additional travel/transportation costs). These special needs items or services must not have been funded from another source (e.g. social security or health insurance). Both long-term leave and special needs allowances can be requested when the need arises during the first

¹⁷⁷ The pre-defined categories are as follows: EUR 3 000, EUR 4 500, EUR 6 000, EUR 9 500, EUR 13 000, EUR 18 500, EUR 27 500, EUR 35 500, EUR 47 500 and EUR 60 000.

¹⁷⁸ See eligibility section 5.3.

¹⁷⁹ See Article 1 of the UN Convention on the Rights of Persons with Disabilities.

phase of the project. During the second phase, the beneficiary should continue to follow the applicable national legislation regarding remuneration of researchers on leave and provisions for researchers with special needs.

The beneficiary must employ and host the selected researchers under an employment contract or 'equivalent direct contract' with full social security coverage (including sickness, parental, unemployment and invalidity benefits, pension rights, benefits in respect of accidents at work and occupational diseases). An exemption from this rule can be accepted only in cases where national legislation or the equivalent internal regulations of International European Research Organisations (IERO), entities created under Union law, or an international organisation, prohibit this possibility and subject to the prior agreement of the granting authority.

In principle, researchers should be employed full-time. The above rates apply to researchers devoting themselves to their project on a full-time basis. Researchers may, in agreement with the beneficiary and with prior approval by the granting authority, implement their project on a part-time basis.

In cases of part-time work, researchers must work at least 50% of the full working time in their recruiting organisation for the action co-funded by the MSCA, whether they are working part-time for family or other reasons¹⁸⁰. The beneficiary should report costs as pro rata of the applicable full-time unit contributions.

The EU contribution is limited to EUR 3.5 million per beneficiary for this call. If an applicant submits two or more successful applications totalling more than EUR 3.5 million within this call, the applicant will be required to decide which of these proposals to implement.

The table above specifies the unit contributions for the co-funding of regional, national and international programmes. The EU contribution can be used to support any cost items of the programme during the initial phase (remuneration costs, mobility costs, family costs, research, training and networking costs, management and indirect costs). Complementary funds to implement the project can be fully or partially funded through other sources including EU programmes other than Horizon Europe, such as the Cohesion policy funds, provided that double funding is avoided.

Applicants must specify in their proposal the total cost of their proposed programme and in particular the amounts, including the Choose Europe allowance, that will be provided for the benefit of the researchers in each phase. This information will be needed to evaluate the adequateness and attractiveness of employment and working conditions of the researchers.

5.2. Admissibility

The following exceptions to the General Annex A apply:

- The page limit of the application is 30 pages (excluding annexes).

¹⁸⁰

An exception to this limit may be granted for medical reasons.

- Applications do not need to include a plan for the exploitation and dissemination of results, including communication activities.

5.3. Eligibility

Given the specific nature of MSCA Choose Europe, the following exceptions and additional eligibility criteria apply. This section also contains eligibility conditions, which apply during action implementation but cannot be verified at proposal stage.

Each Choose Europe programme must have two phases: a first phase of 24 months for a 48-month fellowship or 36 months for a 60-month fellowship, and a second phase of 24 months.

5.3.1. *Participating organisations*

- Applications must be submitted by a single entity established in an EU Member State or Horizon Europe Associated Country.
- Affiliated entities are not allowed to participate as they cannot claim costs in MSCA Choose Europe.
- International organisations with headquarters in an EU Member State or Horizon Europe Associated Country will be deemed to be established in this Member State or Associated Country.
- The beneficiary will be responsible for the availability of the necessary complementary funds to implement the proposal and ensure the full coverage of the second phase as described in the proposal.
- In each Choose Europe programme, a minimum of three researchers must be recruited. Proposals foreseeing recruitment for fewer than three researchers will be deemed ineligible.

5.3.2. *Recruited researchers*

- Recruited researchers can be of any nationality and must comply with the following **mobility rule**: they must not have resided or carried out their main activity (work, studies, etc.) in the country of the recruiting beneficiary for more than 12 months in the 36 months immediately before the deadline of the vacancy notice.
- For International European Research Organisations' (IERO), 'international organisations' or entities created under Union law, the researchers must not have spent more than 12 months in the 36 months immediately before the deadline of the vacancy notice, in the same appointing organisation.
- Compulsory national service, short stays such as holidays and time spent as part of a procedure for obtaining refugee status under the Geneva Convention are not taken into account.

- Researchers who are already permanently employed by the organisation hosting them cannot be funded by MSCA Choose Europe.
- Researchers who are temporarily employed by the organisation hosting them and who adhere to the mobility requirement can be funded under MSCA Choose Europe.
- Researchers must be nationals or long-term residents of an EU Member State or Horizon Europe Associated Country in case the main part of the activities is carried out in a country other than an EU Member State or Horizon Europe Associated Country.
- Limitations regarding the researchers' origin and destination should be avoided.
- Supported researchers must be in possession of a doctoral degree at the vacancy notice deadline.¹⁸¹

5.3.3. *Duration of the action*

- The maximum duration of the action must be 60 months from the starting date set out in the grant agreement for a 48-month fellowship and 72 months for a 60-month fellowship. It also includes the time that is needed to select and recruit the researchers.
- Researchers must be recruited within the first 12 months of the action duration.
- The minimum duration of each fellowship (on the basis of full-time employment) must be 48 months¹⁸² and the maximum duration is 60 months¹⁸³.

5.4. Award criteria

- Proposals will be evaluated by experts on the basis of the **award criteria** 'excellence', 'impact' and 'quality and efficiency of the implementation'.
- Evaluation scores will be awarded for each of these criteria, and not for the different aspects listed in the table below. Each criterion will be scored out of 5. Scores will be awarded with a resolution of one decimal place and will be subject to a weighting factor as indicated in the table below.
- Proposals scoring equal to or above 70% will be considered for funding — within the limits of the available call budget. Other proposals will be rejected.

Excellence	Impact	Quality and efficiency of the implementation
------------	--------	--

¹⁸¹ A medical doctor degree will be accepted only when it corresponds to a doctoral degree or if the researcher can demonstrate his/her appointment in a position that requires doctoral equivalency (e.g. professorship appointment). Medical doctor degrees corresponding to basic medical training as defined in Annex V of Directive 2005/36/EC will not be considered a doctoral degree.

¹⁸² 24 months of the initial stage and 24 months of the second phase

¹⁸³ 36 months of the initial stage and 24 months of the second phase

Quality of the selection / recruitment process for the researchers (transparency, composition and organisation of selection committees, evaluation criteria, equal opportunities, the gender dimension and other diversity aspects)	Contribution to addressing local human resource needs, to advancing regional/national specialisation strategies, and to strengthening European research, innovation and teaching capacity	Quality, credibility and effectiveness of the recruitment plan, assessment of risks and appropriateness of the effort assigned towards offering concrete career prospects for recruited researchers
Quality and attractiveness of the appointment conditions, including inclusive working conditions, quality and attractiveness of the research environment and the resources, training and career development opportunities provided, and remuneration offered in the second phase of the fellowship	Strengthening human resources good practices at institutional, regional, national, or international level, in particular through aligning the practices of participating organisations with the principles set out by the EU for human resources development in research and innovation	Quality and capacity of the recruiting institutions, including hosting arrangements and institutional procedures' alignment with the European Charter for Researchers (institutions with the HRS4R label are exempted from providing further justification for this criterion) and the Agreement on Reforming Research Assessment
Quality and attractiveness of the concrete long-term career prospects that extend beyond the duration of the fellowship		
Quality and ambition of the research, innovation and/or academic objectives of the recruitment programme		
50%	30%	20%
Weighting		

5.5. Procedure

- For MSCA Choose Europe, the evaluation will be organised in a single panel.

- The threshold for criterion 1 (Excellence) will be 3.

Ex-aequo Proposals

- When the total scores of two or more proposals are equal (ex-aequo cases), the priority order will be established as follows:

The proposals will be prioritised first according to the scores they have been awarded for the criterion ‘Excellence’ and if these scores are equal, priority will be based on scores for the criterion ‘Impact’. When these scores are equal, priority will be based specifically on the career prospects offered to the recruited researchers. If a distinction still cannot be made, the panel may decide to further prioritise by considering geographical diversity. This will be documented in the panel report.

Seal of Excellence

Seals of Excellence will be awarded to applications with a total score **equal to or higher than 85%**, but which cannot be funded due to lack of budget available to the call.

5.6. Legal and financial set-up of the Grant Agreements

The following exceptions and additional conditions apply:

- Eligible costs must take the form of unit contributions, as stipulated in Decision of 11 March 2021 authorising the use of lump sum contributions and unit contributions for Marie Skłodowska-Curie actions under the Horizon Europe Programme.
- When associated partners are involved, the beneficiary is encouraged to sign a partnership agreement with them to regulate the internal relationship between all participating organisations. The partnership agreement(s) must comply with the grant agreement.
- Grants awarded under this topic may be linked to actions funded under the Cohesion policy funds.
- The beneficiary must ensure full access — on a royalty-free basis — for the recruited researchers to background and results needed for their activities under the action.
- The following deliverables will have to be submitted for grants awarded under this topic:
 - **mid-term meeting** organised between the participants and the granting authority;
 - **career development plan:** a document describing how the individual Career Development Plans have been established (listing also the researchers for whom such plans have been put in place), submitted towards the end of the project;

- **evaluation questionnaire** completed by each recruited researcher and submitted at the end of the research training activity; a follow-up questionnaire submitted two years later;
- **data management plan** submitted at mid-term and an update towards the end of the project if needed.

Horizon Europe

Work Programme 2023-2025

13. General Annexes

IMPORTANT NOTICE:

This amended draft has not been adopted or endorsed by the European Commission. Any views expressed are the views of the Commission services and may not in any circumstances be regarded as stating an official position of the Commission.

This amended draft is made public before the adoption of the amended work programme to provide potential participants with the currently expected main lines of this amended work programme. Only the adopted amended work programme will have legal value.

The adoption of the amended work programme will be announced on the Horizon Europe website and on the Funding and Tenders Portal.

Information and topic descriptions indicated in this amended draft may not appear in the final amended work programme; and likewise, new elements may be introduced at a later stage. Any information disclosed by any other party shall not be construed as having been endorsed by or affiliated to the Commission.

The Commission expressly disclaims liability for any future changes of the content of this document.

<u>SPECIFIC CONDITIONS FOR ACTIONS WITH PCP/PPI</u>	37
<u>H — Specific conditions for actions implementing pre-commercial procurement or procurement of innovative solutions</u>	37

INTRODUCTION

These General Annexes set out the general conditions applicable to calls and topics for grants and other forms of funding under the Horizon Europe main work programme. They also describe the evaluation and award procedures and other criteria for Horizon Europe funding. In particular, the General Annexes outline the:

- admissibility and eligibility criteria for participation and for receiving funding, the criteria for having the financial and operational capacity and for exclusion (Annexes A-C);
- award criteria, mandatory documents and evaluation procedure (Annexes D-F);
- legal and financial set-up of the grant agreements (Annex G);
- specific conditions applying to actions which include pre-commercial procurement or procurement of innovative solutions (Annex H).

If a topic deviates from the general conditions or includes additional conditions, this is explicitly stated under the specific conditions for the topic.

Applicants are invited to read the call documentation on the topic page of the Funding & Tenders Portal ('Portal') carefully, and particularly these General Annexes, the [Horizon Europe Programme Guide](#)¹, the [EU Funding & Tenders Portal Online Manual](#)² and the [EU Grants AGA — Annotated Grant Agreement](#)³. These documents provide clarifications and answers to questions on preparing the application.

 Please note that calls launched by the European Research Council (ERC), the European Innovation Council (EIC), the European Institute of Innovation and Technology (EIT), the Institutionalised European Partnerships based on Articles 185 and 187 of the Treaty on the Functioning of the European Union (TFEU), calls under the Euratom Research and Training Programme and the activities of the European Commission Joint Research Centre (JRC) are subject to separate work programmes and thus not covered by these General Annexes.

