- The teams should also assess the potential to provide the AI models and their diagnosis guidelines and training possibly using virtual and remote learning, as a service to countries in need through e.g. hosting in high computing facilities.
- Synergies with ongoing activities and projects already running under the scope of Cancer Mission and Digital Europe Programme will be sought.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Second quarter of 2025

Indicative budget: EUR 2.40 million from the 2025 budget

16.2. AI for Public Good 2: Innovative AI-powered solutions for emergency response and crisis management

As part of the international cooperation on AI for Public Good in the area of emergency response, innovative solutions and services are to be implemented to face natural disasters such as wildfires and flooding. This will be done through a combination of advanced technologies including AI, geographic information systems, and real-time data analytics empowering emergency responders to anticipate, optimize, and track resource allocation, coordinate response efforts more effectively. The goal is to implement an **open, modular, accessible, multi-hazard platform** that harnesses the potential of artificial intelligence (AI) to significantly enhance emergency response capabilities during natural disasters, supporting them with accurate data. The ecosystem will leverage existing global, national and regional systems like the Global Wildfire Information System ([GWIS](#)) and National Emergency Response Information System [NERIS], and link. with/draw from EU initiatives providing relevant data, such as Copernicus or Destination Earth.

The set of innovative service to be procured by the EC for phases II (development), III (testing) are:

- Development of the platform and integrating the existing Global Wildfire Information System (GWIS) that already covers the entire planet. Synergies with EU initiatives providing relevant data, such as Copernicus or Destination Earth, are to be sought.
- Host the platform in cloud-based servers.
- Deployment in several countries in Latin America (mainly Central America, the Carabean and Colombia).
- Support for the EU (DG ECHO) to use the platform as part of the Union Civil Protection Mechanism (UCPM).
- Assess the potential to provide the platform as a service, hosted in high computing facilities in order offer emergency response capabilities to countries in need at broader scale. Prepare the scaling-up and hosting.
- Initial analysis on how to expand the platform's capabilities to a second disaster (flood).

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Second quarter of 2025

Indicative budget: EUR 2.00 million from the 2025 budget

16.3. AI for Public Good 3: Innovative AI-powered solutions for urban reconstruction

Under this proposal, a Local Digital Twin for reconstruction based on AI models will be developed. The tool will allow urban planners to simulate and evaluate potential rebuilding scenarios based on damage assessments and precise reconstruction costs.

The set of innovative services to be procured by the EC for phases II (development), III (testing) are:

- Expert teams from EU and outside will identify data sources and datasets containing 3D virtual replicas of buildings in urban areas of third countries where digital twin will be tested/deployed (e.g. Ukraine).
- The technical team will organise the data and make it accessible according to security, ethical, privacy etc. requirements as agreed upon by all stakeholders including end-users.
- The technical team will develop and train supporting AI algorithms for building damage assessment and precise reconstruction estimates.
- The virtual replicas and the AI algorithms will be integrated into a Geographical Information System (GIS)-based solution for a complete offering of a digital twin based on AI-algorithms for reconstruction.

- The technical team will design, develop and test the productive version of a Digital Twin for reconstruction based on requirements gathered from potential users and the pilots conducted in Phase I.
- Initial stages of deployment of the productive solution in one country: Ukraine.

The technical team will also assess the technical feasibility of offering the Local Digital Twin as a service to countries in need at broader scale, hosted in cloud-based facilities. Existing EU initiatives and programmes will be explored to that end. A proposal of roadmap will be provided.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Second quarter of 2025

Indicative budget: EUR 2.00 million from the 2025 budget

16.4. AI for Public Good 4: Innovative AI-powered solutions for electric grid optimisation

In the area of electric grid optimisation, innovative solutions will be implemented to dynamically integrate renewable energy sources and adapt to increasingly variable demands. Leveraging AI, these solutions will enhance energy efficiency, promote optimal usage, and support the transition to a more sustainable and resilient energy system.

The set of innovative solutions to be procured through domain experts by the EU are:

- Developing, training and optimising a comprehensive set of AI-based tools for the flexible management of digitally operated edge electric-grid systems. This will involve integrating existing modelling approaches to simulate long-term flexibility scenarios and provide a robust assessment tool.
- Running laboratory simulations to validate the proposed data exchange mechanisms and simulate complex systems.
- Testing and validating tools in real-world conditions across various EU locations.
- Deploying in third countries with specific needs, such as South America.

The teams should also assess the feasibility of providing grid optimisation tools as a service to countries with specific needs, leveraging cloud-based or high-performance computing solutions. To support this effort, existing EU initiatives and programs will be explored. To that end, a roadmap will be provided.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Second quarter of 2025

Indicative budget: EUR 3.00 million from the 2025 budget

Grants to identified beneficiaries

Proposals are invited against the following topic(s):

1. Quantum Internet Framework Partnerships Agreement– launching the second Specific Grant Agreement - Research and Innovation Action (SGA)

Expected outcome:

Proposals submitted under the Second Specific Grant Agreement (SGA2) for the FPA on "Building the Quantum Internet" (HORIZON-CL4-2021-DIGITAL-EMERGING-02-19) are expected to achieve the following outcomes, building on the achievements made by the SGA1 and demonstrating concrete steps (in terms of improved functionality, distance, accessibility, cost-effectiveness and real-world deployments) towards the realisation of a quantum internet:

1. The realization of quantum communication technology that is scalable, secure, reliable, and ready for manufacturing.
2. The achievement of entanglement distribution over distances reaching or exceeding 500 km, incorporating quantum repeaters.
3. The demonstration of a proof-of-principle quantum internet infrastructure with a prototype (lab conditions) of a long-distance quantum communication fibre network that uses quantum repeaters capable of connecting metropolitan area networks, demonstrating interoperability of various approaches and scalability of the architecture.
4. The integration of advanced quantum network applications (e.g. secret key sharing, distributed quantum computation, blind quantum computation) into classical network infrastructures (i.e. orchestration platforms) over a quantum network including quantum repeaters.
5. Platform-independent software and network stack demonstration that can operate on a quantum communication network involving at least two quantum computing nodes with quantum memories, ensuring the network's resistance to known forms of cyber-attacks.
6. Demonstration of the maturity of quantum networks by showcasing the technologies developed by the project and demonstrating and validating use cases in a real-world environment.

Scope:

Projects should focus on making significant steps towards the practical realization of a quantum internet:

- Develop the foundational technologies and network architectures needed to establish a quantum internet that interconnects quantum computers, simulators, and sensors through quantum networks.
- Further develop and mature the hardware components and systems needed for a quantum internet, such as quantum sources, detectors, memories, and repeaters, using the platforms identified as most promising according to objective criteria.
- Further develop and mature the software for a quantum internet, as well as integrating quantum network applications into network infrastructure.
- Propel the innovation and deployment of quantum internet components and systems capable of operating across extensive real-world networks.
- Encourage collaboration across disciplines and sectors to address the technological, computational, and societal aspects of building the quantum internet, including maximisation of its potential contributions to economic growth, technological sovereignty, and strategic autonomy.
- Contribute to the development of international standards and ensure interoperability across different quantum technologies, facilitating the secure and efficient exchange of quantum information, while promoting, where possible, sustainable practices.
- Build and operate pilot testbeds, in order to demonstrate technologies, architectures, operation and integration of hardware and software elements and systems in real-world deployments, for taking further steps towards the realisation of a quantum internet.
- Demonstrate pilot use cases for a quantum internet, and evaluate them with a focus on enabling upgradability towards general quantum connectivity. Engage with potential end users and service providers to maximise the uptake potential of use cases, targeting future commercial services.

Proposals should demonstrate synergies with actions already carried out under HORIZON-CL4-2021-DIGITAL-EMERGING-02-19: Framework Partnership Agreements in Quantum Communications, and with any other relevant European projects.

Proposals should also contribute to spreading excellence across Europe, for example, through the involvement of EU Widening Countries.

In this topic the integration of the gender dimension (sex and/or gender analysis) in research and innovation content is not a mandatory requirement; however, should proposers consider it to be of relevance for their proposal, they are strongly encouraged to integrate it.

Technology Readiness Level: Activities are expected to start at TRL 4-5 and achieve TRL 6-7 by the end of the project – see General Annex B.

Eligibility conditions - Participation limited to legal entities established in MS only, or in specified ACs or other 3rd countries in addition to MS:

The conditions are described in General Annex B. The following exceptions apply: In order to achieve the expected outcomes, and safeguard the Union's strategic assets, interests, autonomy, and security, it is important to avoid a situation of technological dependency on a non-EU source, in a global context that requires the EU to take action to build on its strengths, and to carefully assess and address any strategic weaknesses, vulnerabilities and high-risk dependencies which put at risk the attainment of its ambitions. For this reason, participation is limited to legal entities established in Member States, Iceland and Norway, and Israel.

For the duly justified and exceptional reasons listed in the paragraph above, in order to guarantee the protection of the strategic interests of the Union and its Member States, entities established in an eligible country listed above, but which are directly or indirectly controlled by a non-eligible country or by a non-eligible country entity, shall not participate in the action.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Specific grant agreement awarded without call for proposals in relation to a Framework Partnership Agreement

Indicative timetable: Second quarter of 2025

Indicative budget: EUR 47.50 million from the 2025 budget

2. Presidency Event (conference): Technologies for Europe 2026

Events of a major strategic nature, which are focused and attract a broad spectrum of stakeholders, are important in assessing past activities, identifying policy options and priorities, and planning future actions.

The European Commission will support the organisation of a Presidency conference in 2026, in cooperation with a government holding the EU Presidency of the European Union at the time, as well as with interested regions.

This event may cover aspects of industrial technologies, including the twin green and digital transformation of European industry, in particular green and circular technologies and materials, as well as relevant digital technologies.

This event is co-funded and co-organised by the European Commission and the rotating Presidency of the Council, the latter of which is the named beneficiary of the grant in question, via a responsible ministry or agency of the EU Member State holding the Presidency.

The evaluation committee will be composed fully by representatives of EU institutions.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Subcontracting is not restricted to a limited part of the action.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Legal entities:

This event is co-funded and co-organised by the European Commission and the rotating Presidency of the Council, the latter of which is the named beneficiary of the grant in question, via a responsible ministry or agency of the EU Member State holding the Presidency.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1-4, 2026

Indicative budget: EUR 0.20 million from the 2025 budget

3. Presidency Event (conference) on AI in Science 2025

Expected Outcome: Informing of and providing a platform to debate and implement the AI in Science policies of the European Commission with stakeholders and Members States

Scope: Two days of discussions and matchmaking on AI in Science issues and trends with high level policy decision makers at Member State, European and international level, as well as scientific community.

Procedure – Evaluation Carried out by EU Staff: The evaluation committee will be composed fully of representatives of the European Commission.

This particular conference, organised by DG RTD and the rotating Presidency of the Council of the European Union, the latter of which is the named beneficiary of the grant in question (usually via a Member State Ministry), will raise awareness of the strategic importance of incorporating AI in science, bring together all stakeholders to discuss the challenges and opportunities and build a European AI in science community.

Grant awarded without call for proposals according to FR Article 198 (a, b, c, d, f, g).

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Subcontracting is not restricted to a limited part of the action.

Legal entities:

This event is co-funded and co-organised by the European Commission and the rotating Presidency of the Council, the latter of which is the named beneficiary of the grant in question, via a responsible ministry or agency of the EU Member State holding the Presidency.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2025

Indicative budget: EUR 0.35 million from the 2025 budget

4. Organisation of the Presidency Event European Quantum Technologies Conference (EQTC) 2025

Expected Outcome: The EQTC 2025, the latest in the EQTC series, will be dedicated to reinforcing Europe's leadership in quantum technologies by fostering and promoting a collaborative ecosystem that includes academia, industry, and governmental bodies. This event will serve as a critical platform for discussing strategic directions, sharing innovations, and engaging the entire European quantum technology community.

Scope: This three-day conference will focus on a variety of quantum technologies such as quantum computing, quantum communication, quantum sensing and metrology, and quantum materials. High-level decision-makers from Member States, the European Commission, and key international stakeholders will engage in discussions aimed at advancing the quantum technology sector within Europe.

Procedure – Evaluation Carried out by EU Staff: The evaluation committee will be composed fully of representatives of the European Commission.

Legal and financial set-up of the Grant Agreements - Lump sum grant (flexible - option 2): Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021

authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025)²⁴³.

Legal entities:

Responsible ministry or agency of the EU Member State holding the Presidency

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Third quarter of 2025

Indicative budget: EUR 0.30 million from the 2025 budget

5. Heading 7 of Space - Monitoring Space

5.1. Consolidate European commercial SST capabilities on sensors

Specific conditions		
<i>Expected contribution per project</i>	<i>EU</i>	The Commission estimates that an EU contribution of around EUR 15.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>		The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>		Research and Innovation Actions
<i>Admissibility conditions</i>		The conditions are described in General Annex A. The following exceptions apply: The page limit of the application is 50 pages.

²⁴³ This decision is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>In order to achieve the expected outcomes, and safeguard the Union’s strategic assets, interests, autonomy, or security, namely avoiding a situation of technological dependency on a non-EU source, in a global context that requires the EU to build on its strengths and to carefully assess and address strategic weaknesses, vulnerabilities and high-risk dependencies, participation is limited to legal entities established in Member States. Proposals including entities established in countries outside the scope specified in the call/topic/action will be ineligible.</p> <p>For the duly justified and exceptional reasons listed in the paragraph above, in order to guarantee the protection of the strategic interests of the Union and its Member States, entities established in an eligible country listed above, but which are directly or indirectly controlled by a non-eligible country or by a non-eligible country entity, may not participate in the action unless it can be demonstrated, by means of guarantees positively assessed by their eligible country of establishment, that their participation to the action would not negatively impact the Union’s strategic assets, interests, autonomy, or security. Entities assessed as high-risk suppliers of mobile network communication equipment within the meaning of ‘restrictions for the protection of European communication networks’ (or entities fully or partially owned or controlled by a high-risk supplier) cannot submit guarantees.²⁴⁴</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p>

²⁴⁴

The guarantees shall in particular substantiate that, for the purpose of the action, measures are in place to ensure that: a) control over the applicant legal entity is not exercised in a manner that retrains or restricts its ability to carry out the action and to deliver results, that imposes restrictions concerning its infrastructure, facilities, assets, resources, intellectual property or know-how needed for the purpose of the action, or that undermines its capabilities and standards necessary to carry out the action; b) access by a non-eligible country or by a non-eligible country entity to sensitive information relating to the action is prevented; and the employees or other persons involved in the action have a national security clearance issued by an eligible country, where appropriate; c) ownership of the intellectual property arising from, and the results of, the action remain within the recipient during and after completion of the action, are not subject to control or restrictions by non-eligible countries or non-eligible country entity, and are not exported outside the eligible countries, nor is access to them from outside the eligible countries granted, without the approval of the eligible country in which the legal entity is established.

	<p>The granting authority can fund a maximum of one project.</p> <p>The evaluation committee could be partially composed by representatives of EU institutions.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>The beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. Activities proposed by third parties (FSTP proposals) are to be selected according to selection criteria agreed between the granting authority and the beneficiaries.</p> <p>A “third party”, submitting a FSTP proposal, could be either an entity or a consortium of entities.</p> <p>In accordance with article 207 of the EU Financial Regulation the maximum amount to be granted to each third party can exceed EUR 60,000. This derogation is justified by the fact that the foreseen actions carried out by third parties will target breakthrough techniques and technologies to disruptively improve SST sensors performance and/or operations. Indeed, costly hardware (such as radar, optical...) development and implementation tests are sought on this topic.</p> <p>The minimum amount of <u>each</u> FSTP proposal is expected to be in the range of EUR 2 million.</p> <p>The funding rate for each FSTP proposal is 80%. Third parties shall be asked to co-finance 20% of the total amount of each FSTP proposal.</p> <p>The total amount of the EU contribution supporting FSTP proposals is expected to be in the range of EUR 14,5 million</p> <p>As per Article 16.2 (Ownership of results) of the EU Grants: AGA — Annotated Grant Agreement (V1.0– 01.05.2024), the granting authority does not obtain ownership of the results produced under the action. Similarly, the IPR generated in FSTP activities cannot be retained by the beneficiaries.</p>

The rationale behind the proposed set up of this topic is the following:

The EUSST Partnership (i.e. the identified beneficiary), foreseen in the Space Regulation (art. 54 -EU 2021/696) composed of 15 Member States, has been created (cf. Implementing Decision 2022/1245) in 2022. The EUSST Partnership is entrusted to contribute with their national assets to enhance capabilities to monitor, track and identify space objects and space

debris with the aim of further increasing the performance and autonomy of capabilities under the SST sub-component at Union level.

The implementation of the Space Regulation (cf. EU 2021/696) provisions related to the SST sub-component, foresees the incorporation of commercial capabilities (Art. 54(1.a) of the Space Regulation) so to complement national capabilities. The EUSST Partnership (i.e. the FSTP granting authority) will launch an open call for proposals in order to select the best FSTP proposals within the proposed scope.

The current set up of this topic allows to support in priority the development of innovative commercial sensors. Nevertheless, in case of low private sector participation on FSTP actions the beneficiary (i.e. EUSST Partnership) will be able to use the remaining budget for the upgrade and/or development of national sensors applying the same proposed co-funding scheme and scope. This logic is reflected in the wording : «The beneficiary MAY provide financial support to third parties (FSTP)”.

Hardware development, prototyping and high TRL requested at the end of the FSTP action (at least TRL 5) requires important budgets, well beyond 60k€. Furthermore, it is expected that, at the end of FSTP support, the beneficiaries will pursue the developments in order to reach the operational stage hence contributing to the overall EUSST sensors network.

We foresee to have at least 4 FSTP projects ; if there are only, or less than, 4 FSTP projects, the remaining budget will be used to upgrade national sensors with novel technologies & techniques. The same cofinancing scheme will be applied to national sensors upgrades.

The overall objective of this Topic is to stimulate fast integration of R&D technologies and technics in operational sensors. Co-funding from Third Parties is expected in order to confirm their engagement towards the achievement of operational SST capacities. This means that :

1. Out of the 15M€ indicative budget, 0,5M€ is expected to cover EUSST coordination activities (e.g. drafting the FSTP call for proposals SoW, managing the reviews of each FSTP action).
2. Coordination activities are funded at 100%.

Expected Outcome: Projects developed under this topic are expected to contribute to the following outcomes:

- To reinforce European strategic autonomy and resilience in space surveillance and tracking capabilities (sensors and associated data processing) by leveraging innovation and competitiveness of the European industry and start-ups
- To develop and/or improve existing commercially available assets and SST-related technologies fostering competition and market development, allowing the European SST industry and start-ups to be competitive on global markets.

- To complement, as defined by EUSST Partnership's architecture studies, existing Member States patrimonial SST capacities with European privately-owned ones, assuring interoperability and adopting global standards.
- To improve European SST operational capabilities by supporting the extension of space-tracking infrastructure located outside continental Europe.
- To prepare EU industry to capture new SST markets in the domains by proposing competitive, cutting-edge sensors.

Scope: The following sensors and data processing R&I activities, funded through FSTP, should be addressed to tackle the above expected outcomes:

- Novel, cost-effective sensor concepts and technologies capable of detecting, tracking and surveying objects in order to improve the state-of-the-art performance according to the target orbit regime (e.g. less than 10 cm in LEO, 30 cm in GEO). Note: Priority should be given to projects focusing on LEO detection even though preeminent proposals in other orbit regimes will be considered.
- Autonomous sensor concepts to increase operational robustness, to reduce response times, to reduce operation costs, amongst others.
- Tools, techniques, and technologies necessary to significantly improve the efficiency of future or existing commercial sensor's network by streamlining the scheduling and tasking of its sensors.
- State-of-the-art technologies and concepts improving sensors' tracking and surveillance performances (measurements quality (noise; bias; measurements rates ...), tracks accuracy (track noise; track duration...), sensors' field of view...
- Cost-effective tracking and/or surveillance sensor concepts expanding orbital coverage of Member States patrimonial SST capacities and/or meeting commercial market needs.
- Any promising technology for precise tracking and data processing.

FSTP proposals are expected to promote cooperation between different actors (industry, SMEs and research institutions) and consider opportunities to quickly turn technological innovation into commercial use in the space sector.

FSTP proposals are expected to start between TRL 2 and TRL 4 and reach at least TRL 5 by the end of the project. The reference TRL (Technology Readiness Level) definition is the ISO 16290:2013 applicable to the space sector.

FSTP proposals under this topic should explore synergies and be complementary to already funded actions in the context of technology development at component level. In particular, it is expected that FSTP proposals make use of existing European technologies and/or building blocks at component level contributing to European non-dependence and strengthen

competitiveness. Furthermore, proposed activities should be complementary to national activities and activities funded by the European Space Agency (ESA).

Financial support to third parties is expected to start no later than 7 months after the start date of the grant.

Indicative timetable: in quarter Q4 of year 2025.

Legal entities:

The Constituting National Entities having concluded an agreement creating the SST partnership

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant awarded without call for proposals according to Financial Regulation Article 198 (f)

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 15.00 million from the 2025 budget

5.2. Consolidate European commercial SST capabilities on Services

Specific conditions		
<i>Expected contribution per project</i>	<i>EU per</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>		The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>		Research and Innovation Actions
<i>Admissibility conditions</i>		The conditions are described in General Annex A. The following exceptions apply: The page limit of the application is 50 pages.
<i>Eligibility conditions</i>		The conditions are described in General Annex B. The following exceptions apply: In order to achieve the expected outcomes, and safeguard the Union's strategic assets, interests, autonomy, or security, namely avoiding a

	<p>situation of technological dependency on a non-EU source, in a global context that requires the EU to build on its strengths and to carefully assess and address strategic weaknesses, vulnerabilities and high-risk dependencies, participation is limited to legal entities established in Member States. Proposals including entities established in countries outside the scope specified in the call/topic/action will be ineligible.</p> <p>For the duly justified and exceptional reasons listed in the paragraph above, in order to guarantee the protection of the strategic interests of the Union and its Member States, entities established in an eligible country listed above, but which are directly or indirectly controlled by a non-eligible country or by a non-eligible country entity, may not participate in the action unless it can be demonstrated, by means of guarantees positively assessed by their eligible country of establishment, that their participation to the action would not negatively impact the Union's strategic assets, interests, autonomy, or security. Entities assessed as high-risk suppliers of mobile network communication equipment within the meaning of 'restrictions for the protection of European communication networks' (or entities fully or partially owned or controlled by a high-risk supplier) cannot submit guarantees.²⁴⁵</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The granting authority can fund a maximum of one project.</p> <p>The evaluation committee could be partially composed by representatives of EU institutions.</p>
<i>Legal and financial</i>	<p>The rules are described in General Annex G. The following exceptions</p>

²⁴⁵

The guarantees shall in particular substantiate that, for the purpose of the action, measures are in place to ensure that: a) control over the applicant legal entity is not exercised in a manner that retrains or restricts its ability to carry out the action and to deliver results, that imposes restrictions concerning its infrastructure, facilities, assets, resources, intellectual property or know-how needed for the purpose of the action, or that undermines its capabilities and standards necessary to carry out the action; b) access by a non-eligible country or by a non-eligible country entity to sensitive information relating to the action is prevented; and the employees or other persons involved in the action have a national security clearance issued by an eligible country, where appropriate; c) ownership of the intellectual property arising from, and the results of, the action remain within the recipient during and after completion of the action, are not subject to control or restrictions by non-eligible countries or non-eligible country entity, and are not exported outside the eligible countries, nor is access to them from outside the eligible countries granted, without the approval of the eligible country in which the legal entity is established.

<i>set-up of the Grant Agreements</i>	<p>apply:</p> <p>The beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. Activities proposed by third parties (FSTP proposals) are to be selected according to selection criteria agreed between the granting authority and the beneficiaries.</p> <p>A “third party”, submitting a FSTP proposal, could be either an entity or a consortium of entities.</p> <p>In accordance with article 207 of the EU Financial Regulation, the maximum amount to be granted to each third party can exceed EUR 60,000. This derogation is justified by the fact that foreseen actions carried out by third parties target competitive, close-to-market, added-value SST services proposed worldwide by the EU industry to capture new SST markets.</p> <p>The total amount of the EU contribution supporting FSTP proposals is expected to be in the range of EUR 3,8 million.</p> <p>The amount to be granted to each action implemented by a third party is expected to be in the range of EUR 600,000.</p> <p>As per Article 16.2 (Ownership of results) of the EU Grants: AGA — Annotated Grant Agreement (V1.0– 01.05.2024), the granting authority does not obtain ownership of the results produced under the action. Similarly, the IPR generated in FSTP activities cannot be retained by the beneficiaries.</p>
---------------------------------------	--

Expected Outcome: Projects developed under this topic are expected to contribute to the following outcomes:

- To prepare EU industry and start-ups to capture new SST markets by proposing innovative and competitive services.
- To reinforce European strategic autonomy and resilience in the SST domain by leveraging commercial services while enhancing EU SST operational effectiveness.
- To foster competition and market development in SST-related commercial services considering the needs of relevant actors such as, but not limited to, satellites Owners and Operators, insurances companies, regulators...
- To demonstrate and foster the development of an ecosystem of lucrative, advanced, and tailor-made commercial services, which may rely on, or be provided on top of, the basic public services delivered by EU SST.

Scope: The R&I areas, funded through FSTP, which should be addressed to tackle the above-mentioned expected outcomes are:

- Cost-effective techniques and technologies to develop future SST commercial services or to substantially improve existing ones, additional or complementary to the ones currently delivered by EU SST.
- Development or improvement of algorithms for added value services (with respect to EU SST public services), for instance: measurements correlation, initial Orbit determination, orbit determination, covariance estimation, objects characterisation, application of alternative metrics, manoeuvre detection, secure exchanges between Owners/Operators (for example taking advantage of, but not limited to, technologies such as AI or blockchain).
- Development of evaluation methods of collision probability applied, but not limited to manoeuvrable or non-manoevrable objects, including satellite constellations.
- Improvement of algorithms for data fusion for a more efficient use of data and information from the same object coming from different sensors.
- Expansion or improvement of EU industry proprietary space objects catalogue (targeting in priority debris below 10 cm in LEO and below 50 cm in GEO).
- Development or improvement of new orbit propagation models for efficient propagation of the orbital population (e.g. cloud propagation models to propagate the debris cloud generated after a collision or fragmentation ...).
- Development or improvement of simulators including in-orbit objects population and sensors, as trade-off support for future commercial services, added value services and sensors.

FSTP proposals are expected to promote cooperation between different actors (industry, SMEs and research institutions) and consider opportunities to quickly turn technological innovation into commercial use in space.

FSTP proposals are expected to start at least TRL 2 and reach at least TRL 6 by the end of the project – The reference TRL definition is the ISO 16290:2013 applicable to the space sector. FSTP proposals under this topic should explore synergies and be complementary to already funded actions in the context of technology development at component level. In particular, it is expected that FSTP proposals make use of existing European technologies and/or building blocks at component level contributing to European non-dependence and strengthen competitiveness. Furthermore, proposed activities should be complementary to national activities and activities funded by the European Space Agency (ESA).

Out of the 4M€ indicative budget, 0,2M€ is expected to cover EUSST coordination activities (e.g. drafting the FSTP call for proposals SoW, managing the reviews of each FSTP action). Coordination activities are funded at 100%.

Financial support to third parties is expected to start no later than 7 months after the start date of the grant.

Indicative timetable: in quarter Q4 of year 2025.

Legal entities:

The Constituting National Entities having concluded an agreement creating the SST partnership

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant awarded without call for proposals according to Financial Regulation Article 198 (f)

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 4.00 million from the 2025 budget

6. Heading 2 of Space - Acting in Space

6.1. ISOS Pilot Mission Coordination & Support Action

Specific conditions		
<i>Expected contribution per project</i>	<i>EU per</i>	The Commission estimates that an EU contribution of between EUR 2.00 and 2.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>		The total indicative budget for the topic is EUR 2.50 million.
<i>Type of Action</i>		Coordination and Support Actions
<i>Admissibility conditions</i>		The conditions are described in General Annex A. The following exceptions apply: The page limit of the application is 60 pages.
<i>Eligibility conditions</i>		The conditions are described in General Annex B. The following exceptions apply: In order to achieve the expected outcomes, and safeguard the Union's strategic assets, interests, autonomy, or security, participation is limited to legal entities established in Member States and the following

	<p>associated countries: Norway and Iceland. Proposals including entities established in countries outside the scope specified in the call/topic/action will be ineligible.</p> <p>For the duly justified and exceptional reasons listed in the paragraph above, in order to guarantee the protection of the strategic interests of the Union and its Member States, entities established in an eligible country listed above, but which are directly or indirectly controlled by a non-eligible country or by a non-eligible country entity, may not participate in the action unless it can be demonstrated, by means of guarantees approved by the eligible country of establishment, that their participation to the action would not negatively impact the Union's strategic, assets, interests, autonomy, or security.</p> <p>The guarantees shall in particular substantiate that, for the purpose of the action, measures are in place to ensure that:</p> <p>a) control over the applicant legal entity is not exercised in a manner that restrains or restricts its ability to carry out the action and to deliver results, that imposes restrictions concerning its infrastructure, facilities, assets, resources, intellectual property or know-how needed for the purpose of the action, or that undermines its capabilities and standards necessary to carry out the action;</p> <p>b) access by a non-eligible country or by a non-eligible country entity to sensitive information relating to the action is prevented; and the employees or other persons involved in the action have a national security clearance issued by an eligible country, where appropriate;</p> <p>c) ownership of the intellectual property arising from, and the results of, the action remain within the recipient during and after completion of the action, are not subject to control or restrictions by non-eligible countries or non-eligible country entity, and are not exported outside the eligible countries, nor is access to them from outside the eligible countries granted, without the approval of the eligible country in which the legal entity is established.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The granting authority can fund a maximum of one project.</p>

<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁴⁶ .
<i>Security Sensitive Topics</i>	Some activities resulting from this topic may involve using classified background and/or producing of security sensitive results (EUCI and SEN). Please refer to the related provisions in section B Security — EU classified and sensitive information of the General Annexes.

Expected Outcome: The strategic objective of this topic is to support the development of capabilities to ‘Act in Space’ through demonstrating in space a pilot mission by 2030 related to In-Space Operations and Services (ISOS). The envisaged ISOS pilot mission shall provide the necessary seed components for a service infrastructure, available to the European in-space ecosystem (including the EU assets), driving the generation of a new in-space economy, providing enhanced in-orbit technology demonstration and maximising EU technology non-dependence.

This pilot mission will largely contribute to ensure EU’s freedom of action in space, increase the resilience and protection of EU assets in space and foster the development of the new in-space economy. A pioneering, novel and scalable mission concept, which is unique compared to other initiatives among all space-faring nations is envisaged. The mission will build on previous R&I with an operational mission concept, focusing on application and service demonstration, with a concrete view to commercial and governmental usage. The detailed mission concept will be derived in close coordination with EU Member States and EEA countries through a dedicated ISOS Pilot Mission Advisory Group (PMAG)¹⁶¹.

This Coordination and Support Action addresses the coordination of the development R&I actions for the **implementation of the ISOS pilot mission** and the support of its evolution towards a flagship for commercial and governmental services.

The project is expected to contribute to the following outcomes, in close and continuous coordination with the European Commission services and the ISOS Pilot Mission Advisory Group¹⁶¹:

²⁴⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Creating and promoting an inclusive, transparent and scalable ISOS ecosystem that allows on-boarding of governmental or commercial actors' initiatives putting Europe at the centre of a new in-space economy offering global in-space services;
- Contribution to the ISOS Pilot Mission Objectives provided in the technical annex¹⁶³;
- Elaboration of the ISOS Pilot mission detailed architecture, based on the high-level mission requirements provided in the technical annex¹⁶³;
- Coordination of the implementation of the four components identified in topics HORIZON-CL4-2025-02-SPACE-21/22/23/24, in particular with regards to the determination of interfaces among the mission components, identification of dependencies, exchange of requirements and performance indicators;
- Support to the elaboration of key standards for future institutional and commercial ISOS missions together with the projects implementing the four mission components and other relevant stakeholders;
- Ensuring the availability of results to the next mission phases.

This topic will contribute to, in the medium to long term, developing, deploying global space-based services and contribute to fostering the European space sector competitiveness, as stated in the expected impact of this destination.

Scope: To tackle the above expected outcomes, the following R&I actions must be addressed taking into account the provided technical annex¹⁶³:

- Overall coordination of the ISOS pilot mission preparation up to detailed design¹⁶⁴ and elaboration of a mission deployment plan and detailed system architecture that is modular and scalable, in close cooperation with all mission components and in continuous coordination and under the supervision of the PMAG;
- Ensure interoperability and compatibility between mission components (for instance interfaces among components and exchange of requirements and performance indicators);
- Perform mission minimum cost estimate and cost impact assessment for new plug-ins (mission components, service demonstrations, technologies, etc.) to the mission and system in coordination with the PMAG;
- Elaboration of an effective conflict resolution regime;
- Setup and management of a key technology and service provider group (TSPG) that will be composed of selected future beneficiaries of the four mission components identified in topics HORIZON-CL4-2025-02-SPACE-21/22/23/24. The group composition is expected to consider and contribute to a balanced provision of Member States' countries expertise and capabilities to the overall ISOS pilot mission. This group should be integrated in the decision-making processes of the CSA;

- Dissemination and Communication activities on the ISOS pilot mission, including the creation of a professional video to visualise and promote the ISOS pilot mission;
- Derive an in-space services product tree – functional specification of the pilot mission system;
- Community consultation and preparation of a proposal for a *Pilot Mission and Future Space Ecosystem Plug-in Specification* which should allow third-party on-boarding the ISOS pilot mission ecosystem, at system and technology level;
- Proposal for a pilot mission evolution plan towards a flagship for commercial and governmental services (seed point for future flagship development and deployment plan, to be considered as future component of the EU Space Programme). The project should propose at least three use cases for the servicing of EU flagship assets through the delivery of a concept of operations (CONOPS);
- Contribution to standardisation, regulatory and legal framework actions including stakeholder consultation;
- System risk management plan: identification of global risks, incl. technical, operational, managerial, legal, IP, and related to external interferences, and elaboration of possible mitigation actions.

The project is expected to collaborate with those selected under topics HORIZON-CL4-2025-02-SPACE-21, 22, 23, 24, in order to ensure interoperability and the necessary and sufficient documentation and information sharing for the implementation of the Pilot Mission, to make economies of scale in sharing best practices, defining common processes for addressing the different challenges, ensuring efficient monitoring and review, organising dissemination and communication activities, etc. Such collaboration among all those projects will be formalised by a collaboration agreement.

Indicative timetable: publication in Q4 of 2025.

Legal entities:

The beneficiaries will be the eligible coordinators of the awarded proposals from topics HORIZON-CL4-2025-02-SPACE-21, 22, 23, 24.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 2.50 million from the 2025 budget

Scientific and technical services by the Joint Research Centre

1. JRC support on the obligations for monitoring (Art. 21) in the Critical Raw Materials Act

Objective: To continue the collaboration with the JRC on various aspects of raw materials policy. JRC Petten will provide support to analyse and integrate data provided by Member States on the Critical Raw Materials projects (Art. 21).

Duration: 48 months

Type of Action: Provision of technical/scientific services by the Joint Research Centre

Indicative timetable: Q2 2025

Indicative budget: EUR 0.40 million from the 2025 budget

2. JRC analytical support for studies related to circularity and sustainability provisions under art. 28 of the Critical Raw Materials Act

Objective: CRMA Art. 28 establishes that by 24 November 2025, the Commission shall adopt an implementing act establishing the format for labelling placing on the market certain products (MRI devices, wind turbines, industrial robots, various household appliances, motor vehicles and light means of transport, electric motors, including where integrated in other products). The obligations on economic operators apply from 2 years after entry into force of the implementing act (i.e. latest by 24 November 2027). While not required by the CRMA, the Commission may also provide guidance on the format for the information on removal steps, on chemical composition and any other details relating to the data carrier (the “information folder”). There is a need for analytical support by the JRC to assist DG GROW in the implementation of this delegated act. The JRC can build the analysis on in-house knowledge and the stakeholder interactions conducted in the context of the ELV permanent magnet provisions. Additional literature analysis and stakeholder interactions may be required. When necessary and possible, JRC will also liaise with standardisation bodies and relevant technical committees.

Duration: 48 months

Type of Action: Provision of technical/scientific services by the Joint Research Centre

Indicative timetable: Q2 2025

Indicative budget: EUR 0.09 million from the 2025 budget

Other budget implementation instruments

1. Use of individual experts to support raw materials policy (1)

This action will support the use of appointed individual independent experts for assisting the Commission with advising and assisting the Commission services with the implementation and design of the EU Raw materials policy, and reinforcing the Commission capacity to elaborate evidence-based raw materials policy and the industrial transition to a climate-neutral Europe. Individual experts will work on quantitative analysis of the criticality of individual raw materials based on the EU methodology; critical raw materials supply and demand; future raw materials trends and innovation potential; and technology, infrastructure and raw materials requirements for the industrial transition: review of national exploration programmes.

The tasks of individual experts would include attending bilateral meetings with Commission services, remote analysis, drafting and preparatory work. The experts will be highly qualified and specialised, and will be selected on the basis of objective criteria, following an open call for expressions of interest. A special allowance of EUR 450/day will be paid to the expert appointed in its personal capacity who acts independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2025

Indicative budget: EUR 0.80 million from the 2025 budget

2. Use of individual experts to support raw materials policy (2)

This action will support the use of appointed individual independent experts for advising and assisting the Commission services with the implementation of the European Critical Raw Materials Act. Individual experts will support the Commission in the assessment of applications for the recognition of a critical raw materials project as a Strategic Project. In this context, the experts will assess proposed projects that can cover extraction, processing or recycling of raw materials in terms of their technical feasibility, financial maturity, compliance with environmental-, social- and governance-related standards as well as with the United Nations Framework Classification for Resources.

The tasks of individual experts would include remote analysis, preparatory work, drafting of reports as well as participation in discussions and meetings with other experts and Commission services. The experts will be highly qualified and specialised, and will be selected on the basis of objective criteria, following an open call for expressions of interest. A special allowance of EUR 450/day will be paid to the expert appointed in its personal capacity who acts independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q2 2025

Indicative budget: EUR 0.93 million from the 2025 budget

Subscription Actions

1. Support to Hydrogen in the Economy

The Commission represents the European Union in the International Partnership for Hydrogen and Fuel Cells in the Economy. The annual financial contribution will be paid to the entity responsible for managing it.

Type of Action: Subscription action

Indicative timetable: As of Q1 2025

Indicative budget: EUR 0.05 million from the 2025 budget

Indirectly managed actions

Indirectly managed actions delegated to ESA

1. ESA.1 - Heading 5 of Space - Using Space on Earth – Satellite navigation - EGNSS Evolution: Technology and infrastructure-related R&D activities

Actions under this area will address upstream R&D activities. They will cover the maturing of the existing technologies and the development of new and emerging technologies (e.g. LEOPNT), the engineering activities for the further evolution of Galileo and EGNOS existing systems, technical studies for the assessment of exploratory system concepts and/or responding to new mission needs and a changing environment, the development and maintenance of state-of-art system tools and technical test-beds, the implementation of actions agreed at Programme level to reduce the dependence of the supply chain on non-EU markets, the definition, design, development and implementation of experimental satellite demonstrator, and others.

These activities will be implemented by ESA under the Contribution Agreement between the Commission and ESA. The procurement actions under this section will affect the essential security interests of the Union. In accordance with Art. 136 of the EU Financial Regulation, restricted participation will therefore be established in the tender specifications. In this case, participation should in principle be open only to entities established in the EU Member States. Participation of entities established in Horizon Europe associated countries or in third countries will be decided on a case-by-case basis with the approval of the annual work plan submitted to Commission under the Financial Framework Partnership Agreement (FFPA).

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative budget: EUR 58.00 million from the 2025 budget

2. ESA.2 - Heading 3 of Space - Using Space on Earth – Telecommunications - IRIS2 Space infrastructure: Development and Validation

The Commission has adopted a proposal for a Union Programme for Secure Connectivity. The future IRIS² system – Infrastructure for Resilience, Interconnectivity and Security by Satellites – should upon the GOVSATCOM component of the EU Space Programme, which should also take advantage of additional national and European capacities and develop further the European Quantum Communication Infrastructure (EuroQCI) initiative. This action should therefore enable and support the development and validation actions for the construction of the initial space and ground infrastructure required for the provision of governmental services.

These activities are due to be entrusted to ESA under a Contribution Agreement between the Commission and ESA. In particular, ESA will perform the following tasks: infrastructure development and validation activities as required to achieve full validation activities (including performances) of IRIS², that will be implemented by the future Concessionaire.

IRIS² implementation will include system architecture tasks, engineering and design of non-recurring items, development, manufacturing, security and technology EU non-dependence aspects and all necessary qualification and tests of space and ground segments. It will also include all the new developments that are needed to achieve the programme's objectives, as well as all the early validations deemed as necessary for an early elimination of the technical risks (e.g., interface and functional testing between blocks).

However, the detailed perimeter of activities for the Entrusted Tasks industrial activities will be based on the selected contractors' final proposal.

The procurement actions under this section will affect the essential security interests of the Union. In accordance with Art. 136 of the EU Financial Regulation, restricted participation will therefore be established in the tender specifications. In this case, participation should in principle be open only to entities established in the EU Member States. Participation of entities established in Horizon Europe associated countries or in third countries will be decided on a case-by-case basis.

Proposals under this topic, aiming or contributing to technology development for EU non-dependence are expected to be complementary and in synergies with already funded actions directly managed by the Commission, in the context of critical space technology for EU non-dependence developments. In particular, the topics: Critical Space Technologies for EU non-dependence (HORIZON-CL4-2021-SPACE-01-81, HORIZON-CL4-2022-SPACE-01-82, HORIZON-CL4-2023-SPACE-01-72, HORIZON-CL4-2024-SPACE-01-73); HORIZON-CL4-2025-02-SPACE-71: Space Critical EEE Components for EU non-dependence – RISC-V Microprocessor on 7nm; HORIZON-CL4-2025-02-SPACE-72: Space Critical Equipment and Related Technologies for EU non-dependence – Chip Scale Atomic Clocks and Solar Cells; HORIZON-CL4-2025-02-SPACE-73: Space Critical EEE Components for EU non-

dependence – Connectors; HORIZON-CL4-2025-02-SPACE-74: Space Critical EEE Components for EU non-dependence – Advanced Packages and Memories.

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative budget: EUR 75.50 million from the 2025 budget

3. ESA.3 - Heading 11 of Space - Boosting Space through IOD/IOV opportunities - In Orbit Demonstration/Validation (IOD/IOV) service

To ensure EU non-dependence and competitiveness in technologies, there is a clear need for a regular, sustainable, cost-effective and responsive In Orbit Demonstration/Validation (IOD/IOV) service in the EU. Space flight heritage in real conditions and environment is often required to de-risk new technologies, products, concepts, architectures, services and operations techniques be that for unique or recurrent, institutional or commercial missions.

Intended results of the action is to provide a service for regular aggregation (if needed), launch and operations in orbit for IOD/IOV experiments; the objective is to have at least one opportunity every year during the Horizon Europe implementation period. This will contribute to reduce the time to market or operational use of new technologies, products, concepts, architectures, and operations techniques.

The IOD/IOV activities intend to provide a regular and cost-effective service and solution for common flight ticket actions (management, spacecraft design including reuse of existing solutions, assembly, integration and tests, launch and operations) based on EU solutions both for the spacecraft (i.e. platform, experiments aggregation, operations in orbit including preparation and associated Ground Segment) and for the launch services.

The scope of the activities may include mission design, integration and implementation, for all the necessary tasks to prepare, provide and operate spacecraft(s), together with the related ground segment, which accommodates the selected IOD/IOV experiments as well as the associated launch services.

For the aggregation and operations, the activities include:

- System studies, at ground and space level, including the compatibility with the available launchers;
- Input to the launch mission analysis performed by the launch service provider;
- Selection, assembly, integration and testing of the spacecraft(s) and related ground segment;
- Management of interfaces with and between the different IOD/IOV experiments, between the spacecraft and the launcher and between the spacecraft and the ground segment;

- Preparation of the spacecraft(s) for the flight;
- In-orbit testing and operations including data provision.

Concerning launch aspects, IOD/IOV activities should support the European launcher exploitation policy, therefore relying as far as possible on EU manufactured launcher solutions launched from the EU territory. The actions will include the provision of flight opportunities with EU manufactured launchers which encompass the mission analysis, the verification of interfaces between the spacecraft and the launcher, the preparation of launch campaign and the flight up to the injection of the spacecraft(s) on the required orbit(s).

These activities and associated procurement actions will be implemented by ESA in line with the Contribution Agreement between the Commission and ESA.

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative budget: EUR 8.00 million from the 2025 budget

Indirectly managed actions delegated to EUSPA

1. EUSPA.3 - Heading 12 of Space – Boosting Space through support to entrepreneurship – 2025 CASSINI activities

Business development, acceleration and upscaling of start-ups will be fostered across all space areas under the CASSINI Space Entrepreneurship Initiative. CASSINI will provide support to business and innovation-friendly ecosystems, including the strengthening of business skills in the space market segments and digital services based on space data. The objective is to make start-ups and scale-ups investment-ready and able to secure venture capital funding, including by organising events. Synergies with the InvestEU programme and the EU Space programme will be established. The following action will be funded: CASSINI innovation support.

Legal entities:

European Union Agency for the Space Programme (EUSPA), Janovského 438/2 170 00 Prague 7 – Holesovice Czech Republic

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative budget: EUR 0.50 million from the 2025 budget

2. EUSPA.2 - Heading 6 of Space - Using Space on Earth – Services & Data coming from satellites, both Earth Observation and navigation

We need to make the best use of EGNSS and Copernicus capacities for EU citizens, companies and society. Research and innovation will foster the development of EGNSS and

Copernicus downstream applications and promote their adoption in the EU and worldwide. A call for proposals under this area will address downstream R&D activities to be launched by the European Union Space Programme Agency (EUSPA) in accordance with the specification included in Appendix below.

Legal entities:

European Union Agency for the Space Programme (EUSPA), Janovského 438/2 170 00 Prague 7 – Holesovice Czech Republic

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative budget: EUR 15.00 million from the 2025 budget

Appendix to action EUSPA.2

Call - Services & Data coming from satellites

HORIZON-EUSPA-2026-SPACE-03

Overview of this call²⁴⁷

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ²⁴⁸	Indicative number of projects expected to be funded
		2025		
Opening: 14 Oct 2025				
Deadline(s): 10 Feb 2026				
Heading 7 - Using Space on Earth – Services & Data coming from satellites, both Earth Observation and navigation				
HORIZON-EUSPA-2026-SPACE-02-51: Space Data Economy	IA	10.00 ²⁴⁹	1.50 to 2.50	5
HORIZON-EUSPA-2026-SPACE-02-52: Innovative space-based applications enhancing capabilities for a resilient	IA	5.00 ²⁵⁰	1.50 to 1.80	4

²⁴⁷

²⁴⁸ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

²⁴⁹ Of which EUR 10.00 million from the 'na' budget.

²⁵⁰ Of which EUR 5.00 million from the 'na' budget.

Europe				
Overall indicative budget		15.00		

General conditions relating to this call

Destination 5: Open Strategic Autonomy in Developing, Deploying and Using Global Space-Based Infrastructure, Services, Applications and Data

Heading 7 - Using Space on Earth – Services & Data coming from satellites, both Earth Observation and navigation

Proposals are invited against the following topic(s):

HORIZON-EUSPA-2026-SPACE-02-51: Space Data Economy

Call: Services & Data coming from satellites	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-9 by the end of the project. The reference TRL definition is the ISO 16290:2013 applicable to the space sector. Activities may start at any TRL.
<i>Procedure</i>	To ensure a balanced portfolio covering all the areas described in the scope section, grants will be awarded to applications not only in order of ranking but at least also to one proposal that is the highest ranked within each priority area, provided that the applications attain all thresholds.
<i>Legal and financial set-up of the Grant Agreements</i>	Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the

	Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁵¹ .
--	---

Expected Outcome: This topic aims at supporting activities that are enabling or contributing to overcoming sectorial demand fragmentation and support scale up of the space data²⁵² use, increasing the wider uptake and mass adoption of the EU space data in selected priority areas that are strategic for Europe. To that end, proposals under this topic should aim to deliver results that are directed, tailored towards and contributing to some or all of the following expected outcomes:

- Foster the development and prepare for the commercialisation of innovative space-based solutions that supports an informed decision making of relevant stakeholders (e.g. energy operators, city and regional authorities, financial institutions, insurance companies, corporations, food/industrial manufacturing etc.);
- Leverage EGNSS-based and Copernicus-based capabilities to modernize and increase the efficiency and resilience of energy infrastructure and/or urban environment, and/or support the use of green financing schemes addressing environmental challenges as well as implementing climate resilient practices in the downstream sector;
- Analyse and support the consolidation of the sectorial demand for solutions based on EGNSS and Copernicus services and data, possibly also exploring the synergies with EU space based secure communication and surveillance, addressing the challenges identified in priority areas and leveraging the relevant regulatory environment.

Scope: Europe has made a considerable investment in its space infrastructure, resulting in two pivotal outcomes: first, a strategic autonomy of the continent, and second, a surge in economic growth driven by space-enabled applications. Additionally, Europe boasts a thriving sector offering space data, services and products, which continues to show steady growth.

The market for space data and services is fragmented, both on the side of supply and demand. A fragmented and underdeveloped demand from both public and private users does not allow for scaling up, hindering the realization of the full potential of the EU Space infrastructure.

Space data can be used in almost all industry verticals in the EU and worldwide. While some sectors are already using space data to high extent, providing benefits to the citizens, economy and environment, other sectors are only marginally testing the ground. The demand creation is progressing, however, in order to foster the space data economy, it is needed to scale up and accelerate the market uptake and mass adoption of space data, in the context of the applicable legal framework.

²⁵¹ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁵² Space data relates to data and services provided by the EU Space programme components.

In order to achieve this, the proposals should focus on the development of innovative solutions, tailored to the specific needs of downstream industries and verticals and addressing inherent sectorial demand fragmentation issues. There is also an untapped potential of using space data to bolster green and digital transitions, presenting an opportunity to create innovative solutions in these domains.

Moreover, the projects should leverage the existing relevant sectorial regulations and policies, by exploring how the proposed solutions using space data and services can support these regulations.

Projects supporting the integration of EU Space data and services into vertical market segments should focus on one of the following selected priority areas (and identify which area is being addressed in the proposal):

- **Energy** (renewable energy, energy efficiency, energy infrastructure) In the face of energy supply shortages and climate change, the demand for renewable energy is rapidly increasing. Driving this demand is the fact that renewables are reducing greenhouse gas emissions and transitioning the world towards a sustainable future. Moreover, energy efficiency initiatives aim to optimize energy consumption across various sectors, from manufacturing to residential spaces, fostering a more sustainable and responsible approach to energy use. To expedite this transition, space data and services enable energy stakeholders to make informed decisions about the deployment and management of renewable energy infrastructure and to gain insights into energy consumption patterns across diverse sectors and geographic regions. Examples of downstream innovation in this context is the use of GNSS and EO technologies to enhance energy infrastructure resilience and efficiency in smart grids by adapting to real-time demand changes or to facilitate the monitoring and management of electricity distribution networks.
- **Climate adaptation and Environmental footprint reduction**: The implementation of effective Climate adaptation measures can foster climate resilience and reduce vulnerability to climate change, in communities, ecosystems and infrastructure. GNSS and EO technologies provide accurate and up to date data for assessing climate risks, prioritizing adaptation measures and allocate resources effectively to reduce environmental footprint, enabling a deeper understanding of climate change impacts and informing effective mitigation strategies. This includes the development of innovative downstream applications to prepare and respond effectively, improving disasters preparedness through early warning systems for extreme events, strengthening biodiversity and ecosystems services, promote afforestation and reforestation, manage water resources and water allocation more efficiently, implement climate resilient agriculture practices. Moreover, space-based solutions play a crucial role to reduce resource consumption, environmental impact, pollution and ecological degradation, fostering industry sustainability practices. Proposals should address one or more of the aforementioned areas, leverage digital tools based on innovative technologies such as AI/Big Data/Quantum/Blockchain/Digital Twins, etc., explore synergies with Satcom, as

well as ensure the involvement of private sector as end users for the proposed solution and commercial exploitation.

- **Green financing and insurance:** Green financing involves the allocation of funds to support environmentally sustainable projects. Concurrently, green insurance offers coverage for risks tied to sustainability, climate change, and eco-friendly activities. These insurance products incentivize responsible practices, providing protection against environmental challenges. Both green financing and insurance contribute to fostering sustainability by directing financial resources and risk management strategies toward initiatives that promote positive environmental and social outcomes. Space technologies can play a pivotal role by providing accurate data to ensure transparency, accountability and risk management for the assessment and monitoring of environmental projects funded by green financing.
- **Liveable cities of the future:** The share of the world's population living in cities is constantly increasing. Currently governments have the goal to move cities towards a better liveable future. Tomorrow cities can drive and take advantage of innovation and new downstream space technologies as they are the biggest digital platform. Solutions should develop space-based applications and technologies with focus on commercial exploitation for the modernisation of cities. Examples of areas to be analysed are smart waste and waste water managements, drinking water management, green constructions, urban green, urban mobility and public transports, urban logistics, health and well-being, public safety, sustainable tourism, as well as the monitoring of urbanisation patterns (e.g. land coverage, urban sprawl, heat islands), assessing the link between urban and peri urban/rural areas and interdependencies of cities with their regional areas, improving disasters preparedness and preventive/proactive urban planning, supporting investment in more climate resilient infrastructures etc. In parallel with modernisation of liveable cities another important objective is to preserve the past and valorise the cultural heritage through monitoring sites mitigating the effects of mass tourism, climate change, subsidence and pollution. Synergies with satellite communications can also be explored. Proposals are expected to ensure the involvement of cities' authorities as either end users or regulatory authorities supporting the uptake of the proposed innovative solutions.

Each proposal should address only one of the four areas outlined above, which must be clearly identified.

The proposals under this topic should present a business plan.

Proposals are expected to promote cooperation between different actors (industry, SMEs and research institutions, city authorities, and where relevant, Copernicus Entrusted Entities) and consider opportunities to quickly turn technological innovation into commercial exploitation.

When applicable and upon request of the granting authority, the beneficiaries may be asked to interact with the EU Space Programme, through the most relevant expert group(s) configuration(s), with the purpose of giving feedback about the EU Space Programme.

Proposals under this topic should explore synergies with Space Based Communication, Navigation and Surveillance (CNS) systems, and be complementary to already funded actions in the context of technology development at component level. In particular, it is expected that projects make use of existing European technologies and/or building blocks at component level contributing to European non-dependence and strengthen competitiveness. Furthermore, proposed activities should be complementary to national activities and activities funded by the European Space Agency (ESA) and if applicable Destination Earth.

Proposals addressing Galileo PRS (Public Regulated Service) related applications are not in the scope of this action.

International cooperation is encouraged in this topic.

In this topic, the integration of the gender dimension (sex and gender analysis) in research and innovation content should be addressed only if relevant in relation to the objectives of the research effort.

HORIZON-EUSPA-2026-SPACE-02-52: Innovative space-based applications enhancing capabilities for a resilient Europe

Call: Services & Data coming from satellites		
Specific conditions		
<i>Expected contribution per project</i>	<i>EU per</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 1.80 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>		The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>		Innovation Actions
<i>Eligibility conditions</i>		<p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The following additional eligibility criteria apply: This topic requires participation, as beneficiaries, of at least two crisis or security practitioner²⁵³ organisations or agencies, established in at least two different EU Member States or Associated Countries. For participants with practitioner status, applicants must fill in the table “Information</p>

²⁵³ Crisis or security practitioners has the meaning of organisations or agencies actively engaged in crisis or security operations, involved in e.g., law enforcement, customs, environmental crime management, smuggling and trafficking fighting and counter-terrorism, border and maritime surveillance, critical infrastructure operators, public safety, fundamental rights, disaster first/second responders, civil protection authorities, humanitarian aid etc.

	about security practitioners” in the application form with all the requested information, following the template provided in the submission IT tool.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-9 by the end of the project. The reference TRL definition is the ISO 16290:2013 applicable to the space sector. Activities may start at any TRL.
<i>Procedure</i>	To ensure a balanced portfolio covering all the areas described in the scope section, grants will be awarded to applications not only in order of ranking but at least also to one proposal that is the highest ranked within each priority area, provided that the applications attain all thresholds.
<i>Legal and financial set-up of the Grant Agreements</i>	Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁵⁴ .

Expected Outcome: Projects’ results are expected to contribute to some or all of the following outcomes:

- Foster the development and validation of integrated synergistic space technologies that support the operational work of crisis and security practitioners (e.g. law enforcement, customs, first/second responders, critical infrastructure operators, border or coast guards, civil protection authorities etc);
- Improve, operationalize and mainstream EGNSS-based and possibly Earth observation-based services that enhance the resiliency and security (including cybersecurity) of the EU, reinforcing their acceptance, adoption and usage of the developed solution(s) among practitioners. Synergies with secure satellite communications can also be explored;
- Improve the wide uptake and penetration of EU Space Programme data and services, and in particular EGNSS differentiators (OSNMA - Open Service Navigation Message Authentication, HAS - High Accuracy Service, RLS - Return Link Service, EWSS – Emergency Warning Satellite Service etc.), in the everyday operations and tasks of crisis and security practitioners, increasing their awareness and ability to operate efficiently and with safety;

²⁵⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Identify new, and analyse existing, capability gaps of security practitioners, that space technologies can bridge, demonstrating on the field innovative solutions based on EGNSS and possibly other EU Space Programme components such as Copernicus;
- Create new space-based commercial opportunities for innovative businesses serving practitioner organisations.

Scope: Proposals should be built on the exploitation of the distinguishing features of Galileo and EGNOS seeking to enhance the way practitioners prepare for and manage crises and security operations. Proposals should develop applications and technologies that focus on commercial exploitation in one of the following priority areas, which must be clearly indicated:

- Development of EGNSS-based spoofing-proof downstream solutions to support the digital transformation of security practitioners in security-critical operations (e.g. Law Enforcement Agencies, Custom Authorities, Border and Coast Guards, etc) in various applications, including: environmental crimes management, prevention of smuggling and trafficking, counter-terrorism, border and maritime surveillance, migration management, fugitive search, public safety and fundamental rights, illegal poaching, customs operations and Electronic Freight Transport Information, dangerous goods transportation, usage of robots and/or automated Galileo-enabled platforms for surveillance, etc.;
- Development of EGNSS-based downstream solutions to support the resiliency and functioning of critical infrastructures in EU (e.g. digital infrastructure, drinking water supply and distribution, water waste management, healthcare, e-government, etc.);
- Development of EGNSS-based downstream solutions to support crisis management operations: drone-supported operations, improved and safer asset management systems, AR/VR for first responders, novel EGNSS smartphone-sized or wearable technologies, UneXploded Ordnance (UXO) risk assessment and clearance for humanitarian operations, etc.

Proposals are also expected to address cybersecurity threats in the description of the solution(s).

Proposals should, when relevant, integrate other data sources/services from other EU Space Programme components, in particular Copernicus and/or GOVSATCOM. Where appropriate, the beneficiaries are encouraged to interact with the relevant Entrusted Entities managing the Copernicus Emergency Management Service and/or the Copernicus Security Service.

The action focuses on the development of close to market EGNSS downstream applications through the realisation of large-scale demonstration and implementation projects, with the participation of relevant crisis and/or security practitioners.

Developed applications should have a clearly defined commercial potential and should respond to user needs. The solution(s) developed is/are expected to achieve TRL 7-9 by the end of the project.

Proposals should deliver new innovative applications, identifying and addressing existing gaps, leveraging the existing relevant sectorial regulations and policies and exploring how the solutions implemented using space data and services can address these regulations and be commercialised. Proposals should also highlight the expected impact and define a clear market uptake strategy, presenting a credible post-project pathway to operations. The developed solutions may integrate other non-space technologies like IoT, big data, artificial intelligence, drones, 5G, augmented/mixed reality etc.

For proposals under this topic:

- A Business Plan should be provided as part of the proposal, to evidence the user requirements, the sustainability of the project, and opportunities for wide adoption in Europe according to standards and operational needs;
- Participation of industry, in particular SMEs and midcaps, is encouraged;
- Participation of, or outreach to, entities based in countries without a space tradition is encouraged;
- Involvement of post-graduate researchers (engineers, scientists, and others) is also encouraged, for example through professional work experience or through fellowships/scholarships when applicable;
- When appropriate, Social Sciences and Humanities (SSH) should be considered to maximize public trust in the solution and robustness and quality of results/data.

Proposals addressing Galileo PRS (Public Regulated Service) related applications are not in the scope of this action.

Proposals should seek to leverage and/or create synergies with relevant projects and activities funded under Horizon Europe Cluster 3: Civil security for society, reinforcing the cross-fertilization of research and innovation in this domain.

In this topic, the integration of the gender dimension (sex and gender analysis) in research and innovation content should be addressed only if relevant in relation to the objectives of the research effort.

Horizon Europe
Work Programme 2025

8. Climate, Energy and Mobility

IMPORTANT NOTICE:

This draft has not been adopted or endorsed by the European Commission. Any views expressed are the views of the Commission services and may not in any circumstances be regarded as stating an official position of the Commission.

This draft is made public before the adoption of the work programme to provide potential participants with the currently expected main lines of this work programme. Only the adopted work programme will have legal value.

The adoption of the work programme will be announced on the Horizon Europe website and on the Funding and Tenders Portal.

Information and topic descriptions indicated in this draft may not appear in the final work programme; and likewise, new elements may be introduced at a later stage. Any information disclosed by any other party shall not be construed as having been endorsed by or affiliated to the Commission.

The Commission expressly disclaims liability for any future changes of the content of this document.

Destinations.....	38
Climate sciences and responses for the transformation towards climate neutrality	38
HORIZON-CL5-2025-06-D1-01: Climate simulations data and knowledge for optimal support of IPCC Assessments and International Policy	39
HORIZON-CL5-2025-06-D1-02: Advancing Earth System Models to increase understanding of Earth system change	43
HORIZON-CL5-2025-06-D1-03: Modelling of mitigation pathways for F-gases.....	46
HORIZON-CL5-2025-06-D1-04: The attribution to climate change, and improved forecasting of extreme and slow-onset climate- and weather-related events and their impacts	48
HORIZON-CL5-2025-05-Two-Stage-D1-05: Adaptation to Climate Change: Effectiveness and Limits.....	51
HORIZON-CL5-2025-06-D1-06: Fostering equity and justice in climate policies – Societal Readiness Pilot	55

HORIZON-CL5-2025-06-D1-07: Implementing the climate action pillar of the EU-African Union Partnership on Climate Change and Sustainable Energy	58
Cross-sectoral solutions for the climate transition.....	63
Batteries.....	64
HORIZON-CL5-2026-01-D2-01: Development of sustainable and design-to-cost batteries with (energy-)efficient manufacturing processes and based on advanced and safer materials (Batt4EU Partnership)	64
HORIZON-CL5-2025-01-Two-Stage-D2-02: Cost-effective next-generation batteries for long-duration stationary storage (Batt4EU Partnership)	67
HORIZON-CL5-2025-02-D2-03: Sustainable processing and refining of raw materials to produce battery grade Li-ion battery materials (Batt4EU Partnership)	70
HORIZON-CL5-2026-01-D2-04: Integrating advanced materials, cell design and manufacturing development for high-performance batteries aimed at mobility (Batt4EU Partnership)	73
HORIZON-CL5-2026-01-D2-05: Accelerated multi-physical and virtual testing for battery aging, reliability, and safety evaluation (Batt4EU Partnership).....	76
HORIZON-CL5-2025-02-D2-06: Fostering the European battery ecosystem by providing accurate and up-to-date information and stimulating excellence in the European battery R&I community (Batt4EU Partnership).....	79
Communities and cities	82
HORIZON-CL5-2025-06-D2-07: Driving Urban Transitions to a sustainable future (DUT) Co-Funded Partnership.....	82
Cross-cutting	86
HORIZON-CL5-2025-02-D2-08: Coordinated call with India on waste to renewable hydrogen.....	86
HORIZON-CL5-2026-01-D2-09: Monitoring and Evaluation of the Societal Readiness Pilot	89
HORIZON-CL5-2025-02-D2-10: Clean Energy Transition Co-Funded Partnership.....	92
HORIZON-CL5-2025-02-D2-11: Support to the SET Plan community	95
HORIZON-CL5-2025-02-D2-12: NZIA regulatory sandbox exchange forum support.....	98
Sustainable, secure and competitive energy supply	102
Global leadership in renewable energy	103
HORIZON-CL5-2026-02-D3-01: Large-scale production of liquid advanced biofuels and renewable fuels of non-biological origin	104
HORIZON-CL5-2026-02-D3-02: Competitiveness, energy security and integration aspects of advanced biofuels and renewable fuels of non-biological origin value chains.....	106
HORIZON-CL5-2025-02-D3-03: Novel approaches to geothermal resources development	108
HORIZON-CL5-2025-02-D3-04: Development of hydropower technologies and water management schemes allowing for win-win situation of flexible hydropower and biodiversity improvement – Societal Readiness Pilot.....	111

HORIZON-CL5-2026-02-D3-05: Demonstration of thermal energy storage solutions for solar thermal plants and systems	113
HORIZON-CL5-2025-02-D3-06: Innovative manufacturing of wind energy technologies	114
HORIZON-CL5-2026-02-D3-07: Improved reliability and optimised operations and maintenance for wind energy systems.....	117
HORIZON-CL5-2026-02-D3-08: Understand and minimise the environmental impacts of offshore wind energy	119
HORIZON-CL5-2025-02-D3-09: Optimised/Alternative Silicon Growth Technologies (from either liquid or gaseous phase) for PV Applications (EUPI-PV Partnership).....	122
HORIZON-CL5-2026-02-D3-10: Towards commercialisation of Perovskite PV and development of dedicated manufacturing equipment (EUPI-PV Partnership)	124
HORIZON-CL5-2025-02-D3-11: Novel inverter technologies and flexibility in PV systems (EUPI-PV Partnership).....	126
HORIZON-CL5-2026-02-D3-12: Extending the lifetime of crystalline silicon PV modules (EUPI-PV Partnership).....	128
HORIZON-CL5-2026-02-D3-13: De-risking wave energy technology development through transnational pre-commercial procurement of wave energy research and development ...	130
HORIZON-CL5-2026-02-D3-14: Development of innovative solutions strengthening the security of renewable energy value chains.....	133
HORIZON-CL5-2025-02-D3-15: Building a Long-Term Africa Union (AU) and European Union (EU) Research and Innovation joint collaboration on Sustainable Renewable Energies	135
Energy systems, grids & storage	137
HORIZON-CL5-2025-02-D3-16: Support to the BRIDGE initiative	137
HORIZON-CL5-2025-02-D3-17: Control and operation tools for a RES-based energy system.....	140
HORIZON-CL5-2026-02-D3-18: Next generation distribution substation for increasing the system resilience	142
HORIZON-CL5-2026-02-D3-19: Innovative solutions for a generative AI-powered digital spine of the EU energy system.....	143
HORIZON-CL5-2026-02-D3-20: Innovative tools and services to manage and empower energy communities	146
HORIZON-CL5-2025-02-D3-21: Cross-regional network and market model for optimisation of long duration storage.....	149
HORIZON-CL5-2026-02-D3-22: Underground Thermal Energy Storage in dense urban areas.....	151
HORIZON-CL5-2025-01-Two-Stage-D3-23: Critical elements for energy security of grid and storage technologies	153
Carbon Capture, Utilisation and Storage (CCUS)	156
HORIZON-CL5-2026-02-D3-24: New CO ₂ capture technologies	156
HORIZON-CL5-2025-02-D3-25: Effects of CO ₂ -stream impurities on CO ₂ transport and storage	157

HORIZON-CL5-2025-02-D3-26: European investment atlas of potential CO2 storage sites	160
HORIZON-CL5-2025-02-D3-27: Using captured CO2 as a resource to replace fossil hydrocarbons in industrial production.....	162
Efficient, sustainable and inclusive energy use.....	164
Highly energy-efficient and climate neutral European building stock.....	164
HORIZON-CL5-2026-02-D4-01: On-site innovative robotic and automated solutions and techniques for more sustainable and less disruptive building renovation and construction	164
HORIZON-CL5-2026-02-D4-02: Smarter buildings as part of the energy system for increased efficiency and flexibility – Societal Readiness Pilot.....	166
HORIZON-CL5-2026-02-D4-03: Innovative pathways for low carbon and climate resilient building stock and built environment (Built4People Partnership)	168
HORIZON-CL5-2026-02-D4-04: Innovative approaches for the deployment of Positive Energy Districts	171
HORIZON-CL5-2026-02-D4-05: Optimal combination of low embodied carbon construction products, technical building systems and circularity principles for climate neutral buildings (Built4People Partnership)	173
Industry.....	175
HORIZON-CL5-2026-02-D4-06: Phase out fossil fuel in energy intensive industries through the efficient integration of renewable energy sources	175
Clean and competitive solutions for all transport modes	178
Zero-emission road transport	179
HORIZON-CL5-2025-04-D5-01: Efficient wireless stationary bidirectional charging solutions for road Light Duty Vehicles (2ZERO Partnership) – Societal Readiness Pilot	179
HORIZON-CL5-2025-04-D5-02: Cybersecure and resilient road e-mobility ecosystem (2ZERO Partnership).....	182
HORIZON-CL5-2025-04-D5-03: Safe post-crash management of road Light Duty Battery Electric Vehicles (BEVs) (2ZERO Partnership)	185
HORIZON-CL5-2025-04-D5-04: Extended lifetime of road Battery Electric Vehicles (BEV) (2ZERO Partnership)	188
HORIZON-CL5-2025-04-D5-05: Road Battery Electric Vehicles (BEV) optimised user-centric solutions for energy efficiency design and consistent range throughout weather conditions (2ZERO Partnership)	191
HORIZON-CL5-2025-04-D5-06: Strategies, tools and concepts for optimised road Battery Electric Vehicles (BEV) long-haul logistics use cases (2ZERO Partnership)	193
HORIZON-CL5-2025-04-D5-07: Accelerating the circular transformation of the EU automotive industry	196
Aviation	198
HORIZON-CL5-2025-04-D5-08: Next generation testing capabilities in strategic EU wind tunnels	198

HORIZON-CL5-2025-03-Two-Stage-D5-09: Next generation aircraft autonomy technologies for cockpit / pilot assistance applications	200
Waterborne transport.....	202
HORIZON-CL5-2025-04-D5-10: Innovative solutions for energy conversion and safety of low and zero-carbon fuels in waterborne transport (ZEWT Partnership)	202
HORIZON-CL5-2025-04-D5-11: Demonstration of battery energy storage systems in existing and new vessels via novel energy storage and ship design concepts (ZEWT Partnership)	206
HORIZON-CL5-2025-04-D5-12: Real-time, adaptive and innovative energy management solutions to optimise fuel consumption and lower emissions pollutants in waterborne transport (ZEWT Partnership).....	209
HORIZON-CL5-2025-04-D5-13: Novel holistic intelligent tools for variable retrofit and decarbonised scenarios (ZEWT Partnership)	211
HORIZON-CL5-2025-04-D5-14: Flexible and mobile solutions for Onshore Power Supply (ZEWT Partnership)	214
HORIZON-CL5-2025-04-D5-15: Optimal integrated onboard renewable energy solutions, by considering Wind-Assisted Propulsion Systems (ZEWT Partnership).....	217
HORIZON-CL5-2025-04-D5-16: Support of the new EU renewable and low carbon fuel ecosystem for waterborne transport	219
Transport-related health and environment	222
HORIZON-CL5-2026-01-D5-17: Real time monitoring of regulated and non-regulated emissions from all types of vessels and other port activities in order to enforce emission limits in waterfront cities.....	222
Cross-cutting	229
HORIZON-CL5-2025-04-D5-18: Support to the organisation and dissemination of the Transport Research Arena (TRA) conference.....	229
HORIZON-CL5-2025-04-D5-19: Knowledge sharing and dissemination to support road transport R&I in EU and around the world increasing global EU competitiveness	231
Safe, Resilient Transport and Smart Mobility services for passengers and goods	235
Connected, Cooperative and Automated Mobility (CCAM)	236
HORIZON-CL5-2025-04-D6-01: Advancing remote operations to enable the sustainable and smart mobility of people and goods based on operational and societal needs (CCAM Partnership) – Societal Readiness Pilot.....	236
HORIZON-CL5-2025-04-D6-02: Preparing for large-scale CCAM demonstrations (CCAM Partnership) – Societal Readiness Pilot.....	240
HORIZON-CL5-2026-01-D6-03: Next-generation environment perception for real world CCAM operations: Error-free and secure technologies to improve energy-efficiency, cost-effectiveness, and circularity (CCAM Partnership)	243
HORIZON-CL5-2026-01-D6-04: Integration of human driving behaviour in the validation of CCAM systems (CCAM Partnership)	246
HORIZON-CL5-2026-01-D6-05: Approaches, verification and training for Edge-AI building blocks for CCAM Systems (CCAM Partnership).....	249

HORIZON-CL5-2026-01-D6-06: Federated CCAM data exchange platform (CCAM Partnership)	252
Multimodal transport, infrastructure and logistics	256
HORIZON-CL5-2026-01-D6-07: Innovative construction and maintenance, with the use of new materials and techniques, for resilient and sustainable transport infrastructure	256
HORIZON-CL5-2026-01-D6-08: Accelerating freight transport and logistics digital innovation.....	259
HORIZON-CL5-2026-01-D6-09: Reliable data and practices to measure and calculate transport emissions in multimodal transport chains	263
HORIZON-CL5-2026-01-D6-10: Integrating inland waterway transport in smart shipping and multimodal logistics chains	267
HORIZON-CL5-2025-04-D6-11: Innovative air mobility and services for sustainable and smart urban, peri-urban transport – Societal Readiness pilot.....	269
Safety and resilience.....	272
HORIZON-CL5-2025-04-D6-12: Safe Human-Technology Interaction (HTI) in the vehicle systems of the coming decade – Societal Readiness Pilot	272

HORIZON-CL5-2026-01-D6-14: Predicting and avoiding road crashes based on Artificial Intelligence (AI) and big data.....	279
HORIZON-CL5-2026-01-D6-15: Icing in the context of sustainable aviation	282
Other Actions	285
Grants to identified beneficiaries.....	285
1. Support to European Standardisation Organisations for the development of an improved test method for heat pumps	285
2. Atmospheric monitoring of emission sources of ozone-depleting substances and F-gases	287
Prizes	289
1. Renewable energy technology (RET) solutions in energy communities	289
Public procurements	291
1. Technical support for low carbon and renewables policy development and implementation.....	291
2. Industrial Carbon Management knowledge sharing platform.....	292
3. Alignment of national and regional priorities with co-programmed partnership in the road mobility sector of the future	292
4. Support to the development, implementation, monitoring and evaluation of climate, energy and mobility research and innovation policy activities	293
5. Dissemination and information activities.....	293
6. Support to cities to enable deployment of innovative sustainable air mobility services	294
7. Organisational support to the SET Plan Conferences	294

Indirectly managed actions	295
1. Contribution to InvestEU blending operation under the Green Transition product.....	295
2. Voluntary contribution to the IEA's Clean Energy Transitions Programme (CETP)....	298
3. Voluntary contribution to the IEA for research and analysis supportive of the implementation of REpowerEU	300
4. Strengthening international policy dialogue to address global challenges: the contribution of transport research & innovation	301
Subscriptions.....	302
1. Contribution to Technology Collaboration Programmes (TCPs) of the International Energy Agency (IEA).....	302
2. Contribution to the International Renewable Energy Agency (IRENA)	303
3. Voluntary contribution 2025 to the Secretariat of the Clean Energy Ministerial (CEM) for Phase IV (July 2025 – June 2028), as well as to participation in its workstreams	303
4. Contribution to the International Energy Agency (IEA) – Energy Efficiency Hub (EE HUB)	304
5. Voluntary contribution to the Mission Innovation Secretariat, hosted by the International Energy Agency	305
Scientific and technical services by the Joint Research Centre	306
1. Support for the transition towards CCAM	306
2. Administrative Agreement with the JRC on EU & International Greenhouse Gas Emissions Modelling.....	306
3. Technical and scientific assistance for the Energy Efficiency Directive (EED) and the Energy Performance of Buildings Directive (EPBD)	307
4. Advancing of the TEN-T alternative fuels infrastructure analyses to support research and policy	307
5. Contribution to JRC activities on the development and implementation of innovative tools for detecting structural deficiencies of bridges and tunnels in the TEN-T network..	308
Expert contract actions	308
1. External expertise to advise on EU research and innovation policy	308
Service level agreements	309
1. Contribution to DIGIT for hosting website fees for BRIDGE and ETIP SNET web presence	309
Budget	311

Introduction

The overarching driver for this cluster is to accelerate the twin green and digital transitions and associated transformation of our economy, industry and society with a view to achieving climate neutrality in Europe by 2050, and to increase the competitiveness of the European economies. This encompasses the transition to greenhouse gas neutrality of the energy and mobility sectors by 2050 at the latest (as well as that of other sectors not covered by this cluster), while boosting their competitiveness, resilience, and utility for citizens and society. Europe has been at the forefront of climate science and is committed to keep delivering the knowledge for enabling efficient pathways and just transitions to climate neutrality.

Activities of this work programme support the implementation of the Paris Agreement and the United Nations Sustainable Development Goals¹. By putting research and innovation at the heart of our economy, the EU aims to create more jobs and improve the competitiveness of its industry. On this basis, activities of this work programme will support the European Commission's Net-Zero Industry Act and Clean Industrial Deal, a more circular and resilient economy, as well as enhanced climate adaptation, preparedness and solidarity. This will finally contribute to sustaining our quality of life and strengthening European societies and their social and economic model.

Cluster 5 supports the EU's strategic objectives through activities included in this work programme and through the support of Institutional European Partnerships² which are implemented through dedicated structures. Although the latter activities are not included in this work programme, it is of great importance to maximise synergy and coherence between activities regardless of their implementation mode³. Cluster 5 contributes also to the Strategic Energy Technology Plan (SET Plan) objectives and its domain-specific implementation plans.

Activities in this work programme will contribute to all **Key Strategic Orientations (KSOs)** of the Strategic Plan⁴:

- **The green transition:** Horizon Europe R&I activities must support Europe to become the world's first climate-neutral continent by 2050 and to tackle biodiversity loss and pollution. At least 35% of Horizon Europe's resources are committed to be spent on climate action and 10% for 2025-2027 on biodiversity action.

¹ Activities in this cluster will contribute to multiple SDGs, with the most direct impact on SDG 7 (Affordable and clean energy), SDG 9 (Industry, Innovation and Infrastructure), SDG 11 (Sustainable Cities and Communities), and SDG 13 (Climate Action). In addition, SDG 3 (Good health and well-being), SDG 6 (Clean Water and Sanitation), SDG 8 (Decent work and economic growth), and SDG 12 (Responsible production and consumption) will be positively impacted.

² Clean Hydrogen, Transforming Europe's rail system, Integrated Air Traffic Management, Clean Aviation

³ Activities specifically targeting fuel cells and hydrogen are primarily supported through calls for proposals of the European Partnership on Clean Hydrogen. However, in justified cases and in line with topic descriptions, specific aspects of hydrogen and fuel cells can be supported outside of the Clean Hydrogen Partnership

⁴ https://research-and-innovation.ec.europa.eu/funding/funding-opportunities/funding-programmes-and-open-calls/horizon-europe/strategic-plan_en

- **The digital transition:** Research to support the digital transition is key to Europe's competitiveness and open strategic autonomy, and to setting human-centred standards. It is also key to achieving the green transition. In 2021-2027, it is agreed to invest at least EUR 13 billion from Horizon Europe in core digital technologies.
- **A more resilient, competitive, inclusive and democratic Europe:** Europe's democratic values and principles need a strong foundation so they can be promoted globally. Horizon Europe research activities will help reinforce this foundation. This includes research on civil security, on a fair and environmentally friendly economic model, on health and wellbeing and on democratic participation.

Open strategic autonomy and securing Europe's capacity in developing and deploying critical technologies are overarching drivers that apply across all three key strategic orientations.

To contribute to these programme-level KSOs, cluster 5 will deliver on six specific **expected impacts**. In this work programme, each expected impact has been transformed into a specific **Destination** (see table below). This Destination-based work programme structure follows a thematic centre-of-gravity approach. Activities can have a cross-cutting character and will, in practice, often contribute to multiple expected impacts. The specific contribution to the overall expected impacts is explained in the introductory text of each Destination.

Expected Impact (Strategic Plan 2025-2027)	Destination (Cluster 5 work programme 2025)
21. Advancing science for a transition to a climate-neutral and resilient society	1. Climate sciences and responses for the transformation towards climate neutrality
22. Facilitating a clean and sustainable transition of the energy and transport sectors towards climate neutrality through cross-cutting solutions	2. Cross-sectoral solutions for the climate transition
23. Ensuring more sustainable, secure and competitive energy supply through solutions for smart energy systems based on renewable energy solutions	3. Sustainable, secure and competitive energy supply
24. Using energy in buildings and industry in an efficient, affordable and sustainable way	4. Efficient, sustainable and inclusive energy use
25. Achieving sustainable and competitive transport modes	5. Clean and competitive solutions for all transport modes
26. Multimodal systems and services for climate-neutral, smart and safe mobility	6. Safe Resilient Transport and Smart Mobility services for passengers and goods

According to the **intervention logic** of this work programme, Destination 1 fosters climate science and thus helps to identify effective and efficient pathways and responses to climate change. Destination 2 supports different cross-cutting technologies and solutions for climate, energy and mobility applications. Destination 3 and 4 focus mainly on energy issues – Destination 3 on making energy supply more sustainable, secure and competitive; Destination 4 on reducing energy demand of buildings and industry and enabling their more active role in a smart energy system. Destination 5 and 6 improve the performance of transport modes and mobility solutions – Destination 5 increases the competitiveness and climate/environmental performance of different transport modes; Destination 6 advances mobility services and solutions at system level for passengers and goods.

Horizon Europe is the EU's research and innovation support programme in a system of European and national funding programmes that share similar policy objectives. Projects that have been awarded a grant under a Horizon Europe call have the possibility to also receive funding under other EU programmes, including relevant shared management funds. In this context, applicants should actively seek **synergies** with other R&I-relevant EU, national or regional programmes (such as European Regional Development Fund (ERDF)⁵, European Social Fund Plus (ESF+)⁶, Just Transition Fund⁷, LIFE⁸, Innovation Fund⁹, InvestEU¹⁰, European Defence Fund (EDF)¹¹), where appropriate, as well as private funds or financial instruments.

With a view to be more effective in achieving impact, proposals are expected to synergise with other relevant initiatives funded at EU level, including the **Knowledge and Innovation Communities (KICs)** of the European Institute of Innovation and Technology (EIT)¹². The innovation ecosystems created and nurtured by the EIT KICs (e.g., EIT Climate-KIC, EIT InnoEnergy, EIT Raw Materials) can in particular contribute to building communities or platforms for coordination and support actions, by sharing knowledge or disseminating the exploitation of the project results. Where relevant, and without prejudice to the direct participation of the EIT KICs in the R&I activities under this cluster, proposals are encouraged to explore other forms and means of service provisions that are complementary to the activities of the EIT KICs. Collaboration with other innovation communities that can support the project implementation and impact is also encouraged. Any such cooperation should be based on adequate intellectual property management strategies.

¹¹ https://defence-industry-space.ec.europa.eu/eu-defence-industry/european-defence-fund-edf_en; While focusing on civilian applications, there may be synergies with actions conducted under the European Defence Fund or its precursor programmes (Preparatory Action on Defence Research and European Defence Industry Development Programme), e.g. in the field of energy storage and management as well as innovative fuels.

¹² <https://eit.europa.eu/our-communities/eit-innovation-communities>

Research has proven that **Social Sciences and Humanities (SSH)** and stakeholders' involvement including citizens and civil society in projects is pivotal to understanding the societal transformation, including shifts in governance and institutions, socio-political relations, socio-cultural factors and knowledge systems, required for just and sustainable transitions, as well as for effecting technological change. They are addressed in relevant topics across the six destinations of the Cluster 5 work programme. In addition, this work programme pilots the integration of a **Societal Readiness** approach through eight pilot topics and a Coordinating and Support Action (CSA) for monitoring and evaluation: HORIZON-CL5-2026-01-D2-09). This approach is based on Responsible Research and Innovation processes, with a strong focus on interdisciplinarity and knowledge integration. The integration of a Societal Readiness approach into R&I processes aims to address different societal needs and concerns, thereby increasing the potential for societal uptake.

Horizon Europe's approach to **international cooperation** consist of multilateralism and purposeful openness, combined with targeted actions with key third-country partners. Actions focus on aligning national, European and global efforts and investments in research and innovation areas that contribute to achieving key EU priorities. With regard to Cluster 5, the Commission pushes the acceleration of clean energy innovation through the Mission Innovation¹³ Initiative, which was launched at COP21 and currently comprises 24 countries and the European Commission. International cooperation of EU Member States and Associated Countries in the context of Mission Innovation in relevant topics in this work programme is encouraged. In addition, this work programme specifically addresses cooperation with African countries and cooperation on sustainable decarbonisation with major emitting countries around the world, in line with the spirit of the Paris Agreement which emphasises the need for global cooperation on technology development and transfer. Legal entities established in **China** are not eligible to participate in Innovation Actions in any capacity. Please refer to the Annex B of the General Annexes of this Work Programme for further details.

Applicants to calls in this Work Programme are encouraged to consider, where relevant, the services offered by the EU-funded European Research Infrastructures, notably those prioritised by the European Strategy Forum on Research Infrastructures (ESFRI)¹⁴, European Research Infrastructure Consortia (ERICs)¹⁵ and the European Open Science Cloud.

For topics in this cluster, consortia should consider their voluntary contribution in terms of data, indicators, and knowledge to relevant **Joint Research Centre (JRC)** platforms for capitalising the knowledge developed in their projects and become more policy relevant¹⁶:

¹³ <http://mission-innovation.net/our-work/innovation-challenges/>

¹⁴ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

¹⁵ The ERIC Landscape <https://www.eric-forum.eu/the-eric-landscape/>

¹⁶ Contributions with relevant data, indicators, or knowledge to these JRC-managed platforms do not require having JRC as a partner (associated partner/beneficiary requesting zero funding) in a project, unless it is explicitly mentioned in a specific topic of this Cluster.

- Life cycle assessment (LCA) and its relevant application to value chain assessment: European Platform on Life cycle assessment (EPLCA, <https://eplca.jrc.ec.europa.eu/>) and making reference to the Environmental footprint method when applying LCA (<https://ec.europa.eu/environment/eussd/smgp/index.htm>);
- Raw materials: Raw materials information system (RMIS, <https://rmis.jrc.ec.europa.eu/>);
- Soil and soil related issues: European Soil Observatory (ESO, <https://ec.europa.eu/jrc/en/eu-soil-observatory>);
- The natural capital accounting: INCA platform (<https://ec.europa.eu/eurostat/ecosystem-accounts>);
- Strategic Energy Technologies Information System: SETIS (https://setis.ec.europa.eu/index_en);
- The Transport Research and Innovation Monitoring and Information System: TRIMIS (<https://trimis.ec.europa.eu/>);
- The Energy and Industry Geography Lab: EIGL (<https://energy-industry-geolab.jrc.ec.europa.eu/>);
- The Innovation Centre for Industrial Transformation and Emissions (INCITE) (<https://innovation-centre-for-industrial-transformation.ec.europa.eu/>);
- Innovation in the Built Environment Research Group (iBUILT+) (https://joint-research-centre.ec.europa.eu/scientific-activities-z/iresist-home_en).

In addition, consortia should consider their voluntary contribution in terms of knowledge to relevant European Commission (Eurostat) statistical methodologies for capitalising the knowledge developed in their projects and become more policy relevant.

As regards the technology progress monitoring against the European Green Deal Objectives and the ambitions of the Clean Industrial Deal, all actions related to **hydrogen and fuel cells** funded under this work programme should report directly or indirectly on an annual basis in a secure online data collection platform managed by the Clean Hydrogen Joint Undertaking and the European Commission¹⁷. The reporting should consist of filling in the template questionnaire(s) relevant to the project content (and the technology development and TRL).

Instructions for Societal Readiness pilot projects:

Understanding and responding to the needs and concerns of societal actors continues to be a priority for European Commission funded research¹⁸. In Cluster 5 work programme 2025, a Societal Readiness approach is being proposed to deepen relationships between R&I and

¹⁷ https://www.clean-hydrogen.europa.eu/knowledge-management/annual-data-collection_en

¹⁸ <https://eur-lex.europa.eu/eli/reg/2021/695/oj>: See preamble point 51

society. A number of topics¹⁹ within the Work Programme 2025 have been selected as a vanguard for advancing Societal Readiness practices. To support this work, the Commission has setup a common methodology for applicants. The outcomes of this Cluster 5 pilot in Societal Readiness will be closely assessed and analysed through a dedicated Coordination and Support Action *HORIZON-CL5-2026-01-D2-09: Monitoring and Evaluation of the Societal Readiness Pilot*.

The Societal Readiness approach aims, when integrated into R&I processes, to improve the consideration of different societal needs and concerns and to respond to them, thereby increasing the potential for societal uptake. To achieve this, all types of project partners – including Science, Technology, Engineering and Mathematics (STEM) and Social Sciences and Humanities (SSH) profiles – should be engaged and interact effectively and in sustained ways. Inclusive participation early in proposal development and throughout the project will enable an interdisciplinary approach serving the objectives of the topic.

Definitions related to this Societal Readiness pilot follow those instructions.

Proposals submitted for topics that request to follow the Societal Readiness approach are expected to meet all the requirements listed below:

- Resources should be explicitly allocated to cover project activities associated with advancing Societal Readiness. Societal Readiness considerations should be integrated transversally in the proposal, either as a set of tasks across work packages associated with the R&I work, or in the form of a transversal work package.
- Consortia should bring sufficient expertise to support Societal Readiness activities via the inclusion of partners with appropriate expertise in SSH disciplines²⁰. These partners will facilitate the socio-technical interface and enable the design of project objectives, work packages and tasks compatible with Societal Readiness related activities.
- All partners in the consortia should be associated to the Societal Readiness tasks, where relevant, building on interdisciplinarity efforts to facilitate knowledge integration.
- Proposals should clearly address, under section *1.2 Methodology*, how the project will integrate Societal Readiness throughout the proposed work, by demonstrating how they take up the Societal Readiness guiding questions relevant to the subject (see section below).
- Proposals should allocate reasonable resources as part of a dedicated task to engage with the Coordinating and Support Action funded under *HORIZON-CL5-2026-01-D2-09* (e.g., participation in physical format to annual workshops, availability to reply to

¹⁹ HORIZON-CL5-2025-03-D1-06; HORIZON-CL5-2025-02-D3-04; HORIZON-CL5-2026-02-D4-02; HORIZON-CL5-2025-04-D5-01; HORIZON-CL5-2025-04-D6-01; HORIZON-CL5-2025-04-D6-02; HORIZON-CL5-2025-04-D6-11; HORIZON-CL5-2025-04-D6-12

²⁰ For example, profiles with experience in addressing social and cultural perspectives, methodological knowledge to e.g., conduct and analyse interviews, design, and lead co-creation, facilitate inclusion, or otherwise meaningfully support the consideration of and responsiveness to societal needs and concerns.

interviews, punctual exchanges with other Societal Readiness pilot projects, provide access to Societal Readiness related information). Travel costs to attend physical workshops will be covered by topic *HORIZON-CL5-2026-01-D2-09*.

- A public report called *First report on Societal Readiness* should be delivered within the first six months of the project. The report will build on the Societal Readiness approach for the project as set out in the proposal. It should primarily focus on the project's vision for and approach to Societal Readiness; reflections on initial impressions of societal needs and concerns as connected to the project; preliminary responses to the guiding questions; more detailed plans on how Societal Readiness will be addressed (e.g., time plans, roles and responsibilities, relation to tasks/work packages, anticipated results and how these will be integrated into the project activities).
- A public report called *Final report on Societal Readiness* should be delivered within the last three months of the project. The report will reflect upon the project's experience with implementing Societal Readiness approaches; any differences in experience between expected and actual outcomes; challenges and lessons learned from successful or unsuccessful efforts; ways in which different societal actors were identified and engaged in interdisciplinary or intersectoral activities, as well as these actors needs and concerns considered, identified, and responded to; and recommendations for future projects on similar thematic areas. The *Final report on Societal Readiness* is expected to directly address the questions identified in the *First report on Societal Readiness*.

The standard template of the Application Form remains unchanged, and its page limit is increase by two additional pages. The proposed work is expected to reflect an integration of Societal Readiness consideration into the overall project design.

Responsible Research and Innovation (RRI) guiding questions:

The following guiding questions²¹ are offered to support project teams in considering and integrating a Societal Readiness approach in proposals and, subsequently, in projects' implementation. Consideration of questions in the proposal stage helps to ensure a consortium is well positioned to advance Societal Readiness during project implementation. This consideration includes reflecting upon the four dimensions of Responsible Research and Innovation (RRI) namely reflection, inclusion, anticipation, and responsiveness, as indicated next to each question (see complete definition of RRI in the Horizon Europe Programme

²¹ The questions that follow are condensed from and based on the Societal Readiness Thinking Tool elaborated within the EU-funded project NewHoRRizon, and subsequently detailed in Bernstein, M. J., Nielsen, M. W., Alnor, E., Brasil, A., Birkving, A. L., Chan, T. T., Griessler, E., de Jong, S., van de Klippe, W., Meijer, I., Yaghmaei, E., Nicolaisen, P. B., Nieminen, M., Novitzky, P., & Mejlgaard, N. (2022). The Societal Readiness Thinking Tool: A Practical Resource for Maturing the Societal Readiness of Research Projects. *Science and Engineering Ethics*, 28(1), 6. <https://doi.org/10.1007/s11948-021-00360-3>

Guide²²). The following guiding questions are offered as a basis for reflection and may be complemented by other considerations specific to the topic's subject.

- **R&I Goals**: How do the objectives and expected results of the proposal reflect and integrate the diverse societal needs or goals of different social groups potentially involved or affected? (*RRI dimensions: reflection, inclusion, responsiveness*)
- **Societal actors**: How does the proposal identify and include key stakeholder groups in activities? If appropriate, how does the proposal identify and include groups often marginalised or excluded from previous or similar initiatives? (*RRI dimensions: reflection, inclusion*)
- **Benefits and burdens**: Who stands to benefit from envisioned activities of the project and their expected impacts? Who stands to bear the burdens (social, environmental, economic or other)? How are the groups bearing these burdens included in and given a voice in the project? How are possible conflicts of interest and uncertainties managed? (*RRI dimensions: anticipation, reflection, responsiveness*)
- **Objections and concerns**: How does the project, through its activities, plan to identify and respond to the objections or concerns of different groups of societal actors? How could potential undesired consequences of activities, results, outcomes, or impacts be anticipated? How could such consequences be avoided? (*RRI dimensions: reflection, inclusion, anticipation, responsiveness*)

Evaluation of the Societal Readiness aspect:

Societal Readiness will be assessed in the same way as other aspects that belong to 'Methodology' within the Excellence section of the Application form. During the evaluation, all comments under the "Excellence" criterion will be consolidated so that a mark out of five points is issued, which reflects the overall score of the proposal for the "Excellence" evaluation criterion.

Definitions related to Societal Readiness considerations in Horizon Europe proposals and projects

1. Societal Readiness

Societal Readiness²³ is an indicator of R&I results, expressing they have accounted for different societal needs and concerns, thereby increasing its potential for societal uptake and transition towards societal adaptation.

R&I results with well-developed Societal Readiness will:

- better align innovation trajectories with societally desired and needed goals;

²² https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/programme-guide_horizon_en.pdf

²³ Definition informed by NewHoRRizon project's Societal Readiness Thinking Tool (for Applicants) and Geels "Socio-technical transitions to sustainability" <https://newhorizon.eu/thinking-tool/>

- build inclusive and multi-stakeholder coalitions for change;
- understand diverse apprehensions and interests; and
- adapt to overcome undesired aspects of the proposed innovation.

Working toward Societal Readiness means to better understand that R&I should be:

- driven by the needs, values, and expectations of diverse social groups (e.g., gender, age, socio-economic situation, geography, vulnerable persons²⁴, etc.);
- inclusive and transparent in processes and outcomes;
- active in identifying, mitigating, and avoiding negative/providing positive social, environmental, and economic externalities.

Societal Readiness will contribute to more impactful R&I by widening the focus of researchers and innovators from the very beginning or in the course of an innovation effort to address broader, long-term societal concerns. It will therefore support achieving European Commission policy objectives and help achieving the UN's Sustainable Development Goals²⁵.

2. Responsible Research & Innovation (RRI)

To deliver R&I results with well-developed Societal Readiness, the four dimensions of Responsible Research & Innovation offer a helpful starting point:

Responsible Research and Innovation (RRI), as a concept introduced in R&I policy and previous European Commission framework programmes, primarily focuses on *processes* of R&I. In the context of care for the future, RRI offers a set of procedural interventions in policy makers' and researchers' activities by supporting co-creation with societal actors in different ways. Specifically, RRI asks for four dimensions to be practiced in research^{26,27}:

- **Reflection on the goals, values, and activities of R&I:** Reflection is about reasoning on the underlying motivations, assumptions, and commitments driving the R&I work.
- **Inclusion of broader, diverse groups of stakeholders and participants:** Inclusion is closely related to public engagement and stakeholder involvement. It is about involving relevant societal actors in R&I activities from an early stage, and ensuring continuous, open dialogue about desirable outcomes throughout the project.

²⁴ https://home-affairs.ec.europa.eu/networks/european-migration-network-emn/emn-asylum-and-migration-glossary/glossary/vulnerable-person_en

²⁵ In particular SDG5 (Gender equality); SDG10 (Reduced inequalities); SDG16 (Peace, justice and strong institutions)

²⁶ Owen, R., Macnaghten, P., & Stilgoe, J. (2012). Responsible Research and Innovation: From science in society to science for society, with society. *Science and Public Policy*, 39(6), 751–760. <https://doi.org/10.1093/scipol/scs093>

²⁷ Burget, M., Bardone E., Pedaste M., (2017). Definitions and Conceptual Dimensions of Responsible Research and Innovation: A Literature Review. *Science and Engineering Ethics*, 23, 1-19 <https://doi.org/10.1007/s11948-016-9782-1>

- **Anticipation** of possible consequences, knock-on effects, unintended consequences of R&I: Anticipation is about carefully examining both the intended and possible unintended consequences arising from R&I activities, including environmental, health-related, economic, and social impacts.
- **Responsiveness** to recommendations and changes to improve R&I processes in the service of improved public impact: Responsiveness is about aligning R&I activities with the new perspectives, insights, awareness, and values that emerge in the process of being more anticipatory, reflexive, and inclusive in R&I processes. It presupposes a will to learn from practical experience and a capacity to translate this learning into responsible R&I solutions.

These four dimensions inform the guiding questions provided in support of developing proposals and implementing projects aiming to reach a well-developed Societal Readiness.

3. Integration of Social Sciences and Humanities (SSH)²⁸

To achieve a well-developed Societal Readiness of R&I results, social and cultural perspectives need to be covered. This may be done by researchers from Social Science and Humanities (SSH) disciplines²⁹, as those disciplines have developed a wide range of theories and methods to better understand human behaviour and social organisation.

Social Sciences and Humanities (SSH) study aspects of human society:³⁰

- SSH encompass a wide range of disciplines such as sociology and economics, psychology and political science, history and cultural sciences, law, and ethics. Contributions from these research fields are needed to generate new knowledge, support evidence-based policymaking, develop key competences and produce interdisciplinary solutions to both societal and technological issues³¹.
- Social science is the study of people: as individuals, communities, and societies; their behaviours and interactions with each other and with their built, technological, and natural environments. Social science seeks to understand the evolving human systems across our increasingly complex world and how our planet can be more sustainably managed. [...] Social science includes many different areas of study, such as how people organise and govern themselves, and broker power and international relations; how wealth is generated, economies develop, and economic futures are modelled; how

²⁸ SSH disciplines are relevant to R&I in Cluster 5, since they help to investigate the societal aspects of climate, energy and mobility challenges and opportunities. They have been integrated and mainstreamed in Horizon Europe Cluster 5 topics since the start of the Horizon 2020 Framework Programme https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/programme-guide_horizon_en.pdf

²⁹ See above resource, pages 21 – 22, for a list adapted from UNESCO International Standard Classification of Education (ISCED 2011).

(eds.) *Advancing Energy Policy: Lessons on the Integration of Social Sciences and Humanities*. Cham: Palgrave Macmillan. 1-12. <https://doi.org/10.1007/978-3-319-99097-2>

³¹ https://research-and-innovation.ec.europa.eu/research-area/social-sciences-and-humanities/ssh-integration_en

business works and what a sustainable future means; the ways in which populations are changing, and issues of unemployment, deprivation and inequality; and how these social, cultural and economic dynamics vary in different places, with different outcomes³².

- Humanities (e.g., disciplines like History, Arts, Philosophy, Theology) are concerned with fundamental, and sometimes unspoken, principles that underpin human cultures, how people reason, how societies are ordered and governed, and how people and societies grapple with issues like responsibility, representation and participation, (in)equality, equity, ethics, faith, and so on, sometimes with attention to constructions of meanings of ‘good’, ‘bad’, ‘desirable’, ‘justice’ etc. (even if indirectly).

Integrating theories, methods, and principles across the full range of SSH is highly relevant for effective interdisciplinary R&I pursuing Societal Readiness.

Calls for proposals

Call - Cluster 5 Call 01-2025 (2-stage) (WP 2025)

HORIZON-CL5-2025-01-Two-Stage

Overview of this call³³

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ³⁴	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025				
Deadline(s): 02 Sep 2025 (First Stage), 31 Mar 2026 (Second Stage)				
Cross-sectoral solutions for the climate transition				
HORIZON-CL5-2025-01-Two-Stage-D2-02: Cost-effective next-generation batteries for long-duration stationary storage (Batt4EU Partnership)	RIA	15.00	Around 5.00	3
Sustainable, secure and competitive energy supply				
HORIZON-CL5-2025-01-Two-Stage-D3-23: Critical elements for energy security of grid and storage technologies	RIA	9.00	Around 3.00	3
Overall indicative budget		24.00		
General conditions relating to this call				
Admissibility conditions	The conditions are described in General			

³³ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

³⁴ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

	Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Cluster 5 Call 02-2025 (WP 2025)

HORIZON-CL5-2025-02

Overview of this call³⁵

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ³⁶	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025				
Deadline(s): 02 Sep 2025				
Cross-sectoral solutions for the climate transition				

³⁵ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

³⁶ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

HORIZON-CL5-2025-02-D2-03: Sustainable processing and refining of raw materials to produce battery grade Li-ion battery materials (Batt4EU Partnership)	IA	20.00	Around 10.00	2
HORIZON-CL5-2025-02-D2-06: Fostering the European battery ecosystem by providing accurate and up-to-date information and stimulating excellence in the European battery R&I community (Batt4EU Partnership)	CSA	3.00	Around 3.00	1
HORIZON-CL5-2025-02-D2-08: Coordinated call with India on waste to renewable hydrogen	RIA	10.00	Around 5.00	2
HORIZON-CL5-2025-02-D2-10: Clean Energy Transition Co-Funded Partnership	COFUND	69.00	Around 69.00	1
HORIZON-CL5-2025-02-D2-11: Support to the SET Plan community	CSA	7.50	Around 0.50	15
HORIZON-CL5-2025-02-D2-12: NZIA regulatory sandbox exchange forum support	CSA	0.50	Around 0.50	1
Sustainable, secure and competitive energy supply				
HORIZON-CL5-2025-02-D3-03: Novel approaches to geothermal resources development	IA	20.00	Around 10.00	2
HORIZON-CL5-2025-02-D3-04: Development of hydropower technologies and water management schemes allowing for win-win situation of flexible hydropower and biodiversity improvement – Societal Readiness Pilot	RIA	12.00	Around 4.00	3
HORIZON-CL5-2025-02-D3-06: Innovative manufacturing of wind energy technologies	IA	28.00	Around 7.00	4
HORIZON-CL5-2025-02-D3-09: Optimised/Alternative Silicon Growth Technologies (from either liquid or gaseous phase) for PV Applications (EUPI-PV Partnership)	IA	18.00	Around 9.00	2

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

HORIZON-CL5-2025-02-D3-11: Novel inverter technologies and flexibility in PV systems (EUPI-PV Partnership)	IA	18.00	Around 6.00	3
HORIZON-CL5-2025-02-D3-15: Building a Long-Term Africa Union (AU) and European Union (EU) Research and Innovation joint collaboration on Sustainable Renewable Energies	CSA	4.00	Around 4.00	1
HORIZON-CL5-2025-02-D3-16: Support to the BRIDGE initiative	CSA	1.00	Around 1.00	1
HORIZON-CL5-2025-02-D3-17: Control and operation tools for a RES-based energy system	IA	20.00	Around 10.00	2
HORIZON-CL5-2025-02-D3-21: Cross-regional network and market model for optimisation of long duration storage	IA	14.00	Around 7.00	2
HORIZON-CL5-2025-02-D3-25: Effects of CO ₂ -stream impurities on CO ₂ transport and storage	RIA	10.00	Around 5.00	2
HORIZON-CL5-2025-02-D3-26: European investment atlas of potential CO ₂ storage sites	RIA	5.00	Around 5.00	1
HORIZON-CL5-2025-02-D3-27: Using captured CO ₂ as a resource to replace fossil hydrocarbons in industrial production	IA	14.00	Around 7.00	2
Overall indicative budget		274.00		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex

	D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Cluster 5 Call 03-2025 (2-stage) (WP 2025)

HORIZON-CL5-2025-03-Two-Stage

Overview of this call³⁷

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ³⁸	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025				
Deadline(s): 04 Sep 2025 (First Stage), 14 Apr 2026 (Second Stage)				
Clean and competitive solutions for all transport modes				
HORIZON-CL5-2025-03-Two-Stage-D5-09: Next generation aircraft autonomy technologies for cockpit / pilot assistance applications	RIA	7.00	Around 3.50	2
Overall indicative budget		7.00		

³⁷ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

³⁸ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Cluster 5 Call 04-2025 (WP 2025)

HORIZON-CL5-2025-04

Overview of this call³⁹

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ⁴⁰	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025				

³⁹ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

⁴⁰ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

Deadline(s): 04 Sep 2025				
Clean and competitive solutions for all transport modes				
HORIZON-CL5-2025-04-D5-01: Efficient wireless stationary bidirectional charging solutions for road Light Duty Vehicles (2ZERO Partnership) – Societal Readiness Pilot	IA	20.00	Around 10.00	2
HORIZON-CL5-2025-04-D5-02: Cybersecure and resilient road e-mobility ecosystem (2ZERO Partnership)	IA	10.00	Around 10.00	1
HORIZON-CL5-2025-04-D5-03: Safe post-crash management of road Light Duty Battery Electric Vehicles (BEVs) (2ZERO Partnership)	IA	5.00	Around 5.00	1
HORIZON-CL5-2025-04-D5-04: Extended lifetime of road Battery Electric Vehicles (BEV) (2ZERO Partnership)	RIA	7.00	Around 7.00	1
HORIZON-CL5-2025-04-D5-05: Road Battery Electric Vehicles (BEV) optimised user-centric solutions for energy efficiency design and consistent range throughout weather conditions (2ZERO Partnership)	IA	12.00	Around 6.00	2
HORIZON-CL5-2025-04-D5-06: Strategies, tools and concepts for optimised road Battery Electric Vehicles (BEV) long-haul logistics use cases (2ZERO Partnership)	IA	5.00	Around 5.00	1
HORIZON-CL5-2025-04-D5-07: Accelerating the circular transformation of the EU automotive industry	CSA	2.00	Around 2.00	1
HORIZON-CL5-2025-04-D5-08: Next generation testing capabilities in strategic EU wind tunnels	RIA	15.00	Around 15.00	1
HORIZON-CL5-2025-04-D5-10: Innovative solutions for energy conversion and safety of low and zero-carbon fuels in waterborne transport (ZEWT Partnership)	IA	22.50	Around 11.25	2
HORIZON-CL5-2025-04-D5-11: Demonstration of battery energy storage	IA	15.00	Around	2

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

systems in existing and new vessels via novel energy storage and ship design concepts (ZEWT Partnership)			7.50	
HORIZON-CL5-2025-04-D5-12: Real-time, adaptative and innovative energy management solutions to optimise fuel consumption and lower emissions pollutants in waterborne transport (ZEWT Partnership)	RIA	4.00	Around 4.00	1
HORIZON-CL5-2025-04-D5-13: Novel holistic intelligent tools for variable retrofit and decarbonised scenarios (ZEWT Partnership)	IA	4.00	Around 4.00	1
HORIZON-CL5-2025-04-D5-14: Flexible and mobile solutions for Onshore Power Supply (ZEWT Partnership)	IA	5.00	Around 5.00	1
HORIZON-CL5-2025-04-D5-15: Optimal integrated onboard renewable energy solutions, by considering Wind-Assisted Propulsion Systems (ZEWT Partnership)	IA	7.50	Around 7.50	1
HORIZON-CL5-2025-04-D5-16: Support of the new EU renewable and low carbon fuel ecosystem for waterborne transport	CSA	2.00	Around 2.00	1
HORIZON-CL5-2025-04-D5-18: Support to the organisation and dissemination of the Transport Research Arena (TRA) conference	CSA	1.60	Around 1.60	1
HORIZON-CL5-2025-04-D5-19: Knowledge sharing and dissemination to support road transport R&I in EU and around the world increasing global EU competitiveness	CSA	2.00	Around 2.00	1
Safe, Resilient Transport and Smart Mobility services for passengers and goods				
HORIZON-CL5-2025-04-D6-01: Advancing remote operations to enable the sustainable and smart mobility of people and goods based on operational and societal needs (CCAM Partnership) – Societal Readiness Pilot	RIA	12.00	Around 6.00	2
HORIZON-CL5-2025-04-D6-02: Preparing for large-scale CCAM demonstrations (CCAM Partnership) – Societal Readiness Pilot	CSA	4.50	Around 4.50	1

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

HORIZON-CL5-2025-04-D6-11: Innovative air mobility and services for sustainable and smart urban, peri-urban transport – Societal Readiness pilot	RIA	10.00	Around 5.00	2
HORIZON-CL5-2025-04-D6-12: Safe Human-Technology Interaction (HTI) in the vehicle systems of the coming decade – Societal Readiness Pilot	IA	8.00	Around 4.00	2
Overall indicative budget		174.10		

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Cluster 5 Call 05-2025 (2-stage) (WP 2025)

HORIZON-CL5-2025-05-Two-Stage

Overview of this call⁴¹

Proposals are invited against the following Destinations and topic(s):

⁴¹ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ⁴²	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025				
Deadline(s): 04 Sep 2025 (First Stage), 31 Mar 2026 (Second Stage)				
Climate sciences and responses for the transformation towards climate neutrality				
HORIZON-CL5-2025-05-Two-Stage-D1-05: Adaptation to Climate Change: Effectiveness and Limits	RIA	18.00	Around 6.00	3
Overall indicative budget		18.00		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

⁴² Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Call - Cluster 5 Call 06-2025 (WP 2025)

HORIZON-CL5-2025-06

Overview of this call⁴³

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ⁴⁴	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025 Deadline(s): 24 Sep 2025				
Climate sciences and responses for the transformation towards climate neutrality				
HORIZON-CL5-2025-06-D1-01: Climate simulations data and knowledge for optimal support of IPCC Assessments and International Policy	RIA	30.00	Around 30.00	1
HORIZON-CL5-2025-06-D1-02: Advancing Earth System Models to increase understanding of Earth system change	RIA	15.00	Around 7.50	2
HORIZON-CL5-2025-06-D1-03: Modelling of mitigation pathways for F-gases	RIA	7.50	2.50 to 3.00	3
HORIZON-CL5-2025-06-D1-04: The attribution to climate change, and improved forecasting of extreme and slow-onset climate- and weather-related events and their impacts	RIA	12.00	Around 6.00	2

⁴³ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

⁴⁴ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

HORIZON-CL5-2025-06-D1-06: Fostering equity and justice in climate policies – Societal Readiness Pilot	RIA	15.00	4.00 to 5.00	3
HORIZON-CL5-2025-06-D1-07: Implementing the climate action pillar of the EU-African Union Partnership on Climate Change and Sustainable Energy	CSA	4.00	3.00 to 4.00	1
Cross-sectoral solutions for the climate transition				
HORIZON-CL5-2025-06-D2-07: Driving Urban Transitions to a sustainable future (DUT) Co-Funded Partnership	COFUND	56.00	Around 56.00	1
Overall indicative budget		139.50		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Cluster 5 Call 01-2026 (WP 2025)

HORIZON-CL5-2026-01

Overview of this call⁴⁵

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ⁴⁶	Indicative number of projects expected to be funded
		2025		
Opening: 16 Sep 2025 Deadline(s): 20 Jan 2026				
Cross-sectoral solutions for the climate transition				
HORIZON-CL5-2026-01-D2-01: Development of sustainable and design-to-cost batteries with (energy-)efficient manufacturing processes and based on advanced and safer materials (Batt4EU Partnership)	IA	24.00	Around 8.00	3
HORIZON-CL5-2026-01-D2-04: Integrating advanced materials, cell design and manufacturing development for high-performance batteries aimed at mobility (Batt4EU Partnership)	RIA	30.00	Around 10.00	3
HORIZON-CL5-2026-01-D2-05: Accelerated multi-physical and virtual testing for battery aging, reliability, and safety evaluation (Batt4EU Partnership)	IA	15.00	Around 7.50	2
HORIZON-CL5-2026-01-D2-09: Monitoring and Evaluation of the Societal Readiness Pilot	CSA	1.50	Around 1.50	1
Clean and competitive solutions for all transport modes				
HORIZON-CL5-2026-01-D5-17: Real time	IA	16.00	Around	2

⁴⁵ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

⁴⁶ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

monitoring of regulated and non-regulated emissions from all types of vessels and other port activities in order to enforce emission limits in waterfront cities			8.00	
Safe, Resilient Transport and Smart Mobility services for passengers and goods				
HORIZON-CL5-2026-01-D6-03: Next-generation environment perception for real world CCAM operations: Error-free and secure technologies to improve energy-efficiency, cost-effectiveness, and circularity (CCAM Partnership)	RIA	8.00	Around 4.00	2
HORIZON-CL5-2026-01-D6-04: Integration of human driving behaviour in the validation of CCAM systems (CCAM Partnership)	RIA	5.00	Around 5.00	1
HORIZON-CL5-2026-01-D6-05: Approaches, verification and training for Edge-AI building blocks for CCAM Systems (CCAM Partnership)	RIA	4.00	Around 4.00	1
HORIZON-CL5-2026-01-D6-06: Federated CCAM data exchange platform (CCAM Partnership)	IA	4.00	Around 4.00	1
HORIZON-CL5-2026-01-D6-07: Innovative construction and maintenance, with the use of new materials and techniques, for resilient and sustainable transport infrastructure	IA	22.00	Around 11.00	2
HORIZON-CL5-2026-01-D6-08: Accelerating freight transport and logistics digital innovation	IA	15.00	7.00 to 8.00	2
HORIZON-CL5-2026-01-D6-09: Reliable data and practices to measure and calculate transport emissions in multimodal transport chains	CSA	3.50	Around 3.50	1
HORIZON-CL5-2026-01-D6-10: Integrating inland waterway transport in smart shipping and multimodal logistics chains	IA	16.00	Around 8.00	2
HORIZON-CL5-2026-01-D6-13: Safety of Cyclists, Pedestrians and Users of	RIA	10.00	Around 5.00	2

Horizon Europe - Work Programme 2025
Climate, Energy and Mobility

Micromobility Devices				
HORIZON-CL5-2026-01-D6-14: Predicting and avoiding road crashes based on Artificial Intelligence (AI) and big data	RIA	10.00	Around 5.00	2

Destinations

Climate sciences and responses for the transformation towards climate neutrality

This Destination contributes directly to the Strategic Plan's **Key Strategic Orientations** 'Green transition', 'Digital transition' and 'A more resilient, competitive, inclusive and democratic Europe'.

In line with the Strategic Plan, the overall **expected impact** of this Destination is to contribute to the "*Advancing science for a transition to a climate-neutral and resilient society*".

Advancing climate science and the knowledge base necessary to underpin actionable solutions is essential for catalysing the global transition to a climate-neutral and climate-resilient society. Evidence on research gaps of high policy relevance can be found in the European Climate Risk Assessment (EUCRA)⁴⁹, and in the report "The Next frontier for Climate Change Science"⁵⁰.

Research should contribute to closing major knowledge gaps on the changing climate together with their associated impacts and risks, on both society and nature, and to developing tools to support decision-makers in designing and implementing effective mitigation and adaptation actions at various time and spatial scales while properly accounting for synergies and trade-offs with other policy objectives, such as biodiversity, industrial competitiveness, just transition and leaving no one behind. Notably, state-of-art scientific evidence will be increasingly vital to guide policy decisions aimed at safeguarding long-term societal welfare and EU's economic resilience as climate change impacts increase. Tailored scientific approaches that take into account disparities between regions, countries, communities and diverse groups within society, are needed, to understand how they are affected by global warming and what array of response options is available to them.

The first objective is to **support and accelerate climate action (both mitigation and adaptation) globally** by:

- Improved knowledge of the Earth system, its recent evolution and future responses under different global emissions pathways and socio-economic scenarios;
- Increased understanding of the interrelated impacts between climate change, human and natural systems, including from compound, cascading and tail risks, improving the attribution to anthropogenic factors, and leveraging the role of climate services for effective adaptation and response strategies;
- Well-designed and evaluated solutions and pathways for climate-resilient, low-greenhouse-__gas-emission development enabling just societal transformation while

⁴⁹ European Climate Risk Assessment — European Environment Agency (europa.eu)

⁵⁰ [The Next Frontier for Climate Change Science: Insights from authors of the IPCC 6th Assessment Report on knowledge gaps and priorities for research](#)

promoting citizen and stakeholder involvement, climate literacy and integration of natural and social sciences;

- Increased synergies with the EU Mission on Adaptation to Climate Change, by generating actionable knowledge in support of transformative adaptation.

The second objective contributes substantially to key international assessments by closing key knowledge gaps related to climate change. Such assessments include the ones by the Intergovernmental Panel on Climate Change (IPCC), the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES), the Scientific Assessment of Ozone Depletion and initiatives such as the Coupled Model Intercomparison Project (CMIP) and the Coordinated Regional Climate Downscaling Experiment (CORDEX) under the World Climate Research Programme (WCRP).

The third objective is a **strengthened European Research Area on climate change** by boosting scientific excellence and capacity in an inclusive manner across the participating countries.

The fourth objective is the **maximisation of synergies with other policy priorities** such as biodiversity and ecosystem preservation and restoration, just transition, just resilience, pollution reduction, health and well-being, resource conservation, circularity, and the Sustainable Development Goals by exploring co-benefits, trade-offs and potential unintended consequences of climate strategies and policy interventions.

Strong links exist with activities funded under Cluster 6 on climate-ocean-polar-cryosphere nexus, and in Cluster 3 on disaster risk reduction, and with the Mission on Adaptation to Climate Change. The results of research funded under this Destination, in particular those informing the design of effective mitigation and adaptation pathways, are also highly relevant for other EU Missions on Climate-Neutral and Smart Cities, on Soil, and on Ocean and Water.

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-06-D1-01: Climate simulations data and knowledge for optimal support of IPCC Assessments and International Policy

Call: Cluster 5 Call 06-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 30.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 30.00 million.

<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. This support can be provided in the form of grants to researchers from the Global South countries⁵¹. The maximum amount to be granted to an individual third party is EUR 60.000.</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).⁵².</p> <p>Beneficiaries will be subject to the following additional obligations regarding open science practices: Open access to any new modules, models or tools developed from scratch or substantially improved with the use of EU funding under the action must be ensured through documentation, availability of model code and input data developed under the action.</p>

Expected Outcome: Project results are expected to contribute to **all of the** following expected outcomes:

- The institutions in charge of generating the relevant information for decision makers can access and utilise in a timely manner scientifically robust climate projections corresponding to a range of future scenarios and their corresponding greenhouse gas emission pathways, including scenarios matching the Paris Agreement targets;
- Decision makers and society can better understand the impacts, risks and implications of pathways involving different magnitudes and durations of temperature overshoot;
- The European research community provides a coordinated contribution to the IPCC and other major scientific initiatives (e.g., IPBES, WCRP, World Adaptation Science Programme (WASP), the Global Carbon Budget), in support of informing the UNFCCC process and other global, European and national climate efforts;
- The activities of international programmes and communities like the Integrated Assessment Modelling Consortium (IAMC), the CMIP, the CORDEX and Inter-Sectoral

⁵¹ In absence of a single formal definition of the Global South, the list of low- to middle-income countries automatically eligible for Horizon Europe funding should be used for this purpose – see the [Horizon Europe List of Participating Countries](#) on EU Funding and Tenders Portal for up-to-date information.

⁵² This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Impact Model Intercomparison Project (ISIMIP) are better coordinated between each other, with outcomes more consistent and responding to policy needs better and in a timelier manner;

- The European contribution to these programmes is supported by an improved and interconnected overarching infrastructure.

Scope: Given the rapidly developing climate crisis, there is an increasing need for accurate, reliable, and actionable information at global to local spatial scales, and near to long timescales. This information supports a range of requirements, including policy related ones. In particular, simulations and knowledge delivered that feed into the IPCC, including the Seventh Assessment Report (AR7) and later ones, should be internally coherent and well-coordinated. The modelling, setting, ensemble, and simulation design should be suited to meet societal and policy demands to support timelier European and international climate policy developments. This also implies progressing towards an operational framework to provide the best possible information for societal decision-making that brings together available approaches. The resulting simulations and analysis should sample the full spectrum of climate risks. In particular, as global mitigation efforts are presently insufficient and temperatures continue to rise, the impacts of global warming overshoot on the Earth system and the feasibility, possible pace, and implications of bringing global temperatures down in a sustainable way after an overshoot need to be explored. This analysis should also consider the risks and consequences of potential abrupt and irreversible impacts (e.g., sea level rise, changes in ocean circulation, ocean-acidification, water cycle alterations, soil alterations, aridification, species extinctions, loss of sea ice, glaciers, and ice sheets, and crossing climate and ecological tipping points).

Therefore, actions should address all of the following aspects:

- Generate future global climate projections with state-of-the-art Earth System Models (ESM) which are built on the latest improvements in modelling technologies and in process understanding with a more complete representation of climate-carbon cycle feedback;
- Design climate simulations considering the socio-economic scenarios from the most up to date set of Integrated Assessment Models (IAM). Greenhouse gas emission pathways should be provided based on various societal mitigation and adaptation choices and land-use scenarios. Climate feedback should be also considered. The resulting assessment should link allowable carbon emissions with key climate targets, spanning policy relevant temporal and spatial scales;
- Deliver scenarios and simulations with different levels and durations of warming overshoot (to be selected for their policy relevance), assessing the corresponding risks accounting for fast and slow onset processes and the feasibility and limits of carbon dioxide removal methodologies;

- Update and coordinate the assumptions as well as the observational and simulated climate data sets underpinning the models and experiments of the various climate science communities (including Earth system, sectoral impacts, adaptation, and mitigation modellers) across international programmes, such as IAMC, CMIP, CORDEX and ISIMIP, optimising the interaction between them as much as possible within the same IPCC cycle;
- Design a framework to coordinate and incorporate the suite of global and regional climate projections, encompassing the range of available model resolutions and model realism, using consistent concentration and emission-driven ESMs, enhancing collaboration between European Earth system modelling and service provision, such as Copernicus and Destination Earth. This system should include cross-analysis and evaluation of the full suite of models, including approaches for sampling projection and scenario uncertainty (e.g., emulators). The framework should also make the modelling results more accessible and understandable to the practitioners and decision makers;
- Improve the existing infrastructure landscape (software, tools, data, adaptation of models to High-Performance Computing (HPC)), to support the delivery of global and regional climate projections and associated analysis (for which a part of the budget may be allocated, but not more than 30% of the total eligible costs). This should be complementary to efforts funded through the European Research Infrastructures, Euro-HPC Joint Undertaking, Digital Europe Programme and other sources. ESM simulations are intended as the core of the topic with links to other modelling activities. To maximise the policy relevance of the climate simulations delivered, the operationalisation framework and the scenarios should be developed in co-creation with policy makers (e.g., through advisory boards or other participatory procedures).

When dealing with models, actions should promote the highest standards of transparency and openness, as much as possible going well beyond documentation and extending to aspects such as assumptions, protocols, code, and data that is managed in compliance with the FAIR principles⁵³.

They should envisage clustering activities with any other relevant projects (in⁵⁴ and outside of Horizon Europe) for cross-projects cooperation and exchange of results. Proposals should earmark the necessary resources for these purposes. As this endeavour should be supported by the research communities that continuously improve the modelling systems and related infrastructure, strong interaction and coordination is expected with the projects funded under previous calls of this Destination and other relevant projects on ESM, with the topic HORIZON-CL5-2025-03-D1-02 “Advancing Earth System Models to increase understanding of Earth system change”, and with the topic HORIZON-INFRA-2025-01-SERV-02 (area on Research infrastructure services to improve the understanding and prediction of future climate changes and its impacts).

⁵³ FAIR (Findable, Accessible, Interoperable, Reusable).

⁵⁴ For example, relevant projects funded under the Horizon Europe calls Climate sciences and responses.

International cooperation is encouraged, in particular with the Global South⁵⁵, to promote capacity and consensus building, for example, by training early career researchers from Global South countries (see specific conditions for financial support to third parties). Maximum total amount dedicated to these activities should not exceed EUR 1.000.000.

HORIZON-CL5-2025-06-D1-02: Advancing Earth System Models to increase understanding of Earth system change

Call: Cluster 5 Call 06-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ⁵⁶ Beneficiaries will be subject to the following additional obligations regarding open science practices: Open access to any new modules, models or tools developed from scratch or substantially improved with the use of EU funding under the action must be ensured through documentation, availability of model code and input data developed

⁵⁵ In absence of a single formal definition of the Global South, the list of low - to middle- income countries automatically eligible for Horizon Europe funding should be used for this purpose – see the [Horizon Europe List of Participating Countries](#) on EU Funding and Tenders Portal for up-to-date information

⁵⁶ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

	under the action.
--	-------------------

Expected Outcome: Project results are expected to contribute to **all of the** following expected outcomes:

- Advanced understanding and capability to predict the future evolution of the Earth system, at global to local spatial scales and from weather to climate timescales, including the socio-economic and environmental impacts of these changes;
- Advanced understanding and capability to predict regional climate variability, including extreme events and regional water cycle, in particular, regional precipitation;
- Strengthened collaboration and cross-fertilisation across available approaches to Earth system and climate modelling science, enabling a joint contribution to the next generation of Earth system models (ESMs);
- Long-term science, modelling and evidence base to support European and international policies are advanced.

Scope: ESMs are the primary tools used for assessing future changes in the climate system. They have increased in their resolution and realism over the past two decades. Despite these advances, there remain several poorly understood and simulated processes, interactions and feedbacks that limit their ability to deliver accurate predictions and projections of global and regional Earth system change, and to aid understanding and quantifying future climate variability. Specially challenging is how variability interacts with extreme events (including compound ones), in particular related to precipitation and water availability (both excess and scarcity).

Actions should address all of the following aspects:

1. Improving the simulation of the coupled Earth system and its sensitivity to natural and anthropogenic forcings, with a better representation of key Earth system and climate feedbacks and processes, including, among others, one or more of the following advances⁵⁷:
 - o The interplay between global change, regional climate variability, and changes in climate and weather extremes;
 - o Terrestrial-ocean-climate interactions;
 - o Coupled climate-carbon-water cycle feedbacks;
 - o Coupled climate-ocean-ice interactions;
 - o Aerosol-cloud-climate forcing and feedback;

⁵⁷ The evaluation will be based on the standard Horizon Europe evaluation criteria, regardless of the number of the aspects covered.

- o Climate-vegetation-fire interactions;
 - o Climate-air quality interactions;
 - o Interactions between land use scenarios (in terms of changes in the land use and surface, such as those related to carbon dioxide removal, with consequences on the water and carbon cycles, albedo and aerosols) and regional climate.
2. Increased collaboration across different model development approaches encompassing the range of available model resolutions and model realism.
 3. Bring together and further improve existing and new observational and reanalysis datasets, models, emulators, and analysis tools to facilitate rapid and in-depth bias identification, model calibration and validation, and evaluation and understanding of model simulations.

Actions should exploit the opportunities offered by state of art digital technologies such as machine learning, big data analytics or Artificial Intelligence (AI). They should promote the highest standards of transparency and openness, extending to aspects such as assumptions, protocols, code, and data that is managed in compliance with the FAIR principles⁵⁸. Beneficiaries of EU funding are required to publish results data in open access repositories and/or as annexes to publications, and provide full openness of any new modules, models or tools developed from scratch or substantially improved. Projects should take into account, during their lifetime, relevant activities and initiatives for ensuring and improving the quality of scientific software and code.

All projects funded under this topic are strongly encouraged to connect, coordinate, and participate in networking, intercomparison and joint activities to exploit synergies and maximise complementarities between them. They should envisage clustering activities with any other relevant projects (in⁵⁹ and outside of Horizon Europe) for cross-projects cooperation and exchange of results. Proposals should earmark the necessary resources for these purposes. Results from relevant past and ongoing projects from previous calls of this Destination and other relevant projects on ESM should be considered and strong feedback and coordination with projects funded under the topics HORIZON-CL5-2025-06-D1-01 “Climate simulations data and knowledge for optimal support of IPCC Assessments and International Policy” and HORIZON-INFRA-2025-01-SERV-02 (area on research infrastructure services to improve the understanding and prediction of future climate changes and their impact) is expected.

International cooperation is encouraged, in particular with the Global South⁶⁰, to promote capacity and consensus building, for example, by training early career researchers.

⁵⁸ FAIR (Findable, Accessible, Interoperable, Reusable).

⁵⁹ For example, relevant projects funded under the Horizon Europe calls Climate sciences and responses.

⁶⁰ In absence of a single formal definition of the Global South, the list of low- to middle-income countries automatically eligible for Horizon Europe funding should be used for this purpose – see the [Horizon Europe List of Participating Countries](#) on EU Funding and Tenders Portal for up-to-date information

HORIZON-CL5-2025-06-D1-03: Modelling of mitigation pathways for F-gases

Call: Cluster 5 Call 06-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 7.50 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).⁶¹</p> <p>Beneficiaries will be subject to the following additional obligations regarding open science practices: Open access to any new modules, models or tools developed from scratch or substantially improved with the use of EU funding under the action must be ensured through documentation, availability of model code and input data developed under the action.</p>

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Improved knowledge of regional pathways concerning the use of Ozone Depleting Substances and Fluorinated greenhouse gases (F-gases), options to mitigate this use, the resulting emissions, and how this interacts with the decarbonisation of the energy system;
- Improved modelling capacity regarding the use of Ozone Depleting Substances and F-gases in the refrigeration, air conditioning and heat pump sectors, in a manner that increases the availability to Parties to the Montreal Protocol⁶² of modelling tools to

⁶¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

⁶² [Montreal Protocol on Substances that Deplete the Ozone Layer](#)

inform them on policy options for an ambitious implementation of the Kigali Agreement⁶³, including a transition to natural refrigerants, and how this interacts with the decarbonisation of the energy system.

Scope: F-gases are the fastest growing group of greenhouse gas emissions globally. The Montreal Protocol resulted in decreasing use and emissions of Ozone Depleting Substances and will now also regulate a phasedown of hydrofluorocarbons (HFCs), representing the largest share of F-gas use, of which the majority is used in refrigeration, air conditioning and heat pump equipment.

The project should improve the knowledge base of F-gas use and emission pathways under baseline conditions (i.e., policies as they are today), pathways that meet the Kigali Agreement and pathways that outperform the Kigali Agreement. The development of these pathways should also include fluorinated greenhouse gases not regulated under the Montreal Protocol, in particular those covered by the Regulation (EU) 2024/573 on fluorinated greenhouse gases⁶⁴. It should cover all main regions globally separating at least the countries that fall under Article 5 of the Montreal Protocol and those that do not, and preferably further disaggregating them within these two classes, taking into account for instance climate conditions. The development should assess the interaction with the energy system, notably related to the deployment of HFC-alternatives in refrigeration, air conditioning and heat pump equipment and its impact on energy efficiency, the deployment of sulphur hexafluoride (SF₆) or its alternatives in electrical switch-gear. Possible impacts on emissions of per- and polyfluoroalkyl substances (PFAS) should be considered. The pathways should give detailed insights into the technologies available, including the use of F-gases-free alternatives.

Most F-gas emissions are related to the use in the refrigeration, air conditioning and heat pump (RACHP) equipment. This sector is projected to be one of the highest contributors to future global energy demand increases. The action should include the development of modelling tools that allow for the representation at national level of the use of F-gases and their alternatives at least in this RACHP sector, with a view to develop tools that would allow parties to the Montreal Protocol to assess at national level different options of mitigating HFC use, and the interaction with the decarbonisation of the energy system. The action should thus expand and improve the number of tools that can provide such detailed information at country level, including for the so called Article 5 Parties under the Montreal Protocol, in a manner that would improve the knowledge base for parties to implement specifically the Kigali Agreement to the Montreal Protocol as well as allow them to get insights in how to create synergies with the climate mitigation goals of the Paris Agreement, including the decarbonisation of the energy system.

⁶³ [The Kigali Amendment \(2016\): The amendment to the Montreal Protocol agreed by the Twenty-Eighth Meeting of the Parties \(Kigali, 10-15 October 2016\) | Ozone Secretariat \(unep.org\)](#)

⁶⁴ [Regulation - EU - 2024/573 - EN - EUR-Lex \(europa.eu\)](#)

All research outputs should be managed according to the FAIR principles⁶⁵. Beyond open access to scientific publications and research data, open access to software, models, algorithms, workflows and protocols, cell lines, compounds, etc. is required.

All projects funded under this topic are strongly encouraged to connect, coordinate, and participate in networking, intercomparison and joint activities to exploit synergies and maximise complementarities. Activities on energy efficiency of equipment, on electricity grids or the safe use of chemicals would be of specific interest in this context. Projects should also envisage clustering activities with any other relevant projects (in and outside of Horizon Europe) for cross-projects cooperation and exchange of results. Proposals should earmark the necessary resources for these purposes.

HORIZON-CL5-2025-06-D1-04: The attribution to climate change, and improved forecasting of extreme and slow-onset climate- and weather-related events and their impacts

Call: Cluster 5 Call 06-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).⁶⁶</p> <p>Beneficiaries will be subject to the following additional obligations regarding open science practices: Open access to any new modules, models or tools developed from scratch or substantially improved with the use of EU funding under the action must be ensured through</p>

⁶⁵ FAIR (Findable, Accessible, Interoperable, Reusable).

⁶⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

	documentation, availability of model code and input data developed under the action.
--	--

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Advanced understanding of the causality between anthropogenic climate change and the frequency and intensity of climate and weather extremes (including temperature extremes, heavy precipitation and pluvial floods, river floods, droughts, storms, as well as compound events), and their risks and impacts, including cascading impacts, on human systems and ecosystems;
- Improved methodologies and tools of attribution of extreme climate- and weather-related events, and their impacts, to anthropogenic climate change;
- Enhancement of existing or creation of new pilot global databases of extreme events, impacts and their attribution;
- Advanced knowledge of how attribution science and forecasting can be operationalised for a range of policy purposes, including informing and improving preparedness, civil protection and humanitarian planning for future extreme and slow-onset events, post-disaster reconstruction, resilience and adaptation plans.

Scope: Anthropogenic climate change influences the intensity and likelihood of extreme weather events – the latest IPCC report warns that anthropogenic climate is already affecting weather and climate extremes across the globe and with every additional increment of global warming, changes in extremes will continue to become larger.

Attribution science tries to answer the question of what the role of anthropogenic climate change relative to other drivers (natural and non-climate anthropogenic factors), is for a given extreme climate or weather event. It is relatively nascent, and while it is fast advancing, numerous gaps remain, including on compound and cascading events, the interplay between slow and fast onset events, the appropriate statistical methods and the proper consideration of various degrees of vulnerabilities and exposure.

Some tail events, risks and associated impacts are inherently poorly represented in current simulation records. The latest advances in numerical modelling, AI and Machine Learning, counter-factual datasets using large ensembles and digital twins, for example, could increase the sample size of simulated rare – including compound and cascading - events and offer opportunities to explore the decision-making and estimated impact space (e.g., in relation to water, air pollution, ecosystem status, land use – and their combination). Propagating uncertainties along the causality chain is an important aspect to address in this context.

Actions should address all of the following aspects:

- Advance attribution science through a combination of observations, models, attribution methodologies applied to the physical climate conditions (fast and slow-onset event

attribution for a more accurate estimation of how the likelihood and intensity of the hazards have been altered by anthropogenic climate change) and impacts (identifying how the interplay between anthropogenic climate change and local implemented responses affects residual impacts);

- Advance the understanding of the interplay between natural variability and anthropogenic climate change both in the recent past (since the instrumental data is available) and in the near- and mid- term future (2025-2060), as well as the interplay between climate and non-climate drivers of impacts, and socially differentiated vulnerability patterns;
- Advance methodologies to collect diverse in-situ and remote sensing observations to develop or contribute to robust extreme event and impact databases;
- In the context of attribution, focus on extreme and slow-onset events and their interactions (including cascading and compound events) and impacts (on human systems and ecosystems), locally implemented responses and their limits (response capacities), with due consideration of vulnerable regions;
- Deliver enhanced methods to separate the effects of climate trends (including in extreme events) from trends in exposure and vulnerability, both in observed datasets and in model scenarios;
- Investigate how different model enhancements (e.g., finer resolution, increased complexity) impact the realism and accuracy of the modelled climate and weather extremes. Strive to investigate inter-model differences and their implications for extreme event attribution and contribute to multi-model and intercomparison approaches (e.g., Inter-Sectoral Impact Model Intercomparison Project, ISIMIP), including with downscaling and bias correction of global models for better simulation of extreme events;
- Building on latest advances in attribution studies, improve forecasting of extreme climate- and weather-related events and their impacts, and contribute to the evolution of climate services;
- Improve the knowledge of how to operationalise the attribution science and forecasting for informing future planning including in some of the areas relevant for advancing disaster preparedness and prevention capacity building, humanitarian aid operations, and adaptation plans (e.g., early warning systems, disaster risk reduction including with nature-based solutions, emergency relief) via co-design and co-production with operational actors, including citizens and civil society globally and with due consideration of associated challenges in the Global South;
- The results should serve as a basis to ensure policies and actions that follow from the attribution studies can integrate climate justice.

When dealing with models, actions should promote the highest standards of transparency and openness, as much as possible going well beyond documentation and extending to aspects such as assumptions, protocols, code, and data that is managed in compliance with the FAIR principles⁶⁷.

All projects funded under this topic are strongly encouraged to connect, coordinate, and participate in networking and joint activities together, as appropriate. Collaboration with Destination Earth is encouraged. Clustering activities with other relevant ongoing projects (in and out of Horizon Europe) should be envisaged for cross-projects cooperation and results from relevant past and ongoing projects, including XAIDA⁶⁸ and CLINT⁶⁹, should be considered.

This topic requires the effective contribution of social sciences and humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities. Citizen Science and other innovative and participatory forms of research could be appropriate for this action.

International cooperation is encouraged, in particular with the Global South⁷⁰ in the context of scientific capacity building, disaster risk reduction and strengthening of climate resilience.

HORIZON-CL5-2025-05-Two-Stage-D1-05: Adaptation to Climate Change: Effectiveness and Limits

Call: Cluster 5 Call 05-2025 (2-stage) (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of</p>

⁶⁷ FAIR (Findable, Accessible, Interoperable, Reusable).

⁶⁸ <https://cordis.europa.eu/project/id/101003469>

⁶⁹ <https://cordis.europa.eu/project/id/101003876>

⁷⁰ In absence of a single formal definition of the Global South, the list of low- to middle-income countries automatically eligible for Horizon Europe funding should be used for this purpose – see the [Horizon Europe List of Participating Countries](#) on EU Funding and Tenders Portal for up-to-date information

	Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Grants awarded under this topic will be linked between them by means of a collaboration agreement and will have to submit the following deliverables: (i) A joint action plan (between months 6 and 12), produced in collaboration between the projects funded under this topic; and (ii) A common part of the methodology (not later than month 24), produced and agreed by the projects funded under this topic.</p>

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Adaptation communities - from researchers to practitioners, citizens and decision makers - have an improved understanding of the factors driving climate change adaptation limits⁷¹ and effectiveness⁷²;
- Policy makers can select and prioritise adaptation strategies to design adaptation policies from improved and more consistent comparability of adaptation options and outcomes;
- The limits and effectiveness of adaptation strategies are evaluated by a comprehensive, multidimensional set of criteria within a standardised methodology, thus contributing to the work of the IPCC. A scientific contribution for updating the 1994 IPCC Technical Guidelines on impacts and adaptation is provided;
- Practitioners and decision makers at all relevant levels of governance (local, national, regional, and European) are provided with a consistent framework and tools for monitoring, evaluation, and adjustment of their adaptation strategies, both in the short term (for more effective disaster prevention and preparedness) and in the long term (for more effective transformative and climate resilient adaptation pathways).

Scope: The effectiveness of climate change adaptation measures depends, among other factors, on the magnitude and rate of warming, which can lead to context-specific hard limits being encountered. However, the scientific evidence related to adaptation effectiveness remains limited, and providing a universal definition of what constitutes effective adaptation is challenging. This is motivated by difficulties in defining baseline conditions given the dynamic nature of the adaptation, in measuring avoided impacts and in establishing causality. Other problems arise from the long lead time until responses show outcomes, and limited

⁷¹ Adaptation limits: The point at which an actor's objectives (or system needs) cannot be secured from intolerable risks through adaptive actions. Hard adaptation limit – No adaptive actions are possible to avoid intolerable risks. Soft adaptation limit – Options may exist but are currently not available to avoid intolerable risks through adaptive action.

⁷² Effectiveness: refers to the extent to which an action reduces vulnerability and climate-related risk, increases resilience, and avoids maladaptation (IPCC, 2022).

understanding of trade-offs across spatial scales, community systems and sectors, which limits the application of a system approach, essential for this analysis. Ex-ante and ex-post monitoring and evaluation of adaptation at different timelines and scales is also critical but currently scarcely implemented. It is urgent to better understand and assess adaptation effectiveness and limits to increase adaptive capacity, resilience against extreme, and slow onset, non-extreme events, and to reduce vulnerability and exposure.

The actions should generate assessments of the effectiveness and limits of adaptation options based on quantitative and qualitative evidence (privileging scientific literature but systematically integrating insights from grey literature and including diverse group's perspectives and knowledge), methodologically sound (replicable and with new metrics and indicators informed with uncertainty) and comprehensive in the criteria considered (such as economic, technological, legal, institutional, socio-cultural, geophysical, environmental and cross-cutting aspects that determine soft limits). Cross-cutting criteria to be included are the contribution of the adaptation solutions to mitigation, their ability to reduce cascading, compound effects and risks transmission, the degree of use of nature-based solutions (NBS), together with the feasibility, the ambition level, and their contribution to equity and justice. Other relevant aspects that should be considered are the exogenous factors, the gender, age and intersectional dimensions, the governance and the barriers and enablers.

Actions should evaluate adaptation effectiveness and limits as a function of time and for a comprehensive range of warming rates, considering the changing variability patterns. Projects should address all of the following aspects:

- Further the understanding of the general and context specific (e.g., regional, sectoral, etc.) drivers of adaptation effectiveness and limits, including vulnerability;
- Develop a robust methodology to assess the effectiveness and limits of adaptation options in a consistent way, assuring comparability among assessments. Such a methodology should:
 - o Synthesise different sources of observational (both quantitative and qualitative evidence) and modelling data that are relevant at the regional, local or sectoral levels to assess multiple dimensions of effectiveness and adaptation limits over time;
 - o Have sufficient common core elements to ensure consistency and comparability among regions and sectors, and sufficient flexibility to reflect their contextual specificities;
 - o Include a comprehensive set of measurements and indicators and approaches to characterise adaptation as a process and assess quantitatively and qualitatively the multiple dimensions and aspects of adaptation effectiveness and limits (both hard and soft);

- o Explore the optimal balance between standardisation and the context specific elements of the methodology.
- Test and apply the methodology for the following purposes:
 - o To evaluate the effectiveness of advanced and short-term planned adaptation strategies, for a variety of European (EU Member States and Horizon Europe Associated Countries) environmental and socio-economic sectors, conditions or regions (a minimum of 6 study cases is recommended). Collaboration with the EU Mission on Adaptation to Climate Change is strongly encouraged, for example, in the test cases;
 - o To inform the timeline and likelihood of emergence of context-specific (i.e., regions and sectors) limits to adaptation in a warming world, with an emphasis on societal, climate and biodiversity hotspots.
- Synthesising the results as usable knowledge for practitioners and decision makers and communicating and disseminating them using existing platforms (e.g., expanding the Climate-ADAPT platform of the European Environment Agency or other options).

While joint work will not occur at proposal stage, the common core of the methodology should be jointly developed by all the projects funded under this topic by combining their respective proposal's approaches, to ensure overall consistency. For assuring this, proposals should include a draft plan for joint actions, to be then adapted and agreed between all funded projects. Therefore, all proposals must include a deliverable preferably for month 6 (not later than month 12) that contains the agreed joint action plan. Proposals should dedicate specific tasks and resources, setting aside an adequate budget (in the range of 15 to 25% of their total eligible budget) to collaborate with other projects funded under this topic on developing the common core of the methodology. As a result, this core part should be also a joint deliverable for not later than month 24. Then, the methodology should be separately extended by individual projects to address EU regional and sectoral contexts (e.g., by specific modules) maintaining consistency with the core part. It should build on existing data and approaches, such as those proposed by Copernicus, GAMI⁷³, EUCRA⁷⁴, WASP⁷⁵ and other relevant sources. Aspects such as sectorial and geographical coverage of the real-world case studies are left to the proposals to decide, provided they demonstrate a wide variety of existing or new adaptation options in Europe.

Actions should promote the highest standards of transparency and openness and be managed in compliance with the FAIR principles⁷⁶.

This topic requires the effective contribution of social sciences and humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of

⁷³ <https://globaladaptation.github.io/>

⁷⁴ <https://www.eea.europa.eu/publications/european-climate-risk-assessment>

⁷⁵ For example, Least Developed Countries Fund (LDCF), Special Climate Change Fund (SCCF), Global Climate Facility (GCF), Adaptation Fund (AF).

⁷⁶ FAIR (Findable, Accessible, Interoperable, Reusable).

relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

In addition, the projects funded under this call should envisage clustering activities with other relevant ongoing projects, in and outside of Horizon Europe, for cross-projects cooperation and exchange of results, and build on projects funded under previous calls of this Destination related to adaptation. Projects funded are also strongly encouraged to participate in the Mission Community of Practice of the Mission Climate Adaptation⁷⁷.

HORIZON-CL5-2025-06-D1-06: Fostering equity and justice in climate policies – Societal Readiness Pilot

Call: Cluster 5 Call 06-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 4.00 and 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The consortium must include as beneficiary or associated partner at least three independent legal entities established in three different low or middle-income countries ⁷⁸ .
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training

⁷⁷ <https://climate-adapt.eea.europa.eu/en/mission/community-of-practice>

⁷⁸ <https://datahelpdesk.worldbank.org/knowledgebase/articles/906519-world-bank-country-and-lending-groups>; standard Horizon Europe funding rules apply - only participants from some of these countries are automatically eligible for funding

	Programme of the European Atomic Energy Community (2021-2025). ⁷⁹ .
<i>Exceptional page limits to proposals/applications</i>	The page limit of the application is extended by two pages to 52 to properly address Societal Readiness-related issues.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Climate policies are made more inclusive and equitable, facilitating acceptance across political and societal stakeholders with various socio-economic and development status, both within the EU and globally, enabling high ambition climate action and helping to deliver on the European Green Deal’s commitment to “leave no one behind”;
- There is an improved consensus between the Global North and the Global South within the UNFCCC process, unlocking a greater momentum in the implementation of the Paris Agreement;
- The evidence base underpinning IPCC assessments is strengthened, diversified, and made more inclusive, facilitating consensus and government approval processes;
- Social science perspectives on justice and equity are better incorporated into policy narratives, scenarios, and models, improving their societal relevance and ensuring that climate action strategies are more reflective of the needs, values and concerns of diverse societal groups, building trust in results and outcomes, and increasing their uptake potential.

Scope: Climate change and the transition to low-carbon, climate-resilient future raises complex justice questions around equitable sharing of benefits and burdens of mitigation and adaptation efforts. These considerations not only animate global climate negotiations, but also increasingly emerge as a central issue for national politics, legal systems and for the society at large. Fairness thus becomes both a critical enabler and a potential barrier for shaping ambitious climate action, underscoring the need for prioritising research on advancing just climate transitions within the EU and globally.

For example, mitigation scenarios that have informed and influenced global climate policymaking and target-setting, and form a vital component of IPCC assessments, have been criticised for not considering fairness more explicitly and systematically, creating a barrier to their acceptance as a basis for global mitigation efforts. On the other hand, to avoid exacerbating existing vulnerabilities and locking into maladaptive pathways, it is also necessary to better account for the justice dimension in adaptation planning and implementation.

⁷⁹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Actions should advance more comprehensive and interdisciplinary understanding of climate justice in the context of the European and global mitigation and adaptation policies, promoting awareness, consistency and co-production approaches. They should take into consideration socio-economic, territorial and development disparities that exist between and within countries, regions and across various segments of the population. Actions should address multiple dimensions of justice, diverse spatial and temporal scales (e.g., intergenerational justice), and explore the role of a broad range of social, political, economic, and cultural contexts and factors. These include both collective (such as values, power structures, institutional and legal frameworks, political economy, development models, climate elites) and individual (such as age, gender, and intersectionality) features. Building on the resulting insights, actions are expected to develop recommendations on how to design, implement and evaluate just climate transitions, including definition of specific indicators, standards, and criteria to better operationalise the justice concept in adaptation and mitigation pathways. Among others, actions should address some of the following aspects ⁸⁰:

- Improve integrated assessment models to better represent justice and equity, differences in regional outcomes, and common but differentiated responsibilities and respective capabilities;
- Enhance clarity, comparability, and transparency across global mitigation scenarios with regard to different justice aspects. Evaluate the feasibility and consistency of regionally differentiated long-term mitigation goals in terms of, for example, investments and financial flows, governance and institutional needs;
- Analyse distributional aspects of climate policies, assess consequences for well-being and living standards of people from different socio-economic and development contexts. Advance research to assess the needs of and the effects on the most vulnerable and disadvantaged population segments (e.g., elderly, children, women, migrants, minorities, households at risk from energy and/or transport poverty) and sectors, and provide recommendations for corrective measures;
- Assess the trade-offs and co-benefits between climate action and inequality reduction. Explore the role of inequality and injustice as constraints to individual and collective climate action;
- Investigate innovative climate policy instruments, initiatives and approaches alternative to those prioritising economic efficiency and propose a broader spectrum of climate policies with more attention to equity. Assess their feasibility;
- Investigate justice in the context of sectorial transitions, with focus on under-researched (from justice perspective) sectors such as agriculture, forestry and land use;

⁸⁰ The evaluation will follow the standard Horizon Europe evaluation criteria, regardless of the number of the aspects covered.

- Advance research on how to better account for the needs and constraints of communities representing diversity of vulnerability profiles in disaster risk reduction and adaptation strategies.

Actions should address justice and equity of climate policies both within the EU and from a global perspective, but they may choose to prioritise one of these dimensions, using the other as framing information.

The research should be conducted through close collaboration between research teams from Europe and low or middle-income countries, hence international cooperation is required (see eligibility conditions). Moreover, involvement of key stakeholders and regional experts as part of an inclusive process is essential to guarantee that all relevant perspectives are adequately represented. The involvement of civil society is also highly recommended.

All projects funded under this topic are strongly encouraged to connect, coordinate, and participate in networking, intercomparison and joint activities, to exploit synergies and maximise complementarities. They should also envisage clustering activities with other relevant projects (in⁸¹ and outside of Horizon Europe) for cross-projects cooperation and exchange of results. Proposals should earmark the necessary resources for these purposes.

This topic is a Societal-Readiness pilot:

- Proposals should follow the instructions applying to the Societal readiness pilot, as described in the introduction of the Horizon Europe Main Work Programme 2025 for Climate, Energy and Mobility. They entail the use of an interdisciplinary approach to deepening consideration and responsiveness of research and innovation activities to societal needs and concerns.
- This topic requires effective contribution of the relevant SSH expertise, including the involvement of SSH experts in the consortium, to meaningfully support Societal Readiness. Specifically, SSH expertise is expected to enable the design of project objectives with Societal Readiness related activities. Consortia should mobilise a variety of SSH research backgrounds, in particular equity, poverty, and gender experts.

HORIZON-CL5-2025-06-D1-07: Implementing the climate action pillar of the EU-African Union Partnership on Climate Change and Sustainable Energy

Call: Cluster 5 Call 06-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 3.00 and 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁸¹ For example, relevant projects funded under the calls of Horizon Europe Cluster 5 on Climate sciences and responses and Cluster 2 on Innovative research on social and economic transformations.

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If eligible for funding, legal entities established in the African Union member states⁸² may exceptionally participate in this Coordination and Support Action as beneficiary or affiliated entity.</p> <p>In addition, international organisations with headquarters in a European Union Member State, Horizon Europe Associated Country or an African Union Member State are also exceptionally eligible to participate (and eligible for funding).</p> <p>At least 40% of the beneficiaries must be legal entities established in the African Union Member States.</p>

Expected Outcome: The action is intended to set the foundation for future collaborative activities between the African Union (AU) and the European Union (EU) on climate change research in the context of the implementation of the Partnership on Climate Change and Sustainable Energy (CCSE)⁸³ under the AU-EU High Level Policy Dialogue (HLPD) on Science, Technology, and Innovation⁸⁴ and its Innovation Agenda⁸⁵.

Project results are expected to contribute to all of the following expected outcomes:

- Stakeholders, including funding entities, contribute more effectively to the implementation of the climate action pillar of the AU-EU CCSE Research and Innovation Partnership through an agreed strategy and reinforced R&I coordination;
- The R&I agendas and initiatives on climate issues relevant for Africa are better aligned and defragmented between the EU, national and multilateral levels. The impact of funding is enhanced;
- The climate-related data gap on Africa is reduced and AU countries are better able to access, utilise, and deploy state-of-art climate knowledge and services to inform decision-making and to accelerate a science-based implementation of the Paris Agreement and the Agenda 2030 on Sustainable Development;

⁸² "African Union member states" excludes countries whose membership has been temporarily suspended.

⁸³ https://research-and-innovation.ec.europa.eu/strategy/strategy-2020-2024/europe-world/international-cooperation/regional-dialogues-and-international-organisations/eu-africa-cooperation/partnership-climate-change-and-sustainable-energy-ccse_en

⁸⁴ https://research-and-innovation.ec.europa.eu/strategy/strategy-2020-2024/europe-world/international-cooperation/regional-dialogues-and-international-organisations/eu-africa-cooperation_en

⁸⁵ https://research-and-innovation.ec.europa.eu/system/files/2023-07/ec_rtd_au-eu-innovation-agenda-final-version.pdf

- Impacts and risks of climate change are more accurately assessed, adaptation strategies are developed, and early warning systems are deployed. This strengthens climate and disaster resilience in the AU member states, contributing to the international dimension of the EU Adaptation Strategy, the EU Disaster Resilience Goals, the Sendai Framework for Disaster Risk Reduction, the Nairobi Declaration and the Early Warnings for All initiative;
- The climate research community in the AU is strengthened, with researchers and scientific institutes enabled to engage more effectively in international fora and multilateral collaboration networks, with positive effects on diversity and quality of climate science and benefiting key international assessments and processes (e.g., IPCC, IPBES).

Scope: African societies and productive sectors are already experiencing widespread impacts from both natural hazards and human induced climate change. These include loss of lives and biodiversity, increased disease burden, water shortages, ocean acidification, reduced food production, and diminished labour efficiency and economic growth. The IPCC warns that with additional warming, the risks will further escalate, making a strong case for prioritising climate risk reduction and adaptation efforts while transitioning to low-carbon future. Socioeconomic, political, and other environmental factors - such as high demographic pressure, violent conflicts, biodiversity loss and pollution, unsustainable land and ocean use, strong reliance on agriculture and natural resources - interact with climate change to amplify the region's vulnerability. These compounded challenges undermine Africa's socio-economic advancements, hindering its efforts towards sustainable development. Yet, the continent is very poorly equipped to deal with these challenges: only 40% of its population has access to early warning systems⁸⁶ – the lowest rate of any region of the world, and many countries lack quality climate knowledge and data.

In addition, despite multiple efforts to promote climate research and capacity development, African scientists, scholars, and practitioners are still significantly underrepresented in international fora, such as the IPCC. Furthermore, the bulk of research concerning the region is performed by groups from developed and emerging countries, not sufficiently incorporating indigenous knowledge, local contexts and needs. It is now vital that the assessments of climate change, and its related impacts, risks and response strategies are increasingly delivered by the African community.

This action is intended as a preparatory step towards future joint collaborative activities between the EU and the AU, and their respective Member States to support the implementation of the “Climate Action for adaptation and mitigation” Pillar of the CCSE partnership. This pillar encompasses 1) climate-related data, 2) climate services, 3) and an integrated knowledge approach to support AU countries in their efforts to implement the Paris Agreement. These priorities should be used to frame the activities of the project. The action should establish a joint strategy for improving the availability and accelerating the uptake of advanced climate knowledge, data, and products across Africa. The aim is to enhance climate

⁸⁶ <https://www.undrr.org/news/early-warnings-all-africa>

literacy, to develop and increase uptake of climate services and early-warning systems, and to support capacity building while taking into consideration the continent's socio-economic circumstances and user needs. It is expected to address all of the following aspects:

- Develop a joint roadmap identifying priorities, flagship actions and feasible implementation architecture (including most appropriate financing instruments, not limited to EU level) to pave the way towards more targeted EU-AU cooperation on climate change research, with particular focus on climate risk reduction and resilience building (to be delivered within the first year of the project);
- Mobilise and secure commitments from European and African national funding entities and other actors (e.g., philanthropies, international cooperation entities and financial institutions) necessary to implement joint EU-AU collaborative activities, including a potential Horizon Europe co-fund action in 2026-2027 work programme (ideally within the first year of the project);
- Map the relevant EU funded projects (such as CONFER, FOCUS-Africa, DOWN2EARTH, ALBATROSS, SAFE4ALL, HABITABLE, TEMBO-Africa, SINCERE⁸⁷), match their outputs with the objectives of the CCSE Partnership, and cluster them to establish a vibrant community. Develop and implement a strategy to consolidate, curate, valorise and disseminate the projects' outputs towards African and European stakeholders to amplify their impact. This should include a user-friendly approach (ideally integrated into and complementing existing mechanisms/repositories) for sharing best practises and lessons learnt from past and ongoing EU-funded projects, and with links to internationally and nationally funded activities, to provide visibility and enable scaling and replication of successful initiatives. In addition, the action should also investigate how Europe could best learn from Africa and how to valorise, disseminate knowledge and implement solutions from the EU Mission on Adaptation to Climate Change, other relevant EU Missions and other initiatives (like the Partnership for Research and Innovation in the Mediterranean region, PRIMA) that are of relevance to the African context;
- Design and start implementing training and capacity building strategy that should enable: i) effective climate action planning and management, ii) enhanced representation and diversity of African science and scientists in international fora, iii) upscaled generation of policy relevant knowledge, data, products and services, on climate change, and iv) a greater participation of women, youth, indigenous and marginalised communities.

The action should bring together core European and African funding agencies (and define a credible pathway for mobilising additional funders), research organisations and other key African entities such as regional and national climate service centres. Strong representation of African partners in the consortium is a core requirement (see eligibility conditions). In addition, the action should strive at better connecting scientists, policy makers, practitioners,

⁸⁷

Please refer to <https://cordis.europa.eu/projects/en> for more information

and local communities for integrated solutions, at mobilising private sector engagement and at promoting the uptake of indigenous knowledge and Citizen Science. Efforts should be made to ensure that the data produced in the context of this topic is managed according to the FAIR principles⁸⁸.

The action should build on and aim at improving the coordination between existing and forthcoming multilateral and bilateral initiatives, such as the Climate Services for Risk Reduction in Africa (CS4RRA)⁸⁹, the ClimSA⁹⁰ programme, as well as projects funded by the EU (Horizon 2020 and Horizon Europe) and the JPI-Climate (ERA4CS). Synergies should also be sought, where possible, with relevant activities of the World Climate Research Programme, the World Adaptation Science Programme, the World Meteorological Organisation, the Group on Earth Observations, or the Copernicus programme. It is advisable that the action integrates the lessons learnt from the implementation of the energy pillar of the CCSE Partnership⁹¹.

⁸⁸ FAIR (Findable, Accessible, Interoperable, Reusable).

⁸⁹ <http://cs4rra.wascal.org/>

⁹⁰ <https://www.climsa.org/>

⁹¹ See <https://cordis.europa.eu/project/id/815264> and <https://cordis.europa.eu/project/id/963530>

Cross-sectoral solutions for the climate transition

This Destination contributes directly to the Strategic Plan's **Key Strategic Orientations** 'Green transition', 'Digital transition' and 'A more resilient, competitive, inclusive and democratic Europe'.

In line with the Strategic Plan, the overall **expected impact** of this Destination is to contribute to the "Facilitating a clean and sustainable transition of the energy and transport sectors towards climate neutrality through cross-cutting solutions".

This Destination covers thematic areas which are cross-cutting by nature and can provide key solutions for climate, energy and mobility applications. In line with the scope of cluster 5 such areas are batteries, hydrogen⁹², communities and cities⁹³ and others. Although these areas are very distinct in terms of challenges, stakeholder communities and expected impacts, they have their cross-cutting nature as a unifying feature and are therefore grouped, if not addressed in other places of this work programme, under this Destination.

The main impacts to be generated by topics under this Destination are:

Batteries

- Increased competitiveness and strategic autonomy of EU Battery sector while maximising sustainability.
- Enhanced local and circular supply chains by reducing dependency on critical raw materials and upscaling processing capacity, also for recycled materials.
- An integrated European battery sector for high performance batteries, from design to manufacturing and all the way to end of life, reducing environmental impact.
- Improved resilience of EU energy system and facilitated integration of renewable energy sources through application of energy storage.
- Affordable and reliable batteries to boost the market penetration of Electric Vehicles and storage systems.

Cities and Communities

This topic is for continuation of the **Driving Urban Transition (DUT) co-funded partnership** to assist cities in their sustainability and climate neutrality transitions. The main impacts expected are:

⁹² The bulk of activities are supported by the Institutional Partnership 'Clean Hydrogen'.

⁹³ Communities and cities are mainly supported under the Mission on Climate-Neutral and Smart Cities, and through the co-funded Partnership 'Driving Urban Transition', implemented in this work programme as a grant to identified beneficiary.

- Strengthen EU as a role model for R&I and cooperation with international cities to align strategies and support the role of DUT as co-lead of the Urban Transitions Mission (UTM) under Mission Innovation (MI);
- Innovative urban governance, policy, and decision-making engaging citizens in the city making process;
- Integration of mobility and transport services, and their alignment with citizens' needs;
- Climate-neutral, safe, inclusive and liveable neighbourhoods, towns, cities and urban services for the citizens' well-being;
- Empowerment of all actors such as local authorities, business, civil society, knowledge institutions and citizens, being engaged in climate-neutrality transitions;
- Evidence-based implementation of the European Green Deal, the Urban Agenda for the EU and other urban-relevant policies and strategies.

Batteries

Proposals are invited against the following topic(s):

HORIZON-CL5-2026-01-D2-01: Development of sustainable and design-to-cost batteries with (energy-)efficient manufacturing processes and based on advanced and safer materials (Batt4EU Partnership)

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 24.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL6 (for manganese-rich HLM) and TRL7 (for lithium manganese iron phosphate and sodium-ion) by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- Development of next generation low-cost batteries for improving the affordability of electric mobility, enhancing the competitiveness of the European battery value chain, while lowering the share of Critical Raw Materials (CRM)⁹⁴;
- Improved adaptation and flexibility of advanced and sustainable production processes in European battery manufacturing;
- Improved adaptation/flexibility of design-to-circularity strategies.

Scope: Proposals are expected to target technologies for design-to-cost batteries, with little reliance on CRMs, from one of the following two main technologies:

- Liquid electrolyte lithium-ion batteries with lithium manganese iron phosphate (LMFP) or manganese-rich HLM (high lithium, manganese) as cathode materials (design-to-cost lithium-ion batteries for mobility⁹⁵);
- Sodium-ion batteries for mobility applications.

The projects are expected to demonstrate, at the end of the project, the following:

For HLM and LMFP chemistries, at the cell level:

- Gravimetric energy density and volumetric energy density of at least 220 Wh/kg (for LMFP) and 250 Wh/kg (for HLM) and 550 Wh/L (for both) at operational temperature, respectively;
- Charging duration of 20 minutes (20-80% SoC);
- Cycle life of >4000 cycles for LMFP and >1500 cycles for HLM at 80% depth of discharge;
- Electric Vehicle (EV) grade cell format and capacity;
- A feasible pathway towards a competitive cost of 50-75€/kWh at pack level by 2030.

For sodium-ion batteries at cell level:

- Gravimetric energy density and volumetric energy density of 180-200 Wh/kg and 400+ Wh/L at operational temperature, respectively;
- Cycle life of 4000-6000 cycles at 80% depth of discharge;
- Charging duration of 20 minutes (20-80% SoC);
- EV grade cell format and capacity;

⁹⁴ [Regulation - EU - 2024/1252 - EN - EUR-Lex \(europa.eu\)](https://eur-lex.europa.eu/eli/reg/2024/1252/oj)

⁹⁵ <https://bepassociation.eu/our-work/sria/>

- A credible pathway towards a competitive cost level of 50-75€/kWh at pack level by 2030.

Projects are expected to demonstrate the production of cell prototypes at pilot level and feasibility of compatibility (or improvement) of the developed materials with regards to at least one of the following cell production processes:

- Dry or aqueous processing technologies;
- Advanced electrode drying processes;
- Improved cell formation processes and aging protocols;
- Improved energy efficiency of processes in dry rooms.

Proposals are expected to provide the corresponding state-of-the-art benchmark for the selected production process and compare the project's compatibility or improvement targets to said benchmark.

Furthermore, projects are expected to demonstrate the feasibility of compatibility (or improvement) of the developed materials with regards to at least one of the following:

- Design for sorting, dismantling, separation, cost-effective repairing/regeneration, and safe recycling (including direct recycling);
- Adapting Sensing solutions to improve lifetime and state of health detection;
- Quantification of degradation mechanisms at early stage to determine the best strategy for beyond the first life.

The Commission initiative for Safe and Sustainable by Design⁹⁶ (SSbD) sets a framework for assessing the safety and sustainability of chemicals and materials which should be considered as a reference for project proposals.

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation. The exploitation plans are expected to include preliminary plans for scalability, commercialisation, and deployment (feasibility study, business plan) indicating the possible funding sources to be potentially used (in particular the Innovation Fund).

Proposals could consider the involvement of the European Commission's Joint Research Centre (JRC)⁹⁷ whose contribution could consist in providing added value regarding integral evaluation of safety of materials. For further information on the JRC's possible contribution to the projects, please, search for additional publicly available information on the JRC's

⁹⁶ https://research-and-innovation.ec.europa.eu/research-area/industrial-research-and-innovation/key-enabling-technologies/chemicals-and-advanced-materials_en

⁹⁷ https://joint-research-centre.ec.europa.eu/laboratories-z/battery-energy-storage-testing_en

website (EU Science Hub) on the NCP portal, or request specific information from the JRC (JRC-NCP-Network@ec.europa.eu)

JRC shall assure that all the other applicants receive the same information on the JRC's possible contribution to the project (e.g., via the topic-specific FAQs under the Funding and Tenders Portal).

Projects are expected to collaborate and contribute to the activities of the Coordination and Support Action defined under the topic HORIZON-CL5-2025-D2-02-06.

To strengthen the European battery ecosystem, projects are expected to use materials, products and equipment produced in EU Member States and countries associated to Horizon Europe, unless it is demonstrated that no valid option exists. The procurement strategies should be described in the proposal, especially and to the furthest extent possible the place of production of the elements.

This topic implements the co-programmed European Partnership on Batteries (Batt4EU). As such, projects resulting from this topic will be expected to report on the results to the European Partnership on Batteries (Batt4EU) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-01-Two-Stage-D2-02: Cost-effective next-generation batteries for long-duration stationary storage (Batt4EU Partnership)

Call: Cluster 5 Call 01-2025 (2-stage) (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p>

<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁹⁸.</p>

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- Advanced battery materials aiming at storage duration from 10 hours to seasonal storage are developed, thus contributing to the Renewable Energy targets set by RePowerEU;
- Minimised use of Critical Raw Materials (CRM) in line with the EU's Critical Raw Materials Act ⁹⁹ to enhance economic base, reduce dependencies and ensure competitiveness in green and digital transitions;
- Development of viable alternatives to the current state of the art for battery technologies and to other seasonal storage devices in terms of cost, efficiency, safety, lifetime and (environmental) sustainability;
- Improved longevity of energy storage systems;
- Battery technologies with minimal required auxiliary services, storage in a wide range of State-of-Charges (SOCs), and minimal voltage slippage.

Scope: This topic aims to promote the development of materials that are recyclable, with low environmental impact, safe and with a potential for large-scale manufacturing. To the extent possible, the safety and sustainability of developed materials are expected to be assessed in alignment with the Commission Recommendation on safe and sustainable by design chemicals and materials¹⁰⁰.

Projects are expected to demonstrate credible commercial and technical paths that are able to satisfy all the following points:

- Energy storage system cost (CAPEX) lower than 50 €/kWh;

⁹⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

⁹⁹ [Regulation - EU - 2024/1252 - EN - EUR-Lex \(europa.eu\)](https://eur-lex.europa.eu/eli/reg/2024/1252/oj)

¹⁰⁰ https://research-and-innovation.ec.europa.eu/news/all-research-and-innovation-news/recommendation-safe-and-sustainable-chemicals-published-2022-12-08_en

- Projected lifetime of 20 years with minimised self-discharge in operating and ambient conditions typical of the selected application;
- Minimum round-trip efficiency of 50% at energy storage system (AC) level and 75% at cell level;
- Large-scale deployment in the long term of reliable materials supply and manufacturing of cell or reaction stack.

Projects are expected to focus on technologies that are presently at a low Technology Readiness Level. Lithium-ion, vanadium-based redox flow, sodium-ion using liquid electrolyte, molten sodium-sulphur and other commercialised technologies are out of scope of this topic.

Taking the above into account, the scope of the topic is technology neutral. In case the following battery chemistries or configurations are chosen, the following points must be addressed:

- For metal-air chemistries: reduce sensitivity to impurities of gases;
- For multivalent chemistries: develop electrolytes with reduced corrosivity and improved compatibility with other cell components and housing;
- For materials for redox flow chemistries: develop redox couples with minimised share of Critical Raw Materials (CRM)¹⁰¹;
- For Potassium batteries: address rate performance limitations due to potassium ion diffusivity and electrolyte decomposition due to high K⁺/K redox.

Projects are encouraged to implement calibrated and validated computational models and/or (generative) artificial intelligence methods for materials discovery and cell design.

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation. The exploitation plans should include preliminary plans for scalability, commercialisation, and deployment (feasibility study, business plan).

Proposals could consider the involvement of the European Commission's Joint Research Centre (JRC)¹⁰² whose contribution could consist of performing experimental research on battery performance and/or safety. For further information on the JRC's possible contribution to the projects, please, search for additional publicly available information on the JRC's website (EU Science Hub) on the NCP portal, or request specific information from the JRC (JRC-NCP-Network@ec.europa.eu)

¹⁰¹ [Regulation - EU - 2024/1252 - EN - EUR-Lex \(europa.eu\)](#)

¹⁰² https://joint-research-centre.ec.europa.eu/laboratories-z/battery-energy-storage-testing_en

JRC shall assure that all the other applicants receive the same information on the JRC's possible contribution to the project (e.g., via the topic-specific FAQs under the Funding and Tenders Portal).

Projects are expected to collaborate and contribute to the activities of the Coordination and Support Action defined under the topic HORIZON-CL5-2025-D2-02-06.

To strengthen the European battery ecosystem, projects are expected to use materials, products and equipment produced in EU Member States and countries associated to Horizon Europe, unless it is demonstrated that no valid option exists. The procurement strategies should be described in the proposal, especially and to the furthest extent possible the place of production of the elements.

This topic implements the co-programmed European Partnership on Batteries (Batt4EU). As such, projects resulting from this topic will be expected to report on the results to the European Partnership on Batteries (Batt4EU) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-02-D2-03: Sustainable processing and refining of raw materials to produce battery grade Li-ion battery materials (Batt4EU Partnership)

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 20.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p> <p>To increase EU resilience in raw materials supply chains and thus reduce the serious risk to the Union's strategic assets, economic and societal interests, autonomy and security associated with the current EU reliance on a few third countries for critical raw materials, by increasing sustainable and responsible sourcing of primary and secondary raw materials necessary to enable the green and digital transition and in alignment with the Communication (2020) 474 on Critical Raw</p>

	Materials Resilience and the Critical Raw Materials Act ¹⁰³ , participation in this topic is limited to legal entities established in Member States, associated countries, OECD countries, African Union Member States, MERCOSUR, CARIFORUM, Andean Community and countries with which the EU has concluded strategic partnerships on raw materials ¹⁰⁴ as well as trade (or association/economic partnership or equivalent, including the new Clean Trade and Investment Partnerships) agreements containing raw materials cooperation provisions (i.e. Energy and Raw materials chapters) ¹⁰⁵ . The choice of these countries was made taking into consideration the development of strategic international partnerships on raw materials and avoidance of reinforcing existing over-dependencies, as well as the importance of involving partners committed to pursuing open trade in such materials. Proposals including legal entities which are not established in the countries that fall under the criteria above will be ineligible.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁰⁶

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- Increased autonomy for the EU in the battery raw materials sector, with a focus on creating new business models and opportunities within a strengthened battery value chain;

¹⁰³ Regulation (EU) 2024/1252 of the European Parliament and of the Council of 11 April 2024 establishing a framework for ensuring a secure and sustainable supply of critical raw materials and amending Regulations (EU) No 168/2013, (EU) 2018/858, (EU) 2018/1724 and (EU) 2019/1020 ([OJ L, 2024/1252, 3.5.2024, ELI: http://data.europa.eu/eli/reg/2024/1252/oj](#)).

¹⁰⁴ [Raw materials diplomacy - European Commission \(europa.eu\)](#)

¹⁰⁵ https://policy.trade.ec.europa.eu/eu-trade-relationships-country-and-region/negotiations-and-agreements_en

¹⁰⁶ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Increased processing and refining capacities of battery raw materials, contributing to the target of 40% of domestic processing capacity in the EU for Strategic Raw Materials¹⁰⁷;
- Advanced technologies for the processing of primary and secondary raw materials into high-quality battery metals or active materials are demonstrated, emphasising operational feasibility;
- Sustainability, efficiency, and resilience of the European Li-ion battery sector is significantly increased by adopting innovative refining and processing solutions;
- Circular battery value chains within EU are promoted by expanding the European refining capacity for secondary streams and implementing the objectives of the Batteries Regulation¹⁰⁸;
- Improved societal acceptance and benefits of processing plants.

Scope: Projects are expected to demonstrate the cost-efficient, safe and sustainable production of at least one of the following final products:

- Battery-grade metals and precursors;
- Electrode active materials.

Raw materials in the scope are limited to lithium, cobalt, graphite, nickel, manganese and phosphorus.

The proposed processes need to be ready for large-scale adoption, using at least one of the following source materials:

- Primary: Refining of raw materials sourced from ores, brine, or other mineral-bearing resources, using processes tailored to raw materials originating from the EU (or countries associated to Horizon Europe);
- Secondary, such as mining waste, tailings, sludges and slags (for Ni, Co), intermediate products of end-of-life processes (e.g., black mass), manufacturing scraps, and wastewater from processing.

Mining and mechanical recycling processes of battery cells, modules and packs are out of scope for this topic. The use of waste batteries and battery manufacturing waste which require mechanical (pre-)treatment is also out of scope.

Integration of produced electrode materials into cell production is out of scope, but validation of functionality and quality of the processed materials is within the scope.

¹⁰⁷ Regulation (EU) 2024/1252 of the European Parliament and of the Council of 11 April 2024 establishing a framework for ensuring a secure and sustainable supply of critical raw materials and amending Regulations (EU) No 168/2013, (EU) 2018/858, (EU) 2018/1724 and (EU) 2019/1020 (OJ L, 2024/1252, 3.5.2024, ELI: <http://data.europa.eu/eli/reg/2024/1252/oj>).

¹⁰⁸ https://environment.ec.europa.eu/topics/waste-and-recycling/batteries_en

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation. The exploitation plans are expected to include preliminary plans for scalability, commercialisation, and deployment (feasibility study, business plan) indicating the possible funding sources to be potentially used (in particular the Innovation Fund).

Proposals are expected to evaluate the social acceptance of the proposed sustainable business models, by consulting and involving actors directly affected by the planned processing activities. Proposals should demonstrate the potential of the proposed solutions to reduce environmental and social barriers to the deployment of new production facilities.

The Commission initiative for Safe and Sustainable by Design¹⁰⁹ (SSbD) sets a framework for assessing the safety and sustainability of chemicals and materials which should be considered as a reference for project proposals.

Proposals could consider the involvement of the European Commission's Joint Research Centre (JRC) whose contribution could consist of providing added value regarding various aspects of battery sustainability, considering in particular provisions of the 2023/1542 battery regulation. For further information on the JRC's possible contribution to the projects, please, search for additional publicly available information on the JRC's website (EU Science Hub) on the NCP portal, or request specific information from the JRC (JRC-NCP-Network@ec.europa.eu)

JRC shall assure that all the other applicants receive the same information on the JRC's possible contribution to the project (e.g., via the topic-specific FAQs under the Funding and Tenders Portal).

Projects are expected to collaborate and contribute to the activities of the Coordination and Support Action defined under the topic HORIZON-CL5-2025-D2-02-06.

This topic implements the co-programmed European Partnership on Batteries (Batt4EU). As such, projects resulting from this topic will be expected to report on the results to the European Partnership on Batteries (Batt4EU) in support of the monitoring of its KPIs.

HORIZON-CL5-2026-01-D2-04: Integrating advanced materials, cell design and manufacturing development for high-performance batteries aimed at mobility (Batt4EU Partnership)

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU</i>	The Commission estimates that an EU contribution of around EUR

¹⁰⁹ https://research-and-innovation.ec.europa.eu/research-area/industrial-research-and-innovation/key-enabling-technologies/chemicals-and-advanced-materials_en

<i>contribution per project</i>	10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 30.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results under this topic are expected to contribute to all of the following outcomes:

- European battery cell manufacturers are supported in their transition from incumbent (Gen.3) liquid electrolyte lithium-ion battery to high performance (solid-state) lithium-ion batteries;
- Increased diversity of chemistries, cell design (application-oriented) of the existing production lines and enabling European Original Equipment Manufacturers (OEMs) to stay competitive;
- Scaled production for premium products is targeted in the medium-term (for specific applications such as aviation), and large-scale production is targeted in the longer term.

Scope: The scope covers quasi-solid and all-solid-state lithium-ion battery technologies (up to 5% liquid electrolyte weight percentage) which encompasses Si-C composite anodes **or** lithium metal anodes.

Process-Specific Machinery and Technological Upgrades

Projects are expected to identify and target at least one key manufacturing process for enhancement, and to focus on optimising and testing the specific critical process(es) within existing production lines rather than overhauling the entire production system. These processes must be critical to the transition from liquid electrolyte to solid-state batteries and have the potential for high-impact improvements in terms of production yield, quality, cost, and sustainability including energy consumption.

Projects are expected to cover all of the following tasks:

- Provide detailed plans on how existing machinery and systems can be adapted to optimise the chosen process, ensuring that these enhancements are both impactful and economically viable;
- Modify existing machinery to better support the specialised requirements of the targeted process. This includes enhancing capabilities to handle new materials and designs efficiently;
- Develop and implement technological innovations that specifically enhance the chosen process, such as precision manufacturing tools and additive manufacturing.

Feasibility and Impact Validation

Projects are expected to conduct pilot testing to validate the feasibility and benefits of the enhancements on the chosen process. Proposals are expected to include clear metrics for evaluating improvements, such as reductions in energy consumption, increases in production yield, and enhancements in product consistency.

Projects are encouraged to evaluate the impact of the new or improved process on other steps in the manufacturing line, including any necessary modifications to adjacent processes, or across other parts of the production line and in different manufacturing environments.

Advanced Materials and Cell Design Integration

Projects are expected to tailor the design of the produced cell to maximise the benefits of the improved process. This can be done through the development of new advanced materials or through the integration of existing materials to improve the targeted manufacturing process.

Digitalisation, Data Integration and Analytics and Process Control

Projects are expected to cover at least one of the following tasks:

- Implement advanced control systems and digital technologies that are specifically designed to optimise the chosen process, improving efficiency, and reducing waste;
- Develop new process simulation methods, process models and materials chemistry models allowing to virtually assess novel cell designs' flexible manufacturability at scale for adapted existing plants.

In addition, projects are encouraged to leverage data analytics and data-driven approaches (artificial intelligence) to enhance decision-making and process optimisation, focusing on the specific needs and challenges of the targeted process.

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation. The exploitation plans are expected to include preliminary plans for scalability, commercialisation, and deployment (feasibility study, business plan).

Proposals could consider the involvement of the European Commission's Joint Research Centre (JRC)¹¹⁰ whose contribution could consist of performing experimental research on battery performance and/or safety. For further information on the JRC's possible contribution to the projects, please, search for additional publicly available information on the JRC's website (EU Science Hub) on the NCP portal or request specific information from the JRC (JRC-NCP-Network@ec.europa.eu).

JRC shall assure that all the other applicants receive the same information on the JRC's possible contribution to the project (e.g., via the topic-specific FAQs under the Funding and Tenders Portal).

Projects are expected to collaborate and contribute to the activities of the Coordination and Support Action defined under the topic HORIZON-CL5-2025-D2-02-06.

To strengthen the European battery ecosystem, projects are expected to use materials, products and equipment produced in EU Member States and countries associated to Horizon Europe, unless it is demonstrated that no valid option exists. The procurement strategies should be described in the proposal, especially and to the furthest extent possible the place of production of the elements.

This topic implements the co-programmed European Partnership on Batteries (Batt4EU). As such, projects resulting from this topic will be expected to report on the results to the European Partnership on Batteries (Batt4EU) in support of the monitoring of its KPIs.

HORIZON-CL5-2026-01-D2-05: Accelerated multi-physical and virtual testing for battery aging, reliability, and safety evaluation (Batt4EU Partnership)

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p> <p>The Joint Research Centre (JRC) may participate as member of the</p>

¹¹⁰ https://joint-research-centre.ec.europa.eu/laboratories-z/battery-energy-storage-testing_en

	consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹¹¹.</p>

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- Shortened development time of battery cells and battery systems by minimising the experimental testing effort, thus reducing the overall costs and the time to market;
- Increased battery reliability and safety through better understanding of ageing, and safety-relevant (deactivation, degradation, failure) mechanisms;
- Acceleration of a more reliable verification and validation of new solutions contributing to increased user acceptability (safety, performance & costs) and competitiveness of the European battery value chain;
- Standardised battery system testing & validation approaches focussing on the combination of physical and virtual test methodologies.

Scope: This topic aims to reduce development costs and time to market of new battery systems by accelerated multi-physical and virtual testing. Current test strategies are still very time consuming and costly due to the need to understand the impact of multi-physical operational loads (electric, thermal, mechanical, etc.), potential failure modes, ageing and misuse on the safety and reliability of battery cells and modules.

To overcome these barriers, new multi-physical test strategies supplemented by virtual testing are required taking into account the most impactful parameters on ageing, reliability and safety and their dependencies.

Proposals are expected to address Electric Vehicle (EV) batteries and are encouraged to develop techniques and methodologies which are applicable to other forms of electro-mobility as well as stationary applications (including second life).

¹¹¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Proposals are expected to address and demonstrate all the following activities:

- Understand and describe the impact of multi-physical operational loads, failure modes, ageing and misuse on battery reliability and safety highlighting the dependencies between them in order to design the most adequate testing methods and parameters;
- Derive advanced operating profiles for testing and development of novel X-in-the-Loop (XiL) test environments for multi-physical and accelerated testing addressing electrical, thermal and mechanical loads at the same time;
- Combine physics-based with data-driven test strategies enabling reliable virtual and physical battery testing considering specific applications;
- Develop simplified test strategies reducing the number of tests and their complexity while improving battery safety and reliability. Synergies between different battery chemistries, including next generation battery designs and sizes must be exploited where possible, allowing to re-use or scale test results from cell to system level;
- Research activities are also expected to lead to advanced response strategies for damaged and aged batteries. Furthermore, a contribution to the European safety classification system is expected by developing standards for this safety classification. To this end, proposals are expected to establish contact and exploit complementarities with selected proposals under topic HORIZON-CL5-2025-04-D5-03 “Safe post-crash management of road Light Duty Battery Electric Vehicles (BEVs) (2ZERO Partnership)” with regards to monitoring techniques for safety risks, algorithms for defining state of health and remaining useful life.

Activities covering the following aspects are encouraged:

- Development of virtual methods for full system validation using physical sub-system results;
- Development, exploitation, and harmonisation of advanced battery cell or pack measurement and diagnostic methods for enhancing the data depth and breadth over what is currently available. Definition of performance indicators relating to battery degradation and safety, and development of methods for the validation of digital models.
- Application of AI and generative AI for the definition of the design of experimental and testing strategies to increase the outcome of experimental testing campaigns, in order to accelerate achievement of significant conclusions, and to thus reduce testing time and effort.

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation. The exploitation plans are expected to include preliminary plans for scalability,

commercialisation, and deployment (feasibility study, business plan) indicating the possible funding sources to be potentially used (in particular the Innovation Fund).

Proposals are expected to also establish cooperation and complementarity with the selected proposal under the topic HORIZON-CL5-2023-D2-02-03: “Creating a digital passport to track battery materials, optimise battery performance and life, validate recycling, and promote a new business model based on data sharing (Batt4EU Partnership)” with regards to safety and ageing information as part of the battery passport.

Proposals could consider the involvement of the European Commission's Joint Research Centre (JRC)¹¹² whose contribution could consist of performing experimental or desk-top research on battery performance and/or safety. For further information on the JRC's possible contribution to the projects, please, search for additional publicly available information on the JRC's website (EU Science Hub) on the NCP portal, or request specific information from the JRC (JRC-NCP-Network@ec.europa.eu)

JRC shall assure that all the other applicants receive the same information on the JRC's possible contribution to the project (e.g., via the topic-specific FAQs under the Funding and Tenders Portal).

Projects are expected to collaborate and contribute to the activities of the Coordination and Support Action defined under the topic HORIZON-CL5-2025-D2-02-06.

To strengthen the European battery ecosystem, projects are expected to use materials, products and equipment produced in EU Member States and countries associated to Horizon Europe, unless it is demonstrated that no valid option exists. The procurement strategies should be described in the proposal, especially and to the furthest extent possible the place of production of the elements.

This topic implements the co-programmed European Partnership on Batteries (Batt4EU). As such, projects resulting from this topic will be expected to report on the results to the European Partnership on Batteries (Batt4EU) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-02-D2-06: Fostering the European battery ecosystem by providing accurate and up-to-date information and stimulating excellence in the European battery R&I community (Batt4EU Partnership)

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

¹¹² https://joint-research-centre.ec.europa.eu/laboratories-z/battery-energy-storage-testing_en

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹¹³.</p>

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- A solid basis of information is established addressing R&I stakeholders and supporting decision making within the European battery value chain, at European, national, and regional levels, and for public and private actors alike;
- An agile European battery value chain is set up that can update its priorities based on global trends;
- Maximisation of the scientific, technological, economic, and societal impact of the BATT4EU Partnership and its projects and paving the way to industrial exploitation of their research results in key energy and transport application domains;
- A well-coordinated, best-in-the-world, battery research community is fostered in Europe, gathering excellent scientists and innovators as well as involving other relevant stakeholders;
- Excellence in battery research is spread across Europe, enhancing the wide adoption of best practices.

Scope: The project proposal should cover all of the following tasks:

¹¹³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Animate and organise the National and Regional Coordination Group (NRCG) in coordination with the Batteries European Partnership Association (BEPA)¹¹⁴;
- Cooperate with the European Technology and Innovation Platforms (ETIPs), Important Projects of Common European Interest (IPCEIs)¹¹⁵ and similar stakeholder fora.
- Provide support to existing SET Plan Implementation Plans and advancement towards more interconnected activities, both in terms of contents and implementation mechanisms;
- Create and maintain an online accessible platform which provides:
 - o A rolling assessment of the current state-of-the-art of the battery technology, both globally and in the EU and Associated Countries;
 - o An updated set of technical targets and intermediary KPIs to track the progress of the battery technology in the EU;
 - o A rolling overview of open and recently closed calls on batteries from research and innovation programmes on European, national, and regional level. This task should build upon the links with the NRCG, ETIPs, and any ongoing IPCEIs on batteries. Direct collaboration with national funding agencies is encouraged.

Proposals should include a credible strategy for how this platform could be continued beyond the time horizon of the project.

- Provide an analysis of battery roadmaps from other global regions and see how they compare to the state-of-art and targets set for the European battery technology development and propose updates to the European battery R&I strategy in a yearly report for short-, medium- and long-term research needs;
- Support monitoring efforts undertaken by the European Commission, the European Battery Alliance (EBA)¹¹⁶ regarding the above-mentioned indicators of technological progress in Europe;
- Provide scientific animation of the Battery R&I Community, that includes the organisation of (thematic) community events to improve the overall knowledge level of the sector; ensure that projects working on similar topics can learn from each other and that projects goals converge towards the objectives of the Partnership; inform on possible funding mechanisms (e.g., Innovation Fund and the EBA One-Stop-Shop) to take developed technologies to the next level;
- Share best practices with the community and push for adoption of common data standards and reporting methodologies;

¹¹⁴ [BATT4EU \(bepassociation.eu\)](https://batt4eu.eu)

¹¹⁵ [IPCEI Batteries \(ipcei-batteries.eu\)](https://ipcei-batteries.eu)

¹¹⁶ [Building a European battery industry - European Battery Alliance \(eba250.com\)](https://eba250.com)

- Co-organise together with BEPA and other interested stakeholders an annual conference where BATT4EU projects can share their results.

Proposals could consider the involvement of the European Commission's Joint Research Centre (JRC) whose contribution could consist of providing input to or discuss technical targets or KPIs and testing the capability of the observatory to provide meaningful data for EC / JRC work. For further information on the JRC's possible contribution to the projects, please, search for additional publicly available information on the JRC's website (EU Science Hub) on the NCP portal, or request specific information from the JRC (JRC-NCP-Network@ec.europa.eu)

JRC shall assure that all the other applicants receive the same information on the JRC's possible contribution to the project (e.g., via the topic-specific FAQs under the Funding and Tenders Portal).

This topic implements the co-programmed European Partnership on Batteries (Batt4EU). As such, projects resulting from this topic will be expected to report on the results to the European Partnership on Batteries (Batt4EU) in support of the monitoring of its KPIs.

Communities and cities

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-06-D2-07: Driving Urban Transitions to a sustainable future (DUT) Co-Funded Partnership

Call: Cluster 5 Call 06-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 56.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 56.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The proposal must be submitted by the coordinator of the consortium funded under HORIZON-CL5-2021-D2-01-16: Co-Funded Partnership: Driving Urban Transitions to a sustainable future (DUT). This eligibility condition is without prejudice to the possibility to include additional partners.</p>

<p><i>Procedure</i></p>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The evaluation committee will be composed partially by representatives of EU institutions.</p> <p>If the outcome of amendment preparations is an award decision, the coordinator of the consortium funded under the grant agreement that was established in response to the call topic HORIZON-CL5-2021-D2-01-16 and HORIZON-CL5-2023-D2-01-08 will be invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.</p>
<p><i>Legal and financial set-up of the Grant Agreements</i></p>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>This action is intended to be implemented in the form of an amendment of the grant agreement concluded pursuant to topics HORIZON-CL5-2021-D2-01-16 and HORIZON-CL5-2023-D2-01-08.</p> <p>For the additional activities covered by this action:</p> <ul style="list-style-type: none"> • The funding rate is up to 30 % of the eligible costs. • Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. • The maximum amount of FSTP to be granted to an individual third party is EUR 5.000.000. This amount is justified since provision of FSTP is the primary activity of this action and it is based on the extensive experience under predecessors of this partnership. <p>The starting date of the grant awarded under this topic may be as of the submission date of the application. Applicants must justify the need for a retroactive starting date in their application. Costs incurred from the starting date of the action may be considered eligible (and will be reflected in the entry into force date of the amendment to the grant agreement).</p>

Expected Outcome: This topic is a continuation of the Driving Urban Transitions to a sustainable future (DUT) Co-Funded Partnership to enable the roll-out of its full strategy and action plan and assist cities in their sustainability and climate neutrality transitions. Actions will contribute to the achievement of the European Green Deal targets, the UN 2030 Agenda for Sustainable Development commitments, the Urban Agenda for the EU, the New EU Urban Mobility Framework, the Habitat III New Urban Agenda and the Paris Agreement. European cities need to engage urgently in sustainability and climate-neutrality transitions.

The partnership is expected to contribute to all of the following expected outcomes:

- Enhanced multi-level cooperation and alignment on R&I on sustainable urban development across and within cities, regions, and countries, including international outreach and cooperation with other networks and initiatives;
- EU is strengthened as a role model for R&I on sustainable urban development; cooperate with international cities and research funding networks (e.g., Belmont Forum) to align strategies and R&I agendas and strengthen the role of DUT as co-lead of the Urban Transitions Mission (UTM) under Mission Innovation (MI). In this context, potential synergies could be also considered with ongoing EU funded work related to Africa, to enhance the implementation of DUT Strategic Research & Innovation Agenda (SRIA);
- Set up innovative, cross-sectoral, and inclusive urban governance, policy, and decision-making harnessing the full potential of social science and citizens' engagement in the city development process;
- Integrate emerging mobility and transport services, and align them with the citizens' needs and preferences;
- Foster sustainable, climate-neutral, safe, resilient, socially inclusive, liveable, and attractive neighbourhoods, towns, cities and urban services, with reduced environmental footprint (e.g., burdens from other pollutants, foster the reuse of materials in view of increased integration of circularity aspects) and net-zero greenhouse emissions, and enhance well-being and quality of life for citizens;
- Empower local authorities, municipalities, businesses, social partners, civil society, knowledge institutions and citizens with necessary capacity, knowledge and skills; deliver efficient urban tools, solutions methodologies and processes to actively engage in sustainability and climate-neutrality transitions;
- Increase science and evidence-based implementation of the European Green Deal, the Urban Agenda for the EU and other European, national, regional, and local urban-relevant policies and strategies (e.g., Circular Economy Action Plan).

Scope: The objective of this action is to continue to provide support to the European “Driving Urban Transitions to a sustainable future ” (DUT) Co-funded Partnership identified in the Horizon Europe Strategic Plan 2021-2024 – first implemented under the topic *HORIZON-CL5-2021-D2-01-16: Co-Funded Partnership: Driving Urban Transitions (DUT)* – and to fund additional activities (which may also be undertaken by additional partners) in line with its intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation.

The proposal should capitalise upon new collaboration opportunities offered by the Association Agreements to Horizon Europe, the “EU Climate Neutral and Smart Cities” Mission and the Global Urban Transitions Mission (UTM) of Mission Innovation to enhance expertise, capacities, critical mass and broaden geographical coverage and outreach capacity.

With respect to international outreach, mutual benefits from collaboration and cooperation with global and international cities and research funding networks should be pursued to align strategies and research agendas and promote scientific evidence and good practice for urban policy at international level.

Taking into account that the present action is a continuation of topic HORIZON-CL5-2021-D2-01-16 and HORIZON-CL5-2023-D2-01-08, it foresees an amendment to an existing grant agreement, the proposal should describe plans, activities and initiatives that would enable the DUT to ensure, as appropriate, a seamless pursuance of its strategy, objectives and actions to fill important gaps in knowledge, evidence, innovation, technology, data, capacity and skills, integrated approaches, while fostering inclusive and participatory governance structures and assisting cities at European (and, as appropriate, global) level in designing and implementing the transition towards sustainability and climate neutrality.

The proposal should describe in detail additional activities (including additional partners) to be covered by the grant and justify their added value as compared to ongoing actions, whilst accounting for actual progresses in relevant EU and international policy frameworks and urban initiatives. The proposal is expected to cover DUT calls for proposals included in the work programme (2025-2027). from 2025 to 2027.

The proposal should elaborate on modalities to scale-up synergies with the works of the NetZeroCities Mission Platform, the CapaCITIES coordination and support action and, as appropriate, with other EU Missions and related platforms (e.g., MIP4Adapt). Those synergies will underpin the implementation of the “EU Climate Neutral and Smart Cities” Mission and ensure the coherence and complementarity of activities while leveraging knowledge and investment possibilities.

Furthermore, concrete actions should be envisaged to enhance collaboration and synergies with other European Partnerships such as Clean Energy Transitions (CET), Built environment and construction (Built4People), Rescuing biodiversity (Biodiversa+), Safe and Sustainable Food Systems, Towards Zero Emission Road Transport (2ZERO), Cooperative, Connected and Automated Mobility (CCAM), EIT Urban Mobility and Water4All.

Interfaces with public procurement and investment programmes and links with Urban Innovative Actions (UIA) under the Urban Agenda for the EU, the European Urban Initiative (EUI) under the Cohesion Policy Funds, private funds, etc. should be explored to support take-up and larger scale implementation of tested approaches and solutions.

The consortium that won the grant under topic HORIZON-CL5-2021-D2-01-16 is uniquely placed to submit a proposal to continue the envisioned partnership. It is noted that this consortium submitted the initial proposal leading to the identification of the partnership in the Horizon Europe strategic planning 2021-2024. Moreover, it has implemented the partnership through the co-funded calls in the years 2022 and 2023. In this context, the current consortium has specific expertise in relation to the objectives of the Partnership, the activities implemented in 2022 and 2023 co-funded calls, or other calls/scope of calls clearly required/envisaged pursuant to initial proposal/partnership, and other relevant aspects of the

action. In practice, no other consortium would be able to continue the activities of the Partnership underway without a significant disruption of the ongoing activities.

While the grant under this topic should be attributed to a proposal submitted by the coordinator of the consortium funded under topic HORIZON-CL5-2021-D2-01-16, the consortium applying to the present topic may include additional partners and new activities, to be funded by the grant subject to an evaluation, which will take into account the existing context and the scope of the initial evaluation (as relevant), and related obligations enshrined in the grant agreement.

Cross-cutting

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-02-D2-08: Coordinated call with India on waste to renewable hydrogen

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The project must include at least one work package for coordinated activities with the linked project awarded by the Ministry of New and Renewable Energy of the Government of India (MNRE). In case of participation of legal entities established in India, which is a third country under Horizon Europe, these can only participate as associated partners.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Grants awarded under this topic will be linked to the coordinated project awarded by the Ministry of New and Renewable Energy of the Government of India (MNRE).</p>

Expected Outcome: In addition to renewable hydrogen produced by water electrolysis, there is a need to develop other technologies to cover the sustainable hydrogen demand of future society including industry, energy and transport. Agricultural, forest and industrial biogenic waste resources may offer significant potential for bio-based hydrogen production. R&I in this area has been identified as a priority by the EU-India Trade and Technology Council's Working Group on Green and Clean Energy Technology to reinforce bilateral cooperation.

Project results are expected to contribute to all of the following expected outcomes:

- Renewable hydrogen producers and consumers based in the EU and India benefit from improved sustainability, safety, and affordability of renewable hydrogen production technologies from biogenic wastes (compared to existing ones);
- Technology developers based in the EU and India benefit from the expanded portfolio of renewable hydrogen production concepts through biogenic wastes use;
- Stakeholders on renewable hydrogen production based in the EU and India benefit from each other's experience on renewable hydrogen from biogenic wastes;
- The cooperation between EU and India key researchers, institutions and industries which are active in biogenic waste to renewable hydrogen research is supported and strengthened.

Scope: The topic aims at developing innovative technologies to produce renewable hydrogen from biogenic wastes without recycling potential such as agricultural, forest and biogenic part of municipal wastes, sewage sludge and industrial waste waters, through biochemical and thermochemical Waste to renewable Hydrogen (W2rH) pathways. Focus will be on increasing the resource efficiency (carbon to hydrogen yield), reducing the GHG emissions or even generating a negative carbon footprint, decreasing environmental footprint for pollution and water consumption, and significantly reducing the production cost of hydrogen. Use of advanced catalysts to enhance primary conversion or upgrading of the intermediate from primary conversion or process intensification methods including advanced reactor technologies are in the scope. Utilisation of side streams such as aqueous and gaseous streams from primary conversion and/or their further conversion using biological, electrochemical, biochemical and/or catalytic technologies are in the scope as well. Development of feedstock pretreatment methods including sorting and post-treatment technologies required for hydrogen purification could be included in the projects.

An assessment of the feedstock cost supply at regional and local level suitable for the selected conversion technology and improvement of feedstock mobilisation patterns including via enabling technologies, such as digitalisation, should be performed. Preliminary economic feasibility as well as socioeconomic and environmental sustainability of the developed concept including assessing potential impacts on land use, water use, biodiversity, and greenhouse gas emissions, as well as social impacts, are expected to be assessed by the project on a life-cycle analysis basis. The production cost of the W2rH pathway should be compared to the state-of-the art production technologies of renewable hydrogen and with aim to be

reduced. Projects should develop an overall process concept using advanced modelling techniques including flowsheet modelling for mass and energy flows.

Safety aspects and ways to increase safety concerning the hydrogen and other gaseous and system component leakages are expected to be addressed in a ‘hydrogen safety planning and management’ plan at the project level. Project developers are encouraged to contact the European Hydrogen Safety Panel (EHSP)¹¹⁷ established under the Clean Hydrogen Partnership to benefit from the developed experience in safety issues for hydrogen systems. The projects should lead to commercially viable and economically interesting pathways when upscaled.

Organic waste being not biogenic is not in the scope of the call.

The exploitation of results, including IPR, should be appropriately addressed in the proposal.

Joint work should benefit from the Indian and European experience in W2rH. Linked EU and Indian projects should have the same start date, the same duration, and same targets. Proposals must show clearly how the coordination among them will bring added scientific value. To ensure a project implementation that reflects a genuine EU-Indian cooperation, linked projects should include properly coordinated research activities between EU and India in the Work Plan of the two coordinated projects.

Proposals will include detailed explanations about tasks and effort of the coordinated proposal as a whole and cross-references to the e proposal for the linked project.

This topic aims at exploiting synergies between India and Europe in terms of scientific expertise and resources in topics related to W2rH production by implementing coordinated projects. Potential areas for collaboration (i.e. the coordinated part of the call) could include (but are not limited to) optimising fermentation and thermochemical processes, developing new catalysts, and improving separation techniques, as well as assessment of sustainability, technoeconomic feasibility and safety aspects including by using advanced process modelling.

The topic falls within the scope of the EU-India Strategic Partnership and the EU-India Trade and Technology Council in relation to waste to renewable hydrogen. For the purposes of this topic, the Ministry of New and Renewable Energy of the Government of India (MNRE) has made the required funding available for the coordinated projects of the Indian side¹¹⁸. A balanced effort and matched budget between Europe and India regarding the two coordinated projects are expected.

In order to maximise synergies and increase the impact of the projects under this topic, proposals selected for funding under this topic will be required to participate in common networking and joint activities. Without the prerequisite to detail concrete joint activities, proposals should allocate a sufficient budget for the attendance of joint meetings periodically.

HORIZON-CL5-2026-01-D2-09: Monitoring and Evaluation of the Societal Readiness Pilot

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 1.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 1.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Procedure</i>	The procedure is described in General Annex F. The following exceptions apply: The evaluation committee will be composed partially by representatives of EU institutions.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹¹⁹ .

Expected Outcome: Societal Readiness (SR) is an indicator of R&I results, expressing they have accounted for different societal needs and concerns, thereby increasing their potential for societal uptake.

The project is expected to contribute to all of the following outcomes:

- The European Commission has a comprehensive overview on the way Societal Readiness is addressed and integrated in piloted projects, and main challenges and concerns are identified;
- A proven strategy to intensify collaboration between STEM¹²⁰ and SSH¹²¹ partners led to in-depth interdisciplinary work in R&I projects. All involved project constituencies and

¹¹⁹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹²⁰ Sciences, Technology, Engineering and Mathematics

relevant parts of society are accounted for in an integrated way to ensure broad and sustainable support for R&I solutions;

- The next generation of Societal Readiness projects benefits from current pilot projects' experiences, success stories and do's and don'ts thanks to a public web platform, acting as a one-stop-shop for Societal Readiness for future EU projects;
- The European Commission is equipped with a sound, clear, and replicable procedure – both at implementation and content level – presented as an improvement of the current approach, to address Societal Readiness effectively in future EU funded R&I projects.

Scope: The European Commission has a strong interest in learning from the implementation of Societal Readiness actions piloted in eight topics from the Cluster 5 work programme 2025¹²², and resulting in an estimate of eighteen projects to be implemented. Conclusions on the pilot's monitoring and evaluation will be the basis for the European Commission's decision to replicate further these actions, to improve its implementation and possibly widen its use to other fields of application.

The instructions and definitions applying to pilot topics are included in the introduction of the Horizon Europe Main Work Programme 2025 for Climate, Energy and Mobility.

The action is expected to analyse the way Societal Readiness is addressed and integrated in piloted projects and help in designing an efficient, clear, and impactful way of applying a Societal Readiness approach in future EU funded R&I projects with a true interdisciplinary collaboration.

The project selected should address all of the following actions:

- Make a consolidated analysis:
 - o on the way Societal Readiness is considered and integrated in the ***Descriptions of the Actions***¹²³ of selected pilot-projects in terms of content (e.g., the type of Responsible Research and Innovation (RRI) guiding questions chosen and related methodology), implementation (e.g., SR related work distribution and partners) and methodology. Assess the level, timing, and quality of interactions between SSH and STEM partners during the proposal preparation.
 - o of all ***First reports on Societal Readiness*** to be delivered by the selected pilot-projects. Assess the way SR consideration unfolds from the *Description of the Actions'* methodology, observe how guiding questions are addressed and plan to respond to the concerns identified. Compare the various 'SR visions' put forward by each consortium.

¹²¹ Social Sciences and Humanities

¹²² HORIZON-CL5-2025-03-D1-06; HORIZON-CL5-2025-02-D3-04; HORIZON-CL5-2026-02-D4-02; HORIZON-CL5-2025-04-D5-01; HORIZON-CL5-2025-04-D6-01; HORIZON-CL5-2025-04-D6-02; HORIZON-CL5-2025-04-D6-11; HORIZON-CL5-2025-04-D6-12

¹²³ A declaration of confidentiality will be signed by the CSA

- o of all ***Final reports on Societal Readiness*** to be delivered by the selected pilot-projects. Assess the various projects' experiences, challenges and lessons learned during the actual implementation of the Societal Readiness activities, looking at the participation and type of external actors in co-design methods, responses to SR guiding questions, possible adjustment of R&I activities.

Mid-project recommendations based on the two first points are expected in order to give a preliminary sense of directionality for future Societal Readiness projects.

- Analyse the various **interdisciplinarity** mechanisms (SSH vs. STEM, collaboration with societal stakeholders) across pilot-projects as well as their effectiveness in practice. Identify successful interdisciplinary approaches and less successful ones. Possible evolutions in partners behaviours, or changes in interdisciplinary strategies should be identified. The degree of involvement from partners in SR activities, as well as the way they perceive them (in a positive or negative way) should also be scrutinised. This analysis should result in a publication with concrete tips helping future project partners integrating implementable, efficient, and well-accepted interdisciplinary practices both within consortia and towards external actors.
- Organise **annual workshops** in physical format to allow all pilot project representatives to meet, interact and exchange experiences periodically. Travel costs for all participants are to be covered by this action.
- Set up a **public web platform** during the action duration, to provide a direct source of support to future SR users, including examples of SR pathways, do's and don'ts, tips and tricks specifically tailored to facilitate the use and understanding of the European Commission's approach on Societal Readiness. A survey submitted beforehand to pilot-projects partners could be envisaged to help in defining those needs. The platform should be updated and completed on a regular basis.
- Eventually provide a set of **recommendations to the European Commission** taking stock of the work achieved as well as of the recommendations elaborated by pilot-projects in their *Final reports on Societal Readiness*. Practical improvements of the current Societal Readiness approach should be proposed to overcome identified shortcomings, while at the same time, acknowledging the successful aspects of the current approach. The overall Societal Readiness vision¹²⁴ should be kept in mind when providing those recommendations, while aiming at keeping a lowest level of implementation complexity, a highest degree of understandability (including for non-SSH experts) and replicability to various technology maturities and fields of applications, as well as a strong interdisciplinary component.

¹²⁴ Societal Readiness is an indication of R&I results, expressing they have accounted for different societal needs and concerns, thereby increasing its potential for societal uptake and transition towards societal adaptation. Working towards Societal Readiness means to better understand that R&I should be driven by the needs, values, and expectations of diverse social groups, inclusive and transparent in processes and outcomes, active in identifying, mitigating, and avoiding negative social, environmental, and economic externalities.

An analysis of the added value of SR pilot topics compared to SSH-flagged-only-topics within Cluster 5 as well as of other relevant Societal Readiness routes (e.g. at national level) applied to R&I projects in the area of Climate, Energy and/or Mobility should be performed. Successful practices identified may complement recommendations to be provided to the Commission.

Information on e.g. on perceptions, feelings, concerns, past experiences on ways of working that is not translated into projects' documents should be collected via direct interactions (bilateral discussions with respective project partners).

The action should also initiate similar monitoring activities on Societal Readiness pilot projects funded under future Horizon Europe work programmes, whenever operational phases of this action and new pilot projects overlap.

A duration of 42 months is recommended for this action.

The proposed action requires the effective contribution of relevant SSH disciplines including the involvement of SSH experts to proficiently support the monitoring and evaluation of Societal Readiness pilot-projects in Cluster 5 work programme 2025.

HORIZON-CL5-2025-02-D2-10: Clean Energy Transition Co-Funded Partnership

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 69.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 69.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The proposal must be submitted by the coordinator of the consortium funded under HORIZON-CL5-2021-D3-01-04 Clean Energy Transition. This eligibility condition is without prejudice to the possibility to include additional partners.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The evaluation committee can be composed partially by representatives of EU institutions.</p> <p>If the outcome of amendment preparations is an award decision, the</p>

	<p>coordinator of the consortium funded under the topic HORIZON-CL5-2021-D3-01-04 will be invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.</p>
<p><i>Legal and financial set-up of the Grant Agreements</i></p>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>This action is intended to be implemented in the form of an amendment to the grant agreement concluded pursuant to topics HORIZON-CL5-2021-D3-01-04 and HORIZON-CL5-2023-D3-01-18.</p> <p>For the additional activities covered by this action:</p> <ul style="list-style-type: none"> • The funding rate is up to 30 % of the eligible costs. • Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. • The maximum amount of FSTP to be granted to an individual third party is EUR 5.000.000. This amount is justified since provision of FSTP is the primary activity of this action and it is based on the extensive experience under predecessors of this partnership. <p>The starting date of the grant awarded under this topic may be as of the submission date of the application. Applicants must justify the need for a retroactive starting date in their application. Costs incurred from the starting date of the action may be considered eligible and will be reflected in the entry into force date of the amendment to the grant agreement.</p>

Expected Outcome: This topic is a continuation of the Clean Energy Transition Co-fund partnership (CET Partnership) and constitutes the EU contribution for the period 2025-2027.

The third instalment of the partnership will contribute to the expected outcomes specified in topic *HORIZON-CL5-2021-D3-01-04: Clean Energy Transition, for continuation and development of new activities.*

The partnership is expected to contribute to all of the following expected outcomes:

- Increased directionality of clean energy transition research and innovation in EU and Associated Countries in line with the SET Plan thanks to a shared pan-European vision on the goal and direction of required system transformation processes, adapted to regional needs and availability of renewable energy resources;
- Evidence based energy and climate policy formulation;

- A wider systemic transition and energy supply required for a climate neutral economy in all sectors of society; enabling the transition of the built environment, transport, industry and other sectors to clean, low carbon energy;
- An innovation ecosystem for Europe's transition to clean energy and contribution to a resource and energy efficient system, both from an ecological and economic standpoint;
- A building block to a zero-emission energy system for the decarbonisation of transport, buildings, industry, agriculture in the specific European environment;
- Increased engagement of consumers and prosumers as well as fair and appropriate demand-response mechanisms integrated in the energy system;
- An energy system that meets the needs of different parts of society, in different geographical locations (urban and rural) and different groups.

Scope: The Clean Energy Transition co-funded Partnership (CET Partnership) is a transnational initiative on joint R&I programming to boost and accelerate the energy transition, building upon regional and national R&I funding programmes.

It aims at empowering the energy transition and contributing to the EU goal of becoming the first climate-neutral continent by 2050, by pooling national and regional R&I funding for a broad variety of technologies and system solutions required to achieve the transition. It will foster innovation ecosystems from the very local and regional level, up to the transnational European level, thus overcoming a fragmented European landscape. The CET Partnership enables national and regional R&I programme owners and managers from Member States and Associated Countries to align their priorities and implement annual joint calls from 2022 to 2027. The Partnership also organises joint accompanying activities to enable a dynamic learning process, extracts strategic knowledge and accelerates the upscaling, replication, and market diffusion of innovative solutions to maximise impact and foster the uptake of cost-effective clean energy technologies.

The common vision of the CET Partnership is already expressed in its Strategic Research and Innovation Agenda (SRIA) that has been co-created with the involved countries, the EU SET Plan Implementation Working Groups and ETIPs, all energy relevant ERA-Nets as well as the EERA joint programmes (over 500 editors, co-authors, commenters, and discussants). The SRIA articulates the common goal of (1) building a transnational transformative Joint Programming Platform, (2) developing and demonstrating technology and solutions for the transition of energy systems, and finally (3) building innovation ecosystems that support capacity building at all levels.

The objective of this action is to continue to provide support to the European Clean Energy Transition Co-fund Partnership identified in the Horizon Europe Strategic Plan 2021-2024 and first implemented under topic HORIZON-CL5-2021-D3-01-04, and in particular to fund additional activities (which may also be undertaken by additional partners) in view of its

intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation.

The new geopolitical and energy market realities require to drastically accelerate the clean energy transition and increase energy independence from unreliable suppliers and volatile fossil fuels. In support to the objectives of REPowerEU¹²⁵ it is expected that the partnership explores pathways and develops new actions to reinforce R&I investments (and utilisation of R&I results) accelerating the clean energy transition.

It is expected that the European Clean Energy Transition Co-Fund Partnership reinforces its ambition considering the revised SET Plan and continues the implementation of its SRIA by setting up joint calls in 2025, 2026 and 2027. In addition, the partnership is invited to setup joint calls without co-funding from the European Union.

The consortium that won the grant under topic HORIZON-CL5-2021-D3-01-04 is uniquely placed to submit a proposal to continue the envisioned partnership. With regards to the various activities already undertaken in previous years, no other consortium is able to continue the activities of the Partnership underway without a significant disruption of the ongoing activities.

While the grant under this topic should be attributed to a proposal submitted by the coordinator of the consortium funded under topic HORIZON-CL5-2021-D3-01-04, the consortium applying to the present topic may include additional partners and new activities, to be funded by the grant subject to an evaluation, which will take into account the existing context and the scope of the initial evaluation (as relevant), and related obligations enshrined in the grant agreement.

HORIZON-CL5-2025-02-D2-11: Support to the SET Plan community

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 0.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 7.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Award criteria</i>	The criteria are described in General Annex D. The following exceptions apply: Only up to one project will be funded in each of the following sectors:

¹²⁵

[REPowerEU: affordable, secure and sustainable energy for Europe | European Commission \(europa.eu\)](https://ec.europa.eu/energy/en/repowereu)

	<ul style="list-style-type: none"> • geothermal energy • hydropower • ocean energy • photovoltaics • renewable fuels and bioenergy • solar thermal energy • renewable heating and cooling • direct solar fuels • wind energy • energy efficiency in buildings • sustainable and efficient energy use in industry • direct current technologies • carbon capture storage and use • hydrogen • energy systems
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>As the presently ongoing actions supporting the SET Plan in the above-mentioned sectors will end on different dates, the contractual start dates of new actions under this topic shall be set specifically to avoid any overlap exceeding one month.</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹²⁶</p>

Expected Outcome: In 2015, the launch of the Energy Union saw the SET Plan (Strategic Energy Technology Plan) incorporated as the Energy Union’s fifth pillar on ‘Research, Innovation and Competitiveness’. With the 2023 Communication on the revision of the SET

¹²⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Plan, its strategic objectives were harmonised with the European Green Deal, REPowerEU and the Green Deal Industrial Plan. Moreover, the SET Plan became a structural policy under the European Research Area. In 2024, the SET Plan was enshrined in the Net Zero Industry Act and the SET Plan Steering Group was established as a high-level expert group.

Depending on the sector, European Technology and Innovation Platforms (ETIPs), and/or SET Plan Implementation Working Groups (IWGs) and/or similar stakeholder fora support the development and implementation of the SET Plan priorities by bringing together relevant stakeholders in key areas from industry, research organisations and, where applicable, SET Plan countries' government representatives.

It is crucial for the clean energy transition that the SET Plan stakeholder fora align and coordinate their activities.

Project results are expected to contribute to all of the following outcomes:

- European climate and energy policies are supported by science-based evidence.
- The implementation of the SET Plan and its contribution to the Green Deal Industrial Plan, the Net Zero Industry Act and the European Research Area are facilitated.
- The SET Plan stakeholder fora are recognised as key players in the clean energy transition.
- The societal and economic effects of the clean energy transition are addressed through the consideration of interests, needs and concerns of end users and actors across the value chain of the respective technology sectors.

Scope: The projects are expected to support ETIPs and/or IWGs and/or stakeholder fora in one of the sectors listed below, taking into consideration the specific needs of the sector they address, the emerging European policy priorities, and the coordination with other initiatives (to avoid overlaps).

The proposals are expected to address one of the following sectors: geothermal energy, hydropower, ocean energy, photovoltaics, renewable fuels and bioenergy, solar thermal energy, renewable heating and cooling, direct solar fuels, wind energy, energy efficiency in buildings, sustainable and efficient energy use in industry, direct current technologies, carbon capture storage and use, hydrogen, and energy systems.

In line with the Recovery Plan for Europe and the latest EU climate and energy related policies (notably the National Energy and Climate Plans), stakeholder fora are expected to develop research and innovation roadmaps and/or analyses (e.g., strategic research and innovation agendas, strategic reports, industrial strategies, analyses of market opportunities and funding needs, studies on innovation barriers, assessments of their sectors' contribution to the European competitiveness and strategic autonomy). Special attention should be given, as appropriate, to the key challenges of the European Green Deal, the Green Deal Industrial Plan and the Net Zero Industry Act, including (but not limited to) energy security, technological

pushback, industrial production and competitiveness, supply chain security and dependencies, access to market, circularity, advanced materials, digitalisation, societal transformation, skills, and just transition. Moreover, as appropriate, the projects are expected to address the contribution to the goals of the European Research Area in the field of energy, in particular the achievement of the 3% GDP target of public and private spending on research and innovation.

The stakeholder fora should ensure the participation of industrial players (including SMEs), research and civil society organisations, universities and European associations representing relevant sectors (as applicable) across several SET Plan countries, establishing links with national authorities. To maximise impact, the projects are encouraged to develop and implement robust outreach approaches to widen participation from across the EU and associated countries. As appropriate, societal needs and interests should be considered in the activities of the fora, so that inequalities and employment issues are addressed. Where applicable, the stakeholder fora should establish synergies with relevant Horizon Europe European Partnerships.

The projects are encouraged to implement dissemination and networking activities with other relevant projects (e.g., joint workshops, thematic conferences, webinar series, regular exchanges, etc.).

Relevant outputs of the projects will feed into the SET Plan information system (SETIS), the annual SET Plan progress report and the Commission's Clean Energy Technology Observatory. As appropriate, the projects should provide data and analysis tracking the progress of the different technologies towards the EU targets, for instance those set out by the Net Zero Industry Act (e.g., the implementation of non-price criteria), the Critical Raw Materials Act, and the Renewable Energy Directive (e.g., the target for innovative renewable energy technologies to represent at least 5 % of newly installed renewable energy capacity by 2030). Data should be accessible and reusable according to the FAIR data principles (Findable, Accessible, Reusable, Interoperable). The projects are expected to contribute to the reporting of the SET Plan to the European Parliament and the Council.

The projects should prepare new (or update existing) finance and sustainability plans for future continuation of the stakeholder fora without EU funding.

If relevant, this topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, to produce meaningful and significant effects enhancing the societal impact of the related research activities.

The indicative project duration is two years.

HORIZON-CL5-2025-02-D2-12: NZIA regulatory sandbox exchange forum support

Call: Cluster 5 Call 02-2025 (WP 2025)

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 0.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 0.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹²⁷.</p>

Expected Outcome: The framework of measures for strengthening Europe’s net-zero technology manufacturing ecosystem (Net-Zero Industry Act) was adopted¹²⁸ in 2024, establishing a requirement for Member States to set up net-zero regulatory sandboxes¹²⁹ in order to promote innovation and regulatory learning in the field of net-zero technologies. This instrument allows for testing of innovative net-zero technologies in real-world environment for a limited amount of time and with a view of potential scaling up and further wider deployment. Those innovative technologies could eventually be essential to achieve the Union’s climate neutrality objective and to ensure the security of supply and resilience of the Union’s energy system. Regulatory sandboxes contribute to better regulation¹³⁰ and to the New European Innovation Agenda’s¹³¹ flagship on experimentation spaces.

According to the Regulation, Member States designate one or more contact points for setting up net zero regulatory sandboxes and the net zero Europe Platform is assigned to coordinate Member States’ activities and cooperation on net zero regulatory sandboxes. For the wider and accelerated deployment of innovative net-zero technologies it is crucial that the assigned contact points and competent authorities coordinate their activities, exchange information on

¹²⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/lis-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/lis-decision_he_en.pdf

¹²⁸ Regulation (EU) 2024/1735 of the European Parliament and of the Council on establishing a framework of measures for strengthening Europe’s net-zero technology manufacturing ecosystem and amending Regulation (EU) 2018/1724

¹²⁹ It means a scheme that enables undertakings to test innovative net-zero technologies and other innovative technologies in a controlled real-world environment, under a specific plan, developed and monitored by a competent authority

¹³⁰ Tool 69 of better regulation toolbox of the European Commission.

¹³¹ COM(2022) 332 of 5.7.2022

lessons learnt and good practices and cooperate, including possible cross-border implementation.

Project results are expected to contribute to all of the following outcomes:

- Regulatory learning of how regulation supports or hampers the enhanced use of innovative net-zero technologies;
- Net zero regulatory sandboxes schemes are well established, streamlined and designed;
- The net zero Europe Platform actively and smoothly exchanges information among Member States (contact points and competent authorities) and stakeholders thanks to the support of the project.

Scope: Covering all of the following points proposals are expected to:

1. Provide support to the goals of the net zero Europe Platform related to net zero regulatory sandboxes and to reach out to stakeholders involved in net zero regulatory sandboxes across Member States (including assigned contact points, competent authorities, potential participating entities, including SMEs and start-ups, social partners, consumers and other stakeholders). They should support exchanging best practices, lessons learnt and enhancing cooperation between Member States, as well as the coordination with other similar initiatives.
2. Prepare comparative analyses and assessments of the national legislative frameworks for net zero regulatory sandboxes and other regulatory sandboxes relevant for innovative net zero technologies in line with the Regulation on strengthening Europe's net-zero technology manufacturing ecosystem:
 - o on regulatory barriers for innovative net zero technologies;
 - o on national net-zero regulatory sandbox schemes (including application procedures);
 - o on concrete trials;
 - o on impacts and regulatory learning;
 - o on lessons learnt
 - o and explore other forms of regulatory experimentation for net zero technologies in the energy sector.
3. Create and regularly update a publicly available free repository on regulatory sandbox schemes and concrete projects for net zero technologies in the Union.

Proposals actively include the contribution of national and regional authorities, companies (industry and SMEs), social partners, research and civil society organisations, consumers' and users' associations, universities and European associations representing relevant sectors and

any other stakeholders related to net zero regulatory sandboxes. To maximise their impact and widen participation, they are encouraged to develop and implement robust outreach approaches and societal engagement actions to span across the EU.

Proposals are expected to include appropriate means to particularly take into account the experience and possibilities of SMEs and start-ups as potential participants in regulatory sandbox schemes fostering innovation and regulatory learning.

Furthermore, the proposals should develop a dissemination and exploitation strategy and implement dissemination and networking activities.

The project is expected to contribute to the Commission's reporting on the results of the implementation of net-zero regulatory sandboxes (including good practices, lessons learnt and recommendations on their setup and, on the application, within the net-zero regulatory sandbox of Union law in a manner adapted for the purposes of the net-zero regulatory sandbox).

Proposals submitted under this topic are expected to include actions designed to ensure the accessibility and reusability of data produced during the project. The project should include a finance and sustainability plan for future continuation beyond the lifetime of the project.

Projects should be designed for a duration of three years.

Sustainable, secure and competitive energy supply

This Destination includes activities targeting a sustainable, secure and competitive energy supply. In line with the scope of cluster 5, this includes activities in the areas of renewable energy; energy system, grids and storage; as well as Carbon Capture, Utilisation and Storage (CCUS).

This Destination contributes directly to the Strategic Plan's **Key Strategic Orientations** 'Green transition', 'Digital transition' and 'A more resilient, competitive, inclusive and democratic Europe'.

In line with the Strategic Plan, the overall **expected impact** of this Destination is to contribute to the '*Ensuring more sustainable, secure and competitive energy supply through solutions for smart energy systems based on renewable energy solutions*'.

This destination contributes to the activities of the Strategic Energy Technology Plan (SET Plan) and its implementation working groups.

The main impacts to be generated by topics under this Destination are:

Renewable energy

1. Energy producers have access to competitive European renewable energy and renewable fuel technologies and deploy them to enhance the EU's energy security. This will contribute to the 2030 "Fit for 55" targets (in particular, at least 42.5% renewable energy share and aiming for 45% in the EU energy consumption, 5.5% advanced biofuels and renewable fuels of non-biological origin share in EU fuel consumption). It will also contribute to the indicative target of at least 5% innovative renewable energy technology for the newly installed renewable energy capacity. By 2050, climate neutrality in the energy sector will be achieved in a sustainable way in environmental (e.g., biodiversity, multiple uses of land and water, natural resources, pollution) and socioeconomic terms, and in line with the Sustainable Development Goals.
2. Technology providers have access to European, reliable, sustainable, and affordable value chains of renewable energy and renewable fuel technologies.
3. Economic sectors benefit from better integration of renewable energy and renewable fuel-based solutions that are among others cost-effective, efficient, flexible, reliable, and sustainable. Such integration is facilitated by digital technologies and by renewable energy technologies that provide network stability and reliability.
4. European researchers benefit from a stronger community and from a reinforced scientific basis on renewable energy and renewable fuel technologies, also through international collaborations.
5. European industries benefit from a reinforced export potential of renewable energy and renewable fuel technologies, also through international collaborations.

6. European industries become frontrunners and maintain technological leadership in innovative renewable energy technologies in line with the energy union strategy.
7. European citizens, including disadvantaged and vulnerable groups, have access to an energy market that is affordable, fair and equitable, more resilient, uses all different types of local renewable energy resources, and is less dependent on fossil fuels. Local communities benefit from a more decentralised and secure energy system and from multiple uses of land and water. Less citizens experience fuel and energy poverty.
8. Strategic Energy Technology Plan (SET Plan) implementation working groups on solar photovoltaics, solar thermal technologies, renewable fuels and bioenergy, wind energy, geothermal energy, and ocean energy benefit from a reinforced scientific basis and collaboration on renewable energy and renewable fuel technologies towards meeting the ambitious targets of the European Green Deal.

Energy systems, grids & storage

R&I actions will support the just digital and green transformation of the energy system through advanced solutions for accelerating the energy systems integration and decarbonisation. The developed clean, sustainable solutions will contribute to making the energy system and supply more reliable, resilient, and secure. The solutions will contribute to increase flexibility and grid hosting capacity for renewables through optimising cross sector integration and grid scale storage. They will enhance the competitiveness of the European value chain, reduce pressure on resources (also by making technologies ‘circular by design’) and decrease dependencies.

Innovative and cost-effective energy storage (integration) solutions are developed, that provide flexibility to the energy system, reduce total cost of grid operation and enhancement and that minimise the use of critical raw materials and ensure, to the best extent possible, their reuse and recycling, are key elements of the energy system.

Carbon capture, use and storage (CCUS) and carbon dioxide removal (CDR)

1. Accelerated development of carbon capture, use and storage (CCUS) as a CO₂ emission mitigation option in electricity generation, in industry applications and carbon dioxide removal technologies (including conversion of CO₂ to energy products).
2. Reduced EU’s dependency on imported fossil fuels and increased energy security, reduced energy system’s vulnerability to the impacts of the changing climate.

Global leadership in renewable energy

Proposals are invited against the following topic(s):

HORIZON-CL5-2026-02-D3-01: Large-scale production of liquid advanced biofuels and renewable fuels of non-biological origin

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 11.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 33.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio, grants will be awarded to proposals not only in order of ranking but at least also to one proposal that is the highest ranked within the area of liquid advanced biofuels and at least also to one proposal that is the highest ranked within the area of liquid renewable fuels of non-biological origin, provided that proposals attain all thresholds (and subject to available budget). This condition to ensure a balanced portfolio will also be considered to be met if a proposal addressing both areas is funded.</p>

Expected Outcome: A quite wide portfolio of technologies, which are close to be deployed but still lack the real-world demonstration of economic viability, exists. Significant volumes of advanced biofuels and renewable fuels of non-biological origin (RFNBOs) are needed to cover the current fleets and the sectors where renewable fuels are the main long-term solution, such as aviation and shipping and energy-intensive industries. Therefore, an exceptional effort is needed to establish more successful projects where full-scale plants are built and operated based on the vast potential of sustainable feedstocks throughout the EU.

Project results are expected to contribute to all of the following expected outcomes:

- Energy producers and consumers in transport and energy-intensive industries benefit from the mobilisation of building of industrial capacity for advanced biofuels and renewable fuels of non-biological origin;

- Technology developers benefit from the support to the preparation of first-of-a-kind plants of advanced biofuels and/or renewable fuels of non-biological origin to become precursors for the following commercial plants;
- Technology providers benefit from the de-risking of the innovative technologies, reduction of CAPEX and production costs, boosting of scale-up and contribution to market up-take of advanced biofuels and/or renewable fuels of non-biological origin;
- Public authorities, citizens, researchers, and industrial stakeholders benefit from the improvement of the sustainability, reliability, robustness, and security of the relevant value chain;
- National authorities profit from the provided evidence for innovative advanced biofuels and/or renewable fuels of non-biological origin technologies, which can contribute to the Renewable Energy Directive indicative target for innovative renewable energy technology in each Member State of at least 5 % of newly installed renewable energy capacity by 2030, as well as to the targets under ReFuelEU Aviation and FuelEU Maritime.
- Policy makers and regulators profit from the provided factual information and evidence in view of their decision as regards accelerating permitting procedures, harvesting benefits from multiple uses of land and water and increasing the responsiveness of research and innovation in that field to diverse societal interests and concerns;
- The implementation of the Strategic Energy Technology Plan (SET Plan) Action for Renewable Fuels and Bioenergy is supported and facilitated.

Scope: Demonstrate innovative large-scale production of liquid advanced biofuels and/or renewable fuels of non-biological origin for sectors with specific need for such fuels (particularly aviation and shipping and energy-intensive industries). Production is expected to be based on various EU sustainable biomass feedstocks, notably biogenic residues and wastes, biogenic part of slurries and industrial wastes, and/or on non-biological origin feedstocks, such as renewable hydrogen and CO₂ or renewable carbon, nitrogen, or their compounds, through chemical, biochemical, biological, and thermochemical pathways, or a combination of them. Proposals are expected to:

- demonstrate large scale production of ready-to-deploy advanced biofuels and/or renewable fuels of non-biological origin, engaging feedstock developers and suppliers, technology developers, fuel suppliers, end users for purchasing the quantities, national bodies, and public or private authorities with funding capacity;
- address and assess the impact of actual, real-size feedstocks, (like for example agricultural wastes, energy crops grown on marginal and degraded lands or as intermediate crops, forestry wastes, biogenic municipal and industrial wastes, all types of renewable hydrogen, actual streams of CO₂ and nitrogen, available renewable carbon or

their compounds), in terms of their constitution on plant design, (e.g. for feedstock pretreatment and wastewater treatment as appropriate);

- address and assess the impact on plant design and feasibility of improving the feedstocks externally and upstream to the fuel production plant, by increasing the energy density of the feedstocks through for example torrefaction, by homogenisation of feedstocks for making them uniform or similar, and by standardisation of feedstocks, as appropriate.

Projects should produce a lifetime cycle analysis of their production route and in particular for renewable fuels of non-biological origin, as inputs in terms of renewable energy and material (CO₂, nitrogen, renewable hydrogen) may not be continuously available.

Production of renewable hydrogen as an end-product is excluded from the scope of this topic.

The projects are expected to result in reference cases for ready-to-build, revamp/reuse and/or operate full-scale plants of advanced biofuels and/or renewable fuels of non-biological origin. Improvements, optimisation, new schemes and modification of existing demonstration plants that can result into the preparation of the next full-scale plant are considered within scope to encourage deployment of cost-effective solutions.

The plan for the exploitation and dissemination of results should include a strong investment and business case and sound exploitation strategy. The exploitation plan should include plans for scalability, commercialisation, and deployment. It is expected to provide information and assessment about the economic viability of the commercial plant, the permitting procedures, a full value chain-based business plan and identified funding sources such as private equity, loans, loans guarantee, grants, or public financing for CAPEX and OPEX, as well as take-off agreements for the fuel uptake. Moreover, they should provide information on, or linked to, the identified funding sources, like private equity, the InvestEU, the EU Catalyst Partnership, the Innovation Fund, and possibly the European Regional Development Fund programmes. Projects are expected to include at least one relevant local economic business case, outlining local value and supply chains and the expected number of local jobs at the place of deployment. Furthermore, proposals are expected to provide information and assessment of impact on land and water use, soil and biodiversity, for example in relation to marginal and degraded land feedstocks, and of public awareness on full-scale renewable fuel plants.

An assessment of the sustainability and the GHG reduction from fossil equivalents should be shown based on a life-cycle analysis for the large-scale fuel production. Special attention should be paid to estimating the GHG emissions reduction potential; projects are encouraged to use the methodology in the Innovation Fund.

HORIZON-CL5-2026-02-D3-02: Competitiveness, energy security and integration aspects of advanced biofuels and renewable fuels of non-biological origin value chains

Call: Cluster 5 Call 02-2026 (WP 2025)
Specific conditions

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹³² .

Expected Outcome: European energy security and industrial competitiveness are contested by the geopolitical circumstances and market situations around the world. Advanced biofuels and renewable fuels of non-biological origin are in EU's portfolio of technologies that contribute to net-zero manufacturing in Europe. However, remaining challenges impacting the security of supply and competitiveness of these technologies and the integration of their value chains need to be clearly understood, presented, and mitigated.

Project results are expected to contribute to all of the following expected outcomes:

- Energy consumers benefit from the contribution to improved EU energy security and industrial competitiveness of renewable fuel technologies;
- Energy producers and consumers benefit from the improved reliability, robustness and security of renewable fuel technologies (compared to existing ones);
- Diverse stakeholders, e.g., policy makers, public authorities, citizens, researchers, and industry, profit from the enhancement of common knowledge and understanding about existing opportunities of integrated value chains for advanced biofuels and renewable fuels of non-biological origin;
- Multi stakeholders, e.g., policy makers, technology developers, researchers, industrial and any other relevant stakeholders to the value chain, profit from the generation of

¹³² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

multi benefits of promoting sustainable development and sustainable agriculture regarding climate change resilience and regenerative practices, accelerating renewable fuel innovation, and maximising carbon removals.

Scope: Projects are expected to assess the energy security and industrial competitiveness aspects of value chains for advanced biofuels and renewable fuels of non-biological origin, in view of the new situation in the EU regarding energy security and industrial competitiveness with the rest of the world. They are expected to also evaluate how these technologies could contribute to the EU's energy security and industrial competitiveness through detailed value chain analysis and development of future scenarios, macroeconomic modelling, and strategic decision-making methods. Value chains closer to commercialisation with the potential to contribute more to the EU 2030 targets for green transition and industrial competitiveness and value chains for technologies under development with the potential to contribute to the longer term and could duly adopt mitigation measures, are both in scope. Proposals are expected to identify the research and innovation actions needed to improve the energy security and industrial competitiveness aspects of these value chains, and implement as appropriate research activities for such optimisation, as well as new standards definitions for advanced biofuels and RFNBOs as appropriate.

Competitiveness, energy security and integration challenges of the various steps in a value chain and of the relevant stakeholders are expected to be addressed. Integration aspects encompass every step of each individual value chain and every stakeholder. Proposals are expected to coordinate efforts towards development of win-win integrated solutions of sustainable value chains for advanced biofuels and renewable fuels of non-biological origin engaging all relevant stakeholders, including as relevant farmers, CO₂ suppliers, technology providers, researchers, fuel producers, end users, policy makers, international organisations. Multidisciplinary issues related to advanced biofuels and renewable fuels of non-biological origin production, carbon removals, CO₂ trading and valorisation, sustainable farming, production of nature-based soil amendments, fertilizers, and organic materials, fuel standardisation, trade-off/synergies of carbon farming with in-situ carbon storing and of land uses for fuels versus solar panels for derived fuels, are expected to be considered, to achieve benefits for all through the integration.

Value chains of renewable hydrogen as an end-product are not within the scope of this topic.

A sustainability assessment of integrated solutions including techno-economic, environmental and social aspects is expected to be carried out based on life cycle analysis.

HORIZON-CL5-2025-02-D3-03: Novel approaches to geothermal resources development

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU</i>	The Commission estimates that an EU contribution of around EUR 10.00

<i>contribution per project</i>	million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 20.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	The procedure is described in General Annex F. The following exceptions apply: To ensure a balanced portfolio, grants will be awarded to proposals not only in order of ranking but at least also to one proposal that is the highest ranked within the area of shallow & low/mid enthalpy geothermal (0-500 m depth and temperature below 150°C) and at least also to one proposal that is the highest ranked within the area of deep & high enthalpy geothermal (above 500 m depth and temperature above 150°C), provided that proposals attain all thresholds (and subject to available budget). This condition to ensure a balanced portfolio will also be considered to be met if a proposal addressing both areas is funded.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Developers and energy providers benefit from de-risking and cost reduction of geothermal resource development;
- Citizens benefit from energy efficient, sustainable, generation of electricity, direct heat, and/or heating and cooling from geothermal resources in a wide range of geological settings;
- Technology leadership, competitiveness, and technology export potential of European industry in the geothermal energy supply chain are increased;
- The technological innovation is environmentally sound, aligned with societal values, norms and behavioural aspects of end users and actors across the whole geothermal value chain, improving energy justice and citizenship.

Scope: Proposals should focus on the demonstration of innovative approaches to resource development in: (i) the area of shallow & low/mid enthalpy geothermal (0-500 meter-depth and temperature below 150°C) and/or (ii) in the area of deep & high enthalpy geothermal (beyond 500 meter-depth and temperature above 150°C). Proposals should also expressly identify whether they are addressing the area of (i) shallow geothermal; (ii) deep geothermal; or (iii) both shallow and deep geothermal.

Drilling and subsurface engineering account for a large part of the costs of geothermal projects, and on-field project development contains significant risks due to inherent geological uncertainties. Reducing costs upfront, improving performance, estimating uncertainty, and reducing risk can therefore boost the geothermal capacity deployment rate.

The scope covers advances beyond the state of the art in one/several of the following points:

- subsurface engineering;
- well design, drilling and completion;
- reservoir characterisation and development planning.

Proposals should include one or more of the following: robot and AI-physics-based simulation solutions for geothermal resource development, novel cost-efficient drilling methods and equipment, advanced drilling fluids, new materials for casing, cementing and completion, working fluids, logging while drilling, wireline technologies and geosteering high temperature electronics, well architecture and stimulation, closed loop technology, enhanced production pumps, and innovative monitoring systems during geothermal resources exploitation including their integration in digital twins.

Proposals are expected to reduce project development time while ensuring safety of operations and adaptation to specific geothermal environments (including offshore), constraining and quantifying geological uncertainties, reducing field development and seismic risks. They can include standardisation of the drilling equipment enhanced well production, enhanced environmental performance, improve component resistance to corrosion, scaling, high temperature, wear, and mechanical failures, increase energy extraction.

The project must include a clear go/no-go milestone ahead of entering the demonstration phase of the project. Before this go/no-go milestone, delivery of the detailed engineering plans, a techno-economic assessment, and all needed permits for the demonstrator should be foreseen. The project proposal is expected to present a clear and convincing pathway and timeline to obtaining the permits.

Environmental impact of the proposal should be assessed, and mitigation measures considered.

Where relevant, the project is expected to follow FAIR data principles, adopt data quality standards, data integration operating procedures and GDPR-compliant data sharing/access good practices developed by the European research infrastructures.

In order to enhance the benefits of the technology, proposals are expected to develop understandings of how the utilisation of geothermal resources aligns with the cultural values and contextual settings at local to regional level and increase the responsiveness of geothermal energy to diverse societal interests and concerns. To achieve that, an inclusive, early and continuous societal engagement should be enhanced.

In particular, this topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise (applied to social innovation), in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

HORIZON-CL5-2025-02-D3-04: Development of hydropower technologies and water management schemes allowing for win-win situation of flexible hydropower and biodiversity improvement – Societal Readiness Pilot

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹³³ .
<i>Exceptional page limits to proposals/applications</i>	The page limit of the application is extended by two pages to 52 to properly address Societal Readiness-related issues.

¹³³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Expected Outcome: For a renewables-based electricity system sufficiently flexible and also in the long-run highly sustainable hydropower capacity is pivotal.

Project results are expected to contribute to some of the following expected outcomes, to the benefit of hydropower operators and technology providers:

- Enhanced capacity and flexibility of the hydropower fleet to contribute to renewable energy systems and management of water flows;
- Increased technology leadership, competitiveness, and technology export potential of the European hydropower industry;
- Enhanced sustainability of hydropower with positive effects on river ecosystems and biodiversity, and considering adaptation to climate change;
- Responsiveness to a deeper understanding of the needs and concerns of diverse social groups, citizens and civil society at large involved in or potentially affected by the R&I development, thereby increasing the potential for beneficial societal uptake and building trust in results and outcomes.

Scope: Proposals are expected to develop hydropower technology solutions or improved water management schemes or a combination of both, which allow for synergies between flexible hydropower energy generation and local ecosystem management for existing run-of-river hydropower or reservoir hydropower plants or cascades of such plants, which are connected to the grid. To achieve this objective, thematic areas like e.g., hydropeaking, floodplain biotopes, sediment transport and/or river morphology restoration and environmentally efficient water flows also considering effects of climate change, can be addressed. Societal needs and the participation of local communities in decision processes in view of trust building should be considered.

Developed solutions are expected to enhance the flexibility of hydropower generation according to current and expected power grid needs and water availability, while being highly sustainable and creating positive impacts on river ecosystems and biodiversity, through e.g., equipment, material and digital innovation, nature-inclusive design, ecosystem restoration solutions, innovative and sustainable reservoir and water flow operation and management. Developed solution should not reduce the hydropower generation efficiency and equipment functionality while improving the environmental performances arising from this in a win-win optimisation. Respective impacts for both, energy and biodiversity should be assessed. Research and Innovation on pumped storage hydropower as well as on water management schemes not related to hydropower or not directly connected to natural water bodies is excluded from this topic.

This topic is a Societal-Readiness pilot:

- Proposals should follow the instructions applying to the Societal readiness pilot, as described in the introduction of the Horizon Europe Main Work Programme 2025 for

Climate, Energy and Mobility. They entail the use of an interdisciplinary approach to deepening consideration and responsiveness of research and innovation activities to societal needs and concerns.

- This topic requires effective contribution of the relevant SSH expertise, including the involvement of SSH experts in the consortium, to meaningfully support Societal Readiness. Specifically, SSH expertise is expected to facilitate the socio-technological interface and enable the design of project objectives with Societal Readiness related activities.

HORIZON-CL5-2026-02-D3-05: Demonstration of thermal energy storage solutions for solar thermal plants and systems

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio, grants will be awarded to proposals not only in order of ranking but at least also to one proposal that is the highest ranked within the area of concentrated solar power (CSP) and at least also to one proposal that is the highest ranked within the area of solar thermal heat and/or cold, provided that proposals attain all thresholds (and subject to available budget). This condition to ensure a balanced portfolio will also be considered to be met if a proposal addressing both areas is funded.</p>

Expected Outcome: Project results are expected to contribute to some of the following expected outcomes:

- Significant reduction of LCOHS (Levelised Cost of Heat Storage) and/or LCOE (Levelised Cost of Energy);

- Technology providers profit from successful demonstration and de-risking of thermal energy storage solutions that improve the dispatchability of solar thermal plants and/or systems;
- Technology providers have improved access to financing through better understanding of the bankability of dispatchable solar thermal solutions;
- Electricity grid operators have access to reliable options to cope with the increase in the share of variable-output renewables and reduce curtailments;
- The execution of the solar thermal implementation plan of the Strategic Energy Technology Plan (SET Plan) is supported and facilitated;
- The execution of the solar energy joint research and innovation agenda¹³⁴ is supported and facilitated.

Scope: Support will be given to the demonstration of innovative thermal energy storage solutions in the following areas: (i) concentrated solar power (CSP) and/or (ii) solar thermal heat and/or cold.

The proposed solutions will have to achieve substantial improvements in terms of performance, cost-effectiveness and life span compared to the current state of the art.

The project must include a clear go/no-go milestone ahead of entering the demonstration phase. Before this go/no-go milestone, the project must deliver the detailed engineering plans, a techno-economic assessment, and all needed permits for the demonstrator. The project proposal is expected to present a clear and convincing pathway and timeline to obtaining the permits.

The project has to assess the sustainability of the proposed solutions in environmental and socio-economic terms. Furthermore, the Commission initiative for Safe and Sustainable by Design¹³⁵ (SSbD) sets a framework for assessing the safety and sustainability of chemicals and materials which should be considered as a reference for project proposals.

Plans for the exploitation and dissemination of results for proposals submitted under this topic are expected to include a strong business case and sound exploitation strategy. The exploitation plans are expected to include preliminary plans for scalability, commercialisation, and deployment (feasibility study, business plan) indicating the possible funding sources to be potentially used (in particular the Innovation Fund).