¹ The Horizon Europe Programme Guide outlines the detailed guidance on the structure, budget and political priorities of Horizon Europe.

² The Online Manual outlines the procedures to register and submit applications online via the EU Funding & Tenders Portal and recommendations on preparing the application.

³ The AGA — Annotated Grant Agreement contains detailed annotations on all the provisions in the grant agreement that must be signed to obtain the grant.

GENERAL CONDITIONS

A — Admissibility

Admissibility

Applications must be submitted before the **call deadline**.

Applications must be submitted **electronically** via the Funding & Tenders Portal electronic submission system (accessible via the topic page in the [Search Funding & Tenders](#) section). Paper submissions are NOT possible.

Applications must be submitted using the forms provided *inside* the electronic submission system (not the templates available on the topic page, which are only for information). The structure and presentation must correspond to the instructions given in the forms.

Applications must be **complete** and contain all parts and mandatory Annexes and supporting documents (*see Annex E below*).

Applications must be **readable, accessible and printable**.

Applications must include **a plan for the exploitation and dissemination of results including communication activities**, unless provided otherwise in the specific call/topic conditions. The plan is not required for applications at the first stage of two-stage procedures. If the expected exploitation of the results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan must include a strategy for such exploitation. If the plan provides for exploitation of the results primarily in non-associated third countries, the applicants must explain how that exploitation is to be considered in the EU's interest.

Applicants submitting a proposal under the blind evaluation pilot (*see Annex F below*) must not disclose their organisation names, acronyms, logos nor names of personnel in Part B of their first-stage application (*see Annex E below*).

Page limits

In addition to the above admissibility conditions, page limits will apply to parts of applications. The page limits, and sections subject to limits, will be clearly shown in the application templates in the Funding & Tenders Portal electronic submission system.

Unless provided otherwise in the specific call/topic conditions, **the limit for a full application is 45 pages** (except for 'Coordination and support' actions, where the limit is 30 pages, and for 'Programme co-fund' actions, where the limit is 70 pages). For topics using lump sum funding, the limit for 'Research and Innovation' actions and 'Innovation' actions is 50 pages and the limit for 'Coordination and support' action is 33 pages.

The limit for a first-stage application is 10 pages.

If an application exceeds the limits, there will be an automatic warning and invitation to re-submit a version that conforms to these limits. After the call deadline, excess pages will be automatically made invisible, and will not be taken into consideration by the evaluators.

B — Eligibility

Entities eligible to participate

Any legal entity, regardless of its place of establishment, including legal entities from non-associated third countries or international organisations (including international European research organisations⁴) is eligible to participate (whether it is eligible for funding or not), provided that the conditions laid down in the Horizon Europe Regulation⁵ have been met, along with any other conditions laid down in the specific call/topic.

A ‘legal entity’ means any natural or legal person created and recognised as such under national law, EU law or international law, which has legal personality and which may, acting in its own name, exercise rights and be subject to obligations, or an entity without legal personality⁶.

Beneficiaries and affiliated entities must register in the [Participant Register](#) before submitting their application, in order to get a participant identification code (PIC) and be validated by the Central Validation Service before signing the grant agreement. For the validation, they will be asked to upload the necessary documents showing their legal status and origin during the grant preparation stage. A validated PIC is not a prerequisite for submitting an application.

 For more information, see [Rules for Legal Entity Validation, LEAR Appointment and Financial Capacity Assessment](#).

Specific cases:

Affiliated entities — Affiliated entities (i.e. entities with a legal or capital link to a beneficiary⁷ which participate in the action with similar rights and obligations to the beneficiaries, but which do not sign the grant agreement and therefore do not become beneficiaries themselves) are allowed, if they are eligible for participation and funding.

Associated partners — Associated partners (i.e. entities which participate in the action without signing the grant agreement, and without the right to charge costs or claim contributions) are allowed, subject to any specific call/topic conditions.

Entities without legal personality — Entities which do not have legal personality under their national law may exceptionally participate, provided that their representatives have the

⁴ ‘International European research organisation’ means an international organisation, the majority of whose members are Member States or Associated Countries, and whose principal objective is to promote scientific and technological cooperation in Europe.

⁵ Regulation (EU) 2021/695 of the European Parliament and of the Council of 28 April 2021 establishing Horizon Europe (OJ L 170, 12.5.2021, p. 1).

⁶ See Article 197(2)(c) EU Financial Regulation [2018/1046](#).

⁷ See Article 187 EU Financial Regulation [2018/1046](#).

capacity to undertake legal obligations on their behalf, and offer guarantees to protect the EU's financial interests equivalent to those offered by legal persons⁸.

EU bodies — Legal entities created under EU law including decentralised agencies may be part of the consortium, unless provided for otherwise in their basic act.

Joint Research Centre ('JRC')— Where provided for in the specific call/topic conditions, applicants may include in their proposals the possible contribution of the JRC but the JRC will not participate in the preparation and submission of the proposal. Applicants will indicate the contribution that the JRC could bring to the project based on the scope of the topic text. After the evaluation process, the JRC and the consortium selected for funding may come to an agreement on the specific terms of the participation of the JRC. If an agreement is found, the JRC may accede to the grant agreement as beneficiary requesting zero funding or participate as an associated partner, and would accede to the consortium as a member.

Associations and interest groupings — Entities composed of members (e.g. European research infrastructure consortia (ERICs)) may participate as 'sole beneficiaries' or 'beneficiaries without legal personality'⁹. However, if the action is in practice implemented by the individual members, those members should also participate either as beneficiaries or as affiliated entities (otherwise their costs will NOT be eligible).

Restrictions on participation in Innovation Actions — In accordance with the 2019 "EU-China - A Strategic outlook" communication, the 2021 "Global Approach to Research and Innovation" communication, and the joint conclusions of the 4th EU-China Innovation Cooperation Dialogue of 2019, an exercise to develop a Joint Roadmap for the future of EU-China cooperation in science, technology, and innovation (Roadmap) has been established between the EU and China. It has the objective to develop a level playing field for engagement between the EU and China in the areas of science, technology, and innovation (STI) that is respectful of fundamental research and innovation values and principles. This endeavor is to be achieved through an agreement on the framework conditions contained in the Roadmap and their monitoring and evaluation. As progress so far has mainly taken place on the framework conditions linked to research rather than on those related to innovation, and taking into account the nature and objectives in particular of Innovation Actions, cooperation with entities established in China needs to be calibrated accordingly.

Legal entities established in China are therefore not eligible to participate in Horizon Europe Innovation Actions in any capacity. This includes participation as beneficiaries, affiliated entities, associated partners, third parties giving in-kind contributions, subcontractors or recipients of financial support to third parties (if any). Exceptions may be granted on a case-by-case basis for justified reasons. The above eligibility criteria may be reviewed in the future in accordance with policy developments. This exclusion is justified under Article 22(6) of the Horizon Europe Regulation given the substantive concerns regarding the use of intellectual property generated under this publicly funded programme, and the ongoing discussions

⁸ See Article 197(2)(c) EU Financial Regulation [2018/1046](#).

⁹ See Articles 187(2) and 197(2)(c) EU Financial Regulation [2018/1046](#).

between China and the EU on the Joint Roadmap for the future of EU-China cooperation in science, technology, and innovation

Restrictions for the protection of European communication networks — The protection of European communication networks has been identified as an important security interest of the Union and its Member States.¹⁰ In line with the Commission Recommendation on the cybersecurity of 5G networks of 2019¹¹ and the subsequent report on EU coordinated risk assessment of the cybersecurity of 5G networks of 2019,¹² the EU Toolbox on 5G cybersecurity,¹³ the second report on Member States' progress in implementing the EU toolbox on 5G cybersecurity of 2023,¹⁴ and the related Communication on the implementation of the 5G cybersecurity toolbox of 2023,¹⁵ the Commission together with the Member States has worked to jointly identify and assess cyberthreats and security risks for 5G networks.¹⁶ The toolbox also recommends adding country-specific information (e.g. threat assessment from national security services, etc.). This work is an essential component of the Security Union Strategy and supports the protection of electronic communications networks and other critical infrastructures.

Entities assessed as “high-risk suppliers”, are currently set out in the second report on Member States' progress in implementing the EU toolbox on 5G cybersecurity of 2023¹⁷ and the related Communication on the implementation of the 5G cybersecurity toolbox of 2023¹⁸.

The toolbox also underlines that further developing European capacities in the area of 5G and post-5G technologies by leveraging EU Research & Innovation Funding programmes is a strategic risk mitigating measure. This entails the need to avoid the participation of high-risk supplier entities in the development of other technologies linked to the evolution of European communication networks to prevent technology transfer and the persistence of dependencies in materials, semiconductor components (including processors), computing resources, software tools and virtualisation technologies, as well as related cybersecurity.

In order to protect the specific policy requirements of the Union and/or its Member States, it is therefore appropriate that the following additional eligibility criteria apply to actions identified as “subject to restrictions for the protection of European communication networks” and to proposals within the MSCA part¹⁹ that concern the evolution of European communication networks (5G, post-5G and other technologies linked to the evolution of European communication networks):

¹⁰ European Council conclusions of 1 and 2 October 2020 (EUCO 13/20), point 11; Council Conclusions on the significance of 5G to the European Economy and the need to mitigate security risks linked to 5G, 14517/19.

¹¹ Commission Recommendation (EU) 2019/534 of 26 March 2019 Cybersecurity of 5G networks, L 88/42.

¹² NIS Cooperation Group, Report on EU coordinated risk assessment of the cybersecurity of 5G networks, 9 October 2019.

¹³ NIS Cooperation Group, EU Toolbox on 5G Cybersecurity, 29 January 2020.

¹⁴ NIS Cooperation Group, Second report on Member States' progress in implementing the EU Toolbox on 5G Cybersecurity, June 2023.

¹⁵ Communication from the Commission: Implementation of the 5g cybersecurity Toolbox, Brussels, 15.6.2023 C(2023) 4049 final.

¹⁶ Within the NIS framework NIS 1 + 2 [Directive - 2022/2555 - EN - EUR-Lex (europa.eu)]

¹⁷ NIS Cooperation Group, Second report on Member States' progress in implementing the EU Toolbox on 5G Cybersecurity, June 2023.

¹⁸ Communication from the Commission: Implementation of the 5G cybersecurity Toolbox, Brussels, 15.6.2023 C(2023) 4049 final.

¹⁹ Doctorial Networks, Postdoctoral Fellowships, Staff Exchanges, Cofund.

Entities that are assessed as high-risk suppliers of mobile network communication equipment (and any entities they own or control) are not eligible to participate as beneficiaries, affiliated entities and associated partners.

The assessment is based on the following criteria:

- likelihood of interference from a non-associated third country, for example due to:
 - the characteristics of the entity's ownership or governance (e.g. state-owned or controlled, government/party involvement);
 - the characteristics of the entity's business and other conduct (e.g. a strong link to a third country government);
 - the characteristics of the respective third country (e.g. legislation or government practices likely to affect the implementation of the action, including an offensive cyber/intelligence policy, pressure regarding place of manufacturing or access to information).
- (cyber-)security practices, including throughout the entire supply chain;
- risks identified in relevant assessments of Member States and third countries as well as other EU institutions, bodies and agencies, if relevant.

Exceptions may be requested from the granting authority and will be assessed case-by-case, taking into account the criteria provided for in the 5G cybersecurity toolbox, the security risks and availability of alternatives in the context of the action.

Restrictions on participation or control — For actions related to EU strategic assets, interests, autonomy or security, the specific topic conditions may limit participation to legal entities established only in EU Member States or in EU Member States and specific associated or non-associated third countries. In this case, the eligible countries will be identified in the specific call/topic conditions. In addition, for duly justified and exceptional reasons, to guarantee protection of the strategic interests of the EU and its Member States, the specific call/topic conditions may also exclude the participation of legal entities directly or indirectly controlled by non-eligible third countries or by legal entities of non-eligible third countries (or make their participation subject to specific conditions), in line with Article 22(5) of the Horizon Europe Regulation.

EU restrictive measures — Entities subject to [EU restrictive measures](#) under Article 29 of the Treaty on the European Union (TEU) and Article 215 of the Treaty on the Functioning of the EU (TFEU)²⁰ as well as Article 75 TFEU²¹, are not eligible to participate in any capacity, including as beneficiaries, affiliated entities, associated partners, third parties giving in-kind contributions, subcontractors or recipients of financial support to third parties (if any).

²⁰ Please note that the EU Official Journal contains the official list and, in case of conflict, its content prevails over that of the [EU Sanctions Map](#).

²¹ Please note that the EU Official Journal contains the official list and, in case of conflict, its content prevails over that of the [EU Sanctions Map](#).

Special rules also apply to entities covered by Commission Guidelines No 2013/C 205/05²².

Legal entities established in Russia, Belarus, or in non-government controlled territories of Ukraine — Given the illegal invasion of Ukraine by Russia and the involvement of Belarus, there is currently no appropriate context allowing the implementation of the actions foreseen in this programme with legal entities established in Russia, Belarus, or in non-government controlled territories of Ukraine. Therefore, even where such entities are not subject to EU restrictive measures, such legal entities are not eligible to participate in any capacity. This includes participation as beneficiaries, affiliated entities, associated partners, third parties giving in-kind contributions, subcontractors or recipients of financial support to third parties (if any). Exceptions may be granted on a case-by-case basis for justified reasons.

Measures for the protection of the Union budget against breaches of the principles of the rule of law in Hungary — Following the [Council Implementing Decision \(EU\) 2022/2506](#), as of 16 December 2022, no legal commitments can be entered into with Hungarian public interest trusts established under the Hungarian Act IX of 2021 or any entity they maintain. Affected entities may continue to apply to calls for proposals. However, as long as the Council measures are not lifted, such entities are not eligible to participate in any funded role (beneficiaries, affiliated entities, subcontractors, recipients of financial support to third parties, etc). In case of multi-beneficiary grant calls, applicants will be invited to remove or replace that entity and/or to change its status into associated partner. Tasks and budget may be redistributed accordingly.

Entities eligible for funding

To become a beneficiary, legal entities must be eligible for funding.

To be eligible for funding, applicants must be established in one of the following countries:

- the Member States of the European Union, including their outermost regions:

Austria, Belgium, Bulgaria, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden.
- the Overseas Countries and Territories (OCTs) linked to the Member States:

Aruba (NL), Bonaire (NL), Curaçao (NL), French Polynesia (FR), French Southern and Antarctic Territories (FR), Greenland (DK), New Caledonia (FR), Saba (NL), Saint Barthélemy (FR), Sint Eustatius (NL), Sint Maarten (NL), St. Pierre and Miquelon (FR), Wallis and Futuna Islands (FR).
- countries associated to Horizon Europe²³;

²² Commission guidelines No [2013/C 205/05](#) on the eligibility of Israeli entities and their activities in the territories occupied by Israel since June 1967 for grants, prizes and financial instruments funded by the EU from 2014 onwards (OJEU C 205 of 19.07.2013, pp. 9-11).

Albania, Armenia, Bosnia and Herzegovina, Faroe Islands, Georgia, Iceland, Israel, Kosovo²⁴, Moldova, Montenegro, New Zealand, North Macedonia, Norway, Serbia, Tunisia, Türkiye, Ukraine, United Kingdom²⁵. Considering the Union's interest to retain, in principle, relations with the countries associated to Horizon 2020, most third countries associated to Horizon 2020 are expected to be associated to Horizon Europe with an intention to secure uninterrupted continuity between Horizon 2020 and Horizon Europe. In addition, other third countries can also become associated to Horizon Europe during the programme. For the purposes of the eligibility conditions, applicants established in Horizon 2020 Associated Countries or in other third countries negotiating association to Horizon Europe will be treated as entities established in an Associated Country, if the Horizon Europe association agreement with the third country concerned applies at the time of signature of the grant agreement.

- the following low- and middle-income countries:²⁶.

Afghanistan, Algeria, Angola, Argentina, Azerbaijan, Bangladesh, Belarus, Belize, Benin, Bhutan, Bolivia, Botswana, Burkina Faso, Burundi, Cabo Verde, Cambodia, Cameroon, Central African Republic, Chad, Colombia, Comoros, Congo (Democratic Republic), Congo (Republic), Costa Rica, Côte d'Ivoire, Cuba, Djibouti, Dominica, Dominican Republic, Ecuador, Egypt (Arab Republic), El Salvador, Equatorial Guinea, Eritrea, Eswatini, Ethiopia, Fiji, Gabon, Gambia, Ghana, Grenada, Guatemala, Guinea, Guinea-Bissau, Guyana, Haiti, Honduras, Indonesia, Iran (Islamic Republic), Iraq, Jamaica, Jordan, Kazakhstan, Kenya, Kiribati, Korea (Democratic People's Republic), Kyrgyz Republic, Lao (People's Democratic Republic), Lebanon, Lesotho, Liberia, Libya, Madagascar, Malawi, Malaysia, Maldives, Mali, Marshall Islands, Mauritania, Mauritius, Micronesia (Federated States), Mongolia, Morocco, Mozambique, Myanmar, Namibia, Nepal, Nicaragua, Niger, Nigeria, Niue, Pakistan, Palau, Palestine²⁷, Papua New Guinea, Paraguay, Peru, Philippines, Rwanda, Samoa, São Tomé and Príncipe, Senegal, Sierra Leone, Solomon Islands, Somalia, South Africa, South Sudan, Sri Lanka, St. Lucia, St. Vincent and the Grenadines, Sudan, Suriname, Syrian Arab Republic,

²³ The list is correct at the time of adoption of this Work Programme. Please see the [Horizon Europe List of Participating Countries](#) on the Portal for up-to-date information on the current list and on the position for Associated Countries.

²⁴ This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

²⁵ The United Kingdom is associated to the entire Horizon Europe Programme, with the only exception of the EIC fund (which is part of the EIC Accelerator of Horizon Europe that provides investment through equity or other repayable form), for award procedures implementing Union budget for the year 2024 and onwards.

²⁶ The list is correct at the time of adoption of this Work Programme. See the [Horizon Europe List of Participating Countries](#) on the Portal for a up-to-date list of these countries.

²⁷ This designation shall not be construed as recognition of a State of Palestine and is without prejudice to the individual positions of the Member States on this issue.

Tajikistan, Tanzania, Thailand, Timor-Leste, Togo, Tonga, Turkmenistan, Tuvalu, Uganda, Uzbekistan, Vanuatu, Venezuela (Bolivarian Republic), Vietnam, Yemen Republic, Zambia, Zimbabwe.

Legal entities which are established in countries not listed above will be eligible for funding if provided for in the specific call/topic conditions, or if their participation is considered essential for implementing the action by the granting authority.

Specific cases:

Affiliated entities — Affiliated entities are eligible for funding if they are established in one of the countries listed above, or in a country identified in the specific call/topic conditions.

Associated partners — Entities not eligible for funding (and therefore not able to participate as beneficiaries) may participate as associated partners, unless specified otherwise in the specific call/topic conditions.

Coordination and Support Actions – To be eligible to participate as beneficiaries (or affiliated entities) in ‘Coordination and support’ actions, legal entities must be established in a Member State or Associated Country, unless the specific call/topic conditions provide otherwise (in which case the general rules for eligibility for funding apply). Legal entities established in a non-associated third country may, however, participate in ‘Coordination and support’ actions as associated partners, unless this is explicitly excluded by the specific call/topic conditions.

EU bodies — Legal entities created under EU law may also be eligible to receive funding, unless their basic act states otherwise.

International organisations — International European research organisations are eligible to receive funding. International organisations with headquarters in a Member State or Associated Country are eligible to receive funding for ‘Training and mobility’ actions or when provided for in the specific call/topic conditions. Other international organisations are not eligible to receive funding, unless provided for in the specific call/topic conditions, or if their participation is considered essential for implementing the action by the granting authority.

Consortium composition

Unless otherwise provided for in the specific call/topic conditions, only legal entities forming a consortium are eligible to participate in actions provided that the consortium includes, as beneficiaries, three legal entities independent from each other and each established in a different country as follows:

- at least one independent legal entity established in a Member State; and
- at least two other independent legal entities, each established in different Member States or Associated Countries.

As affiliated entities do not sign the grant agreement, they do not count towards the minimum eligibility criteria for consortium composition (if any).

The Joint Research Centre, international European research organisations and legal entities created under EU law are deemed to be established in a Member State other than those in which the other legal entities participating in the action are established.

Applications for ‘Training and mobility’ actions and for ‘Programme co-fund’ actions may be submitted by one or more legal entities, provided that one of those legal entities is established in a Member State or an Associated Country.

Applications for ‘Coordination and support’ actions may be submitted by one or more legal entities, which may be established in a Member State, Associated Country or, in exceptional cases and if provided for in the specific call/topic conditions, in another third country.

Applications for ‘Pre-commercial procurement’ actions and ‘Public procurement of innovative solutions’ actions must also fulfil the eligibility criteria of three independent legal entities as beneficiaries as explained above, out of which a minimum of two beneficiaries must be independent legal entities that are public procurers²⁸, each established in a different Member State or Associated Country and with at least one of them established in a Member State.

Eligible activities

Eligible activities are the ones described in the call conditions. Applications will only be considered eligible if their content corresponds, wholly or in part, to the topic description for which it is submitted.

Projects must focus exclusively on civil applications and must not:

- aim at human cloning for reproductive purposes;
- intend to modify the genetic heritage of human beings which could make such changes heritable (except for research relating to cancer treatment of the gonads, which may be financed);
- intend to create human embryos solely for the purpose of research, or for the purpose of stem cell procurement, including by means of somatic cell nuclear transfer.

Projects must, moreover, comply with EU policy interests and priorities (environment, social, security, industrial policy, etc.).

The following activities are generally eligible for grants under Horizon Europe:

Research and innovation actions (RIA) — Activities that aim primarily to establish new knowledge or to explore the feasibility of a new or improved technology, product, process,

²⁸ ‘Public procurers’ are organisations that are contracting authorities or contracting entities as defined in EU public procurement directives 2014/24/EU, 2014/25/EU, and 2009/81/E.

service or solution. This may include basic and applied research, technology development and integration, testing, demonstration and validation of a small-scale prototype in a laboratory or simulated environment.

Innovation actions (IA) — Activities that aim directly to produce plans and arrangements or designs for new, altered or improved products, processes or services. These activities may include prototyping, testing, demonstrating, piloting, large-scale product validation and market replication.

Coordination and support actions (CSA) — Activities that contribute to the objectives of Horizon Europe. This excludes research and innovation (R&I) activities, except those carried out under the ‘Widening participation and spreading excellence’ component of the programme (part of ‘Widening participation and strengthening the European Research Area’). Also eligible are bottom-up coordination actions which promote cooperation between legal entities from Member States and Associated Countries to strengthen the European Research Area, and which receive no EU co-funding for research activities.

Programme co-fund actions (CoFund) — A programme of activities established or implemented by legal entities managing or funding R&I programmes, other than EU funding bodies. Such a programme of activities may support: networking and coordination; research; innovation; pilot actions; innovation and market deployment; training and mobility; awareness raising and communication; and dissemination and exploitation. It may also provide any relevant financial support, such as grants, prizes and procurement, as well as Horizon Europe blended finance²⁹ or a combination thereof. The actions may be implemented by the beneficiaries directly or by providing financial support to third parties.

Innovation and market deployment actions (IMDA) — Activities that embed an innovation action and other activities necessary to deploy an innovation on the market. This includes the scaling-up of companies and Horizon Europe blended finance.

Training and mobility actions (TMA) — Activities that aim to improve the skills, knowledge and career prospects of researchers, based on mobility between countries and, if relevant, between sectors or disciplines.