HORIZON-CL5-2025-02-D3-06: Innovative manufacturing of wind energy technologies

Call: Cluster 5 Call 02-2025 (WP 2025)

¹³⁴ https://research-and-innovation.ec.europa.eu/document/download/3acfa717-b321-4f7d-b8c3-765f507d7de2_en?filename=ec_rtd_swd-2024-160-fl.pdf

¹³⁵ https://research-and-innovation.ec.europa.eu/research-area/industrial-research-and-innovation/key-enabling-technologies/chemicals-and-advanced-materials_en

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 28.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹³⁶.</p>

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Energy consumers have access to affordable, clean, and secure energy with lower environmental impacts and improved health and safety working conditions along the entire value chain;
- The European wind energy supply chain strengthens its strategic autonomy, technology leadership, competitiveness, and technology export potential;
- The deployment of wind energy in Europe is facilitated thanks to innovations enabling large-volume manufacturing therefore contributing to the achievement of the Net Zero Industry Act.

Scope: Proposals are expected to address at least three of the following aspects:

- Develop and demonstrate innovative wind energy manufacturing technologies that improve the health and safety working conditions of staff along the supply chain;

¹³⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Develop and demonstrate innovative wind energy manufacturing technologies that allow for reduced energy and material consumption, increased circularity, lower costs and decreased pollution;
- Develop and demonstrate automated and/or semi-automated manufacturing solutions that ensure high-quality products, high productivity, increase the lifetime and the reliability of wind energy systems;
- Develop and demonstrate manufacturing solutions for wind energy technologies that allow for high production throughput, optimisation of logistics and transport of components and reduced impacts on the environment, cultural heritage, landscapes and people.

The project could, for instance, support the development of innovative manufacturing solutions for onshore and/or offshore wind energy production, including airborne wind energy. It could focus on specific components of a wind energy system (e.g., blades, nacelles and towers, gearboxes, foundations, generators, floaters, mooring systems, anchors, kites, etc.).

The project should analyse and report on the potential for standardisation of the solutions developed, as well as on possible connections with ongoing standardisation efforts.

The project must include a clear go/no-go milestone ahead of entering the demonstration phase. Before this go/no-go milestone, the project must deliver the detailed engineering plans, a techno-economic assessment, and all needed permits for the demonstrator. The project proposal is expected to present a clear and convincing pathway and timeline to obtaining the permits.

The project must assess the sustainability of the proposed solutions in environmental and socio-economic terms.

The demonstration must be at a realistic, representative scale and must cover a continuous interval of at least six months.

When developing improvements along the supply chain to improve the health and safety working conditions, projects must give special consideration to the gender dimension.

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation. The exploitation plan should include preliminary plans for scalability, commercialisation, and deployment (feasibility study, business plan) indicating the possible funding sources to be potentially used (in particular the Innovation Fund).

HORIZON-CL5-2026-02-D3-07: Improved reliability and optimised operations and maintenance for wind energy systems

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹³⁷ .

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Limit the risks related to wind energy systems (e.g., operational, financial, climate) and thus reduce the wind energy projects' uncertainties;
- The European wind energy supply chain strengthens its strategic autonomy, technology leadership, competitiveness, and technology export potential.

Scope: Proposals are expected to address at least four of the following aspects:

¹³⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Develop and validate solutions to increase the reliability of wind energy systems and their components, thus ensuring security of supply and further reducing the environmental impacts;
- Develop new methods, computational techniques and tools to analyse and predict the reliability of wind energy systems, considering the analysis of the failure modes of existing systems and including a focus on new analytical approaches, technologies and materials;
- Develop new methods and tools for condition and health monitoring of wind energy systems and their components;
- Develop and validate solutions to optimise the operation and maintenance of wind energy systems and their components, for example through improved scheduling and predictive maintenance, autonomous tools, robots and vehicles, semi-automated inspection methods or advanced repair methods;
- Develop and validate new components to be incorporated in structures' designs to improve the safety and efficiency on-site during maintenance activities in wind farms;
- Develop and validate innovative digital tools to facilitate wind farm operation and maintenance, for instance through improved interoperability, decision-making support tools, condition and health monitoring techniques and innovative sensors, while ensuring increased cybersecurity and data sharing.

The solutions proposed have to provide solid evidence to support the choice of the sub-systems and components in focus. They have to be critical for the overall reliability of the wind energy systems. For instance, in the case of floating offshore wind, these could be dynamic cables, moorings and connection systems (electrical and mechanical) and their interaction with complex ocean flows.

Particular efforts should be made to ensure that the data produced in the context of this topic is FAIR (Findable, Accessible, Interoperable and Re-usable).

Digitalisation plays a prominent role under various perspectives, for instance in terms of improved predictive maintenance activities and advanced sensors technologies for diagnostics, condition and health monitoring of the power electronics, and structural health assessment and monitoring.

Projects should aim at reducing downtime and operational costs, enhancing safety protocols for maintenance crews, and increasing the overall lifespan and efficiency of wind energy assets.

These solutions should be easily standardised and/or should take into account current standardisation efforts, notwithstanding the TRL level envisaged for the projects developed under this topic.

HORIZON-CL5-2026-02-D3-08: Understand and minimise the environmental impacts of offshore wind energy

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio covering multiple geographical areas, grants will be awarded to applications not only in order of ranking, but priority will be given to high-ranking proposals that ensure, collectively, the best coverage of the different European sea basins (Atlantic Ocean, Baltic Sea, Black Sea, North Sea and Mediterranean Sea), provided that the proposals attain all thresholds.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹³⁸.</p>

Expected Outcome: The EU's Offshore Strategy¹³⁹ underlines that the deployment of offshore wind should be based on maritime spatial planning, assessing the economic, social, and environmental sustainability of the installations in a life-cycle perspective, while ensuring co-existence with other activities such as commercial and recreational uses of the sea and fishing. At the same time, it calls for research on the cumulative impacts of offshore energy

¹³⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹³⁹ COM(2020) 741 final

generation on the environment, which was also underlined in the Communication on Delivering on the EU offshore renewable energy ambitions (2023)¹⁴⁰.

Our knowledge on such impacts, positive and negative, is more advanced now than when the Offshore Strategy was adopted¹⁴¹. However, there are still significant data and knowledge gaps. Most fieldwork studies have been carried out at very localised sites and often focused on specific species. These ad-hoc studies lead to conclusions that can hardly be generalised. A sound monitoring, measuring multiple pressures and impacts on ecosystems and their services, at wider scale and in interaction with other sea activities, is still largely missing. There is also a need to further develop models and other instruments for environmental risk assessment, identification of mitigation measures and recommendations for restoration measures, considering impacts during construction, operation and maintenance, repowering and decommissioning.

Improving instruments, data, and knowledge on the cumulative environmental impacts of offshore energy, as well as a sound monitoring, is key to ensure that its expected fast and large-scale deployment will be sustainable. It will also better equip the EU to contribute to mitigate such impacts and promote sustainable deployment of offshore wind at regional (e.g., through OSPAR¹⁴² in the Northeast Atlantic) or subregional (e.g., through the Greater North Sea basin Initiative) level.

Project results are expected to contribute to all of the following expected outcomes:

- The scientific community, public authorities, project designers, permitting authorities, civil society organisations and citizens have better tools (including Maritime Spatial Planning tools), reliable data and knowledge to monitor, assess and minimise the cumulative environmental, including on biodiversity, and socio-ecological impacts of large-scale bottom-fixed and floating offshore wind energy generation, including at sea-basin level and when combined with other planned or existing human activities;
- The monitoring of cumulative environmental impacts, including on biodiversity, of offshore wind installations is improved, with better tools and open data, in a coherent scheme with pre-existing monitoring programs of the marine environment at large scale;
- Ambitious national and regional offshore wind deployment targets are achieved with positive or minimum negative impacts on the marine and coastal environment;
- Deploy offshore wind energy with minimal impact on marine and coastal ecosystems, and, if possible, with net-positive ones.

Scope: Proposals are expected to address at least five of the following aspects:

¹⁴⁰ [COM \(2023\) 668 final - EUR-Lex - 52023DC0668 - EN - EUR-Lex \(europa.eu\)](#)

¹⁴¹ See for instance the ETC/ICM Report 2/2022: Mapping potential environmental impacts of offshore renewable energy, at: <https://www.eionet.europa.eu/etcs/etc-icm/products/etc-icm-reports/etc-icm-report-2-2022-mapping-potential-environmental-impacts-of-offshore-renewable-energy>

¹⁴² <https://www.ospar.org/>

- Provide better knowledge and understanding of the cumulative environmental impacts of the offshore wind energy deployment according to the EU targets, when added to the current and planned human activities carried out in the same areas;
- Expand existing studies, field monitoring, and analysis from local to larger areas, and from site- or species-specific impacts to more general ones. Further develop and deploy field monitoring activities, measuring multiple pressures and impacts on marine and coastal ecosystems and their services, as well as pollution, from installation to decommissioning and possible repowering, including operational phase and maintenance activities;
- Test and demonstrate field monitoring and modelling technologies that allow to go beyond state-of-knowledge, regarding life-cycle environmental impacts of offshore wind energy deployments;
- Improve instruments and models for Maritime Spatial Planning, and environmental assessments at plan and project level that are in alignment with public authorities' needs;
- Improve modelling capacity and environmental impact assessments of future offshore wind deployment;
- Support the identification of areas where wind energy deployment is particularly suitable without significant environmental impact and areas where on the contrary, it should be avoided;
- Identify strategies, test, and demonstrate technologies that avoid, minimise, mitigate and compensate the environmental impact of bottom-fixed and floating offshore wind energy systems, propose mitigation and restoration measures and if feasible, provide net-positive environmental impacts. The activities carried out under this point are expected to achieve TRL 5 by the end of the project.

Particular attention must be dedicated to ensuring that the data produced in the context of this topic is FAIR (Findable, Accessible, Interoperable and Re-usable) and to leveraging existing community practices for data sharing especially those in the relevant European common data spaces and in the European Research infrastructures.

Complementarities with other ongoing and upcoming Horizon Europe projects are expected to be ensured as well as with the [European Digital Twin of Ocean \(European DTO\)](#) and its [core infrastructure](#), for instance the projects funded under topics:

- HORIZON-CL6-2025-02-CLIMATE-02: The ocean-climate-biodiversity-people nexus: uncovering safe operating space for safeguarding the integrity and health of the global ocean;
- HORIZON-MISS-2025-03-OCEAN-08: EU Digital Twin Ocean: Contribution to the EU DTO core infrastructure through applications for sustainable ocean management;

- HORIZON-MISS-2023-OCEAN-01-06: Innovative nature-inclusive concepts to reconcile offshore renewables with ocean protection;
- HORIZON-MISS-2023-OCEAN-01-08: Integration of socio-ecological models into the Digital Twin Ocean;
- HORIZON-CL5-2024-D3-02-08 Minimisation of environmental, and optimisation of socio-economic impacts in the deployment, operation and decommissioning of offshore wind farms.

In addition to considering the most evident environmental impacts of offshore wind energy systems (displacement, collision risk, exposure to aerial and underwater noise, habitat loss and degradation, pollution, etc.), funded projects must include an analysis of possible new impacts, that may become particularly relevant when a high number of wind energy systems is deployed, for instance in relation to the decommissioning and removal of end-of-life offshore wind energy systems, the presence of dynamic cables suspended in the water column, the impact of submarine geohazards on the dynamic cables or the production of microplastics.

Environmental monitoring data must be open source and be shared with the European Marine Observation and Data Network (EMODnet) and the International Energy Agency Wind Energy Systems Technology Collaboration Programme's (IEA Wind TCP) Task on the environmental effects of wind energy.

HORIZON-CL5-2025-02-D3-09: Optimised/Alternative Silicon Growth Technologies (from either liquid or gaseous phase) for PV Applications (EUPI-PV Partnership)

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 9.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions

	under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁴³ .
--	---

Expected Outcome: The majority of commercially available photovoltaic (PV) solar cells produced worldwide are made of crystalline silicon. Material quality, process technologies, and solar cell architectures have improved significantly in recent decades, and solar cell efficiencies are now approaching 27%, thus close to the theoretical limit. However, challenges remain in several aspects, such as increasing the production yield, stability, reliability, cost, and sustainability.

The ingot and wafering production steps are power intensive and produce recyclable waste in the form of kerf slurry – the residue ingot material from between the sliced wafers. These production steps are highly concentrated in China.

Project results are expected to contribute to all of the following expected outcomes:

- A European economic base which is stronger, more resilient, competitive, and fit for the green and digital transitions, by reducing environmental impact and strategic dependencies for critical raw materials and components;
- Scaling-up solar PV manufacturing capacity in Europe for an accelerated solar PV deployment, supporting Europe's decarbonisation targets;
- Reduced energy and material consumption and lower carbon and environmental footprint for crystalline silicon PV products along their lifecycle;
- The execution of the solar energy joint research and innovation agenda¹⁴⁴.

Scope: Due to their efficiency and durability, crystalline silicon wafers are by far the most common absorber material used in the production of solar cells and modules today. These wafers are primarily made using either a directional solidification that produces large-grained multi-crystalline (mc-Si) wafers with a greater defect density (and therefore almost out of production) or a solar-optimised Czochralski (Cz) growing method that produces crystalline silicon with low defect density (c-Si). In addition, “kerfless” silicon wafers can be grown directly either from molten silicon or from gaseous epitaxial deposition on a low-cost substrate at high temperature. To facilitate continued and rapid proliferation of Si photovoltaics, realizing new, more efficient and less energy and material intensive processes for silicon feedstock, ingots and wafers is sought. Therefore, proposals are expected to address at least one of the following challenges:

¹⁴³ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁴⁴ [Commission Staff Working Document "Solar energy joint research and innovation agenda with Member States in the context of the European Research Area \(ERA\)"](#)

- Demonstrate alternative, efficient, and scalable (towards gigawatt capacity) processes or methods and equipment to grow silicon ingots and wafers from either liquid or gaseous phase at lower cost (with lower energy and material requirements) and high-quality compared to standard processes and possibly avoid the wafering step;
- Optimise standard processes and equipment for defect, impurities and structure loss minimisation, high-quality ingots with large diameters (for larger wafers) that allow for higher level of automation and kerf recycling and/or use of recycled silicon from waste solar modules and reduced energy use; optimise wafering.

Proposals are expected to involve multidisciplinary consortia including at least one silicon ingot and wafer manufacturer.

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation. The exploitation plan should include preliminary plans for scalability, commercialisation, and deployment (feasibility study, business plan) indicating the possible funding sources to be potentially used (in particular the Innovation Fund).

This topic implements the co-programmed European Partnership for Innovation in Photovoltaics (EUPI-PV). As such, projects resulting from this topic will be expected to report on the results to the European Partnership for Innovation in Photovoltaics (EUPI-PV) in support of the monitoring of its KPIs.

HORIZON-CL5-2026-02-D3-10: Towards commercialisation of Perovskite PV and development of dedicated manufacturing equipment (EUPI-PV Partnership)

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 24.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: The rapid development of perovskite solar cells (PSCs) over the past decade makes it the most promising next generation photovoltaic technology, owing to its prominent advantages such as tuneable bandgap, high absorption coefficients, uncomplicated

preparation process and considerable power conversion efficiency which has reached a certified 26.7% at cell level. Tremendous efforts in material and device engineering have also increased moisture, heat, and light-related stability. All these features render perovskite solar modules suitable for terawatt-scale energy production with a low levelised cost of electricity (LCOE). A number of companies are working on PSCs and some of them, have been establishing new pilot production lines and/or expanding production capacity. Still, the greatest challenges toward commercialisation are scaling up (including ambient manufacturing), achieving long-term stability, reducing, or eliminating the use of toxic solvents, and preventing Pb leakage into the environment.

Project results are expected to contribute to all of the following expected outcomes:

- Increase the potential for commercialisation of perovskite PV creating competitive technological know-how for the European PV industrial base;
- Support a European economic base which is stronger, more resilient, competitive, and fit for the green and digital transitions, by reducing strategic dependencies for critical raw materials and components;
- Support the execution of the solar energy joint research and innovation agenda¹⁴⁵.

Scope: Metal halide perovskite solar cells have attracted much attention because of their low-cost fabrication and high efficiency. In addition, tandem devices, especially perovskite-Si tandems, are expected to play an important role in perovskite commercialisation. Poor stability of these devices remains however the key challenge in their path toward commercialisation. To overcome this issue, a robust encapsulation technique by employing suitable materials and structures with high barrier performance against the external environment must be developed to protect perovskite devices. Dedicated manufacturing processes and equipment need also be demonstrated. Therefore, proposals are expected to address all of the following aspects:

- Demonstrate effective strategies to enhance the optoelectronic properties, performance and stability, and minimise the environmental impact of perovskite devices;
- Scale-up reliable deposition of high-quality perovskite films over large areas, (overcoming the degradation of efficiency as device/module areas scale up) but also patterning and interconnections to connect individual cells into modules;
- Demonstrate internal and external encapsulation structures as protection from extrinsic environmental stressors, such as moisture, oxygen, heat, and illumination;
- Develop module designs considering recyclability requirements and restrictions as to the control and management of toxic Pb²⁺ that could be produced by the irreversible deterioration of the perovskite materials;

¹⁴⁵ [Commission Staff Working Document "Solar energy joint research and innovation agenda with Member States in the context of the European Research Area \(ERA\)"](#)

- Assess performance and reliability according to international standards and compared with well-established PV technologies; develop and apply test protocols for performance and reliability tailored to the features of perovskite and/or perovskite-Si tandem technology.
- Demonstrate suitable equipment adapted to the specific requirements of perovskite (or perovskite-Si tandem) production process.

Proposals are expected to involve multidisciplinary consortia including at least one perovskite or equipment manufacturer.

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation. The exploitation plan should include preliminary plans for scalability, commercialisation, and deployment (feasibility study, business plan) indicating the possible funding sources to be potentially used (in particular the Innovation Fund).

This topic implements the co-programmed European Partnership for Innovation in Photovoltaics (EUPI-PV). As such, projects resulting from this topic will be expected to report on the results to the European Partnership for Innovation in Photovoltaics (EUPI-PV) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-02-D3-11: Novel inverter technologies and flexibility in PV systems (EUPI-PV Partnership)

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and</i>	The rules are described in General Annex G. The following exceptions

<i>financial set-up of the Grant Agreements</i>	apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁴⁶ .
---	---

Expected Outcome: Integrating renewable and distributed energy resources, such as photovoltaics (PV) and energy storage devices, into the electric distribution system requires advanced power electronics, or smart inverters, that can provide grid services such as voltage and frequency regulation, ride-through capabilities, dynamic current injection, and anti-islanding functionality. To enable this integration, designing novel smart inverter technologies, developing robust control algorithms for better inverter functionality, determining interactions between multiple smart inverters and between inverters and utility distribution systems, supporting standards development for smart inverter functionalities, and analysing the impacts of smart inverters on distribution systems is necessary.

Project results are expected to contribute to all of the following expected outcomes:

- Energy yield improvement of PV systems based on smart digitalisation;
- Optimal utilisation of generated energy, energy savings, and enhanced overall energy efficiency;
- Enhanced flexibility services and interoperability;
- The execution of the solar energy joint research and innovation agenda¹⁴⁷.

Scope: Proposals are expected to:

- Demonstrate new inverter technologies with increased power density and reliability at lower cost (e.g., allowing for medium voltage PV systems), that integrate new power device technologies based on wide bandgap semiconductors (e.g., GaN, SiC) that could supply synthetic inertia and a range of grid services;
- Design of smart (e.g., integrating condition and health monitoring), and with improved capabilities, inverter hardware and firmware;

¹⁴⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁴⁷ [Commission Staff Working Document "Solar energy joint research and innovation agenda with Member States in the context of the European Research Area \(ERA\)"](#)

- Ensure inverters' electromagnetic compatibility (EMC) proposing optimal mitigation techniques for the causes and propagation pathways of electromagnetic interference (EMI), and conformity with current and under development standards;
- Use of control and power hardware-in-the-loop techniques to determine interactions between multiple inverters at multiple points of common coupling;
- Demonstrate integrated communication connection between inverters and other components (e.g., battery, PV modules, grid, etc.) to automatically gather their information (serial number, geolocalisation, etc.) and support the creation of Digital Twins and PV data models, towards a real predictive monitoring of electricity production;
- Evaluate system integration and cybersecurity, while providing guidance for future developments (e.g., recyclability) in both hardware and software.

This topic implements the co-programmed European Partnership for Innovation in Photovoltaics (EUPI-PV). As such, projects resulting from this topic will be expected to report on the results to the European Partnership for Innovation in Photovoltaics (EUPI-PV) in support of the monitoring of its KPIs.

HORIZON-CL5-2026-02-D3-12: Extending the lifetime of crystalline silicon PV modules (EUPI-PV Partnership)

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy</p>

Community (2021-2025). ¹⁴⁸ .

Expected Outcome: Photovoltaic (PV) energy systems are one of the cheapest and fastest growing sources of electricity generation, largely thanks to an important decrease in the cost of solar modules in the last 10-15 years, and to their simple installation. The PV market is changing fast, recently transitioning to high-efficiency crystalline silicon cell concepts (e.g., Tunnel Oxide Passivated Contact (TOPCon), Heterojunction (HJT), Interdigitated Back Contact (IBC), tandem, etc.), larger modules or novel designs (e.g., bifacial), use of new materials (e.g., anti-reflection and anti-soiling coatings, thinner glass, new encapsulants and backsheets), or increased number and topology of busbars or wires. There is no PV lifetime definition, but manufacturers usually guarantee a 25-year lifetime with an expected degradation rate of 0.8% per year. However, abnormal degradation rates are still reported for cell and module technologies due to a variety of failures which reduce reliability and increase the cost of PV systems operation.

Project results are expected to contribute to all of the following expected outcomes:

- Reduced degradation to levels that enable longer PV module lifetimes;
- Increased module durability and reliability;
- Resource efficiency and lifelong energy yield improvement of PV systems;
- Decreased levelised cost of electricity (LCOE);
- Execution of the solar energy joint research and innovation agenda¹⁴⁹.

Scope: The degradation rate might vary depending on many factors such as material properties, environmental stress (solar irradiance, humidity, temperature, wind speed, dust, etc.), installation, design and type of components and connections, with some components deteriorating on their own and others impacting additional PV components, leading to more severe failures. To tackle these issues and extend the lifetime of PV modules (and systems) proposals are expected to:

- Identify defects and failure modes encountered in recently developed high-efficiency or novel design c-silicon modules themselves and their components, exploring their mechanisms and root causes, reviewing each component's susceptibility to defects and failures and impacting additional PV components;

¹⁴⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁴⁹ [Commission Staff Working Document "Solar energy joint research and innovation agenda with Member States in the context of the European Research Area \(ERA\)"](#)

- Develop, where necessary, simple, cost-effective and accurate module defect detection techniques (including through Artificial Intelligence (AI)), applicable to most PV modules and systems;
- Propose mitigation approaches at module and system level and validate approaches through modelling and/or AI modelling and lab testing;
- Perform outdoor field experiments and testing to determine degradation rates and/or to identify defects and failure modes and estimate service lifetime.

Different locations representing the European range of climates are to be considered for field experiments.

This topic implements the co-programmed European Partnership for Innovation in Photovoltaics (EUPI-PV). As such, projects resulting from this topic will be expected to report on the results to the European Partnership for Innovation in Photovoltaics (EUPI-PV) in support of the monitoring of its KPIs.

HORIZON-CL5-2026-02-D3-13: De-risking wave energy technology development through transnational pre-commercial procurement of wave energy research and development

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 20.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 20.00 million.
<i>Type of Action</i>	Pre-commercial Procurement
<i>Exceptional funding rates</i>	In line with the nature of the instrument and the need to leverage national funding, the funding rate for grants awarded under this topic and type of action is 50% of the eligible costs.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Energy producers and consumers benefit from improved efficiency and flexibility, reduced cost, improved reliability, robustness and security compared to existing wave energy technologies;

- Wave energy technology providers profit from accelerated technology development, successful demonstrations and de-risking of wave energy technologies with a view to their commercial exploitation;
- Wave energy technology providers have improved access to financing through better understanding of technological solutions and their bankability, leading to effective market uptake, business models, and commercialisation avenues;
- Researchers, industry, public authorities, and citizens have access to increased knowledge, monitoring and assessment methods and tools on the environmental, biodiversity, and socio-economic (both positive and negative) impacts of the wave energy technologies along their lifecycle and value chains;
- Wave energy technology providers have detailed analysis of current costs and potential future energy cost reduction pathways and the creation of a detailed business plan for full scale commercialisation resulting in a clear path for commercial roll-out of the successful wave energy design(s) beyond the lifetime of the project;
- Funding authorities pool resources at national and EU levels dedicated to Research and Development and provide effectively a significant developmental boost of wave energy technology.

Scope: The challenge is the development and demonstration of cost-effective wave energy converters that can survive in a harsh and unpredictable ocean or sea environment through demand-driven pre-commercial procurement (PCP). The challenge is open to proposals seeking to steer wave energy development in an effective way at a European level and to bring these technologies to the market.

The operation of wave energy prototypes in real sea conditions is a critical step to establish confidence in the devices and to facilitate the large-scale roll-out of this renewable technology. Pre-commercial procurement has been shown to be an effective tool to de-risk such activities.

The EuropeWave PCP action has introduced the ocean energy stage-gate process on a European-level procedure following the evaluation framework provided by Task 12 of the IEA Ocean Energy System Technology Collaboration Platform. It supported the development of several wave energy devices in a stage-gate process to Stage 3 (approximately TRL 6). The scope of this action is to bring wave energy technologies at Stage 4 (approximately TRL7/8). Designs must achieve completion of Stage 4 activities of the IEA-OES Framework Evaluation Areas by the end of the action, including technical, socio-economic, and sustainability aspects.

Proposals have to describe their jointly identified challenge, indicating how it fits into their mid-to-long term innovation plans, and specify why solutions currently available on the market or under development are not meeting their needs.

Activities have to include: (1) networking related to preparation, management and coordination and (2) joint research activities related to the validation of PCP strategy. The consortium should include at least three legal entities established in different member states or Horizon Europe associated countries, as well as a minimum of two 'public procurers'. Other entities with a clear added value in the preparation and/or execution of the PCP or in coordination and networking activities might be considered.

The proposed action is to be structured as following:

Preparation phase:

Participating users/buyers of R&D services (with either a pan-European, national, or regional focus) should agree on a common set of performance levels and associated specifications for wave energy systems. The funding from the participating users/buyers and the European Union will be used to bring forward wave energy technologies and complete Stage 4 (reach TRL7/8).

The procurement is open to any entities established in the EU or countries associated to Horizon Europe, and the proposed wave energy technology must be able to evidence the satisfactory completion of stage 3 activities as a minimum prior-development requirement (with or without the support of EuropeWave). A phased approach can be considered to allow developers to qualify for selection for the Stage 4 demonstration. Demonstrators don't have to be necessarily tested at the same site.

At the end of the preparation phase, the following results are expected: i) completed tender documents, ii) signed joint procurement agreement confirming the collaboration modus operandi including the financial commitment of the buyers' group and iii) final confirmation of the lead procurer.

Execution phase:

This phase will take care of implementing the PCP and its contracts.

The procurement will be executed as a single joint procedure in which different lots can be considered. The research and specification works are expected to lead to at least two commercial scale demonstrators tested for at least 12 months in a commercially representative site during the action duration following the IEA-OES¹⁵⁰ stage-gate metrics.

Results will be shared with the European industry to accelerate the technology development and the establishment of guidelines and standards to facilitate the transferability of knowledge creation. At the end of the action, at least one of the demonstrators is expected to be ready for testing in an operational environment at commercial scale.

At the end of the action, designs are expected to be ready to proceed to Stage 5 activities of the IEA-OES Framework Evaluation Areas (Commercial-scale array demonstration).

¹⁵⁰ IEA-OES: International Energy Agency – Ocean Energy Systems

HORIZON-CL5-2026-02-D3-14: Development of innovative solutions strengthening the security of renewable energy value chains

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>Proposals are expected to clearly address only one of the areas within the scope (area 1, 2 or 3).</p> <p>To ensure a balanced portfolio covering areas 1., 2. and 3., grants will be awarded to applications not only in order of ranking but at least also to one project that is the highest ranked within area 1., 2. or 3., provided that the applications attain all thresholds.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁵¹.</p>

Expected Outcome: The security of Europe's clean energy system will, in the long-run, benefit from research and innovation addressing energy-security relevant criticalities of the underlying clean energy technology value chains.

Project results are expected to contribute to some of the following expected outcomes, from which all actors of European clean energy value chains can benefit:

¹⁵¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Strengthened European knowledge base, skills, research and industrial leadership on solutions for energy-security related aspects of renewable energy value chains;
- Technical and value chain solutions are developed addressing key aspects improving the energy security of renewable energy technologies;
- Strengthened availability of skilled labour (crafts, science and business) in order to increase the intra-European share of entire value chains;
- Improved competitiveness, sustainability including social awareness, and resilience of European renewable energy value chains.

Scope: Proposals are expected to provide in-depth assessments that will lead to novel solutions improving critical aspects of specific renewable energy technologies and their respective value chains impacting EU's energy security.

Proposals are expected to focus on the development of solutions for these critical aspects, which could highly improve the overall capacity of the specific value chain in contributing to an improved energy security for Europe in the long run. The projects must address precisely only one of the following areas:

Area 1- Sustainability and social awareness of specific renewable energy value chains as a limiting factor for their roll-out and performance over time (this is expected to be addressed either for hydropower or bioenergy);

Area 2- Skills for renewable energy value chains as a limiting factor for innovation and deployment of relevant clean energy technologies;

Area 3- Complexity for specific renewable energy value chains (this is expected to be addressed either for grid based RFNBOs and/or direct solar fuels and can for example include issues such as necessary market interactions for substrates, or interfaces between different reactions).

Applicants must explicitly indicate to which of these three areas they apply.

Proposals are expected to build on the results of the *Study on clean energy R&I opportunities to ensure European energy security by targeting challenges of distinct energy value chains for 2030 and beyond*¹⁵².

¹⁵² European Commission, Directorate-General for Research and Innovation, Schleker, T., Hicks, M., Cressida Howard, I. et al., *Study on clean energy R&I opportunities to ensure European energy security by targeting challenges of distinct energy value chains for 2030 and beyond final report*, Schleker, T.(editor), Publications Office of the European Union, 2024, <https://data.europa.eu/doi/10.2777/906828>

HORIZON-CL5-2025-02-D3-15: Building a Long-Term Africa Union (AU) and European Union (EU) Research and Innovation joint collaboration on Sustainable Renewable Energies

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If eligible for funding, legal entities established in the African Union member states¹⁵³ may exceptionally participate in this Coordination and Support Action as beneficiary or affiliated entity.</p> <p>In addition to the standard eligibility criteria, at least 40% of the beneficiaries must be established in African Union member states.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹⁵⁴</p>

Expected Outcome: The EU intends to play an increasingly leading role in global and multilateral initiatives. The EU is developing further the AU-EU Research and Innovation Partnership on Climate Change and Sustainable Energy, emanating from the AU-EU High-level Policy Dialogue ('Africa initiative'), to implement the AU-EU Innovation Agenda¹⁵⁵

¹⁵³ "African Union member states" includes countries whose membership has been temporarily suspended

¹⁵⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁵⁵ One of the flagship initiatives of the Global Gateway, which will in particular support the implementation of short-, mid- and long-term actions in the area of green transition related to climate change.

adopted in July 2023. The Green Deal underlines that “Renewable energy and energy efficiency, for example for clean cooking, are key to closing the energy access gap in Africa while delivering the required reduction in CO₂”.

Project results are expected to contribute to all of the following expected outcomes:

- R&I communities of researchers, industries, funding organisations and policy makers will count on a lasting AU-EU sustainable R&I partnership framework to implement joint R&I programmes of activities;
- Researchers, industry, public authorities, and citizens have access to increased knowledge, assessment methods, tools and expertise network;
- The joint AU-EU Climate Change and Sustainable Energy Collaborative Partnership and EU Science Diplomacy in Africa will be strengthened.

Scope: The proposal will build on the achievements made under the project LEAP-RE to strengthen and establish a sustainable collaboration framework. The proposal will expand and provide support to the established community of researchers, industries, innovators and funding organisations involved in the partnership, and seek to create links to other relevant R&I communities. Activities will contribute to human and institutional capacity-building and turn the AU-EU Research and Innovation Partnership on Climate Change and Sustainable Energy into a long-term platform for collaboration.

The activities to be covered are:

- Support the implementation of the AU-EU Innovation Agenda priority on Green Transition and the Global Gateway in Sub-Saharan Africa to increase investments in energy access;
- Analyse the impact of relevant EU-Africa research and innovation projects funded by the EU in the sustainable energy domain;
- Accelerate the translation of innovation into real-life outputs;
- Engagement of local communities across the African continent, in view of facilitating co-design, hybridisation and accelerated adoption of innovation; social sciences and humanities – including gender studies – is expected to play a key role;
- Develop human and institutional capacities on innovative sustainable energy through the creation of a sustainable network of experts and of science-based policymaking knowledge in synergy with existing activities of other AU and EU initiatives;
- Implement and push further clustering activities with all relevant on-going EU, national and regional funded projects, to enable stronger cross-projects co-operation, consultations and joint activities on cross-cutting issues;

- Provide support to the AU-EU Climate Change and Sustainable Energy Partnership of the AU-EU High Level Policy Dialogue on Science, Technology and Innovation, and other AU-EU policy agendas;
- Update strategic and joint research and innovation action roadmaps, implemented and defined in the project LEAP-RE (www.leap-re.eu) to the new ambitions for 2030 and 2050.

Proposals are to provide a long-term perspective and vision on how the AU-EU Research and Innovation joint collaboration on Sustainable Renewable Energies will be supported both financially and structurally, after the end of the project. Proposals should include activities to further develop this long-term perspective and vision, and how to implement it. Synergy and complementarity with projects selected under topics *HORIZON-CL5-2024-D3-01-09: Africa-EU CO-FUND action* and *HORIZON-CL5-2025-06-D1-07: Implementing the climate action pillar of the EU-African Union Partnership on Climate Change and Sustainable Energy* will need to be ensured.

Energy systems, grids & storage

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-02-D3-16: Support to the BRIDGE initiative

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 1.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁵⁶ .

¹⁵⁶ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link:

Expected Outcome: The development of research and innovation policies, as well as general energy policies in the area of smart and integrated energy systems require a sound evidence base. The BRIDGE¹⁵⁷ initiative established by the European Commission brings together projects funded under the Horizon 2020 and Horizon Europe programmes in the areas of Smart Grids, Energy Storage, Islands, and Digitalisation. BRIDGE has a twofold objective. On the one hand, it fosters the exchange of information, experience, knowledge, and best practices among the projects. On the other hand, it provides field experience, feedback and lessons learned from the participating projects to help overcome the barriers to effective innovation. It aims at gathering coordinated, balanced and coherent recommendations presented with a single voice to policy makers, in view of successfully supporting research and innovation actions, and exploiting the results achieved by projects.

Project results are expected to contribute to all the following expected outcomes:

- European research and innovation policies, and energy policies in the areas of smart energy systems are supported by evidence gathered from the implementation of real-life projects.
- Projects funded under Horizon Europe that address energy systems are informed on solutions and methodologies that were previously developed by European-funded projects and are effectively benchmarking their results and compare lessons learnt with other similar European projects.
- Consolidation of the BRIDGE initiative and re-affirmation of its role as a recognised European reference for providing innovative solutions for the development of smart and integrated energy systems.
- Effective and improved cooperation of BRIDGE with other European initiatives that are active in related areas (such as ETIP SNET¹⁵⁸).

Scope: Proposals are expected to:

- Provide professional support to the overall organisation of the BRIDGE initiative, its working groups and task forces. This includes organisational and logistical support for the governance of BRIDGE, e.g. for the preparation and execution of meetings and support to the activities of coordination with other EU and/or national initiatives and bodies. It also includes support to the chairs of the working group chairs in fulfilling their roles and facilitating the periodic processes for the renewal of the chairmanship.
- Onboard new projects and maintain the database of BRIDGE members in terms of projects, implementing organisations/project partners, their membership in Working Groups and Task Forces, contact details.

https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁵⁷ <https://bridge-smart-grid-storage-systems-digital-projects.ec.europa.eu/>

¹⁵⁸ <https://smart-networks-energy-transition.ec.europa.eu/>

- Ensure the completion and publication of the relevant reports, studies, brochures, policy briefings etc. Three main categories of documents are envisaged:
 1. BRIDGE annual brochures¹⁵⁹ – are prepared by the project, updated annually and published online;
 2. Annual thematic/expert reports¹⁶⁰ containing policy conclusions and recommendations – are drafted by the BRIDGE working groups under the coordination of their chairmanship, as decided in their annual work programmes. The project ensures final editorial support and formatting, and their publication online;
 3. Other reports, as needed and decided by the Bridge chairmanship on a case-by-case basis.
- Maintain the online presence of BRIDGE and ensure the related communication activities, notably through maintaining and developing its dedicated web page, distributing a periodic (online) newsletter, and posts on social media.
- Enable BRIDGE to provide policy support to the European Commission services (mainly to DG Energy) by gathering, structuring and presenting information on technological progress, innovation, competitiveness and digitalisation in the field of smart energy systems.
- Organise the annual BRIDGE General Assemblies, including invitations, hosting, minutes/conclusion drafting and follow up on action points. The meetings usually take place in March, usually face-to-face in Brussels with hybrid options available.
- Manage cooperation with other relevant European initiatives, notably with the European Technology and Innovation Platform - Smart Networks for Energy Transition (ETIP SNET). Manage the representation of BRIDGE and its member projects at key events (e.g., European Sustainable Energy Week, established European fairs such as Enlit – to be decided on a case-by-case basis etc.).

Proposals submitted under this topic are encouraged to include actions designed to facilitate cooperation, across Europe, with other initiatives and to ensure the accessibility and reusability of data produced during the project.

The indicative project duration is three years.

¹⁵⁹ As an example, see the Bridge Brochure 2023 <https://bridge-smart-grid-storage-systems-digital-projects.ec.europa.eu/sites/default/files/download/bridge%20cooperation%20between%20horizon%202020and%20horizon-MJ0423748ENN.pdf>

HORIZON-CL5-2025-02-D3-17: Control and operation tools for a RES-based energy system

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 20.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all the following expected outcomes:

- Improved preparedness of the electricity system to support the EU's binding target for 2030 of minimum 42.5% renewables in gross final energy consumption, with the aspiration to reach 45%;
- Grid operators employ improved tools for forecasting energy generation from renewable sources and energy demand;
- Grid operators employ innovative energy management systems and technologies for smart grids to operate efficiently the integration of RES at various voltage levels;
- Transmission and distribution system operators develop better capacity for exploiting system flexibility and accessing services for demand response and energy storage;
- System operators develop structured mechanisms to cooperate with energy suppliers and service providers when required by grid conditions;
- Transmission and distribution system operators cooperate and develop mechanisms to reduce system risks associated with increased fluctuating generation.

Scope: Projects are expected to:

- Design and test innovative technologies, processes, and control mechanisms for the seamless integration of massive volumes of renewable energy sources (RES) at distribution and transmission levels. The solutions are expected to incorporate both hardware and software aspects;
- Address network constraints and increase flexibility capabilities of grids, through advanced operation and control mechanisms and tools, for improving the overall grid performance and the efficiency of RES uptake;
- Ensure effective coordination between transmission and distribution levels of the electricity grids, for the integration of massive volumes of RES at multiple voltage levels, maintaining grid stability and overall preparing for a RES-based energy system.

The demonstration, test and validation of the activities should be carried out in at least two pilots in different EU Member States and Associated Countries.

Proposals should demonstrate a clear understanding of the challenges and opportunities associated with integrating renewable energy sources into the existing energy system. Building on this, they should demonstrate a comprehensive approach for developing and testing advanced technologies and control mechanisms that can effectively address these challenges, while capitalising on solutions for digitalising the energy system.

In addition, projects should propose a set of best practices and recommendations on the effective uptake of increased shares of renewables. This should be suitable for a level of renewables in the electricity system that would allow reaching the EU's binding renewable target for 2030 of minimum of 42.5% (with the aspiration to reach 45%).

Projects are expected to include at least two electricity transmission system operators (TSOs) and four distribution system operators (DSOs), which could be distributed among the pilots of a particular project.

Additionally, collaboration is encouraged with the following entities:

- at least three suppliers of energy from renewable sources, out of which at least two should supply energy from non-dispatchable energy sources. The supply covered by the project should include both wind and solar energy sources;
- at least two providers of energy services for the grids (e.g., aggregation of energy supply and/or energy demand, energy storage).

This collaboration (minimum number of entities) is sought per project in total and does not necessarily apply per each pilot in particular.

Selected projects are expected to contribute to the BRIDGE initiative¹⁶¹ and actively participate in its activities.

¹⁶¹ <https://bridge-smart-grid-storage-systems-digital-projects.ec.europa.eu/>

HORIZON-CL5-2026-02-D3-18: Next generation distribution substation for increasing the system resilience

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 9.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Improved observability, monitoring and control of the electricity distribution grids;
- Optimised management (including maintenance) of the grids by system operators and improved system resilience (including withstanding natural hazards and cybersecurity incidents);
- Grid operators integrate in their practices real-time decision-making. These could be assisted by artificial intelligence (AI) algorithms, if applicable;
- A 'smart substation ecosystem' is created that includes distribution system operators, technology/solution providers, integrators, application developers etc. This should cover both high-to-medium and medium-to-low voltage levels.

Scope: Projects are expected to:

- Demonstrate the integration of power electronics, intelligent electronic devices (IEDs), and software solutions in the distribution substations or in their proximity;
- Demonstrate real-time monitoring and analysis of grid conditions (including power quality, voltage levels, grid component monitoring, and overall system performance) that

allow operators to quickly identify and address any potential issues or disturbances, help to prevent outages and minimise the impact of service disruptions;

- Consolidate data streams from otherwise dispersed sources to create unified visualisations and consolidated analytics that offer insights into the performance of distributions substations;
- Develop the concept of a flexible and programmable electricity distribution grid in which the substation is a centre of intelligence that facilitates optimal power routing while ensuring the resilience of the electricity grid.

The demonstration, test and validation of the activities should be carried out in at least two pilots in different EU Member States and/or Associated Countries.

The projects should propose a set of best practices and recommendations on effective overarching principles and operational measures for: (i) building smart distribution substations, and (ii) integrating them into a more resilient, intelligent, and responsive distribution grid which is able to tackle disturbances and address net congestion.

Projects are expected to include at least five distribution system operators (DSOs) operating across different geographies and climate conditions. This total number of DSOs per project could be distributed across the different pilots of a particular project.

Additionally, collaboration is encouraged with the following entities:

- at least two suppliers of technologies for smart power substations;
- at least one TSO.

This collaboration (minimum number of entities) is sought per project in total and does not necessarily apply per each pilot in particular.

The selected projects are expected to contribute to the BRIDGE initiative¹⁶², actively participate in its activities.

HORIZON-CL5-2026-02-D3-19: Innovative solutions for a generative AI-powered digital spine of the EU energy system

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

¹⁶²

<https://bridge-smart-grid-storage-systems-digital-projects.ec.europa.eu/>

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Availability of generative Artificial Intelligence (AI) tools for electricity system operators, energy service providers, and households and energy communities to enhance digital and green transformation in energy, mobility, and buildings;
- Implementation of decentralised IT solutions based on generative AI to support local grid optimisation, thereby increasing the uptake of renewable energy sources, electric vehicles, and electrification of household and industrial demand at the distribution level;
- Increased reliability, resilience, security, and energy efficiency of the energy system through advanced AI and digital tools;
- Enhanced knowledge for modernising and operating energy networks, integrating digital services, renewables, and electrification through the use of cutting-edge AI technologies;
- Development of smarter demand-side tools for industries and consumers, leveraging AI to optimise energy production and consumption.

Scope: To achieve the Green Deal objectives for 2030 and 2050, substantial investments are required in a smart and digitally enabled energy system capable of integrating higher shares of renewable energy and electrification of demand and electricity storage. This encompasses various sectors such as transport (notably electric vehicles), industry (heating and hydrogen production) and residential heating.

Effective smart planning, operation and control of the electricity grid and numerous distributed devices – including smart electricity meters, smart bi-directional charging networks for electric vehicles, and smart building platforms – are essential. These efforts must be underpinned by markets for flexibility and demand response, along with seamless data exchange between actors and devices.

On-going innovation in the energy data space, smart Internet of Things (IoT) solutions, and digital twins for energy systems, coupled with energy price and market considerations, provide the foundation for advanced energy system intelligence. This intelligence will be

further enhanced by leveraging generative artificial intelligence and the emerging AI Factories¹⁶³.

The scope is to develop and pilot prototypes of a generative AI-powered digital spine¹⁶⁴ that enhances the digitalisation and decarbonisation of the EU energy system.

The overall scope is the development of a prototype of an automated, AI-powered, software-defined smart energy system leveraging and further developing existing (open-source) digital solutions of lower TRLs developed in EU and national research, innovation- and deployment-programmes, as well as AI algorithms and tools provided by the AI Factories, namely to:

- Develop and test the potential for generative AI to develop apps/programmes for local system optimisation and for system planning and operation;
- Develop and test generative AI that can identify sources of flexibility and provide solutions for interoperability and data exchange to enable decentralised optimisation of distributed assets. This includes the integration with various data sources and sectors, such as mobility, to promote decentralisation, energy-efficiency, and cost-efficiency and to enable interoperability across different parts of the energy system;
- Explore the potential of generative AI for system optimisation through scenario generation, simulation, and time series forecasting, while also developing optimisation tools for both supply-side and demand-side management using forecasts and data for renewable energy, transmission assets, storage, and energy-saving applications for consumers;
- Propose tools and control systems to apply generative AI solutions developed in a high-risk use-case (as defined in the AI act).

The developed solutions should be dynamic, flexible, offering reconfigurable automated management, control and data exchange to ensure seamless operations across decentralised a setting.

Projects are expected to:

- Demonstrate AI-powered energy services, tools for power system planning and operation, and smart grid functionalities, such as flexibility, and electric vehicle (EV) charging as well as possibly transmission system operation across at least three EU member states and/or associated countries to enhance demand flexibility and drive innovative capabilities for decarbonisation and energy efficiency;
- Indicate which generative AI basic tools, including available tools from the AI Factories, will be used and demonstrate how energy sector users will be involved in the

¹⁶³ <https://digital-strategy.ec.europa.eu/en/policies/ai-factories>

¹⁶⁴ <https://digital-strategy.ec.europa.eu/en/news/accelerating-green-transition-role-digital-infrastructures-decarbonising-energy-and-mobility>

development and the testing (and possible uptake) of the generative AI tools by the project;

- Indicate what types of assets and what data sources will be used and involved in the project;
- Involve both traditional energy stakeholders and new entrants, such as energy service companies, aggregators, digital infrastructure providers, system integrators, energy asset manufacturers, energy communities, and active consumers;
- Leverage relevant European and international standards and technical specifications, and actively engage with standards development organisations;
- Contribute to the BRIDGE initiative¹⁶⁵, actively participate in its activities;
- Make use of the AI Factories and solutions, open-source where relevant, building on developments in previous Horizon Europe projects, particularly those related to flexibility markets and data exchange, Internet of Things and edge-cloud computing, adhering to relevant standards and engaging with standards development organisations to further develop these standards;
- Demonstrate how the new solutions can be integrated into and/or replace (parts of) existing legacy systems, including (for projects that focus on DSOs) demonstrate how the new solutions can integrate core functions of grid operations including SCADA systems functionality;
- Jointly provide a diverse set of applications of generative AI.

HORIZON-CL5-2026-02-D3-20: Innovative tools and services to manage and empower energy communities

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 20.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply:

¹⁶⁵

<https://bridge-smart-grid-storage-systems-digital-projects.ec.europa.eu/>

	The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Integration of home and building assets in an efficient way based on common Internet of Things (IoT) communication standards for smart homes and using SGAM architecture and data models (e.g., IEC CIM) for load, generation and storage devices;
- Facilitate local energy trading and distributed grid-oriented services using micro market and transactions (e.g., peer-to-peer) and improve the market participation for citizens;
- Enhance the integration of energy communities in European energy grids and increase the renewable energy share and use of flexibility by providing transparent and efficient market-based cost sharing mechanisms;
- Increase the security of data exchange, for prosumer and customer resources, and independent (commercial) asset operators;
- Increase synergies using a cross-sectoral approach (e.g., electricity, gas, mobility, heating/cooling) at the level of citizens and/or energy communities;
- Empower local governments and intermediaries, strengthen overall community energy policies in EU Member States and enhance tool accessibility and user capacity at local level to promote a decentralised and co-owned energy transition.

Scope: The project should:

- Develop innovative and open-source tools for managing shared energy community assets (e.g., energy storage facilities) and optimising energy community management (e.g., selection and switching of aggregators, preparation and trading of smart contracts, peer-to-peer and energy sharing, self-consumption);
- Develop open-source tools for forecasting, prediction and advanced data analysis using AI tools and in-depth data analysis for customers and prosumers for autonomous optimisation of consumption, production, storage, smart devices (appliances), and electric vehicle (EV) both at household and energy community levels;
- Extend DSO SCADA and substation systems for autonomous control of grid assets and seamlessly integrate these systems with home and building energy management systems for direct and fast control and data acquisition to implement local (distribution) grid services (constrain alleviation, grid reconfiguration, restoration of supply, maintenance,

and enhancement of energy quality), real-time assessment and monetisation of the use of grid resources;

- Integrate the three elements above as a basis to establish a platform for cooperation between individual customers or prosumers, entire energy communities, wide area aggregators, and DSOs to provide, acquire, and settle energy system-oriented services (system-wide balancing, support of frequency regulation). The cooperation platform should be based on a plug-and-play integration of the energy community eco-system components (hardware and software), using and extending relevant communication standards and data models. The integration mechanism should be embedded within the core systems used by customers/prosumers, DSO (and TSO), aggregators and market operators, fully aligned with SGAM;
- Develop tailored security solutions for private and public communication networks used by IoT apps and devices (smart appliances) across energy carriers;
- Ensure the follow-up and implementation of EU policy measures, including by conducting quality assessments and introducing national community energy targets;
- Foster institutional allies at local and regional levels;
- Provide access to and capacities for using digital planning tools;
- Identify the barriers for network operators (e.g. legal, economic, regulatory etc.) who want to introduce smart consumption options for their customers.

Preferably semantically interoperable interactions, as enabled by the ETSI SAREF ontologies, are used. Furthermore, the project should follow the IEC TR 63097 Smart Grid Roadmap, and where relevant, the developed solutions should be open for off-shelf integration using common communication and data standards.

The project should benefit from the direct participation of energy communities, smart appliances manufacturers, home energy devices manufacturers, home and building energy management system developers, Distribution System Operators (DSOs), and aggregators.

However, in order to comply with Article 33, 36 and 54 of Directive (EU) 2019/944, TSOs or DSOs participating in this project should not own, develop, manage or operate energy storage facilities or recharging points for electric vehicles. Moreover, the role of the distribution system operator in facilitating peer to peer trading should be without prejudice to the rules in Article 35 Directive (EU) 2019/944.

The developed solutions have to be tested within, at least, three energy communities from different European countries, preferably in regions with different socio-economic development contexts and different resource availabilities. Technical and social characteristics should be used in the project to validate the developed solutions' credibility. The demonstration sites should cover complex and technologically advanced energy communities, each located within the range of neighbouring secondary substations supplying

a variety of customers/prosumers with close-to-autarky local energy generation, a range of energy vectors, a significant share of storage facilities, and flexible topology already available or to be achieved as an integral part of the project. The secondary substation should be already equipped with advanced monitoring and control systems.

In order to increase the replication potential of the deployed solutions the three energy communities are invited to closely collaborate with similar energy communities.

The selected projects are expected to contribute to the BRIDGE initiative and actively participate in its activities. Additional contributions to the ‘Alliance for Internet of Things Innovation’ (AIOTI) and other relevant activities (e.g., clusters of digital projects and coordinating actions) might be considered when relevant.

In particular, this topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

HORIZON-CL5-2025-02-D3-21: Cross-regional network and market model for optimisation of long duration storage

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 14.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for

	Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁶⁶ .
--	--

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Energy system planners and operators will deliver advanced tools to better optimise overall system value of Long-Duration Energy Storage (LDES) for cross-regional networks and markets dominated by intermittent and stochastic renewable energy sources.
- Optimised LDES integration in relevant grid locations will help energy system stakeholders to maximise total lifetime cost-benefit, improved grid-operation as well as avoided fossil fuel use and CO₂ abatement, renewable energy balancing and reduced need for network reinforcement;
- Finetuned business cases for revenue stacking for multiple services as well as detailed overview of marginal abatement costs of various technologies and their combinations across the participating regions will help operators, planners and investors to take the right long term strategic decisions concerning LDES integration in the energy system.
- Cost effective decarbonisation and market revenue streams to improve LDES economics (e.g., nodal and locational pricing) will increase investors trust and therefore accelerate LDES roll out.

Scope: The project will develop and test new, advanced, integrated models and tools for cross-regional networks and markets that are dominated by intermittent and stochastic renewable energy sources. This spatial-temporal model should be designed to create, analyse and optimize scenarios for strategically integrating, locating and dimensioning LDES (here defined as: >12h) for a future European energy system.

The proposed solution will be tested under different scenarios in a relevant/operational environment. The project should be based on a complete understanding of existing operational systems in at least two adjacent regions (NUTS 2 or 3) – best represented in the form of a digital twin (or similar). Consortia should include the respective system operators, service providers, technology providers, potential financial actors and other relevant stakeholders.

The project should produce practical, operationally useful knowledge on cross-regional strategies for combining a variety of clean flexibility LDES solutions/technologies and cross-sector integration, focusing on the optimal combination of LDES with RES production sites, industrial complexes and districts (e.g. co-location and hybridisation), to support the grid.

¹⁶⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

This topic will analyse the overall system value of integration of LDES (>12h) in the energy system under different future decarbonisation pathways, assessing the impact on operation and planning of energy infrastructure costs as well as security of supply, system reliability and resiliency.

The scope is to maximise the benefit of LDES integration within the context of system wide optimisation of long-term grid enhancement strategies. This encompasses relevant, validated historical data sets, visualisation, scenario analysis, model sensitivity analysis and data set optimisation, optimal use of previously developed models and digital twins, cyber security, use of open-source solutions and free licensing.

The project is expected to identify technical and regulatory barriers, and propose possible recommendations and policy actions, to promote the best solutions tackling these barriers and support replication of the solutions.

HORIZON-CL5-2026-02-D3-22: Underground Thermal Energy Storage in dense urban areas

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 9.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁶⁷.</p>

¹⁶⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Advanced European innovative knowledge basis and increased technology competitiveness in the area thermal storage;
- Improved security of the future European renewable-based energy system;
- Contribution to the decarbonisation of cities and densely populated urban areas with high safety solutions;
- Significant reduction of LCOHS (Levelised Cost of Heat Storage);
- Local communities are engaged and their expectations are responded to.
- Technology developers practice inclusive societal engagement which is early, continuous, and sensitive to the technical specificities (e.g. local resource, subsurface uncertainties) and social challenges (e.g. low public awareness) of underground thermal energy storage technologies in the context of densely populated urban areas.

Scope: In scope are novel technologies, interfaces, design methods and organisational concepts that result in the most effective and sustainable use of subsurface space in dense urban areas by Underground Thermal Energy Storage (UTES) systems such as ATES, CTES and BTES.

Proposals should consider the integration in the existing energy grids and interaction with other urban uses of the subsurface (e.g., subways, underground utilities, buildings), including energy geostructures of buildings, tunnels, slabs, energy sheet pile walls, etc., with potential geothermal heating, cooling, and sinks or storage opportunities.

Proposals should address the uncertainties in the seasonal energy demand to increase the predictability of the required subsurface space, the interactions among systems for the sake of optimal use of subsurface and thermal efficiency.

Projects are expected to deploy one or more demonstrators and can address, for example, one or more of the following exemplary areas:

- Optimal utilisation of geothermal resources and thermal energy storage in urban settings, addressing high (above 70 degrees Celsius), medium (30-70 degrees Celsius) and/or low temperatures (10-30 degrees Celsius) and possible requirements for retrofitting of the building stock;
- Subsurface models for a sustainable underground thermal storage and geothermal use in cities;
- The integration of heat pumps, advanced thermal storage, and interface with district heating infrastructures to contribute to the thermal and power grid flexibility;

- Studying the impact of subsurface urban heat islands (SUHI) on the potential of shallow geothermal energy use in cities, using, for instance, long-term subsurface monitoring networks, satellite monitoring and models;
- Best practices strategies for subsurface land-use plans in European cities; well/borehole placement strategies;
- Mutual interaction of existing and future neighbouring UTES systems from geotechnical, energy, and regulatory point of view;
- Management of energy grids on an urban scale and system optimisation thorough digital twins predicting operational, environmental and economic response, as well as the interaction between the storage system and the local grids, under different scenarios;
- Creation of large (time and scale-wise) open multisensory datasets to foster heat energy storage at the European scale which should adhere to the FAIR data principles, adopt data quality standards, data integration operating procedures and GDPR-compliant data sharing/access good practices developed by the European research infrastructures, where relevant.
- Use of advanced monitoring systems such as fibre optic sensors, satellite imagery, etc. for monitoring and early detection of adverse impact of UTES at a district scale level and providing measures to mitigate such effects.

Consideration should be given to de-risking solutions, and dedicated support schemes that guide innovative energy storage technologies through to the commercialisation stage. The consortium should assess the current regulatory context and provide recommendations linked to the proposed solutions for shaping future needs (e.g., regulatory, standardisation, permitting). In addition, appropriate local community engagement initiatives as well as expectations and experiences of underground thermal storage infrastructures (and to what extent it varies in dense urban areas) should be explored.

This topic requires citizens engagement and dialogue and the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities and ensure the translation of innovation into real-life outputs.

HORIZON-CL5-2025-01-Two-Stage-D3-23: Critical elements for energy security of grid and storage technologies

Call: Cluster 5 Call 01-2025 (2-stage) (WP 2025)	
Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately.

<i>project</i>	Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 9.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>Proposals are expected to clearly address only one of the areas within the scope (area 1, 2 or 3).</p> <p>To ensure a balanced portfolio covering all above areas, grants will be awarded to applications not only in order of ranking but at least also to one project that is the highest ranked within each area, provided that the applications attain all thresholds (and subject to available budget).</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁶⁸.</p>

Expected Outcome: Project results are expected to contribute to some of the following expected outcomes:

- Development of advanced solutions contributing to strengthen the energy security of energy network and/or storage technologies for renewable energy;

¹⁶⁸

This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Contribution to strengthened European technology knowledge base on energy system security;
- Solutions addressing key aspects improving the technological and cross-cutting value chain aspects for energy security of grid and/or storage technologies are developed;
- Contribution to improved security of the future European renewables- based energy system as an important factor in its cost-effectiveness and therefore directly impacting European competitiveness;
- Contribution to the creation of European technological leadership in the energy security field and creation of a knowledge base for European industrial competitiveness.

Scope: Development of novel solutions, which address specifically critical aspects affecting the energy security of energy network and/or storage technologies in respect of uninterrupted and cost-effective access to energy. As energy security of the energy grid and safe storage of variable renewables is directly related to a cost-effective and sustainable European energy system and therefore essential to European competitiveness, not only energy security aspects of the grid and storage technologies as such, but also those related to their respective value chains need to be addressed. Proposals should focus on development of solutions for grid and/or storage technologies, which can highly improve their sustainability, resilience, and overall energy security performance in the European context in the long run. Proposals should take into consideration the results of the Study on clean energy R&I opportunities to ensure European energy security by targeting challenges of distinct energy value chains for 2030 and beyond¹⁶⁹.

Project should address precisely only one of the following areas:

Area 1- Advanced tools to address cybersecurity risks to 1) energy system transmission and distribution and 2) renewables to storage and storage to energy network interface technologies;

Area 2- Increasing circular economy processes, recycling, re-use or substitution of sustainably supplied critical materials and electronics for energy network and storage technologies;

Area 3- Sustainability and public perception of energy network and storage technologies as a limiting factor for their required capacity build-up and efficient performance in a secure energy system (e.g., hydropower, CAES storage).

Furthermore, a framework for decent working conditions, most notably essential skills, and efficient skills management within the overall energy network and storage system are essential for inclusivity and competitiveness of these systems. They should be addressed as an important transversal value chain component.

¹⁶⁹ European Commission, Directorate-General for Research and Innovation, Schleker, T., Hicks, M., Cressida Howard, I. et al., *Study on clean energy R&I opportunities to ensure European energy security by targeting challenges of distinct energy value chains for 2030 and beyond final report*, Schleker, T.(editor), Publications Office of the European Union, 2024, <https://data.europa.eu/doi/10.2777/906828>

Carbon Capture, Utilisation and Storage (CCUS)

Proposals are invited against the following topic(s):

HORIZON-CL5-2026-02-D3-24: New CO₂ capture technologies

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>In order to ensure a balanced portfolio of activities covering both (i) point-source capture and (ii) direct air capture technologies, grants will be awarded not only in order of ranking but at least also to one proposal that is the highest ranked within each area, provided they attain all thresholds (and subject to available budget).</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹⁷⁰.</p>

Expected Outcome: Project results are expected to contribute to the following expected outcomes:

¹⁷⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- New capture technologies (either from point sources or directly from air) should lead to reduced overall cost of capture, as well as lowest possible negative environmental impact, including water use.

Scope: Development of new or emerging capture technologies with high potential for cost reduction. Proposals shall address capture of CO₂ either from one of the following areas (and explicitly identify which is being covered):

1. Point sources, or
2. Directly from air (direct air capture, DAC).

Depending on the capture routes chosen (e.g., solvents, sorbents, membranes, cryogenic, solid looping), examples of important issues to address include enhanced absorption/adsorption, improved kinetics and reduced energy use for CO₂ capture and desorption, new materials with high selectivity for CO₂ capture, flexibility of operation, modularisation and scale-up, space occupation, degradation and life span of capture materials, ability for retrofit, potential for heat integration, and solvent-induced corrosion.

In particular for DAC, examples of important issues to address are novel sorbent or solvent materials that have higher CO₂ capture capacities and longer-term stability in the presence of heat and air. For all proposals, minimisation of health and environmental impact must be addressed in the project also in view of future scaling up. The developed technologies should aim at delivering CO₂ at the specifications required for transport and storage, with very low levels of impurities.

For point-source capture, the technologies should address the performance profile and characteristic when operating under variable operating conditions such as load changes to maintain and as high as possible capture rate across the entire operating profile. Results from point-source capture should provide good matches between specific industrial application and capture technology while guaranteeing the quality and continuity of the industrial process.

The use of the European Research Infrastructure for CO₂ Capture, Utilisation, Transport and Storage ECCSEL is encouraged but not mandatory.

In particular for DAC, international cooperation with participating countries of the Mission Innovation Carbon Dioxide Removal Mission¹⁷¹ is encouraged.

HORIZON-CL5-2025-02-D3-25: Effects of CO₂-stream impurities on CO₂ transport and storage

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU</i>	The Commission estimates that an EU contribution of around EUR 5.00

¹⁷¹ Carbon Dioxide Removal – Mission Innovation (mission-innovation.net)

<i>contribution per project</i>	million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>In order to ensure a balanced portfolio of activities covering either (i) transport infrastructure or (ii) storage infrastructure, grants will be awarded not only in order of ranking but at least also to one proposal that is the highest ranked within each area, provided they attain all thresholds (and subject to available budget).</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹⁷².</p>

Expected Outcome: The design and safe operation of a CO₂ transport and storage system represents specific challenges as it involves CO₂ streams at different flow rates, pressures and states (liquid, gaseous, super critical, dissolved in water), and with different compositions and impurities. The presence of impurities will change the chemical and thermophysical properties with respect to a pure CO₂ fluid. When CO₂ is transported in pipelines at conditions close to its critical temperature and pressure, the impact of impurities on the thermophysical properties can become substantial. High levels of CO₂ stream purity must be achieved to avoid two-phase flow during pipeline transportation. In addition, reactive impurities can form strong acids giving unacceptable corrosion of pipelines, tubings and ships, and can impact on injectivity, well integrity and seal integrity of geological storage sites. Directive 2009/31/EC regulates that CO₂ streams, while they may contain incidental associated substances from the source, capture or injection process, the concentrations of these substances should be below levels that would adversely affect the integrity of the storage site or the relevant transport infrastructure and not pose a significant risk to the environment or human health. Member States should ensure that storage site operators only accept and inject CO₂ streams if a risk assessment shows that these conditions are met.

¹⁷² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

The Communication on Industrial Carbon Management¹⁷³ underlines the need for pre-normative research on the physical and chemical behaviour of impure CO₂ in order to contribute to relevant guidelines and standardisation work. This was also emphasised in a report prepared by a stakeholder group on CO₂ standards under the CCUS Forum¹⁷⁴.

Project results are expected to contribute to all of the following expected outcomes:

- Contribution to an accurate understanding of the effects of impure (and possibly corrosive) CO₂ flows along the transport network (in particular pipelines and shipping) or in the storage complex in line with Art. 12 of Directive 2009/31/EC, including any engineered or geological barriers to leakage in the near-well region;
- Inform relevant guidelines and contribute to standardisation work through improved understanding of the physical and chemical behaviour of impure CO₂.

Scope: Based on the application chosen (either transport or storage), projects have to deliver:

- Recommendations for design and operation of pipelines and/or ship offloading, including recommendations for public health and safety requirements and for protective and/or mitigating material and/or approaches and/or monitoring technology to avoid adverse effects on the integrity of the relevant transport infrastructure caused by impurities;
- Recommendations for public health and safety requirements and for protective and/or mitigating material and/or approaches and/or monitoring technology to avoid adverse effects on the integrity of the storage complex;
- Guidance and recommendations for technology providers, regulatory authorities, certification and standardisation bodies, and define and implement ambitious dissemination actions to promote the project results and support their uptake.

Projects can address, for example, the following issues:

- Transient flow modelling along the pipeline network and;
- Combined thermodynamic and corrosion modelling to predict corrosion rates under different conditions;
- Reactive transport and geochemical modelling of the storage reservoir in the near-well zone, including associated geological barriers to leakage;
- Generation of experimental data on the geochemical reactions of reservoir rocks, caprocks, well cements and fault seals exposed to impure CO₂ under the span of pressure and temperature regimes relevant for planned and future storage projects in

¹⁷³ [EUR-Lex - 52024DC0062 - EN - EUR-Lex \(europa.eu\)](#)

¹⁷⁴ <https://circabc.europa.eu/ui/group/75b4ad48-262d-455d-997a-7d5b1f4cf69c/library/13c2a475-c705-432d-8ca3-17ce799ba502/details>

saline aquifers, depleted hydrocarbon reservoirs and or mafic and ultra mafic formations for mineral storage of CO₂, to tune existing and/or new models;

- Generation of experimental data on thermophysical and corrosive properties of CO₂-rich mixtures under CCS-relevant conditions, to tune existing or new models;
- Impact of impurities on various equipment (e.g., valves, gaskets, compressors, instrumentation), in particular on non-metallic components in the CO₂ transportation system;
- Impact of impurities on the physical behaviour and geochemical interaction of the CO₂ stream within the storage complex;
- Impact of achieving very low impurity levels on the relative costs of competing capture technologies and the trade-off with costs for CO₂ transportation and geological storage;
- Development of a systematic method to understand limits for impurities and define specifications for transport and storage infrastructure.

The use of the European Research Infrastructure for CO₂ Capture, Utilisation, Transport and Storage ECCSEL is encouraged but not mandatory.

Selected projects are encouraged to seek synergy with possible standardisation activities performed by CEN, CENELEC, ISO and ETSI on pre-normative research for standards for the transport and permanent storage of carbon dioxide¹⁷⁵.

International cooperation is encouraged, in particular with projects or partners from the United States.

HORIZON-CL5-2025-02-D3-26: European investment atlas of potential CO₂ storage sites

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial</i>	The rules are described in General Annex G. The following exceptions

¹⁷⁵ Open call for proposal, 6 June 2024. See: [Support to Standardisation activities performed by CEN, CENELEC and ETSI - European Commission \(europa.eu\)](#)

<i>set-up of the Grant Agreements</i>	apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁷⁶ .
---------------------------------------	---

Expected Outcome: The emergence of a Carbon Capture and Storage (CCS) value chain in the European Union and Associated Countries is currently being hampered by a lack of a clear pathway to mature CO₂ storage sites. In the Net Zero Industry Act regulation (NZIA), the EU has defined the objective that at least 50 million tonnes of CO₂ per year can be stored geologically by 2030, in storage sites located in the territory of the European Union, its exclusive economic zones or on its continental shelf within the meaning of the United Nations Convention on the Law of the Sea (UNCLOS) and which are not combined with enhanced hydrocarbon recovery. There is a need to understand if current storage development is enough to meet EU storage requirements defined in the NZIA.

Project results are expected to contribute to the following expected outcome:

- Enhanced availability of CO₂ storage sites and transparency about potential CO₂ storage and injection capacity and infrastructure, including in relation to geomechanical characteristics and pressure interference from neighbouring storage projects, which can support market operators to plan their investments and enable the implementation of large-scale storage hubs connected to shared CO₂ transport infrastructure.

Scope: The project is expected to produce a digital atlas of ‘investable’ underground storage space for CO₂ in the EU and Associated Countries. The European CO₂ Storage Atlas¹⁷⁷ currently under revision and being updated by the GSEU project¹⁷⁸, including estimated capacity and storage readiness level, presents a good basis, but also shows that data gaps need to be closed, and access to the necessary data during project implementation will be crucial. The Commission's Energy and Industry Geography Lab¹⁷⁹ can also be used. Proposals are expected to include the following:

- Identify and assess with a harmonised methodology, injection and storage capacities for current and planned projects and compare with storage requirements;
- Identify key regions for future pre-licence appraisal (high estimated capacity, proximity to emitters, transport corridors), and develop plans for pre-licence appraisal, per region;

¹⁷⁶ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁷⁷ [European CO₂ storage database - European Commission \(europa.eu\)](#)

¹⁷⁸ [GSEU \(geologicalservice.eu\)](#)

¹⁷⁹ [Energy and Industry Geography Lab - European Commission \(europa.eu\)](#)

- Each potential storage site must be labelled according to its ‘storage readiness level’ in line with the storage readiness levels included in the GSEU atlas, and matched with public data to speed up the work to identify and assess the storage capacities and what is needed to mature understanding of the site. Furthermore, the identified potential storage sites should be compared and ranked by applying a common ranking scheme developed based on currently used ranking schemes and including a techno-economic assessment;
- Environmental and security aspects must be taken into account.

The proposal is expected to explicitly demonstrate the capacity to have access to the necessary data during the implementation of the grant. Cooperation with relevant national and/or regional actors in the management of the subsurface, such as geological surveys or competent authorities, will be key.

HORIZON-CL5-2025-02-D3-27: Using captured CO₂ as a resource to replace fossil hydrocarbons in industrial production

Call: Cluster 5 Call 02-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 14.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Unlocking the economic potential of CO₂ utilisation. Strengthening the industrial carbon management value chain through the delivery of innovative solutions for recycling CO₂ to produce advanced synthetic fuels, chemicals, polymers or minerals, making them price-competitive and accelerating their market deployment.
- Contributing to emission reduction, energy security and autonomy of the EU through the gradual substitution of fossil-based feedstocks in the production of chemicals and materials by alternative feedstocks, like waste and residues, and captured CO₂.

Scope: Proposals must aim at reducing the capital intensity and energy and environmental footprint of CO₂ conversion technologies to allow for upscaling in the short to medium term.

In particular, proposals are expected to:

- Provide information and assessment about the economic feasibility and the potential of scaling-up the proposed solutions at commercial scale as appropriate.
- Reduce the use of virgin critical raw materials.
- Define ambitious but achievable targets for energy requirements of the conversion process, production costs and product yields, as well of price competitiveness, that will be used to monitor project implementation.
- Define minimum CO₂ concentrations and maximum impurities levels that the conversion process can tolerate. Solutions that can cope with less pure CO₂ streams will improve the overall energy efficiency.
- Apply rigorous life-cycle analysis (LCA) to ensure that the proposed solution is comprehensively assessed on its ability to contribute to long-term sustainability: climate mitigation, adaptation, biodiversity, water use, pollution, and virgin resources depletion. The LCA must be in line with guidelines developed by the Commission, such as the Innovation Fund GHG methodology and the relevant ISO standards and the EU Taxonomy Regulation.

Proposed solutions should focus on the CO₂ conversion process, although integration in industrial capture or direct air capture facilities can be included.

Enhanced oil, gas or coalbed methane recovery (EOR/EGR/ECBM) are out of scope of this topic.

Whenever the expected exploitation of project results entails developing, creating, manufacturing and marketing a product or process, or in creating and providing a service, the plan for the exploitation and dissemination of results must include a strategy for such exploitation and an analysis of equivalent final products in the market. The exploitation plans must include preliminary ideas for scalability, commercialisation, and deployment (feasibility study, business plan, financial model) indicating the possible funding sources to be potentially used (in particular the Innovation Fund).

Efficient, sustainable and inclusive energy use

This Destination targets the energy demand side, notably a more efficient use of energy in buildings and industry. It contributes to the activities of the Strategic Energy Technology Plan (SET Plan) and its implementation working groups.

This Destination contributes directly to the Strategic Plan's **Key Strategic Orientations** 'Green transition', 'Digital transition' and 'A more resilient, competitive, inclusive and democratic Europe'.

In line with the Strategic Plan, the overall **expected impact** of this Destination is to contribute to the 'Using energy in buildings and industry in an efficient, affordable and sustainable way'.

The main impacts to be generated by topics under this Destination are:

Highly energy-efficient and climate neutral European building stock

1. The life-cycle energy performance and resource efficiency of the European building stock is improved at an accelerated pace and contributes to the EU's energy security.
2. The renovation and construction are cost-efficient, affordable and less disruptive, have reduced climate and environmental impact through circularity, and use of low-carbon materials.
3. The buildings in Europe are increasingly interacting with the users, energy system and their environment contributing to an integrated, resilient, secure and flexible operation.
4. The buildings and built environment in Europe mitigate climate change and are more resilient.
5. The built environment is inclusive and delivers a better quality of life for all users.

Industry

The energy efficiency of EU energy intensive industries is improved, their consumption of fossil fuel and their GHG and other pollutants emissions are drastically reduced, while preserving / enhancing their global competitiveness.

Highly energy-efficient and climate neutral European building stock

Proposals are invited against the following topic(s):

HORIZON-CL5-2026-02-D4-01: On-site innovative robotic and automated solutions and techniques for more sustainable and less disruptive building renovation and construction

Call: Cluster 5 Call 02-2026 (WP 2025)

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁸⁰ .

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Measurable reduction in overall time spent on site for renovation and construction, compared to current best practices;
- Measurable increase in resource efficiency, as well as improved accuracy (designed vs. as-built), of on-site renovation and construction works, compared to current best practices;
- Measurable reduction in noise pollution, air pollution (e.g., particulate matter) and other pollution caused by on-site renovation and construction works, compared to current best practices.

¹⁸⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Scope: Buildings need to be sustainable and resource efficient, and the rate of deep renovation needs to be increased. This can be accelerated by modernising the construction sector and embracing the latest developments in robotics and automated systems. There is need for further research on innovative on-site robotic and other automated solutions and techniques that make renovation and construction works more sustainable, less disruptive, faster, as well as more accurate, cost effective and resource efficient.

Proposals are expected to address all of the following:

- Test and validate the use of innovative on-site robotic and automated solutions and techniques both for construction of buildings and for renovation of which at least one must investigate 3D printing;
- Apply a research methodology which allows for a robust comparison of at least the three expected outcomes of the proposed innovative solutions and techniques with current best practices;
- Investigate aspects of on-site workers' safety and human-robot collaboration related to the future application of the proposed solutions and techniques;
- Test and validate at least three prototype solutions and techniques to investigate their applicability for a variety of building typologies, duly justified to represent a relevant part of the European building stock. The prototypes should be validated in a lab or another relevant environment. Testing and validation must address solutions for both renovation and construction. The prototypes should be applicable either to renovation, or to construction, or to both, but both renovation and construction need to be addressed in a proposal.

Selected proposals could consider the involvement of the European Commission's Joint Research Centre (JRC) whose contribution could consist of providing added value regarding various aspects of on-site robotics for construction and renovation, as well as performing experimental research for validating full-scale prototype buildings renovated and/or constructed with robotic solutions.

HORIZON-CL5-2026-02-D4-02: Smarter buildings as part of the energy system for increased efficiency and flexibility – Societal Readiness Pilot

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.

<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹⁸¹.</p>
<i>Exceptional page limits to proposals/applications</i>	The page limit of the application is extended by two pages to 52 to properly address Societal Readiness-related issues.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Measurable reduction in buildings' energy demand together with a reduced gap between their as-designed and as-built energy performance;
- Measurable increase in the number of building typologies with smart grid connected renewable energy sources (RES) and energy storage together with increased flexibility in grid/network management and operations;
- Measurable enhancement of the smart readiness of buildings as rated by the Smart Readiness Indicator and/or other relevant building rating systems;
- Improved responsiveness by the relevant stakeholders to the needs and concerns of users from a diversity of social groups, including vulnerable and disadvantaged ones, involved in or potentially affected by the smart buildings, thereby increasing the potential for beneficial societal uptake and building trust in outcomes.

¹⁸¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Scope: The construction sector and the building subsector remain among the least digitised. Smart buildings can contribute to reducing energy demand, curbing operational CO₂ emissions, integrating RES and enhancing grid flexibility through optimised energy usage. At the same time, it is essential that smart buildings are flexible and adaptive to changing needs and usage patterns and are user-friendly to encourage widespread adoption of these technologies by grid operators, construction professionals, building facility managers and users. Furthermore, to ensure the societal benefits of the smart building technologies there is a need for increased user knowledge, acceptance and satisfaction.

Proposals are expected to address all of the following:

- Develop solutions that enhance the smartness of buildings by using and facilitating the upgrade of existing Building (Energy) Management Systems (BMS/BEMS) and/or other technical equipment;
- Ensure that the proposed solutions are user-friendly and provide the expected indoor environmental quality, as well as user satisfaction and occupant comfort;
- Demonstrate the proposed solutions in at least three pilots. These pilots should collectively cover at least three different climatic zones, three different building types (residential, tertiary etc.), and three different technical building systems;
- Develop a methodology to measure the achieved energy demand reduction, increased flexibility in the grid, and enhanced interoperability, compared to current best practices;
- Investigate the cost-effectiveness and replicability of the proposed solutions.

This topic is a Societal-Readiness pilot:

- Proposals should follow the instructions applying to the Societal readiness pilot, as described in the introduction of the Horizon Europe Main Work Programme 2025 for Climate, Energy and Mobility. They entail the use of an interdisciplinary approach to deepening consideration and responsiveness of research and innovation activities to societal needs and concerns.
- This topic requires effective contribution of the relevant SSH expertise, including the involvement of SSH experts in the consortium, to meaningfully support Societal Readiness. Specifically, SSH expertise is expected to facilitate the socio-technological interface and enable the design of project objectives with Societal Readiness related activities.

HORIZON-CL5-2026-02-D4-03: Innovative pathways for low carbon and climate resilient building stock and built environment (Built4People Partnership)

Call: Cluster 5 Call 02-2026 (WP 2025)
Specific conditions

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁸² .

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Improved planning methods and procedures which are replicable and scalable across Europe, and potentially globally, and that embed the uptake of building solutions to improve whole life carbon performance¹⁸³, circularity, sustainability, climate resilience, safety and durability of buildings and the built environment, in line with the commitment of making the EU climate neutral by 2050;
- Measurable increase in the number of relevant value chain actors applying such planning methods, procedures and building solutions for the benefit of citizens;

¹⁸² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁸³ “[Supporting the development of a roadmap for the reduction of whole life carbon of buildings](#)”, European Union, 2023’. This publication commissioned by the European Commission includes the following definition: “Whole life carbon encompasses all greenhouse gas emissions resulting from the materials, construction and the use of a building over its entire life, including its demolition and disposal. It is thus the total amount of embodied and operational emissions.”

- Quantified pathways to improved buildings' and built environment's whole life carbon performance.

Scope: EU and associated countries continue to develop innovative building solutions that support the decarbonisation and climate resilience of buildings and the built environment, addressing energy performance, circularity, sustainability, resource efficiency, climate resilience, safety, durability and adaptability of the building stock, and whole life carbon emissions. A key challenge remains the accelerated uptake of such solutions in building and renovation projects. Building value chain actors - such as housing association, municipal and regional authorities, or policy makers - require planning methods and procedures that embed the uptake of innovative building solutions and define pathways for the decarbonisation and climate resilience of the building stock and the built environment under their responsibility.

Proposals are expected to address all of the following:

- Develop and validate replicable and scalable planning methods and procedures that embed the uptake of innovative sets of building solutions when developing or regenerating (including deconstruction aspects when relevant) the building stock and the built environment;
- Validate the planning methods, procedures and sets of building solutions in a relevant environment in at least three countries, with different climatic conditions and building stock characteristics. In at least two cases, the proposed planning methods and procedures should be relevant for renovation;
- Investigate the use of innovative tools and methods which facilitate the adaptation of the buildings stock to changing user needs, while positively contributing to occupants' comfort and health;
- Propose and apply a methodology for assessing the effectiveness of the developed pathways for the decarbonisation and climate resilience of buildings and the built environment, including the calculation of their whole life carbon reduction compared to a "business as usual" scenario;
- Ensure the active involvement of all relevant public and private stakeholders of the whole renovation and construction value chain, which must include among others: municipalities, citizens (including vulnerable groups) and civil society organisations and the building and construction sector professions;
- Contribute to the objectives of the Built4People partnership and its network of innovation clusters¹⁸⁴.

Selected proposals could consider the involvement of the European Commission's Joint Research Centre (JRC) whose contribution could consist of providing added value on innovative building solutions for resource efficiency, safety, durability and adaptability of the

¹⁸⁴ https://built4people.eu/nebula_project/

building stock, as well as performing experimental research for validating those solutions on full-scale prototype buildings.

This topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise (including social innovation), in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

This topic implements the co-programmed European Partnership on ‘People-centric sustainable built environment’ (Built4People). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘People-centric sustainable built environment’ (Built4People) in support of the monitoring of its KPIs.

HORIZON-CL5-2026-02-D4-04: Innovative approaches for the deployment of Positive Energy Districts

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the

	Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁸⁵ .
--	---

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Increased number of approaches and solutions enabling a net positive yearly energy balance at district level and the export of excess renewable energy to the grid outside its geographical boundaries, with enhanced replicability on a larger scale in other positive energy districts (PEDs) in different contexts;
- Measurable increase in inclusiveness and public acceptance of the implementation of PEDs;
- Improved user-friendliness and user-awareness of guidelines, tools, and training materials targeting key professionals for overcoming the different types of barriers towards the realisation of PEDs.

Scope: Recent projects have demonstrated the feasibility of PEDs, but there is a need to further demonstrate climate-neutral impact, while developing and demonstrating innovative approaches and solutions for overcoming technical, business, social and organisational constraints in several domains. Such domains include, for example, climate mitigation, integration of renewable energy sources and energy storage in buildings, grid connections, accommodation of distributed energy generation and storage at district level, permitting, data privacy and security and the application of new technologies such as artificial intelligence. Presently, these constraints, which inhibit the demonstration of complete and qualified PEDs, require the cooperation of key professionals from the public and private sector, such as municipal and regional authorities and those from the energy and construction sectors, in complex implementation processes.

Proposals are expected to address all of the following:

- Demonstrate innovative approaches and solutions for overcoming constraints which prevent the successful implementation of PEDs;
- Develop supportive local planning frameworks for the design and realisation of PEDs;
- Demonstrate the proposed approaches, solutions, and supportive local planning frameworks in at least three districts in diverse geographical areas that implement energy efficiency measures alongside renewable energy installations, storage solutions, digital and smart technologies, and local energy communities;

¹⁸⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Develop and/or update existing guidelines, tools, and training materials for key professionals that will enable other cities to successfully replicate these innovative approaches, solutions and supportive local planning frameworks in their district/cities;
- Ensure the active involvement of all relevant public and private stakeholders, including citizens, through co-creation processes and community engagement activities.

This topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise (including social innovation), in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

HORIZON-CL5-2026-02-D4-05: Optimal combination of low embodied carbon construction products, technical building systems and circularity principles for climate neutral buildings (Built4People Partnership)

Call: Cluster 5 Call 02-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the

	Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁸⁶ .
--	---

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Measurable reduction in whole life carbon emissions¹⁸⁷ and uptake of carbon removals in buildings;
- Increased integration of circular approaches for building construction and renovation works, with the aim of minimising lifecycle impacts;
- Availability of more accurate benchmarks and calculations of typical buildings' whole life carbon emissions and carbon removals, based on Level(s) and consistent with the life-cycle global warming potential provisions under the Energy Performance of Buildings Directive.

Scope: Buildings result in greenhouse gas emissions over their whole life cycle (operational and embodied emissions). Buildings can also contribute to long-term carbon removals by storing carbon in construction products. Construction and renovation works must also meet a variety of inter-related requirements such as structural and fire safety, acoustics, and a healthy and comfortable indoor environment. Although much research has focused on developing materials and products with reduced whole life carbon emissions, the life cycle impacts of buildings depend on a complex interaction between individual products, components and technical building systems, spatial distribution, usage during their lifetime, and other design choices. There is therefore a need to deliver buildings and renovation works with minimal life cycle impacts, in particular global warming potential, based on circularity principles, also accommodating future building use-change through design for flexibility, and using innovative combinations of products and systems that result in optimal building-level performance.

Proposals are expected to address all the following:

- Develop solutions that facilitate optimal combinations of construction products and systems with minimal life cycle environmental impacts at the level of the building. The optimal combinations of products and systems must also account for relevant aspects of performance such as structural integrity, thermal, acoustic and hygrometric, durability, potential for deconstruction and preparation for reuse at end of life, and potential for

¹⁸⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁸⁷ "[Supporting the development of a roadmap for the reduction of whole life carbon of buildings](#)", European Union, 2023'. This publication commissioned by the European Commission includes the following definition: "Whole life carbon encompasses all greenhouse gas emissions resulting from the materials, construction and the use of a building over its entire life, including its demolition and disposal. It is thus the total amount of embodied and operational emissions."

automated or industrialised installation. The solutions should cover, among others, the design and construction phases of work;

- Develop decision-related processes and strategies for adaptive reuse of existing structures, such as repurposing buildings as opposed to demolish and rebuild, considering the whole life carbon emissions;
- Validate the solutions, processes and strategies in a relevant environment in at least three countries, with different climatic conditions and building stock characteristics;
- Research the whole life carbon emissions of the developed solutions on typical building typologies in the chosen countries and contribute to whole life carbon benchmarking efforts;
- Consider the cost effectiveness of the developed solutions including relevant business models taking into consideration end-user needs;
- Contribute to the development of European standards¹⁸⁸, where relevant;
- Contribute to the objectives of the Built4People partnership and to the Built4People network of innovation clusters¹⁸⁹.

Selected proposals could consider the involvement of the European Commission's Joint Research Centre (JRC) whose contribution could consist of providing added value on circular design and building solutions that reduce life-cycle greenhouse gas emissions, and enable carbon removals, as well as performing experimental research for validating those solutions on full-scale prototype buildings.

This topic implements the co-programmed European Partnership on 'People-centric sustainable built environment' (Built4People). As such, projects resulting from this topic will be expected to report on results to the European Partnership 'People-centric sustainable built environment' (Built4People) in support of the monitoring of its KPIs.

Industry

Proposals are invited against the following topic(s):

HORIZON-CL5-2026-02-D4-06: Phase out fossil fuel in energy intensive industries through the efficient integration of renewable energy sources

Call: Cluster 5 Call 02-2026 (WP 2025)
Specific conditions

¹⁸⁸ 'harmonised standard' means a standard adopted by one of the European standardisation bodies listed in Annex I to Directive 98/34/EC, on the basis of a request issued by the Commission, in accordance with Article 6 of that Directive

¹⁸⁹ https://built4people.eu/nebula_project/

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Based on the results of the project, at least one industrial sector with a significant heating demand in the EU and Associated Countries develops pathways and business models to improve its energy efficiency, and to significantly reduce its consumption of fossil fuel and its emissions of GHG and other pollutants (including air pollutants), while preserving / enhancing its global competitiveness;
- With the goal of completely phasing out the use of fossil fuels in an industrial plant with a significant heating demand, the process(es) is(are) tightly integrated to minimise energy losses and its (their) energy supply relies on the local integration of a combination of renewable energy sources, including, where appropriate, process flexibility and storage to minimise its demand on the electricity grid.

Scope: Proposals are expected to demonstrate an innovative solution for the efficient, long lasting and cost-effective local integration of one or a combination of renewable thermal, electrical, bioenergy and other renewable energy sources in industrial processes, for heating, cooling and power generation, while optimising process efficiency and reuse, possibly upgrade of excess heat, with the aim of avoiding or drastically reducing fossil fuel use.

Process flexibility and energy storage can also be integrated, to match the energy demand of the industrial process with the variable renewable energy supply profile, and to minimise electricity demand from the power grid. Where possible, the integration with neighbouring industries and/or communities should be considered for the benefit of energy and resources sharing and efficiency.

The solution should be designed to ensure that the industrial process avoids or has very low GHG and other pollutant emissions, ensures high reliability and safety, and high physical and cyber security. It should be physically demonstrated in an industrial environment and be applicable to a significant share of the total energy demand of the industrial plant. The project should demonstrate through numerical simulations that the physically demonstrated solution can be scaled up to completely phase out the use of fossil fuels.

The project should facilitate the future deployment of the solution in the EU and Associated Countries' plants in the same industrial sector(s). Already before starting the design phase, the needs of most EU and Associated Countries' factories in the same industrial sector(s) should be surveyed and analysed in order to design a solution that can be adapted to meet most of them, to identify common components to be optimised/standardised and to issue/disseminate technical and economic guidelines.

Proposals are expected to present a strong business model and sound exploitation strategy for the proposed solution, as outlined in the introduction to this Destination.

DRAFT

Clean and competitive solutions for all transport modes

This Destination addresses activities that improve the climate and environmental footprint, as well as competitiveness, of different transport modes.

The areas of rail and air traffic management will be addressed through dedicated Institutional European Partnerships and are therefore not included in this document.

This Destination contributes directly to the Strategic Plan's **Key Strategic Orientations** 'Green transition', 'Digital transition' and 'A more resilient, competitive, inclusive and democratic Europe'.

In line with the Strategic Plan, the overall **expected impact** of this Destination is to contribute to the '*Achieving sustainable and competitive transport modes*'.

The main impacts to be generated by topics under this Destination are:

Zero-emission road transport

1. Clean solutions for zero tailpipe emission and environmentally friendly mobility for a climate neutral and zero pollution mobility with a higher level of circularity;
2. Affordable, user-friendly, inclusive, safe, and secure concepts and technologies that are easy to deploy, considering needs, behaviours, and socio-economic status of end-users;
3. Increased global competitiveness of the EU transport sector;
4. Increased responsiveness of zero tailpipe emission vehicles and systems to diverse societal interests and concerns;
5. Use cases and concepts for zero-emission road mobility of people and goods are successfully and innovatively demonstrated.

Aviation

1. New and updated Aviation Research and Technology Infrastructures, where the new research and technologies will be developed and tested;
2. Increased understanding and analysis of mitigation options of aviation's non-CO₂ climate impacts. New technologies for significantly lower local air-pollution and noise;
3. Accelerated uptake of sustainable aviation fuels in aviation, including the coordination with Member States and private initiatives.

Waterborne transport

1. The shipping industry (shipowners, equipment manufacturers, port authorities, terminal operators, and shipbuilders) will have access to high-power low and zero emission fuel solutions by 2030, leading to lower costs, enhanced energy efficiency, risk mitigation, standardised implementation, and improved operational efficiency through data science.

2. Port operators and ship owners will benefit from increased safety and technical standards on ammonia and hydrogen bunkering, including failure scenarios and risk mitigation;
3. The shipping industry will benefit from lower-cost and flexible battery-based solutions as primary sources of energy, higher safety standards and broader electrification solutions;
4. Shipowners, ship operators and port authorities will have access to OPS (Onshore Power Supply) solutions that will enable them to comply with the current and incoming legislative framework;
5. Policy makers and shipowners will benefit from access to accurate information and assessment methods on the direct energy savings resulting from the use of wind-assisted propulsion (WAP) systems under current legislative frameworks like FuelEU Maritime, contributing to the assessment of GHG intensity of energy used on-board. Shipowners, shipbuilders, and European shipyards will have access to commercially viable, cost-efficient, and easy-to-retrofit WAP solutions deployed at commercial scale, particularly for long-distance shipping;
6. Shipyards will have innovative holistic intelligent design tools for various retrofit solutions, enhancing the competitiveness of European shipyards and marine equipment providers;
7. Governments, port authorities, and shipping companies will benefit from access to standardised systems and tools for monitoring air pollutants and fuel consumption of ships, enabling compliance with current and incoming regulations on ship emissions;
8. Policymakers and enforcement bodies will benefit from innovative tools to fulfil the requirements of the Ship Sourced Pollution Directive resulting in an increased environmental protection of sea waters.

Transport related environment and health

The better monitoring of the environmental performance and enforcement of emissions regulation and biodiversity protection in order to reduce the overall environmental impact of transport (e.g., as regards biodiversity, noise, pollution and waste) on human health and ecosystems.

Zero-emission road transport

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-04-D5-01: Efficient wireless stationary bidirectional charging solutions for road Light Duty Vehicles (2ZERO Partnership) – Societal Readiness Pilot

Call: Cluster 5 Call 04-2025 (WP 2025)

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 20.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Exceptional page limits to proposals/applications</i>	The page limit of the application is extended by two pages to 47 to properly address Societal Readiness-related issues.

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- Bidirectional, interoperable low-power wireless (i.e., inductive) stationary charging solutions and services are demonstrated in operational environment for Light Duty Vehicle (vehicle category M1 and N1), with significantly reduced losses of power transfer reaching at least 90% power transfer efficiency in both directions and increased robustness against humidity and dirt, and in all weather conditions (including rain, snow and ice);
- Enhanced electro-magnetic compatibility (EMC) within health and safety limits conforming to international standards (e.g. SAE J2954, IEC 61980-1/-2/-3, CISPR 11 and ISO 19363) as well as avoiding interference with relevant telecommunication regulations and Low Frequency(LF)-based navigation systems (e.g., eLORAN);
- Enhanced social acceptance of automatic park and charge functionalities with increased comfort and complete cost/benefit assessment at system-level for acceptable costs;
- Demonstration of the solutions and their efficient integration into the electricity grid in on-street parking (and optionally in parking lots), incorporating advanced V2X technologies to ensure seamless interaction between the vehicles and energy systems to enhance the robustness and efficiency of the wireless charging solutions;

- Deeper understanding of the needs and concerns of diverse social groups involved in or potentially affected by the R&I development (e.g. employing synthetic population models and tools), thereby increasing the potential for beneficial societal uptake and building trust in results and outcomes.

Scope: Wireless stationary charging for road light duty vehicles can be a solution to minimise the intrusiveness of the charging infrastructures, which is critical in urban environments. Moreover, it can provide the EV user with a hands-free way of charging, which is of particular benefit for people with disabilities or other weaknesses. The holistic system approach of EV integration into electricity grids entails bi-directional power between EV and the grid to maximise the battery capacity exploitation for grid-and market-oriented services. Recent progress on wireless bidirectionality of charging technologies motivates the need for additional demonstrations with further improved efficiency¹⁹⁰. The focus of this topic is the development of the charging system, the integration of the system into the vehicle and its demonstration in real life operations. Limited optimisations concerning on-board systems not directly related to the wireless charging (e.g. BMS and battery) may be included if properly justified.

Proposals are expected to address **all** the following aspects:

- Design, develop and demonstrate cost-effective, standardised, safe, visually not intrusive, efficient technologies, solutions and user-centric services offered for bi-directional automatic wireless charging for road Light Duty Vehicles;
- Investigate ways to maximise efficiency through charging plate and power electronic design and positioning (such as auto-positioning of vehicle and/or transmitters/receivers) to increase comfort and social responsiveness of parking and stationary charging;
- Avoid detrimental effects from obstacles such as garbage or amounts of dirt that might interfere with the power transfer and/or might cause damage;
- Efficient system integration of bidirectional wireless charging infrastructures and services to support Renewable Energy Sources (RES) deployment, grid balancing, and investments analysis, making use of generative AI where beneficially applicable;
- Analyse the environmental footprint of the solution following a Life Cycle Assessment (LCA) approach including reuse, repair and recycling/recovery, in particular to reduce use of critical raw materials, and perform a Costs-and-Benefits analysis on the development and the deployment of the proposed solutions;
- Demonstrate solutions and services in at least three different urban areas (peri-urban and/or rural are excluded) within Horizon Europe participating countries considering different climatic conditions and for a period of at least three months;

¹⁹⁰ As examples, see projects funded under call FP7-TRANSPORT GC.SST.2013-1 and H2020- LC-GV-03-2019

- Exploitation of synergies with projects related to the Software-Defined Vehicle of the Future¹⁹¹ is encouraged where applicable.

This topic is a Societal-Readiness pilot:

- Proposals should follow the instructions applying to the Societal readiness pilot, as described in the introduction of the Horizon Europe Main Work Programme 2025 for Climate, Energy and Mobility. They entail the use of an interdisciplinary approach to deepening consideration and responsiveness of research and innovation activities to societal needs and concerns.
- This topic requires effective contribution of the relevant SSH expertise, including the involvement of SSH experts in the consortium, to meaningfully support Societal Readiness. Specifically, SSH expertise is expected to facilitate the socio-technological interface and enable the design of project objectives with Societal Readiness related activities.

The project(s) should contribute to the activities of existing working groups for the definition of standards for EV wireless charging.

The project(s) should take account Open Science, its practices and learning, and the project's results will be enacted in line with FAIR principles for data¹⁹².

Proposals should consider the involvement of the European Commission's Joint Research Centre (JRC) whose contribution could consist of performing experimental or desk-top research on Electromagnetic Compliance and Safety.

This topic implements the co-programmed European Partnership on 'Towards zero emission road transport' (2ZERO). As such, projects resulting from this topic will be expected to report on the results to the European Partnership 'Towards zero emission road transport' (2ZERO) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-02: Cybersecure and resilient road e-mobility ecosystem (2ZERO Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

¹⁹² Final Report and Action Plan from the European Commission Expert Group on FAIR Data, "TURNING FAIR INTO REALITY" - <https://op.europa.eu/en/publication-detail/-/publication/7769a148-f1f6-11e8-9982-01aa75ed71a1/language-en>

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁹³ .

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- A (holistic) architecture integrating cyber-resilient hardware and software modules, such as Hardware Secure Modules considering state-of-the-art cryptographic primitives/technologies (e.g., Post-Quantum Cryptography) to enhance the security, resilience, and robustness of e-mobility systems;
- Implementation and demonstration in real-life environment of cybersecure e-mobility and system tools based on open-source framework, and on use cases for testing, verification, and certification;
- Guidelines towards future mitigation plans, such as advanced cryptographic solutions, over-the-air software corrections etc. for enhanced cybersecurity in short period of time;
- Guidelines towards a data breach response plan for the ecosystem as a framework that sets out the roles and responsibilities involved in managing a breach;
- Hardened Electric Vehicle Supply Equipment (EVSE) against natural hazards, vandalism and criminal tampering by cyber-attacks and physical intrusion.

¹⁹³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Scope: The system approach of the e-mobility entails the interconnection of several e-mobility actors with the technologies (EVs, EVSEs) and e-mobility users but also the establishment of communication interfaces among e-mobility/energy actors via different ICT systems, front-end and back-end systems. On one hand, the charging infrastructures should be open and accessible (to everyone, for all users, for all types of EVs, software systems, charging protocols and apps, communication networks) and, on the other hand, they must fully comply with the Cyber-Resilience Act (CRA) by November 2027 and hence be secured from hackers, criminals, and other malicious parties. It is critical to ensure that all these interactions are secured and reliable, also considering the transition of the automotive industry towards the software-defined vehicle (SDV) concept and the continuous Over-The-Air (OTA) software (SW) updates. A cyber-attack on any level of the e-mobility ecosystem may have financial and/or operational implications which might result in wider disruptions, up to nationwide power outage.

Proposals are expected to address **all** the following aspects:

- Develop a secure-by-design architecture and secure design principles encompassing all components and direct interfaces with EVs, EVSE, Charging Point Operators and E-Mobility Service Providers (EMSP) within the e-mobility ecosystem¹⁹⁴ considering governance models involving the roles and responsibilities of the different actors;
- Conduct a thorough threat analysis and risk assessment to identify potential security vulnerabilities within the ecosystem, also analysing the security of interfaces with all involved actors (e.g., EV Aggregators, Facility Managers, Flexibility Providers, Distribution System Operators, etc.) when applying V2X services;
- Define a comprehensive testing framework for penetration including reacting against live attacks to EVSE as well as to vehicle network on hardware (HW) and software (SW) components to uncover potential weaknesses and vulnerabilities, including behavioural aspects such as sub-standard repair or vehicle tampering;
- Implement a shared system of systems testing approach and develop co-designed verification and certification methods (also via Hackathon);
- Demonstrate in real-life operational environment the use of the framework for testing the cyber security and resilience of vehicles and charging infrastructure isolated and in connection to situations like charging, preparing for charging and payment processing;
- Compliance with existing standards¹⁹⁵ and best practices for security, resilience, and robustness of e-mobility systems for more secured systems should be ensured, making use, where applicable, of generative AI;

¹⁹⁴ The cyber security analysis for connected vehicles performed by the European Union Agency for Cybersecurity (ENISA) and Joint Research Centre (JRC) should be considered.

¹⁹⁵ Such as UNECE R155 or UNECE WP.29 (based on a ISO standard 21434), European CRA and the EC's PKI ecosystem governance and ISO15188-20, see also [Cyber Resilience Act Requirements Standards Mapping - Joint Research Centre & ENISA Joint Analysis — ENISA \(europa.eu\)](#)

- Extend Public Key Infrastructure (PKI) deployment, while considering emerging cryptography threats (i.e., quantum crypto) and exploring solutions, particularly focusing on pre-emptive measures against Post-Quantum Cryptographic attacks;
- Support to the set-up and implementation of the EC's PKI ecosystem governance based on ISO 15118-20 standard;
- Develop digital twins to help define vulnerable elements of infrastructure and identify measures for risk mitigation;
- Consider the HW/SW elements and communication channels spanning from vehicles to charging stations and the electricity grid as a proactive design to mitigate vulnerabilities across the entire chain;
- Exploitation of synergies with projects related to the Software-Defined Vehicle of the Future¹⁹⁶ is encouraged where applicable.

This topic implements the co-programmed European Partnership on 'Towards zero emission road transport' (2ZERO). As such, projects resulting from this topic will be expected to report on the results to the European Partnership 'Towards zero emission road transport' (2ZERO) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-03: Safe post-crash management of road Light Duty Battery Electric Vehicles (BEVs) (2ZERO Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6 by the end of the project – see General Annex B. Activities may start at any TRL.

¹⁹⁶ See Call HORIZON-KDT-JU-2023-3-CSA-IA, HORIZON-CL5-2024-D5-01-05 and HORIZON-JU-Chips-2024-1-IA-T3

<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹⁹⁷.</p>
---	---

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- Significant improvement of vehicle designs (especially the design of the most recent battery pack and its integration into the vehicle) from the perspective of fire-hazard reduction, fire suppression, crashworthiness and post-crash handling compared with the baseline vehicle, following specific design guidelines;
- Advanced BEV condition assessment methods and tools with a focus on the condition of the battery as the most critical sub-system, providing safety-relevant information in a standardised format useful for rescue, towing and after-treatment services, complementing the digital battery passport, ensuring the safety of workers in all these phases, minimising environmental hazards and easy to apply by practitioners – towards standardised procedures;
- Re-purposing/re-using/re-cycling of batteries from crashed BEVs facilitated by tailored interventions, high confidence in battery health condition and standardised handover protocols, thus supporting potential second-life applications of batteries from crashed BEVs;
- Best practices in fire handling and fire suppression, rescue procedures and handling of crashed Light Duty BEVs applied all over Europe, supported by training material and instructions for ‘first responders’, such as firefighters and emergency service workers;
- Dispelling safety concerns of (potential) BEV users as well as policy/decision makers by science-based communication and comparative statistics.

Scope: In addition to protection during a collision, it is the post-crash phase, immediately after the collision, that is crucial for the consequences of a road crash. Vehicle fires are a key concern in this post-crash phase. While there are many similarities to fires in vehicles with Internal Combustion Engines (ICEV), road electric vehicle battery fires pose a range of new challenges to emergency responders and everyone handling EVs post-incident, including tow, repair, storage, salvage & wrecking. The rescue of victims, the safety of first responders and safe, efficient, and timely firefighting measures are key factors. The latter in particular poses

¹⁹⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

important challenges specific to road electric vehicles, amongst others due to the chemical composition of state-of-the-art lithium-ion batteries, the placement of the battery in the vehicles, enclosed in a water-tight, protective compartment, and the volume of water needed to cool a burning high-capacity battery. This is a challenge in particular in constrained spaces, such as in tunnels.

There is a need to support the definition of standards and procedures both in terms of risk but also in terms of response. With a focus on Light Duty Battery Electric Vehicles (BEVs), proposed actions will identify and further develop optimum technological solutions, processes and best practices towards future standards, design guidelines and official instructions / service regulations.

Proposals are expected to address **all** the following aspects:

- Vehicle health assessment tools after a crash, with a focus on the assessment of the battery and high-voltage system condition, ensuring that the HV battery is in a safe and stable condition (avoidance or early detection of thermal runaway after a collision), and maximising the likelihood of keeping the battery in service in the vehicle once fixed / re-using it, in line with the proposed regulation on circularity requirements, eco-design and end-of-life of vehicles. Both on-board monitoring systems and off-board systems can be considered;
- If making use of connectivity to on-board monitoring systems, the accessibility to the health and safety information / data needs to be addressed. This includes the development of state of safety and state of health algorithms to provide the remaining useful life and potential safety risks of the battery after a collision, complementing the information on the digital battery passport¹⁹⁸;
- Extrication procedures protecting both crash victims and emergency service workers to the best possible extent, also considering the gender dimension. To ensure the effectiveness of fire handling, suppression, and rescue procedures for crashed BEVs, it is crucial to further develop these practices in close collaboration with first responders;
- Fire extinguishing techniques and firefighting procedures for BEVs (if the case also including innovative fire extinguishing media), considering the risks specific for EV including potential toxic products of the associated chemical reactions, as well as vehicle designs supporting firefighting. Particular attention should be paid to the design of the battery pack and its integration into the vehicle, including auxiliaries;
- Develop and implement procedures and tools for the safe handover, handling, transport and storage of crashed BEVs, with wide dissemination to relevant stakeholders towards standardised procedures;

¹⁹⁸ With regard to monitoring techniques and algorithms, proposals are expected to coordinate and exploit synergies with research topic HORIZON-CL5-2024-D2-02-04 on “Accelerated multi-physical and virtual testing for battery aging, reliability and safety evaluation” under the Batt4EU Partnership.

- Quantify the rate and severity of BEV fire safety impacts by conducting a comparative study addressing aspects such as frequency of BEV fire and severity of outcome, and provide statistical analysis to deliver science-based communication on the safety of Light Duty BEVs to the general public;
- Real-life demonstration (in comparison to the state-of-art) of Light Duty (vehicle category M1 and N1) BEV condition assessment tools, data analysis, as well as firefighting, rescue, and handling procedures on a series production vehicle;

The project should actively seek interaction with and make use of results from workshops on EV fire safety currently being organised under the IEA HEV Technology Collaboration Programme, and where relevant with the Sustainable Transport Forum Task Force 6: “Developments for fire safe deployment of recharging points in covered parking garages”¹⁹⁹.

The project should take account Open Science, its practices and learning, and the project’s results will be enacted in line with FAIR principles for data²⁰⁰.

This topic implements the co-programmed European Partnership on ‘Towards zero emission road transport’ (2ZERO). As such, projects resulting from this topic will be expected to report on the results to the European Partnership ‘Towards zero emission road transport’ (2ZERO) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-04: Extended lifetime of road Battery Electric Vehicles (BEV) (2ZERO Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 7.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility</i>	The conditions are described in General Annex B. The following

¹⁹⁹ The Hybrid and Electric Vehicle Technology Collaboration Programme (HEV TCP) under the International Energy Agency (IEA) framework. <https://ieahev.org/tasks/49/>; The Sustainable Transport Forum (STF), Task Force 6 is in charge of “Developments for fire safe deployment of recharging points in covered parking garages” https://transport.ec.europa.eu/transport-themes/clean-transport/sustainable-transport-forum-stf/active-sub-groups/sub-group-best-practices-public-authorities-support-deployment-recharging-infrastructure-regex_en

²⁰⁰ Final Report and Action Plan from the European Commission Expert Group on FAIR Data, “TURNING FAIR INTO REALITY” - <https://op.europa.eu/en/publication-detail/-/publication/7769a148-f1f6-11e8-9982-01aa75ed71a1/language-en>

<i>conditions</i>	exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5-6 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁰¹ .

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- Holistic improved understanding of ageing and degradation of critical electric drive components relevant from a system integration point of view (fitting, mounts, connectors, sealings...) of Light Duty (vehicle category M1 and N1) BEV enabling user-centric designs for longer life and for higher residual values to minimise the environmental impact and to strengthen European resource sovereignty;
- 20 % higher residual value²⁰² through longer lifetime of BEV increasing material efficiency and productivity in comparison to baseline, state of the art vehicle;
- Future sustainable, economy-design concept evaluation for extended lifetime with minimum use of resources and re-use, recycle and End of Life (EoL) strategies applicable for advanced technology development;
- Advanced prospective/prescriptive maintenance and repair concepts to extend useful lifetime of BEV and minimise the used resources (20% reduction in resources in the use phase) and environmental footprint (5% reduction).

Scope: Currently, the value of a vehicle is mostly defined by driven mileage and age, underestimating the actual residual value. However, the real actual residual value of a BEV

²⁰¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁰² Reference UBA Study on “Illegal Treatment of End-of-Life Vehicles -Assessment of the environmental, micro- and macroeconomic effects”, <https://www.umweltbundesamt.de/publikationen/illegal-treatment-of-end-of-life-vehicles>, last visited 20.06.2024; the current additional revenue of an BEV (not considering materials and parts which are common with ICE) w/o the battery is estimated to be 120 € neglecting economic effects such as COVID. Correcting this one can assume that the electric drive train currently has a low residual value of » 250 € and the battery estimated to 2.000 €.

and its component should help implement Circular Economies (CE) strategies beyond classical shredding, such as reuse, remanufacturing, recovery of precious material. The residual value is determined by ageing and degradation in the use phase, repair and maintenance measures, operation of the vehicle and also by a CE-specific design. Consequently, prospective/prescriptive maintenance strategies, repairability and upgradability of vehicles must be addressed in relation to actual ageing and degradation of a component as part of upcoming CE strategies (including 9R approaches) to ensure longer (in terms of higher residual values) and more sustainable lifetimes of road BEV without over-sizing components and/or increasing the use of raw materials.

This topic focuses on the road BEV electric drive components relevant from a system integration point of view where high combined operational loads are to be expected, on the thermal management systems as well as on power electronics. The ageing and degradation of pack and module level is included whereas the battery cell level is excluded.

Proposals are expected to address **all** the following aspects:

- Analyse holistically the ageing and degradation of relevant, critical BEV functions and relevant sub-systems (excluding battery cells), that determine the Vehicle Lifetime and residual value under the aspect of functionality, safety and economic considerations (e.g., through correlating real-life operational loads with observed degradation and ageing effects);
- Develop tools and methods to assess, measure and predict ageing and degradation of relevant sub-systems (e.g. modelling combining multi-physical models describing ageing/degradations and vehicle operation and applying AI approaches, non-invasive evaluation to describe ageing and degradation over lifetime, multi-physical testing to accelerated occurrence of realistic ageing and degradation phenomena, use of novel sensors for measuring ageing and degradation in an electric drivetrain, etc.);
- Develop extended lifetime concepts and assess lifetime extension measures for BEV ensuring high residual values including right-sized design, operation, maintenance, refurbish and repair, by e.g. definition of prospective maintenance strategies, implementing ageing / degradation models into the design, advanced control strategies to minimise operational loads contributing to ageing and degradation phenomena including sensor technologies to obtain real-life operational data;
- For all relevant, critical components, follow the “digital product passport” approach, to achieve maximum traceability²⁰³;
- Data management for operational loads, maintenance, and repair measures;

²⁰³ The “Digital Product Passport” will provide information about products’ environmental sustainability. This information will be easily accessible by scanning a data carrier and it will include attributes such as the durability and reparability, the recycled content or the availability of spare parts of a product. https://ec.europa.eu/commission/presscorner/detail/en/ip_23_6257

- Validation and demonstration of concepts and designs for higher residual values (less aging and degradation under operational conditions) appropriate to the TRL level via a full physical demonstrator of all components of the electric drive-in representative laboratory environment.

The project(s) should take account Open Science, its practices and learning, and the project's results will be enacted in line with FAIR principles for data²⁰⁴.

This topic implements the co-programmed European Partnership on 'Towards zero emission road transport' (2ZERO). As such, projects resulting from this topic will be expected to report on the results to the European Partnership 'Towards zero emission road transport' (2ZERO) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-05: Road Battery Electric Vehicles (BEV) optimised user-centric solutions for energy efficiency design and consistent range throughout weather conditions (2ZERO Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the

²⁰⁴ Final Report and Action Plan from the European Commission Expert Group on FAIR Data, "TURNING FAIR INTO REALITY" - <https://op.europa.eu/en/publication-detail/-/publication/7769a148-f1f6-11e8-9982-01aa75ed71a1/language-en>

	Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁰⁵ .
--	---

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- Validated set of user requirements and usage acceptance limits, e. g. acceptable range loss for cabin climatisation, for different vehicle user groups (e. g. age, income, gender, location, regular usage models) in consideration of driving habits under various weather conditions as a basis for system development;
- Innovative and affordable Light Duty Vehicles (LDV) / Light Commercial Vehicles (LCV) energy management solutions demonstrated with a prototypical system (e. g. mock-up vehicle) in relevant environment and compared with State of the Art. Solutions should be cost effectively fulfilling and balancing user needs (from comfort and air quality aspects such as temperatures, humidity, CO₂, to driving range) under extreme weather conditions (-15°C to at least +40°C, aiming to +45°C);
- User and use case specific vehicle range loss (due to climatisation needs) at extreme ambient conditions will be reduced to user acceptance limits. Compared to State of the Art for an affordable system design, the range loss from normal operating conditions (e.g., 10 to 20 °C) to extreme ambient conditions will be reduced by at least 30% without increasing system cost (e.g. energy, battery and thermal management);
- Optimal energy management including integration of future smart cities standards (e.g., speed control, environmental forecasting, swarm information, smart energy management, grid peak load periods) resulting in 10% improvement of energy demand for the thermal system and the powertrain.

Scope: Preserving the benefits of right-sized batteries in terms of road BEV affordability, material resource and energy savings while reducing the impact of occasional extreme weather conditions on driving range for both LDV and LCV, especially during longer trips, calls for novel systemic approaches on thermal management. Finding solutions which adequately balance user needs, technical effort and vehicle affordability requires user research (e. g. user acceptance, preferences, and usage scenarios for the vehicles) to set relevant goals and criteria for innovation in the field of thermal management systems and technologies.

Automotive standards (e.g. ISO 7730, ISO 14505-4) should be met, keeping in mind that extreme weather conditions are a critical challenge and should be tackled not only with innovative or improved components, but especially with novel, user-centric and intelligent solutions based on an overall vehicle system approach (can include interface to infrastructure) to minimise energy and simplify thermal systems and which do not lead to increased system or vehicle cost.

²⁰⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Proposals are expected to address **all** the following aspects:

- Analyse user requirements to identify personalised thresholds of thermal comfort and their different expectations and behaviours, sensitivities, tolerances, and acceptance with regard to various use cases;
- Establish a holistic approach to optimising energy efficiency and relevant thermal functions (system-oriented and simplified solutions based on usage scenarios and inclusion of external data to use energy optimally and avoid oversizing that could also result from cascading engineering safety margins);
- Explore and exploit the potential that connection to the grid offers without overloading the grid especially during extreme weather conditions;
- Develop innovative, safe and intelligent solutions that reduce the loss of range within acceptable limits also addressing the balance of costs, usage models and system complexity when considering extreme weather conditions while meeting automotive standards under normal use;
- Develop innovative vehicle energy management solutions for seldom extreme weather conditions also using predictive energy management, e.g., AI-based functions and intelligent management of auxiliaries, in order to fulfil user preferences and tolerances;
- All developed solutions and concepts must be integrated in a prototype or mock-up vehicle and demonstrated on system level in a relevant environment.

The project(s) should take account Open Science, its practices and learning, and the project's results will be enacted in line with FAIR principles for data²⁰⁶.

This topic implements the co-programmed European Partnership on 'Towards zero emission road transport' (2ZERO). As such, projects resulting from this topic will be expected to report on the results to the European Partnership 'Towards zero emission road transport' (2ZERO) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-06: Strategies, tools and concepts for optimised road Battery Electric Vehicles (BEV) long-haul logistics use cases (2ZERO Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a

²⁰⁶ Final Report and Action Plan from the European Commission Expert Group on FAIR Data, "TURNING FAIR INTO REALITY" - <https://op.europa.eu/en/publication-detail/-/publication/7769a148-f1f6-11e8-9982-01aa75ed71a1/language-en>

	proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁰⁷ .

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- Accelerated uptake of Heavy Duty (HD) Battery Electric Vehicles (BEV) across the EU and Associated Countries, through innovative logistics models, addressing the need to optimise battery size and charging strategies across various logistics scenarios;
- Enhanced reliability and effectivity of the road freight systems enabled by the development and implementation of software tools for decision making considering truck configurations, charging strategies, missions and efficient operational planning of routes and services, including charging and interoperable cross-border services;
- Increased portfolio of real-life HD-BEV operational demonstrations for long-haul and cross border operations and associated logistics models;
- Enhanced understanding of EU and Associated Countries stakeholders' needs for integrating HD-BEVs in logistics operations, also long-term novel usage models.

Scope: It is expected that by 2030 there will be around half a million of HD-BEV on European roads. Nonetheless, the current market application of these vehicles is largely confined to transport tasks with restricted range and considerable repetition. To expand their

²⁰⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

use, diverse strategies and applications must be explored and validated for scalability based on real data coming from logistics operators. The development of new application models should showcase the potential flexibility of HD-BEVs and assist end-users in establishing innovative usage frameworks and models.

Several actions are already underway for HD-BEV logistics (including the projects funded under the 2Zero topics HORIZON-CL5-2022-D5-01-08 and HORIZON-CL5-2024-D5-01-04) with a focus on extending range and charging capacity but also identifying challenges, gaps and impacts of HD-BEV usage in logistics operation. There is an urgent need to address these challenges and gaps for a smooth transition into daily operations and considering the wide variety of use cases and missions to be addressed.

Finding the optimal balance between the vehicle's configuration and available charging infrastructure for different logistics use cases is key to address the Total Cost of Ownership (TCO) challenge in the short and long term. This balancing will be enhanced by innovative logistics models and tools to further optimise logistics regional and long-haul operations in different regions in the EU and Associated Countries accelerating the deployment of HD BEVs for logistics.

Proposals are expected to address **all** the following aspects:

- Derive in-depth insights and lessons learnt from current long-haul transport missions in the EU and Associated Countries along major road arteries (e. g. the Trans-European Transport Network (TEN-T) corridors and nodes) towards overcoming the limitations determined by vehicle range and TCO and propose cost-effective HD BEV based logistics and operational models, building on modular vehicles set up and sound charging strategies. These models should include use cases across the EU and Associated Countries focused on long-haul transport missions and be based on existing, real operations data;
- Test and validate in real demonstrations new logistic operational concepts and models allowing a scalable deployment of HD-BEV in long haul transport missions optimising the different variabilities of a shipment (range, charging time, various European regions, drivers required break/rest times etc.).
- Develop and test associated digital tools for effective, robust integration in the overall logistics operations and fleets, and facilitating interoperable cross-border services. These associated digital tools – where relevant also developed as digital twins – are to enable and support efficient optimisation of the concepts, models, solutions and operations;
- Real-life demonstrations should be based on existing fleets of operators (e.g. haulers, shippers, freight forwarders) with different categories of vehicles and missions. Demonstration should at least include 8 different types of long-haul missions in different climatic conditions, including cross-border missions, and involve several logistic companies and/or logistic users;

- Develop scenarios for optimum balance of vehicles' performance and configuration, charging strategies and solutions. The scenarios will include information on the distance dependency as a function of vehicle combinations, location and capacity of charging stations and payload demands;
- The demonstrated concepts, models and tools should allow strategies for firm upscaling of HD-BEV implementation, taking into account the logistics operational models, the performance of complete vehicle combinations also considering the effects of on-board batteries on the ageing and energy recuperation;

The project(s) should take account Open Science, its practices and learning, and the project's results will be enacted in line with FAIR principles for data²⁰⁸.

This topic implements the co-programmed European Partnership on 'Towards zero emission road transport' (2ZERO). As such, projects resulting from this topic will be expected to report on the results to the European Partnership 'Towards zero emission road transport' (2ZERO) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-07: Accelerating the circular transformation of the EU automotive industry

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional obligations regarding open science practices: Open access to any new modules, models or tools developed from scratch or substantially improved with

²⁰⁸ Final Report and Action Plan from the European Commission Expert Group on FAIR Data, "TURNING FAIR INTO REALITY" - <https://op.europa.eu/en/publication-detail/-/publication/7769a148-f1f6-11e8-9982-01aa75ed71a1/language-en>

	<p>the use of EU funding under the action must be ensured through documentation, availability of model code and input data developed under the action.</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁰⁹.</p>
--	---

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- Widespread and shared understanding of circular economic principles with a harmonised approach across the full life-cycle value chain of road transport and beyond;
- Increased Europe's resource sovereignty, lower the environmental footprint, and strengthen the competitiveness of the European automotive-full life-cycle value chain;
- Definition of requirements and boundaries for a European circular economy eco-system in the automotive sector also towards possible definitions of future standards;
- Increased development and adoption of product passports and digital twins, further optimising reuse and remanufacturing of all possible components, systems and sub-systems and vehicle recycling;
- A roadmap for highly visible and focused European Pilot Projects (lighthouses) is developed that drives the industrial transformation towards circularity at an accelerated speed in the European automotive-full life-cycle value chain.

Scope: Proposals are expected to address **all** the following aspects, focussing on end-of-life strategies:

- Identify stakeholders and industrial sectors and implement all needed measures for a direct involvement:
 - o Support full life-cycle value chain stakeholder communities from European to regional levels;
 - o Map ongoing projects and remanufacturing processes and analyse existing industrial strategies and roadmaps within the automotive value chain;
 - o Design and implement a strong stakeholders' engagement process.

²⁰⁹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Analyse the full life-cycle value chain eco-system, identify bottlenecks, gaps, and hurdles for transformation towards a circular automotive industry;
- Support the implementation and awareness of AI-based tools and processes for open and closed material, systems and component loops that can significantly increase the end-of-life value, the re-useability and re-cyclability “by design” of all vehicle components and materials also in other industrial sectors;
- Assess the economic, environmental and societal impact of a future circular automotive industry (e.g., business cases and investments, contribution to the environmental footprint and the Green Deal objectives, job creation, competitiveness...), and analyse possible viable business models along the full life-cycle value chain (9R principles), within a circular automotive industry;
- Support the conceptualisation of a possible future European Pilot Project (lighthouse) “Recycling Factory of the Future” including viable business models, also analysing the spillovers to other sectors, and outlining a pathway towards its possible implementation with all relevant stakeholders of the full life-cycle value chain;
- Define and develop possible future product passports and digital twins.

Aviation

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-04-D5-08: Next generation testing capabilities in strategic EU wind tunnels

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 15.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 3-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions

	under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²¹⁰ .
--	---

Expected Outcome: Project results should focus on new and adapted testing capabilities for next generation climate neutral aviation. Project results are expected to contribute to all of the following expected outcomes:

- Airframe transformative technologies, including airframe-propulsion integration;
- High aspect ratio and/or highly flexible unfuelled wing;
- Distributed hybrid/electric propulsion;
- Airframe and propulsion aeroacoustics;
- Further advancements of experimental simulation capabilities required for novel low-emission aircraft towards reducing further the lead times.

Scope: The new mission letter to Commission-designate for startups, research and innovation called for new long-term strategy to boost European Research Infrastructures, recognising the need to further strengthen the European research and technology linked to strategic facilities, as they can greatly contribute to the competitiveness of the European economy.

In parallel to ongoing research policy initiatives which aim to define the future EU landscape and funding programmes to support technology infrastructures, the advancement of science and technologies is necessary for the development of new and adapted testing capabilities. EU wind-tunnels is a prime example of such strategic capabilities towards climate-neutral aviation. The Horizon 2020 RINGO project has provided an analysis of needs, gaps and overlaps of European Aviation R&I Infrastructures, especially strategic infrastructures, in order to achieve Flightpath 2050 goals, while a recent internal effort has updated, refined and prioritised those findings.

The scope of this topic is focused on better understanding and further advancing critical technologies that require the update of relevant strategic EU testing capabilities, in particular wind tunnels. While new instrumentation and development of new testing procedures and digital tools is within the scope of this topic, other Research and Technology Infrastructure investments (i.e., buildings, auxiliary facilities, etc) fall outside of the scope.

The complexity of multi-disciplinary design and optimisation of future aircrafts requires extensive computational efforts, validated by wind-tunnel and propulsion testing. The scope of this topic is confined by strategic priorities and proposed aircraft concepts as defined in the

²¹⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

updated Horizon Europe Clean Aviation Strategic Research and Innovation Agenda. Emphasis is placed on airframe and propulsion transformative technologies, including the integration of advanced propulsion architectures on the airframe, distributed hybrid/electric propulsion, high aspect ratio and highly flexible unfuelled wing (e.g. for LH2 aircraft), boundary layer ingestion, ground effects in new aircraft architectures and aeroacoustics.

The projects should be aligned with the Fly the Green Deal vision and 2050 climate neutral aviation objectives and if possible, exploit synergies with other EU and National projects. In those cases that the participation of multiple testing facilities is required, the projects should also define and agree upon interfaces, common architectures and common data exchange formats.

HORIZON-CL5-2025-03-Two-Stage-D5-09: Next generation aircraft autonomy technologies for cockpit / pilot assistance applications

Call: Cluster 5 Call 03-2025 (2-stage) (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 7.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 2-4 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. 	Research and Training Programme of the European Atomic Energy Community (2021-2025) ²¹¹ .
--	--

Expected Outcome: Project results should contribute to the European civil aircraft cockpit technology roadmaps on crew assistance/automation/autonomy, with focus to next generation aircraft autonomy technologies for cockpit / pilot assistance applications.

Project results are expected to contribute to at least two of the following expected outcomes:

- Increasing safety in cockpits, by providing to the crew's assistance new systems or functionalities. with new capabilities for new aircraft platforms, new Human Machine Interface concepts and technologies.;
- Contribution to the roadmap of cockpits digitalisation and autonomy, by conceiving new cockpit capabilities, allowing an enhanced Human-System Relation (new ways for the crews to interact or collaborate with the cockpit). Technological breakthrough could bring to future cockpits the development potential necessary to take up the challenges of the next decades;
- Increased efficiency of cockpits performances: reduction of size, weight and power consumption (SWaP) of systems and equipment, reduced total lifecycle costs, integration levels by reduced production times and, first-time-right delivery.

Scope: Next generation aircrafts will be even more digital and automated, with more interactive and automated cockpits. This will be even more reliant on automation evolution and it is expected to mitigate an always-increased complexity of aircraft systems and operations, ensuring safe and efficient operations. However, automation is also prone to significant errors when misused or misunderstood, especially if this is combined with new aircraft platforms (incl. new systems/capabilities) or new types of operations.

The projects should develop new technology bricks in line with the aircraft concepts proposed in the updated Horizon Europe Clean Aviation Strategic Research and Innovation Agenda²¹² and possibly exploit lessons learned from the H2020-CS2 Large Aircraft Disruptive Cockpit Demonstrator²¹³. Synergies may also be sought with Horizon Europe SESAR Single Person Operations projects.

The technology bricks should be aligned with the needs of future aircraft generations and operations, new requirements, and cockpit philosophy of European aircraft integrators for the next generations of aircrafts, while they should be cyber-resilient and controlled by a single pilot and without the assistance of an on-board human co-pilot. Development of simulation tools, use of artificial intelligence models, human factors, and cost-benefit analysis (CBA) of

²¹¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²¹² <https://clean-aviation.eu/sites/default/files/2024-09/2024-Clean-Aviation-SRIA.pdf>

various technical solutions is within the scope of the topic. Interfacing with the European Union Aviation Safety agency (EASA) on safety and new testing and certification processes as well as alignment with the EASA AI roadmap should be considered, if applicable.

The focus is on development of new technologies up to TRL 4, rather than on integration and demonstration.

Waterborne transport

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-04-D5-10: Innovative solutions for energy conversion and safety of low and zero-carbon fuels in waterborne transport (ZEWTP Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 11.25 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 22.50 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio, grants will be awarded to applications not only in order of ranking but at least also to one proposal that is the highest ranked within area A or B, as described in the scope of the topic, provided that the applications attain all thresholds (and subject to available budget).</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>The following cost categories will be ineligible costs: equipment costs linked to Carbon Capture Storage and Carbon Capture, Storage and</p>

	Utilisation.
--	--------------

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- The waterborne industry will have near-to-market solutions for the safe integration and use of low and zero-carbon fuel power conversion systems as the main power source for vessels above 5,000 Gross Tonnage (GT) with overall energy efficiencies at least 55% in shaft propulsion;
- Equipment manufacturers and ship owners will have access to a knowledge repository to support standardisation for using low and zero-carbon fuels and ensuring technical compatibility between the fuel and energy conversion system;
- Public authorities, port terminals and ship operators will have access to a knowledge repository to identify hazardous scenarios for low and zero-carbon fuels used in the demonstration and their potential impact in ports, including risk control options, as well as development of protocols for safe response operations in case of an accidental release of low or zero-carbon fuels;
- The EU waterborne industry, including shipyards and equipment manufacturers will gain an increased competitive advantage due to the development of innovative software demonstrating optimised integration of energy technologies;
- The workforce across the value chain, including on-board crews and port workers directly handling low and zero-carbon fuels and carrying bunkering operations, will gain competences and certified training in bunkering operations and port authorities' authorisations.

Scope: The International Maritime Organisation (IMO)'s Greenhouse Gases (GHG) revised strategy of 2023 and the FuelEU Maritime Regulation have set ambitious goals to reduce the use of fossil fuels in waterborne transport. To that aim, maritime operators are working to replace the currently used engines with alternative power conversion systems that will allow the use of low and zero-carbon fuels for propulsion. Among all ship-types, the decarbonisation of long-distance shipping will rely the most on successful innovative solutions with high power outputs. Apart from greenhouse gas emissions, other pollutants and harmful ship emissions (e.g., NO_x, SO_x, PM, etc.) coming from the fuel mix currently used in waterborne transport and from low and zero-carbon fuels need to be lowered and eliminated where possible. This topic aims to integrate and further develop various fuel cells (FC) and internal combustion engines (ICEs) solutions for waterborne transport running on low and zero-carbon fuels and scaling-up their technological maturity on-board. Actions addressing these challenges should also align with the European Economic Security Strategy.

Proposals should address one of the two following areas:

Area A: Projects demonstrating FC solutions should deliver results that will reach a combined power output of at least 5 megawatts (MW) with energy supply provided by low and zero-carbon fuels;

Area B: ICEs solutions should demonstrate a combined power output of at least 10 MW with at least 85% of the energy supply provided by low and zero-carbon fuels.

The two selected projects will be complementary, not demonstrating the same areas describe above. If in one of the areas no proposal meets the minimum thresholds, then only one project will be funded under this topic.

Regarding GHG emission reduction, proposals should follow the provisions of FuelEU Maritime and the IMO GHG reduction strategy on fuel standards.

Proposals should address all the following aspects, noting that appropriate consideration should be given to selecting a suitable design approach:

- One full scale demonstrator of a vessel above 5 000 GT, showing the potential of integrated systems for 100% energy load provision under normal operations;
- The demonstrated solutions identify their impact on air pollution, showing at least: i) 90% reduction of NO_x from IMO tier III; ii) sulphur emissions below 90% and; iii) a maximum of 5 mg/kWh of PM;
- Consider fuel flexibility and address cost impacts of energy efficiency, taking into account impacts on vessel CAPEX and OPEX plus the opportunity cost of increased power conversion and fuel storage size and mass;
- An innovative storage and handling solution on-board of ships and mixing of sustainable alternative fuels with sustainable or low carbon pilot fuels. In the case of proposals addressing Area B, solutions should demonstrate a reduction in the use of pilot fuels compared to solutions available on the market, aiming to avoid the use of pilot fuels altogether;
- Solutions developed and proven to prevent and mitigate slippage and fugitive emission factors related to the use of (1) low and zero-carbon fuels and (2) the remaining non-sustainable fuel used;
- Demonstrate optimised integration of energy technologies with overall energy efficiencies from fuel energy to shaft propulsion of at least 55%, able to operate on low and zero-carbon fuels and close to zero direct pollutant and harmful ship emissions;
- Identification of specific gaps in standardisation linked to the integration of the technologies researched and development of a roadmap to gather and disseminate the relevant data in support of standardisation, including communication and discussion with policy makers, industry, academic associations, and other relevant bodies;

- Development of parameters ensuring technical compatibility between the fuel and energy conversion system;
- Provide quantitative and qualitative validated risk and safety assessments and risk control options, including setting of safety rules and distances for bunkering, linked to the use of low and zero-carbon fuels on-board and impact in ports. Develop protocols for safe response through detection and dispersion modelling (both marine and atmospheric). Evaluate the relevant human and organisational risk factors, defining personnel protective equipment and adequate response techniques and equipment;
- The plan for exploitation and dissemination of results should identify adequate business cases and provide a roadmap for the deployment of the proposed technology, including plans for scalability, commercialisation, and deployment. The proposals should identify opportunities and propose strategies for further market uptake under the Innovation Fund and complementary bunkering needs under CEF AFIF (Connecting Europe Facility – Transport Alternative Fuels Infrastructure Facility);
- Development of material (including model courses with minimum requirements and a timeframe for achieving them) for training, reskilling, and upskilling of seafarers and port operators to use the developed solutions and operational procedures, for instance by leveraging the expertise and educational resources of leading training providers and universities;
- In addition to the full-scale demonstrator, proposals should also conduct 3 replication studies on the scalability and transferability of the proposed solutions in different ship types, demonstrating the viability of the new tools, methods and process required for the integration of the proposed solutions. The scope should include not just storage tanks, engines, or injection mechanisms but also virtual prototyping and hardware-in-the-loop testing for verification, especially for the (safety) automation systems. Impact on factors like load-steps, load acceptance, and vibrations should also be included, as to facilitate the design of high-performing, maintainable, and safe vessels must be taken into consideration;
- Development of relevant on-board after-treatment of specific pollutants sourced from low and zero-emission fuels (e.g., ammonia slip or N₂O for ammonia or formaldehyde for methanol);
- Proposals must justify how their objectives, results, intellectual property (IP) management and exploitation strategy contribute to the creation of EU added value and strategic autonomy throughout the supply and value chain. This includes the competitiveness of the EU waterborne industry, enhancement of the EU's R&I capacity, technological know-how capabilities and human capital, and resilience of the EU industrial and manufacturing base. Proposals are encouraged to prioritise shipyards, equipment manufacturers and suppliers located in the EU and EEA.

Additionally, proposals are invited to prove the utilisation of big data and data science technologies to determine real-world references regarding ship performance, environmental impacts and maintenance needs of ships operating on low and zero-carbon fuels.

This topic implements the co-programmed European Partnership on ‘Zero Emission Waterborne Transport’ (ZEWT). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Zero Emission Waterborne Transport’ (ZEWT) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-11: Demonstration of battery energy storage systems in existing and new vessels via novel energy storage and ship design concepts (ZEWT Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio, grants will be awarded to applications not only in order of ranking but at least also to one proposal that is the highest ranked within area A or B, as described in the scope of the topic, provided that the applications attain all thresholds (and subject to available budget).</p>

Expected Outcome: Project results are expected to contribute to all the following expected outcomes:

- Demonstrated 40% increase in fully electric long-distance autonomy for maritime vessels above 400 Gross Tonnage (GT) or inland river vessels above 86 meters, using batteries as the primary energy source;
- Demonstrated innovative solutions in energy storage concepts, energy efficiency or rapid in-route charging;

- Measures to increase the connectivity between islands and their connections to mainland are proposed and modal shift of cargo from road to inland waterway transport is fostered by presenting solutions ready for practical deployment;
- Improved lifetime and safe use of batteries in waterborne transport by addressing the operation, degradation and failure modes associated with unique waterborne transport operating conditions;
- Contribution to the competitiveness and strategic autonomy of the EU waterborne sector. The EU waterborne industry, including shipyards and equipment manufacturers will gain an increased competitive advantage through the development of key and cost-effective solutions for high energy densities storage systems and battery electric ships.

Scope: Batteries are highly efficient carriers of renewable energy and their increased utilisation in various waterborne transport applications enables the decarbonisation and depollution of waterborne transport. Full battery-electrification is already being demonstrated for small and medium-scale vessels. This action aims to increase the range of fully-battery-electric operation of waterborne transport vessels on this range of size. Actions addressing these challenges should also align with the European Economic Security Strategy.

Proposals should address full scale demonstration of battery- electric operation in one of the two following areas:

1.
 1. Area A: seagoing vessels over 400 GWT
 2. Area B: inland river vessels above 86 meters

Proposals are expected to address all of the following aspects

- Demonstrate 40% increase in the vessel operating range with battery as the primary source of propulsion with respect to a 2024 state-of-the-art full electric baseline. The solutions should allow an operation range of at least 120 nautical miles (or equivalent, as appropriate for other applications) and be applicable to representative operating conditions of the chosen area (Area A: appropriate sea states; Area B: upstream and downstream operation on relatively free-flowing parts of major rivers). Proposed solutions can either be suitable for newbuilds or for retrofits on existing vessels. Project proposals should clearly indicate the baseline range, the expected range as an outcome of this project, and the corresponding operating conditions;
- Innovative measures for range extension, which should go beyond the simple scaling up of existing commercial battery systems to increase the range. Solutions are expected to include one or more of the following:
- New onboard energy storage system concepts enabling high energy-densities suitable for different waterborne applications;

- Innovative onboard energy efficiency measures including but not limited to, thermal management, electrical architecture, high voltage electrical components, energy management and energy modelling for optimal operation including weather routing, integration of renewable energy technologies (e.g. photovoltaic panels, wind-assisted propulsion), and improved vessel hydrodynamic efficiency;
- Concepts for extending the operating lifetime of batteries through advanced architecture, onboard monitoring, control, and analytics;
- Concepts for rapid in-route charging or battery replenishment while maintaining desired operating schedules. Fast charging and onshore power supply (OPS) concepts should adhere to the IEC/IEEE standards which are under development, and the consortium is expected to liaise with the technical committee in IEC/IEEE and converge technical solution with standard under development. Other solutions enabling intermittent in-route power transfer to vessels may also be demonstrated.
- Development of guidelines/recommendations for the safety assessment of the novel installations based on field testing. This should build on established safety guidelines and requirements such as the Guidance on the Safety of Battery Energy Storage Systems onboard ships (from the European Maritime Safety Agency – EMSA) and the requirements for fixed and swappable batteries on inland vessels (from the European Committee For Drawing Up Standards In The Field Of Inland Navigation – CESNI), as applicable, and contribute to their applicability to a wider scope of novel electrification solutions. Furthermore, recommendations for improving the guidelines and extending them to the demonstrated new battery installation solutions should be presented. Regulatory aspects for the pertinent safety-critical ship systems as well as fire safety solutions for the battery room should also be addressed;
- Replication case studies showing the applicability of the developed solution under emulated conditions for at least two other waterborne applications. The studies should demonstrate the opportunities of the developed solution, including the conditions under which the target of 40% range extension can be achieved, and provide an outlook of how this can lead to further range extension in the future. These studies should pave the way for further exploitation and market uptake activities as requested in the following point;
- The plan for exploitation and dissemination of results should identify adequate business cases and provide roadmap for the replication and deployment of the proposed technology, including plans for scalability, commercialisation, and deployment. Proposals should identify and propose opportunities for further market uptake under the Innovation Fund and complementary bunkering needs under CEF AFIF (Connecting Europe Facility – Transport Alternative Fuels Infrastructure Facility);
- Development of material for training, reskilling and upskilling of seafarers and shore-based personnel to use the developed solutions, by leveraging the expertise and educational resources of leading training providers and universities;

- Proposals must justify the contribution of their objectives, results, intellectual property (IP) management and exploitation strategy to the EU added value creation and strategic autonomy throughout the supply and value chain, including competitiveness of the EU waterborne industry, enhancement of the EU's R&I capacity, technological know-how capabilities and human capital, and resilience of the EU industrial and manufacturing base. Proposals are encouraged to prioritise shipyards, equipment manufacturers and suppliers located in the EU and EEA.

Additionally, proposals are invited to prove the utilisation of big data and data science technologies to determine real-world references regarding ship performance, environmental impacts and maintenance needs of ships operating on low and zero-carbon fuels.

This topic implements the co-programmed European Partnership on 'Zero Emission Waterborne Transport' (ZEWTP). As such, projects resulting from this topic will be expected to report on results to the European Partnership 'Zero Emission Waterborne Transport' (ZEWTP) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-12: Real-time, adaptative and innovative energy management solutions to optimise fuel consumption and lower emissions pollutants in waterborne transport (ZEWTP Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5-6 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the

	Research and Training Programme of the European Atomic Energy Community (2021-2025). ²¹⁴ .
--	---

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- Ship operators will benefit from the use of Artificial Intelligence (AI), using techniques such as Machine Learning (ML) and Machine Reasoning, and improved instrumentation, as well as on monitoring and control systems to optimise ship operations, while integrating new fuel types, power conversion systems, propulsion and heat systems, wind-assisted propulsion, innovative energy storage systems (beyond conventional batteries), and other energy efficiency solutions;
- Improved supervision, forecasting, and real-time control of the full spectrum and complexity of ship energy needs and flows and sea state, according to the variety of operation profiles (i.e., ship energy dynamics, varying -especially low- water levels);
- Development of adaptable real-time optimisation strategies to accommodate expected and unforeseen operational conditions;
- Improved calibration and certification of sensing systems, including low-cost innovative real-time sensors, to support the enforcement of Greenhouse Gas (GHG) emissions reduction, as well as SO_x and NO_x emissions regulatory framework, both at a European (e.g., Sulphur Directive, NRM Regulation) and international level (e.g., MARPOL Annex VI), as well as the reduction of emissions of any other relevant harmful emissions, leading towards common operational procedures, methodologies and reporting;
- Improved ship design concepts including lessons learnt from energy efficiency optimisation, considering various parameters that influence ship performance under diverse operational conditions (e.g., wave characteristics, wind strength, hull biofouling growth rate, low water levels/droughts).

Scope: Energy Management Systems (EMS) have the potential through adaptive control, ML and AI to optimise energy demand and minimise harmful emissions. This paradigm shift will also lead to increase vessel efficiency through pioneering assessments and optimised integration of groundbreaking power conversion and energy storage systems, Waste Heat Recovery (WHR) systems, machinery prognostics and system simulations, variable speed electric motors, and both centralised and modular energy micro-grid architectures. In parallel, such advancements allow for real-time exhaust gas monitoring, including particulates, SO_x, NO_x and GHG emissions, which could be integrated into the overall monitoring and adaptive control.

²¹⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Proposals are expected to address all the following aspects:

- Development, adaptation, and integration of real-time monitoring solutions for continuous mapping of ship operating profiles, energy flows, Greenhouse Gas (GHG) emissions, as well as SO_x, NO_x and other polluting emissions (e.g., emissions from methane slip), including the assessment of potential ammonia environmental footprint;
- Development of advanced monitoring, supervision and forecasting models, by capitalizing on AI and ML capacities for real-time data analysis and feedback, considering both internal and external data sources; comprehensive machine learning and machine reasoning models should enable intelligent vessel performance monitoring and supervision, vessel operation optimisation and planning;
- Design of centralised or modular ship energy architecture, including micro-grid architectures, applicable to a variety of commercial ship types, and adaptive energy management systems to improve the overall vessel energy efficiency, through energy demand reduction and energy supply efficiency;
- Showcase the flexibility of the adaptive energy management system using simulation methods for different vessels having various propulsion system types, operating in a wide range of environmental conditions;
- Assessment of design, including retrofitting, and operational measures and controls by focusing on three (3) complementary case studies, on, Inland Waterways Transportation (IWT), coastal shipping and Deep-Sea Shipping (DSS), aiming at maximising vessel efficiency, in the context of designing for efficiency.

This topic implements the co-programmed European Partnership on ‘Zero Emission Waterborne Transport’ (ZEWT). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Zero Emission Waterborne Transport’ (ZEWT) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-13: Novel holistic intelligent tools for variable retrofit and decarbonised scenarios (ZEWT Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Innovation Actions

<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²¹⁵ .

Expected Outcome: Project results are expected to contribute to all the following expected outcomes:

- Novel holistic intelligent tools for variable retrofit scenarios and new operational modes will be developed and then demonstrated by the application to a retrofit ship test case;
- Measures to overcome the limitations of current generation of design tools will be proposed which currently do not account for the interferences and mutual influences among the various retrofit systems installed on board;
- Contribution to the retrofitting of existing aging fleets in the EU;
- Increased competitiveness of European shipyards, marine equipment providers and repair yards in the maritime green technology sector through the development of cost-effective solutions, that support ship-owners in making the European fleet climate neutral and still competitive;
- Accelerated regulatory approval processes, best practice guidance, and easy-to-customise strategies for retrofitting by reducing the commercial risk of deployment for ship owners.

Scope: In the quest to get energy reductions from retrofitting, new design requirements and constraints are emerging, e.g., due to the introduction of new low-carbon fuels, and new added propulsion systems (e.g., wind assisted systems). Furthermore, other technical

²¹⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

measures are not yet “standardised” for retrofitting existing ships, due to other difficulties or high costs.

There is also a lack of design/retrofitting experience in applying these new solutions. A practical example is the space rearrangement in the electrification of the ship, including the installation of heavy battery sets, a solution that uses space: but changing ship’s volume and weight distribution along the beam might have a strong effect on the dynamic stability of the vessel.

The realisation of *ad-hoc* web tools and guidelines to help with the retrofit task is currently under development, based on the limited number of new small-scale demonstrators within ongoing projects (e.g., Green Marine, RETROFIT55, etc.).

These approaches combine mature and new technologies creating a decision-support system (DSS) that integrates these solutions. However, even if the final results have not been delivered yet, these projects are considering the retrofit problem in a silo-based mode, that is not including a full multidisciplinary design optimisation with the mutual interactions among the technologies. This might lead to difficulties in achieving overall optimal goals, therefore *resulting in a limited impact* on the transition to zero-emission waterborne. These simplified strategies are indeed not accounting, in a full coupled mode, for the *interferences* and *mutual influences* among the different retrofit systems installed on board (i.e. available space and payload, safety constraints, electrical constraints, etc.): in other terms, they are not considering the *global problem* of retrofitting in a *holistic* way, which is a major objective of this call. Also, the holistic intelligent tools could explore possibilities for modular or serial solutions which reduce costs of retrofitting.

Furthermore, in the short and medium term we are and will be observing multiple ongoing regulatory processes (by IMO, EU, UNFCCC, ES-TRIN) developing frameworks and standards that will shape waterborne transport in the next decades. This further element of variability, i.e. the uncertainty in decarbonisation ambitions as well as on the variability in cost and availability of carbon-neutral fuels, not considered yet in the current approaches, claim for a large effort for new holistic retrofit intelligent design tools for exploring multidisciplinary solutions in variable decarbonisation scenarios.

Innovative holistic intelligent design tools, with a multi-objective strategy and AI simulators, have to be developed rapidly and tested if we want to significantly contribute to the transition to zero-emission waterborne transport, and this has to be done by integrating the many sectors involved in the design.

Proposals are expected to address all the following aspects:

- The development of a novel intelligent design digital tool which can fully integrate decarbonising concepts (e.g., alternative fuel propulsion systems, auxiliary propulsion systems, renewable energy sources, etc.) and can be used for retrofit concepts;
- The design digital tool should have the capability of considering together multiple decarbonisation solutions for operating vessels, accounting for reciprocal influences, and

be able to integrate existing loading instrument (software or data package) for stability, weight and hull strength control;

- Retrofit configurations might include changes in operational modes (e.g., slow steaming, weather routing, etc.) which should also be evaluated against human and organisational risk factors introduced;
- The design tool should also include a life-cycle perspective from design to scrapping;
- Preliminary (intermediate) validation of the design tool by testing at model scale original versus refitted ship solution, also assessing the environmental impact of the solutions, including on biodiversity, air quality and aerial and underwater noise;
- Final demonstration, applying the tool in six virtual demonstrations, one for each one of the six ship types detailed in the Strategic Research and Innovation Agenda of the Zero-Emission Waterborne Transport Partnership, considering together multiple decarbonisation solutions and producing final optimised refitted designs to be tested in operational environment conditions with a given operational profile. Participation of ship owners and operators to these virtual demonstrations should be ensured to pave the way to further market deployment of the solution and real retrofitting operations.

This topic implements the co-programmed European Partnership on ‘Zero Emission Waterborne Transport’ (ZEWT). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Zero Emission Waterborne Transport’ (ZEWT) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-14: Flexible and mobile solutions for Onshore Power Supply (ZEWT Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant</i>	The rules are described in General Annex G. The following exceptions apply:

<i>Agreements</i>	Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²¹⁶ .
-------------------	---

Expected Outcome: Proposals should cover one of the following outcomes:

- Area A: port authorities and ship operators have fully flexible and mobile solutions to ensure that onshore power supply (OPS) can be provided within and across different terminals and port areas maximising operational benefits for port authorities, terminal and ship operators, optimising deployment or;
- Area B: port authorities have available solutions to provide OPS at anchorage areas to different vessel types and different port environments in different conditions (physical and operational) to optimise OPS deployment and investments.

In addition, project results are expected to contribute to all of the following expected outcomes:

- Ship and port operators benefit from cost-efficient innovative solutions for flexible and mobile OPS for ships at shore or OPS at anchorage areas, for Low and High Voltage installations beyond the deployment actions taking place to meet the requirements of FuelEU Maritime and AFIR set by 2030, towards the policy goals set by 2050.
- Terminal and ship operators have available mature mobile and flexible OPS or OPS at anchorage solutions applicable to the different ship types and services and port environments, with a special consideration to safety explosive atmospheres and dangerous zones;
- Ship and port operators have standards, protocols and/or solutions aiming to bridge the gaps identified during the project for the implementation of fast charging as well as mobile and flexible OPS or OPS at anchorage areas;
- Ship operators, grid managers and energy suppliers have solutions to prevent electrical failures and for earthing monitoring, with a particular focus on OPS mobile and flexible solutions or OPS at anchorage areas.

Scope: OPS solutions currently available in the market, while conforming to standards, have gaps in terms of flexibility and modularity, in particular regarding the expected future demand in terminals with a high turnover of diverse waterborne traffic served. OPS port infrastructure

²¹⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

solutions so far are static or have limited flexibility at the berth, whereby several static connections are needed to cover port requirements. As an alternative or supplement, further research is needed in OPS solutions that allow OPS to be provided within and across different terminals and port areas. Solutions developed under this topic should be generally applicable, so they can be used for several types of vessels. However, the solutions should consider the special features of the different ship types and services, such as the safety requirements for tanker and chemicals traffic where connectivity in complex environments is an issue.

Following Fit-for-55 OPS requirements in AFIR and FuelEU Maritime, new Onshore Power Supply products are being developed, including High-Voltage OPS systems, within a framework of robust standardisation. However, further research is needed on the mature, flexible and safe provision of OPS at anchorage and in a flexible way along different terminals and port areas through technologies other than barges, applicable to a wide range of ports with different geographies and conditions.

The development of solutions to simultaneously provide OPS, fast battery charging as well as loading operations needs further standardisation and dedicated protocols. Standardisation of fast battery charging is underway; therefore, proposals are encouraged to explore relevant research for fast battery charging beyond the current or soon to be adopted standards (e.g., IEC/EEE 80005-4) to be implemented in the developed solutions for OPS at anchorage or mobile and flexible OPS.

Proposals should address all the following aspects:

1. Demonstrate innovative scalable OPS solutions as described in the expected outcomes, addressing either Area A or Area B.
2. Minimise the risk of system failure and ensuring continuous operation, resilient to adverse climate conditions;
3. Identify remaining gaps in standardisation for the solutions developed and define recommendations for standards, protocols and/or solutions at least for safe fast battery charging. Projects addressing Area B should also address these activities for load/unload cargo operations simultaneously;
4. Research into systems that can simultaneously provide fast battery charging and OPS;
5. Development of earthing protection solutions through monitoring of the grounding resistance to predict failure;
6. All solutions should align with the optimisation of onboard High Voltage transformers, automation of onboard connection systems, optimisation of onboard OPS switchboard operation, and onboard safety monitoring systems and blackout prevention/mitigation systems to synchronise process and the communication between ship and shore;
7. Adequate training and support for crew and port staff are crucial for the successful implementation and operation of the solutions developed training programs should

encompass system operations, maintenance procedures, safety protocols, and emergency response protocols to ensure safe and efficient operations.

This topic implements the co-programmed European Partnership on ‘Zero Emission Waterborne Transport’ (ZEWT). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Zero Emission Waterborne Transport’ (ZEWT) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-15: Optimal integrated onboard renewable energy solutions, by considering Wind-Assisted Propulsion Systems (ZEWT Partnership)

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 7.50 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Development and demonstration of a standardised methodology for monitoring, recording and verification of energy used from Wind Assisted Propulsion devices directly into ship propulsion. The methodology is expected to allow integration of wind energy used in propulsion of ships directly into calculations of GHG intensity of the energy used on-board, both in context of Fuel EU maritime and International Maritime Organization (IMO) Life Cycle assessment (LCA) guidelines;
- Provision of a standardised framework to ensure certainty in the claims regarding fuel, Greenhouse Gas (GHG) and other polluting emission reduction by Wind-Assisted Propulsion (WAP) systems, strengthening the implementation of the FuelEU Maritime Regulation;
- Uniform rules, regulations, assessment criteria, and sea-trial procedures for WAP solutions are explored and established, facilitating the market uptake of WAP systems;
- Standardisation efforts to implement the IMO Life-Cycle Assessment (LCA) guidelines are supported;

- Market uptake of WAP systems into existing vessels in the coming decade is facilitated, by introducing a set of standardised design alternatives and criteria for decision-making, as part of a standardised framework;
- Concerns about the safety and operational impacts on ships, port and other land infrastructure are addressed, as well as the lack of market confidence in the technology;
- Contribution to the competitiveness and strategic autonomy of the EU waterborne sector, in line with the Communication on European [Economic Security Strategy](#). The EU waterborne industry, including shipyards and equipment manufacturers will gain an increased competitive advantage through the development of key and cost-effective solutions for WAP systems.

Scope: WAP systems (e.g., rotor sails, rigid wing sails, soft wing sails, ventilated foil system, etc.) have gained significant attention as means of reducing ship fuel consumption, and GHG and other emissions, while they are also considered as primary means of propulsion for future newbuilt cases. Several ongoing EU-funded projects are already working on WAP systems with focus on holistic optimised ship design, control, and operation, including changes in conventional propeller propulsion, and focused on Deep Sea Shipping (DSS). However, there is still a variety of barriers and challenges that need to be addressed; the main challenges are to provide certainty on emission saving performance, define standards, while also facilitating WAP retrofitting. The aim of the topic is to develop a methodology that will allow to quantify and monitor the real impact of WAP systems into ship propulsion.

Proposals are expected to address all of the following aspects:

- Demonstration of at least one full scale WAP solution and its management and monitoring on-board. This demonstration will be used to also validate the methodology for integration of the energy provided by the WAP devices to the ship propulsion;
- Develop a holistic framework for the design optimisation for wind-assisted propulsion, either as a means of enhanced energy efficiency, or primary propulsion solution; the framework should work as design tool to facilitate the industry uptake of WAP technologies by introducing tailor-made solutions for various ship types, based on their operational profiles and navigation routes;
- Use of systems for advanced monitoring of energy consumption, performance optimisation, energy savings, mitigation of GHG and other polluting emissions. The project should make optimal use of state-of-the-art sensor and digital technologies with a view to achieve continuous monitoring of energy made available from WAP devices; methodology should cover various types of WAP and should be applicable for all types of ships and operations;
- Assessment of environmental and wider benefits, including reduced emissions of air and water pollutants, underwater noise, biodiversity as well as cost-effectiveness for either

standalone WAP solutions or combinations with other low and zero-emission technologies and/or energy efficiency measures;

- Focus on safety and operational aspects, for addressing any technical and operational challenges that may arise from the introduction of WAP systems – and possible combinations with other energy efficiency solutions – for ships and ports, including other land infrastructure;
- Addressing scalability and adaptability issues to the existing fleet, such as efforts to promote the standardisation of the different solutions, and application of the solution considering the real environmental conditions and the impact of climate change in wind patterns;
- Examine a variety of business cases and propose a number of market measures to address the lack of market confidence in WAP solutions and the uptake of such systems in the maritime industry.

Proposals are expected to explain the contribution of their objectives, results, IP management and exploitation strategy to the EU added value creation and strategic autonomy throughout the supply and value chain, including competitiveness of the EU waterborne industry, enhancement of the EU's R&I capacity, technological know-how capabilities and human capital, and resilience of the EU industrial and manufacturing base.. Proposals are encouraged to prioritise shipyards, equipment manufacturers and suppliers located in the EU and EEA.

This topic implements the co-programmed European Partnership on 'Zero Emission Waterborne Transport' (ZEWT). As such, projects resulting from this topic will be expected to report on results to the European Partnership 'Zero Emission Waterborne Transport' (ZEWT) in support of the monitoring of its KPIs.

HORIZON-CL5-2025-04-D5-16: Support of the new EU renewable and low carbon fuel ecosystem for waterborne transport

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant</i>	The rules are described in General Annex G. The following exceptions apply:

<i>Agreements</i>	Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²¹⁷ .
-------------------	---

Expected Outcome: Project's results are expected to contribute to all the following expected outcomes:

- EU Fuel producers, fuel infrastructure developers and bunkering facilities will jointly benefit from the creation of relevant business models that will accelerate the deployment of renewable and low carbon fuels for waterborne transport.
- EU Fuel producers will become more competitive in the production of renewable and low carbon fuels for waterborne transport.
- Significant increase of pipeline projects supported by various programmes and institutions in relation to renewable and low carbon fuels production and usage.
- Developing a diverse portfolio of scientifically sound mature proposals for the deployment of technological solutions to reduce Greenhouse Gas emissions, in line with the EU climate targets, especially taking into account the Fitfor55 package.
- Added value creation and increased competitiveness within the EU waterborne transport fuel ecosystem.

Scope: The European Commission is currently involved in several initiatives that aim to accelerate the deployment of solutions relevant for the market uptake of renewable and low carbon fuels. Firstly, following the initiative from the Commission, the EU has adopted FuelEU Maritime Regulation, which sets the binding reduction targets for GHG intensity of energy used on board for maritime vessels. As a flanking measure to this regulation, the Commission has promoted the Renewable and Low Carbon Fuel Alliance, which encompasses a large portion of all fuel producers, with the goal to facilitate the investment in renewable and low carbon fuels for waterborne and aviation, aiming to clarify feedstock availability, demand, and supply forecast, and to promote a commercial pipeline of projects.

The Revised ETS directive has put shipping under the umbrella of ETS with corresponding revenues to be allocated to green shipping projects. Consequently, the Commission is preparing the first dedicated calls under the Hydrogen Bank, focusing on maritime applications.

²¹⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

In the context of international collaboration, the Commission is currently working, together with the Joint Research Centre, on a study about the Global Gateway Green Shipping Corridors (GGGSC). This report aims to identify ports outside of the EU of strategic interest to the bloc that can be part of such corridors and to aggregate them into corridors that meet a combination of policy priorities. In this context, the Commission will also look into possible actions to support partner countries to ensure the availability of renewable and low carbon fuels within the selected ports.

In addition, the Commission has published a number of studies, including on the “Development of outlook for the necessary means to build industrial capacity for drop-in advanced biofuels”²¹⁸ and has published a call for a second tender for a study on “How to mobilize industrial capacity building for advanced biofuels”²¹⁹. The EIB published the study [“Financing sustainable liquid fuel projects in Europe: Identifying barriers and overcoming them”](#) in May 2024. In addition Horizon Europe includes a call [“HORIZON-CL5-2024-D3-02-13: Support to the activities of the SET Plan Key Action area Renewable fuels and bioenergy”](#), with deadline in February 2025. Advanced biofuels are also an option for renewable energy supply in waterborne transport. Furthermore, under topic HORIZON-CL5-2023-D2-01-07: Support for the deployment of R&I results for climate mitigation, five coordination and support actions have been selected. Synergies should be drawn in relation with the Innovation Fund program.

Projects are expected to take the previous initiatives as a starting point and go beyond their conclusions. In particular, they must address all of the following aspects:

- Provide project development support to at least 20 proposals²²⁰ within the renewable and low carbon fuel ecosystem for waterborne transport in order to increase the number of applications in programmes such as Horizon Europe and its successor, Innovation Fund, CEF AFIF and schemes such as EIB Loans, structural funds, as well as initiatives at national and regional level and at international level within the Global Gateway strategy. The proposal should consider coordination of their activities with already existing EU project assistance providers such as the EIB Advisory project development assistance scheme, avoiding duplication. Proposals will propose KPIs in relation with additional projects and activities to be performed thanks to its action. The support to projects should be provided following a competitive selection process, prioritizing projects admitted to the RLCF Alliance Project Pipeline and/or Global Gateway. The proposal shall elaborate on project selection methodology.
- Creation of an analytical financial tool which allows users to model a project and understand the economic rational of a business case and identify those assumptions, drivers and barriers which are critical to ensuring that the underlying projects are financially and economically viable. The projects for which the analytical tool will be

²¹⁸ [Development of outlook for the necessary means to build industrial capacity for drop-in advanced biofuels - European Commission \(europa.eu\)](#)

²¹⁹ Call for tenders CINEA/2024/OP/0005 STUDY ON HOW TO MOBILIZE INDUSTRIAL CAPACITY BUILDING FOR ADVANCED BIOFUELS

²²⁰ Individual proposals will not be considered public deliverables to ensure full confidentiality

developed are those which produce renewable and low carbon fuels necessary for the sustainable goals of the waterborne transport sector, as defined in the Green Deal, especially by ensuring a wide European geographical coverage in the EU. These models must take into account the results delivered through the Roundtable 4 of the RLCF Alliance in their financial analysis. The models will aim to preserve the industrial competitiveness of the EU industry, in alignment with RED, FuelEU maritime and ETS, also considering any potential unlevelled playing field risks/challenges vis-a-vis other countries outside the European Union. These models will examine the scalability potential of the fuel considering production, transport and distribution, security of supply in ports in and outside Europe, GHG emission saving on Well to Wake basis, distance continuously sailed on the fuel, size of ship in terms of installed power, total distance sailed and transparency on the project costs. Additionally, these models will also aim to leverage potential synergies between RFNBOs and advanced biofuels technologies development should be identified and utilized for the benefit of both pathways. Appropriate linkage to the RLCF Alliance is encouraged.

- In collaboration with the RLCF Alliance, develop and conduct a series of workshops/trainings with financial institutions and relevant waterborne stakeholders to facilitate the market uptake of waterborne and renewable and low carbon fuel production solutions for waterborne transport, with a particular attention to the access to capital for demonstration projects with a higher technological risk profile and dissemination of best practices to access financing and funding. The project will need to carry out relevant dissemination activities to communicate the results of the project to all relevant policy makers as well as stakeholders from the industry and civil society.

Transport-related health and environment

Proposals are invited against the following topic(s):

HORIZON-CL5-2026-01-D5-17: Real time monitoring of regulated and non-regulated emissions from all types of vessels and other port activities in order to enforce emission limits in waterfront cities

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.00 million.
<i>Type of Action</i>	Innovation Actions

<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>The page limit of the application is 70 pages.</p>
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p> <p>At least one of the ports must be situated in a city participating in the Climate-Neutral and Smart Cities Mission. The demonstration activities must take place in a real operational environment.</p>
<i>Technology Readiness Level</i>	<p>Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Grants awarded under this topic will be linked to the following action(s):</p> <p>HORIZON-MISS-2021-CIT-02-03</p> <p>Collaboration with the Cities Mission Platform is essential and projects must ensure that appropriate provisions for activities and resources aimed at enforcing this collaboration are included in the work plan of the proposal. The collaboration with the Mission Platform must be formalised through a Memorandum of Understanding to be concluded as soon as possible after the project starting date.</p>

Expected Outcome: To support the Zero Pollution Action Plan and the Smart and Sustainable Mobility Strategy as well as the implementation of the Climate-Neutral and Smart Cities Mission, project results are expected to contribute to all of the following expected outcomes:

- Real-time demonstration of on-board tamper-proof and remote measurement techniques for a wide range of pollutants (including pollutants from alternative fuels and non-regulated pollutants) from vessel emissions, allowing shipowners to measure the emissions during operation and contributing to the current monitoring and enforcing activities of public authorities, such as port and maritime authorities and with the potential to be used for future compliance monitoring;
- Development of broadly accepted harmonised methods to measure real sailing emissions, including coastal, open seas and inland waterway with potential to be used for future compliance monitoring;

- Development of an automatic reporting and verification system solution that helps shipping companies to comply with current and future regulation and for maritime, inland and port authorities to monitor and control the actual ship emissions derived from the data exchanged;
- Contribution to the delivery of better emission factors for emissions inventories and projections, especially for harmful substances and fuel mixtures for which little knowledge exists today and ultimately contributing to the establishment of a broadly accepted method for measuring and calculating real sailing emissions of a ship;
- Identification of real-world releases of harmful substances which are currently not controlled by regulations and excessive releases of substances already controlled in open seas and in-port activities;
- Innovative technologies and systems to monitor, measure and identify the source of pollution in ports beyond vessels, including other transport modes, port operations and industries active in the port environment are made available for public authorities;
- Recommendations for improved certification and testing to better cover real world situations;
- Support of local, regional, national and international emissions reduction and air quality plans and noise action plans by providing real-world emission information and measuring the actual impact of control measures and strategies on concentrations and/or deposition of pollutants;
- Identification of risk areas for potential violations to emission limits.

Scope: There is a pressing need to measure accurately the different types of emissions in coastal and port environments located near to cities, because of their negative impact on the environment and human health. Ports, as intricate environments showcasing a variety of vessels including novel designs, pose a challenge to the development of standardised technologies capable of collecting and assessing real-time pollutant emissions data from these ships docking at ports. This is vital for enforcing emissions limits and validating the data for enforcement purposes.

Moreover, emissions in ports stem from other sources, such as port operations (e.g., cargo handling, towing, fuel storage, and bunkering) or even other industrial activities (directly or indirectly linked to transport, e.g., fisheries) taking place within the port area. Additionally, ports are frequently situated near industrial zones, making it crucial to possess an accurate and, where possible, real-time understanding of the types, origins, and intensity of pollutant and noise emissions generated in and around a port area.

The shift from heavy fuel oils to alternative fuels in the context of the regulatory framework²²¹ set to achieve the objectives of the Green Deal requires further research actions; recent evidence from research and monitoring projects has shown that new fuels being considered and GHG emission-control technologies used on-board vessels may result in emissions of other harmful pollutants that are not sufficiently controlled. In some cases, unexpected side effects of emission abatement may arise which might require regulatory action²²².

Further to such undesired releases, it is crucial to ensure that vessels comply with regulations in force, in coastal areas, at open sea and in inland waterways. Projects under call LC-MG-1-1-2018 of Horizon 2020 showed that remote measurement of SO_x emissions using stationary or mobile techniques can significantly increase the cost-effectiveness of compliance monitoring. It is important to explore whether remote or on-board techniques can be extended to the monitoring of additional pollutants such as CH₄, NO_x, N₂O, NH₃, UFP, BC, formaldehyde, PM²²³, as well as the Particle Number (PN), NPAHs and to provide internationally harmonised methods and reporting procedures where such measurements can be used within an enhanced compliance monitoring framework in the future. These methods should also have the potential to be used as evidence for law enforcement to enable independent prosecution of violations. Furthermore, there is a need to develop engine testing procedures that better represent operational patterns in order for the emission values from test cycles to accurately represent real emissions.

Limited surveillance measurements at open seas show a different compliance (lower compliance) behaviour for sulphur emissions compared to measurements in coastal regions. Therefore, it is important to identify risk areas for violations and to establish techniques for monitoring in these areas as well. It is of equally great importance to develop harmonised/standardised monitoring methods that could be used as evidence for sanctions in the future.

Assessment of the real-world performance of emission control, in particular for Tier III vessels, is therefore required to make sure that current NO_x regulations achieve and sustain the emission reductions that these regulations are designed for. Further, certification testing should be modified to better address real world conditions. Moreover, potential ammonia slip

²²¹ The IMO's 2023 GHG Strategy targets net-zero greenhouse gas emissions from international shipping by 2050, with interim goals for 2030 and 2040. Measures include the adoption of lower-carbon fuels such as methanol and ammonia. In the EU, initiatives like FuelEU Maritime and ETS inclusion will drive this transition while regulations address harmful emissions like sulphur and nitrogen oxides, with Tier III NO_x limits enforced. Discussions also focus on Black Carbon emissions in the Arctic and health impacts of ultrafine particles.

²²² For example, evidence shows that the introduced Tiers may not be effective in controlling NO_x emissions in real vessel operation, scrubbers may result in the formation of new ultra-fine particles, ammonia combustion potentially leads to the formation of nitrous oxide and ammonia slip, methanol combustion may lead to the production of formaldehyde, LNG may result in the slip of methane, etc. Obviously, any strategy targeting the control of GHG or air pollutants should not result in negative side-effects such as the release of harmful pollutants which are today not covered by regulations.

²²³ CH₄ – methane; NO_x – nitrogen oxides; N₂O – nitrous oxide; UFP – ultra-fine particles; BC – black carbon; PM – particulate matter.

from urea consumption needs to be identified, and N₂O emission levels need to be determined to ensure that GHG reduction efforts are not thwarted.

In addition, no established method for identifying NO_x emissions that exceed existing standards under real sailing operation is currently in place. Based on different remote or on-board measurement techniques, harmonised methods, and reporting procedures to identify exceedances of expected emission levels needs to be designed and put in action, at least for informative reasons – as no enforcement of low NO_x under real operation is currently in place.

With CH₄ being a potent GHG, any uncontrolled releases from LNG powered vessels significantly compromise any lower carbon benefits of the LNG as a fuel. Moreover, although boil-off gas (BOG) should be reliquefied or used on-board, records of BOG release to the atmosphere have been reported. The extent of any remaining current problem needs to be identified and measurements on methane slip from actual vessels need to identify the extent of emissions, considering potential needs for methane emission limits (for the engines as well as for the fuel storage onboard and the bunkering process). The problem with methane slip will also remain with the use of bio-methane as fuel.

New fuels are considered in the effort to decarbonise shipping, with the most prominent being ammonia (NH₃), methanol (MeOH) and hydrogen. There is currently limited evidence on new pollution dimensions induced by such fuels, including ultrafine particles of non-carbonaceous origin, N₂O and NH₃ emissions, NPAH, Formaldehyde PM, NO_x, etc. Measurements on actual marine engines and vessels using such fuels need to provide new evidence in the pool of data forming so that early measures are taken before such new fuels become widespread in actual use, in case such new emissions prove to be at a level that constitute health hazards or environmental risks. Zero carbon fuels like NH₃ and H₂, as well as dual-fuel engines and CO₂ capture onboard require different remote measurement methods, since CO₂ is no longer a stable and dominant reference gas in the exhaust plume. Alternative options in sensing and calculation method need to be introduced.

Demonstration must be undertaken within a real operational environment. In the collection and analysis of remote as well as static sensing data for the monitoring of emissions and air pollutants, the accuracy of the sensors and the quality and verifiability of the data obtained are of particular importance. Potential risks and problems in data collection and sensor technology, in particular as regards the identification of the source of the pollution, should be analysed in detail. A verifiable methodology is also required for processing and interpreting the data in the next step. Issues such as access to data, data storage and associated security aspects (including the assessment of cyber security of interoperable systems) should be fully considered. Particular efforts should be made to ensure that the data produced in the context of this topic is FAIR²²⁴.

To address all these highlighted issues, proposals are expected to undertake all the following R&I activities:

²²⁴ Findable, Accessible, Interoperable and Reusable

- Map high emission activities and demonstrate port, coastal, inland and open sea monitoring techniques for at least NO_x, BC, N₂O, UFP, NH₃, CH₄, PM as well as PN and NMVOC (or any other related pollutants), during normal operation of ships which includes dynamic engine loads of all ship types (including port service vessels) and suitable for zero carbon fuels, dual-fuel engines and carbon capture. All the emission measurements should be integrated through static and remote sensing in order to share data;
- Demonstration of the developed measuring technologies in 6 different TEN-T ports, (of which 3 Core and 3 Comprehensive ports, covering at least three sea basins of the Black, Mediterranean, North Sea, N. Atlantic and Baltic Seas). Out of these 6 ports at least one should be classified as a TEN-T inland-waterway only port according to Annex II of the TEN-T Regulation. At least one of the ports should be situated in a city participating in the Cities Mission and activities should feed into the implementation of the Climate City Contract (CCC), with abatement measures and port-city collaborative governance approaches to match or enhance CCC commitments. The selection of ports should be such as to cover a wide range of emission profiles and take into consideration the complexity of emission sources in order to ensure that the outcome is representative and can be replicated to other ports;
- Identify, differentiate and measure in real time at or near possible sources of emissions (e.g., individual vessel, specific port operations, industrial installations within and very close to the port area) under complex (geographical, layout, mixed space uses and other) conditions and variable weather conditions. The calibration of the measurement systems and the reproducibility of the results should be demonstrated;
- Development of a methodology for assessing pollution within the port area including emissions from all transport modes, port operations and industries located in the port area;
- Identify the impact of emissions in ports and nearby cities and propose mitigating measures and plans for municipalities and port authorities, including ports in which municipalities are not directly involved in the management of port authorities and terminals;
- Development of Real-Time Decision Support Systems (RT DSS) for ships, onboard ship operations, ship operators to look into data collected to enable port and maritime authorities to make decisions about rebates;
- Development of harmonised monitoring techniques and an automatic reporting and verification system solution helping shipowners to comply with current and future EU and international regulation as well as public authorities to monitor and control emissions from the data exchanged;
- Harmonise/standardise monitoring techniques and reporting (taking also into consideration the CountEmissions EU rules) with the potential to be used for legal

prosecution; develop recommendations for improved certification and testing for real world situations;

- Increase evidence to feed pool of data for regulated and non-regulated pollutants from vessels;
- Identify pollutants from new fuels used for shipping decarbonisation;
- Develop protocol(s) for the measurement of BC, UFP, and PN from vessels;
- Develop engine testing methods to better mimic real-world emissions and propose a vessel grading system methodology with respect to its emissions comparable to EURO classification of road vehicles.

Proposals should demonstrate how they will engage with authorities and local communities in disseminating results in proportion to their expected impacts. Relevant authorities include the European Commission, the Bonn Agreement, Helcom, the IMO, and national, regional, and local competent authorities etc. while local communities are primarily, but not limited to, major port cities and coastal areas in the EU.

Proposals are encouraged to explore and use the results from previous EU-funded projects such as SCIPPER (Horizon 2020), EMERGE (Horizon 2020) and Green C Ports (CEF), Interreg Clean North Sea Shipping and LIFE CLINSH (CLEan Inland SHipping) as well as develop complementarities with relevant activities funded under the Horizon Europe call on “Advanced transport emissions monitoring networks” (HORIZON-CL5-2023-D5-01-18) and activities developing satellite-based measurements (Cluster 4 Destination 5 (Space) and EUSPA), focusing on remaining gaps not covered by these projects. Duplication of activities should be avoided.

Proposals are encouraged to include and consider the fisheries sectors and fishing vessels, considering their potential intersections with the use of alternative fuels in ports when relevant. Consideration of projects such as HORIZON-MISS-2023-OCEAN-01-05 and PPPA-2024-FISHVESSELDEMO may prove beneficial.

The funded projects should share their experience and good practices with the projects selected under the topic of the EU Ocean & Waters Mission on “Restoring waterfront cities and their ports /maritime infrastructures (HORIZON-MISS-2025-03-OCEAN-05) and links should also be established with the projects funded under topic HORIZON-CL4-SPACE-2025-01-46: Innovative Earth observation services in support of maritime litter detection and ship source pollution policies.

This topic has been co-programmed and is contributing to the implementation of the Zero-Emission Waterborne Transport (ZEWT) partnership and of the Climate Neutral and Smart Cities Mission.

Cross-cutting

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-04-D5-18: Support to the organisation and dissemination of the Transport Research Arena (TRA) conference

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 1.60 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 1.60 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²²⁵ .

Expected Outcome: Project's results are expected to contribute to all of the following expected outcomes:

- Successful organisation of the Transport Research Arena conference (TRA) in 2028;
- Successful organisation of two competitions for transport research and innovation awards covering all transport modes and cross-cutting issues;
- Conference proceedings published in recognised scientific journals;
- Higher visibility, political and strategic relevance of the transport sector and of the EU policy in the field;
- Enhanced dissemination, communication and valorisation of transport R&I objectives, perspectives, strategies and results;

²²⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- More effective links and exchanges between research and innovation stakeholders, industry and policy makers, to support the development and deployment of innovative solutions in Europe and Associated Countries;
- Increased attractiveness of transport related studies and reinforce the pursuit of excellence in European transport research and innovation, by giving recognition and visibility to the best achievements;
- Increased visibility, interest and number of applications for the two competitions for transport research and innovation awards.

Scope: The action will prepare and provide support to the Transport Research Arena (TRA) conference to be organised in 2028 gathering transport stakeholders for discussing political, industrial and research issues on a European and global level.

Proposals are expected to demonstrate the financial and organisational support of the national authorities interested to host the event and an economic plan covering the additional funding needs. A professional conference organiser should be included in the consortium. To ensure high political and strategic relevance, the proposals should involve Member States holding the Presidency of the European Union in year 2028.

In line with previous TRA biannual conferences, the event should address the technological and industrial developments of the transport sector (i.e., road, rail, waterborne, aviation sectors and cross-modal aspects) providing a high level, future-oriented perspective coming from politics, the industry and the research community, in response to Europe's social needs and expectations. Specific attention should be put on a broad and balanced participation in the conference i.e., students, young researchers, women, a large number of country representatives, etc.

The action will be implemented in close collaboration with the Management and Programme Committees of the TRA, which includes the TRA 2028 conference organiser, the European Commission services, the different European Technology Platforms (ERTRAC for road, ERRAC for rail, WATERBORNE TP for waterborne, ALICE for logistics and ACARE for aeronautics and ECTP for construction), the Conference of European Directors of Roads (CEDR), the European Transport Research Alliance (ETRA) and the previous TRA conference organiser (TRA 2026) in order to maintain continuity of the event.

Proposals should address all the following aspects:

- Support the definition of the overall planning of the conference, including the main thematic pillars of the event as well as the structuring of the technical and political sessions;
- Contribute to the identification and selection of an appropriate conference venue and support the organisation of the conference's logistics;

- Provide operational support to the TRA conference organisers, such as in relation to the website and conference management IT tools (e.g., for the registration of participants, handling of speakers' contributions, submission and selection of scientific papers, conference application);
- Support the organisation of the demonstration activities and technical visits;
- Assess and monitor the environmental impact of the event and propose appropriate measures to reduce and mitigate this impact;
- Organise of two high-quality competitions for transport research and innovation awards (TRA VISION) covering all transport modes and cross-cutting issues (technological, socio-economic, and behavioural aspects) in line with the EU policy objectives for climate-neutral and environmentally friendly mobility:
 - o A competition for students and young researchers with the goal of stimulating the interest among young researchers/students to develop innovative solutions in the field of transport;
 - o A competition for senior researchers in the field of innovative transport concepts based on results from EU-funded projects only.
- Proposals should plan for involving the awarded researchers in the conference programme and for promoting links between the researchers and possible career development opportunities in the field (e.g., traineeships, jobs, courses, training);
 - o A very good media coverage before, during and after the event should be foreseen for both the TRA conference and for the TRA VISIONS.

HORIZON-CL5-2025-04-D5-19: Knowledge sharing and dissemination to support road transport R&I in EU and around the world increasing global EU competitiveness

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the

	Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²²⁶ .
--	---

Expected Outcome: Project's results are expected to contribute to all of the following expected outcomes:

- Increased participation of actors and stakeholders to EU activities in the area of road transport, also supporting a more coherent and inclusive European alignment in specific identified areas;
- Identified state of the art, requirements and developments, future needs and barriers to foster the deployment of EU R&I results and proposals for action to support the future of the European road transport area R&I, also including skills and standards;
- Identified possible renewed strategy for research infrastructure ecosystems in the Road Transport sector;
- Increased international cooperation on road transport with related national and international organisations and support of international EU activities in line with the UN Sustainable Development Goals and supporting the competitiveness of the EU industry, in particular the US and the Global South;
- Widespread dissemination of contribution from road transport research, in particular from EU funded projects, focused on the realisation of the European Green Deal, the new European industrial policy, the European Union digital strategy as well as Vision Zero for road safety;
- Knowledge sharing and widely promoted R&I activities, in particular via road transport events to support identification of future requirements, potential developments, white spots and precompetitive activities.

Scope: The objective of this topic is to further promote Research and Innovation (R&I) leading to sustainable road transport in Europe and at an international level. The action is expected to help identify future R&I needs, gather an increased number of innovative actors and stakeholders, stimulate a wider participation to EU activities and support European plus Worldwide dissemination of results and support the identification of possible future actions in view of a renewed European competitiveness. This action shall provide a positive contribution to the European Research Area, as well as to the European strategies for future transport systems and the EU's collaboration in R&I with international partners. In addition, this

²²⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

initiative will support climate action and air quality improvement in line with the Green Deals targets and objectives, Vision Zero for road safety, contribute to the United Nations (UN) Sustainable Development Goals as well as the EU's digital strategy.

In line with these objectives, all the following aspects will need to be addressed:

- Widen and increase the European future road transport R&I environment by providing an enlarged, more innovative and more representative number of interested stakeholders that could currently be less represented in existing European platforms, networks and associations (both geographically and thematically);
- Identification of actions to support the road transport R&I area, e.g. identify state of the art, future and innovative requirements, potential technical developments and white spots, and potential precompetitive activities;
- Identification of in-depth state of the art and barriers for the deployment of EU research results at European and international level, co-development of options to overcome them, including development of innovation plans and analysis of competitiveness issues to support the alignment of European stakeholders in the following specific areas: “Urban zero-emission mobility”, “Improved air quality”, “Future road safety”, “Zero-emission long-haul logistics” and “Digitalisation of road transport” (including all relevant aspects related to Artificial Intelligence, big data and Software Defined Vehicles);
- Assess the current road transport related research infrastructures (RI) in Europe and, based on this, analyse and identify needs towards a strategy for the establishment of a research infrastructure (RI) ecosystems in the Road Transport sector that addresses EU priorities and strategic autonomy together with the EU's capacity for excellent research;
- To foster innovation aspects of road transport R&I, at least 4 specific events or workshops will be organised to present, discuss and disseminate the analysed technology needs, trends and results of the above points. In addition, direct support (such as financial, organisational, communication and dissemination) is expected to the annual Road Transport Research Conferences co-organised by the European Commission, ERTRAC, and the 2Zero, CCAM and BATT4EU Partnerships;
- Support the identification and scaling up of activities at an EU level in the fields of education, training and skilling/reskilling and standardisation;
- In the field of international cooperation in line with the UN SDGs and to support the European industrial competitiveness for the future road transport sector:
 - o Following-up the previous EU-US transport research symposia (co-organised by the European Commission) in the specific sectors of “Decarbonisation” and “Digitalisation”, provide a deep analysis of the implementation and evaluation of EU research funded projects and activities to support the alignment with the US

(mainly under the DoE and DoT programmes) on technological, societal, systemic and spatial dimensions of R&I in road transport.

- o Analyse EU research funded projects and activities related to electromobility in urban areas in emerging economies (specifically in Africa, Asia and Latin America) and support further dissemination and replication of implemented solutions in other regions via specific workshops and events, mainly online. This shall also facilitate the exchange of information of EU actors and projects with key international cooperation programmes such as the Global Gateway and the UN Global Environment Facility (GEF).

DRAFT

Safe, Resilient Transport and Smart Mobility services for passengers and goods

This Destination includes activities addressing safe and smart mobility services for passengers and goods.

This Destination contributes directly to the Strategic Plan's **Key Strategic Orientations** 'Green transition', 'Digital transition' and 'A more resilient, competitive, inclusive and democratic Europe'.

In line with the Strategic Plan, the overall **expected impact** of this Destination is to contribute to the 'Multimodal systems and services for climate-neutral, smart and safe mobility'.

The main impacts to be generated by topics under this Destination are:

Connected, Cooperative and Automated Mobility (CCAM)

1. Safe, inclusive, affordable, attractive and accessible door-to-door (incl. shared) mobility for people and goods, including freight services and last-mile deliveries, in all weather conditions, seamlessly integrated with various transportation modes to ensure interoperability and full integration of CCAM solutions into the existing transport ecosystem;
2. Resilient, climate neutral, and sustainable mobility solutions with a reduced carbon footprint leading to greener, less congested, cost-effective and more demand-responsive transport everywhere;
3. Smart mobility services based on user-centric and explainable technologies and services, including digital technologies, advanced satellite navigation services, and smart traffic management (AI enabled when appropriate), considering the diverse needs and behaviours of categories of end-users;
4. Improvement of road safety thanks to the progressive transition of road traffic towards automation and Advanced Driver Assistance Systems (ADAS).

Multimodal and sustainable transport systems for passengers and goods

1. Advanced knowledge base and solutions for climate neutral and resilient infrastructure;
2. More efficient, sustainable, safe and competitive infrastructure construction, maintenance, inspection and monitoring in a "whole life cycle" approach;
3. Existing and new transport infrastructure is designed/adapted to support deployment of new technologies and fuels in view of improving its performance, user experience and safety, support seamless and efficient multimodality and limit transport related emissions;
4. Reduced emissions and increased efficiency and competitiveness of long-haul and regional freight transport and logistics, including the supply chain optimisation.

Safety and resilience

1. Drastic reduction in serious injuries and fatalities in road crashes involving cyclists, pedestrians and users of micro-mobility devices;
2. Predictive framework is established using AI and big data for transport safety;
3. Optimised Human-technology interaction that minimises confusion, distraction and thus collision risks;
4. Enhanced aviation safety under adverse weather conditions.

Connected, Cooperative and Automated Mobility (CCAM)

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-04-D6-01: Advancing remote operations to enable the sustainable and smart mobility of people and goods based on operational and societal needs (CCAM Partnership) – Societal Readiness Pilot

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training

	Programme of the European Atomic Energy Community (2021-2025). ²²⁷ .
<i>Exceptional page limits to proposals/applications</i>	The page limit of the application is extended by two pages to 52 to properly address Societal Readiness-related issues.

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- Comprehensive set of principles, guidelines and requirements for remote operations that clarify operational complexities (e.g., safety, (cyber-)security, liability, privacy, certification and operator training, interoperability, cross-border operations) is defined, and a standardised approach to extend the Operational Design Domain (ODD) of CCAM solutions is established;
- Infrastructure prerequisites, particularly in technology and communications (safe and reliable communication, especially considering SNS components for the automotive sector²²⁸) are defined, which are critical for the successful implementation of remote operation capabilities, outlining the technical standards and investments necessary for seamless integration with current transport systems, while appreciating the potential environmental impact;
- Safety validation methodologies extended to remote operations favouring acceptance and trust of road users in such CCAM systems;
- Identification and description of at least two economically viable business cases for remote operations complementing the ODD of CCAM solutions, analysing the economic costs and benefits, market potential, and scalability factors, and providing a clear value proposition for public or private stakeholders for each use case;
- Understanding the human factors of the entire system (including the in-vehicle and remote perspective), as well as legal requirements and working conditions for remote operators, addressing cognitive load, fatigue and stress, ergonomic considerations, and the identification of essential skills. Establishment of key conditions for job quality, safety, up-to-date competences and acceptance of working conditions in diverse cultural contexts;
- Responsiveness to a deeper understanding of the needs and concerns of diverse social groups involved in or potentially affected by the R&I development, considering gender and other social categories, and thereby increasing the potential for beneficial societal uptake, and building trust in results and outcomes;

²²⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²²⁸ See SNS calls for further linkage.

- Policy and governance recommendations in view of establishing new or updating existing legislation to cover remote operations, e.g., through clear descriptions of stakeholder roles and responsibilities that may vary for different types of remote operations.

Scope: This topic aims at exploring the operational and societal conditions and prerequisites for complementing the ODD of CCAM solutions through remote operations, as defined by the United Nations Economic Commission for Europe (UNECE)²²⁹. Here “remote operations” is to be understood as the remote monitoring, assisting, and operating the Automated Driving System (ADS) by a person located externally. The vehicle operates with a high degree of automation (SAE Level 4), but a human operator can monitor its actions and surroundings remotely and intervene, if needed. Intervention ranges from providing strategic guidance and tactical commands to determining vehicle manoeuvres and taking over control in scenarios that include, but are not limited to, emergency responses, system malfunctions, ADS system limits, or complex navigational challenges unforeseen by the CCAM system.

The topic invites proposals to explore two use cases that should focus on remote operations on urban and rural public roads and/ or confined areas, dealing with at least two of the following areas:

- Transport of people: use cases that enhance public transport services (i.e., by fleets of remotely operated shared vehicles, including, if relevant, on-demand responsive transport) improving accessibility and mobility for users in all their diversity in terms of all characteristics (e.g., age, gender, disability, etc);
- Transport of goods: use cases that optimise logistics (e.g., remotely operated delivery vehicles in urban environment), improving efficiency and sustainability;
- Combination of people and goods transport: use cases of integrated solutions (e.g., remotely operated vehicles that transport goods during off-peak hours and convert into passenger transport services during peak times), improving vehicle utilisation, while addressing congestion and reducing environmental impact.

For each of these use-cases, operational and societal aspects that would enable remote operations of multiple ADSs must be evaluated in terms of business models, infrastructure needs, safety assurance, legislation, as well as organisational aspects that may include cultural elements. Additionally, operator’s skills, performance and situational awareness of the remote operator must be addressed. The analysis of potential rebound effects and questions related to energy sufficiency and sustainability should not be neglected. Where applicable, the use of generative AI should be considered.

This topic aims to understand all the different components of the complex ‘system-of-systems’, combining technological advancements with a focus on human-centred design/ interfaces, as well as societal needs, considering their implications from the start. This will enable to lay the foundation for the development of advanced demonstrator use cases,

²²⁹ https://unece.org/sites/default/files/2023-03/Informal%20document%20No16e_0.pdf

integrating the various components in next phases, although technological adaptations of existing approaches to reach an integrated system-of-systems should already be validated in the relevant environment here.

Technological components of the system-of-system are foreseen to include e.g. infrastructure support, communications, cyber-security, key enabling technologies (possibly including generative AI, etc.). Proper selection of existing technology enablers and related SW developments to implement the remote operation functions is essential. Societal aspects must be identified (e.g., user-centric design, working conditions), through the inclusive engagement of stakeholders for problem formulation and concepts development, co-creation and co-assessment of deployment and operations.

Stakeholders could include user groups and public advocacy organisations, mobility companies, technology providers, public agencies, planners, community groups, industry associations, first responders, social partners²³⁰ and workforce representatives. These should be involved in building awareness, trust, and support for remote operations, identifying skill gaps and skill transferability of operators as well as training needs. Additionally, various stakeholders should be engaged to examine unanticipated implications (e.g., environmental, social equity etc.) and to co-develop solutions, as well as other pre-conditions making remote operations feasible (e.g., policy, governance, territorial planning, infrastructural readiness, integration into Traffic Management Systems (TMS), organisational and legislative requirements etc.).

The dimensions of Responsible Research and Innovation (RRI) – reflection, inclusion, anticipation, and responsiveness – should guide the exploration of the technological components of the system-of-system to achieve societal readiness, involving relevant Social Sciences and Humanities (SSH) disciplines (e.g., psychology, geography, Science and Technology Studies, sociology, ethics).

The safety assurance of remote operations entails the development of a corresponding validation methodology, as the remote operator with the wireless communication system and the related interfaces becomes part of the system to be validated. Proposed actions shall develop the basic principles of such a methodology considering the framework provided by EU 2022/1426, building upon, to the extent possible, the results of the SUNRISE²³¹ project and seeking close coordination with actions under HORIZON-CL5-2023-D6-01-02²³², HORIZON-CL5-2024-D6-01-02²³³ as well as HORIZON-CL5-2024-D6-01-03²³⁴.

This topic is a Societal-Readiness pilot:

²³⁰ As per the legal basis of Art. 154 of the TFEU.

²³¹ [Safety assurance framework for connected and automated mobility system](#), grant agreement ID: 101069573.

²³² Generation of scenarios for development, training, virtual testing, and validation of CCAM systems.

²³³ Scenario-based safety assurance of CCAM and related HMI in a dynamically evolving transport system.

²³⁴ Orchestration of heterogeneous actors in mixed traffic within the CCAM ecosystem.

- Proposals should follow the instructions applying to the Societal readiness pilot, as described in the introduction of the Horizon Europe Main Work Programme 2025 for Climate, Energy and Mobility. They entail the use of an interdisciplinary approach to deepening consideration and responsiveness of research and innovation activities to societal needs and concerns.
- This topic requires effective contribution of the relevant SSH expertise, including the involvement of SSH experts in the consortium, to meaningfully support Societal Readiness. Specifically, SSH expertise is expected to facilitate the socio-technological interface and enable the design of project objectives with Societal Readiness related activities.

This topic implements the co-programmed European Partnership on ‘Connected, Cooperative and Automated Mobility’ (CCAM). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Connected, Cooperative and Automated Mobility’ (CCAM) in support of the monitoring of its KPIs.

Projects resulting from this topic are expected to apply the European Common Evaluation Methodology (EU-CEM) for CCAM²³⁵.

HORIZON-CL5-2025-04-D6-02: Preparing for large-scale CCAM demonstrations (CCAM Partnership) – Societal Readiness Pilot

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training</p>

²³⁵ See the evaluation methodology [here](#).

	Programme of the European Atomic Energy Community (2021-2025). ²³⁶ .
<i>Exceptional page limits to proposals/applications</i>	The page limit of the application is extended by two pages to 35 to properly address Societal Readiness-related issues.

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- Pave the road for forthcoming CCAM deployment and deliver a comprehensive large-scale demonstration plan for CCAM vehicles across Europe;
- Ensure the engagement of key stakeholders across the value chain in transport and mobility, including required industrial partners (such as OEMs and suppliers) and a range of end users and service providers, in preparing for demonstrations that will pave the way for subsequent implementations;
- Establish the foundation for future use case specific projects in different domains, such as public and private road transport and logistics, alongside the large-scale demonstrations;
- Outline a CCAM promotion strategy, supporting elevated public engagement and awareness;
- Responsiveness to a deeper understanding of the needs and concerns of diverse social groups involved in or potentially affected by the R&I development, thereby increasing the potential for beneficial societal uptake, and building trust in results and outcomes.

Scope: In recent years, the work in vehicle automation has concentrated on technological advancements, human factors, extensive testing, and demonstrations to raise public awareness and facilitate market readiness. Even with the progress achieved, the challenges related to technical functionality as well as use, demand and affordability remain considerable.

To tackle these challenges, a sensible approach is needed to implement vehicle automation developments in real-life applications via large-scale demonstrations such as Field Operational Tests (FOTs) within Living Labs. Additionally, particular use cases for public road transport and logistics should be targeted. The validation of technical enablers (also considering technological readiness), understanding user behaviour, promoting acceptance and advancing societal readiness for both mobility of people and transport of goods remains a major focus. The tests and large-scale demonstrations should be conducted in both mixed traffic conditions and confined areas, where applicable. Ensuring interoperability of connected automated systems across various vehicle brands, regions, and Member States is essential.

²³⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Since successful large-scale demonstration activities require strong and early engagement from key stakeholders, comprehensive planning and preparatory actions, leveraging previous and ongoing efforts, are needed to ensure European competitiveness and leadership.

The action should leverage previous and ongoing projects at European and national levels on demonstration activities. It should consider the outcomes of the European software-defined vehicle of the future initiative. The frameworks and guidelines formulated by the CCAM Partnership shall be duly reflected²³⁷. This is to optimise the return on investments and create a strong basis for future large-scale demonstration projects to boost an industry-wide European deployment strategy for CCAM.

Proposed actions for this topic are expected to address all of the following aspects:

- Define the prerequisites for performing large-scale demonstration projects, considering vehicle technology maturity and other technical enablers, physical and digital infrastructures, as well as approval frameworks for public road testing;
- Prepare and refine methodologies, test procedures and tools for the execution of field tests and efficient data management;
- Identify test and demonstration sites across Europe for CCAM functions, considering the extension of Operational Design Domains (ODDs), using vehicular communication technologies (V2X) that enables Traffic Management Systems (TMS) for improved traffic flow and operational efficiency;
- Initiate a cross-sector stakeholder forum for the definition of use case relevant projects in different domains and their implementation.

The proposed action is expected to foster the collaboration between public and private stakeholders to achieve common objectives and assess societal impacts. Engagement of key stakeholders, covering the whole CCAM ecosystem, such as mobility and transport users, , public transport, shared mobility and logistics operators, infrastructure providers, traffic managers, public authorities, and research institutions must be ensured. In addition, European industrial players such as OEMs and suppliers should be adequately represented.

This topic is a Societal-Readiness pilot:

- Proposals should follow the instructions applying to the Societal readiness pilot, as described in the introduction of the Horizon Europe Main Work Programme 2025 for Climate, Energy and Mobility. They entail the use of an interdisciplinary approach to deepening consideration and responsiveness of research and innovation activities to societal needs and concerns.
- This topic requires effective contribution of the relevant SSH expertise, including the involvement of SSH experts in the consortium, to meaningfully support Societal

²³⁷

<https://www.ccam.eu/>
<https://www.connectedautomateddriving.eu/>

Readiness. Specifically, SSH expertise is expected to facilitate the socio-technological interface and enable the design of project objectives with Societal Readiness related activities.

This topic implements the co-programmed European Partnership on ‘Connected, Cooperative and Automated Mobility’ (CCAM). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Connected, Cooperative and Automated Mobility’ (CCAM) in support of the monitoring of its KPIs.

The project should build upon the results of the FAME²³⁸ project and on the actions under HORIZON-CL5-2024-D6-01-05²³⁹ to ensure complementarity between activities.

Projects resulting from this topic are expected to apply the European Common Evaluation Methodology (EU-CEM) for CCAM²⁴⁰.

HORIZON-CL5-2026-01-D6-03: Next-generation environment perception for real world CCAM operations: Error-free and secure technologies to improve energy-efficiency, cost-effectiveness, and circularity (CCAM Partnership)

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the

²³⁸ Framework for coordination of Automated Mobility in Europe, grant agreement ID: [101069898](#).

²³⁹ Robust Knowledge and Know-How transfer for Key – Deployment Pathways and implementation of the EU-CEM.

²⁴⁰ See the evaluation methodology [here](#).

<i>Agreements</i>	Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁴¹ .
-------------------	---

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- Availability of validated prototypes of next-generation vehicle and infrastructure-based environment perception technologies for robust, reliable and trustworthy CCAM operations to anticipate and avoid foreseeable risks and unexpected safety-critical situations in complex real-world conditions (e.g., at pedestrian crossings, in construction sites, during interactions with emergency vehicles, etc.);
- Understanding the degree (and limits) to which automated CCAM perception systems can anticipate, process, and respond to on-site ‘early-warnings’ (e.g., street design, sounds, smells and other signals from the environment, weather conditions, intentions of pedestrians, cyclists, and other active mobility users, etc.);
- Improvement of the energy-efficiency of the sense-think-act systems of CCAM considering the vehicle, the infrastructure, the cloud at-the-edge, while at the same time increasing the performance to guarantee security and error-free reliability; these developments will contribute to the reduction of the potential climate and environmental footprints of CCAM systems;
- Standardisation and adoption of modular, reusable, and upgradable software and hardware platforms, investigating scalable deployment concepts that lead to cost reduction and improved affordability while adopting a circular, eco-design approach (including efficient materials use, reduced waste, and the repair and reuse of components where feasible).

Scope: The initial deployment of Level 4 automated vehicle services in urban and other complex settings has encountered significant challenges in environmental perception and decision-making, leading to occasional remote assistance calls, blockages and accidents that have impacted public trust. At the same time, the increasing computing power demand is in conflict with a limited usage of energy and resources to meet sustainability requirements. Thus, emerging large-scale demonstrations of automated vehicles should be accompanied by objective-oriented research aimed at addressing these challenges directly, while targeting improvements in performance, accuracy, reliability, and cyber-security.

To successfully overcome these challenges, proposed actions for this topic are expected to address all of the following aspects:

²⁴¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Advancements in all steps of the sense-control-act process for both vehicle- and infrastructure-based smart sensor systems and networks, controllers, and actuators to ensure safety and trustworthiness of CCAM, as well as facilitating effective disruption management;
- Utilisation of digital enabling technologies including, for example: AI at-the-edge, machine learning, data spaces with reference scenarios and suitable software architectures²⁴²;
- Adoption of modular, reusable, and open software platforms supporting the environment perception for CCAM while ensuring transparency of operation, verification, and safety assessment to build trust, with respect to authorities, decision makers and the public via direct performance explainability;
- Energy efficiency, circularity, and eco-design of the environment perception systems by decreasing potential energy and resource consumption in both production and operation as well as facilitating reusability, reparability and upgradability while further enhancing the performance;
- Reduction of potential costs of environment perception systems through scalability, modularity and standardisation, making technologies financially viable for widespread implementation;
- Support remote assistance as a stepping-stone towards higher levels of autonomy and vehicle automation in wider Operational Design Domains (ODD).

Solutions are expected to integrate electronic hardware architectures and software stacks in a co-design approach. Hence, it is strongly encouraged that solutions use, as far as possible, building blocks and tools from projects of the Software-Defined Vehicle of the Future (SDVoF) initiative under the Chips Joint Undertaking, e.g., on the hardware abstraction layer and SDV middleware and API framework. Results from projects funded under HORIZON-CL5-2024-D6-01-04²⁴³ and complementarities with projects funded under Horizon Europe Cluster 4 “Digital Industry and Space” should also be considered, where appropriate.

As the activities should demonstrate feasibility and their full potential for real-world applications, proposals should foresee exchanges with other relevant EU or national projects for e.g., coordinated validation, transport systems integration and large-scale piloting. Collaboration should also be sought with projects funded under HORIZON-CL5-2024-D6-01-01²⁴⁴ and other directly relevant call topics.

In view of the relevance of environment perception and decision-making of automated vehicles for the responsiveness of the innovation to diverse societal interests and concerns,

²⁴² In line with the European Artificial Intelligence strategy and requirements for trustworthy, explainable, and safe AI.

²⁴³ AI for advanced and collective perception and decision making for CCAM applications

²⁴⁴ Centralised, reliable, cyber-secure & upgradable in-vehicle electronic control architectures for CCAM connected to the cloud-edge continuum.

accessibility, inclusiveness as well as regulation, proposals should consider societal, ethical, socio-economical and/ or legal aspects as far as feasible in the requirements of the technical solutions to be developed. This could involve the engagement of institutional users as well as citizen-science approaches, e.g., in collaboration with projects CulturalRoad²⁴⁵ and Diversify – CCAM²⁴⁶.

To achieve the expected outcomes, international cooperation is highly relevant, considering the lessons learned in this area (for example, from robo-taxi and freight transport trials in the US and China). Activities should foster links between the European ecosystem and relevant stakeholders around the world, in particular with Japan and the United States but also with other relevant strategic partners in third countries, while taking into account the legal, cultural, historical, and social aspects in Europe as well as other specificities of the European road network and cities (including: traffic rules, user behaviour, diverse user groups considering gender, age, disability, socio-economic status, streets morphology, and the structure and condition of roads in rural areas).

This topic implements the co-programmed European Partnership on ‘Connected, Cooperative and Automated Mobility’ (CCAM). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Connected, Cooperative and Automated Mobility’ (CCAM) in support of the monitoring of its KPIs.

Projects resulting from this topic are expected to apply the European Common Evaluation Methodology (EU-CEM) for CCAM²⁴⁷.

HORIZON-CL5-2026-01-D6-04: Integration of human driving behaviour in the validation of CCAM systems (CCAM Partnership)

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection

²⁴⁵ Cocreate, Embrace – grant agreement ID: [101147397](#).

²⁴⁶ Diversify CCAM by integrating European cultural and regional variations in the design and implementation of citizen-friendly systems to foster mobility equity - grant agreement id: [101147484](#).

²⁴⁷ See the evaluation methodology [here](#).

	of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁴⁸.</p>

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Validated human behavioural models representing the variety of human driving behaviour in safety-relevant scenarios, shared through a common repository and to be used:
 - o to define pass criteria/ assessment criteria for CCAM systems in type approval schemes, consumer testing campaigns and industrial development processes;
 - o to design safe, human-like behaviour of CCAM systems that can be anticipated easily by all road users and is acceptable to both CCAM vehicle occupants and all road users.
- Application of such human behavioural models in the virtual safety validation of CCAM systems to realistically represent the behaviour of human-driven vehicles in closed loop simulations of mixed traffic, thereby reflecting the variety of human driving behaviour, including behaviour in complex real-world and emergency conditions.

Scope: The deployment of CCAM systems in mixed traffic will mean intense interaction with all road users such as the human drivers of other vehicles as well as pedestrians and riders of two-wheelers. These interactions (including implicit and explicit communication by humans and CCAM systems) will play a crucial role in the acceptance and thereby the penetration of CCAM systems in future road transport. CCAM systems will have to show safe and human-like driving behaviour, so that their decisions and actions can be anticipated easily by all road users, respecting the variety of typical driving behaviour across different countries as well as the need for CCAM systems to respect traffic rules and support road safety.

²⁴⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

This will require validated models of explicit and implicit human driving behaviour to design and validate such system behaviour. These models will be needed in closed loop simulations of CCAM systems in mixed traffic to realistically represent the reactions of human drivers in other vehicles to the behaviour of a CCAM system. Models representing human driving behaviour are being developed by the projects i4Driving²⁴⁹ and BERTHA²⁵⁰ for selected fields of application, i.e. they will be calibrated for a limited number of scenarios. Bringing together and building upon the results of these projects – in particular a simulation library and an innovative methodology to account for uncertainty from i4Driving and a scalable, probabilistic driver behavioural model from BERTHA, research is needed to extend the fields of application that these projects are addressing with a focus on representing driver behaviour in a multitude of safety-critical scenarios, considering the variation and statistical distribution of human behavioural patterns and the factors influencing such behaviour, including the parallel execution of non-driving related tasks.

To achieve high degrees of robustness and applicability in a wide range of scenarios, detailed calibration and parameterisation is necessary, as driver behaviour depends on factors such as the road infrastructure, vehicle types, traffic conditions and rules, as well as regional influences and driver experiences / demographics, e.g., gender, age and other relevant social variables. Considering the deviation of average from ideal human driving behaviour, proposed actions must also validate the models for their extended fields of application, going well beyond the applications and degrees of validation accomplished by the above-mentioned projects under HORIZON-CL5-2022-D6-01-03. Proposed actions are thus expected to raise the technology readiness of such models to TRL 5. Data for parameterisation and validation should be captured by monitoring real human drivers in driving simulators and/or real traffic considering what is happening inside and outside the vehicle.

Proposed actions should integrate, to the extent possible, the validated models in the virtual validation and verification approaches as developed in the projects HEADSTART²⁵¹ and SUNRISE²⁵² and complemented by the project SYNERGIES²⁵³. Successful integration should be demonstrated in various safety-relevant scenarios as provided by the action(s) funded under HORIZON-CL5-2023-D6-01-02²⁵⁴. Models should be shared via the federated data exchange platform for CCAM to be developed by an action under HORIZON-CL5-2025-D6-06²⁵⁵.

Proposals are encouraged to also explore additional fields of application of validated driver behaviour models, while the integration of relevant expertise from social sciences and humanities (SSH) is expected.

²⁴⁹ Integrated 4D driver modelling under uncertainty, grant agreement ID: [101076165](#).

²⁵⁰ BEhavioural ReplicaTION of Human drivers for CCAM, grant agreement ID: [101076360](#).

²⁵⁴ Generation of scenarios for development, training, virtual testing and validation of CCAM systems

²⁵⁵ Federated CCAM data exchange platform (see below).

To achieve the expected outcomes, international cooperation is encouraged with research stakeholders in Japan and the United States but also with other relevant strategic partners in third countries. Such cooperation should exploit synergies as far as possible in capturing data for the parametrisation and validation of behavioural models, while considering regional and cultural differences as well as specificities of respective road infrastructures.

This topic implements the co-programmed European Partnership on ‘Connected, Cooperative and Automated Mobility’ (CCAM). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Connected, Cooperative and Automated Mobility’ (CCAM) in support of the monitoring of its KPIs.

Projects resulting from this topic are expected to apply the European Common Evaluation Methodology (EU-CEM) for CCAM²⁵⁶.

Projects funded under this topic are encouraged to explore potential complementarities with the activities of the European Commission's Joint Research Centre's Sustainable, Smart, and Safe Mobility Unit and, where appropriate, establish formal collaboration.

HORIZON-CL5-2026-01-D6-05: Approaches, verification and training for Edge-AI building blocks for CCAM Systems (CCAM Partnership)

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.

-------------------	---

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- CCAM solutions - in hardware and software - with reduced power consumption, latency, and improved speed and accuracy, as domain specific adaptations of sector agnostic advancements in e.g. AI and/or cloud-edge-IoT technologies;
- Enhanced levels of safety, (cyber) security, privacy and ethical standards of data-driven CCAM functionalities by using e.g. edge-AI applications for CCAM;
- Approaches for well-balanced distributions of AI calculations for expanding use cases (e.g. collective perception, decision making and actuation) for connected, cooperative and automated driving applications (using a balanced mix of edge-based solutions, cloud-enabled solutions and vehicle-central solutions), balancing speed and latency, energy use, costs, data sharing and storage needs and availability;
- Validated approaches incorporating edge-AI solutions into the action chain from perception and decision-making up to actuation of advanced CCAM functionalities - both on-board and on the infrastructure side - for systemic applications such as traffic management and remote control, as well as tools and approaches for training of such functionalities, which require optimised and verified edge-AI models.

Scope: CCAM-enabled vehicles are constantly sensing their surroundings on road conditions, location, nearby vehicles and infrastructure. Such data is shared in real-time, while data from other sources is received. This needs powerful and optimised large data processing algorithms, which requires large amounts of computing power, data processing, real-time operation and high levels of security. However, most existing AI computing tasks for automated vehicle applications are relying on general-purpose hardware, which has limitations in terms of power consumption, speed, accuracy, scalability, memory footprint, size and cost. Hardware advancements driven by initiatives such as the Chips JU calls must be complemented by significant efforts to optimise AI algorithms for CCAM functionalities, ensuring their efficient performance on edge-specific hardware.

To encompass CCAM solutions in future steps towards e.g., the Software Defined Vehicle, this dual approach on AI advancements and hardware advancements is essential. Complementarities with projects funded under Cluster 4 “Digital Industry and Space” of

²⁵⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Horizon Europe should also be considered where appropriate, especially in translating sector-agnostic innovations to the specificities of CCAM applications. Requirements on AI algorithm optimisation, latency, on-board energy availability, solutions to gain unbiased datasets for AI training, Electronic Control Unit (ECU) capacity and on potential safety-critical scenarios should be considered to ensure the timely triggering of actions, and in a later stage, anticipatory driving. Solutions should use, as far as possible, building blocks, interfaces, and tools from projects of the Software-Defined Vehicle of the Future (SDVoF) initiative.

Edge-AI involves deploying AI algorithms on edge computing devices, which are hardware systems constrained in proximity to the data source where they operate. This is done without relying on remote resources for the computational efforts. It thus facilitates real-time insights, responses and triggering of actions, with reduced costs as the processing power close to the application is used, greatly reducing networking costs. Combining AI with edge-AI can facilitate stable solutions to include the full activity chain from sensing, perception, decision-making up to actuation of advanced CCAM solutions, gaining speed and resilience which are essential in safety-critical situations.

To successfully overcome these challenges, proposed actions are expected to address all of the following aspects:

- For next major advancements in AI applications in CCAM solutions, huge AI applications need to fit into limited hardware, to make it fit for purpose. Edge-AI devices often have limited computational resources, making it challenging to deploy large and complex AI models. Thus, it is essential to develop and reshape approaches and building blocks for CCAM solutions, viable to be run on edge-hardware. Use cases for the approaches and building blocks should focus on time-critical applications (such as the chain from (collective) perception, decision making and actuation of functionalities) and can be linked to the activities and results from projects AI4CCAM²⁵⁸ and AIthena²⁵⁹.
- Develop optimised edge-AI algorithms and demonstrate their applicability and scalability, using real-world CCAM scenarios such as in the databases resulting from projects such as SYNERGIES²⁶⁰. The development and demonstration use case should include in-vehicle perception and understanding, such as object detection, segmentation, road surface tracking, sign and signal recognition, etc. Decision making and actuation of countermeasures is to be part of the chain of actions. The approaches for these building blocks and enabling technologies should facilitate a quick uptake in adjacent or following projects;
- Optimisation of the models for edge deployment. This involves adjusting the size and complexity of models to allow it to run on the relevant edge devices and include training and verification approaches. Techniques such as model quantization, pruning, and

²⁵⁸ Trustworthy AI for CCAM, grant agreement ID: [101076911](#).

²⁵⁹ AI-based CCAM: Trustworthy, Explainable, and Accountable, grant agreement ID: [101076754](#).

²⁶⁰ Real and synthetic scenarios generated for the development, training, virtual testing and validation of CCAM systems, grant agreement ID: [101146542](#).

knowledge distillation can be used to reduce the size of AI models without significant loss in performance. Additionally, over-the-air (OTA) updates can be used to manage and update models across a fleet of devices efficiently;

- Develop tools and approaches for edge-AI model monitoring, to ensure that edge-AI systems continue to operate as expected and ensure resilience to failure conditions or attacks, and monitoring model outputs to ensure they are accurate even as real-life conditions and datasets change.

The research will require due consideration of cyber security, connectivity and both personal and non-personal data protection rules, including compliance with the GDPR, and ensure that gender and other social categories (such as but not limited to disability, age, socioeconomic status, ethnic or racial origin, sexual orientation, etc.), and their intersections are duly considered where appropriate, as well as Explainable AI to enhance trust and regulatory compliance including alignment with the AI Act.

In order to achieve the expected outcomes, international cooperation is encouraged in particular with Japan and the United States but also with other relevant strategic partners in third countries. Such cooperation should exploit synergies in edge AI approaches for mobility and for CCAM, as well as its integration into the vehicle architecture.

This topic implements the co-programmed European Partnership on ‘Connected, Cooperative and Automated Mobility’ (CCAM). As such, projects resulting from this topic will be expected to report on results to the European Partnership ‘Connected, Cooperative and Automated Mobility’ (CCAM) in support of the monitoring of its KPIs.

Projects resulting from this topic are expected to apply the European Common Evaluation Methodology (EU-CEM) for CCAM²⁶¹.

Projects funded under this topic are encouraged to explore potential complementarities with the activities of the European Commission's Joint Research Centre's Sustainable, Smart, and Safe Mobility Unit and, where appropriate, establish formal collaboration.

HORIZON-CL5-2026-01-D6-06: Federated CCAM data exchange platform (CCAM Partnership)

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Overview of CCAM-specific limitations of current data exchange solutions and existing dataspace related to interfaces, harmonised ontologies and taxonomies, standards, formats, monetisation / compensation;
- Mapping of information and reference data needs for KPIs collected by Member States and Associated Countries (where relevant and to the extent possible), related to impacts of CCAM technologies and solutions;
- Federated sustainable CCAM Data Exchange Platform that facilitates sharing of data for both large-scale demonstrations and deployment, interfacing existing data spaces and improving the exchange, availability, and accessibility of data for the development, testing and deployment of CCAM services (including but not limited to Digital Twins, digital scenario representations, safety assurance and validation, ADS regulation monitoring, driver behaviour, AI model training, and the collection of national/EU level statistics and Key Performance Indicators);
- Proposed governance structure for the Data Exchange Platform with a sustainability plan and viable business model.

²⁶² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Scope: Data sharing plays a pivotal role in supporting R&I, enabling deployment, and enhancing the competitiveness of the CCAM industry. Within the realm of data sharing, there are two distinct categories of data that are particularly pertinent: mobility data, and data for research and development. The common European mobility data space²⁶³ aims to facilitate mobility data access and sharing, and is supported by projects, notably from the Digital Europe Programme. This mobility data space will facilitate the sharing of data related to mobility patterns, traffic flow, and other macroscopic aspects that are essential for the development of CCAM solutions. Within the research, testing and deployment of CCAM solutions for the automotive as well as infrastructure sectors, there is a need for a dedicated data space tailored specifically to the requirements of CCAM stakeholders. This CCAM Data Space demands a more granular and extensive array of data to cater to the needs of both Tier X suppliers, Original Equipment Manufacturers (OEMs), traffic managers and infrastructure providers, particularly in terms of vehicle and traffic safety considerations. Specific aspects related to ongoing regulatory developments would need to be considered (e.g. Automated Driving Systems and General Safety regulations, adaption of type approval to the AI Act, including trustworthy AI integration).

Several data spaces exist or are being developed in Europe for CCAM in specific R&I initiatives. The FAME²⁶⁴ project has released a CCAM Data Sharing Framework (DSF) 2.0 describing best practices in data sharing and will develop a CCAM Federated Data Space as a proof of concept to facilitate the exchange of research and test data across R&I projects. Several CCAM Partnership R&I projects expressed interest in making data available and reusing data from other projects through the FAME Test Data Space, once it will be operational. The scenario-based validation approach for safety argumentation in highly automated functions will result in an integration of various scenario databases facilitated by a federated layer, as developed in project SUNRISE²⁶⁵ and SYNERGIES²⁶⁶. However, this integration falls short of constituting a comprehensive Data Space approach, both for new data sets and extensions of existing datasets. To achieve full Data Space functionality for CCAM, significant enhancements are required in terms of developing connectors, APIs, and protocols for seamless data exchange. Additionally, there is a need to refine user profile management systems and establish robust contractual frameworks to govern data access and usage rights. A generic data space blueprint and building blocks are being developed and governed by the Data Space Support Centre²⁶⁷. In parallel, the DeployEMDS²⁶⁸ builds a decentralised technical infrastructure and common governance mechanisms for urban mobility use cases in 9 cities and regions across Europe.

Consequently, substantial efforts are necessary to fully integrate these approaches into a cohesive and efficient Data Space environment that can effectively support the diverse needs

²⁶³ [Creating a common European mobility data space - European Commission \(europa.eu\)](https://european-council.europa.eu/media/en/press-room/pages/press-room-detail.aspx?lang=en&id=101069898)

²⁶⁴ Framework for coordination of Automated Mobility in Europe, grant agreement ID: [101069898](https://european-council.europa.eu/media/en/press-room/pages/press-room-detail.aspx?lang=en&id=101069898).

²⁶⁵ Safety assurance framework for connected, automated mobility Systems, grant agreement ID: [101069573](https://european-council.europa.eu/media/en/press-room/pages/press-room-detail.aspx?lang=en&id=101069573).

²⁶⁶ Real and synthetic scenarios generated for the development, training, virtual testing and validation of CCAM systems, grant agreement ID: [101146542](https://european-council.europa.eu/media/en/press-room/pages/press-room-detail.aspx?lang=en&id=101146542).

²⁶⁷ [Data Spaces Blueprint](https://data-spaces.eu/)

²⁶⁸ See for more information: <https://deployemds.eu/>

of the CCAM research community and industry. Moreover, extensive datasets are also indispensable for the development of low-level modules such as driver monitoring systems, perception systems, and decision-making algorithms, as well as for sensors like GNSS, radar, cameras, and lidar. While projects like AIthena²⁶⁹ and AWARE2ALL²⁷⁰ have generated valuable datasets, the lack of centralised storage and access hampers their utility. Therefore, there is a strong need to incorporate such datasets into a unified CCAM Data Space that is aligned with the data space blueprint, taking advantage of the common building blocks.

By establishing robust interfaces, ontologies, and data management architectures, the CCAM research community and industry can effectively utilise and repurpose existing data, thereby reducing costs, and facilitating the development and validation of CCAM solutions, including the creation of digital twins through synthetic data. The enhanced sharing of data across the CCAM stakeholders should also benefit national authorities, and operators in their efforts to collect KPIs to monitor wider impacts of CCAM solutions including on safety, economy, and society.

Proposed actions for this topic are expected to address all of the following aspects:

- Identify how to further evolve the data spaces for CCAM applications, connecting existing dataspace and bridging data gaps;
- Identify harmonisation and standardisation needs for taxonomies, interfaces, and data formats to push CCAM data exchange and extend and implement the CCAM taxonomies in the CCAM Test Data Space;
- Identify information needs and reference data for KPIs collected from Member States and Associated Countries (where relevant and to the extent possible) of i.e. high-level socio-economic statistics, accidents, infrastructure, vehicles;
- Establish a Federated CCAM Data Exchange Platform with tools and governance, including a viable business model to ensure the durability of the platform, which facilitates sharing of data for industry, social partners, authorities and academia that are supporting specific use cases related to: large-scale demonstrations, generation and maintenance of digital twins and representation of scenarios (for development or validation), performance and safety assessment, driver behaviour data from real and synthetic driving conditions, ADS regulation monitoring, AI model training, and common information source for national/EU level statistics and Key Performance Indicators;
- Identify and describe methods/algorithms/processes to refine and use data for the specific use cases tackled by the Platform;

²⁶⁹ AI-based CCAM: Trustworthy, Explainable, and Accountable, grant agreement ID: [101076754](#).

²⁷⁰ Safety systems and human-machine interfaces oriented to diverse population towards future scenarios with increasing share of highly automated vehicles, grant agreement ID: [101076868](#).

- Identify the effects of the EU General Data Protection Legislation (GDPR) on AI learning workflows and possible mitigation measures.

A strong alignment with the common European mobility data space and related projects²⁷¹ is expected. The work should ensure coherence and interoperability with other common European data spaces, especially regarding its cross-sectoral blueprint and building blocks, by aligning with the Data Spaces Support Centre and by using, as far as possible, the smart cloud-to-edge middleware platform Simpl²⁷². The work should build on the outcomes of the FAME project and the FAME Test Data Space ([Data Sharing - Connected Automated Driving](#)). Finally, links with related activities under the future European Digital Infrastructure Consortium ([EDIC](#)) for Mobility and Logistics Data and cooperation with the CCAM Partnership's States Representative Group (SRG) is expected. Particular attention should be dedicated towards establishing interoperability standards for data sharing within and across data ecosystems, through the implementation of the FAIR data principles and leveraging already adopted practices, especially in relevant European common data spaces.

In order to achieve the expected outcomes, international cooperation is encouraged in particular with Japan and the United States but also with other relevant strategic partners in third countries.

This topic implements the co-programmed European Partnership on 'Connected, Cooperative and Automated Mobility' (CCAM). As such, projects resulting from this topic will be expected to report on results to the European Partnership 'Connected, Cooperative and Automated Mobility' (CCAM) in support of the monitoring of its KPIs.

Projects resulting from this topic are expected to apply the European Common Evaluation Methodology (EU-CEM) for CCAM²⁷³.

Multimodal transport, infrastructure and logistics

Proposals are invited against the following topic(s):

HORIZON-CL5-2026-01-D6-07: Innovative construction and maintenance, with the use of new materials and techniques, for resilient and sustainable transport infrastructure

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 11.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a

²⁷¹ The awarded proposal should build on the outcomes of the preparatory action PrepDSpace4Mobility and the EMDS study under CEF. It should collaborate and align the deployEMDS project and the future action under call DIGITAL-2024-CLOUD-AI-06-MOBSPACE.

²⁷² More information [here](#).

²⁷³ See the evaluation methodology [here](#).

	proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 22.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

Demonstration of combined solutions for infrastructure construction that achieve the following targets:

- At least 50% of the construction materials used are recycled or sourced from recycled materials;
- Reduced pollutant emissions by at least 30% considering the entire life cycle of the infrastructure;
- Reduced degradation of ecosystems and fragmentation of habitats during construction, maintenance, operation and decommissioning of transport infrastructure (thereby contributing to maintaining biodiversity);
- Increased climate resilience of infrastructure to extreme weather and human caused events, assuring at least 80% capacity at network level during the disruptions;
- Structured analysis and recommendations on the need for EU standards in construction, inspection, maintenance and deconstruction, contributing to the decarbonisation and increased resilience of transport infrastructure;
- Guiding document on the necessary adaptations to public procurement rules that contribute to including clear sustainability and resilience award criteria.

Scope: The overarching policy background is the European Green Deal, which aims to achieve climate neutrality by 2050. In the transport area, this translates into a 90% reduction of transport-related greenhouse gas emissions by 2050²⁷⁴. To deliver the European Green Deal, there is a need to revise and upgrade numerous policies, including those for transport and large-scale infrastructures.

The EU Sustainable and Smart Mobility Strategy²⁷⁵ (SSMS), which translates this overall transport target into actions, states that infrastructure must be adapted to climate change and made resilient to disasters. In line with the SSMS, it is also important that such infrastructure should rely on clean and decarbonised energy sources, notably renewable energy, as well as on a modernised grid.

²⁷⁴ [Transport and the Green Deal - European Commission \(europa.eu\)](https://transport.ec.europa.eu/document/download/be22d311-4a07-4c29-8b72-d6d255846069_en?filename=2021-mobility-strategy-and-action-plan.pdf)

²⁷⁵ https://transport.ec.europa.eu/document/download/be22d311-4a07-4c29-8b72-d6d255846069_en?filename=2021-mobility-strategy-and-action-plan.pdf

Research in this topic should provide knowledge and technical solutions to a triple challenge: (1) limiting emissions of transport infrastructures; (2) making them more resilient to climate change; and (3) addressing environmental and biodiversity aspects. Projects should cover the entire life cycle of transport infrastructures, covering overall emissions from sourcing of materials, construction, maintenance, operation and decommissioning of the infrastructure.

Proposals should address all of the following aspects:

- Development of new methods and techniques to construct, manage, maintain and repair (including self-repair) transport infrastructures, in order to increase climate resilience and lower emissions;
- Assessment of solutions considering the principles of circularity and taking into account the entire life cycle assessment (LCA) approach;
- Cost-benefit analysis (CBA) of the solutions considering the entire life cycle of the infrastructure and accompanying business plans for their implementation;
- Application of innovative materials (e.g. green asphalt, green cement, carbon sinks) that enable transport infrastructures to become more resilient, more sustainable and emit less pollutants;
- Validation of all the proposed solutions and proofs of concepts is to be carried out in at least two large-scale demonstrations. The demonstrations should cover at least two different transport infrastructure types (e.g., road, rail, waterborne, airport) which are located on at least two different Trans European Transport Network (TEN-T) corridors. The demonstrations should also cover different environments and phases of the infrastructure life cycle (e.g. design, construction, maintenance, decommissioning);
- Analysis of EU national and international standards in construction, inspection, maintenance and deconstruction, contributing to the decarbonisation and increased resilience of transport infrastructure;
- Design of green, sustainable and innovative public procurement methods, contributing to lowering the environmental footprint, resources, and material consumption;
- Demonstration of sustainable and climate resilient infrastructure with nature-based solutions (NBS²⁷⁶), minimising the negative effects on the environment, including the degradation of ecosystems, the fragmentation of habitats and the loss of biodiversity.

The projects should develop clear indicators with baselines and quantified targets in support of the expected outcomes that are monitored for each demonstration site. With regards to the expected outcomes, projects should take into account expected technological developments and policy implementation (e.g. revised TEN-T regulation), multi-disciplinary adaptive capacity in line with the European Climate Risk Assessment²⁷⁷ (EUCRA) and the

²⁷⁶ https://research-and-innovation.ec.europa.eu/research-area/environment/nature-based-solutions_en
²⁷⁷ [European Climate Risk Assessment — European Environment Agency \(europa.eu\)](#)

Commission Communication on Managing Climate Risks²⁷⁸, in particular cascading impacts across sectors.

Proposals should consider and build on results from previous calls on resilient and sustainable infrastructure and standards,²⁷⁹ and should incorporate relevant EU guidance on the development and management of European transport infrastructures. Proposals should also build on previous results from projects on advanced materials, sensor technology, digitalisation, asset management, decision support and automation in the construction and maintenance of infrastructures. If the proposed activities and solutions involve the use of artificial intelligence (AI) systems and/or techniques, the proposal is expected to demonstrate that robustness of the solution.

HORIZON-CL5-2026-01-D6-08: Accelerating freight transport and logistics digital innovation

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 7.00 and 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: The proposals are expected to contribute to all the following outcomes:

- Extended functionalities of electronic Freight Transport Information (eFTI) platforms beyond the required actions forming part of the implementation of Regulation 2020/1056²⁸⁰ for:

²⁷⁸ [EUR-Lex - 52024DC0091 - EN - EUR-Lex \(europa.eu\)](#)

²⁷⁹ <https://im-safe-project.eu/>

²⁸⁰ Regulation (EU) 2020/1056 of the European Parliament and of the Council of 15 July 2020 on electronic freight transport information; <https://eur-lex.europa.eu/eli/reg/2020/1056/oj>.

- new use cases, solutions and applications, enabling harmonised electronic business-to-business (B2B) information sharing and exchange in multimodal logistics chains and hubs such as those related to greenhouse gases (GHG) reporting, sustainability claims and other actions leveraging efficient and green freight operations in the supply chain;
- complementary applications and services for electronic business-to-authority (B2A) information sharing aimed to support the implementation by businesses of relevant Union regulatory frameworks in transport or in other relevant policy fields, such as in the context of smart enforcement, statistics, customs, e-invoicing, sustainability reporting, data spaces, GHG and external costs calculators;
- Best practices to boost and accelerate the adoption of eFTI framework and data sharing innovations by companies and in particular by SMEs are established;
- Improved efficiency in operations and freight transport, through the provision of advanced digital connectivity and interoperability of the information shared electronically between actors in both B2B and B2A perspectives, compared to the baseline defined in the start of the project, is demonstrated and quantified;
- Reduced administrative burden and costs associated with B2B data sharing and B2A regulatory and non-regulatory reporting are demonstrated and quantified.

Scope: Electronic Freight Transport Information (eFTI) platforms established in line with Regulation 2020/1056 will play a central role in facilitating the implementation of business-to-authority (B2A) information exchange processes related to multimodal transport of goods. In line with the Regulation's requirements, common specifications for a single comprehensive data set and harmonised protocols for data sharing will ensure interoperability of the information shared electronically between actors, and the requirements for rights-based access-control system will establish safeguards for cybersecurity and trust. The use of electronic means to exchange regulatory information is also expected to reduce administrative costs for economic operators, to enhance the efficiency of freight transport services and to facilitate green transformation of the logistics sector.

Therefore, given their potential, apart from specific B2A functionalities, eFTI platforms could also serve as an enabler for other universal, open and affordable solutions and tools to achieve digital interconnectivity of logistics systems and platforms including in a business-to-business (B2B) perspective.

The proposals should unlock the potential of eFTI platforms for further functionalities, beyond the scope of Regulation 2020/1056, to new B2B services and applications as well as other B2A uses.

Proposals should refer, as a core principle, to the legislative framework and specific technological solutions provided through Regulation 2020/1056, while duly reflecting the latest technological state of the art for electronic information exchange. Where relevant, and

especially in B2B perspective, they should apply and build upon the concepts and solutions developed in other Union initiatives aimed to facilitate data sharing and exchange in transport, the [Digital Transport and Logistics Forum \(DTLF\)](#) and the [European mobility data space \(EMDS\)](#).

Outside the scope of this topic is any type of architecture, federation of platforms or similar, as these are already delivered by eFTI and DTLF. Proposals also should not develop functionalities already required in the current scope of the eFTI Regulation. Instead, they are expected to leverage and/or extend functionalities of eFTI platforms that are in operation at the time of the implementation of the project, to ensure the effective implementation of new use cases.

Building on the functionalities, requirements and implementation specifications for eFTI platforms provided for in the eFTI Regulation and its implementing and delegated acts, the proposals should address all of the following aspects:

- Develop technical solutions and tools, at least at the level of operational prototype demonstration (TRL7), for complementary applications and services for electronic B2A information sharing;
- Develop universal, open and affordable solutions and tools to enable electronic B2B information sharing in collaborative logistics processes. The proposed solutions should be implemented with minimal integration effort for industrial stakeholders, for instance through the usage of Artificial Intelligence to facilitate data and information interoperability.
- Develop solutions and tools to facilitate SMEs engagement in the digital freight transport and logistics ecosystem and the adoption of solutions by SMEs.
- Define multiple use cases, services and application of eFTI platforms for B2B and B2A processes duly accounting of relevant existing solutions and projects and identifying specific barriers to interoperability and universal adoption.
- Identify and define relevant data to be added to the existing eFTI common dataset to support the new use cases, services and functionalities; while addressing aspects of data sovereignty, data privacy and cybersecurity, pursuant to the relevant Union legislation;
- Assess and provide recommendations for B2B framework arrangements, including standard data exchange contracts, identification/authentication and authorisation to ensure trusted operations in data sharing and exchange in freight transport and logistics;
- Define and seek synergies with relevant EU frameworks and policies related to the exchange of transport emissions data (such as new Commission's proposal for the Regulation on CountEmissions EU ²⁸¹, the Corporate Sustainability Reporting

²⁸¹ Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the accounting of greenhouse gas emissions of transport services (Text with EEA relevance); <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A52023PC0441>

Directive²⁸², and other relevant Union acts) to facilitate their effective and harmonised implementation, including through the establishment of an open source emissions calculators, as well as the exploitation of data sharing frameworks for carbon reporting between operators in the same supply chain;

- Assess the interdependencies and needs with horizontal Union strategies and legislation such as GDPR²⁸³, digital identities²⁸⁴, data spaces²⁸⁵, AI act²⁸⁶, Data Governance Act²⁸⁷, Cybersecurity Act²⁸⁸; identify best practices and provide recommendations for compliance.
- Define and test B2A and B2B solutions and use cases in at least 2 demonstration environments/ecosystems involving platforms and users. B2B use cases should be led by industry stakeholders, in particular shippers and logistics service providers (e.g. freight forwarders, transportation companies). B2A use cases should be developed in cooperation with industry stakeholders, researchers and public administrations, including statistical offices.
- Identify and develop best practices, map solutions and value streams. Provide recommendations on incentives, capability building, training and technology adoption support schemes as well as trust building mechanisms – to facilitate, encourage and accelerate the adoption of eFTI platforms and data sharing and exchange innovations by companies and in particular by SMEs.

²⁸² Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022 amending Regulation (EU) No 537/2014, Directive 2004/109/EC, Directive 2006/43/EC and Directive 2013/34/EU, as regards corporate sustainability reporting (Text with EEA relevance); <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:32022L2464>

HORIZON-CL5-2026-01-D6-09: Reliable data and practices to measure and calculate transport emissions in multimodal transport chains

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁸⁹ .

Expected Outcome: Project results are expected to contribute to all the following outcomes:

- Input is provided for the implementation of the existing and forthcoming Union's regulatory initiatives related to measurement, calculation and reporting of emissions in transport, such as Regulation (EU) 2023/1805 (FuelEU Maritime)²⁹⁰, Regulation (EU) 2023/2405 (ReFuelEU Aviation)²⁹¹, and the recent Commission's proposal for the Regulation on the accounting of greenhouse gas emissions of transport services (CountEmissions EU)²⁹²;

²⁸⁹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁹⁰ Regulation (EU) 2023/1805 of the European Parliament and of the Council of 13 September 2023 on the use of renewable and low-carbon fuels in maritime transport, and amending Directive 2009/16/EC

²⁹¹ Regulation (EU) 2023/2405 of the European Parliament and of the Council of 18 October 2023 on ensuring a level playing field for sustainable air transport

²⁹² COM(2023) 441 final

- Methodological components are developed and proposed to complement the methodology for accounting emissions provided under the Commission's proposal on CountEmissions EU.

Scope: Greenhouse gas (GHG) emissions from transport represent around 25% of total man-made GHG emissions and continue to grow. The negative impact of these is further strengthened by the existence of other external costs of transport, including air pollution, noise, congestion and accidents. The EU, Member States and industry have made considerable efforts to reduce transport-related GHG emissions and associated external costs.

Accurate and reliable information on emissions is an important tool to increase effectiveness of specific emission reduction measures undertaken by public authorities and businesses. Over the past 15 years, a lot of progress has been made at EU level and globally through new regulatory actions and continuing collaboration between actors to improve the transparency of transport GHG emissions and external costs monitoring. This is manifested through:

- Regulatory initiatives including Regulation (EU) 2023/1805 (FuelEU Maritime)²⁹³, Regulation (EU) 2023/2405 (ReFuelEU Aviation)²⁹⁴, Regulation (EU) 2015/757 (EU MRV)²⁹⁵ and especially, the recent Commission's proposal for the Regulation on the accounting of greenhouse gas emissions of transport services (CountEmissions EU)²⁹⁶, and Directive (EU) 2023/2413 (Renewable Energy Directive);
- Relevant EU research projects, including "Carbon Footprint of Freight Transport" (COFRET), "Logistics Emissions Accounting & Reduction Network" (LEARN) and the on-going "Creating Legitimate Emission Factors for Verified GHG Emission Reductions in Transport" (CLEVER)²⁹⁷;
- Standardisation work, including ISO 14083, the official international standard developed between November 2019 and October 2022 and published in March 2023 as part of the 14000 family of ISO GHG-related standards²⁹⁸;
- Regular updates of the Handbook on the External Costs of Transport²⁹⁹;
- Industry initiatives, such as the Global Logistics Emissions Council (GLEC) Framework, the industry-led guideline for GHG calculation and reporting in the global logistics sector.

²⁹³ Regulation (EU) 2023/1805 of the European Parliament and of the Council of 13 September 2023 on the use of renewable and low-carbon fuels in maritime transport, and amending Directive 2009/16/EC

²⁹⁴ Regulation (EU) 2023/2405 of the European Parliament and of the Council of 18 October 2023 on ensuring a level playing field for sustainable air transport

²⁹⁵ Regulation (EU) 2015/757 of the European Parliament and of the Council of 29 April 2015 on the monitoring, reporting and verification of carbon dioxide emissions from maritime transport, and amending Directive 2009/16/EC

²⁹⁶ COM(2023) 441 final

²⁹⁷ <https://emissionfactors.eu/>

²⁹⁸ This standard has also been formally adopted by the European Committee for Standardisation (CEN) under the reference CEN ISO 14083

²⁹⁹ <https://op.europa.eu/en/publication-detail/-/publication/9781f65f-8448-11ea-bf12-01aa75ed71a1>

Building on the initiatives listed above, proposals should undertake further work to ensure that:

- The full climate impact of transport operations is covered in a comprehensive and consistent way;
- Relevant open items identified in the emissions accounting reference methodology set out under the Commission's proposal on CountEmissions EU can be scientifically clarified and closed;
- Any detailed tweaks to the methodology that have come to light through application can be developed and tested in view of the implementation of the CountEmissions EU framework;
- New technologies, such as generative Artificial Intelligence, are considered in developing datasets and methodologies;
- Relevant data is available for the proper implementation and seamless integration of requirements set in other EU climate related legislation in transport, including Regulations on Fuel EU Maritime, ReFuelEU Aviation, EU MRV, and Regulation (EU) 2020/1056 on electronic freight transport information³⁰⁰.

The Action will play a central role in contributing to the establishment of an unambiguous scientific framework aimed to tackle emissions in transport. However, the Action should also facilitate alignment between EU policy development and market implementation, especially towards enabling market-based accounting approaches that would support proactive investment in low emission fuels and associated transport services.

The proposals should address all of the following aspects:

- Explore, assess and establish the state of the art regarding issues of measuring and calculating specific types of transport-related emissions for which there is no clear consensus on the market, in particular:
 - o black carbon emissions, which primarily result from the combustion of fossil fuels in compression ignition engines;
 - o radiative forcing, which has been suggested as having a strong supplementary climate impact at high altitude and is already included in an inconsistent manner across some, but not all, transport GHG reporting programs;
 - o GHG emissions from vehicle manufacturing and scrappage, which, although not directly linked to transport operations, do contribute to overall life cycle transport emissions;

³⁰⁰ Regulation (EU) 2020/1056 of the European Parliament and of the Council of 15 July 2020 on electronic freight transport information

- o GHG emissions that result from the installation of transport infrastructure, which would need to include the definition of rules for the combination of operational and life cycle emission calculations into a meaningful and consistent presentation format;
- o GHG emissions related to the maintenance operations associated with transport operations that are currently excluded;
- o GHG emissions from information and communication technology (ICT) equipment and data servers that support the delivery of transport operations.
- Clarify specific methodological issues for enabling more accurate quantification of emissions and setting proper incentives towards efficient and sustainable transport options, addressing in particular:
 - o a detailed methodology for GHG emissions stemming from temperature-controlled transport and cool chain operations;
 - o allocation of GHG air transport emissions across passengers and freight transported on the same aircraft.
- Based on relevant European/national/sectorial repositories, explore, assess and contribute to an EU core dataset of default values for GHG emissions intensity of transport services, including for supporting relevant EU regulatory initiatives (such as CountEmissions EU);
- Building on the results of the CLEVER project, where relevant, update the list of applicable GHG emission factors for emissions stemming from energy production, distribution and use, in particular in the context of relevant EU regulatory initiatives (such as CountEmissions EU). Consistency with data and methodologies in current energy legislation such as Directive (EU) 2023/2413 (Renewable Energy Directive)³⁰¹ must be ensured;
- Define R&I gaps on emissions accounting of transport and provide scientifically sound recommendations to address those gaps to improve the existing GHG emissions measuring framework.

The project's main governance (e.g. Steering Group, Advisory Board) is expected to provide for direct involvement of all relevant stakeholders.

Mechanisms to ensure coordination between other ongoing or selected projects (e.g. CLEVER) during their implementation should be put in place where applicable.

³⁰¹ Directive (EU) 2023/2413 of the European Parliament and of the Council of 18 October 2023 amending Directive (EU) 2018/2001, Regulation (EU) 2018/1999 and Directive 98/70/EC as regards the promotion of energy from renewable sources, and repealing Council Directive (EU) 2015/652

HORIZON-CL5-2026-01-D6-10: Integrating inland waterway transport in smart shipping and multimodal logistics chains

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Enhanced solutions and tools to better integrate inland waterway transport (IWT) into the overall logistic chains and increase the modal share of inland waterway transport, are developed and demonstrated in use cases in line with the objectives set up in NAIADES III³⁰²;
- Gains (compared to the baseline defined in the beginning of the project) in terms of operational efficiency, as well as environmental and social impact from the integration of IWT in multimodal logistics chains, are clearly identified, demonstrated and measured;
- Recommendations for an EU regulatory framework on harmonised smart shipping at EU level, as well as input for related standardisation, harmonisation and amendments to Inland Water Transport Digitalisation Vision³⁰³ to reflect findings from the project;
- Stakeholder engagement and communication campaigns and events to increase visibility and use of IWT are organised.

Scope: While the increased use of sustainable transport modes and multimodal solutions are critical levers for transport, logistics and supply chain decarbonisation, and despite obvious environmental advantages, the modal share of the EU IWT sector has remained below expectations over the last decades. The seamless integration of inland waterway transport in multimodal supply chains requires the physical and digital connection to other land transport modes and maritime transport. Digitalisation is not a goal in itself but an important supporting

³⁰² COM(2021) 324 final eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52021DC0324
³⁰³ <https://ec.europa.eu/transparency/expert-groups-register/core/api/front/document/98613/download>

development required to remain competitive and to improve the connectivity to ports, other transport modes and the clients (e.g. to keep the direct costs low and to allow synchromodal solutions). Digital interconnectivity (with logistics systems and other digital platforms for transport) is crucial to increase the modal share of IWT in multimodal logistics chains and to be able to significantly contribute to the modal shift goals as presented in the Sustainable and Smart Mobility Strategy³⁰⁴.

Proposals are expected to focus on the integration of smart vessels, smart infrastructure, smart data and smart governance in multimodal logistics chains. The proposals should address all of the following aspects:

- Building on the results of previous and on-going Horizon 2020, Horizon Europe and Connecting Europe Facility (CEF) funded projects, identify, develop and test robust technical and operational solutions and tools (also exploring innovative technologies such as generative Artificial Intelligence) to connect physically and digitally IWT to existing land and waterborne multimodal logistics chains for a sustainable, efficient, safe, resilient, automated IWT with a view to synchromodal transport;
- Define and develop key parts of the IWT-related aspects of a common framework for multi-modal data sharing, while enabling compatibility with legacy systems; building upon the concepts and solutions developed in other Union initiatives aimed to facilitate data sharing in transport, such as the Digital Transport and Logistics Forum (DTLF), the European mobility data space (EMDS), the electronic Freight Transport Information regulation; and considering high value datasets, the revised Intelligent Transport Systems (ITS) Directive³⁰⁵ and River Information Services (RIS) Directive. Outside of the scope are any type of new platforms or similar; rather, proposals are expected to leverage existing frameworks or platforms to ensure effective use case implementation (e.g. proposed solutions could interface with and be integrated in existing platforms used by shippers, carriers and freight forwarders to connect with multimodal information). Proposals could also identify datasets already available or that could be developed in order to enhance the integration of IWT in multimodal supply chains;
- Define and test applications and use cases, building on the proposed solutions for advanced cooperative Smart Shipping and Smart Logistics, including integration with the physical infrastructure, in at least four demonstration pilots in actual operational environments (minimum at TRL 7). The pilots should focus on better integrating inland waterway transport in the multimodal supply chains, with a focus on cross border applications, on the accessibility and usability of node services in an automated/digital manner, and on efficient and green operations. The pilots should cover different types of goods, different routes and IWT basins (to have better EU geographical coverage), possibly along the Trans-European Transport Network corridors. To ensure a user and governance perspective approach, the pilot cases should be led by industry stakeholders

³⁰⁴ Sustainable and Smart Mobility Strategy – putting European transport on track for the future, COM/2020/789 final

³⁰⁵ [Directive \(EU\) 2023/2661](#)

(e.g. freight forwarders, intermodal operators), in cooperation with shippers and public administrations (involvement of public administrations is considered a priority). The impact of increased automation and digitalisation on all stakeholders should be considered as part of the requirements definition and throughout the design life cycle;

- Through the pilots and the application of the proposed solutions, analyse the existing relevant regional/national regulations, identify gaps and legal barriers, and propose recommendations for an EU regulatory framework on harmonised smart shipping at EU level, as well as input for the standardisation and harmonisation of the smart shipping components to the relevant standardisation bodies (e.g. CESNI, CEN, CENELEC);
- Based on the pilots' results, assess and quantify, in a comprehensive, structured and substantiated analysis, the environmental, economic and social benefits of smart shipping (including automated vessels and the link to the physical infrastructure), and the effects of increasing the use of IWT in multimodal logistics chains. Develop and propose new business models to incentivise the use of IWT;
- Foster collaboration among key stakeholders, including transport operators, logistics providers, shippers, policymakers, and technology developers, also by implementing communication activities and organising an outreach event displaying the pilots' results and the demonstrated advantages of integrating IWT in multimodal logistic chains.