Pre-commercial procurement actions (PCP) — Activities that aim to help a transnational buyers’ group to strengthen the public procurement of research, development, validation and, possibly, the first deployment of new solutions that can significantly improve quality and efficiency in areas of public interest, while opening market opportunities for industry and researchers active in Europe. Eligible activities include the preparation, management and follow-up, under the coordination of a lead procurer, of one joint PCP and additional activities to embed the PCP into a wider set of demand-side activities.

²⁹ ‘Horizon Europe blended finance’ means financial support for innovation and market deployment activities, consisting of a specific combination of a grant or reimbursable advance and an investment in equity or any other repayable form of support.

Public procurement of innovative solutions actions (PPI) — Activities that aim to strengthen the ability of a transnational buyers' group to deploy innovative solutions early by overcoming the fragmentation of demand for such solutions and sharing the risks and costs of acting as early adopters, while opening market opportunities for industry. Eligible activities include preparing and implementing, under the coordination of a lead procurer, one joint or several coordinated PPI by the buyers' group and additional activities to embed the PPI into a wider set of demand-side activities.

Technology Readiness Levels

Where the specific call/topic conditions require a Technology Readiness Level (TRL), the following definitions apply, unless otherwise specified:

- TRL 1 — Basic principles observed
- TRL 2 — Technology concept formulated
- TRL 3 — Experimental proof of concept
- TRL 4 — Technology validated in a lab
- TRL 5 — Technology validated in a relevant environment (industrially relevant environment in the case of key enabling technologies)
- TRL 6 — Technology demonstrated in a relevant environment (industrially relevant environment in the case of key enabling technologies)
- TRL 7 — System prototype demonstration in an operational environment
- TRL 8 — System complete and qualified
- TRL 9 — Actual system proven in an operational environment (competitive manufacturing in the case of key enabling technologies, or in space)

Ethics

Projects must comply with ethical principles (including the highest standards of research integrity) and applicable EU, international and national law.

Applicants must have completed the ethics self-assessment as part of their application.

 For more information, see [How to complete your ethics self-assessment](#).

Projects involving ethics issues will have to undergo an ethics review to authorise funding and may be made subject to specific ethics requirements. These requirements become part of the grant agreement as ethics deliverables, e.g. ethics committee opinions/authorisations required under national or EU law.

Security — EU classified and sensitive information

Projects involving classified and/or sensitive information will have to go through the security appraisal process to authorise funding and may be made subject to specific security rules (detailed in the Security Section, which is annexed to the grant agreement). Specific provisions for EU classified information (EUCI) and sensitive information (SEN) will be included in the grant agreement, as necessary and appropriate.

The rules for protecting EU classified information (governed by Commission Decision (EU, Euratom) [2015/444](#)³⁰ and/or national rules) provide for instance that:

- projects involving information classified as TRES SECRET UE/EU TOP SECRET (or equivalent) can NOT be funded;
- EU classified information must be marked in accordance with the applicable security instructions in the Security Classification Guide appendix of the Security Aspects Letter (SAL), which is contained in the Security Section of the grant agreement;
- generation of, or access to, information with classification levels CONFIDENTIEL UE/EU CONFIDENTIAL or above (and RESTREINT UE/EU RESTRICTED, if required by national rules) may take place only on the premises of entities which have been granted a facility security clearance (FSC) issued by the competent national security authority (NSA);
- handling of information classified CONFIDENTIEL UE/EU CONFIDENTIAL or above (and RESTREINT UE/EU RESTRICTED, if required by national rules) may take place only in a secured area accredited by the competent NSA;
- access to and handling of information classified CONFIDENTIEL UE/EU CONFIDENTIAL or above may be granted only to individuals with a valid personnel security clearance (PSC) and an established need-to-know, who have been briefed on the applicable security rules;
- access to, and handling of, information classified RESTREINT UE/EU RESTRICTED may be granted only to individuals who have a need-to-know and have been briefed on the applicable security rules;
- at the end of the grant, the classified information must either be returned or continue to be protected according to the applicable rules;
- subcontracting of tasks involving EU classified information is subject to prior written approval by the European Commission, which is the originator of EU classified information. It is only possible to subcontract these tasks to entities established in an EU Member State or in a non-EU country with a security of information agreement with the EU (or an administrative arrangement with the Commission);

³⁰ See Commission Decision (EU, Euratom) 2015/444 of 13 March 2015 on the security rules for protecting EU classified information (OJ L 72, 17.3.2015, p. 53).

- disclosure of EU classified information is subject to prior written approval by the European Commission.

Depending on the type of activity, FSCs may have to be provided before the grant is signed. The granting authority will assess this for each case and fix the delivery date during the grant preparation stage. It is not possible to sign any grant agreement before at least one of the beneficiaries in the consortium has an FSC.

In certain cases, the project results might not require classification, but they might be sensitive and require restricted disclosure or limited dissemination for security reasons, according to the applicable instructions in the Security Section. This means that, in principle, third parties should have no access to results subject to this type of restriction. Disclosure of this information is subject to prior written approval by the European Commission.

Further security recommendations may be added to the grant agreement in the form of security deliverables (e.g. establishing a security advisory board, appointing a project security officer, limiting the level of detail, using a fake scenario, etc.).

In addition, beneficiaries must ensure that their projects are not subject to national/third-country security requirements that could affect implementation or put into question the award of the grants (e.g. technology restrictions, national security classification, etc.). Any potential security issues must be notified immediately to the granting authority.

Gender equality plans and gender mainstreaming

Beneficiaries must take all measures to promote equal opportunities between men and women in implementing the action and, where applicable, in line with their gender equality plan. They must aim to achieve, to the extent possible, a gender balance at all levels of personnel assigned to the action, including at supervisory and managerial level.

In addition, to be eligible, legal entities from Member States and Associated Countries that are public bodies, research organisations or higher education establishments (including private research organisations and higher education establishments) must have a gender equality plan, covering the following minimum process-related requirements:

- publication: a formal document published on the institution's website and signed by the top management;
- dedicated resources: commitment of resources and expertise in gender equality to implement the plan;
- data collection and monitoring: sex/gender disaggregated data on personnel (and students, for the establishments concerned) and annual reporting based on indicators;
- training: awareness raising/training on gender equality and unconscious gender biases for staff and decision-makers.

Content-wise, it is recommended that the gender equality plan addresses the following areas, using concrete measures and targets:

- work-life balance and organisational culture;
- gender balance in leadership and decision-making;
- gender equality in recruitment and career progression;
- integration of the gender dimension into research and teaching content;
- measures against gender-based violence, including sexual harassment.

A self-declaration will be requested at proposal stage. If all the above-mentioned mandatory requirements are met through another strategic document, such as a development plan or an inclusion or diversity strategy, it can be considered as an equivalent. This eligibility criterion does not apply to other categories of legal entities, such as private for-profit organisations, including SMEs, non-governmental or civil society organisations.

Financial support to third parties

Where the specific call/topic conditions allow for financial support to third parties, the applicants must clearly describe in their proposal the objectives and the expected results, including the elements listed in the application template. The following conditions must also be fulfilled:

- projects must publish their open calls widely and adhere to EU standards of transparency, equal treatment, conflict of interest and confidentiality;
- all calls for third parties and all calls that are implemented by third parties must be published on the Funding & Tenders Portal, and on the beneficiaries' websites;
- the calls must remain open for at least 2 months;
- if submission deadlines are changed, this must immediately be announced and registered applicants must be informed of the change;
- projects must publish the outcome of the calls without delay, including a description of third-party projects, the date of the award, the duration, and the legal name of the third party and country of establishment;
- the calls must have a clear European dimension.

Further conditions may be stipulated in the specific conditions for the topic.

 For more information, see AGA — *Annotated Model Grant Agreement*, Articles 6.2.D.1 and 9.4.

OTHER TYPES OF ACTIONS AND FORMS OF FUNDING

The following types of action and forms of funding are also used in Horizon Europe. They are usually placed in the 'Other Actions' section of the work programme parts and are not all subject to calls for proposals.

- **Grants to identified beneficiaries** — Exceptionally, a grant may be awarded to legal entities explicitly named in the work programme without a prior call for proposals. The identified beneficiaries must nevertheless submit a proposal to benefit from funding. This proposal will be evaluated and must meet the required threshold. The funding rates will correspond to the type of action indicated.
- **Prizes** — Prize means a financial contribution given as a reward following a contest. *Inducement prizes*: a prize to stimulate investment in a given area, by specifying a goal prior to the work being performed. Contests for inducement prizes must address technological and/or societal challenges. The award criteria will define a goal, but without prescribing how to achieve it. Contests for inducement prizes are split into awards for the contestant that first meets the specific goal defined in the rules of the contest, and awards for the best contestant within a given period. *Recognition prizes*: a prize to reward past achievements and outstanding work after it has been performed. Recognition prizes must help to raise public awareness of EU policies, create role models and support best practice exchange. The Rules of the contest of a specific prize provide for the admissibility, eligibility, exclusion and award criteria, the prize amount and categories (if applicable) the evaluation procedure, the indicative timetable and the modalities of payment. The rules are found on the call topic page on the Funding & Tenders Portal.
- **Framework partnerships and specific grant agreements** — Framework partnerships are formalised long-term cooperation mechanisms involving several or recurring grants. They must be based on jointly agreed action plans and agreements that set out the terms and conditions for receiving grants to implement the actions, framework partnership agreements (FPA) and specific grant agreements (SGA). The FPA will set out the framework conditions governing potential grants to beneficiaries on the basis of an action plan and jointly agreed general objectives. The SGA will set out the specific obligations and conditions to implement the specific action. The FPA will have no budget; the budget and rules on funding will be set out in each SGA and depend on the specific type of action. The establishment of an FPA must take place following a call for proposals. Beneficiaries will be identified from the evaluation of the proposals. In a subsequent step, beneficiaries may be invited to submit their proposals for the SGA. Framework partnerships do not give the partners (i.e. potential beneficiaries) exclusive rights to be awarded the grants covered by the FPAs. SGAs must only be signed if the FPA has been signed, and before the end date of the FPA.
- **Operating grants** — Operating grants provide financial support for the functioning of a body to enable it to carry out specific activities set out in the agreed work programme. Operating grants do not support the implementation of a specific action, but rather the annual operating budget (or part of it) for certain bodies whose statutory activities serve the strategic objectives of EU policies. Operating grants will always be mono-beneficiary grants supporting the work programme of only one organisation. Operating grants must follow the same rules as described in Annex G, but they do not differentiate between direct and indirect costs. Receiving an operating grant may make beneficiaries ineligible to receive indirect costs in all other EU action grants.
- **Public procurement** — In a public procurement action, the granting authority purchases works, supplies or services, or acquires or rents land, buildings or other immovable property. This is done by entering into a contract with an economic operator chosen by the granting authority. Before the granting authority enters into a procurement contract, a call for tender is published on the Funding & Tenders Portal.
- **Expert contract actions** — Expert contracts are used to appoint independent expert(s) to advise or assist us. Experts are used for evaluating proposals, for evaluating the programme, for ethics screenings and assessments, for advisory bodies, and for expertise related to the objectives of Horizon Europe.
- **Subscription actions** — Subscription actions are used to pay contributions to bodies in which the EU is a member or an observer.
- **Scientific and technical services by the Joint Research Centre** — Scientific and technical services cover research and innovation activities undertaken by the Commission through its Joint Research Centre. These (non-nuclear) activities are direct actions generating high-quality scientific evidence to support efficient and affordable public policies. Horizon Europe's rules for participation do not apply to these actions.
- **Indirectly managed actions** — Indirectly managed actions refer to actions implemented by entities which are entrusted with implementing EU funds or budgetary guarantees through a contribution agreement.
- **Service level agreement actions** — These are actions implemented through a service level agreement. Service level agreements include agreements between Commission departments or, agreements that the Commission may conclude with another Union institution, Union body, or European office involving the provision of services.

C — Financial and operational capacity and exclusion

Financial capacity

Applicants must have **stable and sufficient resources** to successfully implement the projects and contribute their share. Organisations participating in several projects must have sufficient capacity to implement all these projects.

The financial capacity check will be done on the basis of the documents uploaded in the [Participant Register](#) during the grant preparation stage (e.g. profit and loss account and balance sheet, business plan, audit report produced by an approved external auditor, certifying the accounts for the last closed financial year, etc.). The analysis will be based on neutral financial indicators, but will also take into account other aspects, such as dependency on EU funding and deficit and revenue in previous years.

The check will normally be done for the coordinator if the requested grant amount is equal to or greater than EUR 500 000, except for:

- public bodies (entities established as a public body under national law, including local, regional or national authorities) or international organisations; and
- cases where the individual requested grant amount is not more than EUR 60 000 (low-value grant).

If needed, it may also be done for the other applicants, including affiliated entities. If the financial capacity is structurally guaranteed by another legal entity, the financial capacity of that legal entity will be verified.

If the granting authority considers that the financial capacity is not satisfactory, they may require:

- further information;
 - an enhanced financial responsibility regime, i.e. joint and several responsibility of affiliated entities (*see Annex G below*); and
 - prefinancing paid in instalments;
- or
- propose no prefinancing;
 - request that the applicant concerned is replaced or, if needed, reject the entire proposal.

i For more information, see [Rules on Legal Entity Validation, LEAR Appointment and Financial Capacity Assessment](#).

Operational capacity

Applicants must have the **know-how, qualifications** and **resources** to successfully implement their tasks in the project and contribute their share (including, when appropriate, sufficient experience in EU/transnational projects of comparable size).

This assessment of operational capacity will be carried out during the evaluation of the award criterion ‘Quality and efficiency of the implementation’. It will be based on the competence and experience of the applicants and their project teams, including their operational resources (human, technical and other) or, exceptionally, the measures proposed to obtain the necessary competence and experience by the time the tasks are implemented.

If the evaluation of this award criterion leads to a score above the applicable threshold, then the applicants are considered to have sufficient operational capacity.

For this assessment, applicants will be required to provide the following information in the application form:

- description of the consortium participants; and
- for each participant:
 - identity of researchers involved in the proposal (through the researchers table);
 - up to five most relevant publications, widely-used datasets, software, goods, services, or any other achievements relevant to the call content;
 - up to five most relevant previous projects or activities, connected to the subject of this proposal; and
 - description of any significant infrastructure and/or any major items of technical equipment, relevant to the proposed work.

Additional supporting documents may be requested if they are needed to confirm the operational capacity of any applicant.

Public bodies, Member State organisations and international organisations are exempted from the operational capacity check.

Exclusion

Applicants that are subject to **EU administrative sanctions** (i.e. exclusion)³¹ or are in one of the following **exclusion situations**³² that bar them from receiving EU grants can NOT participate:

³¹ See Article 136 EU Financial Regulation [2018/1046](#).

³² See Articles 136 and 141 EU Financial Regulation [2018/1046](#).

- bankruptcy, winding up, affairs administered by the courts, arrangement with creditors, suspended business activities or other similar procedures (including procedures for persons with unlimited liability for the applicant's debts);
- they are in breach of social security or tax obligations (including if done by persons with unlimited liability for the applicant's debts);
- they are guilty of grave professional misconduct (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant);
- they are guilty of fraud, corruption, having links to a criminal organisation, money laundering, terrorism-related crimes (including terrorism financing), child labour or human trafficking (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant);
- they have shown significant deficiencies in complying with their main obligations under an EU procurement contract, grant agreement, prize, expert contract, or similar (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant);
- they are guilty of irregularities within the meaning of Article 1(2) of Regulation No [2988/95](#)³³ (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant); or
- they have created under a different jurisdiction an entity with the intent to circumvent fiscal, social or other legal obligations in the country of origin or created another entity with this purpose (including if done by persons having powers of representation, decision-making or control, beneficial owners or persons who are essential for the award/implementation of the grant).

Applicants will also be refused if they³⁴:

- have misrepresented the information required as a condition for participating in the procedure or have failed to supply that information; or
- were previously involved in the preparation of documents used in the award procedure where this entails a breach of the principle of equality of treatment, including distortion of competition, that cannot be remedied otherwise.

³³ Council Regulation (EC, Euratom) No 2988/95 of 18 December 1995 on the protection of the European Communities financial interests, (OJ L 312, 23.12.1995, p. 1).

³⁴ See Article 141 EU Financial Regulation [2018/1046](#).

D — Award criteria

Award criteria

If admissible and eligible, the proposals will be evaluated and ranked against the following **award criteria**³⁵, depending on the type of action:

	Excellence (The following aspects will be taken into account, to the extent that the proposed work corresponds to the description in the work programme)	Impact	Quality and efficiency of the implementation
Research and innovation actions (RIA) Innovation actions (IA)	<ul style="list-style-type: none"> - Clarity and pertinence of the project’s objectives, and the extent to which the proposed work is ambitious and goes beyond the state of the art. - Soundness of the proposed [for the first stage: overall(*)] methodology, including the underlying concepts, models, assumptions, inter-disciplinary approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society 	<ul style="list-style-type: none"> - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project. - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities. 	<ul style="list-style-type: none"> - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall. - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

³⁵ For two-stage submission procedures, only the aspects in bold are considered for the evaluation of first-stage applications. See “Two-stage calls” below in this General Annex.

	<p>and end-users where appropriate.</p> <p>(*) Including all aspects mentioned in the first stage proposal template, which also include the integration of the gender dimension in research and innovation content as well as open science practices.</p>		
Coordination and support actions (CSA)	<ul style="list-style-type: none"> - Clarity and pertinence of the project's objectives. - Quality of the proposed coordination and/or support measures, including soundness of methodology. 	<ul style="list-style-type: none"> - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project. - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities. 	<ul style="list-style-type: none"> - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall. - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.
Programme co-fund actions (CoFund)	<ul style="list-style-type: none"> - Clarity and pertinence of the project's objectives, and the extent to which the proposed work is ambitious, and goes beyond the state of the art. - Soundness of the proposed methodology, including the underlying concepts, models, assumptions, inter-disciplinary 	<ul style="list-style-type: none"> - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions from the project. - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the 	<ul style="list-style-type: none"> - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall. - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

	approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices, including sharing and management of research outputs and engagement of citizens, civil society and end-users where appropriate.	dissemination and exploitation plan, including communication activities.	
Innovation and market deployment actions (IMDA)	<i>See the European Innovation Council Work Programme.</i>		
Training and mobility actions (TMA)	<i>See the Marie Skłodowska-Curie Actions Work Programme part 2.</i>		
Pre-commercial procurement actions (PCP) Public procurement of innovative solutions actions (PPI)	<ul style="list-style-type: none"> - Clarity and pertinence of the objectives and the extent to which they are ambitious, and go beyond the state of the art in terms of the degree of innovation that is needed to satisfy the procurement need. - Soundness of the proposed methodology, taking into account the underlying concepts and assumptions. 	<ul style="list-style-type: none"> - Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme. - Suitability and quality of the measures to maximise expected outcomes and impacts, as set out in the dissemination and exploitation* plan, including communication activities. <p style="font-size: small; margin-top: 10px;">* For PCP actions and PPI actions, the exploitation of results by the beneficiaries means primarily the use that is made of the innovative solutions</p>	<ul style="list-style-type: none"> - Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall. - Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise.

		by the procurers/end-users. The manufacturing and sale of the innovative solutions are performed by the suppliers of the solutions, which are not beneficiaries but subcontractors.	
Framework Partnership Agreements (FPA)	- Clarity and pertinence of the project's objectives.	- Credibility of the action plan of the FPA to achieve the expected outcomes and impacts specified in the work programme.	- Capacity and role of each participant, and the extent to which the consortium as a whole brings together the necessary expertise. - Potential for long-term cooperation among participants.

Scores and weighting

Evaluation scores will be awarded for the criteria, and not for the different aspects listed in the table. For full applications, each criterion will be scored out of 5. The threshold for individual criteria will be 3. The overall threshold, applying to the sum of the three individual scores, will be 10.

To determine the ranking for 'Innovation actions', the score for 'Impact' will be given a weight of 1.5.

Proposals that pass the individual threshold AND the overall threshold will be considered for funding, within the limits of the available call budget. Other proposals will be rejected.

Two-stage calls

For the evaluation of first-stage applications under a two-stage submission procedure, only the 'Excellence' and 'Impact' criteria will be evaluated. Within these criteria, only the aspects in **bold** will be considered.

The threshold for both individual criteria will be 4. For each indicative budget-split in the call conditions, the overall threshold applying to the sum of the two individual scores will be set at a level that ensures the total requested budget of proposals admitted to stage 2 is as close as possible to three times the available budget, and not less than two and a half times the available budget. The actual level will therefore depend on the volume of proposals received. The threshold is expected normally to be set at 8 or 8.5.

The evaluation procedure is explained further in *Annex F below*.

E — Documents

Submission

All proposals must be submitted **electronically** via the Funders & Tenders Portal electronic submission system (accessible via the topic page in the [Search Funding & Tenders](#) section). Paper submissions are NOT possible.

Proposals must be **complete** and contain all parts and mandatory annexes and supporting documents.

The application form will have two parts:

- **Part A** (to be filled in directly online) contains administrative information about the applicant organisations (future coordinator and beneficiaries and affiliated entities), the summarised budget for the proposal and call-specific questions;
- **Part B** (to be downloaded from the Portal submission system, completed and then assembled and re-uploaded as a PDF in the system) contains the technical description of the project.

Annexes and supporting documents will be directly available in the submission system and must be uploaded as PDF files (or other formats allowed by the system).

Proposals should be designed to stay as close as possible to the award criteria (*see Annex D above*). The application form will help to achieve this.

When submitting the proposal, the coordinator will have to confirm that they have the mandate to act for all applicants. Moreover, they will have to confirm that the information in the application is correct and complete and that all participants comply with the conditions for receiving EU funding (especially eligibility, financial and operational capacity, exclusion, etc.). Proposals not complying with these requirements will be rejected. Before signing the grant, each participant will have to confirm this again by signing a declaration of honour.

For lump sum grants proposals, the estimated budget must be described in a detailed budget table. This will be used as a basis for justifying and/or fixing the lump sum amount. As the lump sum must be an approximation of the costs actually incurred, the costs included in this detailed budget table must comply with the basic eligibility conditions for EU actual cost grants (*see AGA — Annotated Grant Agreement, Article 6*). This is particularly important for purchases and subcontracting, which must ensure best value for money (or, if appropriate, the lowest price) and be free from any conflicts of interest. If the budget table contains ineligible costs, the grants may be reduced (even later on during implementation of the project or after they end). Exceptionally, the Decision authorising the use of lump sum funding for a specific action might specify that a detailed budget table is not required.

 Applicants may be asked at a later stage for further documents (for legal entity validation, financial capacity check, bank account validation, etc.).

F — Procedure

Evaluation procedure and ranking

Calls may be subject to either a **single-stage submission procedure** or a **two-stage submission procedure**. The **evaluation procedure** may be organised in one (standard) or several steps.

In the first stage of a two-stage submission, applicants will be requested to submit only an outline application (which will be evaluated against only two award criteria: ‘Excellence’ and ‘Impact’). Successful applicants will be invited to submit a full application for the second stage (which will be evaluated against the full set of award criteria).

Proposals will be checked for formal requirements (admissibility and eligibility) and then evaluated (for each topic separately) by an **evaluation committee** composed of independent external experts for operational capacity and award criteria (*see Annexes C and D above*) and then ranked according to their quality score.

For lump sum grants proposals, comments on the detailed lump sum budget table will be provided in the Evaluation Summary Report only for proposals invited to grant agreement preparation (or placed in the reserve list) and ones rejected (in part) due to significant overestimation or underestimation of costs.

Exceptionally, where indicated in the specific call/topic conditions, the evaluation committee may be composed partially or, in the case of ‘Coordination and support actions’, partially or fully of representatives of EU institutions.