HORIZON-CL5-2025-04-D6-11: Innovative air mobility and services for sustainable and smart urban, peri-urban transport – Societal Readiness pilot

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up</i>	The rules are described in General Annex G. The following

<i>of the Grant Agreements</i>	exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ³⁰⁶ .
<i>Exceptional page limits to proposals/applications</i>	The page limit of the application is extended by two pages to 52 to properly address Societal Readiness-related issues.

Expected Outcome: Project results are expected to contribute to all of the following outcomes:

- Enabling very low-level unmanned aviation, specifically Innovative Air Mobility (IAM) and services, for sustainable and smart urban mobility in cities, by developing and refining tools for urban planning, outreach, and system forecasting in line with the Drone Strategy 2.0³⁰⁷. Climate-neutral, smart, resilient, and safe IAM, accepted by local communities;
- Institutional capacities to enable IAM are built up;
- New tools and services for optimising IAM in cities and other areas, as well as workable governance arrangements for a multimodal transport network;
- Evidence-based guidelines and recommendations, co-designed with and provided to cities, on how to develop a sustainable urban air mobility eco-system (e.g. planning and development processes for local authorities, integration of IAM in Sustainable Urban Mobility Plans, etc.);
- Advanced understanding and quantification of the value of IAM, its benefits and use cases, particularly in the urban logistics sector;
- Enhanced multimodality, urban logistics planning/flow and communication between stakeholders, which can be replicated by other cities to enable IAM;
- Creation of jobs and economic growth by implementation of urban air mobility services in the long-term;
- Responsiveness to a deeper understanding of the needs and concerns of diverse social groups involved in or potentially affected by the R&I development, thereby increasing the potential for beneficial societal uptake, and building trust in results and outcomes.

³⁰⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

³⁰⁷ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A52022DC0652>

Scope: The proposal is expected to develop the conditions and guidelines for a sustainable, smart, safe and resilient ecosystem for urban air mobility and services, focusing on the urban logistics sector, where drones could be more easily demonstrated and accepted than for passenger mobility.

Proposals will have to address at least seven the following points:

- Prepare a roadmap to define the needs for new or upgraded infrastructures and logistics, to facilitate innovation in IAM technologies and operations;
- Collaborate with city authorities to develop guidelines for integrating and co-designing drone infrastructure, such as vertiports, landing areas, and charging stations, into Sustainable Urban Mobility Plans, ensuring environmental, safety, security, and privacy considerations;
- Assess the effects of IAM traffic, including electric vertical take-off and landing (eVTOL) downwash/outwash³⁰⁸ on urban microclimate, as well as the requirements for a vertiport area, to enable safe IAM operations (incl. take-off and landing), for different VTOL aircraft and rotor configurations;
- Building on EASA's work and other studies on drone noise, assess and define the noise monitoring needs and tools that cities will have to implement, in areas where drone and IAM infrastructures and operations are planned, to ensure compliance with noise limits;
- Analyse and make a proposal on how IAM could be integrated in the existing freight transport flows in cities, to boost multimodality;
- Perform demonstration activities on IAM for cargo delivery (e.g. medical supplies), with data collection and flight monitoring between different landing/take-off areas/vertiports, while ensuring safety of operations in densely populated areas;
- Evaluate and quantify the impact and potential benefits of cargo delivery by drones and eVTOLs on city congestion, noise, pollution, as well as on current and future airspace capacity to accommodate large scale operations;
- Develop viable business models for sustainable IAM services for logistics operators, identifying key use cases where the benefits are the highest;
- Collaborate with city authorities to align IAM services with citizen needs, developing strategies to raise public awareness and secure buy-in for drone integration. Identify attractive benefits and incentives for early adopters to accelerate market uptake of IAM operations and services;

³⁰⁸ Downwash is the downward flow of air produced by the propulsion system of an electric vertical take-off and landing (eVTOL) aircraft, such as the thrust from rotors. Outwash refers to the outward flow of the air that results from the downwash.

- Report on lessons learnt and recommendations to be shared with other cities for replication, and develop training / competence building packages for the relevant stakeholders (e.g., cities authorities involved in the design of a sustainable IAM ecosystem);
- Analysis of potential rebound effects and arising questions of (energy) sufficiency with regard to extensive use and large-scale operations of IAM.

Projects must involve cities authorities (multi-level governance) and logistics operators, to ensure user needs are duly considered. Projects should build on previously funded Horizon 2020 projects such as AiRMOUR³⁰⁹.

The action aims to exploit synergies with the EU Mission on Climate-Neutral and Smart Cities and with the SESAR 3 Joint Undertaking, while the alignment with the activities of EASA is highly recommended.

This topic is a Societal-Readiness pilot:

- Proposals should follow the instructions applying to the Societal readiness pilot, as described in the introduction of the Horizon Europe Main Work Programme 2025 for Climate, Energy and Mobility. They entail the use of an interdisciplinary approach to deepening consideration and responsiveness of research and innovation activities to societal needs and concerns.
- This topic requires effective contribution of the relevant SSH expertise, including the involvement of SSH experts in the consortium, to meaningfully support Societal Readiness. Specifically, SSH expertise is expected to facilitate the socio-technological interface and enable the design of project objectives with Societal Readiness related activities.

Safety and resilience

Proposals are invited against the following topic(s):

HORIZON-CL5-2025-04-D6-12: Safe Human-Technology Interaction (HTI) in the vehicle systems of the coming decade – Societal Readiness Pilot

Call: Cluster 5 Call 04-2025 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

³⁰⁹ <https://airmour.eu/>

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following exceptions apply: subject to restrictions for the protection of European communication networks.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).³¹⁰.</p>
<i>Exceptional page limits to proposals/applications</i>	The page limit of the application is extended by two pages to 52 to properly address Societal Readiness-related issues.

Expected Outcome: Project results are expected to contribute to all the following expected outcomes:

- Increased understanding of the synergies between driver and driving assistance systems capabilities and implementation of tailored, “self-learning” Human-Technology Interaction (HTI) strategies in order to improve road safety;
- Avoidance of crashes related to mode confusion during the use of driver’s assist, the hand-over and take-over phase;
- Advanced standardisable assessment tools and methods for improved HTI;
- Development of training methods for new and experienced drivers with respect to the evolving technologies;
- Responsiveness to a deeper understanding of the needs and concerns of diverse social groups involved in or potentially affected by the research and innovation (R&I)

³¹⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

development, thereby increasing the potential for beneficial societal uptake, and building trust in results and outcomes.

Scope: The increasing automation of road transport is bringing up new challenges especially in lower automation levels (level 3 and below) when driving control is transitioning from the driver to the vehicle or vice versa. For these levels, ensuring the right level of driver vigilance with respect to the context and the automation level is important in order to avoid dangerous situations because of cognitive distraction.

In addition, systems based on HTI are generally built on a non-stationary and non-deterministic foundation – human behaviour. Therefore, the concept of individually “adaptive” systems has to be followed and elaborated in all its particular aspects, as the consideration of “average” human behaviour is not sufficient.

This has large implications on the design of HTI systems.

Such systems should provide a reliable and seamless interface between the driver and the vehicle in normal driving conditions as well as in specific situations with a risk of generating high cognitive load, diverted attention, inattention, impaired driving, or in the case of instantaneous limitations in driving capabilities.

As drivers and their experience, as well as driving conditions, may vary a lot, HTI systems will need to address a wide variety of use cases in order to ensure a relevant Operational Design Domain (ODD)³¹¹. Therefore, in-cabin monitoring systems with adequate accuracy are key to have a clear understanding of the driver state, while considering all contextual in/out cabin data, so that the vehicle can propose a pertinent and tailored strategy to prompt the required driver action or behaviour.

Advances in in-cabin monitoring and multi-modal sensing technologies, as well as robust detection/prediction of driver cognitive status adapted to the situation awareness, are necessary to achieve these objectives. The same applies to the need to link interior with exterior sensing capabilities.

In addition, it is necessary to enhance drivers’ understanding of the assisted and automated driving system and to avoid mode confusion. In this aspect, the implications of automation on driver training and driver's licence requirements should be investigated. However, training methods for experienced drivers should also address the evolving technologies. This could include innovative training methods that prepare drivers for various mode transitions and safety critical scenarios like the development of virtual and mixed reality training approaches. The automation status and the limits of the system should be clearly communicated via the HTI to prevent mode confusion, enhance trust, and avoid unnecessary deactivation of the assistance or automation systems.

Special attention should be dedicated to the “hand-over” and “take-over” phases. Hand-over/take-over requests should be done considering the context (e.g. information from other

³¹¹ Results from the project of topic HORIZON-CL5-2023-D6-01-02 could be relevant for this issue.

vehicles or infrastructure) and the state of the driver in a way to minimise cognitive stress related to hand-over and take-over. In this context, it is important to investigate standardised requirements for the human-machine interface (including in case of system failure), including their assessment.

In this respect, the proposals should focus on developing strategies to prevent driver disengagement and minimise cognitive load during critical situations. Additionally, behavioural models and methodologies should be created to identify activities or behaviours that the vehicle's human-machine interface (HMI) should avoid or block (such as entertainment systems that may distract the driver from driving tasks). These strategies should be scalable based on the sophistication of the vehicle's sensing capabilities.

Moreover, proposals should address use cases involving specific populations, such as elderly drivers with decreased sensing abilities and higher sensitivity to cognitive load, young and inexperienced drivers, and professional drivers performing multiple tasks simultaneously. For these groups, a key question is how to meet their unique needs and how to balance tailored (or personalised) vs. standardised approaches for the best results. When considering these groups, proposals are expected to consider the gender dimension.

Also, trust is mandatory for the acceptability of these systems: precision, reliability, and transparency need to be ensured. In particular, the vehicle response to a given situation as well as the level of information to be conveyed needs to be coherent and logical. Relevant research areas to achieve this objective will be the definition of multi-modal and multi-sensorial vehicle warning and response strategies for the safe management of critical phases considering user responsiveness and the severity of scenarios.

HTI systems should be upgradable both in software and in hardware with minimal disruption for the users, while ensuring that the intended effect and functionality is improved or at least maintained. A cross-fertilisation opportunity would be to investigate how other transport modes (e.g. aviation) handle upgrades/updates with minimal disruption for the user.

This topic is a Societal-Readiness pilot:

- Proposals should follow the instructions applying to the Societal readiness pilot, as described in the introduction of the Horizon Europe Main Work Programme 2025 for Climate, Energy and Mobility. They entail the use of an interdisciplinary approach to deepening consideration and responsiveness of research and innovation activities to societal needs and concerns.
- This topic requires effective contribution of the relevant social sciences and humanities (SSH) expertise, including the involvement of SSH experts in the consortium, to meaningfully support Societal Readiness. Specifically, SSH expertise is expected to facilitate the socio-technological interface and enable the design of project objectives with Societal Readiness related activities.

Further research and data collection is needed to ensure a better understanding of synergies between driver and assistance systems, to evaluate their performances in different contexts

and user scenarios. This will enable appropriate adaptive and “self-learning” strategies to be tailored to the individual driver abilities and preferences.

In consideration of the above, proposals should address all the aforementioned aspects and issues in order to achieve the expected outcomes.

Research needs should be addressed in coherence and continuation with topics HORIZON-CL5-2021-D6-01-10, DT-ART-03-2019, HORIZON-CL5-2022-D6-01-02³¹², as well as HORIZON 2020-MG-2018-TwoStages (MG-2-1-2018).

HORIZON-CL5-2026-01-D6-13: Safety of Cyclists, Pedestrians and Users of Micromobility Devices

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5-6 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).³¹³</p>

Expected Outcome: Project results are expected to contribute to all the following expected outcomes:

³¹² <https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/opportunities/topic-details/horizon-cl5-2021-d6-01-10>
<https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/opportunities/topic-details/horizon-cl5-2022-d6-01-02>

³¹³ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- Improved (compared to the current figures for the locations selected for the pilot testing) road safety (actual and perceived) for pedestrians, cyclists, e-cyclists and users of other micro-mobility devices, considering that the safety of these users is not only at risk from motorised vehicles, but also from their interaction with road users with higher masses or operating speeds (e.g. between e-bikes and pedestrians);
- An in-depth analysis and assessment of the safety associated with the emergence of electrically assisted small vehicles such e-bikes, e-cargo bikes, e-scooters, to be referred to as micromobility modes, that may be shared or own, and are used for personal mobility (e.g. commuting) and the transportation of goods (e.g. parcel delivery);
- Increased (compared to the current figures for the locations selected for the pilot testing) use of active and micromobility modes in all age and socioeconomic groups as a result of improved safety;
- Standardisation guidelines for the authorities (cities authorities, police, and hospitals) on how to report crashes that involve micromobility modes with the objective to avoid under- and/or misreporting;
- Guidelines for the city authorities on how to incorporate micromobility modes in their Sustainable Urban Mobility Plans (SUMP) and account for the safety and convenience of all road users;
- Development of mitigating solutions for the adverse impact on the safety of cyclists, pedestrians, and other users of the changing car fleet towards bigger and heavier vehicles;
- In depth analysis of the impact of road infrastructure (e.g. design, markings, degradation status, quality, network connectivity) on the safety and comfort of cyclists, pedestrians, and micromobility users and development of mitigation solutions;
- Assessment methodologies to evaluate the safety potential and the effectiveness of advanced safety measures.

Scope: The share of trips made by active modes is increasing, which is in line with the United Nations Sustainable Development Goals. This increase is linked to cities actively placing more focus on the mobility and safety needs of pedestrians, cyclists, e-cyclists and users of other micro-mobility device, which materialises in new regulations, and in new or improved infrastructure. However, pedestrians and cyclists remain heavily affected by crashes. Concurrently, the use of electrically assisted devices (such as e-bikes, e-scooters, e-cargo bikes, mobility systems used by people with disabilities, etc.) – to be referred to as micromobility modes – is increasing exponentially because these modes represent an efficient means of personal mobility, as well as a new and effective mode for the last-mile delivery of goods within the city area. Micromobility modes, shared and owned, have been adopted by commuters, tourists, the elderly, food and goods delivery companies, and come in varying sizes and operating speeds. When their use emerged, micromobility modes were associated

with high hospitalisation rates, mainly for the micromobility users themselves, but also pedestrians and cyclists. While efforts have been made to regularise and standardise these vehicles, especially in the case of shared e-scooters, there is still a significant knowledge gap related to the operational safety of these vehicles in cities.

Proposals submitted under this topic should address all of the following aspects:

- Collect and use exposure data when analysing the safety of pedestrians, cyclists, and micromobility users, and identify crash contributing factors and their interactions;
- Provide an extensive analysis of the safety needs, as well as tailored safety measures for cyclists and each type of micromobility mode (e.g. shared e-scooters versus owned e-bikes), while taking into account the trip purpose (e.g. recreational ride versus delivery of goods), and the socioeconomic and demographic characteristics of the users;
- Assess the actual and perceived safety risk of pedestrians and cyclists due to the emergence of micromobility modes that operate at higher speeds and that have increased in size and weight;
- Quantify the impact of the geometric design, quality, and continuity of the cycling infrastructure on the safety of cyclists, pedestrians and micromobility users, considering their increasing demand, operating speeds, and size of vehicles;
- Assess the potential effectiveness of vehicle-to-everything (V2X) technologies in decreasing conflicts and near misses between pedestrians, cyclists and micromobility vehicles, and users and motorised vehicles;
- Identify best practices in the design of bicycles and micromobility vehicles in terms of stability and the avoidance of single crashes, contributing to the underlying development of a draft European regulatory framework on the type-approval of micromobility vehicles or self-certification based on harmonised standards;
- Identify, define and pilot test the following in at least two clearly identified real-life urban environments:
 - o new geometric designs of infrastructure to ensure safe, seamless, and comfortable mobility for pedestrians, cyclists and users of micromobility modes while accounting for the increasing demand, higher operating speeds and weight and size of e-bikes, e-scooters and all types of micromobility devices;
 - o smart technologies (V2X) to assess their effectiveness in preventing and decreasing conflicts between pedestrians, cyclists, micromobility modes users and motorised traffic;
 - o road safety requisites, requirements, rules and/or regulations that could be put in place by local authorities in order to increase the take-up and the safety of active

and micromobility modes in all age and socioeconomic groups, by 20% compared to the baseline at the start of the project;

- o development of a comprehensive, real-time information platform for cyclists that includes data on route accessibility, signage, and infrastructure conditions.

Special focus should be paid to supporting the safety of user groups with particular vulnerability including people with disabilities (physical, mental, cognitive, developmental, intellectual, sensory, etc).

Proposals are invited to explain how the work supports local/regional/national authorities' efforts to deliver on the objectives of the Vision Zero Strategy, the Strategic Action Plan on Road Safety and the EU Road Safety Policy Framework 2021-2030 as well as on the integration of road safety policies and programmes in Sustainable Urban Mobility Planning.

Proposals should plan for an active collaboration with the well-recognised initiatives in the field of road safety and urban mobility such as the European Road Safety Observatory and the CIVITAS initiative. In addition, proposals should demonstrate that the proposed approaches build upon the results from previous research actions³¹⁴ and liaise and collaborate with the projects that will be selected under topic "HORIZON-MISS-2025-06-CIT-CANCER-01: Walking and cycling: increasing their modal share to reap health benefits and emission reductions and integrating active mobility and micro-mobility devices, with smart technologies and infrastructure".

This topic requires the effective contribution of social sciences and humanities (SSH) disciplines and the involvement of SSH experts and institutions, as well as the inclusion of relevant SSH expertise, to produce meaningful and significant effects enhancing the societal impact of the related research activities, with a focus on human-technology interaction, responsiveness of safety solutions and how this varies across different population groups, and behavioural norms.

HORIZON-CL5-2026-01-D6-14: Predicting and avoiding road crashes based on Artificial Intelligence (AI) and big data

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.

³¹⁴ E.g. <https://cordis.europa.eu/project/id/861570> and <https://cordis.europa.eu/project/id/723430> projects

<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following exceptions apply: subject to restrictions for the protection of European communication networks.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5-6 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ³¹⁵ .

Expected Outcome: Project results are expected to contribute to all the following expected outcomes:

- Knowledge of high-risk locations along the road network becoming available, before crashes actually occur, enabling road authorities to deploy appropriate countermeasures proactively;
- Predictive identification of safety-critical situations based on data from multiple sources and enabling real-time interventions to avoid crashes;
- Determination of the optimal sample size to allow for reliable real-time crash occurrence prediction;
- Enhanced monitoring of traffic flows and incorporation of traffic flow variations and patterns in real-time crash prediction, which will also lead to more effective traffic management by foreseeing unexpected or disruptive events.

Scope: One of the principles of the Safe System Approach is to turn from mainly re-active to pro-active management of road safety, i.e. not to derive needs for intervention primarily from crash investigations, but to intervene before serious crashes happen. The ubiquitous gathering of ever-growing amounts of data and their processing in the digital transport system support this idea providing valuable information on traffic situations and events. Potential data sources include amongst others: smart phones, wearables, connected vehicles, drones, road-

³¹⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

side sensors (e.g. camera, radar), etc. Progress in computing power, in the accuracy of location services and in video analytics are further enablers in the processing and analysis of such data in order to identify safety-critical situations or conflicts based on surrogate safety metrics.

In terms of crash prediction modelling artificial intelligence has the potential to identify the underlying risk and the complex relationships between large and diverse datasets which in turn could lead to the identification of crash contributing factors and their interrelations. The identification of these risk factors may then allow predicting safety-critical situations at quantifiable risk levels and guide the proactive implementation of crash avoidance measures, as proposed amongst others by the International Transport Forum at the Organisation for Economic Co-operation and Development (OECD). Ideally, interventions would be feasible in real-time and increase the safety of all road users.

Proposals should address all the following aspects:

- Development of an artificial intelligence (AI)-enabled digital twin of traffic and infrastructure. This would integrate historical, current, and forecast data, including crowdsourcing and infrastructure sensors, infrastructure topology and condition, along with environmental (e.g. local weather and visibility) and road and traffic conditions. Such a digital twin can allow monitoring and preventively optimising both safety and traffic flow, equally addressing congestion and resilience issues. Results from existing projects like OMICRON³¹⁶ could be considered. The proposals should also explore the possibility and usefulness of other type of data such as sociodemographic and economic data, behavioural driving data, data from security cameras, among others that could be provided by third parties (tourism, planned events, demand, etc.);
- Analyse in detail the technical challenges associated with the acquisition and use of adequate and reliable big data from multiple sensors in the road transport system, as well as the process of combining these datasets in ways that are meaningful for proactive road safety analysis;
- Develop methods and tools to predict safety-critical traffic situations at quantifiable risk levels based on real-time and historical data;
- Account for biases in the datasets and ensure that the developed AI-based models or algorithms are bias-free, so that the safety of all road users will be improved effectively in a fair, non-discriminatory way;
- Analyse in detail also the non-technical challenges associated with this approach and the inherent need to collect and share large amounts of data that can be used to identify and quantify road safety-related risk factors. Ethical, legal and economic issues should be considered and concepts be developed to overcome these challenges in terms of privacy concerns, questions of data ownership, organisational barriers etc;

³¹⁶ <https://cordis.europa.eu/project/id/955269>

- Analyse what real-time countermeasures can be taken to reduce instantaneous risk levels for all road users complementary to existing Intelligent Transport Systems (ITS) services;
- Demonstrate the feasibility of such risk predictions and targeted interventions;
- Build consensus among relevant stakeholders on possible routes for deployment in coordination with other ITS services.

Particular attention should be dedicated on establishing interoperability standards for data sharing, through the implementation of the FAIR (Findable, Accessible, Interoperable, and Reusable) data principles and leveraging on already adopted practices especially those in the relevant Common European data spaces.

Ways to leverage valuable complementary data, e.g. metadata from crash databases, should also be explored, as well as links to initiatives for European data spaces.

Research is expected to develop recommendations for updates to relevant standards and legal frameworks. International cooperation is advised, in particular with projects or partners from the US, Japan, Singapore and Australia. Knowledge and experience from other modes where similar approaches are followed in much more controlled environments should be leveraged.

HORIZON-CL5-2026-01-D6-15: Icing in the context of sustainable aviation

Call: Cluster 5 Call 01-2026 (WP 2025)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy</p>

Community (2021-2025). ³¹⁷ .

Expected Outcome: The need to perform research in the field of icing, to ensuring safety and efficiency of proposed new solutions (TRL 3-5), is justified by the increasing incidence of weather hazards caused by climate change, the new generation of low carbon dioxide (CO₂) aircraft with associated disruptive configurations, and the stringency of new policies and certification rules.

In the mid-term, project results are expected to contribute to the following outcomes:

- Generating scientific expertise to develop means of compliance for the certification of icing systems;
- Generating scientific knowledge to be able to develop new prototypes of ice detection and protection.

Scope: The field of aircraft icing is of particular importance because it relates to the safety of flight facing adverse weather conditions, which became increasingly extreme during the last decade.

The aviation industry is working to develop clean and sustainable aviation. There is the need to innovate while maintaining safety.

To enable design, validation and future certification of new technologies emerging from cleaner aviation, R&I should be initiated on the following three principal areas (proposals should consider addressing all, or significant areas of all, three areas):

1. R&I to prepare for the development of means of compliance for certification of future sustainable aviation concepts including:

- Development of reliable numerical tools to be used to validate the designs against the icing environment of Appendix C, O, P and snow, including ground anti-icing fluids;
- Development of Supercooled Large Drop (SLD) Testing Capabilities such as icing wind tunnel test or ice tankers. Generation of flight-testing open datasets for validation of modelling and tunnel testing;
- Development of European Ice Crystal test Capability (for engine/air data probe);
- Development of Falling / Blowing Snow Testing Capability.

2. R&I on Icing environment to assess the impact of the climate change effects on the certification icing environments³¹⁸.

³¹⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

3. R&I related to new technologies for Ice detection and protection, including:

- Ice crystal and SLDs Ice Detection systems to optimise Ice crystals protection or support the detect and exit the SLD appendix O or a portion of the appendix O conditions;
- High Efficiency/Low Energy protection: cleaner aviation with more electric airplanes will drive the need for new ice protection technology: more effective and with less energy, active, passive and hybrid technologies (e.g., low ice-adhesion durable coatings and including new air mobility products (e.g., low speed propeller icing concerns);
- Dissimilar means for Air data (angle of attack (AOA)/Speed) measurement and insensitive to icing threat. Air speed and aircraft attitude measurements are crucial for aircraft control. Air data/navigation probes are externally mounted and exposed to adverse conditions. Dissimilar means to determine the aircraft speed and altitude would provide benefits and make the air data system even more robust and fault tolerant to environmental conditions (icing or hail);
- Enhanced aircraft performance and in particular ice protection health monitoring by improving the ice protection system monitoring coverage based on smart systems capable to monitor a large number of aircraft parameters.

This research and innovation topic is linked to several ongoing rulemaking actions of the European Union Aviation Safety Agency:

1. RES.0010 Ice Crystal Detection
2. RES.0017 Icing hazard linked to super cooled large droplets (SLD)
3. RES.0014 Air-data enhanced fault detection and diagnosis
4. RMT.0196 Update of the flight simulation training device requirements
5. RMT.0118 Analysis of on-ground wing contamination effect on take-off performance degradation

A close cooperation with the European Union Aviation Safety Agency (EASA) and with notational aviation authorities during the implementation of this project should be envisioned.

³¹⁸ Note: the project will assess the use of specific models for the prediction of icing conditions (e.g., addressing cloud micro-physics for the formation ice crystals, super cooled water droplets), which can be coupled to climate models (e.g., General Circulation Models).

Other Actions³¹⁹

Grants to identified beneficiaries

1. Support to European Standardisation Organisations for the development of an improved test method for heat pumps

Expected impacts:

This action is necessary and urgent for the EU to be able to use this improved test method in a regulatory context. If this new test method is adopted without asserting the identified knowledge gaps, problem may appear after the new test method has been adopted leading to problems in the enforcement of heat pump ecodesign and energy labelling regulations. Without this action, stakeholders are likely to remain undecided on the test method to be used with the risk of paralysing the regulatory process.

Expected outcomes:

This grant will be awarded to legal entities identified below as it follows up this previous work within the CEN TC113/WG8 in which knowledge gaps were identified. Indeed, before this new test method can be implemented by the EU in a regulatory context, it must be ensured that it is representative (shows realistic performance compared to real life), reproducible and repeatable. In that direction, a Round Robin Test is necessary to validate the method. It is also necessary to identify product subtypes whose control configuration or other characteristics would make it impossible to test with this method.

Scope:

Heat pumping is a key technology for the future of heating in the building sector: heat pumps will supply a sizeable share of the heat to satisfy building needs in the future. Energy efficiency is a key parameter for the uptake of heat pumps and it will also influence future energy demand for heating of buildings. Heat pump energy efficiency is regulated through ecodesign (Regulation (EU) n°813/2013) and energy labelling (Regulation (EU) n°811/2013) regulations. Harmonised standards, which are reliable, accurate, reproducible, and representative of real-life use are important for product energy efficiency regulations to be applied and enforced. In the context of the revision of the previously mentioned regulations, discussions are on-going to improve the present test method. With the present test method, the average energy efficiency (calculated in standard EN14825) is obtained by weighting the results of steady state tests obtained by setting the unit control in specific modes following manufacturer instructions (according test method defined in EN14511-3); it means that the impact of the control of the unit on the energy efficiency is not fully considered and that it cannot be ensured that the set points tested are really part of the normal functioning of the machine. In order to improve the situation, a new and dynamic methodology has been

³¹⁹ The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

proposed, which is known as the load-based testing or compensation method. However, it was never used in a regulatory context, nor in Europe or elsewhere. This method is presently being developed within the CEN TC113/WG8 as part of standard EN14511-3.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st quarter of 2025

Indicative budget: EUR 2.00 million from the 2025 budget

2. Atmospheric monitoring of emission sources of ozone-depleting substances and F-gases

Expected impacts:

Enabling scientific entities that are capable of measuring atmospheric concentrations of substances controlled under the Montreal Protocol, to provide data for further assessments carried by relevant international bodies on their impact on the climate and the stratospheric ozone layer.

Expected outcomes:

- Sustaining and strengthening existing global networks, by closing identified monitoring gaps, using mechanisms established under the Vienna Convention General Trust Fund.
- To identify sites for the monitoring of potential emission sources of controlled substances and provide support to a limited number of monitoring sites to become operational after positive assessment.

Scope:

Whereas the Montreal Protocol has been successful in reducing the release of ozone depleting substances, unexpected increases in emissions, for instance linked to uses in chemical processes, have been recorded through atmospheric sampling. Parties to the Montreal Protocol have asked the scientific community to identify gaps in global coverage of atmospheric monitoring of controlled substances under the Montreal Protocol and to provide options on ways to enhance such monitoring.

Their decision³²⁰ tasks the Multilateral Fund of the Protocol (MLF) to develop a funding modality enhancing atmospheric monitoring, guided by the scientific advice of the Advisory Committee of the General Trust Fund for Financing Activities on Research and Systematic Observations Relevant to the Vienna Convention (VCGTF).

The action should support the international efforts on the identification and characterisation of sources of emissions of controlled substances and their local abundance, providing data for subsequent optimisation of measurements of the ozone-depleting substances and F-gases, which may include satellite-based measurements. The latter is challenging due to the very low concentrations of the relevant substances in the atmosphere (parts per billion to parts per trillion).

A grant to UNEP, managing the VCGTF, should strengthen the global monitoring network by providing support for the establishment of additional monitoring capacities at locations that need to be identified. The identification of suitable locations for measurements requires complex modelling of atmospheric circulation patterns and subsequent measurements at potential sites. The envisaged financial support through the MLF would ensure a long-term operation of additional monitoring capacities, enabled by this grant.

The action will identify potential emission sources and pathways, which are not yet fully understood, including how they are released and how they can be best monitored via atmospheric sampling.

The action will support, in at least 3 different locations, in-situ measurements for at least 2 consecutive years. The locations should cover different regions at a global scale that are identified as representing a gap in atmospheric monitoring. The action should also provide support for calibrating new and existing monitoring capacities, to reinforce international networks.

The action should build on the scientific findings presented in this context to the Parties of the Montreal Protocol, including through the “Report of Scientific Assessment Panel to the 11th Meeting of the Ozone Research managers – White Paper - Identification of gaps in the global coverage of atmospheric monitoring of controlled substances and options to enhance such monitoring (2021)” and outcomes of the “Workshop on Costs of atmospheric Monitoring of Gases Controlled under the Montreal Protocol (February 2024)”, and the EU-funded project operated by the UNEP Ozone Secretariat on ‘Regional quantification of emissions of substances controlled under the Montreal Protocol’.

Specific Conditions:

The evaluation committee will be composed fully by representatives of EU institutions.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants (including direct grants where justified). The maximum amount of financial support to third parties is EUR 60,000. However, the amount may be

³²⁰ [cop-13_mop-36_decisions.pdf](#)

higher if achieving the objectives of the action would otherwise be impossible or overly difficult; or, in the case of a direct grant to World Meteorological Organisation (WMO), if the support is duly justified and documented.

Legal entities:

The General Trust Fund for Financing Activities on Research and Systematic Observations Relevant to the Vienna Convention (VCTF), administered by UNEP

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 2nd quarter 2025

Indicative budget: EUR 4.50 million from the 2025 budget

Prizes

1. Renewable energy technology (RET) solutions in energy communities

Individual energy communities encounter different challenges, such as developing a successful governance structure that is sufficiently inclusive and involves different types of actors, carrying out an effective business model and embedding activities within the structure and management of the European Commission to territorial regional and/or local plans (e.g., Just Transition Plans, Climate City Contracts, etc.).

By rewarding Energy Communities' innovative governance structure and management of a RET, the prize aims to inspire other Energy Communities to improve their operations and implementation activities and to foster innovativeness in the compliance of climate goals. In addition, this prize will also serve as inspiration and example to other types of communities to become an energy one, accelerating the pace for the ones that are already being formed/developed.

The prize will showcase the best practices from the awarded communities to other ones experiencing similar challenges and issues, portraying a (replicable) framework on how to address these issues successfully. In this way, communities will feel incentivised to apply these practices, to improve their performance, management, etc., and so they can participate in future (similar) prize calls.

Since Energy Communities have encountered bottlenecks in terms of management, governance structure, provision of other services, etc., this prize will aid to portray the

successful ones on how to develop/carry out a fruitful business model that includes and promotes different type of services, while including and improving social aspects within the community.

While showcasing governance innovativeness within the common barriers encountered to operate, the awarded communities will present a clear example that can serve as a replicable framework for other communities on how to overcome challenges and barriers, and address encountered common bottlenecks.

Furthermore, the prize is expected to contribute to the broader goals of the EU Mission on Climate-Neutral and Smart Cities by demonstrating how energy communities can play a pivotal role in achieving climate neutrality at the city level. By embedding their activities within existing strategic and systematic approaches towards climate neutrality, such as the Climate City Contracts, these communities will help cities transition to more sustainable and resilient urban environments.

The total money allocated to this prize is €1 million (EUR 1.000.000) to be awarded up to 10 winners as follows:

- 1st place: €350.000
- 2nd place: €200.000
- 3rd place: €100.000
- 4th place to tenth place: €50.000

Essential award criteria: Prizes will be awarded, after closure of the contest, to the applicants that in the opinion of the Jury demonstrates excellence within their governance structure in the following criteria:

1. Inclusivity of the governance structure: Addressing the issues of gender balance, membership diversity and solution to inequalities
2. Internal governance processes: Covering the aspects of innovative financing, mechanisms for representative governance, members participation and engagement with local authorities
3. Regional/local approach: links into territorial plans, activities related to regional policies
4. Other innovative approaches; efforts to integrate the energy community to the broader energy system, alignment with local sustainable energy and climate action plans or other relevant environmental related plans and cost saving initiatives.

Eligibility criteria: The contest will be open to all Energy Communities that fall into the definitions and concepts of the Energy Communities Repository, which identifies renewable Energy Communities and Citizen Energy Communities as defined in the [Renewable Energy Directive](#) and in the [Internal Electricity Market Directive](#). Under EU law, energy communities

can take the form of any legal entity including an association, a cooperative, a partnership, a non-profit organisation or a limited liability company”. In addition, only energy communities with up to 10,000 members at the time of the submission will be eligible.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	3rd quarter 2025
Deadline for submission of application	3rd quarter 2026
Award of the prize	1st quarter 2027

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative budget: EUR 1.00 million from the 2025 budget

Public procurements

1. Technical support for low carbon and renewables policy development and implementation

This action aims at providing technical support for the development and implementation of policies related to low carbon and renewable energy. The main base will be the recast of the renewables directive 2018/2001 and the associated actions linked to the implementation of the revised Renewable Energy Directive (EU) 2023/2413. It will also address policy development for the implementation of the Industrial Carbon Management strategy (COM/2024/62 final)³²¹ and the hydrogen and decarbonised gas market package (Directive (EU) 2024/1788³²² and Regulation (EU) 2024/1789³²³).

This would include studies on sustainability, certification, climate impacts, industry competitiveness, consumer information, and facilitation of standardisation. Furthermore, communication activities that enable stakeholder engagement can be undertaken.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: 1st quarter and 3rd quarter of 2025

Indicative budget: EUR 1.00 million from the 2025 budget

³²¹ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=COM%3A2024%3A62%3AFIN&qid=1707312980822>

³²³ https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=OJ:L_202401789

2. Industrial Carbon Management knowledge sharing platform

A growing number of carbon capture, utilisation and storage (CCUS) projects are on track to become operational before 2030. The Communication on Industrial Carbon Management³²⁴ emphasises the importance of aggregating these industrial-scale projects into a knowledge-sharing platform to facilitate the collection of and information on best practices between CCUS projects in the EU. This procurement is expected to establish and operate an open collaboration and knowledge sharing platform, providing data and up-to-date information about the entire CCUS sector, based on the collection of primary data from current and future large-scale demonstration projects.

The knowledge sharing platform will be open to all projects (at industrial scale, but also larger research and pilot demonstrations) that are ready to share information and cooperate without disclosing commercially sensitive information and in full compliance with single market competition rules. Depending on the type of project, the knowledge sharing platform must collect and display data on deployed technologies and storage site characteristics as well as best practices from the projects, such as project governance (including management of interphases and risks, involvement of operating organisation of facility³²⁵), barriers and success factors, needs for standards, access to funding, stakeholder management, regulatory aspects and permitting issues. It will also cover lessons learned on public engagement and on sharing best practice of dialogues between project developers, local and national authorities. The data and information must be displayed in a user-friendly way in order to be easily accessed by industry stakeholders, managing authorities, policymakers, researchers and citizens.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: 2nd quarter 2025

Indicative budget: EUR 3.00 million from the 2025 budget

3. Alignment of national and regional priorities with co-programmed partnership in the road mobility sector of the future

The action is aimed at supporting national and regional coordination with European co-programmed partnership in establishing connections and synergies with national and regional research funding systems, therefore leveraging complementarities for a better integration of innovative and zero-emission road transport solutions.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: 1st quarter 2025

Indicative budget: EUR 1.00 million from the 2025 budget

4. Support to the development, implementation, monitoring and evaluation of climate, energy and mobility research and innovation policy activities

The action focusses on three types of activities:

- Technical assistance, and economic and policy analysis to support various aspects of the research and innovation policy relevant in climate, energy and mobility and related sectors;
- Communication activities, such as events and publications, that could support dissemination of knowledge and information to interested organisations and individuals, as well as development of new forms of cooperation and information exchange between interested organisations and individuals;
- Provision of information on new forms of innovation in the climate, energy, and mobility sectors, as well as new forms of supporting innovation, e.g., start-up support, new business models, new financing instruments, cooperation with organisations outside the climate, energy and mobility sectors, supporting innovation investment communities and intermediaries.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: as of 1st quarter 2025

Indicative budget: EUR 1.00 million from the 2025 budget

5. Dissemination and information activities

Communication activities such as meetings, conferences, out-reach communication events/papers/materials and publications should support dissemination of knowledge and information to relevant stakeholders.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: as of 1st quarter in 2025

Indicative budget: EUR 0.80 million from the 2025 budget

6. Support to cities to enable deployment of innovative sustainable air mobility services

The Urban Mobility Framework, adopted in December 2021, recognises Urban Air Mobility (UAM) as an emerging transport and mobility service. Several barriers remain to ensure an uptake of this new mode of transport, e.g., the preparation of cities and local authorities. This action is intended to support cities in their endeavour to introduce Innovative Aerial Services (IAS) in line with the goals of the Drone Strategy 2.0³²⁶:

- Number of cities/regions that will be served by IAM regular commercial services (Target for 2030: at least 45 in the EU and at least one per Member State)
- Number of Member States where emergency health services (medical samples, defibrillators, air ambulances) will be provided using drones (Target: services used in at least 20 Member States)

This action intends to:

- Prepare cities for Urban Air Mobility (UAM) to become a part future urban multimodal intelligent mobility ecosystem;
- Increase societal acceptance of new IAM services.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: as of 3rd quarter in 2025

Indicative budget: EUR 0.50 million from the 2025 budget

7. Organisational support to the SET Plan Conferences

Support for the preparation and organisation of the annual SET Plan conferences in 2026, 2027 and 2028 under the respective Presidencies of the Council of the European Union.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: as of 3rd quarter in 2025

Indicative budget: EUR 1.20 million from the 2025 budget

³²⁶ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A52022DC0652>

Indirectly managed actions

1. Contribution to InvestEU blending operation under the Green Transition product

The ‘Fit for 55’ package of measures adopted by the Commission in July 2021 sets out the policies and legislation for the EU to meet its 2030 target of 55% net greenhouse gas emissions reductions, which will create new opportunities for investment in new technologies and approaches. The final aim is decarbonising the economy in line with the objectives of the Paris Agreement, the European Green Deal and the European Union’s 2050 net-zero target, and Climate Law. That is why the European Commission intends to establish an efficient framework to identify European projects deploying innovative technologies, business models and approaches to reduce the green premium – the difference between the price of a carbon-emitting technology and its clean alternative. Under existing initiatives, the Commission has already been supporting, under InnovFin and other EU programmes, a variety of technological pathways for decarbonisation. InnovFin Energy Demonstration Projects³²⁷, in particular, has been very effective at mobilising finance for first-of-a-kind projects in the area of innovative renewable energy production, storage and smart grids. It has mobilised so far EUR 346 million of EU support for 11 operations (with total project costs of EUR 864 million).

The blending operation will target projects at TRLs 6-8 via the European Investment Bank (EIB) or other implementing partners’ financial instruments, by providing loans and quasi-equity (or a combination of both), which may be blended with non-reimbursable components. The financial instrument component of operations may draw from the Innovation Fund, this Horizon Europe action, or the InvestEU budget, while the non-reimbursable component will only be funded by this Horizon Europe action – to be spent economically as a last resort option to enable project’s financial closure.

The blending under the InvestEU’s Green Transition product focusses on the following four areas that are underrepresented in the current portfolio of InnovFin:

- *Renewable hydrogen.* In July 2020, the Commission adopted the Hydrogen Strategy³²⁸ with the aim of decarbonising its production and to expand its use to store, transport and accelerate the use of renewable energy, as well as replacing fossil fuels in specific sectors, aiming to reach 40 GW of electrolyser capacity by 2030, producing up to 10 million tonnes of renewable hydrogen. Investments in renewable hydrogen production capacity are estimated at EUR 180-470 billion in the EU until 2050. The strategy identifies as a clear priority the production of renewable hydrogen, i.e. hydrogen produced through electrolysis using renewable electricity. In this context, a top priority is to demonstrate larger size, more efficient and cost-effective electrolyzers, with capacities reaching 100 MW and above. Another priority is to further develop large scale hydrogen end-use applications, notably in industry. The path to business case feasibility (without any grant component) of the solution at potential replication sites shall also be

³²⁷ <https://www.eib.org/en/products/mandates-partnerships/innovfin/products/energy-demo-projects.htm>
³²⁸ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52020DC0301>

investigated. The necessary coordination, along the value chain with the European Clean Hydrogen Alliance³²⁹, and on data and knowledge with the observatory and data base in the Clean Hydrogen Joint Undertaking, is foreseen.

- *Sustainable aviation fuels (SAF)*. Though aviation accounted for only 3.7% of total CO₂ emissions in the EU in 2018, it accounted for 15.7% of CO₂ transport emissions. Reducing aviation emissions is challenging considering the long operational life of aircraft and the fact that that zero-emission aircraft configurations and powertrain options for commercial air transport are far from technological and commercial maturity. SAF can significantly reduce aviation reliance on fossil fuels, while relying on existing infrastructure and propulsion systems, but the transition will require significant investments. While several SAF production pathways are certified, their use in the fuel mix is still very low due to high production costs. The price of the most innovative and sustainable types of fuels is on average estimated at up to 3 to 6 times the price of fossil aviation fuels depending on the production pathway, while their lifecycle emissions savings are 85% or more compared to fossil fuels. The path to business case feasibility (without any grant component) of the solutions at potential replication sites shall also be investigated as well as sustainability in wider scale as part of the Fit-for-55 package. The EU has therefore adopted the ReFuelEU Aviation³³⁰ to boost the supply and use of sustainable aviation fuels in the EU. The action will support the development of the most innovative SAF notably advanced biofuels and RFNBOs³³¹ in line with the ReFuelEU Aviation and Renewable Energy Directive sustainability framework.
- *Long duration energy storage (LDES)*. At any moment in time, electricity consumption and generation have to be perfectly matched. This balance is necessary not only in the short term for power grid stabilisation (for which short duration storage solutions exist), but also over the long term, to ensure supply adequacy, by compensating for fluctuations, for meteorological dark and still periods ('dunkelflaute') that can last a few weeks, and for seasonal variations between summer and winter. Long duration – weekly to seasonal - renewable grid scale energy storage needs will expand as both the electrification of demand and the share of renewable – and variable as well as distributed - energy sources in the total supply mix will grow. Sustainable long duration energy storage therefore has a key role to play in the transition towards a carbon-neutral economy. The storage system needs to be optimised for large capacity and long duration (weekly, seasonal), for minimal climate and environmental footprint over the full life cycle, for regulatory compliance and for financial viability (hence maximising round trip efficiency, minimising costs and identifying a business case for the targeted investment based on electricity storing / de-stocking price projections). The path to business case feasibility (without any grant component) of the storage solution at potential replication sites shall also be investigated. Sustainable storage solutions for renewable energy, involving an energy vector that can be used for other purposes than regenerating

³²⁹ https://ec.europa.eu/growth/industry/policy/european-clean-hydrogen-alliance_en

³³⁰ Regulation (EU) 2023/2405 of the European Parliament and of the Council of 18 October 2023 on ensuring a level playing field for sustainable air transport (ReFuelEU Aviation))

³³¹ Renewable Fuels of Non Biological Origin (RFNBOs) as defined under RED II.

electricity are also eligible. The topic is open to all technologies: chemical (including hydrogen and its derivatives), electrochemical, thermal and mechanical technologies (other than pumped hydro which is mature and available commercially).

- *Direct air capture (DAC) of CO₂*. European Commission scenarios reaching net-zero emission by 2050 show extensive use of carbon dioxide removal, including DAC. For example, the 1.5 tech scenario forecasts 266 Mt of CO₂ point capture and 200 Mt of CO₂ DAC. Most IPCC scenarios modelling 1.5°C paths also include a share of carbon dioxide removal (with and without DAC). DAC emerges as the most relevant source of carbon for renewable power-to-fuels/chemicals processes in such scenarios, but several challenges remain for a large-scale deployment of the technology. The future operational and financial viability (without any grant component or support scheme) of any DAC solution at potential replication sites shall also be investigated in function of the fate of the captured CO₂ (i.e. underground storage or use), renewable energy source used for the capture process, and vicinity to CO₂ transport and storage infrastructure (in case of underground storage). The International Energy Agency estimates the current DAC cost to be within a wide range of \$100-\$1000 per captured tonne of CO₂. Stakeholders claim that costs can be reduced to €50-€100 by 2030 with sufficient investments in R&I and deployment. As there is so far no specific EU initiative targeting DAC, this topic will fill an important gap.
- *Decarbonisation of Industry (steel and cement)*. Rapid innovation is needed to bring to market clean technologies for those parts of the energy system where emissions are harder to address, in particular carbon intensive industries (e.g. steel, cement, chemicals, aluminium, ceramics). Carbon capture, utilisation and storage (CCUS) will play an important role in mitigating those hard-to-abate process emissions. In March 2023 the European Commission introduced the Net Zero Industry Act, which identifies CCUS as a strategic net zero technology for which scaling up of manufacturing capacity is critical to reaching the EU's climate goals. Specifically, the Act proposes to set an EU-wide goal to achieve an annual CO₂ injection capacity of 50 Mt by 2030, with oil and gas producers asked to contribute, in addition to setting clear timelines for permitting CCUS projects. While CCUS technologies have been demonstrated in various settings and on certain scales, it is still a challenge to scale up these technologies for widespread use, understand their performance and requirements and develop the best models for their deployment. This is due to factors such as energy efficiency, cost of capture technologies, and the technical feasibility of transporting and storing large volumes of CO₂.

Functioning of the blending operation agreement

The blending operation will be open to all applicants meeting the set eligibility criteria set in this text and InvestEU Green Transition product. As such, it is not restricted to projects proposed under pre-existing or future partnerships with the European Commission. This blending operation is particularly relevant because it seeks to bring together the public and private sector to fund pre-commercial, industry-scale demonstration projects for critical

decarbonisation technologies, directly addressing the early deployment funding gap for the selected technologies and provide a structure to accelerate their commercialisation.

Projects' selection and financing procedure follows the InvestEU Regulation. In particular, the EIB or other implementing partners will check the financial viability of and perform full due diligence on each potential financing operation, while the Commission services assure their eligibility under the 'policy check' procedure. Special attention shall be paid to ensuring that the technologies developed, and Intellectual Property generated will benefit the EU interest, in particular by focussing the funds on high quality projects realised in the Union/eligible Associated Countries.

Expected impact

Unprecedented investment is needed to turn climate policy targets into reality. Attaining the 2030 target of at least 55% net emissions reduction is estimated to require EUR 350 billion of additional annual investment. Blended finance is a crucial tool to mobilise urgently needed private 'patient capital,' especially in domains considered too risky for the markets to function. This is the case of the technologies selected, which will benefit from investments in demonstration and scaling-up – leading to increased confidence among market participants, economies of scale in production and deployment, and significant cost reductions. The project pipeline of the InnovFin EDP and FutureMobility facility, as well as the high number of submitted proposals under the first Innovation Fund calls, indicate the richness of the EU ecosystem, which - boosted by the Fit-for-55 package - is expected to thrive in the coming years. The initiative will accelerate the reduction of the green premium in key areas, allow for wider, faster up-take and contribute to the creation of jobs in the EU in green industries manufacturing these solutions.

Legal entities:

European Investment Bank (EIB), 98-100, boulevard Konrad Adenauer, L-2950 Luxembourg, Luxembourg

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative timetable: as of 1st quarter 2025

Indicative budget: EUR 50.00 million from the 2025 budget

2. Voluntary contribution to the IEA's Clean Energy Transitions Programme (CETP)

The International Energy Agency's (IEA) Clean Energy Transitions Programme (CETP) turns targets into action, working to accelerate progress towards the goal of global net zero emissions through secure and people-centred clean energy transitions, with a focus on major emerging and developing economies. Drawing on the IEA's recognised expertise, this programme assists the target countries in overcoming the energy technology and policy challenges of moving towards the implementation of the Paris Climate Agreement. In 2022, at

the IEA's Ministerial Meeting, 15 IEA member countries and the European Commission expressed their support to the CETP, with the goal of accelerating the global transition to net zero emissions.

The CETP delivers collaborative action across three areas: 1. Accelerating national transitions (supporting emerging and developing economies to develop and implement timely strategies for achieving national clean energy transition goals); 2. Strengthening multilateral coordination (facilitating international collaboration to scale up innovation and deployment of clean energy sources and technologies); 3. Informing global energy dialogue (developing greater international understanding of barriers and environmentally sustainable solutions for the development and deployment of clean energy technologies).

This Contribution Agreement will be awarded to the legal entity identified below as it contributes directly and significantly to the external dimension of the EU Green Deal and the Paris Climate Agreement and can leverage IEA's unique clean energy expertise and recognition in major emerging economies.

Scope

The new three-year CETP project will build on the outcomes of the previous and current CETP activities funded by the European Union. It will deepen and extend work in at least three of the following areas: (1) reducing investment risk and improving the cost of capital and financing options in priority countries; (2) strengthening the global landscape of clean energy innovation; (3) expanding analysis and modelling to empower policymakers, regulators and system operators in priority countries with regard to clean energy policy design and implementation; (4) strengthening the quality and accessibility of official government data and statistics. Additional activities can be developed in response to changes in the global clean energy landscape.

The involvement of the European Commission, including its delegations in priority countries, should be sought throughout the implementation of the project as appropriate.

The project duration is expected to be 3 years.

Expected impact

The project will provide for more effective knowledge and information sharing, increase collaboration between experts across priority countries and make available relevant global expertise for priority countries, strengthening domestic policy action as well as international collaboration. As such, it will contribute to the implementation of the priority countries' nationally determined contributions (NDCs) under the Paris Climate Agreement, as well as to the objectives of the EU external energy policy, in particular what regards to accelerating the global green and just energy transitions.

Legal entities:

Organisation of Economic Cooperation and Development (International Energy Agency),
OECD, rue André-Pascal 2, PARIS CEDEX 16 75775

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative timetable: 4th quarter 2025

Indicative budget: EUR 3.00 million from the 2025 budget

3. Voluntary contribution to the IEA for research and analysis supportive of the implementation of REpowerEU

Expected impact:

Ensuring more sustainable, secure and competitive energy supply through solutions for smart energy systems based on renewable energy solutions.

Expected outcome:

The IEA will provide the Commission with research, data, advice, analysis, workshop and peer review support and written contributions on a range of energy topics supporting the implementation of the REpowerEU plan.

Scope:

IEA will provide research, data, advice, analysis, workshop and peer review support and written contributions on the diversification away from Russian fuels and the development of better energy efficiency measures and renewable energy resources, with a view to researching ways to support the competitiveness of European industry whilst decarbonising increasing electrification, and accelerating the deployment of renewables and innovative and clean energy technologies. All fuels need to be monitored to build decarbonisation and non-Russian supply scenarios.

This Contribution Agreement will be awarded to the legal entity identified below as it contributes directly and significantly to the EU Green Deal and Clean Industrial Deal and can leverage IEA's unique clean energy expertise and research in providing analysis and policy advice as the EU implements the REpowerEU programme.

Legal entities:

Organisation of Economic Cooperation and Development (International Energy Agency) -
OECD, rue André-Pascal 2, PARIS CEDEX 16 75775

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative timetable: 1st quarter 2025

Indicative budget: EUR 0.40 million from the 2025 budget

4. Strengthening international policy dialogue to address global challenges: the contribution of transport research & innovation

Expected impacts:

Achieving sustainable and competitive transport modes, as well as multimodal systems and services for climate-neutral, smart and safe mobility.

Expected outcomes:

In line with the “Administrative arrangement between the European Commission and the Organisation for Economic Co-operation and Development (OECD) for cooperation in the domain of science, technology and innovation policies”, the work, led by the International Transport Forum, an OECD body, in cooperation with the European Commission, aims at:

- Providing fora for EU member states, OECD member countries and all key transport stakeholders to identify transport R&I priorities of common interest, addressing technological, societal, and behavioural aspects to promote the development of sustainable and smart transport systems and infrastructure, as well as to support a socially fair transition towards such connected, integrated, accessible, environmental-friendly and safe transport and mobility for all;
- Supporting the development and uptake of innovative, sustainable and competitive transport and mobility solutions by developing concrete policy proposals relevant for the local, national or international level, with a particular focus on policies and technologies that improve energy efficiency and reductions in CO₂ and local pollution from transport; economic and technological analysis of different solutions to decarbonise hard to abate transport sectors, in particular aviation, maritime and transport from heavy duty vehicles.
- Creating a favourable environment for the implementation of sustainable and inclusive transport policies, by bridging knowledge gaps, addressing skills and labour shortages, and enhancing cooperation across different sectors relevant for the development of sustainable transport systems (e.g. energy, trade and finance).

Scope:

Through transport R&I diplomacy, addressing global challenges and the Sustainable Development Goals (SDGs), the work will engage, on a voluntary basis, a number of regions, countries, cities, corporations and academia and think tanks. The stakeholder fora, supported by research inputs, will further the (understanding of the) evidence-base for transport mitigation and/or adaptation measures relevant for countries' Nationally Determined Contributions (NDCs), and will help countries meet their targets as set out in these commitments.

The work will support the development of an international coalition for effective climate change policy implementation in the transport sector, building on earlier efforts and introducing new approaches to policy making, as well as the development of a sustainable, smart and inclusive transport and mobility solutions for all, especially for hard to abate transport sectors like aviation, maritime and long haul road transport (heavy duty vehicles) where we still need to make focus on the most promising technologies.

Legal entities:

Organisation for Economic Co-operation and Development (OECD), , 2, rue André Pascal
75016 – Paris – FRANCE

Form of Funding: Indirectly managed actions

Type of Action: Indirectly managed action

Indicative timetable: Q3 of 2025

Indicative budget: EUR 1.00 million from the 2025 budget

Subscriptions

1. Contribution to Technology Collaboration Programmes (TCPs) of the International Energy Agency (IEA)

The Commission represents the European Union in the Technology Collaboration Programmes (TCPs) concluded under the framework of the International Energy Agency where it participates in activities in certain areas of energy research. The annual financial contributions will be paid to the entities responsible for managing the TCPs in which the Commission represents the European Union:

- Geothermal Energy Research and Technology;
- Bioenergy;
- Ocean Energy Systems (OES TCP);
- International Smart Grids Action Network (ISGAN TCP)
- Greenhouse Gas Research & Development;
- Concentrating Solar Power, Thermal and Chemical Energy Systems (SolarPaces TCP)
- Photovoltaic Power Systems (PVPS TCP);
- Solar Heating and Cooling (SHC TCP);
- Hydrogen;
- Hydropower

- Wind Energy Systems;
- Energy Efficient End-Use Equipment (4E TCP);
- Equality in Energy Transitions;
- Hybrid and Electric Vehicle Technology Collaboration Programme (HEV TCP).

Type of Action: Subscription action

Indicative timetable: 1st quarter 2025

Indicative budget: EUR 0.50 million from the 2025 budget

2. Contribution to the International Renewable Energy Agency (IRENA)

The European Union is a member of IRENA. According to the organisation's Statute and Financial Regulation this implies the obligation to pay an annual contribution to its budget covering the participation of the EU in IRENA's activities. In addition to its annual contribution, the EU supports Ukraine's membership in IRENA by a voluntary contribution, covering Ukraine's annual contributions on hold since the Russian invasion. IRENA's main objective is to disseminate best practices in the field of renewables as the principal platform for international cooperation in the field, a centre of excellence on renewable energy and a repository of policy, technology, resource, and financial knowledge. This includes:

- The promotion of the widespread and increased adoption and the sustainable use of all forms of renewable energy globally, including in the EU, in particular to bring down costs and also to increase market experience, in order to contribute to economic growth and social cohesion as well as access to and security of energy supply;
- Support activities for countries in their transition to a renewable energy future;
- Reducing of barriers for renewable energy, stimulating best practice and raising awareness.

Type of Action: Subscription action

Indicative timetable: 1st quarter 2025

Indicative budget: EUR 0.60 million from the 2025 budget

3. Voluntary contribution 2025 to the Secretariat of the Clean Energy Ministerial (CEM) for Phase IV (July 2025 – June 2028), as well as to participation in its workstreams

The Clean Energy Ministerial (CEM) is a high-level global forum to promote policies and programmes that advance clean energy technology, to share lessons learned and best practices, and to encourage the transition to a global clean energy economy. Initiatives are based on areas of common interest among participating governments and other stakeholders.

It serves as a platform where its members help shape the global clean energy agenda and advance the deployment of specific clean energy technologies and solutions; a bottom-up, government-led community for exchanging knowledge and insights; an implementation vehicle that helps its members to achieve specific domestic clean energy objectives.

The Commission has been active in the CEM since its inception in 2010, with the European Union officially becoming member on 6 June 2016, following the formal endorsement of the CEM Framework by EU Energy Ministers.

The CEM Framework established a multilateral CEM Secretariat to facilitate the long-term engagement of all CEM Members in the work. The secretariat is hosted at the International Energy Agency (IEA) under an "Administrative Arrangement" between the IEA and the CEM Members. In order to provide "adequate and predictable financial resources" for the CEM Secretariat, CEM Members provide voluntary contributions on an annual or multi-annual basis.

The Commission supports the extension of the CEM mandate to Phase IV (from July 2025 to June 2028) and intends to provide voluntary contribution for its Secretariat as well as for the specific workstreams it co-leads: the Super-efficient Equipment and Appliance Deployment (SEAD) initiative (50.000 EUR/year), the Hydrogen initiative (20.000 EUR/year) and the Supercharging Battery Storage (SBS) initiative (50.000 EUR/year).

Type of Action: Subscription action

Indicative timetable: as of 1st quarter 2025

Indicative budget: EUR 0.72 million from the 2025 budget

4. Contribution to the International Energy Agency (IEA) – Energy Efficiency Hub (EE HUB)

The purpose of the International Partnership for Energy Efficiency Cooperation (IPEEC) is to strengthen international cooperation on energy efficiency. The action carried out under the auspices of the partnership should result in more effective energy policy and programme output, in best practices being more widely known, disseminated, and applied and in economies of scale. The aim of the partnership is to offer a topic-driven, structured dialogue and an operational network for enhanced cooperation and exchanges on energy efficiency between countries and international organisations by:

- exchanging information and experience on development of regulatory measures, policies and programmes;
- developing benchmarks and sharing information on goods and services, along with measurement methods regarding energy performance and energy savings;
- strengthening information, education and training for energy consumers;

- building stakeholder capacity by improving contacts between national, regional, and local authorities and other relevant partners and stakeholders, exchanging views, and sharing knowledge and experience.

Type of Action: Subscription action

Indicative timetable: 1st quarter 2025

Indicative budget: EUR 0.08 million from the 2025 budget

5. Voluntary contribution to the Mission Innovation Secretariat, hosted by the International Energy Agency

Mission Innovation is a global platform bringing together 23 countries and the European Commission (on behalf of the EU), launched at COP21 in 2015, with the aim to accelerate efforts in clean energy globally. Its goal is to both stimulate political action and attract investments on research, demonstration, and development to make clean energy technologies more attractive, affordable, and accessible to all.

Mission Innovation (MI) is entirely voluntary, a free commitment of countries, international organizations and industry, that are all welcome to collaborate and provide support to its workstreams according to their own strategic priorities. MI members represent over 95% of global government investments in clean energy research and innovation.

In 2021, MI has reached the end of its first phase of five years, in which its members have successfully stimulated global efforts, increasing annual investments by more than USD 5.8 billion and developing over 70 new international collaborations (worth USD 1.4 billion) in clean energy through joint calls, demonstration projects, and student and researcher exchanges. If 1000 innovations delivered by MI members were fully deployed, they could avoid emission of over 12 Gigatons of CO₂ per year until 2030.

MI 2.0, launched in June 2021, concentrates on seven impact-oriented, public-private missions, with ambitious goals that accelerate the pathway towards the Paris Agreement goals and net zero. Namely they focus on: clean hydrogen, urban transitions, zero-emission shipping, net-zero industries, green power, integrated biorefineries and carbon dioxide removal.

The Commission currently plays a key leadership role in Mission Innovation, by (co-) leading two missions, through its contribution to the governance of Mission Innovation and by delivering the Chair of the MI Steering Committee.

As of September 2025, the Secretariat of Mission Innovation will be hosted by the International Energy Agency. While continuing to be a member driven initiative, the allocation of the Secretariat to the IEA will allow the multilateral platform to receive financial contributions from its Member States. At the MI Steering Committee meeting on 30 October 2024, Members have expressed their support to the new Hosting arrangement and provided indication of financial commitment to the Mission Innovation Secretariat.

Type of Action: Subscription action

Indicative timetable: 2nd quarter 2025

Indicative budget: EUR 0.30 million from the 2025 budget

Scientific and technical services by the Joint Research Centre

1. Support for the transition towards CCAM

This action aims at providing scientific and technical support from the JRC to EU policies related to the transition towards Connected, Cooperative and Automated Mobility (CCAM) in road transportation. Activities will be coordinated with the European players in this domain such as the CCAM Partnerships and other relevant stakeholders.

Type of Action: Provision of technical/scientific services by the Joint Research Centre

Indicative timetable: 3rd quarter 2025

Indicative budget: EUR 0.50 million from the 2025 budget

2. Administrative Agreement with the JRC on EU & International Greenhouse Gas Emissions Modelling

This action aims at conducting research and providing analytical support to the implementation of the climate policies within the European Green Deal and on future EU policy initiatives for the post-2030 policy framework in view of reaching the EU's climate neutrality objective by 2050.

The action will build on a set of modelling tools developed and maintained by JRC (including but not necessarily limited to POLES-JRC, POTEnCIA and JRC-GEM-E3), which ensures a full coverage of global GHG emissions' monitoring, allows to identify the role of carbon removals, and helps in understanding and analysing the socio-economic aspects of the clean transition. The action will cover the further development and deployment of such tools, where relevant, to address new policy research questions.

Furthermore, the action aims to support research and related outreach with counterparts in third countries (particularly in major emitting economies outside the EU and least developed countries) with a view to promote the use of economic analysis tools in policy preparation, build capacity and strengthen the interface between economic modelling research – relevant for climate policy – and policy making in these countries.

Type of Action: Provision of technical/scientific services by the Joint Research Centre

Indicative timetable: 3rd Quarter 2025

Indicative budget: EUR 2.25 million from the 2025 budget

3. Technical and scientific assistance for the Energy Efficiency Directive (EED) and the Energy Performance of Buildings Directive (EPBD)

The JRC should provide technical and scientific assistance to enable the European Commission to meet its obligations on the EU energy efficiency legislative framework, most notably the Governance Regulation, the Energy Efficiency Directive (EED), the Energy Performance of Buildings Directive (EPBD), the Ecodesign Directive and the Energy Labelling Regulation.

The main components of the work to be carried out are divided into four work packages. The work packages and the necessary tasks and deliverables are:

- WP 1 - Support to the implementation of the Governance Regulation with regards to Energy Efficiency related dimension including buildings;
- WP 2 - Support to the implementation of EU Energy Efficiency legislation currently in force including energy performance of buildings and products;
- WP 3 - Collecting, processing, and analysing relevant data to properly assess complex technical, environmental, economic, and social aspects of energy efficiency including energy performance of buildings and products;
- WP 4 - Technical and scientific support to the review of EU Energy Efficiency legislation including energy performance of buildings and products, with a focus on financing.

Type of Action: Provision of technical/scientific services by the Joint Research Centre

Indicative timetable: 2nd quarter of 2025

Indicative budget: EUR 1.00 million from the 2025 budget

4. Advancing of the TEN-T alternative fuels infrastructure analyses to support research and policy

Detailed, timely and reliable information on the progression from research to deployment is essential for further research, evidence-based policy and decision making. In particular, with the adoption of the 'Fit for 55' package, including the Alternative Fuels Infrastructure Regulation (AFIR), the revised TEN-T regulation and other relevant initiatives, information on alternative fuels infrastructure deployment and identified gaps in the transport network is crucial to monitor and to support the uptake of innovative solutions for sustainable transport. Enhanced mapping and data visualisation of the alternative fuels infrastructure network can also facilitate investments in research and innovation by private stakeholders. Valuable information is becoming increasingly available, for instance through the European Alternative Fuels Observatory (EAFO) and the analyses performed in TENtec. However, additional data and analyses are needed to develop and enhance comprehensive algorithms that consider routing, and perform an in-depth, comprehensive assessment of alternative fuels network

coverage on the TEN-T network. The development and integration of new thematic data layers into TENtec will also foster new analyses and research into the opportunities and effects of EU policies on alternative fuels.

Type of Action: Provision of technical/scientific services by the Joint Research Centre

Indicative timetable: 2nd quarter of 2025

Indicative budget: EUR 0.30 million from the 2025 budget

5. Contribution to JRC activities on the development and implementation of innovative tools for detecting structural deficiencies of bridges and tunnels in the TEN-T network

Bridges and tunnels in the TEN-T network present structural deficiencies or are reaching the end of their design life. Ensuring that our transport system is truly resilient against future crises and climate events is a key objective of EU's transport policy. The project will categorise the TEN-T tunnels and bridges according to their state (e.g. very good, good, mediocre, bad, very bad) and develop tools to prioritise expensive interventions, in a general situation of tight budgets and supporting administrations in planning and decision-making. The project will valorise research output on infrastructure management and maintenance (making sense of data, methods and deployment in practice), as well as identify and streamline future research, align with sector needs, avoid duplication and target application.

Type of Action: Provision of technical/scientific services by the Joint Research Centre

Indicative timetable: 2nd quarter of 2025

Indicative budget: EUR 0.50 million from the 2025 budget

Expert contract actions

1. External expertise to advise on EU research and innovation policy

This action will support the provision of independent expertise in support of the design, implementation, and valorisation of EU research policy. Individual experts will work in the following domains:

- Analysis, design, assessment and implementation of strategic climate, energy and mobility research and technology options and actions;
- Future climate, energy, and mobility -related research actions and programmes, contribution to their impact assessment;
- International cooperation in the field of climate, energy and mobility research and innovation;
- Analysis and valorisation of EU climate, energy and mobility research results in view of contributing to the elaboration of policy reports (such as projects for policy, project cluster reports, etc.);

- Preparation of actions for Horizon Europe missions.

The tasks of individual experts would include:

- Analysis of the contribution of the funded research to the EU policy objectives spanning across all climate, energy and mobility modes and systems;
- Analysis of the state-of-the-art at international level; investigation of deployment options for the developed knowledge;
- Participation in international symposia, including the drafting of White Papers and reports on the symposia's conclusions;
- Advise the Commission on promising technologies covered by European and nationally funded projects and on ways to stimulate synergies;
- Assist the Commission in the evaluation of calls for expression of interest.

In addition to individual experts, this action could provide for Commission expert groups.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: As of 1st quarter 2025

Indicative budget: EUR 0.50 million from the 2025 budget

Service level agreements

1. Contribution to DIGIT for hosting website fees for BRIDGE and ETIP SNET web presence

The ETIP Smart Networks for Energy Transition (SNET) is one of the ETIPs set up by European Commission as part of the SET-Plan and is guiding Research, Development & Innovation (RD&I) to support Europe's energy transition.

BRIDGE is a cooperation group involving more than 150 EU-funded projects in the field of smart grid, energy storage, islands, and digitalisation.

The two initiatives are coordinated by the European Commission and their websites are hosted on the EUROPA server as the information generated belongs to the Commission. These websites must follow standards on their design to promote a common visual experience to all Commission related websites and initiatives. Costs engaged to host related services (e.g., secure environment, tools to develop and maintain websites) reach the amount of €30.000 per year per website.

Type of Action: Service Level Agreement

Indicative timetable: 1st quarter 2025 and 1st quarter 2026

Indicative budget: EUR 0.12 million from the 2025 budget

Horizon Europe

Work Programme 2025

9. Food, Bioeconomy, Natural Resources, Agriculture and Environment

IMPORTANT NOTICE:

This draft has not been adopted or endorsed by the European Commission. Any views expressed are the views of the Commission services and may not in any circumstances be regarded as stating an official position of the Commission.

This draft is made public before the adoption of the work programme to provide potential participants with the currently expected main lines of this work programme. Only the adopted work programme will have legal value.

The adoption of the work programme will be announced on the Horizon Europe website and on the Funding and Tenders Portal.

Information and topic descriptions indicated in this draft may not appear in the final work programme; and likewise, new elements may be introduced at a later stage. Any information disclosed by any other party shall not be construed as having been endorsed by or affiliated to the Commission.

The Commission expressly disclaims liability for any future changes of the content of this document.

Destinations	36
Destination - Biodiversity and ecosystem services	36
Consolidating biodiversity knowledge for nature and society	38
HORIZON-CL6-2025-01-BIODIV-01: Additional activities for the European Biodiversity Partnership: Biodiversa+	38
HORIZON-CL6-2025-01-BIODIV-02: Strengthening the capacity of citizen science in biodiversity observation	41
HORIZON-CL6-2025-01-BIODIV-03: Strengthening taxonomic approaches for biodiversity	44
HORIZON-CL6-2025-01-BIODIV-04: Large-scale in situ biodiversity observations for better understanding of biodiversity state, drivers of its decline and impacts of policies....	48
Restoring ecosystems for resilient society and economy	51
HORIZON-CL6-2025-01-BIODIV-05: Assessing and modelling ecosystems' dynamic processes to guide restoration activities and to improve models used for climate.....	51
HORIZON-CL6-2025-01-BIODIV-06: Assessing and modelling socio-economic impacts of nature restoration	54
HORIZON-CL6-2025-01-BIODIV-07: Integrated and coordinated approaches for coral reefs and associated ecosystems (mangroves and seagrass beds) conservation, restoration, and climate mitigation and adaptation	57
Transformative change towards a nature positive economy	61
HORIZON-CL6-2025-01-BIODIV-08: Strengthening pathways to alternative socio-economic models for continuous improvement of biodiversity	61

HORIZON-CL6-2025-01-BIODIV-09: Understanding the perceptions of and improving communication on the biodiversity crisis and nature restoration benefits to sustain citizen engagement and democratic governance.....	64
Biodiversity friendly practices in agriculture	67
HORIZON-CL6-2025-01-BIODIV-10: Supporting the implementation of nature restoration measures for sustainable farming systems	67
Restoring ecosystems for resilient society and economy	70
HORIZON-CL6-2025-01-BIODIV-01-two-stage: Living labs co-creating innovative solutions for forests and freshwater ecosystems restoration	70
Biodiversity friendly practices in agriculture	73
HORIZON-CL6-2025-01-BIODIV-02-two-stage: Breeding for resilience: enhancing multi-stress tolerance in crops.....	73

Destination - Fair, healthy and environment-friendly food systems from primary production to consumption..... 77

Enabling sustainable farming systems	81
HORIZON-CL6-2025-02-FARM2FORK-01: Additional activities for the European partnership on accelerating farming systems transition - agroecology living labs and research infrastructures	81
HORIZON-CL6-2025-02-FARM2FORK-02: Additional activities for the European partnership on animal health and welfare.....	85
HORIZON-CL6-2025-02-FARM2FORK-03: Overcoming the barriers for scaling up circular water management in agriculture	88
HORIZON-CL6-2025-02-FARM2FORK-04: Enhancing plant protein production to bolster the resilience of agricultural systems and EU self-sufficiency in plant protein used as feed	91
HORIZON-CL6-2025-02-FARM2FORK-05: Developing innovative phytosanitary measures for plant health - focus on systems approach for pest risk management.....	95
HORIZON-CL6-2025-02-FARM2FORK-06: Improving grassland management in European livestock farming systems.....	97
HORIZON-CL6-2025-02-FARM2FORK-07: Fostering animal breeding and genetics for climate change adaptation and mitigation, improved robustness and resilience.....	101
HORIZON-CL6-2025-02-FARM2FORK-08: Exploring the potential of controlled environment agriculture (CEA).....	104
HORIZON-CL6-2025-02-FARM2FORK-09: Strengthening the EU crop breeding research and innovation ecosystem for competitive, resilient, and sustainable agriculture	106
Enabling sustainable fisheries and aquaculture.....	109
HORIZON-CL6-2025-02-FARM2FORK-10: Diversifying aquaculture production with emphasis on low-trophic species	109
HORIZON-CL6-2025-02-FARM2FORK-11: Towards modern, integrated, and effective fisheries monitoring, control and surveillance (MCS) systems	111
Transforming food systems for health, sustainability and inclusion.....	114
HORIZON-CL6-2025-02-FARM2FORK-12: Nutrition and Mental Health.....	114

HORIZON-CL6-2025-02-FARM2FORK-13: Raising citizen awareness on alternative proteins derived from biotechnology	118
HORIZON-CL6-2025-02-FARM2FORK-14: Nutrients produced by microorganisms utilising primarily CO ₂ from the air, with the support of biotechnology	120
HORIZON-CL6-2025-02-FARM2FORK-15: Additional activities of the European partnership on sustainable food systems for people, planet and climate.....	123
Targeted international cooperation.....	126
HORIZON-CL6-2025-02-FARM2FORK-16: Developing a joint AU-EU Agricultural Knowledge and Innovation System (AKIS) supporting the Food and Nutrition Security and Sustainable Agriculture (FNSSA) partnership	126
HORIZON-CL6-2025-02-FARM2FORK-17: Nutrition in emergency situations - Ready-to-use Supplementary Food (RUSF) and Ready-to-use Therapeutic Food (RUTF)	129
Enabling sustainable farming systems	131
HORIZON-CL6-2025-02-FARM2FORK-01-two-stage: Emerging and future risks to plant health	132
HORIZON-CL6-2025-02-FARM2FORK-02-two-stage: Open topic: Innovating for on-farm post-harvest operations, storage and transformation of crops into food and non-food products	135
Transforming food systems for health, sustainability and inclusion.....	137
HORIZON-CL6-2025-02-FARM2FORK-03-two-stage: Making food systems more resilient to food safety risks through the deployment of technological solutions.....	137
HORIZON-CL6-2025-02-FARM2FORK-04-two-stage: Research and innovation for food waste prevention and reduction at household level through measurement, monitoring and new technologies	140

Budget	305
---------------------	------------

DRAFT

Introduction

Horizon Europe Cluster 6 will serve the new Commission priorities for 2024-2029 with a focus on “Sustaining our quality of life: food security, water and nature” and “A new plan for Europe’s sustainable prosperity and competitiveness”. The Cluster will further contribute to the priorities “Supporting people, strengthening our societies and our social model” and “Protecting our democracy, upholding our values”.

The Horizon Europe mandate for Cluster 6 is to provide research and innovation opportunities to strengthen and balance environmental, social and economic goals and to set human economic activities on a path towards sustainability. Cluster 6 supports transformative change of the EU economy and society to reduce environmental degradation, halt and reverse the decline of biodiversity, better manage natural resources, and meet the EU’s climate objectives. This needs to happen while ensuring food and water security and fostering the sustainable prosperity and competitiveness of the EU, taking into account the evolving geopolitical context. The Work Programme builds on the new research and innovation (R&I) priorities outlined in the Horizon Europe Strategic Plan 2025-2027¹.

Activities in this Work Programme will contribute to all Key Strategic Orientations (KSOs) defined by the Strategic Plan, namely: 1) the green transition; 2) the digital transition; and 3) a more resilient, competitive, inclusive and democratic Europe.

To contribute to these programme-level KSOs, Cluster 6 will deliver on six specific expected impacts defined in the Strategic Plan. In this Work Programme, each expected impact has been developed into one or two specific destination(s) (see table below). Activities in a given destination may be of a cross-cutting nature and may often contribute to several expected impacts. The specific contribution to the overall expected impacts is explained in the narrative of each destination.

Expected impact (Strategic Plan 2025-2027)	Destination (Cluster 6 work programme)
27. Fostering mitigation of and adaptation to climate change in areas and sectors covered by Cluster 6.	Destination 5: Land, oceans and water for climate action
28. Putting biodiversity on a path to recovery, and protecting and restoring ecosystems and their services.	Destination 1: Biodiversity and ecosystem services
29. Achieving healthy soils and forests, as well as clean air, fresh water and marine water, whilst ensuring water resilience and the transition to a clean, competitive and circular economy and sustainable bioeconomy.	Destination 3: Circular economy and bioeconomy sectors Destination 4: Clean environment and zero pollution

¹ [Horizon Europe strategic plan 2025-2027 - Publications Office of the EU \(europa.eu\)](https://european-council.europa.eu/media/en/press-articles/2024/04/10/1024224.pdf)

30. Ensuring healthy food and nutrition security by making agriculture, fisheries, aquaculture and food systems sustainable, resilient, inclusive and within planetary boundaries.	Destination 2: Fair, healthy and environmentally friendly food systems from primary production to consumption
31. Sustainably developing rural, urban and coastal areas.	Destination 6: Resilient, inclusive, healthy and green rural, coastal and urban communities
32. Developing innovative governance models and tools enabling sustainability and resilience.	Destination 7: Innovative governance, environmental observations and digital solutions in support of the Green Deal

Cluster 6 will support the new innovation agenda for Europe and help accelerate the green transition by implementing the European Green Deal². Achieving climate neutrality by 2050 in line with the European Climate Law³ will be done by preserving Earth's natural carbon sinks and stocks in ecosystems, including soils and plants, forests, farmed lands and wetlands and the marine environment. This requires substantially reducing GHGs from the forestry and agricultural sectors and transforming the food system. In addition, activities will foster innovation on circular economy in line with the upcoming Circular Economy Act announced in the Clean Industrial Deal and exploit the potential of biological resources for renewable products. This will reduce the EU's dependence on resources and emissions/waste from industrial processes, transforming waste into resources and using more sustainable bio-based systems. At the same time, it will avoid trade-offs that could damage biodiversity and promote biodiversity protection.

In addition to the EU's climate policy, R&I will support the objectives and implementation of the EU Competitiveness Compass and of the European Green Deal for a competitive, resilient and sustainable agri-food system, the EU vision for agriculture and food, the EU biodiversity strategy for 2030⁴ and the Kunming-Montréal Global Biodiversity Framework⁵, the EU Clean Industrial Deal and the announced Circular Economy Act, the EU zero pollution action plan⁶, the updated EU bioeconomy strategy, the EU forest strategy for 2030⁷, the EU soil strategy for 2030⁸, the sustainable blue economy strategy⁹, the long-term vision for the EU's rural areas¹⁰, the chemicals strategy for sustainability¹¹ and the EU plastics strategy¹².

¹⁰ [The long-term vision for the EU's rural areas: key achievements and ways forward - European Union \(europa.eu\)](https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52021DC0240)

¹¹ [Chemicals strategy - European Commission.](https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52021DC0240)

R&I in this cluster will help meet the long-term priority objectives to 2030 set out in the 8th Environment Action Programme¹³ and contribute to ensuring that policy development is firmly anchored to the latest science and knowledge. This cluster will also contribute to achieving the target of dedicating 10% of the Multiannual Financial Framework 2021-2027 annual spending to biodiversity as of 2025.

Protecting and restoring the integrity of ecosystems and their capacity to deliver essential services is fundamental to achieving European Green Deal objectives. This will put Europe's biodiversity on a path to recovery by 2030, as required by the EU biodiversity strategy for 2030. Avoiding biodiversity loss (from genes to species and ecosystems) could also help avoid threats to human health in the future. In 2025, this cluster will improve knowledge on the state of biodiversity, the role of ecosystems and their services and will notably develop innovative solutions to support the implementation of the EU Nature Restoration Regulation¹⁴. This cluster deals with agriculture, forestry, aquaculture and fisheries, food and bio-based systems, which have profound environmental impacts and are also affected by global environmental changes, while providing opportunities for economic and social sustainability in the context of Europe's strategic autonomy.

Cluster 6 will accelerate the transition to competitive, resilient, sustainable, healthy and inclusive food systems to achieve the objectives of the European Green Deal, the Vision for agriculture and food and the United Nations Sustainable Development Goals (SDGs). It will empower farmers, fishers and aquaculture producers to efficiently transform their production methods, making the best use of nature-based solutions, technological, digital and social innovations and transferable knowledge while supporting fair incomes and the competitiveness of the entire EU food value chain. This will accelerate climate mitigation and result in positive environmental outcomes, increased climate resilience and reduced dependency on pesticides and antimicrobials, fostering multi-disciplinary approaches including the One Health approach¹⁵. Furthermore, it will also provide consumers with affordable, safe, nutritious, healthy and sustainable food. R&I will also stimulate sustainable practices at all stages of the food system from production to processing, services, the use and valorisation of waste and by-products and surplus management. This will ensure safe and sustainable food and enable a shift to sustainable and healthy diets. R&I will also support the design, implementation and monitoring of the common agricultural policy (CAP), the common fisheries policy (CFP) and the EU General Food Law¹⁶.

Improved knowledge and innovations will be key to achieving the transition towards a sustainable and circular economy and the zero-pollution ambition of the European Green Deal to halt and prevent pollution, by addressing issues concerning fresh and marine waters, soils, nutrients as well as the environmental performance of processes. R&I will support EU environmental legislation and policies that target a higher level of protection for biodiversity,

¹⁴ [Regulation - EU - 2024/1991 - EN - EUR-Lex.](#)

¹⁵ [One health](#)

¹⁶ [General Food Law - European Commission](#)

soil, water, air and marine resources, including the Nature Restoration Regulation, the Birds Directive¹⁷ and the Habitats Directive¹⁸, the EU pollinators initiative¹⁹, the upcoming European Water Resilience Strategy, the Water Framework Directive²⁰, the Marine Strategy Framework Directive²¹, the revised Ambient Air Quality Directives²², the EU waste legislation²³, the Ecodesign for Sustainable Products Regulation²⁴ the upcoming European Ocean Pact and the EU Arctic policy as well as the objectives of the proposal for a directive on soil monitoring and resilience²⁵ and of the proposal for a regulation on a Forest Monitoring Framework²⁶.

The cluster will help develop resilient and vibrant rural, coastal and urban communities in line with the Commission priority ‘Sustaining our quality of life: food security, water and nature’. To support the long-term vision for rural areas by 2040, it will help achieve thriving rural innovation ecosystems by supporting and/or establishing synergetic initiatives such as living labs, smart and start-up villages, European Innovation Partnership for Agriculture Productivity and Sustainability (EIP-AGRI) operational groups and a Thematic Smart Specialisation Platform. It will develop innovative governance models to implement the European Green Deal, ensuring a fair and just transition and that no one is left behind. The cluster will foster the use, uptake and deployment of environmental observations and take advantage of data and digital solutions in line with the EU priority ‘A new plan for Europe's sustainable prosperity and competitiveness’.

To be more effective in achieving a positive impact, proposals should synergise with relevant Horizon Europe initiatives, including European Partnerships, Missions and the Knowledge and Innovation Communities (KICs) of the European Institute of Innovation and Technology (EIT). Through Cluster 6, special attention will be given to ensuring cooperation between universities, scientific communities and industry, including SMEs, citizens and civil society and their representatives. This allows bridging gaps and reducing inequalities between genders, territories, generations and regional cultures, supporting women innovators and caring for the needs of young people in shaping Europe's future.

In this context, applicants should consider and actively seek synergies with, and, where appropriate, possibilities for further funding from other R&I-relevant EU, national or regional programmes, such as the European Regional Development Fund (ERDF)²⁷, the European

²⁵ [EUR-Lex - 52023PC0416 - EN - EUR-Lex.](#)

²⁶ [Proposal for a Regulation on a Forest Monitoring Framework - European Commission.](#)

²⁷ The ERDF (including Interreg) focuses, among others, on the development and strengthening of regional and local R&I ecosystems and smart economic transformation, in line with regional/national smart specialisation strategies. It can support investment in research infrastructure, activities for applied research and innovation, including industrial research, experimental development and feasibility

Social Fund Plus (ESF+), the Just Transition Fund (JTF), the European Maritime Fisheries and Aquaculture Fund (EMFAF), the European Agricultural Fund for Rural Development (EAFRD), the LIFE Programme, InvestEU and private funds or financial instruments.

Synergies are also sought with the work of the European Space Agency (ESA) to ensure complementarities and mutual benefits with R&I actions conducted by ESA, contributing to the European Commission-ESA Earth System Science initiative to support significant breakthrough in the areas covered by the Cluster.

Research on a societal and political framework is necessary to achieve the transformation expected and R&I investments under Cluster 6 will therefore emphasise the essential role played by the social sciences and humanities (SSH) for accelerating the green transition as well as gender aspects, citizens and societal engagement and inter- and trans-disciplinary and systems approaches. R&I will build on existing research infrastructures.

Cluster 6 activities will sustain the EU's ambition in international fora in areas such as biodiversity, climate change, the management of natural resources, seas and ocean, zero pollution, sustainable agriculture, food safety and food and nutrition security. In line with the EU's global approach to research and innovation, and in support of the global gateway strategy, projects involving international partners will lead to increased scientific knowledge and transfer of technology, to address global challenges while fostering sustainable growth and job creation in the sectors covered by the Cluster. Special attention is given to the EU-African Union Partnership on Food and Nutrition Security and Sustainable Agriculture (FNSSA). Cooperation should take place in a value-based way, creating linkages, not dependencies. Legal entities established in China are not eligible to participate in Innovation Actions in any capacity. Please refer to the Annex B of the General Annexes of this Work Programme for further details.

The cluster is strongly committed to the UN SDGs which have an important impact on food, bioeconomy, natural resources, agriculture and the environment, notably SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 6 (Clean water and sanitation), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 11 (Sustainable cities and communities), SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water) and SDG 15 (Life on land).

Applicants are encouraged to consider, where relevant, their possible contribution to Joint Research Centre (JRC) relevant platforms for capitalizing on the knowledge developed in their projects, and becoming more policy relevant, contributing in terms of data, indicators and knowledge²⁸. For instance, they could make reference to: the [European Platform on Life Cycle Assessment](#) (LCA) and to the [Environmental footprint method](#) when applying LCA; the [Raw Materials Information System](#); the [European Soil Observatory](#); the [Integrated Natural](#)

studies, building research and innovation capacities, uptake of advanced technologies and roll-out of innovative solutions from EU R&I Framework Programmes.

²⁸ Contributions with relevant data, indicators or knowledge to these JRC managed platform do not require having the JRC as a partner (associated partner/beneficiary requesting zero funding) in a project, unless it is explicitly mentioned in a specific topic.

[Capital Accounting platform](#); the [EC Knowledge Centre for Biodiversity](#); the [EC Knowledge Centre for Global Food and Nutrition Security](#), the [EC Knowledge Centre for Bioeconomy](#), the [Africa Knowledge Platform](#); the [EC Knowledge Centre on Earth Observation](#); [Innovation in the Built Environment \(iBUILT+\)](#) and/or the [EU Forests Observatory](#).

Applicants are also encouraged to consider, where relevant, the services offered by the EU-funded European Research Infrastructures, notably those prioritised by the European Strategy Forum on Research Infrastructures (ESFRI)²⁹, European Research Infrastructure Consortia (ERICs)³⁰ and the European Open Science Cloud (EOSC)³¹.

Specific requirements for multi-actor projects:

Proposals submitted for topics including the eligibility condition to follow the multi-actor approach must meet all of the requirements below. The multi-actor approach is a form of interactive, transdisciplinary and responsible R&I that aims to make the R&I process more co-creative and inclusive, and thereby its outcomes are more co-owned, reliable, demand-driven and relevant to society. It also aims to extensively share these outcomes and to widely use them in practice. This entails more than just widely disseminating the projects' results or listening to the views of a board of stakeholders. A multi-actor project ensures the genuine and sufficient involvement of a targeted array of actors in co-creation, which serves the objectives of the project proposal.

These actors include: i) researchers, ii) farmers / farmers' groups and associations, iii) foresters / foresters' groups and associations, iv) aquaculture producers, v) fishers / fishers' groups and associations, vi) advisors, vii) food and bioeconomy businesses, viii) other businesses, ix) consumer associations, x) local communities, xi) citizens, xii) civil society organisations including NGOs and social economy actors, and xiii) government representatives. The selection of key actors that are relevant to participate depends on the objective(s) of the proposal that respond(s) to the needs of the (end-)users of the project results. The key actors are essentially the (end-)users³² of the project results who are backed up by any other useful intermediaries and actors who can contribute with further expertise and innovative ideas relevant to the topic's objectives, and support communication and dissemination. The genuine and sufficient involvement of such actors should take place over the whole course of the project: from participation in the development of the project idea, planning and experiments to implementation, communication and dissemination of results and to a possible demonstration phase.

Building blocks for the project proposal are expected to come from science as well as from practice: it is a 'co-creation' process. (End-)users are involved in the project activities not as a study-object, but to use their practical and local knowledge and/or entrepreneurial skills to develop solutions and to create 'co-ownership' of results for (end-) users. This

²⁹ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

³⁰ The ERIC Landscape <https://www.eric-forum.eu/the-eric-landscape/>.

³¹ [Home | European Open Science Cloud - EU Node](#).

³² An "(end-) user" of project result is a person who is him/herself using the project results in practice.

should speed and scale up the acceptability and uptake of new ideas, approaches and solutions developed in the project in practice.

Therefore, a multi-actor project proposal must meet the following requirements:

- it must demonstrate how the description of the project concept, including the proposed objectives, activities and planning, are targeting the needs/challenges/opportunities for the (end-)users of the project results;
- it must demonstrate how the composition of the consortium fits into the project concept and reflects a balanced choice of relevant actors who have complementary types of knowledge (scientific, practical, etc.) and skills to achieve the project objective, and to ensure that project results are ready for practice and broadly implemented;
- it must demonstrate how the project intends to use existing practices and tacit knowledge. This should be illustrated in the proposal methodology with a sufficient number of high-quality knowledge exchange activities outlining the precise and active roles of the different, relevant non-scientific actors in the co-creation and sharing of R&I contents. The cross-fertilisation of skills, experiences, competencies and ideas between actors should generate innovative findings and solutions that are more likely to be widely applied in practice;
- it must demonstrate how the project will facilitate the multi-actor engagement process by making use of the most appropriate methods and expertise and what mechanisms the project will set up to maintain engagement of different, relevant actors, in particular non-scientific actors, during the whole project lifecycle;
- it must demonstrate the project's added-value for the (end-)users: how it will complement and advance state-of-the-art, including existing knowledge and best practices;
- it must demonstrate how the project will result in practical and ready to use knowledge, solutions, approaches, tools, products, processes or services that are easily understandable and accessible for (end-)users;
- it must demonstrate how these results ready for practice will be widely and effectively disseminated, and feed into the existing dissemination channels most consulted and trusted by the (end-)users of the project results in countries and regions.

In addition, to ensure Europe-wide communication and dissemination in all areas related to the European Innovation Partnership for Agricultural Productivity and Sustainability (EIP-AGRI)³³ and the common agricultural policy (CAP) specific objectives³⁴, in particular

³³ For the areas covered by the EIP-AGRI see section 8 (pp.8-9) of the Commission Communication 2012(79) final: eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52012DC0079&from=EN : Increased agricultural productivity, output, and resource efficiency, the bioeconomy, biodiversity,

agriculture, forestry and rural development, the new knowledge and innovation generated by the multi-actor projects must be summarised in an appropriate number of ‘practice abstracts’ in the common EIP-AGRI format for Horizon³⁵. The number of ‘practice abstracts’ depends on the size of the project and the volume of results which are ready to be applied in practice. The ‘practice abstracts’ stemming from Horizon Europe projects should be uploaded to the EIP-AGRI project database using a dedicated online form accessible via the EU CAP Network website³⁶.

For areas falling outside the remit of EIP-AGRI and CAP specific objectives, other similarly effective solutions ensuring dissemination at European level should be sought. Where appropriate, it is strongly recommended to involve interactive innovation groups such as the EIP-AGRI operational groups funded under the CAP.

climate, ecosystem services and soil functionality, products and services for the integrated supply chain, and food quality, food safety and healthy lifestyles.

³⁴ For areas covered by the CAP specific objectives see Article 6 of the Regulation (EU) 2021/2115 https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv:OJ.L_.2021.435.01.0001.01.ENG.

³⁵ The EIP common format for "practice abstracts" is available at the following link: [Practice abstracts | EU CAP Network](#)

Calls

Call - Cluster 6 Call 01 - single stage

HORIZON-CL6-2025-01

Overview of this call³⁷

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)			Expected EU contribution per project (EUR million) ³⁸	Indicative number of projects expected to be funded
		2025	2026	2027		
Opening: 06 May 2025 Deadline(s): 17 Sep 2025						
Destination - Biodiversity and ecosystem services						
HORIZON-CL6-2025-01-BIODIV-01: Additional activities for the European Biodiversity Partnership: Biodiversa+	COFUND	20.00	20.00	20.00	Around 60.00	1
HORIZON-CL6-2025-01-BIODIV-02: Strengthening the capacity of citizen science in biodiversity observation	CSA	4.00			Around 4.00	1
HORIZON-CL6-2025-01-BIODIV-03: Strengthening taxonomic approaches for	RIA	24.00			Around 12.00	2

³⁷ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.

The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

³⁸ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Horizon Europe - Work Programme 2025
Food, Bioeconomy, Natural Resources, Agriculture and Environment

biodiversity						
HORIZON-CL6-2025-01-BIODIV-04: Large-scale in situ biodiversity observations for better understanding of biodiversity state, drivers of its decline and impacts of policies	RIA	22.00			Around 11.00	2
HORIZON-CL6-2025-01-BIODIV-05: Assessing and modelling ecosystems' dynamic processes to guide restoration activities and to improve models used for climate	RIA	18.00			Around 6.00	3
HORIZON-CL6-2025-01-BIODIV-06: Assessing and modelling socio-economic impacts of nature restoration	RIA	16.00			5.00 to 6.00	3
HORIZON-CL6-2025-01-BIODIV-07: Integrated and coordinated approaches for coral reefs and associated ecosystems (mangroves and seagrass beds) conservation, restoration, and climate mitigation and adaptation	RIA	12.00			Around 6.00	2
HORIZON-CL6-2025-01-BIODIV-08: Strengthening pathways to alternative socio-economic models for continuous improvement of biodiversity	RIA	14.00			Around 7.00	2
HORIZON-CL6-2025-01-BIODIV-09: Understanding the perceptions of and improving communication on the biodiversity crisis and nature restoration benefits to sustain citizen engagement	RIA	6.00			Around 3.00	2

Horizon Europe - Work Programme 2025
Food, Bioeconomy, Natural Resources, Agriculture and Environment

and democratic governance						
HORIZON-CL6-2025-01-BIODIV-10: Supporting the implementation of nature restoration measures for sustainable farming systems	RIA	11.00			5.00 to 6.00	2
Destination - Circular economy and bioeconomy sectors						
HORIZON-CL6-2025-01-CIRCBIO-01: Novel circular business models to enable the just transition to a sustainable and circular economy	IA	10.00			Around 5.00	2
HORIZON-CL6-2025-01-CIRCBIO-02: Improving ecodesign of products and development of testing methods for products prioritised under the Ecodesign for Sustainable Products Regulation	RIA	8.00			Around 4.00	2
HORIZON-CL6-2025-01-CIRCBIO-03: Product Environmental Footprint (PEF) of policy and market-relevant product groups	RIA	8.00			Around 4.00	2
HORIZON-CL6-2025-01-CIRCBIO-04: Development and testing of Extended Producer Responsibility schemes (EPR) within the priority Circular Economy Action Plan value chains	IA	10.00			Around 5.00	2
HORIZON-CL6-2025-01-CIRCBIO-05: Consumption patterns and environmental awareness as enablers of transition to circular economy	IA	12.00			Around 6.00	2

Horizon Europe - Work Programme 2025
Food, Bioeconomy, Natural Resources, Agriculture and Environment

HORIZON-CL6-2025-01-CIRCBIO-06: Indicators for the transition to sustainable and circular economy	RIA	8.00			Around 4.00	2
HORIZON-CL6-2025-01-CIRCBIO-07: Demonstration, deployment and upscaling of circular systemic solutions in cities and regions (Circular Cities and Regions Initiative)	IA	18.00			Around 9.00	2
HORIZON-CL6-2025-01-CIRCBIO-08: Bioprospecting and optimized production of the terrestrial natural products: new opportunities for bio-based sectors	IA	11.00			Around 5.50	2
HORIZON-CL6-2025-01-CIRCBIO-09: Unleashing the potential and advancing the impact of the digitalization/Artificial Intelligence of the climate-neutral bio-based value chains	IA	10.00			Around 5.00	2
HORIZON-CL6-2025-01-CIRCBIO-10: Support to the EU Biotechnology and Biomanufacturing Initiative: scoping action	CSA	2.00			Around 2.00	1
HORIZON-CL6-2025-01-CIRCBIO-11: Demonstration of reduced energy use and optimised flexible energy supply for industrial bio-based systems	IA	11.00			Around 5.50	2
HORIZON-CL6-2025-01-CIRCBIO-12: Harmonizing and optimising composting	CSA	2.00			Around 2.00	1

Horizon Europe - Work Programme 2025
Food, Bioeconomy, Natural Resources, Agriculture and Environment

plants performances in Europe						
HORIZON-CL6-2025-01-CIRCBIO-13: Reconstructing areas affected by conflicts: the role of the bio-based solutions	RIA	8.00			Around 4.00	2
HORIZON-CL6-2025-01-CIRCBIO-14: Bioprospecting and optimised production of marine/aquatic natural products in the omics & artificial intelligence era	IA	12.00			Around 6.00	2
HORIZON-CL6-2025-01-CIRCBIO-15: European partnership: Forests and Forestry for a Sustainable Future	COFUND	10.00	30.00	30.00	Around 70.00	1
Destination - Clean environment and zero pollution						
HORIZON-CL6-2025-01-ZEROPOLLUTION-01: Innovative and advanced monitoring and modelling systems for revised air quality policies	RIA	10.00			Around 10.00	1
HORIZON-CL6-2025-01-ZEROPOLLUTION-02: Environmental impacts from the production of agricultural crops for bio-based industrial systems	CSA	2.00			Around 2.00	1
HORIZON-CL6-2025-01-ZEROPOLLUTION-03: Environmental biotechnology applications in service of remediation of polluted ecosystems	RIA	8.00			Around 4.00	2

Horizon Europe - Work Programme 2025
Food, Bioeconomy, Natural Resources, Agriculture and Environment

HORIZON-CL6-2025-01-ZEROPOLLUTION-04: Towards a comprehensive European strategy to assess and monitor aquatic litter including plastic and microplastic pollution	RIA	6.00			Around 6.00	1
HORIZON-CL6-2025-01-ZEROPOLLUTION-05: EU-India cooperation on cumulative impacts of marine pollution on marine organisms and ecosystems	RIA	12.00			Around 6.00	2
HORIZON-CL6-2025-01-ZEROPOLLUTION-06: Provide digital solutions tailored to small and medium-sized farms to monitor and sustainably manage agricultural inputs and natural resources	IA	8.00			Around 8.00	1
HORIZON-CL6-2025-01-ZEROPOLLUTION-07: Reducing pollution from the food and drink industries	IA	12.00			Around 6.00	2
Overall indicative budget		345.00	50.00	50.00		

General conditions relating to this call	
<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.

DRAFT

Destinations

Destination - Biodiversity and ecosystem services

Under destination “Biodiversity and ecosystem services”, R&I in 2025 provides scientific support to the development and implementation of EU environmental legislation and of European Green Deal initiatives, in line with the new Commission priority “Sustaining our quality of life: food security, water and nature”.

This destination is based on the vision developed in the EU biodiversity strategy for 2030 and supports its implementation, pursuing the orientations of the Work Programmes 2021-2022 and 2023-2024, and notably focuses on the EU Nature Restoration Regulation and other new European Green Deal initiatives such as the proposal for an EU soil monitoring and resilience law, the proposal for an EU forest monitoring law and the EU Taxonomy for Sustainable Activities (specifically the Environmental Delegated Act) and the EU action plan: protecting and restoring marine ecosystems for sustainable and resilient fisheries. R&I activities continue to support the environmental objectives of the common agricultural policy and reflect the strong interconnections between the EU biodiversity strategy for 2030 and the European Green Deal objectives for a competitive, resilient and sustainable agri-food system, including the pollinators initiative.

R&I on biodiversity and ecosystems services, if translated into action, contribute to a clean environment for the EU and Associated Countries, including water, soil, air, health, climate adaptation and risk (including disaster risk) reduction, sustainable bioeconomy and blue economy policies.

This destination also contributes to the twin green and digital transition. Where relevant, advantage should be taken of the use of advanced digital technologies and tools such high-performance computing, Artificial Intelligence (AI) and Environmental Observation where appropriate.

This destination supports the EU leadership in the relevant international fora and develops analysis and tools to reach our international biodiversity commitments, such as those taken in the Kunming-Montreal Global Biodiversity Framework (GBF), in line with the new Commission priorities. It will in particular support the monitoring framework of the GBF. Its activities serve the objectives of the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES), the Intergovernmental Panel on Climate Change (IPCC) and of the potential International/Intergovernmental Panel for Ocean Sustainability (IPOS).

Proposals for topics under this destination should set out a credible pathway contributing to **“putting biodiversity on a path to recovery, and protecting and restoring ecosystems and their services”** of the Strategic Plan 2025-2027, and more specifically to one or more of the following impacts:

- improved knowledge, innovations, methods, pathways and tools are available to protect healthy ecosystems and to restore degraded ones ensuring the provision of ecosystem services, including for adaptation and/or mitigation to climate change;
- the ongoing biodiversity crisis and its consequences, the benefits of ecosystem services and the need to protect and restore them are better understood. Policymakers and all relevant sectors of society are aware and well informed thereof, and fully grasp opportunities of biodiversity protection and restoration. Society is on a path of transformative change;
- farmers, foresters, and land managers test and implement biodiversity-friendly practices while safeguarding food security and the long-term sustainability of farming and forestry;
- progress towards reaching the goals and targets of the Kunming-Montréal Global Biodiversity Framework contributes to reducing the pressure on biodiversity and to ensuring sustainable development worldwide.

R&I under Destination “Biodiversity and ecosystem services” will mostly deliver under Key Strategic Orientation (KSO) 1 of Horizon Europe Strategic Plan 2025-2027: Green transition and to a lesser extent KSO 3: A more resilient, competitive, inclusive and democratic Europe.

Spending under this destination counts 100% against the target for biodiversity expenditure under Horizon Europe. In addition, most of the activities, especially in the area of ecosystem restoration, contribute to the target for climate expenditure in line with the European Climate Law, which acknowledges that the restoration of ecosystems can maintain, manage and enhance natural sinks.

The Work Programme 2025 supports additional activities of the European Biodiversity Partnership Biodiversa+, while ensuring complementarity of actions with other instruments.

Synergies are sought with:

- EU missions, in particular “A Soil Deal for Europe” and “Restoring our ocean and waters by 2030” in topics dealing with nature restoration;
- Horizon Europe partnerships: in addition to Biodiversa +, several co-funded partnerships under Cluster 6 notably Water4All, sustainable blue economy and agroecology;
- JRC activities, notably the EC Knowledge Centre for Biodiversity (KCBD) and its Science Service for Biodiversity (SSBD), the Competence Centre on Participatory and Deliberative Democracy, the European Technical Support Centre for the Global Biodiversity Framework as requested by the Convention on Biological Diversity, European regional centre for biodiversity and the Global Knowledge Support Service for Biodiversity (GKSSB).

To maximise the impacts of R&I under this destination, international cooperation is encouraged in topics as appropriate. International cooperation is sought, in particular in topics that support IPBES, the implementation of the Kunming-Montreal Global Biodiversity Framework, the Sustainable Development Goals, the Paris Agreement and related international agreements such as the Agreement on the conservation and sustainable use of marine biological diversity of areas beyond national jurisdiction (BBNJ).

Under this destination there is a substantial need for more fundamental research and therefore there is a majority of Research and Innovation Actions (RIAs).

This destination benefits from interdisciplinarity and trans-disciplinarity, including the contribution of social sciences and humanities (SSH), and takes into due account gender and other social categories and their intersections to ensure promotion of democracy and a socially just transition where relevant. Citizens and stakeholders' engagement will be sought including with living labs. The destination is expected to contribute to the new Commission priority "Protecting our democracy, upholding our values" by engaging with civil society. Furthermore, it strives to take full advantage of the potential of nature restoration and nature-based solutions, to deliver multiple social, economic and environmental co-benefits.

Consolidating biodiversity knowledge for nature and society

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-BIODIV-01: Additional activities for the European Biodiversity Partnership: Biodiversa+

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 60.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 60.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The proposal must be submitted by the coordinator of the consortium of</p>

	the grant funded under HORIZON-CL6-2021-BIODIV-02-01 and HORIZON-CL6-2023-BIODIV-01-18. This eligibility condition is without prejudice to the possibility to include additional partners.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The evaluation committee will be composed partially by representatives of EU institutions.</p> <p>If the proposal is successful, the next stage of the procedure will be grant agreement amendment preparations.</p> <p>If the outcome of amendment preparations is an award decision, the coordinator of the consortium funded under HORIZON-CL6-2021-BIODIV-02-01: European partnership rescuing biodiversity to safeguard life on Earth will be invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>This action is intended to be implemented in the form of an amendment of the grant agreement concluded pursuant to topic HORIZON-CL6-2021-BIODIV-02-01.</p> <p>For the additional activities covered by this action:</p> <ul style="list-style-type: none"> • The funding rate is 30% of the eligible costs. • Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. • Financial support provided by the participants to third parties is one of the primary activities of this action in order to be able to achieve its objectives. The EUR 60 000 threshold provided for in Article 207(a) of the Financial Regulation No 2024/2509 does not apply. • The maximum amount of FSTP to be granted to an individual third party is EUR 7 000 000 for the whole duration of Horizon Europe ⁴⁷. This amount is justified since provision of FSTP is one the primary activities of this action and it is based on the extensive experience under predecessors of this partnership. <p>The starting date of grants awarded under this topic may be as of the</p>

⁴⁷ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal) the maximum amount may be higher

	submission date of the application. Applicants must justify the need for a retroactive starting date in their application. Costs incurred from the starting date of the action may be considered eligible (and will be reflected in the entry into force date of the amendment to the grant agreement).
<i>Total indicative budget</i>	The total indicative budget for the topic is EUR 60 million committed in annual instalments over years 2025-2027 (EUR 20 million from the 2025 budget, EUR 20 million from the 2026 budget and EUR 20 million from the 2027 budget).

Expected Outcome: The third instalment of the partnership is expected to further contribute to the expected outcomes specified in topics HORIZON-CL6-2021-BIODIV-02-01 and HORIZON-CL6-2023-BIODIV-01-18, for continuation of the activities in line with already agreed outcomes. In addition, during the third instalment, the partnership is also expected to contribute to the objectives of the EU Nature Restoration Regulation and of the European Climate Law.

Scope: The objective of this action is to continue to provide support to the European Biodiversity Partnership Biodiversa+ identified in the Horizon Europe Strategic Plan 2021-2024 and implemented under the previous topics HORIZON-CL6-2021-BIODIV-02-01 and HORIZON-CL6-2023-BIODIV-01-18, and in particular to fund additional activities (which may also be undertaken by additional partners) in view of its intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation. It is expected that the partnership's additional activities will contribute to the objectives of the EU Nature Restoration Regulation and of the European Climate Law by developing innovative solutions for the restoration of ecosystems that can maintain and enhance natural carbon sinks and by further developing nature-based solutions and ecosystem-based adaptation measures.

The consortium which applied to and received funding under HORIZON-CL6-2021-BIODIV-02-01 and HORIZON-CL6-2023-BIODIV-01-18 is uniquely placed to submit a proposal to continue the envisioned partnership. Not only did this consortium submit the proposal leading to the identification of the partnership in the Horizon Europe strategic planning 2021-2024, it has also implemented the partnership through co-funded annual calls in years 2021-2024 based on this planning and further to topics HORIZON-CL6-2021-BIODIV-02-01 and HORIZON-CL6-2023-BIODIV-01-18. In this context, the current consortium has particular expertise in relation to the objectives of the Partnership, the activities to be implemented in particular FSTP calls or other calls/scope of calls clearly required/envisioned pursuant to initial proposal/partnership, and other relevant aspects of the action. In practice, another consortium could not continue the activities of the Partnership underway without significant disruption to the ongoing activities, if at all.

The scope of the application for this call on the European Biodiversity Partnership Biodiversa+ should focus on the flagship programmes 2025-27 according to the partnership's co-created strategic research and innovation agenda for seven years, which includes calls for

research projects, biodiversity- and ecosystems monitoring and science-based policy advisory activities, and all horizontal activities to allow the Partnership to operate and to achieve its five specific objectives.

It is expected that the partnership continues to organise joint calls on an annual base and therefore it should factor ample time to run the co-funded projects. It should build on, and widen, the data availability in European Research Infrastructures federated under the European Open Science Cloud.

The partnership should collaborate closely with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora. The partnership should also seek to collaborate with EU space programmes (Copernicus, Galileo) to foster the use of emerging or operational space technologies for policy development. Moreover, the partnership should describe specific activities foreseen in order to strengthen the complementarities with other related Missions and Partnerships.

While the award of a grant to continue the Partnership in accordance with this call should be based on a proposal submitted by the coordinator of the consortium funded under HORIZON-CL6-2021-BIODIV-02-01 and HORIZON-CL6-2023-BIODIV-01-18, and the additional activities (which may include additional partners) to be funded by the grant should be subject to an evaluation, this evaluation should take into account the existing context and the scope of the initial evaluation as relevant, and related obligations enshrined in the grant agreement.

Taking into account that the present action is a continuation of topic HORIZON-CL6-2021-BIODIV-02-01 and HORIZON-CL6-2023-BIODIV-01-18, and foresees an amendment to an existing grant agreement, the proposal should also present in a separate document the additional activities and any additional partners to be covered by the award in terms of how they would be reflected in the grant agreement.

The partnership should pool the necessary financial resources from the participating national (or regional) research programmes with a view to implementing joint calls for transnational proposals resulting in grants to third parties.

HORIZON-CL6-2025-01-BIODIV-02: Strengthening the capacity of citizen science in biodiversity observation

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.

<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ⁴⁸.</p>

Expected Outcome: In supporting the implementation of the European Green Deal, the EU biodiversity strategy for 2030 and the EU Nature Restoration Regulation, which contributes to the EU's overarching objectives on climate mitigation and adaptation, the successful proposal will deliver on the impact of this Destination on improved knowledge, innovations, methods, pathways and tools to protect healthy ecosystems and to restore degraded ones ensuring the provision of ecosystem services. It will thus contribute to the objectives of the European Climate Law on nature-based solutions and ecosystem-based adaptation.

Project results are expected to contribute to all of the following expected outcomes:

- capacity for citizen engagement in biodiversity observation is enhanced and contributes to the development of climate change mitigation and adaptation measures at local level;
- citizen science initiatives on biodiversity are promoted and coordinated by citizen science experts (taxonomy, genomics, IT, education and communication experts) and their outputs better harmonised;
- citizen science approach is better integrated in taxonomic networks and communities, supporting modern taxonomic research and resolution of pressing ecological challenges;
- systematic biodiversity observation is established (including citizen science and environmental observations), covering also little-known taxonomic groups and going beyond what the current policy is covering. Specifically, the possibilities of using citizen science data for monitoring ecosystem dynamics in time and for modelling the effects of the drivers of biodiversity loss, notably climate change, on species distribution are enhanced.

Scope: Citizen science is key to gather in situ biodiversity data, which complement official/national data collection programmes. The role of European citizens, including young people, in the generation of knowledge on biodiversity, ecosystems and their provision of essential ecosystem services to society needs to be strengthened on the basis of best practices.

⁴⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

There are hundreds of citizen science initiatives across the European Union, managed and/or funded by EU, national or regional authorities, NGOs, municipalities and others. Data are not always collected and/or presented in a harmonised way, preventing their best use. Many lesser-known species are overlooked, as well as some opportunities (e.g. collaboration with key stakeholders such as farmers, foresters, fishers, hunters, urban planners). A coordinated approach, at the level of the EU, is necessary to tackle some specific issues such as challenges in nature management, state of plant health, spread of invasive alien species, changes in species distribution or migrations due to climate change or as result of human activity (e.g., transport, agriculture, industrial production).

Activities under this topic are expected to:

- analyse all tools available for citizen science on biodiversity (taxonomy fiches, schoolkits, App, use of e-DNA kits, artificial intelligence, etc), collect best practices and propose/identify, if necessary, new ones in collaboration with taxonomy, genomics, IT, education and communication experts;
- develop strategies, roadmaps and guidelines and test them to scale up citizen engagement in biodiversity observation, including a review of good practices for setting up a system of incentives to attract and retain citizen interest. The development and tests on the ground should be based on tools and protocols for data quality assessment, control and validation, consider data need scenarios (e.g. types of data used by Environmental Authorities and bodies providing scientific advice to policy makers on environmental aspects) and involve potential users (e.g. schools, stakeholders, young citizens, NGOs, civil society organisations as well as hard-to-reach and vulnerable citizens/groups);
- develop outreach activities and materials on the crucial importance of biodiversity and biodiversity observation for climate change mitigation and adaptation;
- identify frameworks for harmonisation and standardisation of citizen science protocols for data collection, validation, storage and sharing, as well as frameworks for interoperability of various digital tools (e.g. smart phone applications) used by citizen scientists. Attention should be paid to metadata and accessibility and transparency with regard to reference documentation, taking into account the multilingual nature of citizen science activities. Cyber security and personal data protection aspects should be considered;
- explore avenues to streamline development of essential resources for setting up and running citizen science initiatives, including kits for collection of biodiversity data, promotion and awareness raising toolkits, training schemes, applications, multilingual protocols and participation certification for diverse target groups including children and young people.

The support and early involvement of citizens and civil society is central to achieving the targeted outcomes. The proposals should focus on all potential groups of stakeholders and citizens including vulnerable groups, such as young people (including those not in education

or employment), elderly people, migrants, ethnic minorities, pregnant women, and persons with disabilities.

It is expected that the proposed activities cover terrestrial, freshwater and marine environments, and that the activities will contribute to the objectives of the EU Nature Restoration Regulation and thereby also to climate change mitigation and adaptation objectives.

The proposal should foresee cooperation with the European Biodiversity Partnership Biodiversa+, the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora. The proposal should also foresee cooperation with the European Alien Species Information Network (EASIN), the upcoming pilot on the EU Biodiversity Observation Coordination Centre (EBOCC), national biodiversity monitoring hubs, and national statistical offices to explore and advance the collection of citizen science observations.

The selected project should coordinate with other projects working on citizen science for biodiversity⁴⁹, the European Citizen Science platform⁵⁰ and relevant organisations as the European Citizen Science Association (ECSA), to ensure the exhaustive overview of all citizen science initiatives across the EU.

The selected project is also expected to collaborate with the projects selected under the topics HORIZON-CL6-2025-01-BIODIV-03: Strengthening taxonomic approaches for biodiversity and HORIZON-CL6-2025-01-BIODIV-04: Large-scale in situ biodiversity observations for better understanding of biodiversity state, drivers of its decline and impacts of policies.

The use of AI could be considered for the analyses needed under this topic.

HORIZON-CL6-2025-01-BIODIV-03: Strengthening taxonomic approaches for biodiversity

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 12.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 24.00 million.
<i>Type of Action</i>	Research and Innovation Actions

⁴⁹ Projects funded under the topics HORIZON-CL6-2021-BIODIV-01-02, HORIZON-CL6-2021-BIODIV-01-03, HORIZON-CL6-2022-BIODIV-01-01. See also relevant EU projects funded under the EU Missions, in particular “Soil Deal for Europe” (e.g. HORIZON-MISS-2022-SOIL-01-09), “Restoring our ocean and waters by 2030” (e.g. HORIZON-MISS-2024-OCEAN-01-04), “Adaptation to Climate Change” and “Climate-neutral and smart cities”.

⁵⁰ <https://eu-citizen.science/>.

<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio, grants will be awarded to applications not only in order of ranking but at least also to one project within the area A that is the highest ranked, and one project highest ranked within the area B, provided that the applications attain all thresholds. Proposals must clearly indicate the area they are applying to.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000 ⁵¹.</p>

Expected Outcome: In supporting the implementation of the European Green Deal, the EU biodiversity strategy for 2030 and the Kunming-Montréal Global Biodiversity Framework, successful proposals will contribute to the impact of this Destination on improved knowledge, innovations, methods, pathways and tools to protect healthy ecosystems and to restore degraded ones ensuring the provision of ecosystem services, including for adaptation and/or mitigation to climate change, thus contributing to the objectives of the European Climate Law on nature-based solutions and ecosystem-based adaptation.

Project results are expected to contribute to all the following expected outcomes:

- the taxonomic community (experts who identify, name, describe, and classify biodiversity working from the level of molecules, including eDNA and eRNA, genomes and metagenomes, species and populations, to habitats and ecosystems) and its capacity to engage with and support policy and other decision-making on biodiversity, climate change and other environmental issues are strengthened;
- strategic approaches for a systematic reinforcement of expertise and training of the taxonomic community in Europe, including genomics for biodiversity identification and monitoring are developed.

Scope: R&I activities should:

- fill gaps in taxonomic expertise, including in the context of intra-species biodiversity (genetic diversity within and between populations) and habitats/ecosystems;
- establish, pilot and test novel taxonomic approaches on observing and quantifying biodiversity at all levels;

⁵¹ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal) the maximum amount may be higher

- develop strategies and roadmaps for systematic capacity building and transfer of taxonomic knowledge;
- compile a comprehensive open online catalogue of taxonomic and nomenclatural databases, and encourage the existing databases to align with common standards and FAIR principles, to merge where possible, and to link with or mirror each other. This catalogue should be designed to support the process of taxonomic identification, covering a wide range of databases from genetic information to species classification⁵², and support a common European Taxonomy Initiative contributing to the Global Taxonomy Initiative;
- support development of tools to facilitate taxonomic training, such as reference collections, guidelines, standards and schemes for academic certification (e.g. within the European Credit Transfer and Accumulation System ECTS);
- establish an EU network of taxonomy and genomics experts, from taxonomic facilities to universities, including an interconnected network of biodiversity genomics facilities⁵³;
- ensure representative coverage of biodiversity across terrestrial, freshwater, and marine ecosystems, including lesser-known taxa and ecosystems and with regard to such taxa and ecosystems that act as climate change indicators, recognising the critical role that biodiversity and ecosystem services play in climate change mitigation and adaptation.

Proposals should address either Area A or Area B as follows:

Area A:

- integrate and maximise the impact of taxonomic work across the different stages of biodiversity identification, description, curation, publication, digitalization and management, to the scale needed at national and European level;
- consolidate and underline the taxonomic ground for long-term monitoring efforts based on expert knowledge and activity, and the use of advanced and validated tools.

Proposals may provide financial support to third parties, to cover specific needs/taxa/ecosystems and/or issues. These third party grants should focus on the most pressing and identified knowledge gaps, by reinforcing taxonomy notably in expertise and data lacking areas such as in Central and East European, Mediterranean and outermost regions. Maximum 30% of the requested EU contribution should be allocated to this purpose.

Area B:

⁵² Including nomenclatural databases such as the International Plant Names Index (IPNI), Zoobank, Algaebase and Mycobank.

⁵³ Associated Countries can participate in the network.

- widen participation and accessibility of genomic data, increase geographical coverage and scale of participation, whilst engaging in training and knowledge transfer, including links with non-genomic data (“from molecules to ecosystems approach”);
- consolidate and enhance the uptake / use / impact of genomic data as more and better-quality data become available to support environmental management, environmental risk assessment and sustainable use of natural resources;
- establish a comprehensive biodiversity genomics system in Europe, based on latest progresses, particularly in DNA barcoding and whole-genome sequencing through participation in the International Barcode of Life (iBOL) and the Earth BioGenome Project.

Proposals may provide, when relevant, financial support to third parties to cover specific needs/taxa/ecosystems and/or issues related to the use of genomic data. These third party grants should focus on the most pressing and identified knowledge gaps, by reinforcing genomic taxonomy notably in expertise and data lacking areas such as in Central and East European, Mediterranean and outermost regions. Maximum 30% of the requested EU contribution should be allocated to this purpose.

Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora.

Proposals should use existing platforms and information sharing mechanisms relevant to the topic and build on results from relevant projects including TETTRIs, BGE and EuropaBON⁵⁴. The proposals should foresee close collaboration with the other project selected under this topic and collaboration with the projects selected for topics HORIZON-CL6-2025-01-BIODIV-02: Strengthening the capacity of citizen science in biodiversity observation and HORIZON-CL6-2025-01-BIODIV-04 on large-scale biodiversity observations.

Proposals should coordinate and collaborate with relevant organisations such as the Consortium of European Taxonomic Facilities (CETAF), the Global Biodiversity Information Facility (GBIF) and with the European Alien Species Information Network (EASIN) and the upcoming pilot on the EU Biodiversity Observation Coordination Centre (EBOCC). The proposals should also connect to existing global and European biodiversity data infrastructures including the Catalogue of Life (COL), DiSSCo, LifeWatch ERIC, EMBRC, eLTER and MIRRI-ERIC⁵⁵, where relevant. The activities should cover also alien species, thereby contributing to the implementation of the Invasive Alien Species Regulation.

⁵⁴ Other relevant projects are BIOCEAN5D, MARBEFES, OBAMA-NEXT, MARCO-BOLO and DiverSea and the project funded under Area A of HORIZON-CL6-2024-BIODIV-01: Digital for Nature.

⁵⁵ And any other relevant research infrastructure prioritised by the European Strategy Forum on Research Infrastructures (ESFRI). The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

Concrete efforts should be made to ensure that the data produced in the context of the funded projects is FAIR (Findable, Accessible, Interoperable and Re-usable), particularly in the context of real-time data feeds, exploring workflows that can provide “FAIR-by-design” data, i.e., data that is FAIR from its generation. Possibilities offered by the European Open Science Cloud (EOSC) to store and give access to research data should be considered.

Citizen science approach is encouraged as research methodology at all stages of the research activities in addressing both Area A and Area B. Citizen science activities should follow a R&I approach in line with disciplinary/sectoral standards, including for the data and knowledge generation.

International cooperation is encouraged, in particular with countries and partners that support global efforts such as the Global Taxonomy Initiative, iBOL, GBIF and COL.

The use of AI could be considered for the analyses needed under this topic.

HORIZON-CL6-2025-01-BIODIV-04: Large-scale in situ biodiversity observations for better understanding of biodiversity state, drivers of its decline and impacts of policies

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 11.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 22.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.