For proposals with the same score within a single budget envelope (with the exception of the first stage of two-stage submissions) a method to establish the **priority order** will be determined, taking into consideration the objectives of the specific topic. In the absence of special arrangements in the specific call/topic conditions, the following method will apply:

For each group of proposals with the same score, starting with the group achieving the highest score and continuing in descending order:

- 1) Proposals that address aspects of the call that have not otherwise been covered by more highly ranked proposals will be considered to have the highest priority.
- 2) The proposals identified under 1), if any, will themselves be prioritised according to the scores they have been awarded for ‘Excellence’. When these scores are equal, priority will be based on scores for ‘Impact’. In the case of ‘Innovation actions’, priority will be given to the score for ‘Impact’, followed by that for ‘Excellence’.
- 3) If necessary, the gender balance among the researchers named in the researchers table in the proposal, will be used as a factor for prioritisation.
- 4) If necessary, any further prioritisation will be based on geographical diversity, defined as the number of Member States or Associated Countries represented in the proposal,

not otherwise receiving funds from projects higher up the ranking list (and if equal in number, then by budget).

- 5) If a distinction still cannot be made, the panel may decide to further prioritise by considering other factors related to the objectives of the call, or to Horizon Europe in general. These may include, for example, enhancing the quality of the project portfolio through synergies between projects or, where relevant and feasible, involving SMEs. These factors will be documented in the panel report.
- 6) The method described in 1), 2), 3) and 4) will then be applied to the remaining equally ranked proposals in the group.

At the end of the evaluation, all applicants will be informed of the result in an evaluation result letter. Successful proposals will be invited to the next stage, 'grant preparation'; the other proposals will be put on the reserve list or rejected.

 No commitment to provide funding — Invitation to the grant preparation stage does NOT constitute a formal commitment to funding. Various legal checks are still needed before the grant can be awarded, such as legal entity validation, financial capacity verification, exclusion check, etc.

 If indicated in the specific call/topic conditions, proposals which were judged to deserve funding but did not succeed because of budget limits will receive a **Seal of Excellence**³⁶. With prior authorisation from the applicant, the granting authority may share information concerning the proposal and the evaluation with interested financing authorities, subject to the conclusion of confidentiality agreements.

 Budget flexibility — The budgets set out in the calls and topics are indicative. Unless otherwise stated, final budgets may change following evaluation. The final figures may change by up to 20% compared to the total budget indicated in each individual part of the work programme. Changes within these limits will not be considered substantial within the meaning of Article 110(5) of Regulation (EU, Euratom) No 2018/1046.

 Joint calls for proposals — In cases of applications for **joint calls** with third countries (including scientific and technological organisations or agencies from third countries), international organisations or non-profit legal entities, the joint selection and evaluation procedures will be indicated in the specific call/topic conditions.

 Blind evaluation pilot – If indicated in the specific call/topic conditions, first-stage proposals of two-stage submissions will be evaluated blindly³⁷ and applicants must not disclose their identity in Part B of their proposal (*see Annex A above*).

Evaluation review procedure

³⁶ https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/seal-excellence_en.

³⁷ See Horizon Europe Programme Guide for further details.

If the consortium believes that the evaluation procedure was flawed, the coordinator can submit a **complaint** (following the deadlines and procedures also set out in the evaluation result letter).

Only the procedural aspects of an evaluation may be the subject of a request for an evaluation review. The evaluation of the merits of a proposal will not be the subject of an evaluation review.

A request for an evaluation review must relate to a specific proposal and must be submitted within 30 days after the beneficiary accesses the evaluation results. The deadlines will be counted from the date of opening/access. The maximum size limit of the request is 7 000 characters. Notifications of evaluation results which have not been opened in the Funding & Tenders Portal within 10 days after sending are considered to have been accessed (*see also [Funding & Tenders Portal Terms and Conditions](#)*).

An evaluation review committee will provide an opinion on the procedural aspects of the evaluation. The evaluation review committee may recommend a re-evaluation of the proposal, to be carried out primarily by evaluators who were not involved in the previous evaluation, or a confirmation of the initial evaluation.

Indicative timetable for evaluation and for signature of the grant agreement

Unless otherwise stated in the specific call/topic conditions, the timing for evaluation and grant preparation is as follows:

- information on the outcome of the evaluation: around 5 months from the deadline for submission;
- indicative date for the signing of grant agreements: around 8 months from the deadline for submission.

For two-stage calls, the timing is different (for the evaluation result: around 3 months from the deadline for submission for the first stage, and around 5 months from the deadline for submission for the second stage, for signature of the grant agreement around 8 months from in the second stage deadline for submission).

G — Legal and financial set-up of the grant agreements

During the grant preparation stage, the consortium will be asked to prepare the [grant agreement](#), together with the EU project officer.

This grant agreement will set out the framework for the grant and its terms and conditions, particularly concerning deliverables, reporting and payments. The applicable model with the complete text of the provisions is available on the topic page, together with the other call documentation.

Starting date & project duration

The project starting date and duration will be fixed in the grant agreement (*see Data Sheet, point 1*). Normally, the starting date will be after the grant has been signed. A starting date before the date the grant is signed (retroactive) can be granted exceptionally for duly justified reasons, if agreed with the granting authority³⁸.

The project duration is provided in months (extensions will be possible only exceptionally, for duly justified reasons and if the granting authority agrees).

Milestones and deliverables

The milestones and deliverables for each project will be managed through the grant management system in the Portal and are reflected in Annex 1 of the grant agreement.

The standard deliverables will be set out in the specific call/topic conditions.

Form of grant, funding rate and maximum grant amount

The grant parameters (maximum grant amount, funding rate, total eligible costs, etc.) will be fixed in the grant agreement (*Data Sheet, point 3 and Article 5*).

The project budget is provided in EUR. The amount of the grant awarded may be lower than the amount requested.

For **actual cost grants**, the grant will be a budget-based, mixed actual cost grant. This means that it will reimburse **ONLY** certain types of costs (eligible costs) and **ONLY** those costs *actually* incurred for the project (NOT the *budgeted* costs).

The costs will be reimbursed at the funding rate fixed in the specific call/topic conditions and in the grant agreement.

Such grants may NOT produce a profit. If there is a profit (i.e. surplus of revenues + EU grant over costs), it will be deducted from the final grant amount.

Moreover, the final grant amount may be reduced in case of non-compliance (e.g. improper implementation, breach of obligations, etc.).

³⁸ See Article 193 EU Financial Regulation [2018/1046](#).

The maximum Horizon Europe funding rates are as follows:

- Research and innovation action: 100%
- Innovation action: 70% (except for non-profit legal entities, where a rate of up to 100% applies)
- Coordination and support action: 100%
- Programme co-fund action: between 30% and 70%
- Innovation and market deployment: 70% (except for non-profit legal entities, where a rate of up to 100% applies)
- Training and mobility action: 100%
- Pre-commercial procurement action: 100%
- Public procurement of innovative solutions action: 50%

Other funding rates may be set out in the specific call/topic conditions.

For **lump sum and unit grants**, the funding rate is already applied as part of the methodology for fixing the amounts and is therefore not shown in the grant agreement.

Budget categories and cost eligibility rules

The budget categories and cost eligibility rules are fixed in the grant agreement (*see Data Sheet, point 3 and Article 6*).

Budget categories:

- actual costs (i.e. costs which are real and not estimated or budgeted) for:
 - personnel costs (unless declared as a unit cost; see below);
 - subcontracting costs;
 - purchase costs (unless declared as a unit cost; see below); and
 - costs of providing financial support to third parties (if provided for in the specific call conditions);
- units (i.e. an amount per unit) for:
 - personnel costs of SME owners/natural persons not receiving a salary;
 - personnel costs calculated by the beneficiaries according to their usual cost accounting practices (average personnel costs);
 - costs of internally invoiced goods and services calculated by the beneficiaries according to their usual cost accounting practices; and

- specific unit costs (if provided for in the specific call/topic conditions; see also Annex 2a of the grant agreement);
- flat-rate (i.e. costs calculated by applying a percentage fixed in advance to other types of eligible costs) for:
 - indirect costs (25% flat-rate of the total eligible direct costs, excluding eligible direct costs for subcontracting, financial support to third parties and any unit costs or lump sums which include indirect costs);
- lump sum (i.e. a global amount deemed to cover all costs of the action or a specific category of costs, if provided for in the specific call/topic conditions).

Within a grant, different forms of costs can be used.

Costs can also be declared under several EU Synergy grants, if the cumulative funding under the grants does not exceed 100% of the eligible costs and the contributions declared to them.

Reporting & payment arrangements

The reporting and payment arrangements are fixed in the grant agreement (*Data Sheet, point 4 and articles 21 and 22*).

After the grant has been signed, the consortium will normally receive a float to start working on the project (normally, pre-financing of 160% of the average EU funding per reporting period (i.e. maximum grant amount/number of periods); exceptionally, less or no pre-financing). For actions with only one reporting period, it will be less, since 100% would mean the totality of the grant amount.

Programme co-fund actions may receive additional pre-financing payments.

Payments will be automatically lowered if one of the consortium members has outstanding debts towards the EU (granting authority or other EU bodies). Such debts will be offset by the granting authority, in line with the conditions set out in the grant agreement (*see Article 22*).

At the moment of the prefinancing payment, an amount ranging from 5% to 8% of the maximum grant amount will be deducted from the prefinancing payment and transferred to the mutual insurance mechanism. This mechanism covers the risks associated with non-recovery of sums due from the beneficiaries.

There will be one or several interim payments linked to a periodic report, depending on the duration of the project.

At the end of the project, the consortium will be invited to submit a report on the basis of which the final grant amount will be calculated. If the total of earlier payments is higher than the final grant amount, the beneficiaries concerned (or the coordinator) will be asked to pay back the difference (recovery).

Certificates

Depending on the size of the grant amount and on the type of beneficiaries, beneficiaries may be required to submit a certificate on the financial statements. The thresholds for this certificate are fixed in the grant agreement (*Data Sheet, point 4 and Article 24*).

Liability regime for recoveries

The liability regime for recoveries is that of individual financial responsibility. Each beneficiary is liable only for their own debt (and those of its affiliated entities, if any) (*Data Sheet point 4.4 and Article 22*).

Provisions concerning project implementation

- Proper implementation of the action (*Article 11*).
- Conflict of interest (*Article 12*).
- Confidentiality and security (EU classified information) (*Article 13 and Annex 5*).
- Ethics (research integrity) and values (gender mainstreaming) (*Article 14 and Annex 5*).
- Data protection (*Article 15*).
- Intellectual Property Rights (IPR), background and results, access rights and rights of use (*Article 16 and Annex 5*). In addition to the standard provisions, the following specific provisions in the model grant agreement will apply to all grants awarded under this work programme:

Additional exploitation obligations in case of a public emergency: If requested by the granting authority, beneficiaries must grant non-exclusive licences to their results – for a limited period of time specified in the request and on fair and reasonable conditions – to legal entities that need the results to address the public emergency. These legal entities must commit to rapidly and broadly exploiting the resulting products and services on fair and reasonable conditions. This provision will apply up to 4 years after the end of the action.

Additional information obligation relating to standards: Unless stated otherwise in the specific call conditions, beneficiaries must, up to 4 years after the end of the action, inform the granting authority if the results could reasonably be expected to contribute to European or international standards.

Granting authority right to object to transfers or licensing — Horizon Europe actions: The granting authority may, up to 4 years after the end of the action, object to a transfer of ownership or to the exclusive licensing of results, as set out in the specific provision of Annex 5.

- Communication, dissemination, open science and visibility (*Article 17 and Annex 5*). In addition to the standard provisions, the following specific provisions in the model grant agreement will apply to all grants awarded under this work programme:

Open science - additional practices, validation of scientific publications:

Beneficiaries must provide (digital or physical) access to data or other results needed to validate the conclusions of scientific publications, to the extent that their legitimate interests or constraints are safeguarded (and unless they already provided the (open) access at publication).

Open science - additional practices, public emergency: In case of a public emergency, if requested by the granting authority, beneficiaries must immediately deposit any research output in a repository and provide open access to it under a CC BY licence, a public domain dedication (CC 0) or equivalent.