Expected Outcome: In supporting the implementation of the European Green Deal, and in particular the EU biodiversity strategy for 2030, successful proposals will contribute to the impacts of this destination, notably to a better understanding of the ongoing biodiversity crisis and its consequences, the benefits of ecosystem services and the need to protect and restore them. Successful proposals are expected to support the implementation of the EU Nature Restoration Regulation and of the European Climate Law which requires Member States to promote nature-based solutions and ecosystem-based adaptation.

Project results are expected to contribute to all of the following expected outcomes:

- competent authorities in charge of the design and implementation of biodiversity policies at all levels have more high-quality data and information from in situ biodiversity observations to understand the biodiversity state and trends in the EU and in Associated Countries;
- more high-quality data and information from in situ biodiversity observations is available to evaluate the effectiveness (in terms of biodiversity related objectives) of policies and business activities and for applied research and innovation.

Scope: The EU biodiversity strategy for 2030 sets the following targets for 2030: significant areas of degraded and carbon-rich ecosystems are restored; habitats and species show no deterioration in conservation trend and status, and at least 30% reach favourable conservation status or at least show a positive trend. The EU Nature Restoration Regulation establishes a framework within which Member States shall put in place effective and area-based restoration measures with the aim to jointly cover, as a Union target, throughout the areas and ecosystems within the scope of this Regulation, at least 20 % of land areas and at least 20 % of sea areas by 2030, and all ecosystems in need of restoration by 2050. At global level, the EU has taken commitments reflecting the EU targets with the Kunming-Montréal Global Biodiversity Framework. The European Climate Law requires Member States to promote nature-based solutions and ecosystem-based adaptation when preparing their adaptation strategies and plans, and therefore it is crucial to improve the knowledge of biodiversity status and trend to select the most appropriate adaptation measures at local level.

However, knowledge of the state and trends of biodiversity and ecosystems in the EU is insufficient to enable a robust measurement of progress towards the EU and global commitments and targets. To fill these knowledge gaps, robust data and information on species and habitats have to be generated in different climate zones. Large-scale in situ observations are essential to deliver such data and information with adequate quantity and quality. Besides improved understanding of the state of biodiversity and ecosystems, better in-situ data on species and habitats, coupled with other data sources, will also enable better identification and quantification of the effects of drivers of biodiversity decline, impacts of policy actions to mitigate those effects and overall progress made under the green transition. High-quality in situ data is also essential for building and updating reliable indicators and models, their validation and improvement, as well as the validation of newly developed observation techniques.

R&I activities should:

- prepare harmonised or standardised frameworks for the execution of biodiversity observations and apply state-of-the-art protocols of the utilised sampling techniques, in order to ensure the quality and interoperability and public access of the collected data. Particular attention should be paid to comprehensive and robust metadata. In particular a comprehensive coverage of the territory of EU Member States should be sought;

- undertake systematic large-scale in situ observations of biodiversity in order to a) record occupancy, richness and abundance of species and populations, b) map species, populations and habitats, and c) survey habitat composition and structure. In this regard, the activities should generate data of adequate spatial and temporal granularity spanning multiple geographical scales to capture the variability in biodiversity across different contexts. The activities should cover species and habitats in terrestrial, freshwater and marine ecosystems, including lesser-known taxa, ensuring a comprehensive understanding of biodiversity across diverse ecological and geographical settings;
- define the methodology for applying specific data quality checks;
- ensure that the collected data which is relevant for future projections are properly defined and fit for modelling (in particular in the context of the activities under HORIZON-CL6-2025-01-BIODIV-05);
- based on the undertaken observations:
 - o assess the state, geographical distribution, phenology and trends of observed species populations;
 - o assess the quality, structure, functions and geographical distribution of observed habitats;
 - o fill species and habitat data gaps in terms of geographical coverage in the EU and in Associated Countries, as well as the data gaps in terms of taxonomic coverage.

The use of AI could be considered for the analyses needed under this topic. Concrete efforts should be made to ensure that the data produced in the context of the funded project is FAIR (Findable, Accessible, Interoperable and Re-usable), exploring workflows that can provide “FAIR-by-design” data, i.e., data that is FAIR from its generation. Possibilities offered by the European Open Science Cloud (EOSC) and by relevant European research infrastructures including the Catalogue of Life (COL), DiSSCo, LifeWatch ERIC, EMBRC, eLTER and MIRRI-ERIC⁵⁶ to store and give access to research data could be considered where relevant.

Proposals may provide financial support to third parties (FSTP) to, for instance, undertake in-situ observation on specific habitats and species. A maximum of 30% of the EU funding should be allocated to this purpose. Consortia need to define the selection process of organisations, for which financial support may be granted.

Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora. Proposals should also show how the planned activities could provide timely information for consideration by the Intergovernmental science-policy Platform on Biodiversity and Ecosystem Services (IPBES).

⁵⁶ And any other relevant research infrastructure prioritised by the European Strategy Forum on Research Infrastructures (ESFRI). The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

Projects will be asked to cooperate with projects that will be selected under the following topic under this call: HORIZON-CL6-2025-01-BIODIV-05: Assessing and modelling ecosystems' dynamic processes to guide restoration activities and to improve models used for climate.

Restoring ecosystems for resilient society and economy

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-BIODIV-05: Assessing and modelling ecosystems' dynamic processes to guide restoration activities and to improve models used for climate

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio, grants will be awarded to applications not only in order of ranking but at least also to one project within the area A that is the highest ranked, and one project highest ranked within the area B, provided that the applications attain all thresholds. Proposals must clearly indicate the area they are applying to.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the</p>

	Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁵⁷ .
--	---

Expected Outcome: Successful proposals will contribute to the impacts of this destination by improving knowledge and developing modelling tools to guide the restoration of degraded ecosystems ensuring the provision of ecosystem services. It will thus contribute to the objectives of the European Climate Law (which requires Member States to promote nature-based solutions and ecosystem-based adaptation) and will improve knowledge to ensure that biodiversity and climate policies and their implementation are coherent, mutually supportive and provide co-benefits for sectoral policies.

Project results are expected to contribute to all the following expected outcomes:

- national competent authorities, decision makers and practitioners having to implement restoration activities benefit from updated knowledge and new tools based on modelling approaches;
- nature restoration is fully taken into account in the modelling frameworks used for climate and land use policies.

Scope: The EU biodiversity strategy for 2030 set the following targets for 2030: significant areas of degraded and carbon-rich ecosystems are restored; habitats and species show no deterioration in conservation trend and status, and at least 30% reach favourable conservation status or at least show a positive trend. The EU Nature Restoration Regulation establishes framework within which Member States shall put in place effective and area-based restoration measures with the aim to jointly cover, as a Union target, at least 20 % of land areas and at least 20 % of sea areas by 2030, and all ecosystems in need of restoration by 2050.

The use of models is expected to support national and EU competent authorities and stakeholders for the implementation of the EU Nature Restoration Regulation, in particular in the following areas:

- determination of the good conditions of habitats as defined in the Habitats directive and the good environmental status defined in the Marine strategic framework directive;
- establishment of threshold values for the favourable reference area for habitats and ecosystems covered by the EU Nature Restoration Regulation;
- estimate of ecological needs of species in terms of quantity and quality of their habitats and better understanding of links between habitats and ecosystems restoration and species conservation;

⁵⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- better understanding of connectivity, functionality, ecological coherence of Natura 2000 network and marine reserve network and competing needs of species;
- analysis of restoration pathways proposed by competent authorities to achieve the short term (2030) and long term (2040-2050) targets of the EU biodiversity strategy for 2030 and the EU Nature Restoration Regulation for all ecosystem types.

Proposals should either address Area A: main focus on terrestrial ecosystems, or Area B: main focus on marine ecosystems. The area (A or B) should be clearly indicated on the application.

For both areas, R&I activities should:

- develop a model as described above capable of simulating dynamic ecosystems processes, including interactions at different scale levels, based on literature review, available datasets or data-basis, realised restoration activities, on-going projects including demonstration cases, and existing guidance. The model should be able to estimate ecological reference values tailored to the specificity of ecosystems in different territories and in given contexts including under climate change, to assess proposed restoration pathways and to contribute to improve/expand other models;
- prioritise ecosystems corresponding to synergies identified between ecosystem restoration and one or several of the following areas: climate change mitigation, climate change adaptation, land degradation neutrality and disaster risk prevention;
- address data gaps with direct observation if needed;
- formulate practical guidelines or advice for practitioners about how to carry out restoration, including when dealing with invasive alien species;
- aim at improving and expanding models used for climate and land-use policies, by coupling modelling functionalities as described above.

Proposals should build on the results of relevant existing projects and envisage enough resources to collaborate with other selected projects under this topic to provide an effective integration of the generated models.

Proposals should build on the knowledge compiled in the assessment reports produced by the Intergovernmental science-policy Platform on Biodiversity and Ecosystem Services (IPBES), including the IPBES scenarios and models assessment, and should show how the planned activities could provide timely information for consideration to future reports.

Concrete efforts should be made to ensure that the data produced in the context of the funded projects is FAIR (Findable, Accessible, Interoperable and Re-usable), particularly in the context of real-time data feeds, exploring workflows that can provide “FAIR-by-design” data, i.e., data that is FAIR from its generation. Possibilities offered by the European Open Science Cloud (EOSC) to store and give access to research data should be considered, including data from in-situ sensors and satellite-based Earth observations.

Citizen Science approach could be appropriate for this action to produce, collect and analyse data.

When dealing with models, actions should promote the highest standards of transparency and openness, as much as possible going well beyond documentation and extending to aspects such as assumptions, protocols, code and data that is managed in compliance with the previously mentioned FAIR principles.

This topic is part of a coordination initiative between ESA and the EC on Earth System Science (ESSI). Projects will be asked to cooperate with projects that will be selected under ESA's Future EO programme as well as under the following topics under this call: HORIZON-CL6-2025-01-BIODIV-04: Large-scale in situ biodiversity observations for better understanding of biodiversity state, drivers of its decline and impacts of policies and HORIZON-CL6-2025-01-BIODIV-06: Assessing and modelling socio-economic impacts of nature restoration. To this end, proposals should plan to allocate sufficient resources for effective coordination, with concrete cooperation activities to be defined at a later stage. Applicants are not expected to contact the ESA or ESA projects to prepare proposals.

Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora.

HORIZON-CL6-2025-01-BIODIV-06: Assessing and modelling socio-economic impacts of nature restoration

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 5.00 and 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Legal and financial set-up of the Grant</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the</p>

<i>Agreements</i>	Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁵⁸ .
-------------------	---

Expected Outcome: Successful proposals will contribute to the impacts of this destination by providing tools to assess the socio-economic impacts, including benefits and costs, of measures aiming at restoring degraded ecosystems ensuring the provision of ecosystem services, including for adaptation and/or mitigation to climate change.

Project results are expected to contribute to all the following expected outcomes:

- short, medium, and long-term socio-economic impacts, including benefits and costs, of nature restoration, along with their social and territorial distribution, are better known including by scientists and stakeholders of the public and private sectors;
- policy-makers have at their disposal science-based tools to predict impacts, including benefits and costs, of the implementation of policies aiming at restoring nature;
- stakeholders in charge of financing or implementing nature restoration have tools at their disposal to integrate impacts, including benefits and costs, of nature restoration in their business plans;
- socio-economic benefits and costs are traceable directly to the intervention or the origin of stressor, for instance reduction of pollution input.

Scope: The EU biodiversity strategy for 2030 set the following targets for 2030: significant areas of degraded and carbon-rich ecosystems are restored; habitats and species show no deterioration in conservation trend and status, and at least 30% reach favourable conservation status or at least show a positive trend. The EU Nature Restoration Regulation sets binding targets for 2030 and 2050, with an incremental implementation. The European Climate Law requires that policies on adaptation in the Union and in Member States are coherent, mutually supportive, provide co-benefits for sectoral policies, and work towards better integration of adaptation to climate change in a consistent manner in all policy areas, including relevant socioeconomic and environmental policies and actions.

R&I activities are expected to:

- conduct sector-specific assessments to measure the comprehensive economic and social (including employment) impacts and benefits of nature restoration, including their territorial and social distribution, encompassing both the financial effect of economic activities and the non-market benefits (including climate mitigation and adaptation,

⁵⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

health and well-being benefits) derived from ecosystem services including provisioning, regulating and cultural services as well as nature's contribution to people;

- employ a multidisciplinary approach combining at least expertise in economics, ecology, social sciences, geography, sustainability and environmental science as well as system and complexity science to capture the full range of impacts and benefits;
- develop and validate modelling approaches, that can build on existing environmental and socio-economic models, to analyse the economic, social and employment impacts and benefits of nature restoration, including their territorial and social distribution, integrating also biodiversity, ecosystem services and nature's contribution to people good quality of life including food security;
- enable understanding of the incremental progress in nature restoration between the 2030 and 2050 target years to guide public and private stakeholders in their continued actions through quantification of socio-economic benefits and impacts of individual measures;
- improve the understanding of the possibilities and limitations of tools for socio-economic assessments of nature restoration, particularly with regard to the non-market benefits.

Proposals should build on results of past and on-going projects and on the knowledge compiled in the assessment reports produced by the Intergovernmental science-policy Platform on Biodiversity and Ecosystem Services (IPBES), including the IPBES values assessment and the IPBES scenarios and models assessment.

This topic requires the effective contribution of SSH disciplines, including economics, socio-economics, geography and sociology. It is essential to involve SSH experts and institutions, as well as incorporate relevant gender expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Concrete efforts should be made to ensure that the data produced in the context of the funded projects is FAIR (Findable, Accessible, Interoperable and Re-usable), particularly in the context of real-time data feeds, exploring workflows that can provide “FAIR-by-design” data, i.e., data that is FAIR from its generation.

Proposals should envisage enough resources to collaborate with other selected projects under this topic to provide an effective integration of the models generated. Projects will be asked to cooperate with projects that will be selected under the following topics under this call: HORIZON-CL6-2025-01-BIODIV-05: Assessing and modelling ecosystems' dynamic processes to guide restoration activities and to improve models used for climate and HORIZON-CL6-2025-01-BIODIV-10: Supporting the implementation of nature restoration measures for sustainable farming systems.

Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora.

HORIZON-CL6-2025-01-BIODIV-07: Integrated and coordinated approaches for coral reefs and associated ecosystems (mangroves and seagrass beds) conservation, restoration, and climate mitigation and adaptation

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The following additional eligibility criteria apply: due to the specific challenge of this topic, in addition to the minimum number of participants set out in the General Annexes, consortia must include, as beneficiaries, at least three independent legal entities, each established in a different Least Developed Country ⁵⁹ and/or Small Island Developing State ⁶⁰.</p> <p>All international organisations are exceptionally eligible for funding.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁶¹.</p>

⁵⁹ [LDCs at a Glance | Department of Economic and Social Affairs \(un.org\)](#)

⁶⁰ [List of SIDS | Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States](#)

⁶¹ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/lis-decision_he_en.pdf

Expected Outcome: In line with the EU biodiversity strategy for 2030, the Kunming-Montreal Global Biodiversity Framework and the EU climate adaptation strategy, successful proposals will contribute to the impacts of this Destination, notably to protect healthy ecosystems and to restore degraded ones ensuring the provision of ecosystem services, including for adaptation and/or mitigation to climate change. The research will contribute to the objectives of the European Climate Law, which requires Member States to promote nature-based solutions and ecosystem-based adaptation.

Project results are expected to contribute to all of the following expected outcomes:

- increased protection, restoration, and resilience of coral reefs and associated ecosystems in both protected and non-protected areas, acknowledging the objectives of the EU Nature Restoration Regulation, the climate change mitigation and adaptation strategies;
- effective management and land-sea planning of those associated ecosystems are based on approaches considering them together and integrating field experience with state-of-the-art and indigenous populations & local communities (IPLC) knowledge into hands-on guidelines;
- international initiatives are supported in the effort to coordinate and reduce the fragmentation of the current landscape of interventions and resources for the conservation and management of these ecosystems. The capacity for a durable intervention is built in outermost regions, overseas countries and territories of the EU and in third countries, in particular Least Developed Countries and Small Island Developing States.

Scope: Coral reefs and seagrass beds represent about less than 1% of the ocean's surface and mangrove cover about 1%. They are home to at least 25% of known marine species and supporting up to 40% of fish species of the global ocean through food webs and nutrients cycles. About half of the coral reef ecosystems have disappeared since the 1950's, 29% of the known areal extent of seagrass has disappeared since the initial records from 1879 and about 35% of the original mangrove area was lost by the end of the 20th century, as consequences of direct drivers at play for the past decades (pollution, extraction, overfishing, harmful fishing practices, coastal development, deforestation), invasive alien species and now additionally from increasing climate change impacts (rising sea surface temperature, marine heatwaves, sea level rise, deoxygenation, acidification, etc.). Providing multiple ecosystems services and benefits for people, research, conservation and management efforts have increased in the recent years but often targeted these systems individually, with various duration and focus and long-term observation and management.

Where they co-occur, coral reefs (including mesophotic extensions), mangroves and seagrass beds share tight ecological connections. Recent observations during coral bleaching events suggest that jointly protecting mangroves, seagrasses, and reefs may synergistically increase the success and benefits of conservation due to positive feedback at habitat boundaries. However, an integrated land-sea planning and management remain challenging because of

knowledge gaps in their functional ecology and connectivity, in the spatial extents of their interactions, their seasonal patterns, the socio-political decision-making contexts for local / national planning at sea or on land, and the scarce access to knowledge, experience and to spatial data. Most of past and ongoing interventions are isolated from one another, displaying a fragmented landscape in terms of approaches, of targets, of resources and by limited recognition and inclusion of IPLCs traditional stewardships of these coastal ecosystems. Based on IUCN protected area dataset, only 18% of coastline where mangroves, seagrasses, and reefs interact are protected. Nevertheless, these data set underrepresents areas managed by IPLCs, which manage or have tenure rights over at least ~38 million terrestrial km2 worldwide.

In particular, proposals should:

- where shallow coral reefs (including mesophotic extensions), mangroves, and seagrasses coexist and interact: provide an improved understanding of the functional ecology, their species assemblages' and communities, their connectivity through life cycle stages and food webs structures and complexity in the healthy functioning and co-evolutionary processes of these ecosystems and in the biogeochemistry of sediments and their impact on climate change mitigation and adaptation, in order to design and inform effective management and restoration measures;
- look particularly at functional groups in maintaining the health, as well as the potential of adaptation to changes of corals assemblage, mangrove and sea grass beds, in particular top predators, reef sharks and species controlling algae proliferation and possible IAS and climate change. Proposals may also look at the role of the microbiome, periphyton or symbionts associated to shallow and mesophotic corals ecosystems healthy functioning;
- better understand the consequences of loss of coral reefs (including mesophotic extensions) and associated ecosystems, both in terms of coverage and diversity, on food web locally and cascading on distant communities and of socioeconomic impacts;
- combine different scientific disciplines, and where relevant, possible active restoration measures (coral cuttings or larval propagation on the reef or artificial structures, fishing management, acoustic assisted fish recruitment in restored areas, etc.), for developing approaches for their effective management and restoration, based on functional targets, (departing from usual approach focusing on a single species and coral cover or biomass), so as to support coral reefs and associated ecosystems, mangroves & seagrass beds complexity and connectivity as best asset for their (climate) resilience, co-evolutionary processes and adaptation potentials;
- jointly develop management and restoration guidelines with IPLCs knowledge, state of the art science and integrating lessons learnt and legacy from past and ongoing relevant initiatives from research to aid projects at regional, national, EU (such as the FPI Governance MPA Atlantic & Southeast Asia or the BEST initiative - Biodiversity and Ecosystem Services in Territories of European overseas) or international levels and

consolidate a community of practice in socio-ecological management in networks of protected area managers and locally managed marine areas;

- guidelines should also be going beyond local objectives, considering the trophic and life traits connectivity and with special attention to future climate and abiotic conditions;
- contribute to the coordination and capacity building activities of relevant international initiatives and frameworks, in the design and dissemination of actionable knowledge and guidelines to relevant stakeholders; develop training materials, capacity building and empowerment tools, the access to data and scientific expertise to local actors for ecosystems description and the development of ad hoc localised management measures;
- develop or integrate means and methods (such as sensors, in situ observation devices, remote sensing products developments, citizen science data, etc.) for a cost effective, accessible and lasting monitoring of these functionally associated ecosystems in order to inform on their status, on the effect of measures and to identify necessary management adjustments to changes;
- support natural capital valuation for cost/benefit analysis of measures of conservation and restoration for coral reefs and associated ecosystems and the services and benefits they provide (food, cultural & social values, nature-based solutions for coastal resilience, protection against extreme events, climate adaptation, etc.) and how they affect fishing, shipping, local tourism or other programmes for sustainability, such as offshore wind.

Proposals should envisage clustering activities with projects funded under this topic as well as with other relevant international or Horizon Europe and Horizon 2020 projects working on links between marine biodiversity, functional ecology, ecosystem services, socio-ecological management, cumulated impact of multiple stressors and on observation, mapping, and monitoring for application to the protection and restoration targets. To this end, proposals should foresee dedicated tasks and appropriate resources for coordination measures, joint activities, and deliverables.

Proposals should ensure adequate involvement of researchers, Local Communities and Indigenous People, end-users, MPA managers or governance levels relevant to inform, support and implement measures, actors contributing to practical and ready to use knowledge, tools and freely accessible dissemination and capacity building channels.

Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora. Proposals should also show how the planned activities could provide timely information for consideration by the Intergovernmental science-policy Platform on Biodiversity and Ecosystem Services (IPBES) and in particular the IPBES assessment on integrated biodiversity-inclusive spatial planning and ecological connectivity expected to be delivered in late 2027.

This topic requires the effective contribution of SSH disciplines and involvement of SSH experts. International cooperation is encouraged.

Transformative change towards a nature positive economy

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-BIODIV-08: Strengthening pathways to alternative socio-economic models for continuous improvement of biodiversity

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 14.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>

Expected Outcome: In line with the European Green Deal priorities providing for a fair and just green transition, in particular the EU biodiversity strategy for 2030 and the EU Nature Restoration Regulation, which contributes to the EU's objectives on climate adaptation and mitigation, as well as the Kunming-Montréal Global Biodiversity Framework (GBF), successful proposals will contribute to the impacts of this Destination, notably to grow understanding of the biodiversity crisis and ecosystem services, leading policymakers and society to recognise the importance of protecting and restoring biodiversity, driving a path towards transformative change.

Project results are expected to contribute to all of the following expected outcomes:

- new knowledge to develop and accelerate pathways towards best available alternative socio-economic models that support biodiversity restoration and protection. These models should include adaptive legislative, governance, education and financing strategies, with potential applications of Generative AI to enhance research;
- decision makers (e.g. policy makers and public/private strategic decision makers) benefit from synthesised, systematised and prioritised knowledge on models that better integrate values of biodiversity and nature. Including valuation methods for assessing the benefits of restoration measures and the socio-economic distribution of impacts, tools and innovative market and governance instruments (e.g. potential incentives/capacity-

building, including possible use of Generative AI-based tools), the application of environmental, social and ethical safeguards, and ensuring that biodiversity is continuously improved (e.g. through the non-deterioration principle) and to enhance community resilience to climate change;

- decision makers will have at their disposal information, tools, assessment strategies and metrics that allow for the continuous improved protection and restoration of biodiversity, alongside climate resilience, especially through enhanced climate adaptation. These should be integrated into socio-economic analytical frameworks, considering the quantitative and qualitative representation of social and economic variables in the short (up to 1 year), medium and long (5+ years) term, of the implications of applying such frameworks.

Scope: The degradation of natural assets due to human activities, including climate change, emissions to air, water, and soil and land use intensification and change in Europe, and the subsequent cascading effects of biodiversity loss, have profound economic and social implications, including for our standards of living and immaterial aspects of quality of life. Biodiversity loss is increasingly recognised as a risk to macroeconomic and financial stability, affecting key institutions, countries and regions. Protecting and restoring ecosystems not only benefits biodiversity but also contributes to broader socio-economic objectives, such as human health and wellbeing, climate resilience, and particularly climate adaptation.

To address these trends, alternative socio-economic models can integrate biodiversity efforts into economic activities. The EU biodiversity strategy, GBF, and SDGs set ambitious biodiversity targets, but achieving them requires overcoming barriers in education, technology, society, economy, and governance. Numerous socio-economic models exist to achieve the necessary ecological, climate, economic, financial and social transition for biodiversity. These models need further analysis and development to be widely accepted and implementable. They play a key role in the transformative change called for by IPBES towards a nature positive society, for example through the deployment of nature-based solutions.

To contribute effectively to transformative change, it is crucial to deepen our understanding of the pathways to alternative socio-economic models. This includes better valuing the economic and social benefits that nature protection and restoration bring, beyond monetary valuation, and assessing the cost of inaction. Where possible, the actions should incorporate both quantitative and qualitative research, and the use of Generative AI could integrate new socio-economic data, aiding in model interpretation and action implementation.

In particular, actions are expected to:

- analyse existing models: evaluate and prioritise existing alternative socio-economic models related to biodiversity protection and restoration, identifying best practices and assessing their impacts across Europe. This analysis should explore pathways for future development and implementation of these models, aiming to generate the most positive

biodiversity outcomes, while also promoting climate resilience, social equity and community well-being;

- analyse barriers: Identify and propose solutions to overcome potential barriers and obstacles in scaling up the best available models. This includes considering the potential of Generative AI to enhance model implementation and effectiveness;
- identify gaps and build capacity: pinpoint gaps in current research, innovation, skills, education, legislation and technology. Propose capacity-building strategies to address these gaps, ensuring that the necessary infrastructure and knowledge are in place to support the widespread adoption of effective and fair socio-economic models;
- advance valuation methods: Build on previous research, notably incentive mechanisms and natural capital valuation methods (both monetary and non-monetary), to make progress towards standardised, widely accepted indicators. These indicators should reflect broader socio-economic, biodiversity and natural capital benefits as well as trade-offs. A reflexive use of valuation methods is encouraged, considering the ethical and social implications of different valuation approaches;
- develop and pilot strategies: using collaborative and participatory approaches, develop and pilot strategies, scenario methods, market and non-market measures, instruments, and approaches to scale-up the implementation of alternative socio-economic model.
- co-design pathways: work with stakeholders, including decision-makers, to co-design pathways towards the implementation of alternative socio-economic models. Develop innovative technologies and tools to support scenarios that capture the specificities of different ecosystems, ensuring that models are adaptable and responsive to the unique challenges faced by various regions and sectors.
- engage stakeholders: actively involve end-users such as policy and decision makers and citizens in the co-creation process. This could include the use of Generative AI-based tools to fully account for diverse views and needs, facilitating broader acceptance and application of the proposed models.
- disseminate knowledge: issue and disseminate recommendations, actionable knowledge and empowerment tools at European and possibly Member State levels. Explore synergies with other European initiatives, policies and strategies particularly those under the EU Green Deal, including various fiscal, financial and economic policies to help reach sustainability. Outcomes and findings should also be disseminated beyond the EU.
- investigate economic models: analyse how traditional economic models contribute to biodiversity loss, climate change and other socio-economic challenges, as well as the interactions between these challenges. Identify pragmatic actions and strategies to address these issues, considering the root causes of unsustainable practises, power imbalances and justice concerns.

Concretely, the project(s) should support the practical implementation of the EU biodiversity strategy and the GBF, providing evidence-based recommendations. Actions should build on synergies across multiple SDGs to deliver both direct and indirect biodiversity benefits, and leverage the knowledge compiled in IPBES assessment reports⁶². Actions should consider ethical implications throughout project lifecycles, ensuring that outcomes align with broader societal values and contribute to equitable and just transitions. Actions should address specific challenges faced by different ecosystems, especially vulnerable ecosystems (e.g. agriculture, forestry) and communities (e.g. rural areas, those facing socio-economic inequalities).

Proposals should create synergies with other relevant initiatives, particularly Horizon 2020 and Horizon Europe projects, and foresee clustering activities, through the dedication of appropriate resources. Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora.

Proposals should involve contributions from the social sciences (including economics, sociology and educational science) and humanities (SSH) disciplines.

HORIZON-CL6-2025-01-BIODIV-09: Understanding the perceptions of and improving communication on the biodiversity crisis and nature restoration benefits to sustain citizen engagement and democratic governance

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Legal and financial set-up of the Grant</i>	The rules are described in General Annex G. The following exceptions apply:

⁶² Including the IPBES values assessment, the IPBES scenarios and models assessment, the IPBES nexus assessment and the IPBES transformative change assessment.

<i>Agreements</i>	Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ⁶³ .
-------------------	--

Expected Outcome: Successful proposals will contribute to the expected impacts of this destination notably by identifying mechanisms to raise awareness on the biodiversity crisis and on opportunities of biodiversity protection and restoration including for climate mitigation and adaptation.

Project results are expected to contribute to all of the following expected outcomes:

- policy-makers at all levels better understand how different groups of stakeholders and citizens perceive the biodiversity crisis and its underlying conflicts, as well as the potential impacts of new policies in this area and in climate adaptation and mitigation. This leads to better-informed and more inclusive decision-making and policy implementation, based on the identification of tensions and opportunities;
- policy-makers at all levels are able to implement innovative forms of co-creation and deliberative processes involving citizens throughout the policymaking cycle in order to improve policy-making and eventually contribute to effective mobilisation for collective action in favour of nature restoration and protection, and climate mitigation and adaptation;
- all sectors of society understand the biodiversity crisis and the full extent of its impacts on their lives, including the interplay with climate change and the need for synergies with climate adaptation and mitigation; they understand the critical role of nature restoration in addressing these impacts and are empowered to contribute to it.

Scope: With the EU biodiversity strategy for 2030, the Kunming-Montréal Global Biodiversity Framework, and more recently the adoption of the EU Nature Restoration Regulation, the EU has taken strong commitments to address the challenges of the biodiversity crisis, in addition to the current efforts towards increasing resilience to climate change embedded in the EU climate policy. Strong scientific evidence supports the need to act, given the importance of biodiversity and ecosystems for society, economy and resilience.

However, as the debates for the negotiation of the EU Nature Restoration Regulation showed, there are different levels of understanding and different approaches towards challenges to be addressed among the EU society, which is increasingly polarised with activists and citizens engaged in nature protection (and more generally environment protection) on the one hand

⁶³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

and defenders of the status quo on the other hand. This has even led to local conflicts. While the engagement of activists is visible, little is known about how the rest of society values nature and what citizens think should be done for its protection and restoration.

R&I activities are expected to:

- conduct comprehensive research to better understand civil society's plurality of perceptions and understanding of the biodiversity crisis, its underlying conflicts and links with climate change, identifying key concerns and perspectives. The analysis should identify and quantify the relevance of stakeholder groups and population segments (e.g. based on gender, age, disability, socio-economic status, ethnic and/or cultural origins, etc. and their intersections) sharing similar perceptions and interests. This analysis should build on results of existing research on the relationship between people and nature, including relationship between nature and culture, historical and/or natural heritage, effects of experiences in nature on environmental attitudes and behaviour, etc. and on the report "Methodological assessment regarding the diverse conceptualization of multiple values of nature and its benefits, including biodiversity and ecosystem functions and services"⁶⁴ of the Intergovernmental science-policy Platform on Biodiversity and Ecosystem Services (IPBES);
- address various cases such as stakeholders depending on nature and ecosystems for their professional activities, rural communities living in both protected and not protected areas, urban communities having limited contacts with nature, etc.;
- analyse the perception of various stakeholders towards the EU commitment to protect and restore ecosystems. In particular, investigate if the need to protect and restore nature is perceived as a top-down approach or if it is understood as a necessity for the benefit of society. Explore solutions to address such issues;
- drawing on experiences of citizen engagement around the climate transition and biodiversity crisis – such as for instance the Irish Citizen's Assembly on Biodiversity Loss⁶⁵ or local co-creation processes on sustainable transport⁶⁶ - pilot citizen engagement (case-studies) around ecosystem protection and restoration possibly with nature-based solutions, with the participation of public authorities who have the competence to implement the results of citizen deliberation, thus creating a pathway to implementation as well as a model for best practice;
- develop approaches for each identified group to enhance the communication and dissemination of knowledge regarding the biodiversity crisis and its implications, including on climate. These strategies should aim to improve the groups' understanding of the benefits of nature restoration and empower them to make informed decisions.

⁶⁴ <https://www.ipbes.net/the-values-assessment>.

⁶⁵ <https://citizensassembly.ie/citizens-assembly-on-biodiversity-loss/>.

⁶⁶ <https://mosaic-mission.eu/pilots/gothenburg>.

A multi-disciplinary approach involving relevant biodiversity expertise should be sought. In addition, this topic requires the effective contribution of SSH disciplines, including gender studies, and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals should involve public authorities with the legal competence to implement policy in biodiversity and nature restoration in their pilots and in their advisory boards.

Proposals should demonstrate how they will collaborate with or build upon the work of R&I projects from any of the following previous calls and projects: The climate imperative and its impact on democratic governance (HORIZON-CL2-2023-DEMOCRACY-01-05), H2020-SC6-GOVERNANCE-2020, the Green Deal Call – cross-cutting theme on empowering citizens, the projects PHOENIX and REAL DEAL under Horizon Europe Missions.

The possible participation of the JRC in the project could involve the following contributions from the side of the Competence Centre on Participatory and Deliberative Democracy:

- supporting networking activities by invitations to JRC events and the Community of Practice of the Competence Centre on Participatory and Deliberative Democracy;
- capacity building on citizen engagement;
- offering the use of the JRC Makerspace in Ispra, Italy.

Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora.

International cooperation is encouraged, in particular with Latin American and Caribbean countries.

The use of AI could be considered for the analyses needed under this topic.

Biodiversity friendly practices in agriculture

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-BIODIV-10: Supporting the implementation of nature restoration measures for sustainable farming systems

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 5.00 and 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 11.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ⁶⁷.</p>

Expected Outcome: In line with the targets of the European Green Deal, the common agricultural policy, and the EU biodiversity strategy for 2030, a successful proposal will contribute to the expected impact of this Destination by testing and implementing biodiversity-friendly practices while supporting long-term sustainability of farming and safeguarding food security. A successful proposal will contribute to facilitating the implementation of the EU Nature Restoration Regulation, aligning with the Union's overarching objectives of climate change mitigation and adaptation, for national authorities, by assessing and promoting the most suitable agricultural practices that support agrobiodiversity and a wide range of ecosystem services.

Projects are expected to contribute to all of the following expected outcomes:

- synergies between nature restoration/conservation and food security (production and availability) are scientifically demonstrated to farmers, land managers, advisors and policymakers;
- suitable measures and strategies, along with evidence-based recommendations, are identified and developed to assist farmers in the implementation phase, while supporting Member States competent authorities in addressing specific targets of the EU Nature Restoration Regulation in agricultural landscapes;

⁶⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- collaborations and exchanges between farmers, researchers, and policymakers from competent authorities are strengthened to enable the development of integrated and effective policies that restore natural capital, generate sustainable income for farmers, while also ensuring food availability and quality.

Scope: Farmers play a pivotal role in addressing biodiversity loss while ensuring food production and quality, thereby contributing to overall food security. To support biodiversity-friendly agriculture, it is essential to first list demonstrated farming practices and ecosystems that benefit biodiversity. Next, there is a need to assess the socio-economic impact of nature restoration measures on the agricultural sector and the individual farm, as well as develop and improve existing incentives and their interplay. A key element for a wide adoption of such practices by farmers is demonstrating production and labour benefits, or at least maintaining economic competitiveness in the implementation of nature restoration measures. Moreover, specific targets for agricultural ecosystems outlined in the EU Nature Restoration Regulation necessitate that applied research lays the foundation for Member States to effectively comply and design appropriate and successful strategies. Therefore, environmental, economic, and social benefits, as well as potential trade-offs between nature restoration measures and food security and quality (production and availability) should be demonstrated over different time frames. These should be developed with farmers in mind: short-term and immediate impact on production, their businesses, and nature, as well as medium-, and long-term.

Proposals should:

- quantify the costs and benefits of restoration measures on farm productivity (referring to the ratio input/output) over short, medium, and long-term. Additionally, evaluate the impact of taking action versus non-action on the provision of ecosystem services, such as climate, water, soil health, pollination, nutrients, natural pest control, erosion prevention, etc., along with their associated economic impact at farm level;
- develop and assess possible science-based targets for satisfactory levels of restoration for biodiversity in agricultural ecosystems considering Art. 11 of the EU Nature Restoration Regulation, a path for implementation by farmers, land managers and policymakers, and further develop, solidify, and harmonise existing indicators of biodiversity in agricultural landscapes;
- generate evidence to support and improve incentive schemes, including rewarding mechanisms for actions taken and results achieved in nature restoration/conservation on farmland, while considering synergies and trade-offs;
- assess and compare the potential of various farming approaches to contribute to ecosystem restoration. While considering all types and sizes of farming systems (conventional, organic, agroecological, etc.), prioritise those that are clearly defined to ensure compliance with legislation.

Proposals should adopt a transdisciplinary approach, engaging with relevant experts and stakeholders from farming, biodiversity and ecosystems, as well as from social sciences and

humanities (SSH). Proposals must apply the multi-actor approach to ensure adequate involvement of researchers, policymakers, farmers, land managers and agricultural advisors among other relevant stakeholders. Proposals should aim to increase practical, ready to use knowledge and tools, and promote freely accessible dissemination and open capacity building channels.

Proposals should allocate adequate resources to collaborate with topic projects funded under other topics in this work programme, in particular HORIZON-CL6-2025-01-BIODIV-06: Assessing and modelling socio-economic impacts of nature restoration. Moreover, proposals should build on existing knowledge and the results of other relevant projects, as well as ensure cooperation with appropriate Horizon Europe Partnerships, in particular ‘Biodiversa+’ and ‘Agroecology’.

The JRC may contribute by advising and providing relevant information on the effects of farming practices on the environment, biodiversity, and climate. This collaboration aims to enhance the targeting and quantification of proposed restoration interventions, alongside fostering cooperation with stakeholders and facilitating the dissemination of results to policymakers.

Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora.

Restoring ecosystems for resilient society and economy

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-BIODIV-01-two-stage: Living labs co-creating innovative solutions for forests and freshwater ecosystems restoration

Call: Cluster 6 Call 01 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 14.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>

<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁶⁸.</p>
---	--

Expected Outcome: Successful proposals will contribute to the impacts of this destination by improving knowledge and developing innovations, methods, pathways and tools to restore degraded ecosystems ensuring the provision of ecosystem services, including for adaptation and/or mitigation to climate change.

Project results are expected to contribute to all the following expected outcomes:

- The capacities of researchers, policymakers, practitioners and other stakeholders are enhanced, facilitating effective collaboration among research, practice, and policy to co-develop, test, refine and scale up solutions, methods and tools for ecosystem restoration and for their non-deterioration;
- Practice-oriented knowledge and tools are available to stakeholders having to restore ecosystems and to ensure their non-deterioration, and to provide advice, such as to public and private land managers, foresters or environmental NGOs;
- Competent authorities in charge of preparing and updating national restoration plans to implement the EU Nature Restoration Law and of national climate adaptation strategies and plans are aware of effective solutions, methods and tools for ecosystem restoration and they are able to propose appropriate restoration measures;
- Collaborations between actors across territories and sectors are strengthened and consideration of effective solutions for ecosystem restoration and for their non-deterioration in regions where living labs are operating is increased, and business models to finance them are developed;
- Social, economic and environmental co-benefits and trade-offs of nature restoration activities are demonstrated, including for climate mitigation and adaptation.

Scope: The EU biodiversity strategy for 2030 set the following targets for 2030: significant areas of degraded and carbon-rich ecosystems are restored; habitats and species show no deterioration in conservation trend and status, and at least 30% reach favourable conservation status or at least show a positive trend. The EU Nature Restoration Regulation establishes a

⁶⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

framework within which Member States shall put in place effective and area-based restoration measures with the aim to jointly cover, as a Union target, at least 20 % of land areas and at least 20 % of sea areas by 2030, and all ecosystems in need of restoration by 2050. The European Climate Law requires Member States to adopt and implement national adaptation strategies and plans in which they should promote nature-based solutions and ecosystem-based adaptation. It notably acknowledges that forests are carbon sinks, which contribute to the reduction of greenhouse gases in the atmosphere, while ensuring that forests continue to grow and provide many other services.

Successful proposals are expected to set up living labs which will develop and widely deploy innovative solutions for restoring key ecosystems, which deliver multiple ecosystem functions and services relevant for climate action, including carbon sequestration, regulating water regimes, and other climate adaptation aspects. Proposals under this proposal are expected to combine research on forest and freshwater ecosystems.

Proposals should apply the three main principles of the living labs research concept: (a) co-creating innovative solutions in real-life sites focusing on end-users' needs; (b) co-deciding / co-creating with end-users all along the project; (c) bringing together actors with complementary knowledge in a targeted combination as best suited to achieve the expected outcomes/objectives of the projects.

Living labs should correspond to the definition of the European Network of Living Labs and involve partners from different backgrounds, disciplines and/or sectors that are most relevant to achieve the project objectives and be composed of at least seven experimental sites. By working together in a living lab, the various partners involved in the different sites will be able to co-develop, experiment, test, replicate and benchmark innovative actions and solutions, compare results, exchange good practices, validate methodologies and benefit from cross-fertilisation within a local/regional setting.

More specifically, proposals should:

- set up at least three living labs to work together on ecosystem restoration, covering forests and freshwater ecosystems. The living labs are expected to be located in at least three different EU Member States and/or Associated Countries. Proposals should describe the rationale for cooperation across the various living labs and among the various stakeholders within the living labs;
- establish a detailed work plan of the activities to be undertaken in a transdisciplinary way, ensuring the co-design, co-development, and co-implementation of locally adapted innovative solutions
- conduct participatory and transdisciplinary research and innovation in living labs with the objective of finding practical solutions to ecosystem restoration, while considering relevant drivers of biodiversity loss, in particular climate change and invasive alien species, and related pressures. Challenges with scaling up and transferability of solutions should be addressed. Proposed strategies and solutions should be adapted to the different

environmental, socio-economic and cultural contexts in which the living labs are operating and should consider the cultural and natural heritage. Sites should be selected along a gradient of anthropogenic pressure to evaluate restoration challenges in heterogeneous areas from highly disturbed to relatively intact areas. Action oriented and collaborative approach combining local expertise in economics, ecology and locally created sustainable innovations to capture the full range of knowledge in addition to scientific knowledge should be sought. Gender dimension should be integrated;

- establish for each living lab a satisfactory level for ecosystem condition, in order to allow for an accurate assessment of the conditions and changes and a clear monitoring of progress towards the objectives. Where relevant, the overall objective should be to reach the good conservation status defined in the Habitats or in the Water Framework Directives. Impacts of forestry and forestry practises on freshwater ecosystem health and how changes in forestry practises/management can support the restoration of freshwater ecosystems, including sediments, should be considered;
- monitor and carry out an assessment of the innovative practices for ecosystem restoration and their effectiveness, including the conditions for non-deterioration. This should include a demonstration of the economic viability of the proposed innovative solutions for the end-users and appropriate business models and actions possibly involving local authorities, business communities, SMEs, investors, entrepreneurs should be developed, including with co-funding schemes;
- document the newly developed solutions in an intuitive and accessible way and widely disseminate them in order to facilitate their uptake by practitioners and transmit the acquired knowledge to all relevant actors.

Proposals should foresee cooperation with the EC Knowledge Centre for Biodiversity and the Science Service project BioAgora. Nature-based solutions are relevant to this topic if they concern the restoration of ecosystems.

This topic requires the effective contribution of SSH discipline in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Biodiversity friendly practices in agriculture

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-BIODIV-02-two-stage: Breeding for resilience: enhancing multi-stress tolerance in crops

Call: Cluster 6 Call 01 - two stage	
Specific conditions	
<i>Expected EU</i>	The Commission estimates that an EU contribution of around EUR

<i>contribution per project</i>	7.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 14.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>Applicants submitting a proposal under the blind evaluation pilot (see General Annex F) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (see General Annex E).</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>This topic is part of the blind evaluation pilot under which first stage proposals will be evaluated blindly.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: In line with the objectives of the European Green Deal, the common agricultural policy, the EU climate policy and the EU biodiversity strategy for 2030, a successful proposal will contribute to the expected impact of this destination by supporting the adaptation of agricultural production to the effects of climate change, increasing biodiversity in agroecosystems, and promoting low-input practices, thereby enhancing the resilience of agricultural systems and safeguarding food security.

Projects are expected to contribute to all of the following expected outcomes:

- deeper knowledge and characterisation of relevant traits for tolerance and resistance to multiple stresses, whether occurring simultaneously or sequentially, are more accessible to researchers and breeders;
- the identification of local varieties with high plasticity to cope with multi-stress conditions is enhanced, along with the development of agro-ecological practices that improve stress tolerance while supporting biodiversity-friendly cropping systems;
- the capacities to evaluate the effects of multiple stresses in crops by researchers and breeders are strengthened;

- information and recommendations on variety performance and practices to cope with multi-stress are available to advisors and farmers.

Scope: Crop production faces significant challenges due to climate change and the need to adopt low-input practices, including efficient water use, to reduce the environmental impact while ensuring food security. Issues such as salinity, extreme weather conditions like droughts, waterlogging, high temperatures, and emerging patterns of pests and diseases severely impact crops, resulting in reduced productivity and yield losses. Crop responses to multiple stresses differ from their responses to single stresses. Therefore, attention should be given to enhancing crop tolerance to combinations of multiple abiotic and biotic stresses, thus better reflecting real-life agricultural conditions.

To address these challenges, it is crucial to evaluate local crop varieties, which are often better adapted to specific environmental conditions and stresses. Identifying local varieties with high plasticity enhances crop resilience and agro-biodiversity. Developing agro-ecological practices to improve stress tolerance will further support these efforts, promoting low-input practices and enhancing the overall adaptability of agricultural systems. Additionally, broad-spectrum strategies for improving stress tolerance in crops should be developed. Smart and future-proof breeding programmes need to systematically consider characteristics that enhance crop resilience and adaptation to these demands.

Proposals should:

- provide insight into the range of mechanisms and traits that underpin crop responses to multiple stresses, whether occurring simultaneously or sequentially, guiding the development of varieties and a crop system better equipped to withstand abiotic and biotic stresses, including reduced agricultural inputs;
- increase understanding of the causality between abiotic and biotic stress factors and propose strategies to improve multi-stress tolerance;
- integrate advanced technologies to assist in evaluating GxExM (Genotype x Environment x Management) interactions in the context of multi-stress, combining multiple "omics" data sources, high-throughput phenotyping, computational modelling and artificial intelligence, to evaluate at different levels (e.g. greenhouses, experimental fields, production fields). This integration should assist breeders in developing local varieties optimised for sustainability and climate change adaptation;
- develop location-specific breeding strategies and agroecological practices, incorporating models and artificial intelligence approaches for prediction of cropping systems output, under multiple stress conditions considering climate change scenarios and climate analogues. These strategies should promote agrobiodiversity, soil health, and ecosystem services;
- deliver robust methodologies for benchmarking and communicating the performance of crop varieties when they are challenged by multiple stresses.

Proposals should provide a clear explanation and justification for the selected crop(s) in alignment with the proposal's objectives and the topic's expected outcomes, considering as well that activities should be carried out in a range of agronomically relevant pedo-climatic conditions. All farming systems and approaches are in scope. If proposals address organic farming, particular attention should be given to aspects related to organic varieties and organic heterogeneous materials.

Proposals may provide financial support to third parties (FSTP) to, for instance, develop, test and demonstrate tools to evaluate GxExM interactions in the context of multi-stress. A maximum of 20% of the EU funding should be allocated to this purpose. Consortia need to define the selection process of organisations, for which financial support may be granted.

Proposals should ensure coherence and complementarities with ongoing relevant Horizon Europe projects, including the agroecology partnership, and capitalise on existing relevant research findings and tools, included those developed under previous research projects. Collaboration with European research infrastructures such as AnaEE-ERIC, EMPHASIS or other relevant research infrastructures⁶⁹ is encouraged.

⁶⁹ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

Destination - Fair, healthy and environment-friendly food systems from primary production to consumption

Food systems are to be understood as covering, ‘from the farm to the fork’, all the sectors, actors, stakeholders, organisations and disciplines relevant to and connecting natural resources, primary production from land, fresh water and sea, food processing, food distribution and retailing, food services, food consumption, healthy diets, food safety, nutrition and public health, and the prevention of food waste streams i.e. actors operating in the food supply circuit, working directly ‘with’ food. It also comprises actors that operate ‘around’ food at the broader food system level: governance, finance, education, media and culture, research, marketing and advertising, operational services and those representing business and professional interests. The Vision on agriculture and food and the Competitiveness compass will address challenges ensuring the long-term competitiveness and sustainability of the Agri-food sector within planetary boundaries. The EU Green Deal and more specifically its competitive, resilient and sustainable food system goals, the biodiversity strategy, the zero pollution and climate action ambitions, and their follow-up initiatives set ambitious targets and objectives for food systems will continue to guide research and innovation programming under this destination. Food system related policies cover an array of diverse areas. While those policy areas are interconnected, they cover specific sectors and actors along the food system that have distinct research and innovation needs to be addressed through this destination.

Sustainable farming systems provide economic, social (including health), environmental and climate benefits, and are the main prerequisite for food and nutrition security. For farmers, who are the backbone of food systems and principal managers of natural resources, the common agricultural policy (CAP) set ambitious targets and objectives concerning the sustainability and safety of feed, food and non-food production. R&I in line with the strategic approach to EU agricultural research and innovation⁷⁰ will be key enablers for achieving these ambitious targets and objectives. More specifically, they will contribute to the following policy priorities: nine specific objectives of the CAP; EU action plan for the development of organic production; food safety regulations; sustainable use of pesticides requirements under the plant protection products framework; animal health and welfare legislations; regulation on feed additives; legislative and non-legislative initiatives to enhance cooperation of primary producers and support their position in the food chain; protein strategy; contingency plan for ensuring food supply and food security and communications on food security and fertilisers.

The **partnerships on ‘Accelerating farming systems transition: agroecology living labs and research infrastructures’** will continue to unlock the potential of agroecology to make agri-food systems environmentally friendly and regenerative, climate-neutral, inclusive, competitive and resilient.

Through the **partnership on ‘Animal health and welfare’**, farmers and other actors will continue to be better equipped to protect animals against infectious diseases, including

⁷⁰ <https://ec.europa.eu/programmes/horizon2020/en/news/final-paper-strategic-approach-eu-agricultural-research-and-innovation>

zoonoses, and to improve animal welfare, while reducing the dependency on antimicrobials, maintaining productivity, improving food safety and quality, and protecting the environment and public health.

Sustainable fisheries and aquaculture, as mentioned in the 2023 common fisheries policy (CFP) communication, contribute to securing a wide variety of food and provide employment in many coastal communities. On top, the goal of the European Green Deal is ensuring a neutral or positive environmental impact of all sectors involved in the food system. The European Oceans Pact will focus on boosting the blue economy and ensuring the good governance and sustainability of our ocean in all of its dimensions. The CFP of the future is a policy that enables and supports: (i) fisheries and aquaculture activities within ecological boundaries, including organic aquaculture; (ii) fishing vessels and aquaculture farms that operate with less impact and fewer resources; (iii) the contribution of seafood to safeguarding food security and reinforcing the resilience and sustainability of food systems in the EU; as well as (iv) fishers and aquaculture farmers who can find fulfilment, recognition and economic well-being in their profession. Additionally, the Control Regulation clearly mentions that traceability is important not only for food safety purposes but also to allow control, ensure the protection of consumers' interests, combat illegal, unreported and unregulated fishing, and contribute to ensuring fair competition. R&I will also support the “strategic guidelines for a more sustainable and competitive EU aquaculture for the period 2021 to 2030”, that propose specific actions including access to space and water, human and animal health, environmental performance, climate change, animal welfare, regulatory and administrative framework, and communicating on EU aquaculture. Moreover, R&I in fisheries and aquaculture will contribute to the relevant Food 2030 pathway for action ‘food from oceans and freshwater resources’.

Sustainable, healthy and inclusive food systems rely on systemic, cross-sectoral and participatory, multi-actor approaches and on integration between policy areas at all levels of governance. An important driver for transforming food systems should be the integration of sectors, actors and policies⁷¹. This should occur in order to better understand the multiple interactions between the actors and components of current food systems, the lock-ins and potential leverage points for synergistic changes and the interdependencies of outcomes (linkages between nutritional climate and sustainability outcomes). This can provide solutions that maximise co-benefits with respect to the four priorities of the **Food 2030** R&I initiative: i) nutrition and health, including food safety; ii) climate and environmental sustainability; iii) circularity and resource efficiency; iv) innovation and empowering communities.

This destination will deploy solutions to the 11 Food 2030 pathways for action⁷² and will help build innovation ecosystems to bring together relevant public and private sector actors, researchers and society. R&I activities (including at organisational, social or technological levels) will provide food-related businesses, including those involved in food processing and

⁷¹ Scientific Advice Mechanism, [Towards a sustainable food system - Publications Office of the EU \(europa.eu\)](https://european-council.europa.eu/media/en/press-communications/infographic/Pages/infographic-towards-a-sustainable-food-system-2023-05-10.aspx)

⁷² [New Report: Food 2030 Research and Innovation – Pathways for action 2.0 - European Commission \(europa.eu\)](https://european-council.europa.eu/media/en/press-communications/infographic/Pages/infographic-towards-a-sustainable-food-system-2023-05-10.aspx)

packaging, retail, distribution, and food services, with opportunities and incentives to stimulate environmentally friendly, healthy, circular and diversified practices, products and processes that are biodiversity-friendly, climate-neutral and less reliant on fossil fuels. It will also help devise tools and approaches that enable the shift to healthy, sustainable diets and responsible consumption for everyone, boosted also by social innovation, technology, behavioural change and marketing standards, and by inclusively engaging with different consumers, citizens and communities. This will support the announced future EU vision for agriculture and food and the multi-disciplinary strategy for European life sciences that should further unlock high-value technologies in support of the green transition, and also contribute to the communication “Building the future with nature: Boosting Biotechnology and Biomanufacturing in the EU” and the forthcoming new EU biotech act.

The partnership on ‘Sustainable food systems for people, planet and climate’ will continue to accelerate the transition towards healthy and sustainable diets that are safe and sustainably produced in resilient EU and global food systems.

The EU also aims to promote a *global transition to sustainable food systems*. Its relationship with Africa is a key priority. Targeted R&I activities, in particular under the EU-Africa Partnership on Food and Nutrition Security and Sustainable Agriculture (FNSSA) and global initiatives involving international research consortia, will help achieve this ambition and contribute to the AU-EU High Level Policy Dialogue (HLPD) on Science, Technology and Innovation.

A comprehensive and integrated response to current and future challenges benefiting people, nature and economic growth in Europe and in Africa will be provided. Advances will be made particularly in the following key areas: agroecology, agriculture knowledge and innovation systems and nutrition.

Topic proposals under this destination should set out credible paths to “**ensuring healthy food and nutrition security by making agriculture, fisheries, aquaculture and food systems sustainable, resilient, inclusive and within planetary boundaries**”. More specifically, proposed topics should contribute to one or more of the following impacts:

- Agri-food systems contribute to the EU strategic autonomy by fostering food and nutrition security practices and safeguarding long-term sustainability with multi-disciplinary approaches including One Health.
- Farmers and relevant actors in agricultural primary sector are enabled to manage sustainable, efficient, profitable, circular, low greenhouse gas-emitting farming systems contributing to climate-neutrality and climate-resilience. This will be achieved by new knowledge, innovation and the upscaling and replication of existing and new sustainable farming approaches, including organic farming, while making farming a professionally attractive and remunerative life choice.

- Sustainable and resource efficient farming practices contribute to ecosystems' health, and their related ecosystem services, while minimising pollution, including in surface and groundwaters and the marine environment, and restoring and protecting biodiversity.
- Sustainable fisheries and aquaculture (including organic aquaculture) contribute to fair, healthy, resilient and environment-friendly food systems, promote low-impact and diverse aquatic food production. Healthy aquatic ecosystems with thriving diversity of species and habitats provide ecosystem and climate services for safe and sustainable fisheries and aquaculture and use of coastal zones for leisure activities, thus triggering growth and jobs' creation in coastal, and rural areas. Technological knowledge on the elimination of negative impacts of fishing and aquaculture is improved, in particular through the creation of innovative, more selective, energy and resource efficient and environmentally sustainable techniques.
- The just transition to overall sustainable, healthy and inclusive food systems⁷³ is consistently developed. Analysis of existing barriers and enablers to change allows to design effective leverages to steer the sustainability transition. Co-benefits for climate change mitigation and adaptation, environmental sustainability and circularity, sustainable healthy diets, malnutrition and hunger reduction are delivered.
- Food environments are transformed so that citizens and communities are empowered to move towards healthy, affordable and sustainable diets; food businesses can flourish; food processing industries' competitiveness is improved, while ensuring sustainability; food safety and food sovereignty as well as human health is preserved and food waste is reduced.

To unlock the full potential of R&I and maximise impacts of the expected outcomes, multi-actor and socially innovative approaches (involving the engagement of researchers, policy makers, technology providers, primary producers, the food, drink and hospitality industry, retailers and social economy actors, SMEs along the value chain, local authorities and communities, NGO and civil society, while considering gender and other socio demographic groups and their intersections etc.), open innovation ecosystems, such as living labs and regional innovation ecosystems such as Regional Innovation Valleys for Bioeconomy and Food Systems⁷⁴, will be promoted with a view to co-creating innovative systemic place-based solutions in support of food system sustainability. Activities will benefit from the implementation of unifying approaches through R&I, including the One Health approach where relevant.

To effectively transition innovations into the market, SMEs participation is particularly promoted under this destination. Topics under this destination should be balanced in terms of high as well as low Technological Readiness Levels (TRLs).

⁷³ [Sustainable food systems: Concept and framework \(fao.org\)](https://www.fao.org/3/af0402e/af0402e.pdf)

⁷⁴ [Concept of Regional Innovation Valleys for Bioeconomy and Food Systems](#)

R&I actions under this destination are encouraged to seek complementarities with the EU Missions ‘A Soil Deal for Europe’ and ‘Restore our Ocean and Waters by 2030’ as well as with the European partnerships on Agroecology, Animal Health and Welfare, Sustainable Blue Economy, Sustainable Food Systems for people, planet and climate, and Agriculture of Data (forthcoming), the Partnership for Research and Innovation in the Mediterranean areas (PRIMA) and importantly the European innovation Partnership for Agriculture productivity and sustainability (EIP-AGRI).

The EU will seek to increase the efforts on innovation actions for food systems sustainability in widening countries, reaching out to EU outermost regions and to countries in Central and Eastern Europe, also in preparation for the next EU enlargement.

To maximise the impacts of R&I under this destination, the topics encourage international cooperation as appropriate. The EU will promote a global transition to sustainable agri-food systems. Hence, targeted R&I activities in 2025, in particular under the EU-Africa Partnership on Food and Nutrition Security and Sustainable Agriculture (FNSSA) as well as other initiatives involving international research consortia and already running international activities, will contribute to this ambition.

Coordination will be ensured with the JRC activities under the EC Knowledge Centre for Bioeconomy, the EU Soil Observatory, the European Platform on Life Cycle Assessment, the EC Knowledge Centre for Earth Observation, the Knowledge Centre for Food Fraud and Quality, and the JRC secretariat for the Scientific, Technical and Economic Committee for Fisheries.

To be more effective in achieving impact, this Destination encourages synergies with relevant EU financial programmes and initiatives including the Knowledge and Innovation Communities (KICs) of the European Institute of Innovation and Technology (EIT), in particular EIT Food, and international cooperation programmes (e.g., DeSIRA).

The multi-actor approach is used in several topics. Relevant topics under this destination also require the integration of Social Sciences and Humanities (SSH) to apply a human-centred approach to R&I, and support social innovation at regional and local level to meet needs and co-create solutions for specific challenges.

Enabling sustainable farming systems

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-FARM2FORK-01: Additional activities for the European partnership on accelerating farming systems transition - agroecology living labs and research infrastructures

Call: Cluster 6 Call 02 - single stage
Specific conditions

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 90.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 90.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The proposal must be submitted by the coordinator of the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-1: European partnership on accelerating farming systems transition – agroecology living labs and research infrastructures, European Horizon Europe - Work Programme 2023-2024 Food, Bioeconomy, Natural Resources, Agriculture and Environment. This eligibility condition is without prejudice to the possibility to include additional partners.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>If the proposal is successful, the next stage of the procedure will be grant agreement amendment preparations. If the outcome of amendment preparations is an award decision, the coordinator of the consortium funded under HORIZON-CL6-2023- FARM2FORK-01-1: European partnership on accelerating farming systems transition – agroecology living labs and research infrastructures, will be invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>This action is intended to be implemented in the form of an amendment of the grant agreement concluded pursuant to topic HORIZON-CL6-2023-FARM2FORK-01-1.</p> <p>For the additional activities covered by this action:</p> <ul style="list-style-type: none"> • The funding rate is 50% of the eligible costs. This is justified by the pooling of proposers' in-kind contributions and in-house

	<p>activities and by the nature of activities to be performed.</p> <ul style="list-style-type: none"> • Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. • Financial support provided by the participants to third parties is one of the primary activities of this action in order to be able to achieve its objectives. The EUR 60 000 threshold provided for in Article 207(a) of the Financial Regulation No 2024/2509 does not apply. • The maximum amount of FSTP to be granted to an individual third party is EUR 10 000 000 for the whole duration of Horizon Europe⁷⁵. <p>The starting date of grants awarded under this topic may be as of the submission date of the application. Applicants must justify the need for a retroactive starting date in their application. Costs incurred from the starting date of the action may be considered eligible (and will be reflected in the entry into force date of the amendment to the grant agreement).</p>
<i>Total indicative budget</i>	<p>The total indicative budget for the topic is EUR 90 million committed in annual instalments over the years 2025-2027 (EUR 30 million from the 2025 budget, EUR 30 million from the 2026 budget and EUR 30 million from the 2027 budget). The total indicative budget of the Partnership for the whole duration is EUR 150 million.</p>

Expected Outcome: The successful proposal is expected to further contribute to the expected outcomes specified in topic HORIZON-CL6-2023-FARM2FORK-01-1: European partnership for accelerating farming systems transition - agroecology living labs and research infrastructures, for continuation of the activities in line with already agreed outcomes.

Scope: The objective of this action is to continue to provide support to the European partnership for accelerating farming systems transition - agroecology living labs and research infrastructures identified in the Horizon Europe Strategic Plan 2021-2024 and first implemented under the topic HORIZON-CL6-2023-FARM2FORK-01-1: European partnership for accelerating farming systems transition - agroecology living labs and research infrastructures, and in particular to fund additional activities (which may also be undertaken by additional partners) in view of its intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation.

⁷⁵ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal) the maximum amount may be higher.

The consortium which applied to and received funding under HORIZON-CL6-2023-FARM2FORK-01-1: European partnership for accelerating farming systems transition - agroecology living labs and research infrastructures, is uniquely placed to submit a proposal to continue the partnership. Not only did this consortium submit the proposal leading to the identification of the partnership in the Horizon Europe strategic planning 2021-2024, it has also been implementing the partnership through two co-funded calls launched in year 2024 and several internal activities based on this planning and further to topic HORIZON-CL6-2023-FARM2FORK-01-1. In this context, the current consortium has particular expertise in relation to the objectives of the partnership, the activities to be implemented in particular financial support to third parties and internal activities clearly required/envisioned pursuant to initial proposal/partnership. In practice, another consortium could not continue the activities of the partnership underway without significant disruption to the ongoing activities, if at all.

The proposal submitted to this call should align with the partnership's co-created strategic research and innovation agenda. Activities should reflect a balanced proportion of financial support to third parties and of internal activities, including calls for research projects, setting-up an EU-wide network of agroecology living labs and research infrastructures, development of indicators, metrics, and tools to monitor the agroecology transition and sustainability performance, and supporting evidence-based policy-making at EU, national and regional level. Through its activities, the partnership should deliver and support the upscaling of concrete, ready-to-use tools, solutions and innovations for farmers in different pedo-climatic conditions and contexts, and ensure a wide-spread uptake of partnership's results by farmers and by all relevant stakeholders. These aspects should be reflected in the successive updates of the partnership's strategic research and innovation agenda.

The partnership should pool the necessary financial resources from the participating national (or regional) research programmes with a view to organising and implementing joint calls for transnational proposals resulting in grants to third parties, for which it should factor ample time to run the co-funded projects.

The partnership should seek to include additional partners, including from Member States and Associated countries not yet in the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-1. Through its activities, and by remaining open to accepting new partners, the partnership should devote efforts to promote agroecological farming also in countries where there is still limited understanding and uptake of the concept. Likewise, in setting up and building an EU-wide network of agroecology living labs, the partnership should ensure a balanced representation of pedo-climatic conditions and bio-geographical regions, with a view to cover a wide range of farming systems that are representative of the European agricultural sector. The partnership should cover issues pertaining to the agroecology transition in all agricultural production systems and approaches, including but not limited to conventional and organic farming. This will among others contribute to supporting the development of the organic farming sector and increasing its sustainability, as well as to ensuring a widespread adoption of agroecological practices across sectors across Europe.

Specific activities to strengthen the complementarities of the European partnership for accelerating farming systems transition - agroecology living labs and research infrastructures, with the related Horizon Europe Missions and Partnerships, identified in the proposal submitted by the coordinator of the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-1, as well as activities to enhance the partnership's collaborations at international level, should also be described.

While the award of a grant to continue the partnership in accordance with this call should be based on a proposal submitted by the coordinator of the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-1 and the additional activities (which may include additional partners) to be funded by the grant should be subject to an evaluation, this evaluation should take into account the existing context and the scope of the initial evaluation as relevant, and related obligations enshrined in the grant agreement.

Taking into account that the present action is a continuation of topic HORIZON-CL6-2023-FARM2FORK-01-1 and foresees an amendment to an existing grant agreement, the proposal should also present in a separate document the additional activities and any additional partners, to be covered by the award in terms of how they would be reflected in the grant agreement.

HORIZON-CL6-2025-02-FARM2FORK-02: Additional activities for the European partnership on animal health and welfare

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 120.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 120.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The proposal must be submitted by the coordinator of the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-2: European partnership on animal health and welfare, European Horizon Europe - Work Programme 2023-2024 Food, Bioeconomy, Natural Resources,</p>

	Agriculture and Environment. This eligibility condition is without prejudice to the possibility to include additional partners.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>If the proposal is successful, the next stage of the procedure will be grant agreement amendment preparations. If the outcome of amendment preparations is an award decision, the coordinator of the consortium funded under HORIZON-CL6-2023- FARM2FORK-01-2: European partnership on animal health and welfare will be invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>This action is intended to be implemented in the form of an amendment of the grant agreement concluded pursuant to topic HORIZON-CL6-2023-FARM2FORK-01-2.</p> <p>For the additional activities covered by this action:</p> <ul style="list-style-type: none"> • The funding rate is 50% of the eligible costs. This is justified by the pooling of proposers' in-kind contributions and in-house activities and by the nature of activities to be performed. • Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. • Financial support provided by the participants to third parties is one of the primary activities of this action in order to be able to achieve its objectives. The EUR 60 000 threshold provided for in Article 207(a) of the Financial Regulation No 2024/2509 does not apply. • The maximum amount of FSTP to be granted to an individual third party is EUR 10 000 000 for the whole duration of Horizon Europe⁷⁶. <p>The starting date of grants awarded under this topic may be as of the submission date of the application. Applicants must justify the need for a retroactive starting date in their application. Costs incurred from the starting date of the action may be considered eligible (and will be reflected in the entry into force date of the amendment to the grant agreement).</p>

⁷⁶ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal) the maximum amount may be higher.

<i>Total indicative budget</i>	The total indicative budget for the topic is EUR 120 million committed in annual instalments over the years 2025-2027 (EUR 40 million from the 2025 budget, EUR 40 million from the 2026 budget and EUR 40 million from the 2027 budget). The total indicative budget of the Partnership for the whole duration is EUR 180 million.
--------------------------------	---

Expected Outcome: The successful proposal is expected to further contribute to the expected outcomes specified in topic HORIZON-CL6-2023-FARM2FORK-01-2: European partnership on animal health and welfare, for continuation of the activities in line with already agreed outcomes.

Scope: The objective of this action is to continue to provide support to the European partnership on animal health and welfare identified in the Horizon Europe Strategic Plan 2021-2024 and first implemented under the topic HORIZON-CL6-2023-FARM2FORK-01-2: European partnership on animal health and welfare, and in particular to fund additional activities (which may also be undertaken by additional partners) in view of its intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation.

The consortium which applied to and received funding under HORIZON-CL6-2023-FARM2FORK-01-2: European partnership on animal health and welfare is uniquely placed to submit a proposal to continue the envisioned partnership. Not only did this consortium submit the proposal leading to the identification of the partnership in the Horizon Europe strategic planning 2021-2024, it has also been implementing the partnership through a co-funded call launched in year 2024 and a number of internal activities, including research projects, based on this planning and further to topic HORIZON-CL6-2023-FARM2FORK-01-2. In this context, the current consortium has unique expertise in relation to the objectives of the partnership, the activities to be implemented in particular through financial support to third parties and internal activities clearly required/envisioned pursuant to the initial proposal/partnership. In practice, another consortium could not continue the activities of the partnership underway without significant disruption to the ongoing activities, if at all.

The proposal submitted to this call should align with the partnership's co-created strategic research and innovation agenda. Activities should reflect a balanced proportion of financial support to third parties and of internal activities, including research projects, integrative activities, networking, training or other activities. Through its activities, the partnership should deliver and give rise to ready-to-use tools, solutions and innovations, seek uptake of results by farmers, veterinarians and all relevant stakeholders, and provide science-based policy advisory activities. The proposal should focus on additional priority activities and when duly justified, on continuation of on-going activities.

The partnership should seek to include additional partners, in particular from Member States and Associated countries not yet in the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-2.

The partnership should pool the necessary financial resources from the participating national (or regional) research programmes with a view to organising and implementing joint calls for transnational proposals resulting in grants to third parties, for which it should factor ample time to run the co-funded projects.

Specific additional activities to strengthen the complementarities of the European partnership on animal health and welfare with the related Horizon Europe partnerships, identified in the proposal submitted by the coordinator of the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-2, as well as activities to enhance the partnership's collaborations at international level, should also be described.

While the award of a grant to continue the partnership in accordance with this call should be based on a proposal submitted by the coordinator of the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-2 and the additional activities (which may include additional partners) to be funded by the grant should be subject to an evaluation, this evaluation should take into account the existing context and the scope of the initial evaluation as relevant, and related obligations enshrined in the grant agreement.

Taking into account that the present action is a continuation of topic HORIZON-CL6-2023-FARM2FORK-01-2 and foresees an amendment to an existing grant agreement, the proposal should also present in a separate document the additional activities and any additional partners to be covered by the award in terms of how they would be reflected in the grant agreement.

HORIZON-CL6-2025-02-FARM2FORK-03: Overcoming the barriers for scaling up circular water management in agriculture

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>

	If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B.

Expected Outcome: In line with the European Green Deal objectives for agriculture, the climate adaptation strategy and the EU water related policies, notably the Water Framework Directive and the Water Reuse Regulation, successful proposals will contribute to increasing the resilience of agriculture to water scarcity with improved circular water management systems and enable farmers and relevant actors to manage farming systems in a long-term sustainable and resource-efficient way, enhancing their ability to adapt to climate change, while lowering the pressure on water bodies, as described for this destination.

Project results are expected to contribute to all of the following expected outcomes:

- sustainable pathways to scale up the use of alternative water sources by farmers in agriculture in different contexts in the EU and Associated Countries (where relevant) are developed;
- enhanced knowledge is available to farmers on the long-term impact of alternative water sources for irrigation and other uses with special attention to emerging contaminants;
- resilience of farming systems to water scarcity is increased, especially in areas where droughts are becoming more frequent, longer and more intense, due to climate change;
- awareness and confidence of farmers and consumers in alternative water use in agriculture is increased.

Scope: According to the European Environmental Agency (EEA), water stress affects 30% of the EU population with an economic damage of up to EUR 9 billion annually. Droughts are increasing in frequency, magnitude and impact, and the affected area is expanding. Agriculture is the main water user in some Member States and Associated Countries.

Alternative water sources and storage systems (e.g., rainwater harvesting, storm water collection, water reuse and reclamation, brackish and sea water desalination, aquifer recharge, etc.) limit abstractions from surface waters and groundwater reducing the environmental footprint of agriculture and food systems, and provide a reliable water source for irrigation and other uses, strengthening its resilience. Some barriers still hinder a broader use of alternative water sources. For example, a lack of knowledge from farmers on the benefits and characteristics of other water supplies, financial models considering production and transport costs, seasonal variations of water quality with nutrient imbalances and salinity, heavy metals or emerging contaminants issues, or long-term impacts.

Proposals should:

- test different strategies and technologies for irrigation or for other agricultural purposes (including drinking water for livestock), using alternative water sources (considering the most feasible sources according to the specific conditions of availability, climate, soil, socio-economics, environment) in the long-term in real-life contexts across the EU and Associated Countries (where relevant) at a larger scale beyond small experimental sites, covering the whole water cycle in agriculture;
- identify and test different business models regarding financial viability and long-term economic sustainability (including cost-benefit analysis or agro-economic modelling) for the adoption of alternative water sources, considering different scenarios, pedo-climatic conditions and socio-economic contexts;
- evaluate the long-term impact of the use of alternative water sources on soil health, including the soil microbiome, crop productivity and quality, food and feed safety (especially for fresh-consumed products) and on freshwater resources and ecosystems (surface and groundwater), considering seasonal variations of water source quality (including persistent chemicals and microplastics' releases) and quantity, such as situations of extreme water scarcity;
- test and document cost-efficient methodologies and techniques to monitor most relevant quality and quantity parameters in real-time and/or to remove contaminants (e.g. using bio-filters) for a safe and efficient management of water from different sources, with particular attention to emerging contaminants especially in reclaimed water;
- identify societal, behavioural and regulatory challenges still hampering upscaling of alternative water sources' uptake for irrigation and development of suitable solutions to increase the uptake in practice;
- develop, test and make recommendations for improved and targeted incentives and policies at regional, national and European level to reduce financial, social and economic barriers for adoption and acceptance of circular water management in agriculture by farmers and consumers;
- enhance the dissemination of existing knowledge, by connecting actors, policies, projects and instruments to speed up adoption of solutions by practitioners, and by providing training and advice for farmers and demonstration activities. Complementarities with European and national AKIS knowledge channels or similar should be explored.

Proposals should benefit various farming systems/approaches, one of which should be organic farming.

Applicants should apply the most efficient, state of the art agricultural practices and technologies (including irrigation, soil and crop management, etc.) to ensure maximum impact.

This topic should involve the effective contribution of social sciences and humanities (SSH) disciplines, especially in the field of societal and behavioural sciences, and of adoption and acceptance processes.

Proposals must implement the multi-actor approach (MAA), involving at least scientists, companies working in the field of water management and agriculture, farmers and consumers, in order to co-create the knowledge and adapted solutions, and enhance the adoption process.

Proposals should include dissemination activities to increase awareness about the potential value for farmers, advisors and society at large and people of the results. In that sense, proposals should develop diverse practice-oriented dissemination materials, e.g., audiovisual materials, brochures, etc. presenting the R&I solutions, while exploring the use of relevant support services offered by the Commission, such as the Horizon Results Booster.

Proposals should ensure complementarities with other relevant activities carried out under Horizon Europe, including with the European Partnership on Agriculture of Data.

Regarding activities involving aquifer recharging, proposals should take into consideration guidelines provided by the Working Group Groundwater (one of the several groups under the umbrella of the Common Implementation Strategy for the Water Framework Directive), such as provided in the Guidance Document on Managed Aquifer Recharge under the Water Framework Directive.

Applicants are encouraged to tap into international expertise (particularly from Africa and the Mediterranean Area) where relevant. Complementarities with the PRIMA and Water4All partnerships should be explored.

The JRC could participate in this topic, applying its tools to support analysis, such as its integrated agro-economic modelling platform (iMAP) for scenario assessments, or specific water-related models.

HORIZON-CL6-2025-02-FARM2FORK-04: Enhancing plant protein production to bolster the resilience of agricultural systems and EU self-sufficiency in plant protein used as feed

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 11.00 million.
<i>Type of Action</i>	Research and Innovation Actions

<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).⁷⁷.</p>

Expected Outcome: In line with the European Commission’s food security communication⁷⁸, the successful proposals will support the reduction of the EU's import dependency on key agricultural products and inputs by boosting EU plant proteins production and use for feed while increasing the sustainability and resilience of Europe’s agricultural systems.

Successful proposals should support the objectives of the common agricultural policy (CAP), as well as the EU Green Deal strategies, the EU climate action⁷⁹, and the communication on boosting biotechnology and biomanufacturing in the EU.

Successful proposals will deliver on the expected impacts of the destination by enabling agri-food systems to contribute to EU strategic autonomy by fostering food and nutrition security and safeguarding long-term sustainability of EU farming systems.

Projects results are expected to contribute to all of the following expected outcomes:

- farmers capacity to sustainably produce and use protein crops for feed in the EU is fostered;
- farmers and advisors understanding about protein crops cultivation and share in animals’ diets is improved;
- knowledge and innovation of the diverse actors across the protein crops value chain on preservation and transformation processes of protein crops for feed is increased;

⁷⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

⁷⁸ COM(2022) 133 final (<https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52022DC0133>)

⁷⁹ COM(2022) 133 final ([EUR-Lex - 52022DC0133 - EN - EUR-Lex](https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52022DC0133))

- contributions to move towards a more competitive EU protein crop sector are provided, rendering agricultural systems more resilient to climate change, external shocks and supply chain disruptions, while more committed to biodiversity preservation and conservation.

Scope: Currently, protein crops⁸⁰ cultivation, such as grain legumes and fodder legumes, only accounts for a small proportion (around 3%) of the EU agricultural area. While there is little shortage in the protein supply for food purposes in the EU, there is a more important shortage in the feed sector⁸¹, resulting in high levels of imports (especially of soya) originating from countries often with different environmental and social standards. It is, therefore, strategic for the EU to expand the domestic production of protein crops, including in mixed crops⁸² as a feed source.

Increasing the EU' plant protein autonomy would allow for reducing imports of protein feed from third countries, and thereby, would contribute to the decrease of environmental and climate footprints. Additionally, promoting locally produced protein crops would contribute to the sustainable development of EU rural areas, in line with the EU long-term vision on rural areas, for example through the development of new regional value chains that are self-sustaining. Developments in this area should at the same time be coherent with the new Regulation on deforestation-free products⁸³ by reducing the impact of plant protein feed needs on deforestation and forest degradation globally.

The benefits of increasing the share of protein crops, in particular nitrogen-fixing leguminous crops, in EU farming systems, are also reflected in the climate and the environment, through the improvement of soil quality (restoring and enhancing biodiversity, increasing soil fertility, cycling nutrients, improving soil structure, increasing water retention capacity, etc.) which in turn improves the sustainability and resilience of farms.

Proposals should:

- improve the knowledge about local production and utilization of various available protein crops used for animal feed across different regions;
- identify gaps, needs, barriers and enablers for taking up and scaling up sustainable protein crops intended for feed use in the EU, from production to processing and trade levels. Draw up a strategic roadmap with research and innovation priorities based on the identified challenges, including for the optimization of manufacturing processes of locally produced plant protein into feed;
- identify, test and showcase biodiversity-friendly management practices in farming systems (crop production and livestock raising) containing protein crops intended for

⁸⁰ In this topic, protein crops refer to crops with a high content of proteins which can be used for animal feed.

⁸¹ [EC \(2023\), EU agricultural outlook for markets, 2023-2035](#)

⁸² Cereals and grain legumes or grass and fodder legumes are examples of mixed crops used for feed (maize and beans, clover and ryegrass, barley and peas, etc).

⁸³ Regulation - 2023/1115 - <http://data.europa.eu/eli/reg/2023/1115/oj>

feed use. Prioritise the use of climate and pest resilient protein crops adapted to different EU pedoclimatic conditions;

- assess the social, economic and environmental impacts and trade-offs for up- and downstream actors of the feed value chain, of the increased share of different protein crops in different farming systems;
- generate comprehensive capacity building material, trainings and information tools for farmers, advisors and extension services, including a visualization tailored to different geographical regions and pedoclimatic zones in the EU. Address the most cost-effective production systems with protein crops and combinations of crops, based on local agronomic features as well as on local market data such as demand for feed.

All farming approaches, including organic farming, are in the scope of this topic.

Proposals must implement the 'multi-actor approach' and ensure adequate involvement of the main actors relevant for domestic plant protein feed value chain, such as farmers, other land managers, advisors, feed manufacturers, industry (including small and medium enterprises), policy-makers, etc. Proposals should ensure an effective knowledge, co-creation and exchange between researchers and field actors as well as with the whole feed value chain actors concerning the benefits, challenges and opportunities of producing and integrating local protein crops for feed in the EU. To this end, proposals should develop diverse practice-oriented dissemination materials presenting R&I solutions (e.g. audiovisuals, brochures, fact sheets, etc) and should share all generated data and knowledge through existing digital tools or platforms.

Proposals should include a dedicated task, appropriate resources, and a plan on how they will collaborate with the other project funded under this topic and with relevant activities to be carried out under topic HORIZON-CL6-2024-FARM2FORK-02-5-two-stage⁸⁴ and HORIZON-CL6-2025-02-FARM2FORK-06⁸⁵. Proposals should ensure coherence and complementarity with ongoing relevant Horizon Europe projects and with relevant activities of the Horizon Europe Partnership 'Agroecology'. Likewise, proposals should capitalise on existing relevant research findings and tools, such as those resulting from Horizon 2020 projects.

The possible participation of the JRC in the project could consist of support analysis, applying its tools such as the integrated agro-economic modelling platform (iMAP), for scenario assessment.

⁸⁴ HORIZON-CL6-2024-FARM2FORK-02-5-two-stage: 'Animal nutritional requirements and nutritional value of feed under different production management conditions', under [wp-9-food-bioeconomy-natural-resources-agriculture-and-environment_horizon-2023-2024_en.pdf \(europa.eu\)](#).

⁸⁵ HORIZON-CL6-2025-02-FARM2FORK-07: 'Improving grassland management in European livestock farming systems', under this work programme.

HORIZON-CL6-2025-02-FARM2FORK-05: Developing innovative phytosanitary measures for plant health - focus on systems approach for pest risk management

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁸⁶.</p> <p>Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: Successful proposals should contribute to the objectives of the common agricultural policy, as well as to the European Green Deal's objectives for resilient and sustainable agri-food systems, the EU biodiversity strategy for 2030 and support Regulation (EU) 2016/2031⁸⁷ on protective measures against pests of plants.

⁸⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

⁸⁷ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:32016R2031>

Successful proposals will deliver on the expected impacts of the destination by enabling farmers and relevant actors in the agricultural sector to manage sustainable, efficient, profitable, circular, low greenhouse gas-emitting farming systems contributing to climate-neutrality and climate-resilience.

Project results are expected to contribute to all of the following expected outcomes:

- cost-effective measures using a systems approach, implemented across the entire agri-value chain, are developed and tested, with a thorough assessment of their combined effects and interactions to ensure efficiency and sustainability;
- the capacity of farmers and actors in the agri-value chain to manage pest risks more effectively, in an environmentally friendly and fair manner, across various agricultural and trade contexts is strengthened through collaborative efforts, with particular attention to the challenges posed by climate change;
- scientific support, recommendations and policy advice are provided to enhance plant health policies, fostering international cooperation and strengthening global efforts to combat plant pests.

Scope: Plant health is critical for agriculture, forestry, ecosystems, and biodiversity on a global scale. However, maintaining healthy crops is becoming increasingly challenging due to climate change, biodiversity loss, globalisation, and international trade, which accelerate the spread of pests and diseases. These threats can severely harm crops, native plants, and the environment, jeopardising agricultural sustainability, biodiversity, and food security.

Effective plant health measures play a vital role in protecting sustainable agriculture and enhancing global food security, safeguarding the environment, forests, and biodiversity, and facilitating economic and trade development. A systems approach to plant health is a comprehensive pest risk management strategy that integrates different measures, at least two of which act independently, with cumulative effect and of high efficacy⁸⁸. The systems approach is designed to effectively meet phytosanitary import requirements, allowing for the consideration of measures and procedures that contribute to effective pest risk management throughout the entire value chain, from pre-planting and pre-harvest stages to harvest, post-harvest handling, transport, and distribution. By integrating multiple measures, this approach enhances the ability to manage pest risks comprehensively and sustainably, ensuring the health of plants and the safety of agricultural products across borders. Proposals should target one or more plant pests⁸⁹, providing a clear explanation and justification for the selected pest(s) in alignment with the proposal's objectives and the topic's expected outcomes.

Proposals should:

⁸⁸ International Standard for Phytosanitary Measures No. 14. The use of integrated measures in a systems approach for pest risk management [<https://www.ippc.int/en/publications/607>]

⁸⁹ A pest is defined here as any species, strain or biotype of plant, animal or pathogenic agent injurious to plants or plant products (EU legislation, Regulation 2016/2031)

- develop innovative climate and environmental-friendly measures for a highly efficacious pest risk management to be implemented across the value chain to meet the phytosanitary requirements in a variety of socio-economic contexts;
- evaluate risk reduction, cost-effectiveness, scalability, and sustainability, of each proposed innovative measures;
- design and validate protocols targeting systems approaches, considering the whole value chain;
- assess the combined effect of all measures and their interactions across the value chain, including cost-effectiveness, scalability, and overall sustainability (economic, social and environmental aspects);
- support capacity building and training of the actors within the value chain, enabling the large-scale adoption of safe, innovative, cost-effective measures.

International cooperation is strongly encouraged. Results should benefit diverse farming systems/approaches, such as conventional and organic farming.

Proposals must implement the ‘multi-actor approach’ including a range of actors to ensure that knowledge and needs from various sectors such as research, plant health services, farming/forestry sectors, advisory services, and other relevant actors of the value chain are brought together. This topic should involve the effective contribution of social sciences and humanities (SSH) disciplines.

Proposals may provide financial support to third parties (FSTP) to, for instance, develop, test and demonstrate innovative measures. A maximum of 10% of the EU funding should be allocated to this purpose. Consortia need to define the selection process of organisations, for which financial support may be granted.

The possible participation of the JRC in the project could involve supporting the analysis to understand the acceptance and adoption of innovative measures across the value chain.

Proposals should ensure coherence and complementarities with ongoing relevant Horizon Europe projects and capitalise on existing relevant research findings and tools, included those developed under previous research projects.

The proposals should include a dedicated task in the workplan and appropriate resources to collaborate with the projects funded under this topic.

HORIZON-CL6-2025-02-FARM2FORK-06: Improving grassland management in European livestock farming systems

Call: Cluster 6 Call 02 - single stage
Specific conditions

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>

Expected Outcome: Proposals should contribute to the objectives of the common agricultural policy (CAP), to the EU Green Deal's goals for resilient and sustainable agri-food systems, the EU biodiversity strategy, the Nature Restoration Regulation, the climate policy, and the EU action plan for the development of organic production. Proposals will also contribute to the expected impacts of the destination by enabling farmers and relevant actors in the agricultural sector to manage sustainable, efficient, profitable, circular, low greenhouse gas-emitting farming systems contributing to climate-neutrality and climate-resilience.

Project results are expected to contribute to all the following expected outcomes:

- the availability of data, models and methodologies to measure, monitor, assess and valorise the multifunctionality of grassland farming systems is improved, benefitting all relevant actors involved in grassland management;
- the availability and accessibility for, and use by farmers of sustainable grassland management knowledge, innovative solutions/practices and strategies is increased;
- networking, participatory approaches and knowledge mobilisation among relevant stakeholders for sustainable grassland management is enhanced;
- scientific support and recommendations for the development, implementation and evaluation of EU policies relevant for grasslands, including the CAP, the EU climate policy and the Nature Restoration Regulation is provided.

Scope: Well managed grasslands are key for the sustainability of the EU's and Associated Countries agriculture and for the delivery of multiple ecosystem services, including water purification, erosion and flood prevention, carbon sequestration and food production, and for preserving biodiversity. Grasslands can also play an important role as protein crop supply for feed. They constitute key elements of European socio-cultural landscapes. However, grasslands maintenance and functions in the EU are under threat for reasons that may include sub-optimal input management, intensification, farm concentration, climate change and abandonment.

Ensuring the sustainable management of grasslands and preventing their disappearance is essential for a sustainable farming sector, for healthy nature, and for human wellbeing in the EU and Associated Countries. This calls for increasing scientific evidence on grasslands across Europe, including on their performance, benefits and trade-offs (e.g., climate, environment, biodiversity, socio-economic). There is also a need to further develop and demonstrate approaches that allow assessing the climate change adaptation and mitigation potential of grazing livestock systems, along with other benefits they can deliver. Moreover, farmers need new knowledge, innovative solutions, support and advice to sustainably maintain grasslands, and to restore degraded grassland habitats.

In this context, the role of and coherence among policies is crucial. Research and Innovation have a key role to play in demonstrating that properly managed grasslands systems are viable options for farmers.

This topic focuses on grazing livestock systems and involves both permanent grasslands, as defined in Regulation (EU) 2021/2115⁹⁰, and temporary grasslands, understood as arable land with grasses, or grass mixtures with other species, that has been included in the crop rotation before reaching the five years that are necessary to be considered as permanent grassland.

Proposals should address all the following activities and should cover various farming systems/approaches, one of which should be organic farming:

- develop and operationalise methodologies to measure, monitor, benchmark and assess the performance of grassland farming systems in different contexts in terms of the delivery of ecosystem services (e.g., productivity, carbon sequestration, nutrient cycling, resilience to climate change, soil health, forage value), biodiversity restoration, reducing emissions of greenhouse gas (GHG) and air pollutants, and social aspects such as profitability for farmers and co-benefits for other stakeholders. This should include analysis of synergies and trade-offs between the above elements in the short- to medium- and long-terms. The benchmark of the performance of grassland farming systems should also include comparison between different levels of grass-based ruminants' farming systems in similar pedo-climatic contexts;
- develop new knowledge, innovative solutions/practices, and manageable strategies for creating, maintaining and restoring grasslands systems that are productive, cost-

⁹⁰ <http://data.europa.eu/eli/reg/2021/2115/oj>

effective, sustainable, environmentally sound, and resilient to a changing climate. These strategies should include assessment of innovations in the social, environmental and economic domains, such as market uptake by value chain actors and consumers through, for instance, standards and labelling;

- develop farm- and landscape level decision tools and strategies to support farmers in managing grasslands sustainably, to improve forage productivity and quality and livestock production, and the delivery of other ecosystem services, based on documented cases or in-situ demonstrators;
- organise activities to mobilise the sharing of knowledge (scientific, practical and traditional), and networking among relevant actors. Proposals should develop practice-oriented dissemination materials, e.g. audiovisual materials, brochures, etc., presenting solutions, and make them publicly available;
- assess relevant public policies at various levels and provide policy recommendations to improve their impact and coherence in supporting sustainable grassland systems;
- perform economic cost-benefit analysis of applying the R&I solutions developed during the project and explore the potential of financing or incentive tools specific to the sustainable management of grassland farming systems, including lower-polluting and lower-GHG-emitting grazing livestock systems, and where relevant, restoration of degraded grasslands habitats.

Proposals must implement the 'multi-actor approach' and ensure adequate involvement of the main stakeholders involved in grassland management in Europe, e.g., farmers (including farmers managing protected grassland habitats), shepherds and related organisations notably in the ruminants' sectors, advisors, policy-makers, landscape and territorial planners, industry including small and medium enterprises, social economy actors, consumers, environmental Non-Governmental Organisations, etc.

Proposals should capitalise on research findings and tools, included those developed under previous research projects. Proposals should cover a variety of grasslands systems in different pedo-climatic conditions and biogeographical regions across the EU and consider marginal areas at risk of abandonment or with other constraints, and areas in intensification trends towards arable crop farming. Activities should allow for the comparison of performance and sustainability between grasslands systems presenting mixtures of plant species, including legumes, compared to mono-species grasslands. The possible contribution of the JRC could involve connecting with spatial datasets on livestock grazing density and grassland management intensity available in its portfolio. Furthermore, Eurostat⁹¹ related data should also be considered.

Proposals should include a dedicated task, appropriate resources and a plan on how they will collaborate with other projects funded under this topic. Proposals should, where relevant, consider the use of Earth Observation data. Proposals should ensure complementarities with

⁹¹ <https://ec.europa.eu/eurostat/web/experimental-statistics/geospatial-data-agricultural-census>

other relevant activities carried out under other initiatives in Horizon Europe, including those funded under the topics HORIZON-CL6-2025-02-CLIMATE-04, HORIZON-CL6-2025-02-FARM2FORK-04, as well as with relevant activities of the Horizon Europe Partnership ‘Agroecology’ and other relevant future Horizon Europe Partnerships and R&I projects.

In order to enhance the societal and long-term impact of the activities beyond the life cycle of the project, proposals should apply social innovation and citizen engagement and include a strong involvement of citizens/civil society, together with academia/research, industry/SMEs/start-ups and government/public authorities.

This topic should involve the effective contribution of social sciences and humanities (SSH) disciplines. To achieve the objectives of this topic, international cooperation is encouraged.

HORIZON-CL6-2025-02-FARM2FORK-07: Fostering animal breeding and genetics for climate change adaptation and mitigation, improved robustness and resilience

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Technology Readiness Level</i>	Specified activities are expected to achieve TRL 7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the</p>

	Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁹² .
--	---

Expected Outcome: Successful proposals will contribute to more sustainable and environmentally responsible land-based agricultural production systems, which are among the objectives of the EU Green Deal, including the methane strategy, the action plan for the development of organic production and the common agricultural policy (CAP) among others. The proposals will help tackle the issues linked to emissions from livestock and will support the EU Members States and Associated Countries in implementing cost-effective mitigation efforts and better quantifying their expected impacts. Successful proposals will also contribute to the expected impacts of the destination by enabling farmers and relevant actors in the agricultural sector to manage sustainable, efficient, profitable, low greenhouse gas emitting farming systems contributing to climate-neutrality and climate-resilience.

Project results are expected to contribute to all the following expected outcomes:

- the understanding by all relevant actors involved in livestock breeding practices and programmes of interactions between management, genotype and environment is enhanced, with the aim of improving the sustainable management of livestock population and achieving efficient animal/feed recoupling from farm to landscape scale;
- genomic and phenotypic characteristics that could be applied in breeding schemes for the selection and use of animals having desirable traits for lower greenhouse gas emissions and other climate-change and environmental related challenges for the livestock sector are widely known and considered by breeders;
- contribution of breeding and genetics in livestock to sustainability and production efficiency, including trade-offs among other breeding objectives are known by all relevant actors involved in livestock breeding practices and programmes, where improvement paths are undertaken and options to overcome obstacles to their adoption are provided;
- scientific support and recommendations/policy advice for the development, implementation and evaluation of EU policies and strategies, including the CAP and other policies relevant for sustainable livestock production, is provided.

Scope: Breeding and genetic improvements are among the tools with potential to help livestock to increase production efficiency and sustainability, to adapt to the changing environment (e.g., harsh climates, health hazard, changes in feed quality or availability) as well as to help to mitigate emissions. By selecting specific traits that are important for adaptation and mitigation purposes, and integrating them in breeding programmes, livestock farmers and breeders can contribute to more sustainable livestock farming systems. Balancing

⁹² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

multiple breeding objectives, including reduction of methane emissions and other environmental considerations, is complex and requires careful consideration of trade-offs, including with animal health and welfare. Proposals should enhance animal breeding programmes by identifying, validating and upscaling easily accessible and low-cost protocols, which can be used at farm level in diverse environments and production systems, for measuring and selecting existing and new traits with low environmental and climate footprint.

The aim is to optimise the selection of animals with genotypes that are best suited to thrive in different production systems and environmental conditions, with different diets and rumen/gut microbiota by incorporating adaptation and mitigation objectives into breeding and sustainable management decisions.

Proposals should address all the following activities and should cover various terrestrial livestock farming systems/approaches, one of which should be organic farming:

- identify new traits, including proxy indicators from -omic or meta-omic data, that consider genotype-environment interactions on the whole animal lifespans to renew breeding goal, i.e. desirable traits for lower greenhouse gas emissions and other climate-change related challenges, validate and integrate them into indexes used to benchmark farm performance;
- develop tools/systems/methods to measure genotype-environment interaction and traits of interest, predicting the breeding value at animal and population levels in diverse farming conditions, while maintaining genetic diversity;
- demonstrate in an operational environment breeding programs and management practices for improving robustness, lifetime efficiency and resilience, including the contribution of livestock to climate change mitigation efforts and the adaptation to climate change conditions (TRL 7) while considering trade-offs including with animal health and welfare and demonstrating gender-responsive strategies where relevant;
- analyse the cost effectiveness of the identified breeding programmes and assess private and/or public incentives or rewarding schemes for the use of certain mitigation-related traits currently used in some European regions or countries, with their advantages, limits, and ways to overcome them.

Proposals must implement the 'multi-actor approach' and ensure adequate involvement of the main stakeholders involved in livestock breeding in Europe, including farmers, breeders, advisors, private sector/industry, and policy-makers.

The proposal should include a dedicated task, appropriate resources, and a plan on how it will collaborate with other projects funded under this topic, and ensure coherence and complementarities with ongoing relevant Horizon 2020 and Horizon Europe research projects, including relevant infrastructures. Proposals should interact with relevant structures or organizations at European level and beyond such as FAO, Livestock Environmental

Assessment and Performance Partnership (LEAP, FAO)⁹³, Global Research Alliance on Agricultural Greenhouse Gases⁹⁴.

To better address the requirements of the topic, international cooperation is encouraged.

HORIZON-CL6-2025-02-FARM2FORK-08: Exploring the potential of controlled environment agriculture (CEA)

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025)⁹⁵.</p> <p>Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: By exploring the potential of controlled environment agriculture (CEA) as a transformative contribution to global food security and sustainability challenges, the successful proposal will support the common agricultural policy (CAP), the European Green Deal's goals for resilient and sustainable agri-food systems and the EU Climate Law. It will also deliver on the expected impact of the destination by enabling farmers and relevant actors in the agricultural primary sector to manage sustainable, efficient, profitable, circular and low emissions farming systems contributing to climate-neutrality and climate-resilience. This will be achieved by new knowledge, innovation and the upscaling and replication of existing and

⁹³ <https://www.fao.org/partnerships/leap/en/>

⁹⁴ <https://globalresearchalliance.org/research/livestock/networks/>

⁹⁵ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

new sustainable farming approaches while making farming a professionally attractive and remunerative life choice.

Project results are expected to contribute to all the following expected outcomes:

- a holistic understanding of CEA is provided, comprising technological needs, trade-offs, sustainability, societal and environmental impacts and policy implications;
- the knowledge of CEA sustainability is advanced, in its economic, environmental and societal dimensions (profitability, energy efficiency, greenhouse gas emissions (GHG), environmental sustainability and circularity, social dimension, etc.);
- novel and diverse crop varieties with potential in CEA are identified, and next generation of CEA systems are explored;
- adoption, expansion and uptake of CEA best practices are enhanced.

Scope: Controlled Environment Agriculture (CEA) refers to any form of agriculture that controls and optimises environmental conditions such as temperature, humidity, carbon dioxide, light or nutrient concentration. Examples of CEA include greenhouses, vertical farms, grow rooms, building-integrated agriculture, hydroponics, aquaponics, aeroponics and other practices where technological advancements enable precise regulation of growing conditions farming. Optimising CEA offers advantages in terms of resource efficiency, environmental sustainability and crop quality, providing a promising alternative to traditional agriculture for meeting the growing global demand for food, especially in the face of climate change and urbanisation. More research on CEA is essential to address its challenges, from addressing technological gaps to expanding crop diversity and reducing environmental impacts, so to unlock its full potential as a sustainable solution for future food production.

Proposals should:

- assess the state-of-the-art technologies and innovations in CEA, evaluating their effectiveness, assessing resource efficiency (including energy and water demands) and identifying opportunities for optimisation through technological innovations and management practices;
- analyse the socio- economic feasibility and viability of implementing CEA systems at different scales and evaluating their cost-effectiveness compared to conventional agriculture. Analysing the economic viability of sustainable CEA practices.
- investigate the environmental sustainability and environmental footprint⁹⁶ of CEA systems (including GHG emissions);

⁹⁶ Commission Recommendation (EU) 2021/2279 on the use of the Environmental Footprint methods to measure and communicate the life cycle environmental performance of products and organisations

- assess the current state of crop varieties grown in CEA systems, identifying gaps and opportunities for the development of novel crop varieties, including innovation in plant variety testing, and challenges hindering the adoption of novel crop varieties in CEA;
- provide insights into the future trajectory of CEA, examining emerging trends, investigating technological innovations (like IoT, artificial intelligence, robotics, biotechnologies, etc.), and their implications for sustainable food production in the coming decades and the farming profession therein. Identify key challenges hindering CEA adoption and provide strategies for enhancing the expansion of best practices in CEA.

The involvement of SMEs is essential for this topic. Proposals may involve financial support to third parties, particularly for SMEs providing and/or developing testing, or validating the proposed innovative technologies/solutions. A maximum 30% of EU funding should be allocated to this purpose.

Proposals should capitalise on relevant research findings and tools, included those developed under previous research projects.

HORIZON-CL6-2025-02-FARM2FORK-09: Strengthening the EU crop breeding research and innovation ecosystem for competitive, resilient, and sustainable agriculture

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ⁹⁷ .

⁹⁷ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link:

Expected Outcome: Successful proposals should contribute to the objectives of the common agricultural policy, the European Green Deal's goals for resilient and sustainable agri-food systems and ensure the long-term competitiveness and sustainability of the farming sector within planetary boundaries. Proposals should also support the Commission communication on: Building the future with nature: Boosting Biotechnology and Biomanufacturing in the EU⁹⁸ and should contribute to the expected impacts of the destination by enabling farmers and relevant actors in the agri-food sector to manage sustainable, efficient, profitable, circular, low greenhouse gas-emitting farming systems contributing to climate-neutrality and climate-resilience.

Projects are expected to contribute to all the following expected outcomes:

- enhanced critical understanding and applicability of funding landscapes and financing models at national, regional and EU levels for plant breeding, is achieved, leading to more efficient coordination and streamlining of research and innovation actions among public and private actors;
- a co-creative environment is established, enabling stakeholders to collaboratively identify and prioritise shared research gaps and infrastructure needs for crop breeding, ensuring coordinated research efforts at national, regional, and EU levels;
- trans-national R&I cooperation between the public and private breeding sector and the research community is supported, focusing on shared research priorities, critical and emerging technologies, and aligning efforts to address key challenges in crop breeding;
- market access processes of new, improved varieties are facilitated, addressing identified gaps and development needs.

Scope: Crop production faces growing challenges, including the urgent need to adapt to climate change, enhance water and nutrient efficiency, protect biodiversity, improve soil health, reduce environmental impacts, and ensure food security and resilience. Tackling these complex issues demands innovative solutions and the conservation and sustainable use of plant genetic resources to develop resilient and adaptable crops. Prioritising diversification, resilience, and ecological approaches—including organic farming—will strengthen sustainable farming systems and boost the overall resilience of agriculture.

Support for smart, future-oriented plant breeding programs that prioritise traits enhancing crop resilience, sustainability, and adaptability, is a key objective for the coming years, aimed at strengthening food security. To achieve these goals, it is essential to ensure that companies, particularly small and medium-sized enterprises (SMEs) in the breeding sector, have access to cutting-edge scientific expertise, modern breeding technologies, and a highly skilled workforce. This will drive innovation and ensure that the latest advances benefit both farmers and the entire breeding community. Additionally, market access process for new varieties,

https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

⁹⁸ COM (2024)137 final.

including variety testing and registration, are critical in realising these benefits, and the research and development needs in relation to prioritised traits and values for cultivation should be identified.

Better coordination of research activities is crucial to overcome the current fragmentation of public and private research efforts. Strengthening collaboration across international, regional, and national levels will help integrate the needs of farmers, breeders, researchers, industry stakeholders, and society at large. A more connected and cohesive approach has the potential to enhance the efficiency of the research and breeding ecosystem, streamline innovation processes, align them with the needs of all stakeholders, and support the competitiveness of the agri-food value chain.

Proposals should:

- conduct a comprehensive mapping of the relevant plant breeding needs of farmers, breeders, industry and society, and related activities within the EU;
- evaluate the infrastructure available, including state-of-the-art infrastructure and demonstration facilities, and identify gaps that need to be addressed and the opportunities presented to support cutting-edge research and breeding activities, suitable to cover the needs of different agricultural sectors, including market access;
- provide evidence and insights on how current funding sources and financial models at EU, regional, and national levels are mobilised to support research and innovation in the plant breeding public and private sectors;
- assess adoption and implementation of participatory approaches for breeding activities and provide insights on integrating these methods, highlighting pathways for involving farmers, end-users, and other stakeholders to ensure that breeding outcomes meet diverse agricultural, environmental and societal needs;
- establish a structured framework for an EU-wide network that promotes close cooperation among research and innovation actors, including funders, research institutions, and infrastructure providers, alongside the public and private plant breeding sectors. This framework could be developed by coordinating and integrating existing networks and initiatives, creating a unified platform to facilitate collaboration, knowledge exchange, and joint initiatives;
- develop a strategic R&I roadmap that outlines priorities for plant breeding research and innovation at the EU level. Prepare the groundwork for potential action aimed at fostering cooperation, aligning efforts, and advancing the public and private plant breeding sectors.

Particular attention should be paid to minor, underutilised and permanent crops. All farming systems and approaches, including organic farming, are within scope. Specific considerations should be made for organic varieties and organic heterogeneous materials to ensure their unique needs are adequately addressed.

Proposals should consider the perspectives and needs of the different 27 EU Member States to ensure a high level of representation, while also considering relevant global initiatives, such as the Kunming-Montreal Global Biodiversity Framework (GBF)⁹⁹.

Proposals should ensure coherence and complementarity with ongoing relevant Horizon Europe projects, including the Agroecology partnership, and capitalise on existing relevant research findings and tools, such as those resulting from the Horizon 2020 and Horizon Europe projects. Collaboration with European research infrastructures such as AnaEE-ERIC, EMPHASIS or other relevant research infrastructures¹⁰⁰ is encouraged.

Enabling sustainable fisheries and aquaculture

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-FARM2FORK-10: Diversifying aquaculture production with emphasis on low-trophic species

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: In the frame of the EU's farm to fork strategy, the EU strategic guidelines for sustainable aquaculture for the period 2021 to 2030, the EU algae initiative and the food 2030 R&I policy framework, successful proposals will contribute to the impact of this Destination on sustainable fisheries and aquaculture.

Project results are expected to contribute to all of the following expected outcomes:

- consumers have access to a variety of edible aquatic species produced in the EU and in Horizon Europe Associated Countries¹⁰¹;

⁹⁹ Notably its target 13 on fair and equitable sharing of benefits that arise from the utilization of genetic resources.

¹⁰⁰ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

¹⁰¹ https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/common/guidance/list-3rd-country-participation_horizon-euratom_en.pdf

- aquaculture industry has access to new and improved technologies to enhance the competitiveness and profitability of the sector;
- reduced environmental impact of the sector, becoming resilient and climate-adaptive and contributing to climate change mitigation;
- increased information available to consumers to enhance their literacy in relation to the nutritional and environmental benefits of food produced in aquatic ecosystems;
- economic growth and creation of jobs in coastal and rural areas.

Scope: Aquaculture is booming globally but in the EU is almost stagnating. The “Strategic Guidelines for a more sustainable and competitive EU aquaculture for the period 2021 to 2030” (COM(2021)236 final) identify diversification as a key area for further work in conjunction with supporting the farming of existing species. The guidelines underline that the EU aquaculture sector has great scope for further diversification, not only in the farming of promising new species (notably diversification into non-fed and low-trophic species with a lower environmental footprint), but also in production methods such as integrated multi-trophic aquaculture (IMTA) and organic aquaculture. The guidelines therefore promote the development of IMTA, organic aquaculture and the diversification to lower-trophic species alongside supporting the existing production of finfish and shellfish species.

Algae and shellfish have a huge market potential but are not always well-known to the consumers. EU imports more than 60% of the seafood consumed, with algae imports alone worth 0,5 billion EUR.

The scope of this topic includes all possible edible aquatic organisms with preference for low-trophic species which, in the frame of this topic, are photosynthetic or herbivorous or un-fed species. There is also preference for fish farming that relies on feed ingredients low in fish meal and oil and/or produced in the region where the farm is situated or in neighbouring to the farm regions, as well as feed ingredients derived from circular practices, such as, the use of wastes or by-products.

Aspects of sustainability, including circularity and zero waste, in particular in relation to the achievement of good environmental status, should also be addressed following a life cycle approach and potentially applying Environmental Footprint methods as described in Recommendation (EU) 2021/2279. Issues of fair pricing as well as regional particularities should also be addressed. Research could include aspects of feeding, breeding but also health and welfare issues as well as economic issues and issues of consumers’ acceptance. Regulatory aspects and legal barriers regarding the approval of novel feed ingredients or the licencing of new aquaculture farms should also be considered. Collaboration with European research infrastructures such as EMBRC ERIC and with accredited laboratories is encouraged.

Proposals should take into account, when applicable, the work done under the DIVERSIFY¹⁰² FP7 project, the Horizon 2020 AquaVitae and ASTRAL projects as well as the IMPRESS, NOVAFOODIES, INNOAQUA, ULTFARMS, OLAMUR, AlgaePro BANOS, LOCALITY, VeriFish, Mr.Goodfish3.0 and EUAqua.Org Horizon Europe projects and relevant national and regional projects.

This topic should involve the effective contribution of Social Sciences and Humanities (SSH) disciplines. International cooperation is encouraged for win-win outcomes and mutual benefits.

HORIZON-CL6-2025-02-FARM2FORK-11: Towards modern, integrated, and effective fisheries monitoring, control and surveillance (MCS) systems

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: In line with the common fisheries policy and in particular the Data Collection Framework (DCF)¹⁰³, the revised Control Regulation¹⁰⁴, the farm to fork strategy goals, the food 2030 R&I policy framework, the EU biodiversity strategy and in particular its target 15, the EU Marine Strategy Framework Directive and the EU action plan on protecting and restoring marine ecosystems for sustainable and resilient fisheries, successful proposals will contribute to the impact of this Destination on sustainable fisheries and aquaculture.

Project results are expected to contribute to all of the following expected outcomes:

¹⁰² <https://cordis.europa.eu/project/id/603121>

¹⁰³ Regulation EU 2017/1004, <http://data.europa.eu/eli/reg/2017/1004/oj>.

¹⁰⁴ Regulation EU 2023/2842, <https://eur-lex.europa.eu/eli/reg/2023/2842/oj>.

- improve data collection (including position and catch data) for small scale fisheries (SSF)¹⁰⁵, recreational fisheries¹⁰⁶ and long-distance fisheries, i.e. EU fleets operating beyond EU waters¹⁰⁷, while reducing the costs of data collection and analysis;
- improve efficiency, save costs, and advance fisheries monitoring, surveillance, control and enforcement technologies to fight illegal, unreported and unregulated (IUU) practices in SSF, recreational fisheries and long-distance fisheries;
- provide effective and, where possible, real-time tools for monitoring fishing operations, including for the implementation of technical measures, for mitigation requirements for target and bycatch species, as well as for sensitive species and for comparing and matching logbook and/or landing declaration data with data collected and reported by observers on board;
- increase and enhance data collection resolution while exploring the potential of interconnecting vessel tracking and e-logbooks to improve interoperability and expand their usage in SSF and long-distance fisheries;
- contribute to the standardisation on how data are collected and the harmonisation of implementing procedures and quality control for collecting and processing data with a view to using these data in fisheries management and improving the reliability of scientific advice;
- improve the mechanisms for sharing fisheries dependent data among fisheries management authorities and institutions formally charged with provision of scientific advice;
- improve the digital readiness of SSF, recreational fisheries and long distance fisheries by identifying solutions such as business models that encourage and enhance fishers' adoption of digital technology as well as data sharing, through distribution of incentives and risks among stakeholders (i.e. fishers, policy makers, scientists).

The funded projects should contribute to the achievements of the United Nations 2030 Agenda and its Sustainable Development Goals and global biodiversity framework COP-15 goals and targets for marine ecosystems and fishing areas.

Scope: The implementation of the revised Fisheries Control Regulation (EU Regulation 2023/2842) and relevant implementing and delegating acts require tools to identify patterns, anomalies, trends and detect inconsistencies in electronic reporting (validation and cross-checking of data) at high spatial and temporal resolution, supporting more effective fisheries

¹⁰⁵ Vessels of less than 12 metres in length overall, according to the Regulation (EU) 2023/2842 of the European Parliament and of the Council.

¹⁰⁶ Non-commercial fishing activities exploiting marine biological resources for recreation, tourism or sport, according to the Regulation (EU) 2023/2842 of the European Parliament and of the Council.

¹⁰⁷ E.g., in international waters, including in particular those under the purview of Regional Fisheries Management Organisations and in waters subject to the sovereignty or jurisdiction of third countries, including in particular in the context of Sustainable Fisheries Partnership Agreements.

monitoring, control and surveillance. Moreover, it requires secure, tamper-resistant, accurate and innovative vessel tracking systems tailored for the specificities of different types of fisheries such as, small-scale fisheries. These systems need to ensure reliable monitoring, be cost-effective and easily deployed and maintained. In addition, monitoring and controlling the catch reporting by millions of recreational fishers in European waters and estimating the ecological impact of recreational fisheries requires new and effective strategies and tools.

The new European fisheries control system also calls for innovative remote sensing technology and satellite imaging systems equipped with automatic detection abilities. These tools are needed to monitor and control fishing operations, complement and cross check data from fisheries observers, and verify compliance with regulations. Such tools will also help to identify and combat IUU fishing activities (e.g., detecting illegal transshipments, illegal discards, unauthorised gear use, and unlicensed fishing) in EU waters and beyond and improve the European maritime situational awareness.

Funded projects should firstly focus on extending data collection to encompass SSF, recreational fisheries and long-distance fisheries, enhancing MCS capabilities. Secondly, funded projects should develop, and test user-friendly technologies tailored for these sectors, while striving to reduce associated costs. Thirdly, funded projects should devise innovative MCS methods to improve efficiency alongside advancements in remote monitoring and surveillance technologies to support the effective implementation of relevant fisheries regulations and combat IUU fishing practices in these sectors. Fourthly, funded projects should emphasise the development of technology for automatic real-time data collection, including the vessel monitoring systems (VMS) and other vessel tracking technologies, and explore opportunities for interconnecting vessel tracking position, electronic monitoring systems and e-logbooks to enhance data resolution and expand their usage in SSF and long-distance fisheries. Finally, funded projects should focus on applications of artificial intelligence technologies for mining information and data deriving from various monitoring technologies in a timely and cost-efficient manner, for the purpose of supporting effective data collection and cross verification, as well as, monitoring of compliance with applicable fisheries rules and regulations.

Funded projects should also include solutions to directly gather data from fishing activities, including data required under the DCF and for the meaningful application of the Ecosystem Approach to Fisheries management, such as data on biological, environmental, economic, social aspects of the fisheries and basic information on the fishers, vessels, and gear.

Successful proposals are expected to contribute to increase the number of datasets in fisheries dependent data, also including non-commercial species and discards, while ensuring data collection standardisation as well as harmonisation of process and methods on how data are handled to support small scale fisheries data collection.

Successful proposals are expected to take an integrated approach, encompassing the development of new fisheries monitoring and data collection and analysis for SSF, recreational fisheries and long-distance fisheries. Funded projects should showcase the expected outcomes through four case studies covering the following:

- EU SSF in European Seas (Mediterranean Sea or Baltic Sea or Black Sea or North East Atlantic);
- EU SSF in EU Outermost Regions¹⁰⁸;
- recreational fisheries in EU waters;
- EU long-distance fisheries in the Indian Ocean or the Pacific Ocean.

Additional case studies can be included.

Proposals should include, in all stages (from conceptual development until the implementation of the outcomes) the involvement of fishers, other relevant actors, including citizens, and end users.

Proposals are encouraged to cooperate with actors such as the European Commission's Joint Research Centre (JRC). The possible participation of the JRC in the project would consist in providing and/or analysing fisheries data.

Proposals should consider the 2024 recommendations provided by the Strategic Working group on Fisheries and Aquaculture Research (SCAR-Fish¹⁰⁹). Proposals are expected to allocate specific tasks and resources to link with relevant Horizon Europe projects, such as Fish-X, EveryFish, and OptiFish, and projects on the Digital Twin Ocean such as SURIMI and SEADITO as well as projects focusing on observing and mapping biodiversity coastal and marine ecosystems, such as OBAMA-NEXT, MARCO-BOLO and DiverSea and other biodiversity projects such as B-USEFUL.

Particular efforts should be made to ensure that the data produced in the context of this topic is FAIR (Findable, Accessible, Interoperable and Re-usable). When possible, data should become available through the European Marine Observation and Data network, ensuring their further availability for the development of fisheries management related applications through the EU Digital Twin Ocean core infrastructure (EDITO). Proposals should leverage the data and services available through European Research Infrastructures federated under the European Open Science Cloud, as well as data from relevant data spaces.

Transforming food systems for health, sustainability and inclusion

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-FARM2FORK-12: Nutrition and Mental Health

Call: Cluster 6 Call 02 - single stage
Specific conditions

¹⁰⁸ https://ec.europa.eu/regional_policy/policy/themes/outermost-regions_en

¹⁰⁹ <https://scar-europe.org/fish-documents>

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: the proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹¹⁰.</p>

Expected Outcome: The successful proposals will contribute to one of the challenges highlighted in the updated Food 2030 report, particularly under the Food 2030 pathway 7 “Nutrition and Sustainable Healthy Diets”¹¹¹, on how inadequate intakes, malnutrition and unhealthy diet affects people’s mental health and well-being.

They will contribute to the Commission communication on a comprehensive approach to mental health published in 2023¹¹² and to the Healthier together - the EU non-communicable diseases (NCD) initiative presented in June 2022¹¹³.

Project results are expected to contribute to all the following expected outcomes:

- healthy diet is improved and the effects of unhealthy diets on mental health in children (above 36 months), adults (above 18 years old) and older population (above 65 years

¹¹⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹¹¹ https://research-and-innovation.ec.europa.eu/news/all-research-and-innovation-news/new-report-food-2030-research-and-innovation-pathways-action-20-2023-12-04_en

¹¹² COM (2023) 298 final.

¹¹³ https://health.ec.europa.eu/non-communicable-diseases/healthier-together-eu-non-communicable-diseases-initiative_en

old) under different social and economic context for a European comprehensive overview are better monitored;

- science-based communication to policymakers and various professionals is improved and the understanding of the interlink between a healthy diet, nutrition and mental health wellbeing, in the children, adult and older population, is facilitated;
- mechanisms are identified to help to understand the effects of nutrition (i.e. food groups, beverages, macro- and micronutrients) on mental health disorders and also to prevent or exacerbate the development of any mental health disease also by taking into account, as far as possible, differential gender-specific dietary patterns;
- new and improved evidence support decision makers, public authorities, health and nutritional public and private institutes, and stakeholders in the assessment of those effects;
- sound data are identified for developing standardised/validated metrics and analysis approaches (including the use of Omics approaches) on the function/role of the gut microbiome and its interplay with host metabolism;
- knowledge is enhanced to improve nutrition in individuals with mental health disorders to ensure better health and longevity conditions;
- indicators are used to measure the beneficial or detrimental effect of food groups, beverages and, macro and micronutrients present in a daily diet and/or dietary behaviour on preventing mental health disorders.

Scope: Mental health has become a major issue of public health, and economic and social concern across Europe. A healthy dietary pattern can affect mental health and well-being through anti-inflammatory, antioxidant, neurogenesis, microbiome- and immune-modifying mechanisms, as well as through epigenetic modifications¹¹⁴. A good nutritional status is important for maintaining normal body function and adequate growth and development and preventing or mitigating the dysfunction induced by internal or external factors. Environmental psychology has demonstrated the positive impact of healthy nutrition on self-perception, self-efficacy, and successful relationships, as well as on several psychological constructs.

Moreover, alteration of the microbiome could also have an impact on neurodevelopment and neurodegenerative disorders as microbiome has been linked to several mental illness such as depression, bipolar disorders, schizophrenia¹¹⁵.

The proposals should address all the following activities:

¹¹⁴ Maurizio Muscaritoli, The Impact of nutrients on mental health and well-being: insights from the literature. *Frontiers in Nutrition*, mini review 8 March 2021.

¹¹⁵ Hayley A Young, *Nutrition research reviews* (2023) 36, 471-483.

- establish the specific food groups, beverages, macro and micronutrients needed in a daily diet (from food sources or to be integrated to the daily diet) to prevent the development of mental health disorders in Europe and explore the need to characterise and supplement a healthy diet with specific macro and micronutrients in children, adults, and older population affected by specific diseases related to mental health disorders through interviews and literature review;
- establish, through a mapping of the most recent research and innovation projects, the 3-axis 'diet-gut microbiome-host-health' interplay to elucidate some molecular mechanisms and the causal relationship between changes in the gut microbiome and some mental health disorders (including the establishment of possible relevant biomarkers as necessary);
- provide recommendations and develop specific communication materials for prevention campaigns, in line with international and national health and dietary advice and related policies, for national authorities and for nutritional professionals, to communicate the link between healthy diets and mental health, as well as the need to supplement a healthy diet with macro- and micronutrients and/or adapt dietary patterns to prevent mental health disorders to patients;
- provide recommendations on how established deficiencies or excess intake of macro and micronutrients could be addressed, in line with international and national health and dietary advice and related policies, including means to increase or decrease nutrients in the diet, in particular in vulnerable groups.

The information is collected for different ranges of the population in Member States and Associated Countries. Experts, which make the link between the role of food groups, beverages, macro- and micronutrients to mental health, should work closely in identifying the main food groups, beverages, macro- and micronutrients needed or to be limited in a daily diet and which are linked to specific mental health disorders and the possible development of mental disease.

The involvement of citizens and civil society, including Citizen Science approach is encouraged as an appropriate research methodology/approach for this topic. Particular efforts should be made to ensure that the data produced in the context of this topic is FAIR (Findable, Accessible, Interoperable and Re-usable).

The proposals should include a dedicated task in the workplan and appropriate resources to collaborate with the projects funded under this topic.

The proposals must implement the 'multi-actor approach' and ensure adequate involvement of all relevant stakeholders and value chain actors including industry, nutritionists, healthcare professionals, scientists, patients, consumers associations. The active participation and engagement of different stakeholders should span the entire project development and implementation to ensure performance and sustainability and maximise the final impact.

The proposals should involve the effective contribution of SSH disciplines.

Where relevant, the proposals could consider complementarities and avoid duplication with other related funded projects. In particular ERA4Health partnership and the Nutribrain call topic¹¹⁶ and JPND's ERA-NET Cofund (JPcofund2) and the project 'EURO-FINGERS multimodal precision prevention toolbox for dementia in Alzheimer's disease', which included nutritional guidance¹¹⁷ (Call - Better Health and care, economic growth and sustainable health systems (H2020-SC1-BHC-2018-2020)¹¹⁸.

HORIZON-CL6-2025-02-FARM2FORK-13: Raising citizen awareness on alternative proteins derived from biotechnology

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: the proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹¹⁹.</p>

¹¹⁶ <https://era4health.eu/nutribrain-2024/>

¹¹⁷ <https://www.neurodegenerationresearch.eu/wp-content/uploads/2020/06/PROJECT-EU-Fingers.pdf>

¹¹⁸ https://ec.europa.eu/research/participants/data/ref/h2020/wp/2018-2020/main/h2020-wp1820-health_en.pdf

¹¹⁹ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Expected Outcome: In line with Food 2030 R&I initiative¹²⁰ and the Commission communication on Building the future with nature: Boosting Biotechnology and Biomanufacturing in the EU¹²¹, the successful proposal will empower citizens to make informed decisions regarding alternative proteins sources derived from biotechnology¹²² and increase the awareness of the impact of such dietary shift (sustainability and health-related impacts). The successful proposal will also strengthen education, communication awareness and access to information on alternative proteins and contribute to an informed understanding and acceptance of the public of the use of biotechnologies in the food sector.