As an exception, if providing open access would be against the beneficiaries' legitimate interests, the beneficiaries must grant non-exclusive licences, on fair and reasonable conditions, to legal entities that need the research output to address the public emergency. These legal entities must commit to rapidly and broadly exploiting the resulting products and services on fair and reasonable conditions. This exception is limited to 4 years after the end of the action.

- Specific rules for carrying out the action (*Article 18 and Annex 5*).

Other provisions may be set out in the specific call/topic conditions.

Non-compliance and breach of contract

The grant agreement (*Chapter 5*) provides for the measures that may be taken in case of breach of contract (and other violations of law).

 For more information, see the [AGA — Annotated Grant Agreement](#).

IMPORTANT

- **Do not wait until the end** — Complete the application sufficiently in advance of the deadline to avoid any last minute **technical problems**. Problems due to last-minute submissions (*e.g. congestion, etc.*) will be entirely at applicants' own risk. Call deadlines can NOT be extended at the request of applicants.
- **Consult** the topic page on the Portal regularly. The granting authority will use it to publish updates and additional information on the call (call updates).
- **Funding & Tenders Portal electronic exchange system** — By submitting the application, all applicants **accept** to use the electronic exchange system in accordance with the [Portal Terms & Conditions](#).
- **Registration** — Before submitting the application, all beneficiaries, affiliated entities and associated partners must be registered in the [Participant Register](#). The participant identification code (PIC) (one per participant) is mandatory for the application form. For validation, beneficiaries and affiliated entities will be requested to upload the necessary documents showing their legal status and origin during the grant preparation stage. Associated partners do not need validation.
- **Consortium roles** — When setting up the consortium, applicants should think of organisations that can help them reach objectives and solve problems.

The roles should be attributed according to the degree of participation of each participant in the project. Main participants should participate as beneficiaries or affiliated entities; other entities may participate as associated partners, subcontractors, or third parties giving in-kind contributions, provided that the related conditions are fulfilled. Associated partners and third parties giving in-kind contributions should bear their own costs (they will not become formal recipients of EU funding). Subcontracting should normally constitute a limited part and must be performed by third parties (not by one of the beneficiaries/affiliated entities, *see section G*).

- **Coordinator** — In multi-beneficiary grants, the beneficiaries participate as a consortium (group of beneficiaries). They will have to choose a coordinator among them, who will manage and coordinate the project and will represent the consortium towards the granting authority. In mono-beneficiary grants, the single beneficiary will automatically be the coordinator.
- **Affiliated entities** — Applicants may participate with affiliated entities. Affiliated entities will get a part of the EU funding and must therefore comply with all the call conditions (just like beneficiaries). But they do not sign the grant agreement and do not count towards the minimum eligibility criteria for consortium composition (if any).
- **Associated partners** — Applicants may participate with associated partners. They participate without funding and without signing the grant agreement and therefore do not need to be validated.
- **Consortium agreement** — For practical and legal reasons, participants must conclude a written consortium agreement to ensure the smooth and successful implementation of the action and to deal with exceptional or unforeseen circumstances, unless otherwise provided for in the specific call conditions. The consortium agreement also gives the possibility to redistribute the EU funding according to internal consortium principles and arrangements (for instance, one beneficiary can reattribute their grant share to another beneficiary). The consortium agreement thus allows the grant to be customised to the needs of the consortium and can also help to protect the members in case of disputes. Consortium agreements are not required for mono-beneficiary projects.
- **Completed/ongoing projects** — Applications for projects that have already been completed will be rejected. Applications for projects that have already started will be assessed on a case-by-case basis (in such cases, no costs can normally be reimbursed for activities that took place before the application was submitted).

- **No-profit rule** — Grants may NOT give a profit (i.e. surplus of revenues + EU grant over costs). This will be checked by the granting authority at the end of the project.
- **No double funding** — There is strict prohibition of double funding from the EU budget. Any given action may receive only ONE grant from the EU budget (except for EU Synergy grants) and same costs may under NO circumstances be declared to two different EU actions.
- **Combination with EU operating grants** — Combination with EU operating grants is possible, if the project remains outside the operating grant work programme and the beneficiary makes sure that cost items are clearly separated in its accounting and NOT declared twice (*see [AGA — Annotated Model Grant Agreement, Article 6.2.E](#)*).
- **Multiple applications** — Applicants may submit more than one application for *different* projects under the same call (and be awarded funding for them).

Organisations may participate in several applications.

BUT: if there are several applications for the *same/very similar* project, only one application will be accepted and evaluated.

- **Language** — Applicants can submit their application in any official EU language. However, for reasons of efficiency, it is strongly advised to use English. If applicants need the call documentation in another official EU language, they must submit a request within 10 days after publication of the call (for the contact information, *see topic page*).
- **Rejection** — By submitting the application, all applicants accept the general call conditions set out in the General Annexes and the specific call conditions set out in the topics. Applications that do not comply with all the call conditions will be **rejected**. This applies also to applicants: all applicants need to fulfil the criteria; if any one of them does not, they must be replaced or the entire application will be rejected.
- **Cancellation** — There may be circumstances which may require the cancellation of the call. In this case, applicants will be informed via a call update. Cancellations are without entitlement to compensation.
- **Transparency** — In accordance with Article 38 of the [EU Financial Regulation 2018/1046](#), information about EU grants awarded is published each year on the [Europa website](#).

This includes:

- beneficiaries' names;
- beneficiaries' addresses;
- the purpose for which the grant was awarded;
- the maximum amount awarded.

Publication can exceptionally be waived (following a reasoned and duly substantiated request), if there is a risk that disclosure could jeopardise applicants' rights and freedoms under the EU Charter of Fundamental Rights or harm its commercial interests.

- **Data protection** — The submission of an application under this call involves the collection, use and processing of personal data. This data will be processed in accordance with Regulation [2018/1725](#). It will be processed solely for the purpose of evaluating the application (and subsequent management of the grant and, if needed, programme monitoring, evaluation and communication). Details are explained in the Funding & Tenders Portal privacy statement.

SPECIFIC CONDITIONS FOR ACTIONS WITH PCP/PPI

H — Specific conditions for actions implementing pre-commercial procurement or procurement of innovative solutions

This Annex applies to all types of actions implementing pre-commercial procurement (PCP) and procurement of innovative solutions (PPI). It applies to both PCP/PPI actions and other types of actions which prepare and/or execute a PCP or PPI, for instance through subcontracting activities.

Requirements for all types of actions supporting PCP or PPI

The PCP/PPI must be prepared and executed by one of the following:

- by one or more public procurer(s), plus possibly one or more private and/or NGO procurer(s) that provide similar services of public interest, that is (are) responsible for the acquisition and/or regulatory strategy of the relevant innovative solutions and aim to obtain ambitious quality and efficiency improvements in the area of the PCP/PPI; or
- by entities with a mandate from one or more of these procurers to act on their behalf in the procurement (e.g. central purchasing bodies).

Other entities (e.g. end-users) that do not have a conflict of interest with the PCP/PPI, and whose participation in the action is well justified, may participate in ‘additional activities’ to prepare, manage and follow-up the PCP/PPI and embed it into a wider set of demand-side activities. This includes disseminating results, removing obstacles to introducing the solutions onto the market (e.g. contributing to standardisation, regulation and certification), awareness raising, experience sharing/training, and preparing further cooperation among stakeholders and procurers for future PCP or PPI.

For PCP executed by a group of procurers, the buyers’ group must jointly prepare and implement the pre-commercial procurement so that there is one joint call for tender, one joint evaluation of offers, and a lead procurer³⁹ awarding the research and development (R&D) service contracts in the name and on behalf of the buyers’ group. The PCP must address one concrete procurement need identified as a common challenge⁴⁰, which requires new R&D and is described in the common specifications of the joint PCP call for tender. Each procurer in the buyers’ group must contribute financially to the total budget necessary to jointly finance the PCP, enabling the procurers to share the costs of procuring R&D services from a number of providers and comparing the merits of the alternative solutions pursued by these competing providers to address the common challenge.

³⁹ The ‘lead procurer’ is a public procurer and is the beneficiary appointed by the buyers’ group to coordinate and lead the procurement activities. They can be either one of the procurers in the buyers’ group or another beneficiary in the action who is established or designated by the procurers in the buyers’ group to act as lead procurer.

⁴⁰ Addressing the common challenge in different countries may require, beyond the common core functionality, the development and testing of additional local functionality or adaption of solutions by each procurer due to differences in the local context. A PCP that addresses a challenge consisting of several facets (sub-challenges or building blocks) is considered one joint PCP, as long as all procurers in the buyers’ group share the need for - and are willing to co-finance - all the facets of the common challenge.

For PPI executed by a group of procurers, the lead procurer must coordinate the preparation and implementation of one joint or several coordinated public procurements of innovative solutions, based on common specifications defined jointly by the buyers' group. Each PPI must focus on one concrete need identified as a common challenge that requires the deployment of innovative solutions⁴¹.

Projects that aim to implement a PCP/PPI must contain a preparation and execution stage.

Preparation stage

The expected outcomes for the preparation stage, to be included as deliverables/milestones, are:

- a prior information notice for the open market consultation: 5 days before submission for publication to the OJEU, i.e. a minimum of 50 days before the start of the first meeting;
- a report on the result of the open market consultation, prior market analysis and its impact on the tender documents; in addition, for PPI, feedback from activities to verify market readiness before deployment (e.g. conformance testing, certification, quality labelling);
- completed tender documents based on the Horizon Europe PCP/PPI model contract documents, including the contract notice: 30 days before its submission to the OJEU;
- for PCP/PPI executed by a group of procurers: the signed joint procurement agreement confirming the final means of cooperation, including the financial commitment of the buyers' group for the PCP/PPI, and final confirmation of the lead procurer.

Execution stage

The expected outcome of the execution stage is the implementation of the procurement procedure and of the PCP/PPI contracts. For PCP, this includes validating and comparing the performance of the competing PCP solutions to verify if they can be converted into permanent service. For PPI, this includes deploying the innovative solutions and evaluating the results in real-life operating conditions, with a duration that allows for appropriate evaluation of the potential impact of these solutions if converted into permanent service.

Deliverables/milestones to be included in the description of work for the execution stage are:

- a copy of the contract award notice published in TED: 48 days after the award of contracts;
- at the end of the tender evaluation (for PCP, also after the evaluations of each phase):
 - information on the total number of bids received, particularly the data on the winning tenderer(s) and abstracts of the winning tenders for publication and evaluation purposes;

⁴¹ Addressing the common challenge in different countries may require deployment and, where applicable, conformance testing, of local functionality or adaption of solutions for each procurer due to differences in the local context.

- final ranking list of the selected projects, final scores and qualitative assessment per criterion for each bid received, along with minutes of the evaluation meeting;
- for PCP: assessing the results achieved by each tenderer in the previous phase;
- at the end of the action, give a demonstration to the granting authority:
 - for PCP: of the tested solutions resulting from the PCP;
 - for PPI: of the deployed innovative solution(s).

Where the WTO Government Procurement Agreement (GPA) does not apply, participation in tendering procedures must be open on equal terms to bidders from EU Member States and all countries with which the EU has an agreement in the field of public procurement under the conditions laid down in that agreement, including all Horizon Europe Associated Countries. Where the WTO GPA applies, tendering procedures must also be open to bidders from states that have ratified this agreement, under the conditions laid down therein.

If the specific call conditions restrict participation or control for security reasons, participation in the PCP/PPI procedure must also be limited to bidders meeting this restriction. If the specific conditions for the topic impose a place of performance obligation, the place of performance of the contract must comply with this obligation.

Specific requirements for pre-commercial procurement (PCP)

The following requirements apply to ensure that the provisions for PCP in the Horizon Europe rules for participation, the conditions for the R&D services exemption of the EU Directives on public procurement⁴², the EU Treaty principles⁴³ and the competition rules⁴⁴ are fully respected.

Definitions

PCP must comply with the Horizon Europe definition: ‘*Pre-commercial procurement*’ means procurement of R&D services involving risk-benefit sharing under market conditions and competitive development in phases, where there is a clear separation between the procurement of the R&D services procured from the deployment of commercial volumes of end-products⁴⁵.

‘*Risk-benefit sharing under market conditions*’ refers to the PCP approach in which procurers share with suppliers at market price the risks and benefits related to the intellectual property rights (IPR) resulting from the R&D.

⁴² See Article 14 of Directive 2014/24/EU, Article 32 of Directive 2014/25/EU and Article 13(f)(j) of Directive 2009/81/EC.

⁴³ In particular, the fundamental Treaty principles on the free movement of goods and workers, the freedom to provide services, the freedom of establishment and the free movement of capital, as well as the principles deriving therefrom, such as the principles of non-discrimination, transparency and equal treatment.

⁴⁴ See, in particular, Article 2.3 of the 2014 R&D&I State aid framework.

⁴⁵ See the Horizon Europe Regulation and the PCP Communication COM/2007/799 and associated SEC(1668)2007. Note that PCPs can include the purchase of the first end-products that were developed, installed and tested during the PCP, but not the purchase of larger commercial volumes of end-products requiring quantity production beyond delivering the first products for the PCP.

‘Competitive development in phases’ refers to buying the R&D from several competing R&D providers in parallel and to comparing and identifying the best-value-for-money solutions on the market to address the PCP challenge. To reduce the investment risk for the procurer, reward the most competitive solutions and facilitate the participation of smaller innovative companies, the R&D is also split into phases (solution design, prototyping, original development and validation/testing of the first products), with the number of competing R&D providers being reduced after each phase.

‘Separation from the deployment of commercial volumes of end-products’ refers to the complementarity of PCP, which focuses on the R&D phase before wide commercialisation, and PPI, which does not focus on R&D but on wide commercialisation/diffusion of solutions. Procurers can, but are not obliged, to procure R&D results from a PCP.

Preparation and publication of the open market consultation and call for tender

To prepare the call for tender, an open market consultation⁴⁶ with potential tenderers and end-users must be held to broach the views of the market on the intended scope of the R&D. The results of this open market consultation must be taken into account to fine-tune the tender specifications, so that the gap between state-of-the-art industry development and the procurement needs justifies the procuring of R&D⁴⁷ services.

The PCP contract notice must be published EU-wide⁴⁸ in at least English. Offers must be accepted and communication with stakeholders must be enabled at all stages in at least English. All offers must be evaluated according to the same objective criteria, regardless of the geographical location, size of organisation or governance structure of the tenderers.

The prior information notice for the open market consultation and the contract notice must be advertised widely, using in particular Horizon Europe internet sites and national contact points. The Commission must be informed at least 5 days before the expected date of publication of the prior information notice for the open market consultation and 30 days before the expected date of publication of the PCP contract notice. The PCP call for tenders must remain open for at least 60 days.

Tender documentation, procurement and implementation of the contract

⁴⁶ The open market consultation should be organised in a way not to preclude or distort competition. In respect of the Treaty principles, the open market consultation must be announced well in advance and widely - via a prior information notice that is published at least 45 days before the first open market consultation meeting in the Official Journal of the EU - and enable potential tenderers regardless of their geographic location to participate at least in English. All information given in answers to questions from participants in the dialogue should be documented and published.

⁴⁷ In line with WTO GPA 2014 Article XIII(1)(f), R&D can cover activities such as solution exploration and design, prototyping, up to the original development of a limited volume of first products or services in the form of a test series. Original development of a first product or service may include limited production or supply to incorporate the results of field testing and demonstrate that the product or service is suitable for production or supply in quantity to acceptable quality standards. R&D does not include quantity production or supply to establish commercial viability or to recover R&D costs, nor commercial development activities such as incremental adaptations or routine or periodic changes to existing products, services, production lines, processes or other operations in progress, even if such changes may represent improvements.

⁴⁸ Through the Official Journal of the EU, using the TED (Tenders Electronic Daily) web portal.

The PCP contract that will be concluded with each selected tenderer must take the form of one single framework agreement covering all PCP phases, without contract renegotiations after the award. This framework agreement must contain information on the procedures for implementing the different phases (through specific contracts), including the format of the intermediate evaluations (including evaluation criteria and weightings) for each phase.

For PCP executed by a group of procurers, the R&D service contracts are awarded by the lead procurer and all selected tenderers can be paid by the lead procurer, or pro rata by each procurer in the buyers' group according to their share in the total PCP budget.

The PCP contract notice must contain information on the intended number of R&D providers that will be selected (minimum of three providers) to start the PCP, the number of PCP phases and the expected duration and budget for each PCP phase. The PCP must cover the full PCP life cycle of solution design, prototyping, and original development, including installation and testing of a limited volume of test series products/services in the procurer's/end-user's premises. Each of the three PCP phases can be split up into further phases if appropriate.

The following simplified and/or accelerated PCP procedures may be used: for PCP that require fast deployment⁴⁹, one specific contract may cover both the second and third PCP phase; if fewer than two tenderers are capable of performing the R&D services in the EU Member States or Associated Countries (for security contracts, this may be restricted to the Member States), the phase 1 contracts may be awarded to a minimum of two tenderers.

Procurers must avoid the use of selection criteria based on disproportionate qualification and financial guarantee requirements (e.g. with regard to prior customer references and minimum turnover). Functional/performance-based specifications must be used to formulate the object of the PCP call for tender as a problem to be solved, without prescribing a specific approach to be followed. Evaluation of the tenders must be based on best-value-for-money criteria, not just lowest price.

The PCP process must be organised to avoid any conflicts of interest, including in the use of external experts. Providers cannot be beneficiaries in an action during which the PCP is planned or undertaken.

The PCP process must require selected providers to locate the majority of the R&D activities, including the principal researcher(s) working for the PCP contract in particular, in the Member States or Associated Countries⁵⁰.

The PCP procurers must not reserve the R&D results exclusively for their own use. The providers generating results must own the attached IPR, and the procurers must enjoy at least royalty-free access rights to use the R&D results for their own use. The procurers must also enjoy the right to grant (or to require the granting of) non-exclusive licences to third parties, to exploit the results under fair and reasonable market conditions, without any right to

⁴⁹ Especially where a budgetary commitment for deployment is already available at the start of the PCP (fast-track PCP).

⁵⁰ For duly justified reasons of public security, this may be limited to the EU Member States.

sublicense. A call-back provision must ensure that, in case the providers fail to commercially exploit the results within a given period after the PCP, or use the results to the detriment of the public interest, including security interests, the procurers can require transfer of the ownership of the results.

The procurers must inform tenderers of the right to publish public summaries of the results of the PCP project, including information about key R&D results attained and lessons learnt (e.g. on the feasibility of the solution approaches to meet the requirements and lessons learnt for potential future deployment of solutions). Details that would be contrary to the public interest, would harm legitimate business interests (e.g. regarding IPR-protected specificities of their individual approaches to solutions) or could distort fair competition may not be disclosed.

To enable the procurers to establish the correct (best value for money) market price for the R&D service, in which case the presence of State aid can in principle be excluded, the PCP call for tender must be carried out in a competitive and transparent way in line with Treaty principles. In addition, the distribution of rights and obligations between procurers and providers (including the allocation of IPR) must be published in the PCP call for tender documents, to obtain a price according to market conditions (and rule out State aid). PCP contracts with providers must contain financial compensation according to market conditions⁵¹, compared to the exclusive development price, for assigning IPR to the providers.

Specific requirements for public procurement of innovative solutions (PPI)

Definition

PPI must comply with the relevant Horizon Europe definitions.

‘Public procurement of innovative solutions (PPI)’ means procurement where contracting authorities act as a launch customer for innovative goods or services which are not yet available on a large-scale commercial basis, and may include conformity testing.

‘Launch customers’, also called early adopters, refer to the first 20% of customers on the EU’s internal market that buy innovative solutions. The solutions have to be new to the procurers in the project, the procurers’ market segment or new to the EU’s internal market, and relevant to procurers in other Member States and/or Associated Countries.

‘Innovative solutions’ are new or significantly improved products, services or processes that have already been (partially) demonstrated on a small scale, and may be nearly or already available in small quantities on the market, but which have not been widely adopted yet. Typically, owing to the residual risk of market uncertainty, they have not been produced at a large enough scale to meet mass market price/quality requirements. This also includes existing solutions that are to be utilised in a new and innovative way; PPI does not include the procurement of R&D.

⁵¹ The market price should reflect the benefits allocated to the R&D provider (e.g. commercialisation opportunities opened up by the IPR) and the risks assumed by the R&D provider (e.g. the cost of maintaining the IPR and commercialising the products).

Preparation and publication of the open market consultation and call for tender

Unless the PPI is undertaken as a follow-up to an FP7, Horizon 2020 or Horizon Europe PCP⁵², or unless the situation is a low-value PPI below national procurement thresholds, the following obligations apply:

- To prepare the call for tenders, an open market consultation with potential tenderers and end-users must be held to inform the market well in advance of the upcoming PPI and broach the views of the market on the PPI's intended scope. Information retrieved from this consultation about the gap between perceived procurement needs and on-going industry developments must be taken into account in the PPI tender specifications, so that the PPI duly focuses on 'early adoption' of 'innovative' solutions.
- The market must be informed well in advance⁵³ of the target date for publishing the PPI call for tenders. Market readiness prior to deployment can be verified through the organisation of e.g. conformity testing, certification or quality labelling of solutions.
- The PPI contract notices must be published EU-wide in at least English, offers must be accepted and communication with stakeholders must be enabled at all stages in at least English. All offers must be evaluated according to the same objective criteria, regardless of the geographical location, size of organisation or governance structure of the tenderers.
- The prior information notices for the open market consultation, early announcements of the expected publication date of the PPI call for tender, and the PPI contract notice must be promoted and advertised widely, using Horizon Europe internet sites and national contact points in particular. The Commission must be informed at least 5 days before the expected date of publication of the PIN for the open market consultation and 30 days before the expected date of publication of the PPI contract notice. The PPI call for tenders must remain open for at least 60 days.

Tender documentation, procurement and implementation of the contract

Procurement procedures covered by the EU public procurement directives that do not involve procurement of R&D can be used. Restricted procedures with shortened timeframes for the submission of offers for reasons of urgency must not be used. Framework contracts/agreements with lots can be used.

For PPI implemented by a group of procurers, the specific contracts for procuring specific quantities of goods/services for each procurer can be awarded and the selected tenderers can

⁵² In the case of a PPI following a PCP that was implemented according to the conditions described in Annex I, the negotiated procedure without publication foreseen in the EU public procurement directives can then be used (Article 32(3)(a) of Directive 2014/24/EU, Article 50(b) of Directive 2014/25/EU and Article 13(j) of Directive 2009/81/EC). At least three offers must be requested, including from the R&D providers that successfully completed the preceding PCP.

⁵³ By means of a prior information notice in the Official Journal of the EU.

either all be paid by the lead procurer, or by each procurer in the buyers' group individually, for their quantity of goods/services procured.

Procurers must avoid the use of selection criteria based on disproportionate qualification and financial guarantee requirements (e.g. with regard to prior customer references and minimum turnover). Functional/performance-based specifications must be used to formulate the object of the PPI call for tenders as a problem to be solved, without prescribing a specific approach to be followed. Evaluation of the tenders must be based on best-value-for-money criteria, not just lowest price.

Procurers must organise their procurement to avoid any conflicts of interest, including in the use of external experts. Potential providers cannot be beneficiaries in an action during which the PPI is planned or undertaken.

To encourage fair and wide exploitation of results, ownership of IPR rights should be assigned to the party generating the IPR, except in duly justified cases (e.g. when that party is not able to exploit them).

The PPI call for tender must be carried out in a competitive and transparent way in line with Treaty principles. The distribution of rights and obligations between procurers and providers (including the allocation of IPR) must be published in the PPI call for tender documents, to obtain a price according to market conditions (and rule out State aid).