Project results are expected to contribute to all the following expected outcomes:

- scientific knowledge is improved at national, regional and local levels on the use of different biotechnology applications for food and food ingredients;
- communication and understanding of the social and economic aspects as well as of the environmental impact of the use of alternative protein sources derived from biotechnology are improved;
- citizens' awareness on the characteristics of alternative proteins, derived from biotechnology (such as precision fermentation) is enhanced through different communication tools at national, regional and local level;

policy inconsistencies (e.g. public funds directed towards unsustainable production of unhealthy foods despite Green Deal objectives) or regulatory issues limiting market uptake with a negative impact to the public are identified.

Scope: The proposal is expected to help public understanding and awareness of the use of alternative proteins produced through biotechnology and to contribute to counteracting misinformation in this area. It should support, as appropriate, educational interventions and information dissemination on the transition towards diets based on alternative protein sources, in particular those derived from biotechnology. The proposal should also address which (new) food products offer market opportunities and where the potential of their production is and which accompanying measures (hygienic conditions, dissemination campaign, etc.) are necessary so that consumers are aware and open to include alternative proteins produced through biotechnology in their diets.

The proposal should address all the following activities:

¹²⁰ [New Report: Food 2030 Research and Innovation – Pathways for action 2.0 - European Commission \(europa.eu\)](https://european-council.europa.eu/media/en/press-communications/infographic/Pages/infographic-2024-01-23-01.aspx). See Pathway 4 “Alternative Proteins for Dietary Shift”.

¹²¹ COM (2024) 137 final.

¹²² According to the OECD, biotechnology is defined as the application of science and technology to living organisms, as well as parts, products and models of them, to alter living or non-living materials for the production of knowledge, goods and services. Advanced biotechnologies are geared towards various application areas, being the main ones medical and pharmaceutical (“red” biotechnology), agri-food (“green” biotechnology), and industrial and environmental (“white” biotechnology), with the marine biotechnology (so-called “blue”) gaining increased attention.

- establish a collaborative science-based information programme to enable citizens understanding of the dietary shift towards alternative proteins produced from biotechnology by launching a survey on citizens consumption patterns and dietary choices;
- improve the transfer of scientific knowledge at different levels (different actors and different territorial/geographical areas and socio-economic groups) with a collection of data on the perception, behaviours and understanding of citizens of alternative protein sources derived from different biotechnological applications;
- produce technical and dissemination material based on scientific evidence and knowledge, encompassing the technical and hygienic processing conditions for the production of alternative proteins through biotechnology and eventual consumption;
- provide recommendations for updating and improving educational curricula in schools and in other educational institutes as appropriate and in accordance with any applicable national, regional and local obligations;
- include the use of diverse communication media (e.g., social media, radio, TV, newspapers) to effectively disseminate information and engage with a broad audience.

The proposal should take into account the preliminary results developed by the project B-Trust ¹²³ funded under Horizon Europe and take advantage of and connect to European research infrastructures in the area of biotechnology such as EU-IBISBA.

Particular efforts should be made to ensure that the data produced in the context of this topic is FAIR (Findable, Accessible, Interoperable and Re-usable).

The proposal should involve the effective contribution of SSH disciplines.

The proposal must implement the 'multi-actor approach' and ensure adequate involvement of all relevant stakeholders including citizens, civil society organisations, authorities, public and private institutes/institutions, value chain actors to ensure acceptability, awareness and deployment. The active participation and engagement of different stakeholders should span the entire project development and implementation to ensure performance and sustainability and maximise the final impact.

To maximise the impacts of R&I, the collaboration with international partners, in particular with those established in the United States, is encouraged.

HORIZON-CL6-2025-02-FARM2FORK-14: Nutrients produced by microorganisms utilising primarily CO₂ from the air, with the support of biotechnology

Call: Cluster 6 Call 02 - single stage

¹²³ [Co-creation methodology for biotechnology trust-building measures for improved innovation uptake in the bio-based innovation system | B-TRUST | Project | Fact sheet | HORIZON | CORDIS | European Commission \(europa.eu\)](#)

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: the proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Technology Readiness Level</i>	Activities are expected to start from TRL 5 in order to achieve TRL 7 by the end of the project – see General Annex B.

Expected Outcome: In line with Food 2030 R&I initiative¹²⁴ and the Commission communication on: Building the future with nature: Boosting Biotechnology and Biomanufacturing in the EU¹²⁵, the successful proposal will address the application of the precision fermentation through genetically engineered microorganisms and will contribute to safer food systems. It will also promote innovation through the creation of new start-ups companies in the field of food production via biotechnology. The outcomes will foster EU strategic autonomy and leadership in delivering innovative nutrient production processes through business models for food applications in industrial plants and SMEs.

Project results are expected to contribute to all the following expected outcomes:

- the costs and resource-efficiency of bioreactors and upstream and downstream processing is delivered by industry or by other industry related actors (e.g., association, consultants, or engineering experts);
- the environmental and climate impacts resulting from the reduction of CO₂ in the air are better understood;
- food producing companies support the set-up of new or existing living laboratory facilities and pre-commercialisation infrastructure or shared infrastructure solutions to test the implementation of biotechnologies;

¹²⁴ [New Report: Food 2030 Research and Innovation – Pathways for action 2.0 - European Commission \(europa.eu\)](#). See pathway 6 ‘The Microbiome World’.

¹²⁵ COM (2024)137 final.

- innovative technologies are identified for the use of microorganisms that have been genetically engineered transforming CO₂ into nutrients for food purposes and scaled up by SMEs and innovative start-ups;
- existing pilot plants in Europe are improved to scale up the production by identifying and removing barriers that slow down the scaling up of the production of nutrients for food and food ingredients.

Scope: Innovations using microorganisms have the potential to deliver benefits in several fields, such as agriculture, food and feed, industries, environment, marine/aquatic and biodiversity. The use of microorganisms genetically engineered for precision fermentation is an innovative approach that could significantly contribute to safer food systems¹²⁶. This biotechnology leverages the capabilities of microorganisms to produce nutrients including enzymes, fats, and other valuable compounds with high efficiency and specificity. Therefore, it represents a key area for investments and research, promising to revolutionise the food system and to contribute to a healthier planet.

The proposals should address all the following activities:

- analyse and provide the costs and investments needed for the use of the biotechnology for scaling up production of nutrients through the use of genetically engineered microorganisms that capture CO₂ from the air and/or from on-site plant emissions;
- establish an open space database or platform for companies to create their own business models for precision fermentation using genetically engineered microorganisms and perform a pre-commercialisation testing alongside business model strategies development as well as also in situ application;
- establish business models for industry and for in-situ application, considering also gases other than CO₂;
- evaluate the sustainability, efficiency, and resilience of European companies that use precision fermentation with genetically engineered microorganisms and their contribution to reducing the presence of CO₂ in the air. Climate-related aspects should also be considered as far as possible;
- provide a scale-up feasibility analysis for the developed biotechnologies which should take into consideration in the design process the feasibility for up-scaling, already from the early stages.

The proposals must implement the 'multi-actor approach' and ensure adequate involvement of existing private companies in Europe, specifically the participation of SMEs and start-ups.

The proposals should include a dedicated task in the workplan and appropriate resources to collaborate with the projects funded under this topic.

¹²⁶

<https://link.springer.com/article/10.1007/s11367-022-02087-0>

The proposals are expected to establish links with Regional Innovation Valleys for the bioeconomy and food systems (RIV4BFS)¹²⁷ to encourage the deployment of technologies related to biotechnological processes across the EU regions.

If possible, cross-articulation with data spaces, and notably with the European Open Science Cloud (EOSC) should be foreseen, exploiting synergies and complementarities of the different approaches. Proposals are also encouraged to consider, where relevant, the services offered by European research infrastructures such as IBISBA or other relevant research infrastructures¹²⁸ as well as the services offered by the existing technology infrastructures.

To maximise the impacts of R&I, collaboration with international partners, in particular with those established in the United States, is encouraged.

HORIZON-CL6-2025-02-FARM2FORK-15: Additional activities of the European partnership on sustainable food systems for people, planet and climate

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 130.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 130.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The proposal must be submitted by the coordinator of the consortium under HORIZON-CL6-2023-FARM2FORK-01-9: European partnership on sustainable food systems for people, planet and climate. This eligibility condition is without prejudice to the possibility to include additional partners.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The evaluation committee will be composed partially by representatives of EU institutions. If the proposal is successful, the next stage of the</p>

¹²⁷ RIV4BFS is a thematic RIV's use case. RIV4BFS can involve actors from across the quadruple helix, meaning promoting a model of cooperation between industry, academia, civil society, and public authorities, with a strong emphasis on citizens and their needs. [The New European Innovation Agenda - European Commission \(europa.eu\)](#).

¹²⁸ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

	<p>procedure will be grant agreement amendment preparations. If the outcome of amendment preparations is an award decision, the coordinator of the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-9: European partnership on sustainable food systems for people, planet and climate will be invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.</p>
<p><i>Legal and financial set-up of the Grant Agreements</i></p>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>This action is intended to be implemented in the form of an amendment of the grant agreement concluded pursuant to topic HORIZON-CL6-2023-FARM2FORK-01-9.</p> <p>For the additional activities covered by this action:</p> <ul style="list-style-type: none"> • The funding rate is 30% of the eligible costs. • Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. • Financial support provided by the participants to third parties is one of the primary activities of this action in order to be able to achieve its objectives. The EUR 60 000 threshold provided for in Article 207(a) of the Financial Regulation No 2024/2509 does not apply. • The maximum amount of FSTP to be granted to an individual third party is EUR 10 000 000 for the whole duration of Horizon Europe¹²⁹. This amount is justified since provision of FSTP is one the primary activities of this action and it is based on the extensive experience under predecessors of this partnership. <p>The starting date of grants awarded under this topic may be as of the submission date of the application. Applicants must justify the need for a retroactive starting date in their application. Costs incurred from the starting date of the action may be considered eligible (and will be reflected in the entry into force date of the amendment to the grant agreement).</p>
<p><i>Total indicative budget</i></p>	<p>The total indicative budget for this topic is EUR 130 million committed in annual instalments over years 2025-2027 (EUR 35 million from the 2025 budget, EUR 45 million from the 2026 budget and EUR 50 million from the 2027 budget). The total indicative budget for the duration of the</p>

¹²⁹ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal) the maximum amount may be higher.

	partnership is EUR 175 million.
--	---------------------------------

Expected Outcome: The second and final instalment of the partnership is expected in continuation to contribute to expected outcomes specified in topic HORIZON-CL6-2023-FARM2FORK-01-9: European partnership on sustainable food systems for people, planet and climate, for continuation of the activities and the continuation of already agreed outcomes.

Scope: The objective of this action is to continue to provide support to the European Partnership identified in the Horizon Europe Strategic Plan 2021-2024 and that will be implemented under the topic HORIZON-CL6-2023-FARM2FORK-01-9: European partnership on sustainable food systems for people, planet and climate, and in particular to fund additional activities (which may also be undertaken by additional partners) in view of its intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation.

The consortium which applied to and is under grant agreement preparations under HORIZON-CL6-2023-FARM2FORK-01-9: European partnership on sustainable food systems for people, planet and climate is uniquely placed to submit a proposal to continue the envisioned partnership. The foreseen consortium has expertise in relation to the objectives of the Partnership and the activities to be implemented by calls and internal activities. In practice, another consortium could not continue the activities of the Partnership underway without significant disruption to the ongoing activities, if at all.

The scope of the application for this call on the European partnership on sustainable food systems for people, planet and climate should focus on the partnership's co-created strategic research and innovation agenda for seven to ten years which includes inspiration for calls for research projects and horizontal activities to allow the Partnership to operate and to achieve its specific objectives. The application should also consider new and upcoming priorities, and this should be reflected in their upcoming work.

The partnership should seek to include additional partners, in particular from Member States and Associated countries not yet in the consortium funded under HORIZON-CL6-2023-FARM2FORK-01-9.

It is expected that the partnership organises joint calls on an annual base and therefore it should factor ample time to run the co-funded projects. The partnership should collaborate closely with relevant partnerships in Horizon Europe Cluster 6 and beyond, the partnership should describe specific activities foreseen to strengthen the synergies with other related Missions and Partnerships.

While the award of a grant to continue the Partnership in accordance with this call should be based on a proposal submitted by the coordinator of the consortium funded under HORIZON-CL6-FARM2FORK-01-9: European partnership on sustainable food systems for people, planet and climate and the additional activities (which may include additional partners) to be funded by the grant should be subject to an evaluation, this evaluation should take into

account the existing context and the scope of the initial evaluation as relevant, and related obligations enshrined in the grant agreement.

Taking into account that the present action is a continuation of topic HORIZON-CL6-2023-FARM2FORK-01-9: European partnership on sustainable food systems for people, planet and climate and foresees an amendment to an existing grant agreement, the proposal should also present in a separate document the additional activities and any additional partners, to be covered by the award in terms of how they would be reflected in the grant agreement.

Targeted international cooperation

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-FARM2FORK-16: Developing a joint AU-EU Agricultural Knowledge and Innovation System (AKIS) supporting the Food and Nutrition Security and Sustainable Agriculture (FNSSA) partnership

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: the proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p> <p>The following additional eligibility criteria apply: due to the specific challenge of this topic, in addition to the minimum number of participants set out in the General Annexes, consortia must include at least three independent legal entities established in an African Union member state*.</p> <p>International organisations with headquarters in a Member State or Associated Country are exceptionally eligible for funding.</p> <p>Due to the scope of this topic, legal entities established in all African</p>

	Union member states* are exceptionally eligible for Union funding. * "African Union member states" includes countries whose membership has been temporarily suspended.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹³⁰ .

Expected Outcome: A successful proposal should support the European Green Deal priorities, contribute to the African Union-EU High Level Policy Dialogue on Science, Technology and Innovation and to the respective R&I partnerships on Food and Nutrition Security and Sustainable Agriculture (FNSSA) and on Climate Change and Sustainable Energy. Proposals should contribute to the climate objectives of the African Union and the EU, and to the commitments of the Kunming-Montréal Global Biodiversity Framework. Projects will therefore contribute to the expected impacts of this Destination by developing innovative tools and approaches to improve the resilience, adaptation to climate change and sustainability of agriculture and food systems in Africa.

Project results are expected to contribute to all the following expected outcomes:

- the understanding, sharing of experiences and science-policy interfaces are strengthened for agri-food system actors to improve knowledge flows and development of an effective AU-EU AKIS, in view of achieving the Sustainable Development Goals and in line with the FNSSA roadmap;
- R&I actors in AU and EU, including farmers, advisors, other business and service providers, and consumers, are better informed and integrated within a well-functioning joint AU-EU AKIS supporting the climate transition implementation of agroecological approaches both in Africa and in the EU;
- better experience sharing among AKIS actors in the EU and AU is achieved.

Scope: AKIS is defined as the combined organisation and knowledge flows between persons, organisations and institutions who use and produce knowledge for agriculture and interrelated fields. Technological, non-technological and social innovation should be considered in an AKIS. In the context of the FNSSA, developing an effective AKIS in close cooperation with the International Research Consortium on FNSSA will strengthen long-term sustainability and

¹³⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

foster the co-creation and flows of knowledge and innovation aimed at ensuring food and nutrition security and improving sustainability of agriculture through the agroecological transition and the adaptation to climate change.

Proposals should:

- identify, map and study the main AKIS actors and AKIS structures at different levels (local, national, regional) and their relationships in a set of countries in the African context to support the agroecological transition, in close cooperation with the FNSSA International Research Consortium;
- explore how to effectively and efficiently enhanced cooperation and knowledge flows between AKIS actors through activities at various geographical levels;
- develop relevant models and formulate operational recommendations for a joint AU-EU AKIS to improve resilience and sustainability of agrifood systems both in Africa and Europe;
- pilot and animate a joint AU-EU Agricultural Knowledge and Innovation System (AKIS) as a bi-continental networking and knowledge sharing platform linking African and European AKIS actors to exchange experiences and best practices on how to enhance co-creation and flows of knowledge and innovation aimed at food and nutrition security.

Proposal should contribute to the implementation of the short-term and medium-term actions outlined in the AU-EU Innovation Agenda in the priority area of Green Transition, particularly in the priority area of Green Transition (notably actions (4) and (5) among short-term actions and (1) and (3) for medium-term actions), and aim to translate R&I efforts into tangible business, products, services, development and employment opportunities in Africa and Europe. Proposals should be in line with the conclusions of the 2023 AU-EU Agriculture Ministerial Conference¹³¹ and support the African Free Trade Area. To leverage opportunities for furthering impact and outreach, proposals should frame an active collaboration with the project resulting from the call “HORIZON-CL6-2025-02-FARM2FORK-05-two-stage: Developing agroecology living labs and lighthouses for climate action under the Food and Nutrition Security and Sustainable Agriculture (FNSSA) partnership”.

Proposals should also contribute to the implementation of the Union for the Mediterranean (UfM) adopted R&I roadmaps by researchers, farmers and policymakers pertaining to climate change, particularly in the areas impact of water scarcity and drought in rural areas, sustainable agriculture production, biodiversity and changing climate.

Proposals must implement the ‘multi-actor approach’ to ensure the adequate involvement of the public authorities, advisory services and farmer organisations.

¹³¹ https://agriculture.ec.europa.eu/events/5th-african-union-au-european-union-eu-agriculture-ministerial-conference-2023-06-30_en

Proposals should adopt an inclusive approach that respects and integrates local knowledge and practices alongside technological and scientific expertise, where indigenous insights are enriched by innovative approaches and new technologies through mutual learning.

The JRC may contribute to foster synergies with the PANAP¹³² community, engagement with stakeholders, dissemination of results, notably to policy-makers, and through cooperation with the EC Knowledge Centre for Global Food and Nutrition Security.

HORIZON-CL6-2025-02-FARM2FORK-17: Nutrition in emergency situations - Ready-to-use Supplementary Food (RUSF) and Ready-to-use Therapeutic Food (RUTF)

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: the proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p> <p>The following additional eligibility criteria apply: due to the specific challenge of this topic, in addition to the minimum number of participants set out in the General Annexes, consortia must include at least three independent legal entities established in an African Union member state*. The places of establishment of at least two of these legal entities must be in the same region, as defined by the African Union: see https://au.int/en/member_states/countryprofiles2.</p> <p>International organisations with headquarters in a Member State or Associated Country are exceptionally eligible for funding.</p> <p>Due to the scope of this topic, legal entities established in all African Union member states* are exceptionally eligible for Union funding. * "African</p>

¹³²

[DataM - PANAP official website - European Commission \(europa.eu\)](https://data.europa.eu/data-m)

	Union member states" includes countries whose membership has been temporarily suspended.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹³³.</p> <p>Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: Ready-to-use Supplementary Food (RUSF) and Ready-to-use Therapeutic Food (RUTF) rely often on imported components while local resources are not exploited. A sustainable and healthy food systems approach is needed for corrective action. Research and Innovation will increase the use of locally available sources of protein, micronutrients and fatty acids (plant-, marine-, and other locally available ingredients) in the local production and food processing of RUSF and RUTF, the latter in line with Codex Guidelines CXG 95-2022 in Africa. Identify options that allow for the safe use of new, locally produced, alternative supplementary foods to be certified by WHO and used, based on the health status of the child and the local conditions, as alternatives to the current ‘all RUTF’ approach. An approach that is more and more challenged by the increasing production and transportation costs, lack of access to beneficiaries, mainly in fragile and conflict affected countries and with a large carbon footprint.

The topic follows the Food 2030 approach, in particular its co-benefits on nutrition, climate, circularity and innovation and implements the FNSSA roadmap of the AU-EU research and innovation partnership. It is also part of a humanitarian-development-peace (HDP) nexus action.

Project results are expected to contribute to all the following expected outcomes:

- scaling up locally produced RUSF and RUTF will help improving access to the life saving nutrition products for more children in need;
- sustainable and locally produced RUSF and RUTFs will enable national governments to develop versions of these products that are best suited to the local context, having higher acceptability, and provide the regulatory frameworks to manufacturers for national

¹³³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

production in line with the relevant Codex Alimentarius Guidelines, such as CXG 95-2022;

- supporting African countries' governments in their effort of local production of energy, protein and micronutrient supplements contributing to the objectives of climate change adaptation and mitigation, sustainable and efficient management of natural resources, resilience and disaster risk reduction as well as protection and restoration of biodiversity.

In parallel research could be developed around new safe and efficacious, science based recipes that could complement and replace under specific circumstances, in collaboration with the Nutrition Technical Advisory Board and after the validation by WHO, the exclusive use of RUTF for persons not affected by severe acute malnutrition, while making sure that relevant quality criteria, information practices and use criteria are established (based on the child health status and local circumstances).

Scope: Research and innovation collaboration between Europe and Africa will help the African countries (health specialists, producers, seed companies, SMEs and food industries) to develop/ scale up the relevant and sustainable local production of RUSF and RUTF or any other types of supplements and related ingredients, using varieties adapted to local climate and agro-ecological conditions, thereby protecting and restoring biodiversity. Thereby contributing to reduce the climate footprint of production and transport in line with the objectives of climate change adaptation and mitigation and sustainable and efficient management of natural resources. Implement the multi-actor approach by involving a wide range of food systems actors and conducting inter-disciplinary research. Link up for clustering to other projects of the AU-EU research and innovation priorities, in particular linked to Food Systems transition projects and the wider range of projects in Food and Nutrition Security and Sustainable Agriculture (FNSSA), Climate Change and Sustainable Energy (CCSE) and the AU-EU Innovation Union using the network linkages to the CEA-First project and the International Research Consortium on FNSSA.

Innovation: Proposals should foresee a space for mentoring and accelerating innovative business concepts, including social innovation and upscaling in view of African or European food business entrepreneurs and start-ups with special consideration of women and the diaspora using cascading funding opportunities. Proposals should involve financial support to third parties e.g. to academic researchers, health institutes, start-ups, SMEs and other multidisciplinary actors, to, for instance, develop, test or validate developed assessment approaches or collect or prepare data sets or provide other contributions to achieve the project objectives. Consortia need to define the selection process of organisations, for which financial support will be granted. Maximum 20% of the EU funding can be allocated to this purpose. Proposals should involve contributions from the social sciences and humanities (SSH) disciplines.

Enabling sustainable farming systems

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-FARM2FORK-01-two-stage: Emerging and future risks to plant health

Call: Cluster 6 Call 02 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>Applicants submitting a proposal under the blind evaluation pilot (see General Annex F) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (see General Annex E).</p>
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>This topic is part of the blind evaluation pilot under which first stage proposals will be evaluated blindly.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹³⁴.</p>

¹³⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

	Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.
--	--

Expected Outcome: Successful proposals should contribute to the objectives of the common agricultural policy, as well as to the European Green Deal's goals for resilient and sustainable agri-food systems, the EU biodiversity strategy for 2030, and support Regulation 2016/2031¹³⁵ on protective measures against pests of plants.

Successful proposals will deliver on the expected impacts of the destination by enabling agri-food systems to enhance the EU's strategic autonomy through promoting food security and long-term sustainability with multidisciplinary approaches, including One Health. They will also empower farmers and key actors in the agricultural sector to manage sustainable, efficient, profitable, and circular farming systems with low greenhouse gas emissions, contributing to climate-neutrality and resilience.

Project results are expected to contribute to all of the following expected outcomes:

- the understanding of drivers of plant pest emergence, including the influence of climate change, ecosystem degradation and globalisation, is increased;
- cost-effective preventive and/or curative measures to new and/or emerging plant pests are developed;
- economic, social, and environmentally sound solutions for effective pest management in farming and/or forestry in line with the principles of integrated pest management are developed;
- scientific support, recommendations, and policy advice are provided to strengthen plant health policies.

Scope: Plant health is crucial for agriculture, forestry, ecosystems, ecosystem services and biodiversity on a global scale. The current EU plant health legislative framework plays a vital role in protecting the EU from the introduction of new plant pests and as well as tackling existing plant pests more effectively. Maintaining healthy crops is increasingly challenging due to factors like climate change, biodiversity loss, globalisation, and international trade which accelerate the spread of pests and diseases. These threats can severely damage crops, native plants, and the environment, jeopardising agricultural sustainability, biodiversity, and food security.

To address these issues, proposals should target one or more new or emerging plant pests¹³⁶ (regulated, non-regulated, introduced or native) that are causing or likely to cause, significant socio-economic and/or environmental impact to agriculture and/or forestry in the EU and/or

¹³⁵ <https://eur-lex.europa.eu/eli/reg/2016/2031/oj>

¹³⁶ A pest is defined here as any species, strain or biotype of plant, animal or pathogenic agent injurious to plants or plant products (EU legislation, Regulation 2016/2031).

Associated Countries, well as the impact on trade and the wider environment, including soil and water, considering potential exacerbation under climate change¹³⁷. Within the scope of this topic are pests exhibiting an altered and higher probability of entry, establishment and spread in a new area that might be the result of changes in their biology or changes in agriculture or forestry pest management practice or rapid spread in new areas.

Proposals should:

- enhance understanding of pest(s) biology, introduction pathways, interaction with crop-soil ecosystems (if relevant), and mechanisms of spread, especially considering the challenges posed by climate change, biodiversity crisis, land use, and globalisation, thereby reducing uncertainties and lack of data in pest risk assessments;
- develop rapid and cost-effective tools and methods for preventing pest(s) entry, spread, and establishment; this includes early detection, surveillance, treatment¹³⁸, and (bio)control measures (including innovative agro-ecological practices), in line with sustainable and integrated pest management;
- assess the social, economic, and environmental impacts of plant pest(s) establishment and spread on farmers and/or forest owners and develop strategies to mitigate these impacts effectively;
- contribute to the identification of resistant and/or tolerant traits and explore agro-ecological processes as tools for pests regulation, enhancing the resilience and long-term sustainability of the sector;
- foster a holistic understanding and management of plant pests following a One Health approach, recognising the interconnection between people, animals, plants and their shared environment.

International cooperation with countries affected or threatened by the same pest(s) is strongly encouraged.

Proposals must implement the ‘multi-actor approach’ including a range of actors to ensure that knowledge and needs from various sectors such as research, plant health services, farming/forestry sectors, advisory services, and industry are brought together.

Results should benefit diverse farming systems/approaches, including conventional and organic farming.

Proposals may provide financial support to third parties (FSTP) to, for instance, develop, test and demonstrate tools and methods for early detection, surveillance, treatment, and (bio)control measures. A maximum of 10% of the EU funding should be allocated to this

¹³⁷ Applicants are expected to explain and justify the choice of pest(s) in alignment with the proposal’s objectives and the topic’s expected outcomes.

¹³⁸ See IPPC Secretariat. 2024. Glossary of phytosanitary terms. International Standard for Phytosanitary Measures No. 5. Rome. FAO on behalf of the Secretariat of the International Plant Protection Convention.

purpose. Consortia need to define the selection process of organisations, for which financial support may be granted.

Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures and accredited laboratories ¹³⁹.

Proposals should ensure coherence and complementarities with ongoing relevant Horizon Europe projects and capitalise on existing relevant research findings and tools, included those developed under previous research projects.

The proposals should include a dedicated task in the workplan and appropriate resources to collaborate with the projects funded under this topic.

HORIZON-CL6-2025-02-FARM2FORK-02-two-stage: Open topic: Innovating for on-farm post-harvest operations, storage and transformation of crops into food and non-food products

Call: Cluster 6 Call 02 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>Applicants submitting a proposal under the blind evaluation pilot (see General Annex F) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (see General Annex E).</p>
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Technology</i>	Activities are expected to achieve TRL 6-7 by the end of the project –

¹³⁹ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

<i>Readiness Level</i>	see General Annex B.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>This topic is part of the blind evaluation pilot under which first stage proposals will be evaluated blindly.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: Successful proposals will support the European Green Deal goals for competitive, resilient and sustainable agri-food systems objectives, the common agricultural policy, the EU Climate Law, the EU bioeconomy strategy, and the successful implementation of the unfair trading practices directive as well as the EU's action plan for the development of organic production.

Project results are expected to contribute to all of the following expected outcomes:

- Farmers employ a wide range of innovative solutions to improve post-harvest handling, processing and storage of crops that contribute to environment and climate objectives;
- Farmers improve their position in the value chains and add value to their food and non-food products at farm level and thereby enhance their competitiveness;
- Farmers and SMEs benefit from new business models and increase their opportunities to engage in sustainable food and non-food value chains.

Scope: Under this topic, proposals should test, develop and pilot innovative solutions to support farmers to improve their position in the value chains, profit from leveraging the use of their agricultural produce and improve financial viabilities. Proposals should improve the climate and environmental performance of the resulting farmer's activities and businesses. Proposals should also foster new SME-led sustainable business models and increase the opportunities for farmers to benefit from on-farm transformation and/or storage of agricultural outputs for food and/or non-food purposes. If they relate to some of the topics covered by Horizon 2020 Calls 'Healthy and safe foods and diets for all' 2016-2017 or/and 'Empowerment of rural areas, support to policies and rural innovation' 2018-2020 or/and Horizon Europe calls "Fair, healthy and environmentally-friendly food systems from primary production to consumption" 2021-2022 and 2023-2024, the proposals should convincingly explain how they will build on and not duplicate them.

Innovations proposed should have a positive impact on environment as well as climate change mitigation and adaptation. Proposals should demonstrate practical applicability and be tailored to the needs of farmers and adapted to the seasonal character of raw material production.

Successful proposals should assess the impact of the proposed innovations on the overall sustainability (environmental, social, economic) of the farmers and business activities. The climate change mitigation and carbon footprint reduction potential of the proposed innovations should be analysed. Successful proposals should address the requirements from relevant EU regulatory frameworks, including where relevant needs for pre-market authorisation.

Proposals should perform economic cost-benefit analysis of the practical implementation of the innovations developed within the project. Proposals should describe an exploitation pathway tailor-made for the developed innovations through the different necessary steps (e.g. market research, manufacturing, regulatory approvals and licensing, IP management etc.) in order to accelerate exploitation of the results.

Proposed activities must apply the concept of the 'multi-actor approach' and allow for adequate involvement of relevant actors including farmers and SMEs. Proposals should benefit various farming systems/approaches, one of which should be organic farming. Proposals should develop publicly available diverse practice-oriented dissemination materials, e.g., audiovisual materials, brochures, presenting the innovations.

SME participation is expected. Proposals may involve financial support to third parties, particularly for farmers and/or SMEs providing and/or developing, testing, or validating the proposed innovative technologies/solutions. A maximum 30% of EU funding should be allocated to this purpose. Consortia need to define the selection process of third parties, for which financial support may be granted.

Transforming food systems for health, sustainability and inclusion

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-FARM2FORK-03-two-stage: Making food systems more resilient to food safety risks through the deployment of technological solutions

Call: Cluster 6 Call 02 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.

<i>Type of Action</i>	Innovation Actions
<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>Applicants submitting a proposal under the blind evaluation pilot (see General Annex F) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (see General Annex E).</p>
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 8 by the end of the project – see General Annex B.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>This topic is part of the blind evaluation pilot under which first stage proposals will be evaluated blindly.</p>

Expected Outcome: The successful proposal will be in line with the European Green Deal priorities and the farm to fork strategy for a fair healthy and environmentally friendly food system. This topic is also in line with the overall challenges highlighted in the updated Food 2030 pathways for action 2.0 report, particularly on the food safety systems of the future pathway, this report was published in December 2023 by the European Commission.

Project results are expected to contribute to all the following expected outcomes:

- a new level of ambition and creativity is implemented to tackle innovation creation, enhancing the deployment of solutions in the field of food safety and/or food fraud using existing knowledge, available technologies (such as molecular methods, genomic strategies, photonics, biotechnology, etc.) and the results achieved by European framework programmes projects. The EU's strong knowledge base is translated into marketable results addressing the “innovation paradox” (i.e. the fact that knowledge does not always translate to marketable products and services);
- food systems become more resilient to food safety risks through the use and exploitation of available knowledge and technologies;
- increased food chain and food systems competitiveness creating close to the market impactful applications that will benefit and connect solutions for food systems actors (i.e., farming, raw materials and ingredients suppliers, food industry, etc.);

- increased complementarities and results uptake in the field of food safety and/or food fraud with past and existing European framework programmes projects, and synergies with programmes and their associated project results from the European Research Council (ERC) and the European Innovation Council (EIC);
- contribute to EU climate action: deployment of clean technologies in the food industry, to boost food manufacturing efficiency and reduce carbon footprint.

Scope: Proposals should contribute to all of the following aspects:

- in the areas of food safety and food fraud a lot of efforts have been invested in European framework programme projects generating knowledge and potential applications. Proposals should contribute to further develop existing knowledge and technological results in the areas to reach higher TRLs aligned with user's needs and estimating the potential impact on cost for the consumers;
- support innovation to foster advances along the food system implementing digital and technological solutions in high TRL's covering existing food safety and/or food fraud gaps. Proposals should develop and implement innovative solutions close to the market. This should be based on an initial food chain needs and technology gap analysis in the area of food safety hazards (including climate-related ones when applicable) and/or food fraud justifying the followed decision-making process. When selecting the food safety and/or food fraud technologies the most innovative clean technologies should be favoured in scenarios of equal conditions to reduce GHG emissions. The exploitation plan should include preliminary plans for commercialisation and deployment (feasibility study, business plan) indicating the possible funding sources to be potentially used;
- identify existing regulations and give recommendations about which technologies could use sandboxes to foster future commercialisation;

Activities are expected to achieve TRL 8 by the end of the project. Proposals should clearly define the TRL starting point for each involved technology and the plan to reach more advanced TRL.

Applicants should seek complementarities and leverage on the results of past and ongoing research and innovation projects (including projects under the same topic) in the areas of food safety and/or food fraud (i.e. HORIZON-CL6-2023-FARM2FORK-01-12, HORIZON-CL6-2024-FARM2FORK-01-3, HORIZON-CL6-2024-FARM2FORK-01-4 among others). Therefore, proposals should include a dedicated task, appropriate resources, and a plan on how they should collaborate with other ongoing projects under this theme. In the case of already finished projects applicants will define the best way to engage relevant stakeholders of such projects and the cooperation agreements (also in terms of technology transfer and intellectual property) that are needed.

Governmental and food safety regulatory authorities (i.e. EFSA) should, alongside with other stakeholders (startups, SMEs, investors, etc.) be involved. The multi-actor approach applies to this topic.

Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures such as METROFOOD-RI (the infrastructure for promoting metrology in food and nutrition) or other relevant research infrastructures.

Proposals are also encouraged to consider citizens and societal engagement in their activities for the implementation of technological results better aligned with consumer's needs.

To achieve the expected outcomes, international cooperation is encouraged.

HORIZON-CL6-2025-02-FARM2FORK-04-two-stage: Research and innovation for food waste prevention and reduction at household level through measurement, monitoring and new technologies

Call: Cluster 6 Call 02 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>Applicants submitting a proposal under the blind evaluation pilot (see General Annex F) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (see General Annex E).</p>
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>This topic is part of the blind evaluation pilot under which first stage proposals will be evaluated blindly.</p>

<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁴⁰.</p>
---	---

Expected Outcome: Successful proposals will be in line with the European Green Deal priorities, the revised Waste Framework Directive and the EU’s climate targets for 2030 and 2050. Actions will also be in line with the overall challenges highlighted in the updated Food 2030 pathways for action report published in December 2023¹⁴¹ on food waste and resource efficient food systems.

Project results are expected to contribute to all of the following expected outcomes:

- successful implementation of the harmonisation of food waste measurement across Europe, supported by the development of new tools, and testing of existing ones, producing reliable and comparable data on food and waste at household level;
- alleviate the burden of reporting of household food waste data for Member States, by making use of technological innovations;
- understand the underlying causes of food waste at household level to help policymakers and stakeholders develop more efficient interventions;
- contribute to Members States’ reporting on their national food waste levels, in line with targets set by the Waste Framework Directive revision, with positive impacts on the reduction of food waste at household level, thereby reducing greenhouse gas emissions and pressure on natural resources.

Scope: In the EU, over 59 million tonnes of food waste (132 kg/inhabitant) are generated annually¹⁴², with an associated market value estimated at 132 billion euros.

Eurostat roughly estimates that around 10% of food made available to EU consumers (at retail, food services and households) may be wasted. At the same time, in 2023, 9.5% of the

¹⁴⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁴¹ European Commission, Directorate-General for Research and Innovation, Bizzo, G., Fabbri, K., Gajdzinska, M. et al., *Food 2030 – Pathways for action 2.0 – R&I policy as a driver for sustainable, healthy, climate resilient and inclusive food systems*, Publications Office of the European Union, 2023, <https://data.europa.eu/doi/10.2777/365011>

¹⁴² Eurostat (2024), *Food waste and food waste prevention – estimates*, https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Food_waste_and_food_waste_prevention_-_estimates

EU population could not afford a meal with meat, chicken, fish or vegetarian equivalent every second day¹⁴³. In the EU, households generate more than half of the total food waste (54%).

Wasting food is not only an ethical and economic issue but it also depletes the environment of limited natural resources. Food waste has a huge environmental impact, accounting for about 16% of the total greenhouse gas emissions from the EU food system. Therefore, by reducing food waste we can also support the fight against climate change.

Proposals should contribute to all of the following aspects:

- develop and validate new tools and methods, and/or further test existing methods (including those developed by previous EU-funded projects), to measure and estimate food waste at household level, including the food waste discarded as or with wastewaters and that would help distinguish between amounts of avoidable (edible) fraction of food waste and non-avoidable (inedible) food waste. The potential of AI and other technologies (including ones that are currently available) to simplify the collection of data and the reporting (by being integrated in advanced monitoring solutions) should be considered. Interoperable metadata standards accompanying indicators coming from these new tools and methods should be provided. The metadata standards for edible and inedible food waste indicators should allow data to be federated through the European Open Science Cloud (EOSC) infrastructure;
- these new tools and methods should be applied across a large enough sample of diverse type of products and target groups (in terms of gender, age, socio-economic status, ethnic and/or cultural origins, etc.), allowing for a more precise assessment of food waste fractions (edible and inedible), across several years and in a significant number of Member States, and potentially in Associated Countries. This should generate robust measurement/estimation of food waste at household level for different target groups, at national level. The potential for extensive uptake of the proposed solution should be clearly highlighted;
- in addition to measurement, the direct and indirect drivers and root causes of food waste at household level should be thoroughly investigated. Particular attention should be paid to the identification of consumer behaviours (food consumption and disposal patterns) and other factors that influence food waste at household level, to assess the potential for a reduction strategy based on change in consumer behaviours.

In addition, proposals could explore eco-friendly, low-input and efficient technological solutions to prevent edible food from being discarded in households, e.g. by preventing product degradation.

The required multi-actor approach must be implemented by conducting inter- and trans-disciplinary research and involving a wide diversity of food system actors, with special attention paid to consumers and civil society organisations.

¹⁴³ Eurostat (2024), *Inability to afford a meal with meat, chicken, fish (or vegetarian equivalent) every second day*, https://ec.europa.eu/eurostat/databrowser/view/ilc_mdcs03/default/table?lang=en

Proposals are encouraged to build on past or ongoing EU-funded research (in particular, the EU-funded CHORIZO and WASTELESS projects, expected to be finalised in 2025) and on the work carried out by the European Consumer Food Waste Forum¹⁴⁴, and create synergies with relevant initiatives including the EU Platform on Food Losses and Food Waste.

This topic should involve the effective contribution of SSH disciplines. Citizen science is encouraged at all stages of the research activities for this topic and should be integrated in the research methodology. Proposals should take into account and address inequalities (e.g. by addressing the risk of AI bias in terms of gender, disability, ethnicity, etc.).

Targeted international cooperation

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-FARM2FORK-05-two-stage: Developing agroecology living labs and lighthouses for climate action under the Food and Nutrition Security and Sustainable Agriculture (FNSSA) partnership

Call: Cluster 6 Call 02 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p> <p>The following additional eligibility criteria apply: The following additional eligibility criteria apply: due to the specific challenge of this topic, in addition to the minimum number of participants set out in the General Annexes, consortia must include at least three independent legal entities established in an African Union member state*. The places of</p>

¹⁴⁴

https://knowledge4policy.ec.europa.eu/projects-activities/european-consumer-food-waste-forum_en

	<p>establishment of at least two of these legal entities must be in the same region, as defined by the African Union: see https://au.int/en/member_states/countryprofiles2.</p> <p>International organisations with headquarters in a Member State or Associated Country are exceptionally eligible for funding.</p> <p>Due to the scope of this topic, legal entities established in all African Union member states* are exceptionally eligible for Union funding. * "African Union member states" includes countries whose membership has been temporarily suspended.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁴⁵.</p> <p>Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: A successful proposal should support the European Green Deal priorities, contribute to the African Union-EU High Level Policy Dialogue on Science, Technology and Innovation and to the respective R&I partnerships on Food and Nutrition Security and Sustainable Agriculture (FNSSA) and on Climate Change and Sustainable Energy. Proposals should contribute to the climate objectives of the African Union and the EU, and to the commitments of the Kunming-Montréal Global Biodiversity Framework. Projects will therefore contribute to the expected impacts of this Destination by developing innovative tools and approaches to improve the resilience, adaptation to climate change and sustainability of agriculture and food systems in Africa.

Project results are expected to contribute to all the following expected outcomes:

- the availability, accessibility and adoption by farmers, advisors and policymakers of fair and inclusive approaches and strategies that improve agricultural productivity and sustainability in Africa, while addressing climate challenges is accelerated, optimising the use of ecological processes with co-benefits for biodiversity;

¹⁴⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- the coordination and experience sharing among researchers and agricultural actors in Africa is strengthened, in view of achieving the Sustainable Development Goals and in line with the FNSSA roadmap¹⁴⁶;
- agri-food stakeholders benefit from enhanced climatic, environmental and socio-economic performance of African agroecological farming practices.

Scope: Agroecology is a holistic approach that relies on and optimises the use of ecological processes to support agricultural production. By working more with nature and ecosystem services, it has the potential to increase farms' circularity, diversification and autonomy, address climate challenges while preserving and enhancing biodiversity, and drive a full transformation of farming systems and agricultural value chains, from input substitution and beyond. Agroecological farming systems therefore have great potential to enhance the sustainability performance of agriculture and agricultural value chains that contribute to the objectives of the EU Green deal for agriculture and to the FNSSA partnership.

Living labs under this topic are intended as open innovation ecosystems in real-life sites using iterative feedback processes throughout a lifecycle approach of an innovation to create inclusive and sustainable impact.

While living labs are collaborative initiatives to co-create knowledge and innovations, lighthouses are sites for demonstration of exemplary and replicable solutions, training, peer-to-peer learning, and communications related to promoting agroecological approaches.

Proposals should:

- set up living labs and light houses as places for testing and demonstrating agroecological approaches in different pedoclimatic conditions in Africa;
- carry out participatory and transdisciplinary research and innovation activities in living labs with agricultural actors (e.g. researchers, farmers, advisors, policymakers), including on socio-economic aspects to support sustainability transitions and upscaling, to seek practical agroecological solutions to the climatic and biodiversity challenges/opportunities identified;
- identify sites that demonstrate high performance in terms of their actions and results on agroecology and that may be converted into lighthouses;
- strengthen interactions between existing living and new labs, light houses and like-minded arrangements on agroecology to share lessons and facilitate science policy interfaces using where relevant existing network arrangements, such as those under the Horizon Europe CEA-First project.

¹⁴⁶ https://research-and-innovation.ec.europa.eu/strategy/strategy-2020-2024/europe-world/international-cooperation/regional-dialogues-and-international-organisations/eu-africa-cooperation/partnership-food-and-nutrition-security-and-sustainable-agriculture-fnssa_en

Proposals should contribute to the implementation of the short- and medium-term actions of the joint AU-EU Innovation Agenda, particularly in the area of Green (notably actions (4) and (5) among short-term actions and (1) and (3) for medium-term actions), and aim to translate R&I efforts into tangible business, products, services, development and quality employment opportunities and social economy enterprises in Africa and Europe. Proposals should be in line with the conclusions of the 2023 AU-EU Agriculture Ministerial Conference¹⁴⁷ and support the African Free Trade Area.

Proposals should contribute to the implementation of the Union for the Mediterranean (UfM) adopted R&I roadmaps¹⁴⁸ pertaining to climate change, particularly in the areas impact of water scarcity and drought in rural areas, sustainable agriculture production and biodiversity in changing climate.

Proposals should build on the experience gained with relevant former and on-going FNSSA projects on agroecological approaches under Horizon 2020 and the Horizon Europe Work Programmes, as well as with activities of the DeSIRA¹⁴⁹ initiative part of the EU International Partnerships. At the same time, proposals should create synergies with any relevant activities carried out under the European Partnership “Agroecology” (‘Accelerating farming systems transition – agroecology living labs and research infrastructures’) and targeted EU-Africa cooperation activities under the EU Mission “A soil deal for Europe”. Proposals should include a dedicated task and appropriate resources to create those synergies. To leverage opportunities for furthering impact and outreach, proposals should create synergies with the project resulting from the call “HORIZON-CL6-2025-02-FARM2FORK-16: Developing a joint AU-EU Agricultural Knowledge and Innovation System (AKIS) supporting the Food and Nutrition Security and Sustainable Agriculture (FNSSA) partnership”.

Proposals should adopt an inclusive approach that respects and integrates local knowledge and practices alongside technological and scientific expertise, where indigenous insights are enriched by innovative approaches and new technologies through mutual learning.

Proposals must implement the ‘multi-actor approach’ to ensure the adequate involvement of the farming sector, civils society and relevant policy actors.

Participation of Mediterranean countries other than from EU and AU is encouraged.

The possible contribution of the JRC could involve exploring possible pathways for a sustainable transition of agriculture and food systems, defining scenarios for the agro-ecological transition, assessing the impacts of such transition, engaging with stakeholders, disseminating results notably to policymakers and through cooperation with the EC Knowledge Centre for Global Food and Nutrition Security.

¹⁴⁷ https://agriculture.ec.europa.eu/events/5th-african-union-au-european-union-eu-agriculture-ministerial-conference-2023-06-30_en

¹⁴⁸ <https://ufmsecretariat.org/ministerial-conference-research-innovation-2022/>

¹⁴⁹ https://international-partnerships.ec.europa.eu/policies/programming/programmes/desira-development-smart-innovation-through-research-agriculture_en

Proposals should ensure that gender dimension and social categories (e.g. disability, age, socioeconomic status, ethnic and/or cultural origins, sexual orientation) and their intersections, are duly considered.

Proposals may involve financial support to third parties to researchers, farmers, advisors and other multidisciplinary actors contributing to the setting up of living labs and/or lighthouses. A maximum 30% of EU funding should be allocated to this purpose. The provision of training (including technical guidelines and ad-hoc materials) and support services to farmers may be considered as a criterion to grant financial support to third parties.

DRAFT

Destination - Circular economy and bioeconomy sectors

Under Destination “Circular economy and bioeconomy sectors’, R&I in 2025 provides scientific and technological support to the European Green Deal, in line with the new Commission priority on “A new plan for Europe’s sustainable prosperity and competitiveness”.

Actions focus on the implementation of a wide range of EU initiatives such as the circular economy action plan and the upcoming Circular Economy Act, the EU bioeconomy strategy and its upcoming update, the forest strategy for 2030, and the Common Agriculture Policy. In addition, this Destination contributes to the industrial strategy, the chemicals strategy for sustainability, the European Climate Law, the SME strategy, the communication on safe and sustainable by design framework, the sustainable blue economy and its offshoot initiatives, the EU biodiversity strategy for 2030, the EU Nature Restoration Regulation, the proposals for an EU forest monitoring regulation and a directive on EU soil monitoring and resilience.

The Destination also upholds the upcoming working plan for the implementation of Ecodesign for Sustainable Products Regulation and research needs identified in the Global Resources Outlook 2024. In addition, it supports the EU social economy action plan and the Council Recommendation on developing social economy framework conditions which includes social economy entities in the circular economy.

Furthermore, it will support the EU biotechnology and biomanufacturing initiative, covering and underpinning sustainable bio-based innovation systems, as well as the Commission communication “A Competitive Compass for the EU”, the upcoming strategy for European life sciences and the EU biotech act. Also, it will support the capacity of bio-based systems to enable a sustainable carbon management and allow the better understanding of the carbon removal potential of circular bio-based economies. Through innovative circular and bio-based materials, products, processes and value chains for consumers and industry, the awareness and importance of agriculture and forestry in the EU will be strengthened. The destination will align with the Global Biodiversity Framework, the future science-policy panel to further contribute to the sound management of chemicals and waste and to prevent pollution and promote the new approach for the sustainable blue economy in the EU, which stresses that marine/aquatic biotechnology offers solutions for materials, enzymes, food supplements and pharmaceuticals.

R&I activities under this Destination will help establishing healthy, biodiverse and resilient forests that are sustainably managed and able of providing a wide range of key ecosystem services, including climate mitigation through carbon removals and continuing supplying materials and services for the development of a sustainable forest bioeconomy in line with the EU forest strategy for 2030.

Proposals for topics under this destination should set out a credible pathway contributing to “achieving healthy soils and forests, as well as clean air, fresh and marine water, whilst ensuring water resilience and the transition to a clean, competitive and circular economy and sustainable bioeconomy”, and more specifically to one or more of the following impacts:

- innovative circular and bio-based materials, products, processes and value chains are developed for the consumers and industry, replacing unsustainable alternatives and leading to new and more sustainable approaches for managing waste materials and by-products, aiming at pollution prevention and remediation, and the promotion of new forms of cooperation between diverse economic and societal actors across sectors and territories;
- industry and consumers benefit from new opportunities both through sustainable novel products in line with ecodesign principles, and novel circular business models that have a mitigating impact on resource use and greenhouse gas emissions;
- innovative business and governance models, are advanced to foster safe and sustainable product design. This includes durability, reliability, reusability, upgradability, reparability, recyclability, recycled content, and circularity with a comprehensive approach addressing environmental impacts also at a territorial level and involving civil society in fostering a circular economy;
- large-scale diffusion of social and technological innovation across circular and bioeconomy sectors within planetary boundaries thanks to innovative, socially fair, climate-neutral, circular, bio-based and nature-based solutions;
- the full potential of marine and freshwater biological resources and blue biotechnology is leveraged to deliver societal benefits, such as more environment-friendly industrial products and processes, support public health and environmental conservation;
- actors in the forest sector foster the multi-functionality of forests based on the three pillars of sustainability (economic, environmental and social), enhancing a sustainable and circular bioeconomy including support to business development; restoring and protecting biodiversity and ecosystems, ensuring that ecosystem services continue to be delivered including mitigating and adapting to climate change; and delivering societal expectations including well-being of different actors.

R&I fostering circular economy and other sectors under this Destination aimed at impacting or involving civil society will take into account the participation of disadvantaged groups based on gender and other social categories as appropriate.

The Horizon Europe work programme for 2025 will play a critical role in implementing the Ecodesign for Sustainable Product Regulation (ESPR). More sustainable and circular products will contribute to the resilience and competitiveness of the EU economy. Changes in consumer behaviour and availability of attractive service solutions will lead to waste prevention and tangible reduction in material and energy consumption and greenhouse gas emissions. R&I can link various EU policies, namely those with measures to create market demand for secondary materials related to the green and digital transitions, resilience and competitiveness.

Outcomes will ensure synergies with Cluster 4 – ‘Digital, industry and Space’, its partnerships and with Cluster 5 – ‘Climate, Energy and Mobility’. Full synergy and complementarity will be ensured with the fully operational EU partnership on ‘Circular Bio-based Europe’ (CBE Joint Undertaking), the EU partnership for a climate neutral, sustainable and productive blue economy and with the EU mission ‘Restore our Ocean and Waters by 2030’, as well as with the Soil mission. Furthermore, to maximise the local impact under this destination, synergies and complementarities with the Circular Cities and Regions Initiative (CCRI) and the New European Bauhaus (NEB) Facility are encouraged as appropriate. Coordination will be ensured with the long-standing EC Knowledge Centre for Bioeconomy. Possible synergies should be sought with other JRC activities. The destination will ensure synergies and complementarities with the future European Partnership “Forests and forestry for a sustainable future”. To maximise the impacts of R&I under this Destination, international cooperation is encouraged.

Enabling a circular economy transition

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-CIRCBIO-01: Novel circular business models to enable the just transition to a sustainable and circular economy

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: In supporting the implementation of the European Green Deal, and in particular the 2020 circular economy action plan (CEAP), the Waste Framework Directive and the Ecodesign for Sustainable Products Regulation (ESPR), successful proposals will contribute to the expected impacts of this Destination, notably to benefits for industry and consumers from new opportunities both through sustainable novel products in line with ecodesign principles, and to novel circular business models that have a mitigating impact on resource use and greenhouse gas emissions and contribute to increasing Europe’s sustainable competitiveness.

Project results are expected to contribute to all of the following expected outcomes:

- consumers obtain access to new circular products and services, such as reuse, repair and sharing, that encourage sustainable consumption and thus reduce the environmental footprint, greenhouse gas emissions, and the pressure on biodiversity;
- economic operators that want to introduce circular business models are provided with proved successful examples and recommendations how to do it;
- (re-)skilling programmes and new job opportunities emerge in the areas of re-use, preparing for reuse, repair, upgrade, refurbishment, repurpose, and remanufacture.

Scope: The green transition and moving to a circular economy will require changes not only in the way materials are used and products are designed, but also in the way companies operate and business models are set up. The majority of current business models and the global economic and trading system are based on linear and unsustainable use of materials and products. This results in ever-increasing consumption, depletion of resources, increase in CO₂ emissions and environmental deterioration, and undesirable generation of waste. The transition to a sustainable and competitive and circular economy necessitates transformative changes in material usage and corporate operations, with innovative business models able to trigger sustainable consumer behaviours and purchasing preferences. These models are pivotal in steering both industries and consumers towards sustainable practices, aligning with the comprehensive environmental objectives of the European Green Deal and the EU biodiversity strategy for 2030. The transition to a circular economy is key to reducing pressures on natural resources. It is also a prerequisite to achieve the EU's 2050 climate neutrality target and to halt biodiversity loss.

Novel circular business models can affect business-internal practices as well as interactions with other businesses or civil society. Proposals should develop and demonstrate at large scale innovative business models to facilitate product reliability/durability, reusability, reparability, refurbishment, repurpose and remanufacture, including the preparation stage, as well as product-as-a-service business models.

Proposals should assess and quantify, including monetisation, when possible, the environmental, social and economic impacts of these novel business models on relevant stakeholders, i.e., consumers, social partners, private companies with a focus on SMEs, municipalities and regions. The assessment of environmental impacts should be done from a lifecycle perspective and build on rules set in the Environmental Footprint methods wherever possible. Impacts of the business models on the overall resource efficiency and material use should also be assessed, as far as possible. Proposals should analyse the 'pull' factors that shift consumer choices in the direction of products/services offered by circular business models, as well as what can encourage more to do so. Ecodesign requirements laid down in the ESPR and EU Ecolabel aspects, and the verification of green claims should be considered where relevant.

Proposals should contribute to the development of innovative business models, including social economy entities and social enterprises, to enable the transition towards a circular and sustainable ecosystem and to stimulate the uptake of sustainable consumption patterns.

Proposals should address the opportunities of developing new business models in the context of the circular economy R-strategies (refuse, rethink, reduce, reuse, repair, refurbish, repurpose, remanufacture) as well as upgrade and product-as-a-service business models.

Proposals should include social innovation and explore understanding behaviours to identify routes towards an increase of demand for sustainable products and even towards an overall reduction of consumption and product/materials use, which includes products as a service. Proposals should also explore self-sufficiency approaches and promote regenerative practices aimed at restoring biodiversity, mitigating climate change, and strengthening local communities and social justice.

The proposals should address the different perspectives of all relevant actors in a proposed project, which could be actors involved in raw material sourcing, material processing and manufacturing, intermediate production, end-product manufacturing, as well as brand owners, retailers, enterprises, re-use and repair organisations, civil society/consumers, etc. Proposals should also reflect on how access to finance can be facilitated and how economic viability can be ensured, and how governance can promote the establishment of these new business models. Critical issues of change management, scaling and diffusion of solutions should be addressed.

Proposals should target specific social groups and their purchasing power while developing novel business models, in order to keep a fair transition to climate neutrality in mind. This includes possible questions of gender equality, diversity and inclusion. Also, proposals should assess the potential of and prerequisites for new job opportunities in the areas of reuse, preparing for reuse, repair, upgrade, refurbishment, repurpose and remanufacture, contributing qualitative and quantitative data to the reskilling programmes of the green transition.

For the development of novel business models, projects should include elements of fair and affordable pricing of services/labour within various R-strategies as well as upgrade and products-as-a-service models. In this context, projects should also analyse barriers to such models and possible regulatory, governance and economic solutions. Projects should also address possible unintended or rebound effects, both positive and negative, particularly for consumers and the environment, of such novel business models.

Proposals should explore the territorial and geographical dimensions of the establishment and success of new business models and aim at synergies with the New European Bauhaus and the Circular Cities and Regions Initiative (CCRI). Projects are strongly encouraged to organise joint activities, ensure synergies and undertake clustering activities with CCRI projects and the CCRI Coordination and Support Office. To avoid double-funding and to create added value, projects should seek synergies with projects to be performed under the LIFE-2024-SAP-ENV Call¹⁵⁰.

¹⁵⁰ https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/life/wp-call/2021-2024/call-fiche_life-2024-sap-env_en.pdf

This topic requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

HORIZON-CL6-2025-01-CIRCBIO-02: Improving ecodesign of products and development of testing methods for products prioritised under the Ecodesign for Sustainable Products Regulation

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁵¹ .

Expected Outcome: In supporting the implementation of the European Green Deal, and in particular the circular economy action plan (CEAP), the Ecodesign for Sustainable Products Regulation (ESPR), and the Right to Repair initiative, successful proposals will help reach the Green Deal objectives of lower resource consumption and less environmental impact. They will contribute to the expected impacts of this Destination, notably to innovative business and governance models that foster safe and sustainable product design.

¹⁵¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Project results are expected to contribute to all of the following expected outcomes:

- material and product manufacturers apply the ecodesign principles in developing and manufacturing products and are equipped with methods to assess the performance and potential compliance of their products with the ecodesign requirements to be developed under ESPR, as well to drive sustainability innovations;
- market surveillance authorities and notified bodies are equipped with methods for the verification of compliance of products with the ecodesign requirements;
- consumers have access to reliable and verified information about the ecodesign performance of products;
- consumers benefit from more sustainable and circular products, i.e. durable, reliable, repairable, reusable, upgradable, recyclable products including increased recycled content.

Scope: The Regulation on Ecodesign for Sustainable Products (ESPR)¹⁵² lays down requirements for products placed on the EU market to improve their environmental sustainability. First, the Commission adopts a working plan prioritising product groups, based on the prioritisation criteria laid down in the text of the regulation. Second, the Commission will develop targeted performance and information requirements known as ‘ecodesign requirements’ for prioritized products. This will be done on a product-specific basis or horizontally (for several product groups with similar technical characteristics which would allow requirements to be defined horizontally) through “preparatory studies”. The ecodesign requirements will need to address the environmental impacts of the product(s) in question in a meaningful way, making reference to the methodologies prescribed in the ESPR. The projects are expected to generate knowledge and data which will serve as a scientific basis for and feed into the consequent “preparatory studies”.

Each applicant should choose at least one of the following product groups¹⁵³: detergents, paints, chemicals, non-ferrous metals, home/interior textiles, footwear or toys. For the analysed product groups, proposals should include in the scope representative sub-categories of the product groups on the EU market making reference to relevant European, international and national classification systems and standards, where existing.

Projects are expected to:

- assess how product parameters (as per Annex I of the ESPR) relevant for circularity can be determined for the given product group and explore potential new parameters with the aim of improving the circularity performance of the product;

¹⁵² Regulation (EU) 2024/1781 of 13 June 2024 establishing a framework for the setting of ecodesign requirements for sustainable products, amending Directive (EU) 2020/1828 and Regulation (EU) 2023/1542 and repealing Directive 2009/125/EC, text [here](#).

¹⁵³ Products and product groups which have been prioritized by JRC in the study Ecodesign for Sustainable Products Regulation: Study on new product priorities https://circulareconomy.europa.eu/platform/sites/default/files/2024-12/JRC138903_01.pdf

- assess the performance of products in relation to the specific product parameters (following or building on the methods used in ESPR) and explore pathways to their improvement;
- focus on those product parameters having impact on product aspects contributing to circularity, i.e., durability, reliability, reusability, upgradability, reparability, possibility of maintenance and refurbishment, presence of substances of concern, resource use and resource efficiency, recycled content, possibility of remanufacturing and recycling, possibility of recovery of materials, expected generation of waste materials, and premature obsolescence, as well as social sustainability requirements, which are currently not covered by ESPR;
- develop, test and validate product-specific testing methods for the determination and verification of product performance in relation to the said specific parameters;
- provide analyses and recommendations for additional mechanisms and incentives to reward design for circularity and product durability – such as extended guarantees, VAT reduction, and others – and which best mitigate potential trade-offs;
- map the material flows relevant for the given product group and assess the impacts of potential requirements on these flows within and across value chains (requirement on e.g. recycled content in one value chain can impact availability of secondary raw material in another value chain, etc.);
- develop quantitative and qualitative data on relevant aspects of consumer behaviour in relation to the product parameters for the given product groups.

Proposals should take into account all provisions of the ESPR. The ESPR provisions aim at improving the overall sustainability of the product(s) in question, and by improving the product aspects set out in that regulation (see Art. 5; Annex I). In addition, the revised version of the MEERP methodology by JRC¹⁵⁴, and the Ecodesign for Sustainable Products Regulation: Study on new product priorities¹⁵⁵ published in 2024 should all be reference points. The series of standards on material efficiency for energy-related products EN455XX must be considered as well. In relation to the presence of substances of concern, building on the relevant provisions in the ESPR, the proposals should take into account the principles of Safe and Sustainable by Design (SSbD)¹⁵⁶ applied to chemicals and materials.

For the individual products within the product groups, the proposals should assess the existing methods for the setting of the eco-design requirements in relation to the specific parameters (as set out in Annex I of the ESPR) with the objective to improve the product aspects (as set out in Article 5 of the ESPR) and, as appropriate, develop them further based on the nature of the product, its most relevant aspects and its impacts over its life cycle. In doing so, the projects

¹⁵⁴ [Review of the MEERP - Publications Office of the EU \(europa.eu\)](https://publications.europa.eu/en/publication-detail/-/publication/11111111-1111-1111-1111-111111111111)

¹⁵⁵ Ecodesign for Sustainable Products Regulation: Study on new product priorities
https://circulareconomy.europa.eu/platform/sites/default/files/2024-12/JRC138903_01.pdf

¹⁵⁶ [JRC Publications Repository - Safe and Sustainable by Design chemicals and materials - Methodological Guidance \(europa.eu\)](https://publications.europa.eu/en/publication-detail/-/publication/11111111-1111-1111-1111-111111111111)

should make use of the work already done in assessing the setting of requirements under Directive 2009/125/EC and the continuing efforts to develop and improve science-based assessment tools, such as the updated Methodology for Ecodesign of Energy-related Products (MEErP).

Also, proposals should take into account: relevant technical information in particular of Regulation (EC) No 66/2010 on the EU Ecolabel, Directive 2010/75/EU on Industrial emissions (integrated pollution prevention and control), technical screening criteria adopted pursuant to Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment, the “do no significant harm” principles and green public procurement criteria.

The development of a product specific testing method should include not only the development of the method from the theoretical point of view, but also its proper testing and validation to evaluate its suitability, repeatability, and reproducibility in practice. Projects should demonstrate advances in the development and/or application of related digital/AI computational tools, methods or technologies in the area of assessing ecodesign requirements and developing methods for the verification of performance and involve relevant Member States Authorities responsible for enforcement.

As part of the project, proposals should address the knowledge gap in capacity and skills, especially for SMEs, potentially limiting the understanding of upcoming ecodesign requirements especially if trickling down from upstream in their product value chains as well as when conducting the assessments of compliance with ecodesign requirements. Learning and training materials should be developed for dissemination and training purposes within the relevant companies and value chains.

Successful proposals are encouraged to cooperate with the JRC to foster coordination with on-going JRC science for policy activities to foster the implementation of the European Sustainable Product Regulation.

HORIZON-CL6-2025-01-CIRCBIO-03: Product Environmental Footprint (PEF) of policy and market-relevant product groups

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions

<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ¹⁵⁷.</p>
---	---

Expected Outcome: In supporting the implementation of the European Green Deal, and in particular the circular economy action plan (CEAP) and the Ecodesign for Sustainable Products Regulation (ESPR), successful proposals will contribute to the expected impacts of this Destination, notably addressing environmental impacts at a territorial level and involving civil society in fostering a circular economy.

Project results are expected to contribute to all of the following expected outcomes:

- improved knowledge for stakeholders on the value of a circular economy approach in addressing environmental pollution on air, soil and water and the pressures on biodiversity and ecosystems through the analysis of the environmental impacts of specific products;
- the development of sector-specific methods, data, tools and guidance documents for the assessment, communication and comparison of environmental impacts of targeted product groups, relying on Environmental Footprint (EF) methods;
- reduction of environmental impacts for a significant number of relevant products;
- engagement of stakeholders, including industry, public procurers, SMEs and NGOs, to enhance consistency, reliability and use of developed sustainability metrics and tools across sectors.

Scope: The circular economy action plan (CEAP) aims to stimulate the development of sustainable products, in the EU and beyond, contributing to the EU's 2050 climate neutrality target and to halt biodiversity loss. To achieve this, it establishes a sustainable product policy regulation that broadens the scope of the Ecodesign Directive both in terms of products (covering a very broad range of products, beyond energy-related products only) and new kinds of requirements. It will be key to achieve a sustainable, resilient and competitive circular economy.

Life cycle assessment (LCA) is a key source of information on environmental impacts of products, services or systems. The Commission proposed the Product Environmental

¹⁵⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

Footprint (PEF)¹⁵⁸ as a common way of measuring environmental performance. The PEF methodology, grounded on the LCA standard methodology, allows manufacturers and consumers to obtain reliable and comparable information about the performance of products with respect to various environmental impact categories. A calculation based on the general PEF methods gives quantitative information on the impacts of products, taking into consideration the entire value chain.

R&I activities in the proposal should:

- review existing knowledge on LCA/PEF, identify and fill knowledge gaps and then develop and test PEF category rules for selected product groups of policy and market relevance;
- assess the added value and cost-benefit of these rules compared to other methods or criteria;
- perform in-depth full life cycle assessment studies (also addressing end-of-life aspects) based on PEF for those products groups to identify, quantify, interpret and communicate environmental impacts;
- develop appropriate datasets tailored to the assessed product groups identifying and filling data gaps, as much as possible based on industry and other representative data, and create tools which will be made publicly available to enable and ease PEF-compliant assessments and communications among stakeholders, as well as their verification;
- develop and apply approaches and methods to derive and support potential ecodesign requirements¹⁵⁹ from PEF-compliant assessments, i.e. how decisions for design with a lower environmental footprint can be motivated, and further assess their socio-economic impacts;
- develop and apply approaches and methods: a) to identify and check sustainability requirements used or proposed in legislation, labels and standards relevant for the products in study; b) to analyse how to enhance consistency, synergies and harmonisation between such requirements and ecodesign requirements;
- develop guidance, training and dissemination strategies and material to support the wider use of PEF in the selected sector(s).

Proposals should focus on at least one of the following product groups: home/interior textiles; final products made of metals, or plastics; detergents; lubricants, paints and varnishes; polymers; selected groups of other chemicals; ICT products.

¹⁵⁸ <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32021H2279;> https://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=OJ:L_202401781. The current recommendation for PEF is the recommendation 2021/2279 which is now being revised with the target of having a new recommendation for 2025.

¹⁵⁹ Ibid.

For the analysed product groups, proposals should target a sufficiently broad and granular scope, targeting comprehensive representative sub-categories and products on the market. In doing that, proposals should refer to relevant European, international, and national classification systems and standards where possible. Projects should adhere to the most recent EU rules and data¹⁶⁰ established for the PEF methods and bring together all relevant expert groups and different stakeholders active along the value chains of the selected product groups (industry members, researchers, SMEs and NGOs).

Proposals should develop appropriate and comparable datasets for assessing the analysed products as well as tools and digital solutions to facilitate the sharing and processing of information along the value chain as well as the assessment, communication and verification of environmental characteristics of products based on the PEF method.

As part of the project, proposals should also address the knowledge gap in capacity and skills, especially for SMEs, potentially limiting the understanding, conducting and implementing of PEF-based assessments. Learning and training materials should be developed for dissemination and training purposes within and across companies and value chains.

The data produced in this topic should be open access in line with FAIR principles (Findable, Accessible, Interoperable and Re-usable). Furthermore, different tasks, outputs, interactions with stakeholders, and communication, dissemination and exploitation activities should be conceived in a logical sequence along the lifetime of the project.

HORIZON-CL6-2025-01-CIRCBIO-04: Development and testing of Extended Producer Responsibility schemes (EPR) within the priority Circular Economy Action Plan value chains

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p>

¹⁶⁰ Ibid.

<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
-----------------------------------	--

Expected Outcome: In supporting the implementation of the European Green Deal, the 2020 circular economy action plan, the upcoming Circular Economy Act, the Waste Framework Directive and the Ecodesign for Sustainable Products Regulation, successful proposals will contribute to achieving improved circularity in selected product value chains and improving the efficiency of separate collection and waste management systems. They will contribute to the expected impacts of this Destination, notably improving the durability, reliability, reusability, repairability, recyclability and circularity of consumer products.

Project results are expected to contribute to all of the following expected outcomes:

- demonstrated innovative solutions for large scale uptake and implementation of Extended Producer Responsibility (EPR) schemes, providing for their application by producers, producer organisations and relevant actors across the EU and Associated Countries, including cross-border cooperation.
- improved knowledge of economic operators (including SMEs) and consumers regarding EPR schemes and eco-modulation of EPR fees, and how these contribute to increasing circularity, minimising the demand for primary resources, reducing GHG emissions, preventing environmental pollution and reducing the pressure on biodiversity and ecosystems.
- optimal functioning and increased uptake of EPR schemes in specific priority product value chains within the EU and Associated Countries, i.e.: construction products, ICT products, furniture, mattresses, and carpets.

Scope: The 2020 circular economy action plan introduces measures that aim at making sustainable products the norm, contributing to the EU's 2050 climate neutrality target and to halt biodiversity loss. It focuses on resource-intensive sectors with the highest circularity potential such as textiles, plastics, packaging, electronics including ICT products, furniture and construction products.

EPR schemes can contribute to improve circularity gaps in key product value chains with high circularity potential, given its full lifecycle approach. They make producers responsible for the entire lifecycle of the products made available on the market, from the design-phase up to their end of life, including waste collection and recycling. These schemes can be a lever for producers, including SMEs, to design their products for circularity considering sustainability criteria and have been proven successful in improving the management of waste in products such as packaging and batteries.

R&I activities in proposals should:

- develop, test and demonstrate operational solutions for large scale implementation of EPR schemes that consider the eco-modulation of EPR fees for one or more of the

following product value chains: construction products, ICT products, furniture, mattresses, and carpets;

- develop and test novel circular business models and solutions linked to EPR schemes for the above-mentioned product value chains, supported by ecodesign requirements¹⁶¹;
- assess the economic, environmental and social cost-benefits of the implementation of EPR schemes for the relevant stakeholders, especially for consumer and producers (with a focus on SMEs);
- develop and test the application of dedicated digital technologies, such as the digital product passport (pre-consumer) and tracking applications (post-consumer), to collect evidence within those product value chains and facilitate producers' registration and the exchange of information between national EPR schemes;
- provide policy recommendations for specific elements of an EPR scheme that incentivises waste prevention and/or minimisation (e.g., ecodesign, reuse, preparation for reuse, repair and refurbishment, remanufacturing and recycling) and facilitate cross-border cooperation.

Proposals should consider the global perspective within the national EPR schemes, as frequently the value chains mentioned above are established at a global scale and producers may be situated outside of the EU. This may apply to new products made available on the EU-market or waste from post-consumer products managed outside the EU. They should also include the case of online platforms, given the increase of online sales and the associated potential risks of free-riding economic operators, as well as cross-border cooperation mechanisms.

Projects should bring together all relevant stakeholders active in the selected product value chains (industry members, local authorities, waste management operators, SMEs, economic operators, producer responsible organisations (PROs), consumer organisations, researchers, and NGOs).

This topic requires the effective contribution of SSH disciplines, namely economics and sociology, and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

The JRC may provide expertise in circular economy policy and foster coordination with on-going related activities and participate, potentially, in the projects Scientific Advisory Board.

HORIZON-CL6-2025-01-CIRCBIO-05: Consumption patterns and environmental awareness as enablers of transition to circular economy

Call: Cluster 6 Call 01 - single stage

¹⁶¹ https://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=OJ:L_202401781

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p>

Expected Outcome: In supporting the implementation of the European Green Deal, and in particular the 2020 circular economy action plan (CEAP), the Waste Framework Directive, the upcoming Green Claims Directive, the EU Ecolabel and the Ecodesign for Sustainable Products Regulation (ESPR), successful proposals will contribute to the expected impacts of this Destination, notably to benefits for industry and consumers from new opportunities both through sustainable novel products in line with ecodesign principles, and novel circular business models that have a mitigating impact on resource use and greenhouse gas emissions.

Project results are expected to contribute to all of the following expected outcomes:

- increased awareness of consumers of the importance of their choices, and of available sustainable and circular purchasing and use options, and demonstrated willingness to change their consumption behaviour accordingly; value of making circular purchasing decisions has been demonstrated to consumers;
- guidance is made available to public authorities and civil society organisations on how awareness about sustainable and circular consumption decisions can be increased and how decisions for consumption with a lower environmental footprint and lower greenhouse gas emissions can be motivated;
- circularity-related knowledge and skills of economic operators including product designers are strengthened, with the intention to make sustainable circular products and services more attractive to consumers, in view of their benefits in terms of reduced pollutant and GHG emissions and reduced pressure on biodiversity and ecosystems. .

Scope: The transition to a circular economy is key to reducing pressures on natural resources. It is also a prerequisite to achieve the EU's 2050 climate neutrality target and to halt biodiversity loss. Sustainable consumption and production are key elements in the societal transition to a competitive circular and sustainable economy. Decoupling economic activities and human well-being from natural resource use and environmental impacts is essential and necessary. As part of the transition, with the emergence of circular and sustainable products,

consumers will play an even more important role in making sustainable choices. Consumer empowerment encourages sustainable choices, which in return contribute to pollution reduction and climate neutrality.

Proposals should address the gaps in public awareness about the environmental impacts of the mainstream consumption patterns and between prevalent consumer knowledge/awareness and actual behaviour. Proposals should make use of social innovation and should analyse and identify the economic, social, behavioural, psychological, technical and legal barriers and levers for the uptake of circular and sustainable products, solutions and services. The analysis should address relevant aspects of fairness, equality, diversity, inclusion, and gender.

Proposals should first assess the patterns and underlying motivations of consumption habits through experimentation within various cultural, geographical, social, demographic, and economic groups. Based on this assessment, projects should draw and evaluate possible pathways to behavioural change of various economic actors (municipalities, companies including retailers and service providers, end-users) to enable the transition to circular and sustainable economy. These pathways should show how to change the demand for products and services with high environmental impacts and resource intensity, towards more circular and sustainable ones, including used and second-hand products, sharing services, reparability and durability. Possible environmental impacts in this context should be seen from a lifecycle perspective, including and valuing in monetary terms environmental externalities and building on rules set in Environmental Footprint methods wherever possible. The pathways should include policy, governance and business recommendations in all relevant areas (economic, behavioural, educational, technical, legal, cultural, etc.).

Power imbalances between industry and civil society should be addressed, and the impact and potential of Ecodesign, Ecolabel, green claims, and of digital infrastructures and Digital Product Passports should be explored with a view to changing vantage points and consumer behaviour.

Convincing narratives, framing strategies and storytelling tactics should be developed, improving knowledge of selling points, i.e., which features and qualities make a product or service attractive for consumers.

Proposals should explore the territorial and geographical dimensions of consumption patterns, and aim at synergies with the New European Bauhaus and the Circular Cities and Regions Initiative (CCRI). Proposals are strongly encouraged to organise joint activities, ensure synergies and undertake clustering activities with CCRI projects and the CCRI CSO.

For this topic, the engagement of citizens and civil society in the project activities is central to achieving the targeted outcomes. This topic also requires the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities.

Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures such as ESS ERIC or other relevant research infrastructures¹⁶².

The JRC may provide expertise in circular economy policy and foster coordination with on-going related activities and participate, potentially, in the projects Scientific Advisory Board.

HORIZON-CL6-2025-01-CIRCBIO-06: Indicators for the transition to sustainable and circular economy

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4-6 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁶³ .

Expected Outcome: In supporting the implementation of the European Green Deal, and in particular the 2020 circular economy action plan (CEAP), successful proposals will contribute

¹⁶² The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

¹⁶³ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

to the expected impacts of this Destination, notably to innovative business and governance models and innovative circular materials, products, processes and value chains.

Project results are expected to contribute to all of the following expected outcomes:

- increased knowledge about suitable indicators for measuring the progress and level of circularity in local communities, households, or in value chains at different company levels, as well as associated impacts, including on greenhouse gas emissions, and using Environmental Footprint methods and the derived Consumption Footprint;
- recommendations are made available on how to develop these indicators further, including for the collection of necessary data;
- guidance and recommendations are made available to local public authorities, social economy entities and financial institutions on how to use these indicators in their circularity-supporting activities.

Scope: The EU circular economy monitoring framework has been developed to monitor the progress of the EU and Member States in the circular economy transition. It uses aggregated macroeconomic indicators suitable for understanding how the whole economy changes. At the microeconomic level, i.e., at the level of individual economic agents such as companies, households or investors, or at the level of small territorial units such as cities or regions, no formal monitoring system exists besides the criteria set under the Taxonomy Regulation for Sustainable Activities that are set at activity level. However, more and more economic agents start to use CE indicators either for their internal decisions or for communication with their business partners, clients or the public. The European Commission's Joint Research Centre and the European Environment Agency¹¹ are currently doing research into circularity indicators in specific areas. The European Commission also launched a stocktaking exercise in the form of a contract for the development and testing of indicators and methods for measuring transition to climate-neutral circularity, its benefits, challenges and trade-offs under the Horizon Europe work programme for 2021.

A number of different indicators are currently used for this purpose, often with low information value or outright erroneous and misleading. Several organisations attempted to develop more robust indicator systems and offer them to their members or clients. While this effort is useful, none of these organisations has the authority to propose a monitoring system that would be accepted by a majority of economic actors and stop the proliferation of micro-level CE indicators. The European Commission is in the unique position to convene relevant stakeholders and facilitate the process of development of harmonised CE micro-economic monitoring indicators. Financial institutions are turning to the European Investment Bank (EIB) to organise a similar process to harmonise the monitoring indicators suitable for financial institutions.

Projects should develop and test a set or several sets of simple and meaningful indicators for monitoring of progress towards circular economy at the level of individual economic agents, i.e., in cities and regions, in households, or at different company levels. These indicators

should allow circularity monitoring for the addressed entities, but also help public administration and financial institutions in their decision-making in support of circularity transition measures. Proposals should test the operability of these indicators in the public/private investor environment, or in municipal/regional governance.

If within a project several separate sets of indicators are developed for different users, these should be compatible and possibly have a common set of core indicators.

Proposals should also thematise reasons for and benefits from the use of these circularity indicators and present convincing arguments. Proposals should take a lifecycle perspective and consider available instruments such as the consumption footprint indicator.

Project results will be of relevance for the Circular Cities and Regions Initiative (CCRI). Projects are therefore strongly encouraged to organise joint activities, ensure synergies and undertake clustering activities with CCRI projects and the CCRI CSO.

The JRC may provide expertise in circular economy policy and foster coordination with on-going related activities and participate, potentially, in the projects Scientific Advisory Board.

HORIZON-CL6-2025-01-CIRCBIO-07: Demonstration, deployment and upscaling of circular systemic solutions in cities and regions (Circular Cities and Regions Initiative)

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 9.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: at least 3 different demonstration and 6 replication cities/regions must be part of the consortium as beneficiaries.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: In supporting the implementation of the European Green Deal, and in particular the 2020 circular economy action plan (CEAP), a successful proposal will contribute to various expected impacts of this Destination, notably by supporting the development of innovative circular solutions as well as innovative business and governance

models, and fostering social, technological and non-technological innovation across sectors and value chains at local and regional level.

Project results are expected to contribute to all of the following expected outcomes:

- increased circularity and reduced GHG emissions in the economic sectors, services and product value chains at local and/or regional scale, and efficient valorisation of local resources, with positive effects on air quality and biodiversity;
- widespread deployment and easier replication, scalability and visibility of circular systemic solutions for a multiplication of their economic, social and environmental benefits;
- enhanced collaboration and knowledge transfer between the cities, regions and their partners, and increased uptake and stakeholder engagement in their circular and climate-neutral practices.

Scope: Proposals are expected to implement and demonstrate circular systemic solutions for the deployment and upscaling of the circular economy in cities and regions. The main objective is to stimulate social innovation through new circular innovative technologies, novel governance and business models in order to contribute to climate mitigation and help reduce pressures on natural resources, whilst increasing Europe's competitiveness.

This CCRI-related topic does not target specific technologies or industrial sectors, but supports the implementation of a systemic approach. This means that the implemented circular systemic solutions should involve relevant circular economy stakeholders in the targeted cities/regions, and address several (at least two) sectors and value chains – as set out in the 2020 circular economy action plan¹⁶⁴.

Proposals should select their circular systemic solutions and related economic sectors (e.g. construction and buildings, transport and mobility, bioeconomy, land use and spatial planning) based on a detailed analysis of the cities' and regions' socio-economic and environmental needs, as well as their local circular potentials.

Proposals should monitor and evaluate the implementation and the impacts of their circular systemic solutions through the project lifespan. This should include the identification, analysis, and when feasible, quantification of the economic, social and environmental benefits and other results. By doing so, proposals could take into consideration various social variables (e.g. gender, age, socio-economic status). In this case, proposals should involve the effective contribution of SSH disciplines.

Proposals should facilitate knowledge and experience transfer for further outreach and replication across EU Member States and Associated Countries. They should therefore clearly identify the lessons learned from the demonstration projects, specifying the enabling

¹⁶⁴ The CEAP focuses on the sectors and value chains that use most resources and where the potential for circularity is high such as: electronics and ICT, batteries and vehicles, packaging, plastics, textiles, construction and buildings, food, water and nutrients.

framework, the main (regulatory and/or market) barriers and the enablers, the business case as well as any other relevant factors for successful replication and upscaling in other cities and/or regions. In that respect, proposals should include a clear action plan to communicate experiences and results to ‘replicators’. This is essential for ensuring that circular systemic solutions demonstrated in specific areas are replicated in others, and where feasible, at larger scale.

Proposals should define financing strategies for their circular systemic solutions as part of their exploitation plan. Proposals should also foresee financing follow-up, for instance by linking with the Circular Cities and Regions Initiative financial advisory services (including the Horizon Europe funded Project Development Assistance Projects¹⁶⁵ and the European Investment Bank’s Circular City Centre¹⁶⁶).

Selected proposals will support the implementation of the European Commission’s Circular Cities and Regions Initiative (CCRI).

This topic targets public local and regional authorities or their groupings in EU Member States and Associated Countries. Proposals should support the inclusive engagement and active participation of all relevant circular economy stakeholders in the targeted cities and regions, such as policymakers (at all governance levels), research bodies and academia, the civil society, the private sector (industry, entrepreneurs, start-ups, small and medium enterprises etc.), social economy entities and financial intermediaries. Moreover, proposals should ideally consider different typologies (urban/peri-urban/rural), sizes (towns/cities) and/or geographical areas. Multi-actor Approach (MAA) and social innovation are encouraged.

Proposals should clearly specify how they will ensure synergies and complementarities with other relevant circular economy projects and initiatives, including those recognised as CCRI Projects¹⁶⁷ and CCRI Associated Partners¹⁶⁸. In that sense, proposals should include a dedicated task, appropriate resources and a plan on how they will collaborate with the CCRI office, projects and partners.

In particular, proposals are expected to organise joint activities and undertake clustering activities (e.g. thematic working groups, joint events, joint R&I gap analysis and policy briefs) with CCRI projects sharing a common theme and/or addressing similar issues. The proposals are also expected to ensure that their dissemination plan includes dedicated (possibly joint) actions for promotion of their results and lessons learned on the official CCRI website¹⁶⁹ of the European Commission and through other CCRI-related channels. Both clustering and dissemination activities will be facilitated and supported by the CCRI

Coordination and Support Office¹⁷⁰ and aim to ease knowledge exchange, foster solution replication and up-taking as well as maximise impact.

Linkages with relevant initiatives such as the Hubs for Circularity¹⁷¹, the Regional Innovation Valleys¹⁷², the New European Bauhaus and the Climate-Neutral and Smart Cities Mission should be explored – whenever relevant.

Innovating for sustainable bio-based systems, biotechnology and the bioeconomy

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-CIRCBIO-08: Bioprospecting and optimized production of the terrestrial natural products: new opportunities for bio-based sectors

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 11.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Successful proposals should contribute to a clean, competitive and circular economy and sustainable bioeconomy, through the integration of bioprospecting/biodiscovery, biotechnology and biomanufacturing, enabling the deployment of innovative circular and climate-neutral bio-based materials, processes and value chains with higher resource efficiency and market value.

Project results are expected to contribute to all of the following expected outcomes:

- demonstrating the broadened range of more sustainable and more accessible natural bio-based products from terrestrial ecosystems with high value market applications;
- demonstrating advances in the development and/or application of related computational tools and methods or technologies, such as AI etc. in the biodiscovery pipeline;

¹⁷⁰ [About – CCRI office | Circular Cities and Regions Initiative.](#)

¹⁷¹ [Hubs4Circularity \(h4c-community.eu\).](#)

¹⁷² [Selected Regional Innovation Valleys | Research and Innovation.](#)

- increased commitment to biodiversity preservation and conservation through enabling bioproduction routes (biosynthesis, fermentation, culturing) of natural products, ensuring that the biodiscovery of new compounds does not lead to unsustainable harvesting from the wild, to ensure a sustainable use of genetic diversity;
- awareness raising and creation of a better framework for biotechnology and bio-based innovation and uptake through broad stakeholder engagement, supporting the EU biotechnology and biomanufacturing initiative.

Scope: The action covers modern biodiscovery approaches, including full integration of digital-driven, ‘-omics’ and associated bioinformatic tools¹⁷³, which make possible the identification and further upscaling (optimized production) of bioactive natural compounds with potential high-value application in various bio-based sectors including pharmaceuticals, nutraceuticals, cosmetics, food/feed additives, agrochemicals, cleaning etc. In the context of this topic, the natural products are understood as biologically active products such as secondary metabolites as well as enzymes derived from terrestrial organisms. New products should be safe and sustainable following the SSbD approach.¹⁷⁴

The scope covers immense diversity of terrestrial micro- and macro-organisms and their communities, which represents a rich and largely unexplored reservoir of natural products and their base ingredients (e.g. plants, fungi, microorganisms etc are in scope. The biochemical interplay between interspecies communities, e.g. symbiotic or defence mechanisms may offer attractive leads and is also in scope). For the coverage of aquatic bioprospecting see parallel topic HORIZON-CL6-2025-01-CIRCBIO-14: Bioprospecting of marine natural products in the -omics & artificial intelligence era.

The aim of this action is to broaden the range of novel compounds, lowering the production costs, quicken the development pipeline, and enable more innovation for the industrial operators, with clear-cut benefits for the final users (consumers and industries). The biodiscovery pipeline may cover in silico prospecting, genomic characterisation, creation of natural product libraries, bioactivity screening, chemical structure elucidation, natural products isolation and purification, and/or optimized production pathways via biotechnology and biomanufacturing approaches (including via gene editing) in suitable industrial facilities (bioreactors/biorefineries, e.g. microbial production), or synthetic biology approaches.

Targeted terrestrial biological resources can be sourced from their natural environment (in-situ) and/or from public and private collections and gene-banks (ex-situ).

The integration of digital approaches and tools (AI, computer algorithms such as machine learning, modelling, data science, digital twins etc) on optimizing the biodiscovery processes such as identification of biosynthetic gene clusters and metabolic pathways, enzyme selection, combinatorial assembly and annotation of high-throughput DNA sequencing data, bioactivity prediction, elucidation of the structure of compounds, experimental design etc is in scope (see

¹⁷³ Related to e.g. statistics, algorithms, AI, data science, modelling etc.

¹⁷⁴ Commission Recommendation (EU) 2022/2510 of 8 December 2022 establishing a European assessment framework for ‘safe and sustainable by design’ chemicals and materials.

the parallel topic HORIZON-CL6-2025-01-CIRCBIO-09: Unleashing the potential and advancing the impact of the digitalization/AI of the bio-based value chains).

Safety to the end-users, and operators needs to be assessed and guaranteed.

The action needs to avoid overlaps to past or ongoing topics (e.g. projects funded under the topic HORIZON-CL6-2022-CIRCBIO-02-05-two-stage - Life sciences and their convergence with digital technologies for prospecting, understanding and sustainably using biological resources, or the topic HORIZON-CL6-2023-CIRCBIO-01 - Broadening the spectrum of robust enzymes and microbial hosts in industrial biotechnology), consider synergies to parallel actions (e.g. HORIZON-CL6-2025-01-CIRCBIO-14 - Bioprospecting of marine natural products in the omics and artificial intelligence era), as well as funded under topic HORIZON-2020-FNR-11-2020: Prospecting aquatic and terrestrial natural biological resources for biologically active compounds¹⁷⁵. Also, links to the actions under the Circular Bio-based Europe Joint Undertaking (CBE JU) may be established, as relevant.

Proposals should take into account the findings of the Global Resources Outlook 2024 of the International Resource Panel.

Projects will have a strong industry/SME focus and include demonstration activities to proof the techno/economic viability of the production of the proposed terrestrial natural product(s) and/or the biodiscovery platform tools combining digital approaches and tools and biotechnologies.

The action needs to guarantee biodiversity preservation. This can be addressed, inter alia, by covering propagation of biological material, including by in vitro cultivation, as well as by biotechnological approaches. The aim is to decrease of pressure on wild resources and ensure higher overall sustainability, with policy dialogue with competent authorities; projects need to comply with applicable EU regulations and international rules on access to biological resources, such as UN Convention on Biological Diversity and its Nagoya Protocol, their sustainable use and the fair and equitable sharing of benefits from their utilisation. A sustainability assessment should be carried out to evaluate the environmental, economic and social performance of the developed product(s). Proposals should contribute to understanding of potential trade-offs inherent in the exploitation of ecosystems, and their potential to deliver ecosystem services. Any risks to the ecosystems should be assessed and minimised, along the application of the Do-No-Significant-Harm (DNSH) principle.

Proposals should include a task dedicated to sharing methodologies and findings with projects funded under this topic and with similar recent or ongoing projects.

International cooperation is encouraged, for win-win outcomes and mutual benefits.

¹⁷⁵ https://cordis.europa.eu/programme/id/H2020_FNR-11-2020/en.

HORIZON-CL6-2025-01-CIRCBIO-09: Unleashing the potential and advancing the impact of the digitalization/Artificial Intelligence of the climate-neutral bio-based value chains

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Successful proposals should contribute to a clean, competitive and circular economy and sustainable bioeconomy, through the integration of digital solutions/AI, enabling the deployment of innovative circular and climate-neutral bio-based materials, processes and value chains with higher resource efficiency.

Project results are expected to contribute to all of the following expected outcomes:

- the sustainability, resilience and the strategic autonomy of the European bio-based industry is improved due to the unleashing the full potential of Artificial Intelligence (AI), digitalisation and IT solutions, supporting the bio-based innovation;
- the opportunities on more sustainable feedstocks, more productive and efficient industrial processes and operations, and products, including via increased circularity, biodegradability, and due to better understanding of the carbon removal potential of bio-based systems, are advanced and demonstrated;
- improved understanding of risks and benefits based on new inclusive assessment methods, taking on board advances on technical and social innovation level.

Scope: There is an unprecedented amount of data available in the bio-based sector today, among others, from the ever-growing ‘-omics’ technologies and integration of sensors and the Internet of Things (IoT) devices. Big data and analytics solutions allow bio-based actors, in particular, the bio-based industry, but also other R&I and civil society stakeholders, to tap into this wealth of data to drive innovation and sustainability. Operators already use the bioinformatics solutions but there is still much potential to explore undiscovered bio-based systems, improve processes and develop cleaner solutions (e.g. see parallel topics HORIZON-CL6-2025-01-CIRCBIO-14: Bioprospecting of marine natural products in the omics &

artificial intelligence era, and HORIZON-CL6-2025-01-CIRCBIO-08: Bioprospecting and optimized production of the terrestrial natural products: new opportunities for bio-based sectors).

AI enables also the bio-based operators to automate a wide range of processes, helping them scale up their operations. Using AI image analysis or leveraging deep learning can be used to analyse microbiomes, screen phenotypes, and develop rapid diagnostics in a vast range of applications. Use of AI to predict best metabolic pathways for biosynthesis, optimize/engineer enzymatic activities, and virtually test several variables can speed up bioprocesses' development, while helping to reduce costs and deliver novel molecules for the market. Also, streamlining biorefineries with AI can lead to several levels of productivity gains. Moreover, systemic and integrated modelling approaches can optimise the rational deployment of bio-based value chains.

The action will first, explore the potential of AI and other digital technologies and tools in the bio-based sector and, next, focus on developing new capacities, high-quality tools and algorithms of AI and other digital technologies and tools to be demonstrated for the most promising (in terms of impact on environmental sustainability and competitiveness) applications of this sector. In this context, the concept of a 'digital twin'¹⁷⁶ could be explored. Generative artificial intelligence is in scope, if relevant to the proposed concept.

In line with the current definition of the EU bioeconomy strategy, health biotechnology sector is not in scope.

The scope covers all relevant aspects of the contribution of AI/digital methodologies and tools capable of delivering the high sustainability gains (resource efficiency, circularity, climate neutrality etc), as well as enhance the European industrial competitiveness (in particular in regard to improved quality of bio-based products, strategic autonomy, resilience and role of innovative SMEs). The proposals should demonstrate the upscaling from the current potential, align it to parallel actions on AI and other digital technologies and tools (e.g. database development, predictive capacities, EU-level initiatives (e.g. EU AI Act, Biotechnology and Biomanufacturing Initiative), and incorporate the systematic assessment of the risks and opportunities for the sector.

Multi-actor Approach (MAA) and social innovation are encouraged, especially to address the societal concerns and perceptions on the role of AI in the bio-based innovation and broader bioeconomy (e.g., impacts on skills and job opportunities/risks). All relevant stakeholders and value chain actors are in scope. Links to the Circular Bio-based Europe Joint Undertaking (CBE JU) operations are strongly encouraged. Proposals should also consider citizens engagement and dialogue, for seeking wider input and support, and encourage social innovation approaches.

¹⁷⁶ A digital twin is a digital representation of a physical object, person, or process, contextualized in a digital version of its environment. Digital twins can help an organization simulate real situations and their outcomes, ultimately allowing it to make better decisions.

Proposals should take into account the findings of the Global Resources Outlook 2024 of the International Resource Panel. Any risks to the ecosystems should be assessed and minimised, along the application of the Do-No-Significant-Harm (DNSH) principle.

The action will serve to develop guidelines for the policy makers, industry and civil society, in an inclusive co-creation process.

Proposals should include a task dedicated to sharing methodologies and findings with projects funded under this topic and with similar recent or ongoing projects.

Proposals should leverage the data and services available through European Research Infrastructures federated under the European Open Science Cloud, as well as data from relevant Data Spaces. Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures such as IBISBA or other relevant research infrastructures¹⁷⁷.

International cooperation is encouraged, e.g. with countries mentioned in the EU biotechnology and biomanufacturing initiative communication, such as United States of America, Japan, South Korea, and India, for win-win outcomes and mutual benefits.

HORIZON-CL6-2025-01-CIRCBIO-10: Support to the EU Biotechnology and Biomanufacturing Initiative: scoping action

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the</p>

¹⁷⁷ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

	Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁷⁸ .
--	---

Expected Outcome: Successful proposals should contribute to a clean, competitive, safe, fair and circular economy and sustainable bioeconomy, through the integration of biotechnology and biomanufacturing, supporting the innovative, circular and climate-neutral bio-based sector.

Project results are expected to contribute to all of the following expected outcomes:

- improved uptake of the solutions in the context of the EU biotechnology and biomanufacturing initiative¹⁷⁹, as related to the bio-based sector (e.g. by SMEs, and start-ups) and broader bioeconomy including by ensuring consumers' rights and needs (e.g., increased transparency, co-creating solutions that have high potential for uptake by consumers and stakeholders);
- higher environmental sustainability, including of biomass uses for the development of new bio-based materials and products, replacing fossil- or less environmentally - friendly bio-based ones, and overall innovation capacity, enabled by the technical solutions and stakeholder engagement. This will focus on sharing best practice and inclusive participation across the EU and society;
- improved awareness on the level of EU, national and regional policy making, based on scientific excellence and inclusive co-creation process with relevant stakeholders;
- development of an EU vision and strategic research and innovation agenda to foster biotechnology and biomanufacturing solutions to address EU economic security risks and global challenges like climate change or biodiversity protection.

Scope: The action will first take stock of the large number of funded actions on biotechnology and biomanufacturing (EU – including European Partnerships (in particular, under Circular Bio-based Europe Joint Undertaking (CBE JU)), EU Missions, and European research infrastructures programmes in the area of biotechnology such as EU-IBISBA, as well as others on the national, regional, and international level), related to industrial, environmental, marine and agri-food biotechnology (note: in line with the current definition of the EU bioeconomy strategy, health biotechnology is not in scope), as well as parallel broader scientific advances on the same topics.

Areas of interest could cover CRISPR-Cas gene editing, synthetic biology, digital technologies, including as advanced under the EU-funded projects, e.g. project GENECON, funded under topic HORIZON-CL6-2021-ZEROPOLLUTION-01-08: New

¹⁷⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁷⁹ [Nature-based solutions - European Commission \(europa.eu\)](https://ec.europa.eu/commission/presscorner/detail/en/ip_24_137) COM(2024) 137 Building the future with nature: Boosting Biotechnology and Biomanufacturing in the EU

genomic techniques (NGT): understanding benefits and risks – focus on bio-based innovation, projects DETECTIVE and DARWIN, under topic HORIZON-CL6-2023-FARM2FORK-01-11: New detection methods on products derived from new genomic techniques for traceability, transparency and innovation in the food system etc., as well as social developments (trust-building measures, evidence-based policy making, social innovation (e.g. project B-TRUST, funded under topic HORIZON-CL6-2023-GOVERNANCE-01-6: Co-creation and trust-building measures for biotechnology and bio-based innovation systems). Also, the action may take into consideration the outputs from the parallel topics, such as HORIZON-CL6-2025-01-ZEROPOLLUTION-02: Environmental impacts from the production of agricultural crops for bio-based industrial systems, or HORIZON-CL6-2025-02-FARM2FORK-13: Raising citizen awareness on alternative proteins, including those derived from biotechnology, as well the results of the European Commission study on “Supporting the green transition via the EU Industrial Strategy: opportunities and challenges for bioeconomy, through bio-based industrial systems and biotechnology in the EU”.

The action will then provide scientifically robust assessment of the social, economic and environmental benefits and risks of biotechnologies and biomanufacturing and deliver recommendations in form of a consolidated EU vision and research and innovation agenda, on future trends and main innovation avenues. This action will contribute to the implementation of the EU biotechnology and biomanufacturing Initiative, in particular by developing guidance to stakeholders, such as SMEs, start-ups or civil society.

It should also explore the role of biotechnology and biomanufacturing in terms of knowledge needs around the potential positive impacts and potential risks of biotechnology, including on biodiversity and ecosystems, e.g., resource efficiency, sustainable biomass management, impacts on air, water and soil quality or capacity of bio-based systems to enable a sustainable carbon management and better understanding of the carbon removal potential of bio-based economies.

Furthermore, the action should inform the policy makers on national level, as an input to new or updated national bioeconomy strategies or roadmaps. Given that biotechnology has been identified as a critical technology from the economic security perspective¹⁸⁰, due to its cross-cutting nature, and also as one of the technologies prioritised in the Strategic Technologies for Europe Platform (STEP) Regulation¹⁸¹, such aspects should be covered by the present action.

Proposals should take into account the findings of the Global Resources Outlook 2024 of the International Resource Panel. The proposals under the topic should ensure best use of outcomes from previous projects on biotechnology (some of which are already referenced in the topic), for building consumer trust regardless of regulatory status of the products. To promote this, mapping use cases from past projects should be included. Furthermore,

¹⁸⁰ Commission Recommendation (EU) 2023/2113 of 3 October 2023 on critical technology areas for the EU’s economic security for further risk assessment with Member States.

¹⁸¹ Proposal for a Regulation of the European Parliament and the Council establishing the Strategic Technologies for Europe Platform (‘STEP’) and amending Directive 2003/87/EC, Regulations (EU) 2021/1058, (EU) 2021/1056, (EU) 2021/1057, (EU) No 1303/2013, (EU) No 223/2014, (EU) 2021/1060, (EU) 2021/523, (EU) 2021/695, (EU) 2021/697 and (EU) 2021/24, COM/2023/335 final.

synergies with projects on biotechnology/biomanufacturing pilot infrastructure, such as projects Pilots4U and Copilot (under BBI-JU and CBE-JU, respectively) is encouraged, given they may enable the accessibility to pilot infrastructure to bring biotech/biomanufacturing initiatives to the market.

International cooperation is encouraged, e.g. with countries mentioned in the communication on the EU biotechnology and biomanufacturing initiative, such as the United States of America, Japan, South Korea, and India, for win-win outcomes and mutual benefits.

This topic should involve the effective contribution of SSH disciplines.

HORIZON-CL6-2025-01-CIRCBIO-11: Demonstration of reduced energy use and optimised flexible energy supply for industrial bio-based systems

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 11.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Successful proposals should contribute to a clean, competitive and circular bioeconomy, through the development of innovative and climate-neutral bio-based processes.

Project results are expected to contribute to all the following expected outcomes:

- bio-based industries' operators increase the uptake of innovative low-energy bio-based processes and the use of renewable energy in the processes and utilities of the industrial assets to progress towards climate neutrality and reduction of emission of air pollutants related to energy consumption;
- industrial bio-based systems improve their resilience against energy provision issues.

Scope: Key elements of circular economy applicable to industrial bio-based processes and technologies include increasing their energy and resource efficiency. In fact, on one side, industrial bio-based systems may be affected by a higher energy consumption; on the other side, energy supplies may experience shortage and/or price fluctuations that make the most

energy-intensive sectors more vulnerable. Industrial bio-based systems within the scope of this topic do not include food/feed, biofuels, bioenergy and cultural/recreation sectors.

Proposals should select one or more case-studies of bio-based industrial systems, within the scope of the topic, in the EU and Associated Countries and:

- describe how to improve energy efficiency, developing and implementing, for example: energy efficient (thermal) separation technologies (e.g., membrane distillation); fast and energy efficient drying processes of biomass (e.g., for wood residues, algae residues, and other residual streams); optimized catalysts, enzymatic processes and reactors to save energy, etc.. analyse the rebound effect of energy saving measures and how to address them;
- analyse the nexus water-energy in the processes of the selected bio-based industrial systems and how the reduction of water consumption contributes to energy saving, e.g., in separation and purification processes, as well as how to address the water-energy integration within the factory by considering the whole processes and all the utilities;
- describe how to enable energy consumption flexibility through the optimization of processes with faster response rate to be flexible to variable energy supply, (e.g., by slowing production when less energy available, and prices are high, or increasing the production and/or storing energy and energy carriers onsite when surplus of energy is available, and prices are low);
- analyse the implementation of renewable energy use in the selected bio-based industrial systems, including shifting from fossil-based to renewable resources and/or shifting to electrification;
- include a task in the project to demonstrate the solutions analysed under the previous four bullet points, to i) improve energy efficiency; ii) integrate water-energy nexus; iii) enable energy consumption flexibility; iv) use renewable energy. Such solutions should be demonstrated on one or more of the selected case-studies, and should be optimized, also through the applications of digital tools including based on artificial intelligence. Assess the contribution to climate neutrality of the selected solutions.

For increased resource efficiency (water and energy use) and circular economy (e.g. minimisation of waste generation or raw materials use) in large industrial installations, please refer to the Innovation Centre for Industrial Transformation and Emissions (INCITE) (<https://innovation-centre-for-industrial-transformation.ec.europa.eu/>).

The multi-actor approach is encouraged.

In this topic the integration of the gender dimension (sex and gender analysis) in research and innovation content is not a mandatory requirement.

HORIZON-CL6-2025-01-CIRCBIO-12: Harmonizing and optimising composting plants performances in Europe

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹⁸².</p>

Expected Outcome: Successful proposals should contribute to a clean, competitive and circular economy and sustainable bioeconomy, through the involvement of waste management operators, enabling the deployment of innovative circular bio-based materials and more sustainable approaches for managing waste materials.

Project results are expected to contribute to all the following expected outcomes:

- local authorities and operators responsible for the waste management improve the territorial deployment of individual or centralised composting plants;
- waste management operators in the EU and Associated Countries share best practices on harmonized performances of composting plants and the optimization of their environmental performances reducing the impacts on air/water/soil.

Scope: From 31 December 2023, EU Member States must collect bio-waste separately. The Waste Framework Directive allows waste which complies with relevant standards for packaging recoverable through composting and biodegradation, to be collected together with bio-waste. For example, the collection of bio-waste with industrially compostable plastic bags

¹⁸² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

is encouraged (Communication on “EU policy framework on biobased, biodegradable and compostable plastics” COM(2022)). However, industrial composting facilities in the EU are often unable to biodegrade such packaging due to different performances of composting processes than those required for the biodegradation of compostable packaging compliant with the standard EN 13432. Harmonization of the performances of industrial composting plants in the EU would help meeting the targets for bio-waste collection and the quality of resulting compost.

Proposals should:

- analyse the technical performances of industrial composting plants, with a special focus on the treatment of compostable packaging, at EU and at global scale. Compostable packaging in the EU is compliant with the standard EN 13432. The analysis should address the environmental impacts of composting plants, including emissions of pollutants to air/water/soil, emissions of odours and energy consumption, and the quality and safety of the product (e.g., control of pathogens in compost), also monitoring potential changes in the microbial communities in presence of compostable materials;
- include a task for the project to select ad hoc performance parameters to define the best practices of industrial composting plants, ensuring the full biodegradation of compostable packaging;
- describe how the project will deliver a collection and assessment of the best practices of industrial composting, at EU and global level, ensuring the full biodegradation of compostable packaging, and will individuate promising innovation, e.g., microbial bioaugmentation strategies to improve composting performances in a range of conditions, to generate high quality compost, and/or to biodegrade pollutants commonly present in compost waste (i.e., microplastics);
- include a task for the project to provide recommendations towards the harmonization of EU industrial composting processes and conditions, ensuring the full biodegradation of compostable packaging sustainably and safely and delivering safe and sustainable compost, as well as recommendations on improving the environmental performances of such plants, in terms of emissions of pollutants to air/water/soil and of odours.

International cooperation and multi-actor approach, including the involvement of waste managers in municipalities, are encouraged.

HORIZON-CL6-2025-01-CIRCBIO-13: Reconstructing areas affected by conflicts: the role of the bio-based solutions

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately.

<i>project</i>	Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 3-5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁸³ .

Expected Outcome: In line with EU policies, in particular the European Green Deal, the bioeconomy strategy and the climate adaptation strategy, successful proposals will support bio-based and nature-based solutions to deliver on EU international commitments and outreach, including actions directed at future EU enlargement, EU international partnership and humanitarian aid, contributing to the EU global commitments on biodiversity and climate change.

Project results are expected to contribute to all of the following expected outcomes:

- advanced mapping and assessment of local problems and needs and the opportunities and synergies of both bio-based innovation and of nature-based solutions, for the reconstruction of areas affected by conflict;
- enhanced and more rapidly accessible uptake and community co-creation of more sustainable bio-based solutions, aimed at restoration efforts;
- promotion of the ‘build back better and greener’ concept, at all government levels and by different stakeholders, contributing to climate adaptation;

¹⁸³ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- enhanced understanding and engagement of the policymakers and society stakeholders of the role of bio-based innovation, at relief efforts, underpinned by principles of scientific excellence, sustainability, circularity and inclusiveness.

Scope: The recent wars, some of which are taking place at or near the EU borders, in particular the unprovoked and unjustified war of aggression of Russia on Ukraine, and the humanitarian catastrophe in Gaza, are causing not only tragic loss of human life and human suffering, but also serious environmental degradation, across ecosystems, terrestrial and aquatic, and in consequence biodiversity loss. Beyond the EU's borders, conflicts and fragility also persist where communities are affected by recurring or endemic conflicts with no real efforts to reconstruct, much less to build back better and greener. In this context, the options for the reconstruction process offered by the innovative bio-based solutions should be explored and seized. There is also a clear urgency to assess the resilience of solutions, map and deploy the remedies arising from both bio-based innovation and from nature-based solutions to address the reconstruction of such areas, both rural, coastal and urban, to promote the 'build back better and greener' concept, thus contributing to adaptation to climate change.

The action covers the development of practical solutions to achieve reconstruction efforts and strategies for restoring and 'renaturing' destroyed areas, made possible by bio-based innovation (including, i.e. the role of biotechnology, digital solutions, or bio-based construction materials), taking into account the circular and cascading use of biomass principles, local valorisation of underutilised biological residues, using nature-based solutions for their potential for bringing back biodiversity and restoring areas degraded or destroyed by conflicts, and overall, more sustainable and more environmentally-friendly management of biological resources. The aspect of the disaster risk reduction can be also included, if relevant. Covering the potential use of the bio-based innovation and nature-based solutions and their interplay in the humanitarian relief sphere and preparing for the deployment of concrete and human-centric applications is strongly encouraged. The higher sustainability of circular bio-based materials should be confirmed by the LCA approach, as much as possible.

Synergies with ongoing projects are encouraged, e.g. those funded under topics HORIZON-CL6-2023-CIRCBIO-01-06: Bio-based solutions for humanitarian applications or HORIZON-CL6-2023-GOVERNANCE-01-05: Revitalisation of European local (rural/peri-urban) communities with innovative bio-based business models and social innovation, upcoming topics (e.g. HORIZON-CL6-2025-01-ZEROPOLLUTION-03: Environmental biotechnology applications in service of restoration of polluted ecosystems, as well as with the actions supported under the New European Bauhaus (NEB) Facility. In addition, synergies with the EU Mission on Climate-neutral and Smart Cities, and with LIFE projects, are encouraged, notably the ones which contributed to the Ukraine Green Recovery Conference ¹⁸⁴.

Proposals should include a task dedicated to sharing methodologies and findings with projects funded under this topic and with similar recent or ongoing projects (some of which are referenced in the topic).

¹⁸⁴

[Ukraine Green Recovery Conference - European Commission \(europa.eu\)](https://european-council.europa.eu/media/en/press-room/pages/press-room-detail.aspx?lang=en&id=12345)

Proposals should take into account the findings of the Global Resources Outlook 2024 of the International Resource Panel.

Social Sciences and Humanities aspects, including gender dimension, social innovation are to be covered, to ensure an inclusive engagement of all key stakeholders. The multi-actor approach (MAA) is encouraged.

The action will provide recommendations to policymakers and EU and international relief organisations, to develop any replication actions, including in the context of the possible EU accession process, if relevant. International cooperation is strongly encouraged.

The JRC may provide support in research activities related the application of circular and bio-based materials in the rapid rebuilding of conflict-affected regions.

Innovating for blue bioeconomy and biotechnology value chains

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-CIRCBIO-14: Bioprospecting and optimised production of marine/aquatic natural products in the omics & artificial intelligence era

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Successful proposals should contribute to reaching the impacts of this destination, and European policies, in particular the European Green Deal, the bioeconomy strategy, the new approach for a blue economy. They should help harnessing the full potential of marine and freshwater biological resources and blue biotechnology is leveraged to deliver societal benefits, such as greener more environmentally friendly industrial products and processes, support public health and environmental conservation.

Project results are expected to contribute to all of the following expected outcomes:

- demonstrating the broadened range of more sustainable and more accessible marine/aquatic natural products with high value applications;

- demonstrating advances in the development and/or application related computational tools such as AI etc. in the biodiscovery pipeline;
- increased commitment to biodiversity preservation and conservation through enabling bioproduction routes (biosynthesis, fermentation, culturing) of natural products, ensuring that the biodiscovery of new compounds does not lead to unsustainable harvesting from the wild and a sustainable use of genetic diversity;
- awareness raised and creation of a better framework for blue biotechnology innovation and uptake through broad stakeholder engagement, supporting the EU biotechnology and biomanufacturing initiative.

Scope: The immense diversity of marine/aquatic micro- and macro-organisms and their communities represents a rich and largely unexplored reservoir of natural products and their base ingredients. To survive in habitats ranging from deep-sea sediments to polar regions or shallow waters, marine organisms have developed a broad spectrum of structures, defense mechanisms and metabolic pathways resulting in natural products with vast chemical diversity and wide range of biological activities. The biological interplay between interspecies communities, e.g. symbiotic or defence mechanisms, may offer attractive leads and is also in scope. For the coverage of terrestrial bioprospecting see parallel topic HORIZON-CL6-2025-01-CIRCBIO-08: Bioprospecting and optimized production of the terrestrial natural products: new opportunities for bio-based sectors.

The action covers modern biodiscovery approaches including, *in-silico* bioprospecting and the full integration of digital methods (e.g., statistics, algorithms, AI, data science, modelling, digital twins) with bioinformatics and biotechnological tools, which make possible the identification and production of bioactive natural compounds with potential high-value application in sectors such as pharmaceuticals, nutraceuticals, cosmetics, food/feed additives, agrochemicals, etc. In the context of this topic, natural products are understood as biologically active products such as secondary metabolites as well as enzymes derived from marine/aquatic organisms.

Targeted marine/aquatic biological resources can be sourced from their natural environment (in-situ) and/or from open access and public/private collections and gene-banks (ex-situ).

The aim is to broaden the range of novel compounds, lowering the production costs, quicken the development pipeline, and enable more innovation for the industrial operators, with clear-cut benefits for the final users. Projects should have a strong industry drive and include demonstration activities to proof the techno/economic viability of the production of the proposed marine/aquatic natural product(s) and/or the biodiscovery platform tools combining digital and biotechnologies.

The scope covers relevant steps of the biodiscovery process such as isolation and characterization of microbial strains and consortia, genomic characterisation, creation of natural product libraries, bioactivity screening, natural products isolation and purification, chemical structure elucidation or optimized production pathways via biotechnology and

biomanufacturing approaches in suitable industrial facilities (bioreactors/biorefineries, e.g. for microbial production), synthetic biology or gene editing. The integration of digital approaches (AI, computer algorithms such as machine learning, modelling, data science etc) on optimizing the biodiscovery processes such as identification of biosynthetic gene clusters and metabolic pathways, enzyme selection, combinatorial assembly and annotation of high-throughput DNA sequencing data, bioactivity prediction, elucidation of the structure of compounds, experimental design etc is in scope. Safety to the end-users and operators needs to be assessed and guaranteed.

Proposals should avoid overlaps with past or ongoing topics (e.g. projects funded under the topic HORIZON-CL6-2022-CIRCBIO-02-05-two-stage: Life sciences and their convergence with digital technologies for prospecting, understanding and sustainably using biological resources, topic HORIZON-CL6-2023-CIRCBIO-01: Broadening the spectrum of robust enzymes and microbial hosts in industrial biotechnology), consider synergies to parallel actions (e.g. HORIZON-CL6-2025-01-CIRCBIO-08: Bioprospecting and optimized production of the terrestrial natural products: new opportunities for bio-based sectors as well as funded under the topic HORIZON-2020-FNR-11-2020 - Prospecting aquatic and terrestrial natural biological resources for biologically active compounds¹⁸⁵). The action is expected to establish links with relevant projects funded under the EU Mission Restore our Ocean and Waters.

The action needs to guarantee biodiversity preservation. This can be addressed, inter alia, by covering propagation of biological material, including by in vitro cultivation, as well as by biotechnology approaches. The action needs to comply with applicable EU regulations and international rules on access to biological resources, their sustainable use and the fair and equitable sharing of benefits from their utilisation, including the Nagoya protocol, the Kunming-Montreal Global Biodiversity Framework (KM-GBF), and the agreement on the conservation and sustainable use of marine biological diversity of areas beyond national jurisdiction (BBNJ). A life-cycle assessment should be carried out to evaluate the environmental, economic, and social impact of the developed product(s). Proposals should contribute to the understanding of potential trade-offs inherent in the exploitation of ecosystems, their potential to deliver ecosystem services and ideally provide solution approaches to address these trade-offs. Potential risks to the environment, ecosystems, and society as well as benefits should also be assessed under this topic.

Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures such as EU-OPENSOURCE, ELIXIR, EMBRC ERIC, IBISBA or other relevant research infrastructures¹³⁸.

Safeguarding and sustainably innovating the multiple functions of EU forests

Proposals are invited against the following topic(s):

¹⁸⁵ https://cordis.europa.eu/programme/id/H2020_FNR-11-2020/en

HORIZON-CL6-2025-01-CIRCBIO-15: European partnership: Forests and Forestry for a Sustainable Future

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 70.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 70.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>The funding rate is 30% of the eligible costs.</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. As financial support provided by the participants to third parties is one of the primary activities of the action in order to be able to achieve its objectives, the EUR 60 000 threshold provided for in Article 207(a) of the Financial Regulation No 2024/2509 does not apply. The maximum amount to be granted to each third party is EUR 10 000 000 for the whole duration of Horizon Europe ¹⁸⁶.</p>
<i>Total indicative budget</i>	The total indicative budget for the topic is EUR 70 million committed in annual installments over years 2025-2027 (EUR 10 million from the 2025 budget, EUR 30 million from the 2026 budget and EUR 30 million from the 2027 budget). The total indicative budget for the duration of the partnership is EUR 70 million.

Expected Outcome: In line with the European Green Deal and its vision for a climate-neutral, prosperous economy by 2050, and the EU forest strategy for 2030, this partnership will mobilise research and innovation to accelerate the transition to a sustainable forest bioeconomy to enhance forest sector value, biodiversity, and climate resilience.

The partnership will deliver knowledge and solutions that will support the implementation of several other European Green Deal strategies and initiatives, notably: the EU's 2050 climate neutrality target, the EU forest strategy for 2030, the EU biodiversity strategy for 2030, the EU bioeconomy strategy, the European industrial strategy, circular economy action plan, the

¹⁸⁶ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal) the maximum amount may be higher.

Land Use, Land Use Change and Forestry Regulation (LULUCF), the EU Nature Restoration Regulation and the proposal for a Regulation on a forest monitoring framework.

The expected outcomes of the topic will contribute to impacts of various Destinations under Cluster 6 of Horizon Europe, notably Destination ‘Circular economy and bioeconomy sectors’.

The partnership is expected to contribute to all the following expected outcomes:

- a robust European R&I system for forests and forestry, co-created through complementary forest research agendas across the EU Member States and Associated Countries, leading to strengthened collaborations, enhanced understanding of forest ecosystem resilience, and reinforced role of the EU in the international forest agenda;
- strong consistency between social, environmental and economic dimensions of forests and forestry, and improved knowledge of their interplay is established;
- increased knowledge of the functioning and the role of forests in climate action and ecosystems protection and restoration and improved guidelines on innovative and adaptive forestry regimes for different European regions in order to reach climate mitigation and adaptation, biodiversity, and bioeconomy objectives;
- better understanding of the role of forests in achieving climate and biodiversity objectives in times of accelerating climate change. New knowledge and tools for the timely, consistent, and comprehensive monitoring of forest condition, biodiversity, resilience, and productivity;
- new knowledge, methods, and processes to support major transitions (including increased carbon removals and the restoration of forest ecosystems) and innovations in the sustainable forest-based bioeconomy are developed towards higher added value;
- better understanding of the trends and bottlenecks in the new green forestry business models, including carbon farming, ecotourism and payments for environmental services.

Scope: As the main instrument for public organisations in EU Member States and Associated Countries to collaborate in the forest-based sectors, the partnership will facilitate concerted research and innovation actions on Europe's diverse forestry challenges, with the participation of a wide range of stakeholders, thus reducing fragmentation of related R&I.

The partnership should mobilise key partners and stakeholders, including ministries in charge of research, forest-related areas, and environment, funding agencies, research performing organisations, research infrastructures, foresters, industry, NGOs, international networks, etc.

The partnership should align with transnational research and innovation activities, as defined in its Strategic Research and Innovation Agenda (SRIA) and address all the following:

- identify R&I priorities to strengthen alignment of European and national research, development and innovation programmes and to increase their policy relevance;

- develop new knowledge and innovative solutions for a systemic and inclusive approach to forest and forestry challenges, looking for synergies in complementary actions and trade-offs between competing actions;
- reinforce the European collaboration on improving the understanding of resilience of forest ecosystems and forest-based sectors, and their underlying constituents to multiple hazards, driven by ongoing climate change and other human made impacts as a basis for adaptation and mitigation measures;
- strike an optimal balance in a range of forest functions and related societal values, including views of different stakeholders, thus responding to societal expectations while supporting the forest industry in a transition towards a greener and circular bioeconomy;
- focus on the multifunctional role and the sustainable management of forests as well as the interplay between forestry biomes, regimes and the continuous provision of biodiversity and ecosystem services, and resilience to climate change (drought, fire, pests and diseases, compound and cascading risks etc.) as well as climate adaptation;
- consider the cascading use of forest products and higher added value, supporting business and social enterprise development (creating employment and quality job opportunities and diversified revenue for foresters) in rural areas and industrial development in crucial sectors such as sustainable forest-based industries (traditional and emerging branches), construction, transport, and energy;
- stronger focus on the processes that lead to transformations toward sustainability in the forest-based and bioeconomy sector at European level, which will also be key to the forest industry's long-term competitiveness, in Europe and globally;
- ensure forests and forest management monitoring to ultimately anticipate future developments, provide early alerts on disturbances (e.g., pest outbreaks and climate change driven impacts), and assess the impact of forestry practices on forest and forest soil health and conservation and local communities;
- increase and strengthen international cooperation to develop a critical mass in relation to the global challenges faced including climate mitigation and imported deforestation.

The partnership is open to all EU Member States, as well as to Countries Associated to Horizon Europe. Specific action should be taken to integrate Ukraine in the Partnership to strengthen European sustainable forest management. Partners are expected to provide financial and/or in-kind contribution, in line with the level of ambition of the proposed activities. The partnership should be open to include new partners over its lifetime. Its governance should allow for engaging a broad range of stakeholders, together with the full members of the partnership. Guidelines, standards, and legislation in the field should be taken into consideration, to facilitate the marketing of the methods and products developed in the partnership.

The partnership should allocate resources to cooperate with existing projects, initiatives, platforms, science-policy interfaces, and/or institutional processes at European level, and at other levels where relevant to the partnership's goals.

To ensure that all work streams are coherent and complementary, and to leverage knowledge and innovation investment potential, the partnership is expected to foster close cooperation and synergies with the Horizon Mission 'A Soil Deal for Europe', 'Adaptation to Climate Change', and 'Climate-neutral and Smart Cities', with the existing European Partnerships Circular Bio-based Europe Joint Undertaking (CBE JU), Biodiversa+, Water4All, Agroecology, Built4People, Sustainable Food Systems, and with other relevant future partnerships, in particular the project that may follow from the topic "HORIZON-CL6-2024-GOVERNANCE-02-01: European Partnership of Agriculture of Data". Where relevant, creating links and using the information and data of the European Earth observation programme Copernicus are encouraged.

Cooperation with the JRC may be envisaged, in particular for actions related to forest monitoring and forest management.

Proposals should pool the necessary financial resources from the participating national (or regional) research programmes to implement joint calls for transnational proposals resulting in grants to third parties. The partnership will provide financial support to third parties as one of the means to achieve its objectives. To explore the full range of financing options available under Horizon Europe, the general annexes of the main Work Programme setting out the general conditions applicable to calls and topics for grants should be considered.

To achieve the international cooperation objectives, and given the global dimension of forests, collaboration with strategic third country partners with proven added value in the field of forests and forestry is strongly encouraged. In particular, the participation of legal entities from international countries and/or regions, including those not automatically eligible for funding, is encouraged in the transnational co-funded calls and/or in other activities of the partnership. Cooperation with international organisations may be considered.

Applicants are expected to describe in detail how they would carry out this collaborative work in practice.

Efforts should be made to ensure that the data produced in the context of this topic is FAIR (Findable, Accessible, Interoperable and Re-usable).

This topic should involve the effective contribution of social sciences and humanities disciplines.

In order to enhance the societal impact of the activities, the approach should empower citizens to contribute to the co-design/co-creation/co-assessment of research and innovation agendas/contents/outcomes.

Cross-articulation with data spaces, and notably with the European Open Science Cloud should be foreseen, exploiting synergies and complementarities of the different approaches.

The Commission envisages to include new actions in future work programme(s) to continue providing support to the partnership for the duration of Horizon Europe.

The expected duration of the partnership is seven to ten years.

Enabling a circular economy transition

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-CIRCBIO-01-two-stage: Open Topic: Innovative solutions for the sustainable and circular transformation of SMEs

Call: Cluster 6 Call 01 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>Applicants submitting a proposal under the blind evaluation pilot (see General Annex F) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (see General Annex E).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-8 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>This topic is part of the blind evaluation pilot under which first stage proposals will be evaluated blindly.</p>

Expected Outcome: In line with the EU 2050 climate neutrality objective, the circular economy action plan (CEAP), zero pollution action plan, the EU biodiversity strategy and the EU industrial strategy, a successful proposal will contribute to the expected impacts of this Destination related to innovative circular and bio-based materials, products, processes and value chains and to innovative business and governance models to reduce resource consumption environmental impact.

Project results are expected to contribute to all of the following expected outcomes:

- SMEs are equipped to overcome key barriers and challenges in the green transition and to implement requirements of relevant EU policies to mitigate climate change, reduce pollution emissions to air, water and soil, to protect, restore biodiversity and sustainably use ecosystem services or to reduce environmental degradation;
- significantly more SMEs are engaged in sustainable business practices and management practices, have improved their environmental performance and offer innovative circular and bio-based materials, products, processes, or services enhancing industrial competitiveness, resilience, and resource independence;
- sustainable circular business practices are taken up and diffused.

Scope: Under this open topic, proposals should address common but also new, upcoming, or unforeseen challenges to the green transition of SMEs through innovative, disruptive and sustainable solutions. Proposals should identify and analyse key barriers for the sustainable and circular transition of SMEs and develop and demonstrate innovative solutions. If they relate to some of the topics covered by Horizon Europe Calls ‘Circular economy and bioeconomy sectors’ 2021-2022 or 2023-2024, the proposals should convincingly explain how they will build on and not duplicate them.

Solutions can be innovative products, processes, services, or also plans and arrangements. These solutions can include but are not limited to the following examples: new business models (e.g. regenerative), collaborative governance and organisational approaches, development of tailored transformation plans, the identification, development and communication of meaningful set of metrics and indicators, environmental management and reporting tools or others. Proposals can also include the use of digital solutions e.g. digital product passports (DPP), Artificial Intelligence (AI) or digital assistants enabled by Generative Artificial Intelligence. Proposals should analyse the required skills and include skill development activities for current and future employees of the SMEs.

Proposals should demonstrate the feasibility (e.g. economic, technical), environmental performance and utility and transferability of the developed and demonstrated solutions, notably to address climate change mitigation, biodiversity or environmental remediation aspects related to the sustainable and circular transformation of SMEs. The demonstrations of the innovative solutions should be done in a large-scale operational environment with strong involvement of SMEs. The first deployment of the solutions and the validation of their utility can be demonstrated at territorial, sectoral or value chain context. Nevertheless, the solution should be transferable, and the proposal should include the effectively replication in other contexts.

Successful proposals should address the requirements of EU policies relevant to the green transformation of SMEs, if suitable also national or regional strategies, and consider demands from business partners, as customers, to advance their related commitments. Proposed solutions should be concrete and user-friendly to lower the administrative burden for SMEs. This includes adopted, and planned legislation such as the Corporate Sustainability Reporting Directive (CSRD), Ecodesign for Sustainable Products Regulation (ESPR), Green Claims

Directive, the Eco-Management and Audit Scheme (EMAS), EU taxonomy, best available techniques standards and technology developments like digital product passports (DPP). Proposals should also include the development of policy recommendations that support the widespread adoption of the validated solution and use of new knowledge in the development and revision of regulatory frameworks.

Successful proposal should build on the publicly available achievements and findings of related previous national or EU-funded projects as well as collaborate with existing public organisations, e.g. the Enterprise Europe Network, Innovation Centre for Industrial Transformation and Emissions (INCITE) or the EU pact for skills initiative. It is expected that SMEs or SME associations are participating in the consortia, to ensure applicability and dissemination of the results. The engagement of non-governmental organisations, small-scale initiatives and suitable industry or industry associations is encouraged.

Destination - Clean environment and zero pollution

This destination serves the zero-pollution ambition for a toxic-free environment, as set out in the European Green Deal, towards the 2030 zero pollution targets for air, water and soils. The objectives of the EU's chemicals strategy for sustainability, including the focus on PFAS (the 'forever chemicals'). R&I under this destination will contribute to reach the 2030 targets for pollution reduction, by pursuing the precautionary principle and an effective 'zero pollution hierarchy'¹, prioritising preventive measures.

Proposed activities related to ocean and seas will be aimed at the implementation of the zero-pollution action plan within the scope of the Marine Strategy Framework Directive and the EU water legislation as well as the European Ocean Pact.

The destination will also support the implementation of the revised legislation on industrial emissions and air quality, by promoting innovative monitoring and modelling systems. It will support sustainable solutions to prevent and reduce pollution from agriculture ensuring long-term competitiveness and sustainability of the farming sector within planetary boundaries, and address pollution stemming from food and drink industries, in line with the objectives of the common agricultural policy, the announced future EU Vision for agriculture and food, and the Food 2030 initiative.

The development of innovative solutions and clean technologies in bio-based industrial sectors towards a zero-pollution and clean industrial approach is also in scope of this destination, in line with the industrial carbon management strategy and the European Climate Law, and the upcoming update of the bioeconomy strategy, underpinned by the principles of the circular economy and enabled by innovative approaches, to support the Commission communication "A Competitive Compass for the EU", the announced strategy for European life sciences and the EU biotech act.

R&I initiatives within this destination will contribute to the objectives of the EU biodiversity strategy for 2030 and the Nature Restoration Regulation, by addressing pollution as one of the main drivers of biodiversity loss as well as for the protection of the EU natural capital.

Proposals for topics under this destination should set out a credible pathway to **"achieve a clean environment, ensure water resilience, and enable the transformative change necessary to reduce air, water and soil pollution to levels no longer considered harmful to health and natural ecosystems, while respecting planetary boundaries"**. More specifically, they should contribute to one or several of the following impacts:

- enhanced scientific capacity and innovative solutions for detecting and characterising pollution sources, pathways, distribution, and cumulative impacts, including pollutants of great and emerging concern, assisted by AI domain and improved environmental observation and modelling systems, resulting in cleaner air and healthier ocean, seas, waters and soils;
- safe and sustainable by design bio-based (Commission Recommendation (EU) 2022/2510) solutions are developed for and by the bio-based industries, also through

innovative biotechnology and biomanufacturing techniques, to contribute to climate neutrality and replace harmful chemicals in industrial bio-based processes and products;

- sustainable bio-based and nature-based solutions will be developed and tested to remediate polluted environments;
- food systems adopt the zero pollution ambition, preventing and reducing pollution in water, air, and soil;
- farmers are empowered to make informed management decisions on water, carbon, nutrients and greenhouse gas balances for environmental, social and economic sustainability, preventing and reducing pollution from agriculture.

The expected impacts from actions under Destination 4 will be maximised by the complementarities and synergies with other instruments within Horizon Europe and other programmes, like co-funded partnerships Water security for the planet (Water4All), Sustainable food systems for people, planet and climate, Sustainable Blue Economy, Agroecology and Biodiversa+; and the Horizon Europe Missions ‘A Soil Deal for Europe’, ‘Restore our Ocean and Waters by 2030’ and ‘Climate-Neutral Smart Cities’. Collaboration with the institutionalized partnership Circular Bio-based Europe Joint Undertaking will help industrial bio-based systems to replace harmful processes and substances, while fostering the use of sustainable natural resources.

Complementarities with Destinations 1 and 5 will enhance understanding of ecosystem adaptation and resource management under climate change, while addressing freshwater and groundwater challenges and strengthening water resilience.

To maximise the impacts of R&I under this Destination, international cooperation is encouraged.

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-01-ZEROPOLLUTION-01: Innovative and advanced monitoring and modelling systems for revised air quality policies

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions

<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p>
-------------------------------	--

Expected Outcome: In the context of the European Green Deal and the zero pollution action plan, a successful proposal will contribute to the impact of this Destination related to enhanced scientific capacity and innovative solutions for detecting and characterising pollution, thus contributing to the zero pollution objective for cleaner air.

Project results are expected to contribute to all the following expected outcomes:

- public authorities and other relevant stakeholders (e.g., researchers, NGOs and patient organisations and providers of care especially to vulnerable groups) have access to better and cost-effective solutions to detect, measure, monitor and assess air pollution, including its sources and impacts, as well as pathways for their integration into operational atmospheric monitoring services and networks;
- enhanced and more rapidly accessible air quality data and information support science-based decision-making, and policy development at local and national levels, ultimately leading to more effective air quality measures aligned with the revised EU air policy, as well as to more efficient use of EU, public and private funding for improving air quality;
- increased public awareness and more accurate information of local air quality issues lead to healthier behaviours of citizens, particularly vulnerable groups and sensitive populations (e.g., during air pollution peak periods), including by supporting better evidence-based access to justice related to negative effects of air pollution.

Scope: The revised Ambient Air Quality Directive (AAQD) complements the European Green Deal and is a key action in the Commission's zero pollution action plan. It seeks to align EU air quality standards more closely with WHO recommendations and to better support national and local authorities in achieving cleaner air through strengthening air quality monitoring and modelling and improving air quality plans. For these objectives, several challenges will need to be overcome in the coming years, particularly when it comes to the improvement of accuracy, comparability and real-time nature of monitoring and modelling to assess air quality in Member States and Associated Countries referring to already regulated air pollutants facing stricter limit values (main pollutants include PM₁₀, PM_{2.5}, NO₂, SO₂, benzene, and O₃) and to air pollutants of emerging concern (such as ultra-fine particles – including nano-particles of all kinds, black carbon, volatile organic compounds, ammonia, oxidative potential for particulate matter) and their source apportionment. The proposals are expected to:

- develop or improve cost-effective monitoring and modelling tools, approaches and methods for different types of well-known and emerging air pollutants and pollution sources, addressing the most urgent needs in measurement accuracy (including temporal aspects such as real-time monitoring and modelling) and dispersion mapping, in support of the implementation of the revised AAQD;
- develop methodologies and recommendations for designing optimal monitoring networks, considering relevant aspects of different spatial locations (hotspots as well as urban and rural background locations), combining traditional reference measurements and innovative measurement techniques, including Artificial Intelligence (AI) and the use of innovative low-cost sensors. Recommendations should consider also funding challenges and opportunities;
- improve the processing and integration of in situ, ground-based remote sensing and satellite (e.g. Sentinels) observations, and air quality numerical models utilising various methods, like for example AI algorithms and finite elements modelling.

Where relevant, activities should build and expand on the results of past and ongoing research projects and initiatives with a relevant air quality monitoring and/or modelling component to share experiences, reach synergies and avoid duplication. These could include, but are not limited to, Horizon 2020 and Horizon Europe projects (potentially those funded under HORIZON-CL6-2024-GOVERNANCE-01-6), research infrastructures (for example, ACTRIS ERIC), as well as relevant LIFE integrated projects for clean air. Proposed activities should, where possible, build on results of and cooperate with AQUILA and FAIRMODE¹⁸⁷ communities. Furthermore, this topic is part of a coordination initiative between ESA and the European Commission on Earth System Science. The proposals should articulate how they will coordinate with current and future actions funded by ESA's Future EO programme within ESA atmospheric science cluster.

The integration of the gender dimension (sex and gender analysis) in research and innovation content is not a mandatory requirement.

HORIZON-CL6-2025-01-ZEROPOLLUTION-02: Environmental impacts from the production of agricultural crops for bio-based industrial systems

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

¹⁸⁷ <https://fairmode.jrc.ec.europa.eu/>

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹⁸⁸.</p>

Expected Outcome: In line with the industrial carbon management strategy, successful proposals will support the deployment of safe and sustainable by design bio-based solutions, including the supply of sustainable biogenic carbon, thus contributing to the zero pollution objectives.

Project results are expected to contribute to all the following expected outcomes:

- bio-based industries and stakeholders along the supply chain improve their knowledge of the environmental impacts on air/water/soil quality, biodiversity and climate from the production of primary biological resources for industrial bio-based systems;
- public authorities, farmers, advisors and economic actors in the bio-based industrial value chains have access to best practices to produce crops for industrial uses sustainably.

Scope: The assessment of environmental sustainability of biological resources production and trades in the bio-based industrial systems is still a challenge. There is a lack of information and environmental assessment, including the indirect land use change (ILUC) effects and possible impacts on the ecosystems, related to primary biomass grown for bio-based value chains. Industrial bio-based systems within the scope of this topic include those for the production of bio-based chemicals/materials/products excluding food/feed, biofuels/bioenergy. The scope of the topic focusses on the environmental impacts from biomass production, not covering the full life cycle of the uses of such biomass, nor the valorisation of waste and residues.

Proposals should:

- identify the types of primary agricultural crops currently produced for bio-based products within the scope of this topic at EU and Associated Countries scale;

¹⁸⁸ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- include a task for the project to collect data and figures on volumes and geographical distribution of the identified primary agricultural crops traded within the EU and Associated Countries, and from outside the EU towards the EU and Associated Countries. In the cases of primary agricultural crops grown in the EU and Associated Countries, collect data on type of land used and of pedo-climatic zones, cultivation systems and agronomic practices (crop diversification, intercropping, cultivation of catch-crops, etc);
- analyse the environmental impacts of the identified primary agricultural crops produced for industrial purposes and identified under the first bullet of this scope. The analysis should be based on literature data and potentially applying Environmental Footprint methods as described in Recommendation (EU) 2021/2279;
- include a task for the project to assess quantitatively such environmental impacts and trade-offs addressing, but not limiting to, the following environmental categories: i) GHG emissions/savings and carbon footprint, including temporary carbon removals; ii) emissions to air/water/soil from nitrogen and phosphorous based fertilisers; iii) land use and land use change and its related impact on land carbon sink capacity; iv) water use; v) biodiversity and ecosystem services; vi) energy consumption, vii) any other aspects of air/water/soil environmental quality. The quantitative assessment should consider the range of climatic and land conditions, for each primary agricultural crop, due to the geographical distribution. It should be based on data from literature and stakeholders' consultations and potentially applying Environmental Footprint methods as described in Recommendation (EU) 2021/2279. Based on such assessment, individuate best practices and the means to share them among concerned stakeholders.

Proposals should include a task dedicated to sharing methodologies and findings with similar recent or ongoing projects, e.g., MIDAS and MarginUp funded under the topic HORIZON-CL6-2022-CIRCBIO-01-02-Marginal lands and climate-resilient and biodiversity-friendly crops for sustainable industrial feedstocks and related value chains.

Multi-actor approach and international cooperation, especially with Latin–America and the Caribbean, are encouraged.

HORIZON-CL6-2025-01-ZEROPOLLUTION-03: Environmental biotechnology applications in service of remediation of polluted ecosystems

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁸⁹ .

Expected Outcome: In line with the zero pollution action plan, successful proposals will address the remediation of polluted ecosystems through bio-based and nature-based solutions and ecosystem-based adaptation to climate change, in accordance with the European Climate Law.

Project results are expected to contribute to all the following expected outcomes:

- engage public authorities, scientists and operators in the protection and restoration of ecosystems through bio-based and nature-based solutions;
- integrate in local, regional and national plans and strategies for ecosystems restoration, bio-based and nature-based solutions able to remediate degraded soil, sediment, surface water and groundwater affected by pollutants and threats such as salinization, and improve their resilience to climate change and/or their capacity to reduce greenhouse gases emissions/increase carbon removals;
- take advantage of innovative tools enabled by digital innovation, including AI, for the remediation of pollution in emergency conditions.

Scope: Degradation of soil, sediment and water due to anthropogenic causes may result from continuous exposure to pollution and/or unsustainable exploitation, but also from sudden accidents. Degradation may be exacerbated by negative effects of climate change or other

¹⁸⁹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

threats (e.g., heat waves, fires, floods and landslides, soil/coastal erosion, ocean acidification, etc.). Moreover, in case both the exposure of soil, sediment and water to degrading factors and their vulnerability are high, whereas their resilience is low, the degradation may take the dimension of a disaster. The scope of this topic is the remediation of contaminated soil, sediment and water from pollutants, such as hazardous chemicals, pharmaceutical and waste, including litter and plastics, and their further restoration, including in case of accidents and disasters driven by anthropogenic activities and extreme climate and environmental events. The results from projects funded under this topic will contribute to one of the restoration measures included in the Nature Restoration Regulation to (Annex VII, point (32) *Stop, reduce or remediate pollution from pharmaceuticals, hazardous chemicals, urban and industrial wastewater, and other waste including litter and plastics as well as light in all ecosystems*). Project results will also help Member States to implement national adaptation strategies that promote nature-based solutions and ecosystem-based adaptation to climate change, in accordance with the European Climate Law.

Proposals should:

- select and analyse a set of case-studies of degraded soil, sediment and water affected by pollution and contaminants in the EU and Associated Countries. This could include cases where the degradation is exacerbated by climate change or biodiversity loss or other natural events or anthropogenic forcings;
- include a task in the project to develop bio-based solutions for the environmental remediation of the degraded soil, sediment and water in the selected case-studies, driven by biotechnology applications, and the integration of such bio-based solutions with nature-based solutions. The task should include the assessment of the alignment with the precautionary principle, environmental sustainability and efficiency of the developed solutions in remediating soil, sediment and water, also addressing biodiversity loss and the functional state of the ecosystems. Moreover, it should evaluate the improvement of resilience to the impacts of climate change on the affected ecosystems, due to the applications of the developed solutions;
- include a task in the project on the development of models enabled by digital innovation, including based on artificial intelligence, for the optimization of remediation approaches, also in case of emergency facing disaster and extreme climate and environmental events like fires, droughts, floods, etc.;
- identify and assess the economic, social and safety risks and benefits of the remediation activities in the selected case-studies, in particular in terms of circular economy and of the reduction of the risks for human health resulting from exposure to the contaminants (e.g., vulnerable populations, integrating the gender dimension). The risk reduction should take into consideration the bioavailability and mobility of the contaminants, including heavy metals, other metals (e.g., the ones used in electronic devices, Li, REE, etc.), plastics and organic chemicals (i.e., PFAS, PAHs, pesticides, etc.);

- include a task in the project to deliver the overall environmental, economic, social and safety risk assessment for the developed integrated bio-based and nature-based solutions.

Proposals should include a task dedicated to sharing methodologies and findings with all projects funded under this topic and with similar recent or ongoing projects, e.g., those funded under the topic HORIZON-CL6-2021-ZEROPOLLUTION-01-10: Environmental services: improved bioremediation and revitalization strategies for soil, sediments and water, or under the topic HORIZON-CL6-2023-ZEROPOLLUTION-01-6: Biosensors and user-friendly diagnostic tools for environmental services.

Integrating Citizen Science in research approach is encouraged to contribute to the selection and analysis of case-studies of degraded ecosystems. This topic requires the effective contribution of SSH disciplines, including citizen social science approach and gender studies, especially for the risk assessment on human health. Multi-actor approach and international cooperation are encouraged.

The JRC may contribute with its expertise related to chemical pollutants in the environment and bio-based approaches, as well as to the interface between the research activities and regulatory aspects.

HORIZON-CL6-2025-01-ZEROPOLLUTION-04: Towards a comprehensive European strategy to assess and monitor aquatic litter including plastic and microplastic pollution

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the

	Research and Training Programme of the European Atomic Energy Community (2021-2025). ¹⁹⁰ .
--	---

Expected Outcome: In line with the European Green Deal, notably the EU zero pollution action plan, a successful proposal will contribute to the impacts of this Destination related to addressing pollution for a healthier ocean, seas and waters.

Project results are expected to contribute to all of the following expected outcomes:

- harmonised and coordinated approaches across the EU for monitoring aquatic litter in European freshwater and marine environments;
- improved knowledge and FAIR data enabling a comprehensive assessment of litter sources, pathways, degradation, spatial distribution including on the seabed and sediment, hotspots and areas of accumulation as well as the resulting risks for aquatic biodiversity at EU scale and at basin level;
- implementation of optimised, validated, harmonised, cost-effective, and pan-European monitoring strategies for freshwater, coastal and marine environments, which are taken up by relevant environmental authorities in the EU;
- strengthened cooperation between scientific institutions and relevant environmental authorities responsible for monitoring pollution in freshwater and marine environments at EU and national level, fostering competence in monitoring aquatic litter in the EU;
- implementation of related EU policies, in particular baselines, threshold-setting and identification of changes in levels of plastic litter and microplastics in freshwaters as well as all coastal and marine compartments under the MSFD.

Scope: The monitoring and assessment of litter including plastic, microplastic and nanoplastic pollution in Europe's marine and freshwater environment remains fragmented and diverse, although progress has been made under the Marine Strategy Framework Directive (MSFD) for monitoring quantities and impacts of marine litter and harmonised guidance for monitoring has been produced¹⁹¹. However, large discrepancies between countries, marine regions, litter types and environmental compartments can still be observed and large data and knowledge gaps persist on the sources, pathways, distribution and concentrations of litter in marine and freshwater, which are impeding comprehensive assessments of the extent of litter pollution including microplastics in EU waters. Different approaches for assessing and monitoring litter pollution in freshwater and marine environments are further hindering such assessments.

¹⁹⁰ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

¹⁹¹ [JRC Publications Repository - Guidance on the monitoring of marine litter in European seas \(europa.eu\)](#).

Despite the large amount of literature and recent scientific advancements to develop reliable and harmonised analytical research methodologies, guidance, protocols and reference materials, pan-European approaches and strategies that set out what to measure, where to measure, when to measure and how to measure are missing.

Actions should in particular inform monitoring and assessments, including threshold setting, under the Marine Strategy Framework Directive and more broadly support its implementation, the implementation of the Water Framework Directive, the zero pollution action plan, the evaluation and possible revision of the Single Use Plastics Directive as well as EU initiatives on microplastics (such as under REACH and reduction of plastic pellets releases). Actions will also contribute to the planned Global Agreement to End Plastic Pollution and the UN Decade of Ocean Science for Sustainable Development.

Proposals should demonstrate how they will contribute significantly at EU level to all of the following:

- enhance data acquisition, quality assurance and quality control approaches, and effective use of available data from source-to-sea including lake, riverine, groundwater, coastline, sea surface and seabed monitoring of (plastic) litter including (different types of) microplastics, making use of diverse data sources (incl. data collected by citizen science initiatives) and new technologies to improve quantitative knowledge on pollution sources, pathways, spatial distribution and accumulation zones, including on the seabed, leakage and transport at EU scale and at basin level;
- develop scientific approaches as well as environmentally relevant reference materials and matrices needed to design harmonised methods for detecting, identifying, classifying, and quantifying plastic and microplastic pollution in realistic conditions, which will enable a comprehensive assessment of the exposure of aquatic biodiversity to litter;
- improve tools and methodologies for efficient and where possible autonomous sampling, developing rapid and reliable analytical methods and imaging techniques for seabed macro litter and monitoring of microplastic pollution to address policy needs;
- develop analytical methods for detecting, characterising and monitoring nanoplastic particles in aquatic environments;
- develop, improve and implement fit-for-purpose, optimised, validated, harmonised and cost-effective monitoring strategies for freshwater, coastal and marine environments and collaborative data collection across borders, which need to be implemented on a sufficient scale to assess the problem;
- enable the uptake of monitoring data in large scale databases (e.g. the European Marine Observation and Data Network (EMODnet) and the European Digital Twin of the Ocean) following FAIR principles, to ensure public data accessibility and use and foster a comprehensive assessments of litter pollution at European level.

The action is expected to build on the work and engage with the Technical Group on Marine Litter under the Marine Strategy Framework Directive, which is co-led by the JRC. It should build on the outcomes and establish links with relevant projects, including projects funded under the EU Mission Restore our Ocean and Waters and its Mediterranean lighthouse (e.g. the projects PlasticPirates – Go Europe!¹⁹², UPSTREAM¹⁹³, INSPIRE¹⁹⁴ and topic HORIZON-MISS-2025-03-OCEAN-02: A toolbox for public authorities to address marine plastics and litter from river-to-ocean), the EUROqCHARM¹⁹⁵ project and JPI Oceans microplastics projects.

The action should also contribute to regional and global efforts on monitoring plastic pollution in the ocean and waters, by building links with activities of relevant regional seas conventions, the International Council for the Exploration of the Sea (ICES) and contributing to the UN Decade of Ocean Science for Sustainable Development. Proposals should also build on and contribute to the GEO Blue Planet initiative and the Integrated Marine Debris Observing System (IMDOS) in cooperation with GOOS and UNEP. Proposals are encouraged to liaise with and consider the services offered by, where relevant, European research infrastructures¹⁹⁶.

International cooperation is encouraged, including with All-Atlantic Ocean Research and Innovation Alliance partner countries. This topic is part of a coordination initiative between ESA and the European Commission on Earth System Science. The EC-ESA Earth System Science Initiative enables EC and ESA to support complementary collaborative projects funded on the EC side through Horizon Europe and on the ESA side through the FutureEO programme.

HORIZON-CL6-2025-01-ZEROPOLLUTION-05: EU-India cooperation on cumulative impacts of marine pollution on marine organisms and ecosystems

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions

¹⁹³ <https://cordis.europa.eu/project/id/101112877>

¹⁹⁴ <https://cordis.europa.eu/project/id/101112879>

¹⁹⁵ <https://cordis.europa.eu/project/id/101003805>

¹⁹⁶ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Due to the scope of this topic, consortia must include as associated partner(s) at least one legal entity established in India; Legal entities established in India can only participate as associated partners.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).¹⁹⁷.</p>

Expected Outcome: In line with the European Green Deal, notably the EU zero pollution action plan, a successful proposal will contribute to the impacts of this Destination related to addressing pollution for a healthier ocean, seas and waters.

Project results are expected to contribute to all of the following expected outcomes:

- improved scientific understanding of the interplay of different pollutants, their ‘cocktail effect’ and degradation pathways, on marine organisms and ecosystems;
- improved understanding of the risks and cumulative impacts of different forms of pollutants for the health of marine organisms and ecosystems and ultimately human health;
- policy-makers gain a better understanding of the interplay of the triple planetary crises of climate change, biodiversity loss and pollution on marine life;
- reinforced cooperation between EU and Indian research and innovation communities on marine litter and its effects, including cumulative effects with other forms of pollution.

Scope: Marine pollutants cause harmful effects on marine species and wildlife, serious negative impacts on the structure and functioning of ecosystems, the goods and services they provide, and ultimately on human health, wellbeing and prosperity.

While there have been significant advances in understanding the effects of individual pollutants on marine life, the cumulative effects of different marine pollutants, including persistent organic pollutants (POPs), pharmaceuticals, per- and polyfluoroalkyl substances (PFAS), heavy metals and trace elements, micro- and nano plastics, nanomaterials,

¹⁹⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

biodegradable products, microbiological contaminants, pesticides, fertilisers and nutrients, and the associated risks for marine life are not fully understood. The interplay of climate change (and the resulting effects of a warming and more acidic ocean) with pollutants including actual and predicted changes in their bioavailability, toxicity and water quality, need to be further examined including (gender-specific) implications for human health following a ‘One-Health’¹⁹⁸ approach.

R&I in this area is therefore expected to support the implementation of the Marine Strategy Framework Directive, in particular the assessments of the adverse effects of pollutants, including cumulative effects, on the health of species and habitats in line with Commission Decision (EU) 2017/848, the Water Framework Directive, the zero pollution action plan, the objectives of protecting and restoring ecosystems of the EU biodiversity strategy for 2030 and of the EU Nature Restoration Regulation, the evaluation and possible revision of the Single Use Plastics Directive, the planned Global Agreement to End Plastic Pollution and contribute to the UN Decade of Ocean Science for Sustainable Development.

Marine litter and marine plastic pollution is a particularly pervasive global problem, with particularly high concentrations observed in European seas as well in Southeast Asia. R&I in this area have thus been identified as a priority by the EU-India Trade and Technology Council’s Working Group on Green and Clean Energy Technology to reinforce bilateral cooperation.

Proposals should demonstrate how they will contribute significantly to:

- develop new analytical tools, methods and sensors for the screening, detection, identification and monitoring of different pollutants in the marine environment such as persistent organic pollutants (POPs), pharmaceuticals, per- and polyfluoroalkyl substances (PFAS), heavy metals and micro- and nano plastics including their degradation products, microbiological contaminants, pesticides, fertilisers and nutrients;
- advance assessments of the risks in real conditions, accumulation, exposure (incl. low-level) and ecotoxicological effects (e.g., on endocrine systems, fertility, metabolism, neurological development and behaviour, growth as well as genetic and physiological changes) of these pollutants on marine organisms and (vulnerable) populations including seabed habitats, benthic communities, endangered species and species for human consumption, incl. risks associated with effects such as harmful algal blooms;
- analyse the cumulative impacts of a combination of different pollutants (‘cocktail effect’), their degradation pathways in ecosystems and organisms, and their interplay with climate change such as changes in bioavailability, toxicity and water quality on marine organisms and populations;
- assess bioaccumulation and biomagnification processes of pollutants in the marine food chain including in seafood and implications for human health including and variations in effects on e.g., different sexes or age groups.

¹⁹⁸ [One Health - European Commission \(europa.eu\)](https://european-council.europa.eu/media/en/press-communications/infographic/Pages/infographic-one-health-2021-01-27.aspx)

Proposals should build on the outcomes and establish links with relevant projects, including those funded under the EU Mission Restore our Ocean and Waters and its Mediterranean lighthouse, and the topic HORIZON-CL6-2025-02-CLIMATE-02: The ocean-climate-biodiversity-people nexus: uncovering safe operating space for safeguarding the integrity and health of the global ocean and relevant JPI Oceans projects. Proposals are encouraged to liaise with and consider the services offered by, where relevant, European research infrastructures¹⁹⁹.

This topic is within the scope of the EU-India Strategic Partnership and the EU-India Trade and Technology Council in relation to marine litter. For the purposes of this topic, the Ministry of Earth Sciences of the Government of India has made the required co-funding available for associated partners in selected projects.

HORIZON-CL6-2025-01-ZEROPOLLUTION-06: Provide digital solutions tailored to small and medium-sized farms to monitor and sustainably manage agricultural inputs and natural resources

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B.
<i>Legal and financial</i>	The rules are described in General Annex G. The following

¹⁹⁹ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>

<i>set-up of the Grant Agreements</i>	<p>exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000²⁰⁰.</p>
---------------------------------------	--

Expected Outcome: In line with the common agricultural policy objectives, the European Green Deal and the headline ambitions of a digital age and economy that work for people, leaving no one behind, more specifically the zero pollution action plan for air, water and soil, the EU biodiversity strategy for 2030, the Climate Law and the climate adaptation strategy, the successful proposal will improve the capacities of small- and medium-sized farms to manage agricultural inputs and natural resources through the uptake of tailored digital tools making use of data technologies, including generative AI. In that way, the proposal should encourage farming systems to prevent and reduce pollution in water, air and soil, increase the use efficiency of natural resources, reduce the impact of climate change, and empower farmers to take informed decisions on agricultural inputs and natural resources for environmental and economic sustainability, as described for this destination.

Project results are expected to contribute to all of the following expected outcomes:

- small- and medium-sized farmers are empowered with innovative digital and data-driven solutions tailored to their specific needs, allowing for the sustainable management of water, nutrients, other inputs and natural resources in conventional and other types of agriculture, including organic farming systems;
- the digital divide between farms with differing capacities and characteristics is reduced.

Scope: A key challenge for the agricultural sector is to provide food in a context of increasing global population, climate change and price volatility while reducing pollution and preserving natural resources and biodiversity for future generations. Farmers should be able to adopt innovative solutions to increase the efficiency and competitiveness of the farming sector while lowering its environmental footprint. However, still many farmers, particularly small- and medium-sized ones, do not have easy access to monitoring and decision support systems and tools fed with data reflecting local conditions and farm characteristics.

Digital and data technologies offer solutions to monitor environmental parameters (e.g. soil conditions, water and air quality, nutrients content and availability) in a cost-efficient manner while supporting decision-making of natural resources and inputs management.

Proposals should:

- critically analyse the potential and limitations of R&I results from relevant past and ongoing projects, and the requirements of further development to meet farmers' needs

²⁰⁰ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal) the maximum amount may be higher

(including a cost-benefit analysis), made available to industrial partners (including SMEs) that provide technological solutions to farmers to monitor and manage natural resources and agricultural inputs. This should be in the form of a structured catalogue of these results relevant to the topic such as new sensors, software, databases, applications, methodologies, algorithms, etc. (non-exhaustive list), and covering different farming systems/approaches, including organic farming;

- identify barriers and enablers for translation of R&I results into practical and commercial tools for small- and medium-sized farmers, and for the uptake by these end-users, as well as characterise remaining knowledge, training and/or advice gaps, and needs for policy feedback;
- design and set up an accessible and searchable web-based database with technical descriptions and relevant information of all the available results from the catalogue in a structured way, making concrete efforts to follow the FAIR principles;
- set up a central brokerage and support service point aimed at matching innovation ideas from industrial partners that want to improve or create new products or services with the needs of small- and medium-sized farmers. These developments include, for example, increasing the number of measured parameters on existing devices, improving precision, automation, integration of systems and decision-making tools considering the diverse pedo-climatic, cropping and social conditions across the EU and Associated Countries while checking also the transferability to other regions with similar characteristics. The service should be free of charge for the industrial partners;
- establish a network of research and innovation providers and intermediaries with capacity to support the industrial partners to identify and develop the newly adapted solutions;
- provide innovations based on digital and data-based solutions (e.g. IoT, remote sensing, sensors, (generative) artificial intelligence, data visualization techniques) and tailored to the needs of small- and medium-sized farmers, carefully considering the specific barriers and enablers for adoption in each context (e.g. skills of end users, access to and understanding of digital tools, availability of local data, investment need, connectivity, gender role perceptions and expectations, diverse pedo-climatic and socio-economic conditions across the EU and Associated Countries, etc.) and proposing how to overcome these difficulties and foster the enablers;
- develop prototypes of the innovations and test them in an operational environment;
- set up a community of practice to facilitate science-business exchanges and to share experiences across the EU and Associated Countries. Complementarities with European and national AKIS knowledge channels or similar should be explored;
- propose a clear strategy to disseminate and exploit results, innovations and best practices during and beyond the project lifetime;

- monitor progress of the different innovations delivered by the supported third parties, taking stock of good practices and contribution to the achievement of the objectives of the topic.

Proposals should implement the multi-actor approach, involving at least scientists, private companies, innovators, advisors and farmers to ensure a functional and effective product which is tailored to the farmers' needs.

Proposals should provide financial support to third parties to help private partners to develop those innovative products primarily building on the technologies identified in the catalogue. It is expected that minimum 50% and maximum 65% of the EU funding should be allocated to this purpose. Consortia need to define a selection process for the industrial partners for which financial support may be granted. The provision of training (including technical guidelines and ad-hoc materials) and support services to farmers and advisers should be considered as a criterion to grant financial support to these third parties.

This topic should involve the effective contribution of social sciences and humanities (SSH) disciplines, especially in the field of behavioural sciences and adoption of technologies.

HORIZON-CL6-2025-01-ZEROPOLLUTION-07: Reducing pollution from the food and drink industries

Call: Cluster 6 Call 01 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: In line with the European Green Deal priorities, the zero pollution action plan, chemical strategy for sustainability, farm to fork strategy for a fair, healthy and environment-friendly food system, the biodiversity strategy for 2030, notably its objective of

reducing pollution, and the EU's climate ambition for 2030 and 2050, the successful proposal will support R&I to reduce pollution coming from food systems (and eventually stop it). This will contribute to the transformation of food systems to deliver co-benefits for climate (mitigation and adaptation), biodiversity, environmental sustainability and circularity, sustainable healthy nutrition and safe food, food poverty reduction, empowerment of communities, and thriving businesses.

Project results are expected to contribute to all of the following expected outcomes:

- better understanding of the pollution coming from the food and drink industry;
- all food and drink industries have methods at their disposal to measure their pollutants emissions and to reduce them from the source;
- contribution to the food 2030 priorities: nutrition for sustainable healthy diets, climate, biodiversity and environment, circularity and resource efficiency, innovation and empowering communities.

Scope: Food systems, on the one hand, are a source of pollution and, on the other hand, suffer from the consequences of pollution. Moving towards zero pollution food systems can therefore contribute to building the resilience of food systems and the natural ecosystems on which they depend. Contaminants have been accumulating in food products, whether due to food being in contact with specific materials at various stages of the food supply chain, such as food processing plants, packaging, or in agriculture with contaminated soils, air and water.

In the context of the Industrial and Livestock Rearing Emissions Directive and the relevant Best Available Techniques (BAT) conclusions for the food, drink and milk industries, some data are already available. However, there are currently several knowledge gaps when it comes to emerging and/or less known pollutants, and their cocktail effects on the environment and human health.

Some activities of the food and drink industries can lead to soil, water and air pollution, which can, in turn, adversely affect food safety, biodiversity and human health. This pollution can take many forms: plastics (including micro- and nano-plastics), food packaging, persistent chemicals, light, noise, odour, etc. There are significant regional differences in the impact of environmental pollution, depending on the type of pollutant. While European and national strategies remain important to reducing pollution, international cooperation is key to ensure that efficient and impactful measures are put in place to protect our oceans and inland waters, ecosystems, biodiversity and health.

The proposals are expected to:

- focus on food and drink industries' processes and on pollutants (including emerging pollutants) typically coming from these industries;
- develop analytical methods, e.g. using the Environmental Footprint method, to measure pollutants and studying/mapping the pollutants coming from food and drink industries

that are not covered in the Best Available Techniques (BAT) conclusions for the food, drink and milk industries and how they interact with each other (mixture of pollutants);

- propose monitoring/tracking methods for pollutants coming from food and drink industries, focusing on less-known and emerging pollutants specific for food and drink industries and taking into account the diversity of these industries;
- identify the most effective methods/best available technologies to reduce food-system-related pollution (in soil, water and air) from food and drink industries, focusing on the most relevant/prominent pollutants (the ultimate objective being to eventually stop pollution);
- develop activities for empowering consumers (e.g. communication, awareness raising);
- develop activities for ensuring adequate involvement of researchers, national agencies/authorities and laboratories, as well as food and drink industry (incl. strategic innovation platforms and federations).

This topic contributes to the European Green Deal priorities, the zero pollution action plan, chemical strategy for sustainability, farm to fork strategy for a fair, healthy and environment-friendly food system, the biodiversity strategy for 2030, notably its objective of reducing pollution, and the EU's climate ambition for 2030 and 2050. The successful proposal will contribute to the transformation of food systems to deliver co-benefits for climate (mitigation and adaptation), biodiversity, environmental sustainability and circularity, sustainable healthy nutrition and safe food, food poverty reduction, empowerment of communities, and thriving businesses.

For any activities on depollution to achieve zero pollution in large industrial installations and contribute to the climate ambition, please refer to the Innovation Centre for Industrial Transformation and Emissions (INCITE) (<https://innovation-centre-for-industrial-transformation.ec.europa.eu/>).

Proposals must implement the multi-actor approach by involving a wide range of food system actors and conducting multi-disciplinary research (including on environmental science and biodiversity). International cooperation is strongly encouraged.

Where relevant, activities should build and expand on the results of past and ongoing research projects. Projects should have a clear plan as to how they will collaborate with other projects selected under this topic and any other relevant topic or relevant EU partnerships. They should participate in joint activities, workshops, focus groups or social labs, and common communication and dissemination activities, and show potential for upscaling. Applicants should plan the necessary budget to cover these activities.

HORIZON-CL6-2025-01-ZEROPOLLUTION-01-two-stage: Substances of concern and emerging pollutants from bio-based industries and products: mapping and replacement

Call: Cluster 6 Call 01 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>Applicants submitting a proposal under the blind evaluation pilot (see General Annex F) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (see General Annex E).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>This topic is part of the blind evaluation pilot under which first stage proposals will be evaluated blindly.</p>

Expected Outcome: In line with the chemical strategy for sustainability and the revision of the Industrial Emissions Directive, successful proposals will support the deployment of safe and sustainable by design bio-based industries and products, contributing to the de-fossilization and to the climate neutrality of EU industrial systems in a sustainable way.

Project results are expected to contribute to all of the following expected outcomes:

- stakeholders of bio-based value chains, including in public procurement, researcher centres, industries, public administrations, final consumers, etc., gain awareness on the releases of hazardous substances, emerging pollutants and substances which are persistent and liable to bio-accumulate in ecosystems from bio-based industrial processes and from bio-based products;
- bio-based industries operators and customers improve their knowledge and use of safe and sustainable bio-based alternatives replacing hazardous substances, to achieve healthier air, water and soil.

Scope: Preventing hazardous emissions at source is key to reach the 2030 pollution reduction targets, including substances of concern, very high concern and emerging pollutants (e.g., PFAS and endocrine disrupting chemicals) as defined in relevant pieces of legislation (e.g., REACH, ESPR, Batteries regulation). Bio-based innovative solutions, also in line with the recent initiative on biotechnology and biomanufacturing and the industrial carbon management strategy, should be designed to provide the solutions to replace hazardous substances in industrial assets and in final products and materials. Bio-based materials and products within the scope of this topic do not include food/feed, biofuels and bioenergy.

The proposals should:

- track presence of substances of very high concern and of concern, emerging pollutants and substances which are persistent and liable to bio-accumulate in ecosystems emitted from a selection of bio-based materials and products. This includes substances released in all the life phases of bio-based materials and products, during their use and their end-of-life. Evaluate the exposure of targeted end users to the substances, including integrating the gender dimension (sex and gender analysis) and vulnerable groups;
- include a task for the project to perform a full risk assessment of the substances emitted from the selected bio-based materials and products, also assessing the impacts on affected ecosystems and the risk for biodiversity loss;
- track presence of substances of very high concern and of concern, emerging pollutants and substances which are persistent and liable to bio-accumulate in ecosystems, emitted from a selection of industrial bio-based systems;
- include a task for the project to identify and improve a set of bio-based safe and sustainable by design (Commission Recommendation (EU) 2022/25) and circular solutions, to replace hazardous substances and to increase the resources efficiency, both at the level of industrial processes and in final materials and products selected under the first and the third bullet points of this scope. The number of bio-based solutions provided is not pre-defined. The task should include the assessment of the reduction of substances of concern and emerging pollutants, derived from the substitution;
- describe the collection of recommendations and best practices to replace substances of concern with safe and sustainable by design bio-based alternatives.

Proposals should include a task dedicated to sharing methodologies and findings with all projects funded within this topic. Moreover, the projects should collect and analyse the outcomes from past and ongoing projects under EU programmes, including the Circular Bio-based Europe Joint Undertaking, addressing the challenges in the scope of this topic.

For depollution to achieve zero pollution in large industrial installations, please refer to the Innovation Centre for Industrial Transformation and Emissions (INCITE) (<https://innovation-centre-for-industrial-transformation.ec.europa.eu/>).

Citizen Science is encouraged as a research approach for this topic. Citizen science activities should be conducted with the guidance and in close co-operation with researchers. This topic requires the effective contribution of SSH disciplines, including citizen social science and gender studies, especially in the task on risk assessment.

Multi-actor approach and international cooperation are encouraged.

DRAFT

Destination - Land, ocean and water for climate action

R&I under Destination “Land, ocean and water for climate action” will deliver mainly under Key Strategic Orientation (KSO) 1 of Horizon Europe Strategic Plan 2025-2027: Green transition. It will also deliver under KSO 2: Digital Transition and KSO 3: A more resilient, competitive, inclusive and democratic Europe.

This Destination is expected to support the implementation of the European Ocean Pact, foster mitigation of and adaptation to climate change on land, in the ocean and water, and therefore helps Cluster 6 to support the ambition of Europe becoming the first climate-neutral and climate-resilient continent by 2050, in line with the European Green Deal and the new Commission priority on “Sustaining our quality of life: food security, water and nature”. Actions under this Destination will support the implementation of the European Climate Law, the amended Regulation on land use, land use change and forestry (LULUCF) and the amended Effort Sharing Regulation, which establishes binding annual greenhouse gas emission targets for Member States in sectors which include agriculture.

In continuation with the orientations of previous Cluster 6 Work Programmes, and in line with the Horizon Europe Strategic Plan 2025-2027, R&I actions under this Destination for Work Programme 2025 will be aligned with the Communications on sustainable carbon cycles and with the EU 2040 climate target. They will also support the implementation of the proposed Regulation establishing a Union certification framework for carbon removals and will deliver on climate adaptation in line with the EU strategy on adaptation to climate change. R&I activities in the areas of agriculture and forestry under this Destination will contribute to the implementation of the EU methane strategy, the EU forest strategy for 2030 as well as the proposal for an EU Forest Monitoring Law and will be in line with the EU Marine Strategy Framework Directive when they affect the marine environment.

R&I actions under this Destination will encourage international cooperation and help achieve international commitments concerning land, water and ocean, notably the goals of the Paris Agreement on climate change, the Kunming-Montreal Global Biodiversity Framework and the High Seas Treaty (BBNJ). The destination will support the implementation of the European Ocean Pact and the objectives of the joint communication on the EU Arctic policy, by fostering regional and international initiatives.

Strengthening the climate-ocean-cryosphere-polar science nexus will continue to be a priority for the EU, as well as the integrity and resilience of the ocean and polar regions as vulnerable parts of the Earth system. R&I will support and close key knowledge gaps through research that contributes substantially to the implementation of key international treaties and the work of various international bodies, assessments and other initiatives (such as BBNJ, the Intergovernmental Panel on Climate Change (IPCC), World Ocean Assessment (WOA), UNFCCC Ocean-Climate Dialogue, United Nations Decade of Ocean Science for Sustainable Development and the United Nations Decade for Ecosystem Restoration, the potential International/Intergovernmental Panel for Ocean Sustainability (IPOS), the WMO Greenhouse Gas Watch (G3W), and the work of the Arctic Council).

The Destination will also support the water related targets of the European Green Deal and ensure water resilience with a view of reinforcing society's ability to sustainably secure the availability and affordability of clean water despite the current uncertainty on long-term trends and the increased variability of water availability. This requires adapting our water facilities, our water use and water management to changing economic, societal and environmental factors including climate change. R&I will be necessary to ensure in particular that key innovative approaches, solutions and technologies developed by EU funded projects, are successfully and fairly taken up by policy makers, water managers and water consuming economic sectors. The announced European water resilience strategy and European climate adaptation plan will be supported.

Proposals for topics under this destination should set out a credible pathway contributing to **“fostering mitigation of and adaptation to climate change in areas and sectors covered by Cluster 6”**, and more specifically to one or more of the following impacts:

- better understood short-, medium- and long-term ocean health and integrity at different emission scenarios, under the pressure of current and emerging threats, including ocean climate interventions, and the passing of planetary boundaries for ocean acidification;
- medium and longer-term risks and opportunities for agriculture and forestry from climate change, in particular from shifting climatic zones, are better understood and managed at relevant scales within Europe and in the international context, mitigating hazardous changes where possible;
- greenhouse gas emissions in the agriculture, forestry and land-use sectors are further reduced, while monitoring, reporting and verification of the emissions is improved;
- adaptation and mitigation of water systems in the context of climate change are fostered to help build a water resilient society and environment.

To maximise the impacts of R&I under this Destination, a systemic multidisciplinary approach, strong international cooperation as well as the integration of indigenous and local knowledge need to be ensured. Social innovation also needs to be encouraged to involve all stakeholders, with a view to triggering the ownership of new practices and the uptake of solutions.

R&I under the destination will be complementary with activities of the Mission “Adaptation to climate change”, the Mission “Restore our ocean and waters by 2030” (in particular with the establishment of the Digital Twin of the Ocean) and the Mission “A Soil Deal for Europe”. Synergies will also be established with European partnerships (e.g., Sustainable Blue Economy Partnership, Agroecology and the upcoming European Partnership on Agriculture of Data), PRIMA (amended EC proposal extending the duration of the partnership by three years, i.e., 2025-2027), and with Destination Earth and its Digital Twins (Climate Adaptation, Extremes). Synergies and complementarities with Cluster 5 (Climate, Energy and Mobility) on climate science will also be ensured. Digital technologies, such as AI, robotics,

5G, cloud computing as well as Earth Observation, will be exploited in the activities given their enabling role and potential contribution to the objectives of the cluster.

The Destination will ensure a balance in terms of lower and higher Technological Readiness Levels (TRLs). R&I actions will take advantage of, contribute to, coordinate with, and involve relevant Copernicus services.

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-CLIMATE-01: The ocean-climate-biodiversity nexus and marine carbon dioxide removal (mCDR)

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>All international organisations are exceptionally eligible for funding.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The evaluation committee will be composed partially by representatives of EU institutions.</p> <p>To ensure a balanced portfolio covering the topic, grants will be awarded to applications not only in order of ranking but at least also to those that are the highest ranked within each of the two options (A, B) set under ‘scope’, provided that the proposals attain all thresholds.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions</p>

	under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ²⁰¹ .
--	--

Expected Outcome: In line with the European and global biodiversity and climate objectives, successful proposals should further the European efforts in achieving both climate-neutrality and ocean sustainability by improving the scientific understanding of ocean climate interventions and their short, medium and long term effects, impacts and risks, and developing monitoring and response measures guided by the precautionary principle and supporting decision-making at regional, European and global levels.

Project results are expected to contribute to several of the following expected outcomes:

- advanced knowledge on scientific aspects, environmental, legal, socio-political and governance considerations for Ocean Alkalinity Enhancement (OAE);
- advanced modelling, monitoring and simulation capabilities (including AI methods and tools) needed for the monitoring, reporting and verification of marine carbon dioxide removal (mCDR) and further improved Earth System Models (ESMs), including the Carbon Dioxide Removal Model Intercomparison Project (CDRMIP);
- enabled evidence-based European and global decision-making on mCDR, sustained European leadership in ocean-climate-biodiversity science nexus, and significant contribution to global scientific assessments.

Scope: Environmentally safe, socially acceptable, and economically viable carbon dioxide removal (CDR) is needed to support the realisation of European and worldwide climate policies. There is considerable uncertainty regarding scalability and the short, medium and long-term effectiveness and impacts on marine ecosystems and human health. Mindful of the precautionary approach, legitimate, responsible, multi and trans-disciplinary, transparent, and inclusive scientific research to evaluate mCDR techniques is urgently needed.

The London Protocol also calls for certain activities other than legitimate scientific research to be deferred (LC 45/LP 18²⁰²). The Convention on Biological Diversity (CBD²⁰³) recognizes the importance of biodiversity in the context of climate-related geoengineering. Decision X/33 of the CBD²⁰⁴ emphasizes the need for a cautious approach, specifying that no climate-related geoengineering activities that may affect biodiversity should take place until there is an adequate scientific basis to justify such activities and that small-scale scientific research

201 This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

202 [45th Consultative Meeting of Contracting Parties to the London Convention and the 18th Meeting of Contracting Parties to the London Protocol \(LC 45/LP 18\) \(imo.org\)](#)

203 [Contracting Parties to the London Protocol \(EC](#)
[XI/20. Climate-related geoengineering \(cbd.int\)](#)

204 [Microsoft Word - COP 10 Decision X \(cdrlaw.org\)](#)

studies are allowed if conducted in controlled settings and justified by the need for specific scientific data. The CBD also requests the compilation of scientific information on the impacts of geoengineering on biodiversity and the study of gaps in existing mechanisms.

Whether the ocean has a potential to help achieve the required extent of additional carbon dioxide removal (beyond the ocean sink driven by increasing atmospheric CO₂ concentrations), while maintaining its integrity and health, requires further research.

Among the greatest challenges associated with mCDR technologies is the ability to measure, monitor and verify the amount of additional carbon removed over time, and to assess the environmental effects of the mCDR technology. This is particularly challenging in the ocean environment, an open system with high inertia, globally connected food-webs and high difference in life traits of species in marine life assemblages, for which safety margins need to be considered, and when considering scale up of these technologies would likely require significant additions in hydrodynamically optimum sites, potentially leading to overlaps with repeated, cumulative and/or transboundary exposures and impacts.

Principled ocean CDR research must be precautionary, inclusive, and well-planned, conducted with a view to ensure these technologies are effective, without harming the environment and people. The research conducted under the topic is to be grounded in the Guide to Best Practices in Ocean Alkalinity Enhancement Research²⁰⁵.

The topic is guided by a focus on integrated climate stabilization and biosphere stewardship for the resilience of the entire Earth system. From this perspective, a comprehensive approach to climate and biosphere stewardship is needed, as well as considering all the sustainability dimensions to guide future decisions.

Actions should aim at developing innovative approaches to address only one of the following options:

Option A: Ocean Alkalinity Enhancement (OAE): biogeochemical and physiological responses and impacts on marine ecosystems

The project is expected to:

- elucidate many unknowns that remain about the efficacy, effectiveness, feasibility, covering both technological readiness and lead time until full potential effectiveness, effectiveness to increase net carbon uptake, effectiveness to reduce ocean warming, ocean acidification, scalability, duration of effects, termination effects, Energy Return on Energy Invested (EROEI), environmental and ecological risk (intended, unintended, undesirable consequences at scale), co-benefits, disbenefits, risks, cost effectiveness, externalities, trade-offs, and competing interests, weighing the impact on reducing climate change by OAE against its negative environmental effects, etc. The actions should use a Life Cycle Assessment (LCA) methodology and consider all the

²⁰⁵ Oschlies, A., Stevenson, A., Bach, L. T., Fennel, K., Rickaby, R. E. M., Satterfield, T., Webb, R., and Gattuso, J.-P. (Eds.): Guide to Best Practices in Ocean Alkalinity Enhancement Research, Copernicus Publications, State Planet, 2-oae2023, <https://doi.org/10.5194/sp-2-oae2023>, 2023

sustainability dimensions (in particular SDGs 3, 6, 9, 12, 13, 14, 15, 16 and 17), across different temporal and spatial scales;

- cover the desirability, ethical considerations, social and political considerations and governability from an international perspective, conducting comprehensive and responsible research to inform decision making under climate inertia about OAE and its potential application;
- carry out comprehensive assessment of the Ocean Alkalinity Enhancement (OAE) and its short, medium and long term impacts on ocean biogeochemistry (including acidification), on pelagic, coastal and deep ocean ecosystems, their assemblages and trophic webs, on marine organisms that are not able to concentrate carbon within their cells under conditions of increased alkalinity, potentially strong fluctuations in pH and seawater pCO₂ impacting plankton and microbiome populations dynamics, species competition and assemblages of connected trophic webs, and calcium hydroxide precipitation threatening coral reefs, plants, periphyton and cyanobacteria due to sensitivity to high levels of turbidity, on primary and second production, on seasonal changes in biogeochemistry and plankton dynamics;
- conduct an assessment and evaluation of the rate and severity of the local impacts and compare multiple datasets to deliver a greater holistic understanding of OAE's biological and ecological impacts regionally and globally, on human wellbeing linked to the degree to which the overall changes in primary and secondary production may result in change of species assemblage on which coastal livelihoods depend; the increased accumulation of contaminants within food chains via the release of minerals such as cadmium, nickel, chromium, iron and silicon, with potential implications for human health; the environmental impacts associated with extensive calcium carbonate mining operations, mineral distribution, the energy-intensive oxy-calcination process, dispersion operations, impact on resource scarcity due to high electric consumption, assessment and evaluation of additional resources needed;
- numerical modelling should be used to assess the scale of the consequences under various scenarios, experimental work in-situ like in mesocosms and benthocosms and ex-situ like in large flow through experimental chambers can help to improve parametrization of geo-biochemical processes. Field experiments are out of scope. The action should improve the precision of predictions and inform ESMs, IAMs and the Carbon Dioxide Removal Model Intercomparison Project (CDRMIP);
- advance the knowledge related to cost and challenges of carbon accounting, cost of environmental monitoring and the need to track impacts beyond carbon cycle on marine ecosystems.

Option B: Monitoring the global ocean for safe, verifiable and sustainable potential marine carbon dioxide removal (mCDR)

The project is expected to:

- establish building blocks and capabilities towards realistic, long-term, sustainable, rigorous, standardized monitoring of potential marine carbon dioxide removal and sequestration, including operational system requirements, and cover aspects of detection, attribution and determination;
- advance empirical approaches and new data needed for data-based ocean modelling (vs. numerical simulations) and develop ocean simulation capabilities based on integrated physical, biogeochemical and ecological oceanic components;
- develop the monitoring capability for quantifying the effectiveness and durability of carbon sequestration, especially in the offshore mesopelagic water column, and identify environmental and ecological short-, medium- and long-term impacts (days to 100s of years) on the ocean and marine ecosystems functioning and the ecosystem services they naturally provide (e.g., biological carbon pump), accounting for climate inertia;
- enable monitoring the multiple components of the carbonate system and, especially in coastal zones, at appropriate spatial and temporal resolution, and considering existing monitoring schemes and databases, such as the Copernicus Marine Environment Monitoring Service (CMEMS), Global Ocean Data Analysis Project (GLODAP) or the Surface Ocean CO₂ Atlas (SOCAT);
- utilise enhanced data from observing/modelling to advance scientific knowledge of the ocean-climate-biodiversity nexus and potential impacts of deliberate perturbations (i.e. mCDR). in the ocean, particularly the deep-sea and coastal environments (speed and magnitude of change, thresholds and tipping points), marine ecosystems functioning and the ecosystem services they provide, including carbon and nutrients cycling, climate regulation and fisheries, for future ocean sustainability and decision-making about active climate remediation, trade-offs and policy needs for decision-making under climate inertia.

For both options A&B, the actions funded under this topic should have a strong collaboration mechanism. Proposals should include a dedicated task, appropriate resources, and a plan on how they will collaborate and ensure synergies with relevant activities carried out under other initiatives.

The actions should build on existing observing platforms, e.g. in the context of the Copernicus programme, and strengthen and expand the current capacities in an inter and multidisciplinary and ecosystem-based approach.

The research carried out should also include SSH perspectives and gender, and the research on desirability, benefits and disbenefits should also be done in relation to desirability for whom, benefits and disbenefits for whom, adding a comprehensive justice perspective on the call, including intergenerational aspects. International cooperation is essential.

A strong linkage should be ensured with the activities under the UN Decade of Ocean Science and ongoing Horizon projects, the Copernicus marine service (CMEMS), GOOS, the Ocean

Biogeographic Information System (OBIS), MBON of GEOBON, ICOS, GCOS, and other relevant international Ocean Observing Initiatives. All in-situ data collected should follow INSPIRE principles and be available through open access repositories supported by the European Commission (Copernicus, and EMODnet). Synergies with the Horizon Europe Mission Restore our Ocean and waters is encouraged. The projects outputs may contribute to the European Digital Twin of the Ocean and the Destination Earth initiative and outline specific plans to this effect.

This topic is part of a coordination initiative between ESA and the European Commission on Earth System Science and should towards this end include sufficient means and resources for effective coordination. Projects should leverage the data and services available through European Research Infrastructures federated under the European Open Science Cloud, Copernicus, as well as data from relevant data spaces in the data-driven analyses. Projects could additionally benefit from access to infrastructure and relevant FAIR data by collaborating with projects funded under the topics HORIZON-INFRA-2022-EOSC-01-03: FAIR and open data sharing in support of healthy oceans, seas, coastal and inland waters and HORIZON-INFRA-2024- EOSC-01-01: FAIR and open data sharing in support of the mission adaptation to climate change. Collaboration with the relevant existing European Research Infrastructures such as those prioritised by the European Strategy Forum on Research Infrastructures (ESFRI)²⁰⁶ is encouraged.

HORIZON-CL6-2025-02-CLIMATE-02: The ocean-climate-biodiversity-people nexus: uncovering safe operating space for safeguarding the integrity and health of the global ocean

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 19.50 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>All international organisations are exceptionally eligible for funding.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of</p>

²⁰⁶ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

	Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio covering the topic, grants will be awarded to applications not only in order of ranking but at least also to those that are the highest ranked within each of the three options (A, B, C) set under ‘scope’, provided that the proposals attain all thresholds.</p>

Expected Outcome: In line with the European and global biodiversity and climate objectives, successful proposals should further the European efforts in achieving both climate-neutrality and ocean sustainability, by improving the scientific understanding of the short-, medium- and long-term ocean health and integrity at different emission scenarios, under the cumulative and cascading pressures of current and emerging threats, including ocean climate interventions, tipping points and passing of planetary boundaries, risks and impacts, speed and magnitude of change in deep-sea biodiversity and response measures guided by the precautionary principle and supporting decision-making at regional, European and global levels.

Project results are expected to contribute to several of the following expected outcomes:

- further improved understanding of the limits to ocean integrity at different emission scenarios; ocean changes and near term (~2030), mid-term (2050–2060) and long-term (after ~2060) climate actions and policy making under climate inertia, guided by the precautionary approach;
- further advanced science regarding ocean existing and emerging threats and the associated risks and impacts for the next 5–10 years; 10-20 ys; 50-100 ys and more; and uncovering possible response measures guided by the precautionary principle;
- improved understanding of trends, variability, drivers, and social and ecological impacts of ocean acidification (as an integral part of a multi-stressor and cascading problem, alongside ocean warming, deoxygenation, eutrophication, stratification, etc.); more harmonised and tailored ocean acidification monitoring (both chemical and biological), modelling, observation, data integration and prediction capabilities and mitigation activities;
- important contributions made to key ocean monitoring indicators, Essential Climate Variables (ECVs from GCOS), Essential Ocean Variables (EOVs from GOOS) in compliance with international programmes (IPCC, WOA, IPBES, CMIP, CLIVAR, Ocean Health Index, UN Decade, ARGO) that support international global assessments and foster the development of a regional approach to ocean climate monitoring and reporting, overcoming current limitations and gaps;
- further improved Earth System Models (ESMs) representing key physical, biogeochemical, and biological processes in the ocean with reduced uncertainty of

climate change projections at regional scales, and reduced biases (i.e., in the WCRP Coupled Model Intercomparison Project (CMIP7) models for ocean and polar regions);

- enabled evidence-based regional, European, and global decision-making on ocean governance; sustained European leadership in ocean-climate-biodiversity science nexus supporting EU programmes; significant contribution to global scientific assessments, such as the IPCC, IPBES and WOA, as well as to the UNFCCC Ocean and Climate Change Dialogue, UN Decade of Ocean Science and UN SDGs 13 and 14.

Scope: Actions should aim at developing innovative approaches to address only one of the following options:

A. Ocean integrity at different emission scenarios: extreme events, slow onset events, cascading and tipping elements and ocean inertia

The project is expected to:

- advance the science on ocean tipping elements at different GHG emission scenarios, lag times, opportunities and impacts at multi-decadal to multi-centennial timeframes, including the risk of irreversible changes in the carbon cycle and the risks under various overshoot pathways;
- advance the science on ocean changes and near term (~2030), mid-term (2050–2060) and long-term (after ~2060) climate actions;
- contribute to integrated prediction systems that combine Earth System, Ecosystem and Social System models; fully Integrated Assessment Models (IAMs) and Earth System Models (ESMs) with Essential Ocean Variables (EOVs) (ocean biochemistry, ecology, and biology); ability and/or sensitivity of global Earth System Models (ESM) to simulate tipping point crossings; integrated prediction systems that combine Earth System, Ecosystem and Social System models;
- elaborate on the policy implications of inertia (climate inertia and its thermal, ocean, ice sheet, carbon cycle feedbacks and marine ecological components) and develop recommendations for European policy making.

B. Ocean integrity and health: current and emerging anthropogenic threats

The project is expected to:

- advance the science of ocean emerging threats - identify emerging threats that are likely to have a significant impact on the health and functioning of the ocean over the next 5–10 years; 10-20 ys; 50-100 ys and more;
- exploratory research into short-, medium- and long-term impacts on ocean health and marine biodiversity arising from existing and emerging anthropogenic threats, such as (the list is purely informative): mining for critical materials, technologically enhanced ocean carbon uptake, ocean climate interventions, emerging marine renewable energy

(wave, tidal, ocean current, offshore wind power, offshore solar energy, ocean floor geothermal energy), new hydrogen economy and leakages, ocean crops, marine engineering and oil drilling, untapped potential of marine collagens and their impacts on marine ecosystems, exploring marine genetic resources, impacts of expanding trade for fish swim bladders on target and non-target species, impacts of fishing for mesopelagic species on the biological ocean carbon pump, colocation of marine activities, floating marine cities, trace-element contamination compounded by the global transition to green technologies, emerging NIS (invasive species) and pathogens, novel and emerging chemical problems, nutrient and pesticide runoff from industrial agriculture, nanomaterials and micro and nanoplastics, potentially toxic effects of new biodegradable materials intended to replace plastics, emerging contaminants of concern, emerging applications of seaweeds, entanglement of marine mammals in mooring lines, cables and anchors, microalgae for biofuels, marine hydrates, seaweeds supply for human consumption and also raw materials for feeds, nutraceuticals and pharmaceuticals;

- support improved risk assessment and management actions that can contribute to mitigate the impacts of these current and emerging stressors and inform public and policymakers to mitigate potentially negative impacts through precautionary principles before those effects become realized.

C. Ocean integrity and health: Ocean Acidification (OA), Planetary Boundaries and SDG14.3.1

Making appropriate use of the Guide to best practices for ocean acidification research and data reporting²⁰⁷, the project is expected to:

- improve our understanding of trends, variability, drivers, and impacts (ecological, ecosystem services and human) of ocean acidification, in a context of multiple ocean stressors;
- better incorporate complex interactions between natural systems (e.g., climate-ocean coupling, shifting food webs), social systems (e.g., anthropogenic activities, marine pollution, overfishing), and their social, economic, and ecological impacts;
- fill gaps in space and time for ocean CO₂ and ancillary physical and biogeochemical observations at the ocean surface and interior to reduce the biases and uncertainties in the variability and trends for air-sea fluxes and inventory changes, particularly for the Arctic and the Southern Ocean;
- improve our understanding of changes in water mass ventilation associated with climate change and variability to gain further insights into future trends in ocean acidification and deoxygenation in the ocean interior;

²⁰⁷ European Commission, Directorate-General for Research and Innovation, Hansson, L., Fabry, V., Gattuso, J. et al., *Guide to best practices for ocean acidification research and data reporting*, Hansson, L.(editor), Fabry, V.(editor), Gattuso, J.(editor), Riebesell, U.(editor), Publications Office, 2010, <https://data.europa.eu/doi/10.2777/58454>

- better understand aerosol pH, including more direct measurements, and the process controlling the lability of iron, phosphorus, and other trace metals in atmospheric deposition, as well as the need for more direct measurements of the atmospheric deposition of these nutrients to the ocean, particularly in remote ocean regions such as the Southern Ocean;
- improve observations for the interplay between carbonate chemistry and a variety of biogeochemical and physical processes to increase the robustness of future assessments of ocean acidification; ensure better harmonised and tailored monitoring and data integration, improved models (both in term of spatial resolution and representation of the biological processes), and further integrate observations and model products;
- identify and monitor indicators of biological/ecosystem responses to ocean acidification coupled to support the assessment of ecosystem risk and consequences, and better inform management strategies at temporal and spatial scales relevant for organisms and their habitats;
- use models, forecasts, and predictions as tools to facilitate management strategies and design decision-support tools for prioritising the development of climate adaptation strategies, develop innovative tools to monitor and mitigate changing ocean chemistry locally, explore the potential opportunities and risks associated with the research findings, aligned with policy governance, including the different spatial-temporal scales that are ecologically and socio-economically relevant and politically applicable, propose actionable innovative solutions and policy recommendations.

For all three options (A, B & C), actions funded under this topic should have a strong collaboration mechanism and should include a dedicated task, appropriate resources, and a plan on how they will collaborate with one another.

The actions should build on existing observing platforms, e.g. in the context of the Copernicus programme, and strengthen and expand the current capacities in an inter and multidisciplinary and ecosystem-based approach. The research carried out should also include SSH perspectives and gender, and the research on desirability, benefits and disbenefits should also be done in relation to desirability for whom, benefits and disbenefits for whom, adding a comprehensive justice perspective on the call, including intergenerational.

International cooperation is encouraged, especially with AAORIA partner countries. A strong linkage should be ensured with the ongoing activities under the UN Decade of Ocean Science, including where relevant the Decade Programme of the Global Ocean Acidification Observing Network GOA-ON.

Actions under this topic will build upon and link with sister Horizon projects, the Copernicus marine service (CMEMS), GOOS, the Ocean Biogeographic Information System (OBIS), MBON of GEOBON, ICOS, GCOS, and other relevant international Ocean Observing Initiatives. All in-situ data collected through actions funded from this call should follow INSPIRE principles and be available through open access repositories supported by the

European Commission (Copernicus, and EMODnet). Synergies with the Horizon Europe Mission Restore our Ocean and waters is encouraged; the projects outputs may contribute to the European Digital Twin of the Ocean and the Destination Earth initiative and outline specific plans to this effect.

This topic is part of a coordination initiative between ESA and the European Commission on Earth System Science and should towards this end include sufficient means and resources for effective coordination. Projects should leverage the data and services available through European Research Infrastructures federated under the European Open Science Cloud, Copernicus, as well as data from relevant data spaces in the data-driven analyses. Projects could additionally benefit from access to infrastructure and relevant FAIR data by collaborating with projects funded under the topics HORIZON-INFRA-2022-EOSC-01-03: FAIR and open data sharing in support of healthy oceans, seas, coastal and inland waters and HORIZON-INFRA-2024- EOSC-01-01: FAIR and open data sharing in support of the mission adaptation to climate change. Collaboration with the relevant existing European Research Infrastructures such as those prioritised by the European Strategy Forum on Research Infrastructures (ESFRI)²⁰⁸ is encouraged.

HORIZON-CL6-2025-02-CLIMATE-03: Understanding and managing medium and longer-term challenges and opportunities for agriculture stemming from shifting climatic zones and changing agroecological environments

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>

²⁰⁸ The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website <https://ri-portfolio.esfri.eu/>.

<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁰⁹.</p>
---	---

Expected Outcome: In line with the EU adaptation strategy, the common agricultural policy's key objective of contributing to climate change mitigation and adaptation, and the EU biodiversity strategy for 2030, the successful proposals are expected to contribute to better understanding and managing medium and longer-term challenges and opportunities for agriculture stemming from shifting climatic zones and changing agroecological environments.

Project results are expected to contribute to all of the following expected outcomes:

- the complex links between changes in climate conditions, ecosystems and their services, and agriculture productivity and sustainability are better understood and managed by relevant actors in the sector and in policy-making;
- the suitability of agriculture land areas for different agricultural uses is better understood, and regionally specific adaptation strategies are widely applied, taking into account different climate change scenarios;
- farmers and other owners and managers of agricultural land are more knowledgeable and better equipped to address the challenges and seize the opportunities resulting from shifting climatic zones and changing agroecological conditions.

Scope: While average global temperatures have risen by about 1.5° C globally since pre-industrial times, temperatures in Europe – the fastest warming continent – are rising at about twice that speed.²¹⁰ As temperatures rise, previously stable climatic zones (i.e., long-term patterns of temperature, precipitation and their seasonal variations) are shifting towards higher latitudes (towards the poles) and towards higher altitudes (where possible). Arid and semi-arid zones are expanding, while polar and sub-polar zones are shrinking. Precipitation patterns and regimes are also changing across different climatic zones. These changes affect natural as well as managed ecosystems and the services provided by them, altering the distribution and abundance of many plant species and their lifecycles, with consequences for cropping and other forms of agricultural land use, including animal husbandry. Studies show that agro-climatic zones have already moved in the EU over the past 40 years due to climate change,

²⁰⁹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²¹⁰ European Environment Agency, European climate risk assessment: executive summary, EEA Report 01/2024

with the fastest shifts observed in Eastern Europe.²¹¹ Recent studies also point towards additional risks resulting from changing ocean currents that might drastically affect weather patterns in parts of Europe in various ways.²¹²

Proposals should address the following:

- by using current and novel evidence, observations and approaches, develop, test and validate dynamic models of the impacts of climate change – also in relation to possible tipping points – on agriculture, taking into account diverse agroecological systems and pedoclimatic conditions and covering the most important expected impacts (including changes in growing season and crop phenology, water demand and availability/quality, soil health and fertility, crop, grassland and livestock productivity, pests/diseases and parasites, etc.).
- characterise the geo-distribution of cropping systems – also including permanent crops as well as permanent grasslands and other land uses for livestock farming systems, and including currently grown crops as well as others that could be grown under future conditions – in Europe, propose indicators for sustainability, productivity and resilience, and assess production uncertainties, incorporating climate change projections.
- provide tools for decision-making and business strategies at different levels of action, for evidence-based agricultural land use and management strategies based on climate change trends and quantitative projections, enabling farmers and other practitioners to develop and apply tailored, innovative pathways towards adaptation and, where relevant, restoration in agricultural systems.

Proposals should include a dedicated task and resources for cooperation with the other project(s) funded under this topic and for collaborative actions with other related projects under Horizon Europe, including the Mission on Adaptation to Climate Change, and under the Agroecology Partnership.²¹³

The Joint Research Centre (JRC) may participate as member of the consortium selected for funding. The role of JRC would be to explore how extremes such as drought and heatwaves will reshape land suitability to crop production under different scenarios exploiting advanced AI techniques. Furthermore, JRC would explore suitability under different tipping point scenarios, linked for instance to a possible collapse of the Atlantic Meridional Overturning Circulation (AMOC).

This topic should involve the effective contribution of social sciences and humanities (SSH). The integration of existing Earth observation data space ecosystems and the usage of Destination Earth's Climate Adaptation Digital Twin data is encouraged.

HORIZON-CL6-2025-02-CLIMATE-04: Monitoring, reporting, verification and mitigation of non-CO₂ greenhouse gas emissions and related air pollutants from agriculture

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 4 by the end of the project – see General Annex B.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²¹⁴.</p>

Expected Outcome: To help meeting the ambitions of EU climate and agriculture policies, including implementation of the Regulation on Carbon Removals and Carbon Farming²¹⁵, the successful proposals will provide for activities that ultimately lead to a reduction of

²¹⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²¹⁵ https://climate.ec.europa.eu/eu-action/carbon-removals-and-carbon-farming_en

greenhouse gas emissions (in particular gases other than CO₂) from the agricultural sector and to improved monitoring, reporting and verification of the emissions.

Project results are expected to contribute to all of the following expected outcomes:

- monitoring, reporting and verification (MRV), in particular at farm level, of direct and indirect non-CO₂ greenhouse gas (GHG) emissions and related air pollutants is improved;
- improved MRV and insights from practical experience are comprehensively integrated in relevant models and used in agricultural policy development;
- knowledge on the responses of non-CO₂ GHG and air pollutant emissions to different agricultural practices and to climate change and its impacts is enhanced;
- new and better knowledge and approaches for mitigating non-CO₂ emissions are available, widely shared and applied in agricultural practice, in particular by farmers, advisors, and other stakeholders.

Scope: In 2021, the EU agricultural sector accounted for approximately 11% of the total GHG emissions in the EU. The bulk of emissions can be attributed to methane and nitrous oxide, stemming from livestock and release from agricultural soils, in particular due to fertiliser application and manure management. Additional efforts are needed in the sector to help meet the EU's climate targets, in particular climate neutrality by 2050. To promote the uptake of mitigation practices at farm level, better data on their impact and effectiveness are needed. There is also a need for new practical solutions to help farmers monitor and reduce non-CO₂ GHG emissions.

Proposals should:

- focusing on methane (CH₄) and nitrous oxide (N₂O) and including indirect sources of N₂O (soil nitrification/denitrification, ammonia volatilisation, nitrogen leaching), address agricultural practices in manure management, livestock feeding and grazing, soil tillage, fertiliser use and liming in all relevant types of farming systems, including animal husbandry, with a view to developing harmonised metrics and effective mitigation measures;
- through analysis, field experiments, and demonstration activities, assess and improve the accuracy, effectiveness, efficiency and user-friendliness of MRV tools for the above GHGs, reducing uncertainties via established and novel methods and enabling use of higher tiers for reporting under the UN Framework Convention on Climate Change. Regarding emissions related to fertilisation, this should include a life-cycle perspective addressing also direct and indirect emissions related to the production of different types of fertilisers, notably comparing organic to mineral/chemical fertilisers;
- improve understanding of linkages between direct non-CO₂ GHG emissions, notably of N₂O, and other pollutant emissions from agricultural practices (including ammonia), and

assess and develop options for reducing trade-offs between mitigation measures for both types of emissions;

- consolidate and improve knowledge on mitigation measures for agricultural non-CO₂ GHG emissions, and assess the effects of elevated atmospheric CO₂ concentration and climate change impacts on those emissions and on options for their mitigation;
- through dedicated training and outreach activities, build capacity among farmers, farm advisors and other relevant actors for widespread utilisation of improved MRV tools and GHG mitigation measures.

Proposals should include a dedicated task and resources for cooperation with the other project(s) funded under this topic and with other relevant ongoing and forthcoming Horizon Europe project(s) in different Destinations of this Cluster (notably HORIZON-CL6-2025-02-FARM2FORK-07: “Improving grassland management in European livestock farming systems”) and under the EU Mission “A Soil Deal for Europe” (notably HORIZON-MISS-2024-SOIL-01-04: “Systems to quantify nitrogen fluxes and uncertainties in European landscapes”). Proposals should address various farming systems/approaches, one of which should be organic farming, and cover a range of different pedo-climatic zones.

The Joint Research Centre (JRC) may participate as member of the consortium selected for funding. The role of the JRC would be to model trade-offs between CO₂ and non-CO₂ emissions for different farming activities, using MRV tools to support the implementation and further development of the Carbon Removals and Carbon Farming (CRCF) certification framework.²¹⁶

Due to the scope of this topic, international cooperation is strongly encouraged, in particular with China under the EU-China Food, Agriculture and Biosolutions (FAB) flagship initiative.

HORIZON-CL6-2025-02-CLIMATE-05: Additional activities for the European Partnership Water Security for the Planet (Water4All)

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 70.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 70.00 million.

²¹⁶ https://climate.ec.europa.eu/eu-action/carbon-removals-and-carbon-farming_en. The JRC provides support to the implementation of the framework, by providing regional baselines as well as analysis of linkages between CRCF and Common Agricultural Policy emission mitigation potential, and the uptake in the UNFCCC greenhouse gas emission inventories.

<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The proposal must be submitted by the coordinator of the consortium of the grant funded under HORIZON-CL6-2021-CLIMATE-01-02 and HORIZON-CL6-2023-CLIMATE-01-01: European Partnership Water Security for the Planet (Water4All). This eligibility condition is without prejudice to the possibility to include additional partners.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The evaluation committee will be composed partially by representatives of EU institutions. If the proposal is successful, the next stage of the procedure will be grant agreement amendment preparations. If the outcome of amendment preparations is an award decision, the coordinator of the consortium funded under HORIZON-CL6-2021-CLIMATE-01-02: European Partnership Water Security for the Planet (Water4All) will be invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>This action is intended to be implemented in the form of an amendment of the grant agreement concluded pursuant to topic HORIZON-CL6-2021-CLIMATE-01-02.</p> <p>For the additional activities covered by this action:</p> <ul style="list-style-type: none"> • The funding rate is 30% of eligible costs. • Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. • Financial support provided by the participants to third parties is one of the primary activities of this action in order to be able to achieve its objectives. The 60 000 EUR threshold provided for in Article 207 (a) of the Financial Regulation No 2024/2509 does not apply. • The maximum amount of FSTP to be granted to an individual

	<p>third party is EUR 7 000 000 for the whole duration of Horizon Europe²¹⁷. This amount is justified since provision of FSTP is one of the primary activities of this action and it is based on the extensive experience under predecessors of this partnership.</p> <p>The starting date of grants awarded under this topic may be as of the submission date of the application. Applicants must justify the need for a retroactive starting date in their application. Costs incurred from the starting date of the action may be considered eligible (and will be reflected in the entry into force date of the amendment to the grant agreement).</p>
<i>Total indicative budget</i>	<p>The total indicative budget for the topic is EUR 70 million committed in annual instalments over years 2025-2027 (EUR 23 million from the 2025 budget, EUR 23 million from the 2026 budget and EUR 24 million from the 2027 budget).</p>

Expected Outcome: This topic is for the continuation of the European Partnership Water Security for the Planet (Water4All), i.e. EU contribution in WP 2025. The third instalment of the partnership is expected to contribute to expected outcomes specified in topic HORIZON-CL6-2021-CLIMATE-01-02: European Partnership Water Security for the Planet (Water4All), for continuation and new development of activities.

Scope: The objective of this action is to continue to provide support to the European Partnership Water4All identified in the Horizon Europe Strategic Plan 2021-2024 and first implemented under the topic HORIZON-CL6-2021-CLIMATE-01-02: European Partnership Water Security for the Planet, and in particular to fund additional activities (which may also be undertaken by additional partners) in view of its intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation.

The consortium which applied to and received funding under HORIZON-CL6-2021-CLIMATE-01-02: European Partnership Water Security for the Planet is uniquely placed to submit a proposal to continue the envisioned partnership. Not only did this consortium submit the proposal leading to the identification of the partnership in the Horizon Europe strategic planning 2021-2024, it has also implemented the partnership through co-funded calls between 2021 and 2024 based on this planning and further to topic HORIZON-CL6-2021-CLIMATE-01-02. In this context, the current consortium has particular expertise in relation to the objectives of the Partnership, the activities to be implemented, in particular FSTP calls or other calls/scope of calls clearly required/envisioned pursuant to the initial proposal, and other relevant aspects of the action. In practice, another consortium could not continue the activities of the Partnership underway without significant disruption to the ongoing activities, if at all.

²¹⁷ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal) the maximum amount may be higher.

The scope of the application for this call on the European Partnership Water Security for the Planet should focus on the 2023-27 programmes according to the partnership's co-created strategic research and innovation agenda for seven years, which includes joint calls for research projects, activities to fostering the uptake of R&I results from various stakeholders, living labs and demonstration sites activities to demonstrate the efficiency of innovative solutions, activities to enhance international collaborations and support the achievement of the water related UN SDGs and transfer of in foreign contexts, where specific challenges can be encountered. Actions to ensure coordination and alignment of EU, national and regional programmes, to strengthen the research/policy interface and all horizontal activities to allow the Partnership to operate and to achieve its specific objectives should be also addressed. Emphasis should also be put on activities contributing to the recently adopted Nature Restoration Regulation, the announced European water resilience strategy and climate adaptation plan.

It is expected that the partnership continues to organise joint calls on an annual base and therefore it should factor ample time to run the co-funded projects.

Specific activities to strengthen the complementarities of Water4All partnership with the related Missions, specifically the Missions Adaptation to Climate Change, Restore our Ocean and Waters by 2030, and a Soil Deal for Europe and Partnerships (Sustainable Blue Economy, Biodiversa+, Driving Urban Transition and others), identified in the proposal submitted by the coordinator of the consortium funded under both HORIZON-CL6-2021-CLIMATE-01-02 and HORIZON-CL6-2023-CLIMATE-01-01 should be also described.

While the award of a grant to continue the Partnership in accordance with this call should be based on a proposal submitted by the coordinator of the consortium funded under HORIZONCL6-2021-CLIMATE-01-02: European Partnership Water Security for the Planet (Water4All) and the additional activities (which may include additional partners) to be funded by the grant should be subject to an evaluation, this evaluation should take into account the existing context and the scope of the two first evaluations as relevant, and related obligations enshrined in the grant agreement.

Taking into account that the present action is a continuation of the topics HORIZON-CL6-2021-CLIMATE-01-02 and HORIZON-CL6-2023-CLIMATE-01-01 and foresees an amendment to an existing grant agreement, the proposal should also present in a separate document the additional activities and any additional partners to be covered by the award in terms of how they would be reflected in the grant agreement.

The partnership should pool the necessary financial resources from the participating national (or regional) research programmes with a view to implementing joints call for transnational proposals resulting in grants to third parties. Synergies with the European Regional Development Fund are encouraged.

HORIZON-CL6-2025-02-CLIMATE-01-two-stage: Strengthening the resilience of water systems and water sector to climate and global socio-economic change impacts

Call: Cluster 6 Call 02 - two stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 18.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Admissibility conditions</i>	<p>The conditions are described in General Annex A. The following exceptions apply:</p> <p>Applicants submitting a proposal under the blind evaluation pilot (see General Annex F) must not disclose their organisation names, acronyms, logos nor names of personnel in the proposal abstract and Part B of their first-stage application (see General Annex E).</p>
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 6-7 by the end of the project – see General Annex B.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>This topic is part of the blind evaluation pilot under which first stage proposals will be evaluated blindly.</p>

Expected Outcome: In line with the European Green Deal, notably the EU climate adaptation strategy, the Nature Restoration Regulation, EU water legislation and the upcoming European water resilience strategy, successful proposals will contribute to the impact of this Destination on adaptation and mitigation of water systems in the context of climate change, supporting also biodiversity protection and restoration.

Project results are expected to contribute to all of the following expected outcomes:

- assessing and managing better the changing hydrological cycle, also at fine spatial scales, to reduce water risks amplified by climate change, including floods and droughts, by fostering further development of innovative observing systems to monitor trends in the atmospheric hydrological cycle; by fostering water resilient land use, management and planning and natural water cycle restoration, also contributing to support biodiversity protection/restoration; and by enhancing cross-sectoral and transboundary catchment cooperation between various water use sectors and complementarity between water related policies;
- increasing water use efficiency in all sectors at basin level, balancing better water demand and supply, helping to transform the economics and restructuring the governance of water;
- helping policy makers to prepare for better water infrastructure management and planning allowing among others fair access to drinking water and other essential uses.

Scope: We face a triple interrelated planetary crisis of climate change, biodiversity loss and pollution. Water is at the heart of these challenges. We can no longer ignore the world's crisis of water. The global hydrological cycle is changing. During the last three consecutive years, we have also witnessed not only worrying droughts in many regions of the EU, reaching eastern and northern countries which have been so far preserved, but also catastrophic pollution incidents and deadly floods across Europe. These events are no longer exceptional events. As scientists revealed very recently, human-caused climate change has made these episodes at least 20 times more likely. Moreover, groundwater levels sink steadily in Europe and globally, and the EU water balance is greatly perturbed. This increases tensions in agriculture, energy production and water supply and it is threatening drinking water, food and energy security, the health of ecosystems and the services they deliver, and our way of living.

These issues are highly interlinked, and they must be addressed together, under the remit of the water, energy, food, and ecosystem (WEFE) nexus. Moreover, recent JRC research shows that reduced freshwater flow of rivers into the sea can have severe impacts on coastal and marine ecosystem and their services, for example wild capture fisheries. This emphasizes the need to adopt the “from the source to the sea” approach when tackling water resilience with a support to biodiversity protection/restoration.

According to the EC communication “Managing climate risks – protecting people and prosperity”, “protecting and restoring the water cycle, promoting a water-smart EU economy and safeguarding good quality, affordable and accessible freshwater supplies to all is crucial to ensure a water-resilient Europe. [...] Water needs to be managed, and human demand needs to be adjusted to the new and more scarce supply”.

The objective of this topic is to compare and demonstrate the potential of available state of the art tools to forecast the availability of water resources at the regional and local scale, building

also on JRC and other available tools developed for the European scale²¹⁸. It should take into consideration both the global water cycle (blue and green water) and sectoral water demands for both seasonal and long-term horizon, with an integrated water management approach. It should consider water allocation tools for different uses integrating the quality needed for each use, as well as tools for resilient urban planning and water infrastructure management allowing among others run-off control, reducing flood and drought risks, ensuring safety of citizens and infrastructures and support to biodiversity protection/restoration.

Demonstrations should take place in diverse European regions on a suitable scale e.g., river basin, and should bring together a wide range of relevant stakeholders, including relevant water sectors, water managers and authorities, urban and rural planners, policy makers and the civil society. Solutions aiming at fostering and restoring natural retention measures to keep water in the landscape, mitigating drainage losses, enhancing water retention in watersheds to mitigate extreme events, including both drought and flood, should be explored. Proper attention should be given to actions aiming at overcoming the fragmentation of water monitoring and observation data by strengthening the complementarity between satellites, in situ data, participatory research and integrated assessment models. This should foster the consolidation for better-quality and higher frequency data, reducing uncertainty and increasing trust and making them responsive to end-users' needs.

Appropriate climate change adaptation and mitigation strategies and tools, such as, tools for resilient urban and rural planning to manage runoff, reduce flood risk and ensure the safety of citizens and water infrastructures, should then be developed to strengthen the resilience of the water sector. These strategies should in particular assess the following:

- strategies and technical cost-efficient and sustainable solutions for alternative water resources production adapted to the anticipated use;
- the governance of water resource management to better consider the interlinkages of various water related policies to ensure reliable allocation of water for different uses and cross-sectoral coordination;
- the suitability of current indicators to appropriately define water efficiency in various sectors and provide a harmonised methodology to increase water efficiency;
- strategies to anticipate the consequences of recurrent extreme events, including land use analysis (e.g. floods and droughts) and reduce the associated risks;
- water resilience by exploring water transfer effects for seasonal, annual and pluriannual time-horizon on ecosystems, populations, agriculture, industrial consumption;
- the suitability of solutions to support biodiversity protection/restoration with attention given to avoiding spread of invasive alien species and to ensuring enough water for entire ecosystems (all species and their populations in healthy state).

218

<https://publications.jrc.ec.europa.eu/repository/handle/JRC124342>

Moreover, the economic foundation of the current water management systems, including water pricing and trade policies, in the context of changing climate should be reviewed to provide elements for a new economic framework helping to better structure the cost of building/operating/monitoring the water infrastructures, increase demand for innovative solutions and strengthen private investments for large scale deployment of these solutions in the water sector.

Proposals should avoid duplication with related ongoing work of the JRC and other EU funded projects, while strengthening complementarities with relevant EU Missions and Partnerships (e.g. Water4All, Biodiversa+). Proposals should build on the assessment reports of the Intergovernmental science-policy Platform on Biodiversity and Ecosystem Services (IPBES), particularly the forthcoming IPBES nexus assessment. Where relevant, proposals should build on or further enhance existing hydrological modelling tools and water relevant tools and datasets of the Copernicus Emergency Management Service, Climate Change and Land Monitoring Services and leverage products and services offered by the from Destination Earth initiatives. Proposals should build synergies and complementarities with other related Horizon Europe projects. To this end, proposals should plan the necessary budget to cover related cluster activities.

This action should bring together a wide range of relevant stakeholders, i.e, researchers, technology providers, water utilities, business representatives, investors, policy makers and other water users and citizens to maximise impact. When engaging stakeholders, gender and other social categories (disability, age, socioeconomic status, ethnic and / or cultural origins, sexual orientation, etc.), and their intersections, need to be considered. The possible participation of the JRC would ensure that the assessment of available state of the art tools to forecast the availability of water adequately integrates the existing JRC related work.

Due to the strong socio-economic dimension of water management, the integration of SSH, including gender studies, and Citizen Social Science approach expertise are also needed to ensure the proposed climate change adaptation and mitigation strategies are socially accepted and no one is left behind.

Destination - Resilient, inclusive, healthy and green rural, coastal and urban communities

R&I under destination “Resilient, inclusive, healthy and green rural, coastal and urban communities” will contribute to the implementation of the Horizon Europe Strategic Plan 2025-2027. In particular, it will deliver under the Key Strategic Orientation (KSO) 3: a more resilient, competitive, inclusive and democratic Europe and to a lesser extent to KSO 1: the green transition, and KSO 2: the digital transition.

Places and people, as well as their culture, matter to the achievement of a more sustainable Europe. The European Green Deal's ecological and digital transitions, along with the resulting spatial, socio-economic, behavioural, and cultural implications present unique challenges and opportunities for different regions and populations. Rural (including mountains) and coastal areas play a key role in managing and protecting the environment, as well as natural and cultural heritage. The provision of both private and public goods from these territories depends on the resilience and attractiveness of rural and coastal areas and the capacity of people who live and work there to attain an adequate level of well-being.

This destination will make a key contribution to the action plan flagship initiative “R&I for rural communities” and to the four areas of work of the long-term vision for EU’s rural areas (LTVRA): stronger, connected, resilient, and prosperous.

This destination will as well contribute to sustaining our quality of life, achieve a circular and resilient economy, support people to access affordable housing, the EU territorial agenda for 2030 promoting a future for all places, the ambitions of the food 2030 R&I initiative as well as the EU bioeconomy strategy.

On social related research and innovation, this destination contributes to the implementation of the pillar of social rights and its action plan and to develop a Union of equality.

On an international level, the relevant topics under this destination will support the objectives of the joint communication on the EU Arctic policy, and the all- Atlantic Ocean research and innovation alliance (AAORIA) which has recently prioritised the need to bring science and innovation solutions to coastal communities facing climate threats and to enhance the coastal resilience of cities, regions and islands. The destination will contribute to the aim of the Commission to step up work on climate resilience and preparedness, including work on the priorities of the European Ocean Pact.

Proposals for topics under this destination should set out a credible pathway to contributing to **sustainably developing rural, urban and coastal areas**, and more specifically one or several of the following expected impacts:

- rural, coastal and urban communities are empowered to act for a transformative change to become sustainable and resilient, through better access to knowledge and services, and are better prepared to adapt to climate change and to achieve climate neutrality and environmental objectives.

- rural communities are prepared to manage demographic trends and to mitigate their social, economic and environmental impacts through enhanced territorial governance and innovative inclusive solutions.
- urban and peri-urban communities can access affordable, healthier, nutritious and environmental-friendly food, and benefit from synergies and a systemic approach across the urban-rural interface as well as from enhanced local and regional governance and public services.
- people and the environment will benefit from climate change adaptation. Coastal communities will have better knowledge and become more resilient and better equipped to tackle extreme weather events thanks to deployment of latest scientific research results and innovative solutions, including nature-based solutions.
- communities have access to ocean knowledge, data, tools, training and can develop skills that support them to take evidence-based decisions to respond to climate change with socially acceptable measures in their territories.

Under destination “Resilient, inclusive, healthy and green rural, coastal and urban communities”, the Work Programme 2025 will fill the knowledge gaps in domains that were not tackled in Horizon 2020 or Horizon Work Programmes 2021-2022 and 2023-2024, as indicated in the Strategic Plan 2025-2027. The destination places emphasis on actions that will exploit knowledge created under previous Work Programmes and research, and will deliver impact as well as increase sustainability, resilience, inclusiveness, and competitiveness. The focus is on tackling the impacts of demographic changes and environmental extreme events which cause uncertainty, by engaging communities in decision-making processes, improving policy instruments for policy responses that are evidence based and considering local needs. This Work Programme also contributes to improving access to services, job opportunities, good environmental conditions, and energy-efficient housing in rural areas.

The multi-actor approach may be used in a significant number of topics. Relevant topics under this destination should include social sciences and humanities (SSH), including gender studies, to apply a human-centered approach, as well as make use of social innovation to meet local needs by co-creating place-based solutions.

Coordination will be ensured with the use of the EC knowledge centre for bioeconomy, the EU rural observatory, the EU soil observatory, and the EU Missions “A Soil Deal for Europe”, “Restore our Oceans and Waters” and “Adaptation to Climate Change”, as well as with the New European Bauhaus (NEB) Facility.

To maximise the impacts of R&I under this destination, international cooperation is encouraged when appropriate.

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-02-COMMUNITIES-01: Adapting to and mitigating demographic trends in rural areas through evidence-based planning and innovative solutions

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 13.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: the proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: The successful proposals will support the implementation of the long-term vision for EU's rural areas, contribute to empower rural communities for transformative change to become sustainable and resilient, as well as to manage and adapt to a changing population.

Project results are expected to contribute to all of the following expected outcomes:

- improved understanding by all relevant actors of the causes and of the social, economic and environmental impacts of demographic trends in rural areas;
- rural communities are prepared to respond to the challenges of demographic trends thanks to evidence-based planning, appropriate actions, and through the inclusive engagement of stakeholders;
- the well-being of rural communities and the attractiveness of rural areas is improved thanks to sustainable and innovative solutions.

Scope: Rural areas cover more than 80% of the EU territory and host approximately 30% of its population. Rural communities and areas provide essential ecosystem services for the whole society, such as food production, energy provision, management of natural resources as well as access to nature and cultural heritage. They play an essential role in the green and digital transitions. However, almost 9 out of 10 predominantly rural regions reported negative crude rates of natural population change during the period 2015–2020. In particular, the number of people aged 65 years or over increased by 1.8% each year in predominately rural regions. By contrast, the number of working-age people (20-64 years old) living in predominantly rural regions fell, on average, by 0.6% each year (EUROSTAT)²¹⁹.

Many rural areas also face high variation of their populations, such as seasonal peaks that challenge the local infrastructures and services which are often calibrated only on permanent inhabitants. While some are affected more than others by negative demographic trends.

Proposals should address all of the following:

- advance the understanding of the causes and social (including but not limiting to gender and intersectional differentiations), economic and environmental impacts (including but not limiting to consequences related to land abandonment or land use changes also considering the green transition) of demographic trends;
- focus on how to support rural communities through evidence-based strategies that includes planning, monitoring of fluctuations, and propose appropriate actions to respond to population changes;
- find innovative solutions to mitigate and adapt to a changing population in rural areas. Particular attention should be paid to rural areas that are highly exposed to climate change effects.

The funded consortium should work on collecting evidence for better planning and develop sustainable and comprehensive long-term strategies for managing a changing population by considering the needs of rural communities. These needs should be identified by using an inclusive multi-actor approach. Consideration of gender and other social categories (disability, age, socioeconomic status, ethnic and/or cultural origins, sexual orientation, etc.), and their intersections, must be ensured.

Proposals should test, develop and pilot innovative sustainable solutions that improve the well-being of rural communities based on their needs. In particular, they should focus on providing or co-creating with local communities innovative services that respond to the changing population, foster the sustainable development of strategic sectors, and support job creation in rural areas.

Financial support may be provided by the participants to third parties in the form of grants, in particular for the development, testing and piloting of sustainable solutions. If proposals

²¹⁹ [https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Urban-rural Europe - demographic developments in rural regions and areas](https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Urban-rural_Europe_-_demographic_developments_in_rural_regions_and_areas)

decide to use this option, the consortium should also coordinate activities funded under the financial support to third parties and take stock of results for recommending appropriate policy measures.

Proposals should also focus on the sustainability and replicability of strategies and solutions. Moreover, proposals should develop an accessible tool, also making use of digital technologies, to support local and regional decision-makers to assess demographic impacts and plan for the future with evidence-based strategies in the framework of the just, fair and green transition.

Proposals must implement the multi-actor approach to involve relevant stakeholders, in particular for the development of innovative solutions, which may include public authorities, rural communities, as well as SMEs, organisations, and social economy actors.

Proposals should build on research done by the EU rural observatory, and by relevant projects funded under Horizon Europe.

Moreover, proposals should link with the demographic toolbox²²⁰.

This topic must involve the effective contribution of social sciences and humanities (SSH), including gender studies. Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures such as the European social survey (ESS ERIC).

HORIZON-CL6-2025-02-COMMUNITIES-02: Exploring and improving access to housing in rural areas and developing the houses and villages of the future

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: the proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p>

²²⁰ Communication “Demographic change in Europe: a toolbox for action, https://commission.europa.eu/publications/communication-demographic-change-europe-toolbox-action_en

<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²²¹.</p>
---	--

Expected Outcome: The successful proposal will support the implementation of the long-term vision for EU's rural areas, and of the European pillar of social rights and its action plan, as well as to social fairness. Moreover, the successful proposal will contribute to empowering rural communities for transformative change, enabling them to become sustainable and resilient, in line with the Green Deal objectives and the Commission's priority to support people, strengthen our societies and our social model.

Project results are expected to contribute to all of the following expected outcomes:

- policymakers have better understanding of the real estate and rental markets (including short-term and long-term rentals) in rural areas as well as their social impacts on rural communities;
- new solutions and strategies that improve access to affordable, quality housing and social housing for rural communities are available and widely shared among relevant stakeholders;
- affordable, sustainable and replicable solutions for sustainable, greenhouse gases nearly non-emitting, climate-resilient and climate smart houses and villages of the future are in place to benefit rural communities.

Scope: At European level, there is a lack of research on the rural real estate issues and different rural areas are affected differently by demographic trends and migration flows. Covid 19, and the new teleworking possibilities also strongly impacted the real estate market in rural areas. Some rural areas are experiencing gentrification processes, others are faced with seasonal touristic flows, while others are affected by depopulation. Affordable and adequate housing, as well as adequate access to services and infrastructure, are not only an essential part of quality of life, but they are also a prerequisite to ensure the attractiveness of a place and therefore the accessibility of labour workforce for strategic sectors for the rural economy.

Proposals should address all of the following:

²²¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- analyse the real estate and rental markets (including short-term and long-term rentals) in rural areas and evaluate housing quality and housing poverty; the analysis should include an evaluation of the demand and supply side and an identification of the stakeholders;
- contribute to increase data availability, making use also of digital technologies, in relation to type of settlement structures and buildings and include an in-depth analysis of the abandoned or in state of collapse units, showcasing best practice to recover and reuse buildings when socially, economically and environmentally sustainable;
- increase the understanding of the access to affordable, quality housing and social housing in rural areas considering also financial aspects such as access to finance and price affordability, as well as social aspects such as gender, age, ethnicity, or disability;
- provide recommendations to policy makers on how to regulate the real estate and rental markets and to promote sustainable, nearly-zero emitting housing renovation or construction where needed to benefit rural communities, including people in a vulnerable situation, and ensure affordable and accessible housing;
- run participatory processes involving rural stakeholders to design sustainable houses and villages of the future, paying particular attention to affordability and replicability of innovative solutions (including intergenerational, multiuse, and reuse approaches) as well as to the adaptation to and mitigation of climate change. Solutions should include innovations in terms of improved renovations, insulation, energy and water efficiency and use and reuse of local materials, circularity of materials, as well as of reducing pollution (including air pollution) and soil sealing in rural areas.

Proposals must use the multi-actor approach and involve relevant actors in particular to develop houses and villages of the future.

Proposals should build on research done by the EU rural observatory, and by relevant projects funded under Horizon Europe.

Collaboration and complementarity with the New European Bauhaus (NEB) Facility is encouraged.

This topic must involve the effective contribution of social sciences and humanities (SSH), including gender studies. Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures such as the European social survey (ESS ERIC).

HORIZON-CL6-2025-02-COMMUNITIES-03: Innovative solutions for resilient and climate-adapted coastal communities in the Atlantic

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU</i>	The Commission estimates that an EU contribution of around EUR 6.00

<i>contribution per project</i>	million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: the proposals must apply the multi-actor approach. See definition of the multi-actor approach in the introduction to this work programme part.</p> <p>Due to the scope of this topic, legal entities established in Brazil are exceptionally eligible for Union funding.</p> <p>In order to achieve the expected outcomes of the action, namely contribution to the implementation of the All-Atlantic Ocean Research and Innovation Alliance (AAORIA) Declaration, participation, as a beneficiary or associated partner, of at least three legal entities established in at least three of the following countries is required: Argentina, Brazil, Canada, Cape Verde, Ghana, Iceland, Morocco, Norway, Senegal, South Africa, United Kingdom, United States of America.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7 by the end of the project – see General Annex B.

Expected Outcome: In line with the European Green Deal, notably the EU climate adaptation strategy, the 2030 biodiversity strategy, the European Ocean Pact and EU policies to protect Europe's ocean, seas and coasts, a successful proposal will contribute to the impacts of this Destination related to coastal communities.

Project results are expected to contribute to all of the following expected outcomes:

- deliver tangible benefits and support to Atlantic²²² coastal communities, managing authorities, and citizens, aimed at increasing their resilience to climate change and other environmental challenges, including those affecting coastal ecosystems;
- enhance the capacities of coastal communities for adaptation to environmental change by fostering innovation, and professional skills and competences within an intergenerational context. Building community climate change literacy through creating inclusive learning spaces that also take into account the local cultural heritage and traditional knowledge and are sustainable in the long-term;

²²² This encompasses coastal communities from all Atlantic countries, including those outside the EU, reflecting the pole-to-pole dimension of the All-Atlantic Ocean Research and Innovation Alliance.

- contribute to the implementation of the All-Atlantic Ocean Research and Innovation Alliance (AAORIA) Declaration²²³ and particularly the recently agreed area of action²²⁴ on increasing resilience of coastal communities.

Scope: Approximately 1 billion people around the globe inhabit vulnerable low-lying coastal areas facing multiple environmental threats, such as extreme weather events, sea-level rise, saltwater intrusion into coastal ecosystems, increased water temperatures and ocean acidification. The latest IPCC report warns of further intensification of these threats, projecting a tenfold increase in coastal flood damage by the end of the 21st century and potential damage to coastal ecosystems, infrastructure, economic sectors, livelihoods, and human health. An urgent, coordinated effort to increase coastal resilience²²⁵ has therefore become imperative.

The need to develop outcome-oriented science to enhance the resilience of coastal communities was recently prioritised by AAORIA, a science diplomacy initiative focusing on ocean research and innovation. AAORIA partners²²⁶ have a wealth of already existing innovative ideas, knowledge and solutions for enhanced coastal resilience which could be used by coastal communities to create tangible change.

The European Commission, together with an AAORIA's coordination and support action OKEANO, has started to collect this knowledge and make it available to communities around the Atlantic. But considerable effort is still needed to further develop and expand the range of solutions and services to be made accessible to and co-created with the communities.

This topic contributes to the implementation of the updated Action Plan for a sustainable, resilient and competitive blue economy in the European Union Atlantic area.

Proposals should address all of the following:

- engage with Atlantic coastal communities to understand their unique challenges, concerns, current strategies for adaptation to climate change, and traditional environmental knowledge, and to gather valuable insights into the specific needs and priorities of these communities in the context of coastal resilience;
- work towards enhancing coastal resilience in the Atlantic by building and testing a comprehensive toolbox²²⁷ of scientific outputs and traditional knowledge addressing the community needs for increased coastal resilience, building on the work undertaken by

²²³ [SKM_80822071310280 \(allatlanticocean.org\)](https://skm.80822071310280.allatlanticocean.org)

²²⁴ See of AAORIA 2023 Forum listing the two current priority areas of action of AAORIA

²²⁵ For this action, the definition of coastal resilience proposed by the European Marine Board position paper "[Building Coastal Resilience in Europe](#)" applies: the capacity of coastal natural and socio-economic systems to persist, adapt or transform when faced with disturbances induced by factors such as sea-level rise, extreme events and human impacts, whilst maintaining their essential functions (Folke, 2006; Masselink & Lazarus, 2019).

²²⁶ See partners at [All-Atlantic Ocean Research and Innovation Alliance \(allatlanticocean.org\)](https://allatlanticocean.org).

²²⁷ For this action, the toolbox is intended as a repository of available knowledge, and practices aimed at enhancing coastal resilience; this could include case studies, examples of what has worked in various environments for various aspects of coastal resilience, methodology, description of technological solutions, etc outputs of existing research projects and initiatives.

OKEANO project. The toolbox should include knowledge and solutions for various aspects of coastal resilience, including measures to protect and restore coastal ecosystems as nature-based solutions. As part of the toolbox, the proposals should consider and, where needed, develop methods and tools that would allow the communities to anticipate the diverse impacts of adaptation actions and measures, including on their most vulnerable members, and thus to avoid climate maladaptation²²⁸ risks. In this context, proposals should consider the gender dimension and other social categories²²⁹ and their intersections in disaster preparedness and capacity-building. A dynamic system for regular updates and refinement of the toolbox should be designed, based on emerging research and feedback from communities. An ongoing collaboration between scientists, policymakers, and community representatives should be fostered to ensure the relevance and effectiveness of the solutions included in the toolbox;

- to improve the production, access, and use of the knowledge responding to local community needs, and to support and complement the activities of the living labs, proposals should develop an interface²³⁰ enabling communities to choose a tailor-made mix of coastal resilience solutions uniquely responding to their needs, in a way that increases societal buy-in and acceptance of the solutions while avoiding maladaptation risks;
- for the digital element of the interface, proposals should design an online platform connecting available coastal resilience knowledge and solutions with community needs in a user-friendly manner, and produce interoperable, tailor-made digital applications. Proposals should consider complementarities with other platforms that already exist, such as those of the Mission Restore our Ocean and Waters and Mission Adaptation to Climate Change. The platform should allow for easy integration with existing digital decision-making, mapping and planning tools, for instance, by offering API (Application Programming Interfaces) integration which enables the platform to connect with existing digital tools and systems, allowing for the seamless exchange of data and functionality between systems;
- the toolbox and interface should be tested and piloted in living labs²³¹ based on a systematic user co-creation approach in real life communities and settings. Proposals should create the living labs in a diverse set of Atlantic communities, such as coastal cities, regions and islands (including small island developing states), from different parts of the Atlantic, and other relevant communities living at the intersection of marine, coastal and freshwater areas, with a particular attention to those that are highly

²²⁸ Climate maladaptation has been highlighted in the sixth Assessment Report of the IPCC and refers to a situation when climate change adaptation actions backfire, further deepening existing social inequities and leading to adverse outcomes.

²²⁹ Such as disability, age, socioeconomic status, ethnic and/or cultural origins, sexual orientation, etc.

²³⁰ For this action, the interface is intended as a combination of digital means, participatory approaches and guidelines that would allow coastal communities to access the repository (toolbox) of coastal resilience related knowledge, and practices, and to select the right mix of solutions for their unique resilience needs.

²³¹ [What are Living Labs - European Network of Living Labs \(enoll.org\)](https://enoll.org)

vulnerable to the risks of climate change. These living labs could also serve as centres for knowledge dissemination, training, community engagement, and collaborative problem-solving. Using the results of relevant projects²³², proposals should select appropriate participatory processes or develop new ones that would involve a broad range of stakeholders from the local communities where the toolbox and interface would be used;

- To empower local coastal communities to make evidence-based decisions in response to environmental change within their territories, proposals should promote innovation and enhance human capacity through the establishment of learning spaces, knowledge exchange, training, participatory process of visioning and skills development, based on the contents of the toolbox. Attention should be given to securing the long-term sustainability of these activities.

Proposals must implement the multi-actor approach, to ensure an adequate involvement of researchers and relevant stakeholders (e.g. regional and local authorities, citizens, youth, NGOs, local businesses, private investors, social innovators, etc) from the target communities. They should also integrate SSH disciplines, including gender studies and citizen social science where relevant.

International cooperation is strongly encouraged, especially with AAORIA partner countries and other Atlantic countries.

To ensure complementarities and avoid overlaps, the proposals should foresee to work closely with relevant ongoing Horizon Europe projects, particularly the OKEANO project, and, where relevant, the projects funded under the topic HORIZON-MISS-2025-01-CLIMA-03, and relevant projects of the Mission ‘Restore our Ocean and Waters by 2030’ and its Atlantic and Arctic lighthouse (e.g. A-AAGORA and CLIMAREST), and the Mission Ocean Implementation Platform (MIP)²³³, notably on deployment and upscaling of solutions. Proposals should also consider results of other Horizon 2020 and Horizon Europe projects such as TRIATLAS, the projects of the ADAPT4COAST cluster, ILIAD, DestinE, the EU Digital Twin of the Ocean and other relevant projects, programmes, and initiatives, including from AAORIA partner countries and other countries around the Atlantic, as well as relevant work under the OSPAR convention²³⁴.

HORIZON-CL6-2025-02-COMMUNITIES-04: Creating urban co-creation spaces for driving sustainable food system transformation

Call: Cluster 6 Call 02 - single stage	
Specific conditions	
<i>Expected EU</i>	The Commission estimates that an EU contribution of around EUR 6.00

²³² Such as those from the [ADAPT4COAST project cluster](#) and [EmpowerUs project](#).

²³³ [Mission Ocean, Seas and Waters Implementation Support Platform | Ecologic Institute](#)

²³⁴ [OSPAR Commission | Protecting and conserving the North-East Atlantic and its resources](#)

<i>contribution per project</i>	million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²³⁵ .

Expected Outcome: The successful proposal will contribute to the European Green Deal priorities and the farm to fork and the EU biodiversity strategies, as well as of the EU's climate ambition for 2030 and 2050. It will also contribute to the Food 2030 priorities: nutrition for sustainable healthy diets, circularity and resource efficiency, innovation and empowering communities.²³⁶ The successful proposal will support the development of policies, business models and market conditions contributing to the sustainable and inclusive development of urban areas and to the empowerment and resilience of their communities, who can access, afford and choose sustainable food.

Projects results are expected to contribute to all of the following expected outcomes:

- enhanced skills and problem-based learning to change food cultures, behaviours and food environments;
- improved local governance frameworks for social inclusion and social economy in urban areas;

²³⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²³⁶ European Commission, Directorate-General for Research and Innovation, Bizzo, G., Fabbri, K., Gajdzinska, M. et al., Food 2030 – Pathways for action 2.0 – R&I policy as a driver for sustainable, healthy, climate resilient and inclusive food systems, Publications Office of the European Union, 2023, <https://data.europa.eu/doi/10.2777/365011>

- improved understanding of the local policy ‘mix’/package of measures as well as the effective communication and marketing strategies that are needed to support EU consumer behavioural change towards sustainable diets.

Scope: Achieving sustainable food systems requires managing numerous interconnected activities and actors with an impact on nutrition, environmental and economic outcomes of great relevance to the EU, including the Sustainable Development Goals (SDGs). Understanding food systems interconnections and interdependencies is crucial in decision making processes to steer a food system change. Yet, for governments to promote more sustainable food systems, they will need to improve their capacity to deal with the complexity of interdependencies with adequate governance mechanisms and principles to support a more systemic approach. Strengthening food systems governance in the urban context is an important area and opportunity for research, innovation and implementation to accelerate sustainability impact in the local context. It has the potential to enhance more coordination and coherent actions, leading to the development of more effective urban policies that ensure food security and nutrition for all without compromising economic, environmental, and social foundations.

Proposals are expected to address at least three of the following:

- create innovative hands-on living labs and co-creation spaces that actively engage all parts of society to enhance skills and capacity building toward healthy, affordable and environment- and climate-friendly diets; and apply randomized controlled trials, for different age groups (especially young people and the elderly), socio-economic groups and their different needs;
- promote and establish sustainable / regenerative community gardens and indoor and open field small-scale urban agriculture for skills building and network creation and share best practices from other areas/cities not covered by the proposals;
- enhance participation of vulnerable groups, such as young people (including those not in education or employment), elderly people, migrants, homelessness people, ethnic minorities, pregnant women, and persons with disabilities, in living labs and community gardens to strengthen inclusion as well as intercultural and intergenerational cohesion;
- enhance attractiveness of safe, healthy, environment-friendly food, for instance by making use of social media and partnering up with different actors (e.g., chefs, nutritionists and dieticians, food scientists and technologists, food industry, start-ups R&D, social/solidarity economy actors, etc.);
- involve local and regional governance mechanisms to enable structural change, for instance by developing and implementing effective participatory and inclusive processes which enable and stimulate an extensive dialogue on food system transformation and involve diverse stakeholders (e.g., citizens, farmers, consumers, civil society organizations, research institutions, businesses, and public authorities at the local or regional levels);

- connect different living labs and build networks, also from previous EU funded projects, for joint learning and best practice exchange;
- establish data monitoring approaches (e.g. through using machine learning approach, AI, etc.) and a test-control approach for impact assessment and evidence-based policy making.

Proposals should include a dedicated task in the workplan and appropriate resources to collaborate with the projects funded under this topic and under topic HORIZON-CL6-2022-GOVERNANCE-01-01 (Mobilisation of society to transform food systems for co-benefit, Cleverfood).

Collaboration and complementarity with the European Partnerships on “Sustainable Food Systems”, “Agroecology”, the EU Missions “A Soil Deal for Europe” and “Climate-Neutral Smart Cities”, and the New European Bauhaus (NEB) Facility is encouraged.

Cooperation with the JRC may be envisaged, in particular for actions related to monitoring and improving the governance of food systems.

Proposals should integrate the gender dimension where applicable. Consideration of other social categories besides gender (disability, age, socioeconomic status, ethnic and/or cultural origin, sexual orientation, etc.), and their intersections, should be also ensured. The use of multi-actor approach is encouraged.

This topic should involve the effective contribution of Social Sciences and Humanities (SSH) disciplines.

In order to achieve the expected outcomes, cooperation with legal entities established in widening countries is strongly encouraged. International cooperation is also encouraged.

Destination - Innovative governance, environmental observations and digital solutions in support of the Green Deal

Staying the course on the goals of the European Green Deal and related policy initiatives in a fast-changing context, the EU needs innovative and agile governance models and tools that enable sustainable prosperity and competitiveness. To this end, it is crucial to invest in R&I that delivers evidence-based knowledge and tools, which support decision-making processes and designing effective policy mixes that enable the twin green and digital transitions engaging society at large in a just manner ensuring that no one is left behind. R&I activities under this destination intend to assist policymakers (from the local to the global level) in dealing with complexity and to enable them to introduce science-based arguments for social debates, to compare options for action and to make evidence-based decisions. A higher degree of coordination and convergence across the scientific community and other networks channelling evidence-based knowledge for policymaking will be promoted. Some of the R&I activities will support the development of sustainable, circular and inclusive bioeconomy and its bio-based sectors in line with the bioeconomy strategy²³⁷ and the communication on biotechnology and biomanufacturing in the EU²³⁸ as well as the forthcoming new European biotech act²³⁹. New knowledge and innovations will support the common agricultural policy (CAP) and related EU initiatives, focusing specifically on reinforcing farmers' position in the value chains, as well as rewarding farmers that work with nature, preserving biodiversity and natural ecosystems and helping to decarbonise the economy on the way to net-zero by 2050. R&I activities will also contribute to boosting the attractiveness of agriculture and the links between the farming community, in particular young farmers, and the society at large.

Data and intelligence provided by environmental observations are key for assessing the state of the planet, including its biodiversity and the pollution of its air, soils and waters, thus supporting the EU biodiversity strategy for 2030²⁴⁰, the Nature Restoration Law²⁴¹, the EU zero pollution action plan²⁴² and the announced European Ocean Pact. R&I and related coordinating activities under this destination will improve environmental observing systems and provide Earth Intelligence, i.e. targeted and actionable environmental knowledge and insights, that will support policymakers, society and economy in navigating the transformative changes required by the European Green Deal. Towards these ends, technological solutions and data governance models will be advanced in order to make environmental data more available, accessible, usable and inter-operable at European and global level. Some topics under this destination support the Group on Earth Observations (GEO), which is an international partnership that aims at delivering Earth Intelligence to decision makers at all levels. It offers a unique forum for international cooperation and the opportunity to scale-up solutions developed in Europe and other regions of the globe, in particular under the European programme Copernicus, advancing the implementation of the UNFCCC Paris Agreement, the

²³⁷ [Bioeconomy strategy - European Commission \(europa.eu\)](https://ec.europa.eu/bioeconomy/en/bioeconomy-strategy)

²³⁸ [47554adc-dffc-411b-8cd6-b52417514cb3_en \(europa.eu\)](https://ec.europa.eu/biotechnology/en/biotechnology-and-biomanufacturing-in-the-eu)

²³⁹ https://commission.europa.eu/document/download/e6cd4328-673c-4e7a-8683-f63ffb2cf648_en?filename=Political%20Guidelines%202024-2029_EN.pdf

²⁴⁰ [Biodiversity strategy for 2030 - European Commission \(europa.eu\)](https://ec.europa.eu/biodiversity/en/biodiversity-strategy-for-2030)

²⁴¹ [Nature restoration law – Final text adopted by European Parliament and Council \(consilium.europa.eu\)](https://ec.europa.eu/nature/restoration-law)

²⁴² [Zero Pollution Action Plan - European Commission \(europa.eu\)](https://ec.europa.eu/zero-pollution/action-plan)

Sendai Framework for Disaster Risk Reduction, the 2030 Agenda for Sustainable Development, and the New Urban Agenda, as well as endeavours like the Kunming-Montreal Global Biodiversity Framework, the UN Early Warnings for All and the WMO Global Greenhouse Gas Watch initiatives.

EuroGEO is the regional initiative in GEO implementing a policy- and user-driven research and innovation agenda to maximise uptake and engagement of EO applications, building on Copernicus and other EU assets in Earth Observation, that are addressing the above-mentioned GEO priorities. EuroGEO will be enabled to provide Earth Intelligence to local administrations or businesses with targeted decision support to increase the resilience and environmental performance of their operations. R&I activities will help also to implement the EU Arctic policy, by improving and integrating polar observation systems in response to user requirements at local, regional and international levels.

There is a need to unlock the potential of applied digital and data technologies to support sectors covered by this Cluster in becoming more productive, competitive, sustainable, resilient, competitive, and inclusive in line with the evolving EU policy initiatives in the fields of cyber, data and digital technologies and services (e.g., European data strategy and future European data union strategy, Europe's digital decade policy programme and the AI innovation package, including the announced apply AI strategy). This destination will contribute to the development and diffusion of innovative digital and data-based solutions to support economic sectors relevant for Cluster 6 and society at large to achieve the European Green Deal targets and objectives. The key focus in this destination will be on enhancing sustainable rural development through digital twins for rural communities, agriculture and forestry.

As stressed in the Political Guidelines for the next European Commission 2024–2029, Europe needs a radical step change in ambition and action for all skill levels and for all types of training and education for sustainable prosperity and competitiveness. The common agricultural policy (CAP) cross-cutting objective and the Pact for Skills highlight the important role that knowledge and skills play in enabling all actors relevant to this cluster to actively engage in the twin green and digital transitions. Effective Agriculture Knowledge and Innovation Systems (AKIS)²⁴³, defined as the combined organisation and knowledge flows between persons, organisations and institutions who use and produce knowledge for agriculture and interrelated fields, are key to facilitate the sharing and uptake of knowledge, skills and innovative solutions for a more competitive, sustainable and resilient economy. In synergy with the CAP, activities under this destination will strengthen AKIS at European and national level, by increasing the knowledge flows among the AKIS actors (in particular practitioners), building a community of competent and impartial advisors and preparing the farming community to the future of agriculture through improved education and training

²⁴³ AKIS fosters flows of knowledge and skills to support the actors in the sustainability transitions across the Cluster 6 destinations; they go beyond agriculture, farming and rural activities and cover environment, climate, biodiversity, landscape, bioeconomy, consumers and citizens, i.e., all food and bio-based systems including value chains up to the consumer.

systems. Specific attention will be also given to boosting the co-creation and use of R&I results in practice via enhanced implementation of the multi-actor approach (MAA).

Proposals responding to the topics under this destination should set out credible pathways to **developing innovative governance models and tools enabling sustainability and resilience**, and more specifically to one or several of the following **impacts**:

- effective policy mixes and multi-level governance enable a just sustainable transition for all, engaging society at large and balancing economic, social and environmental goals, thanks to improved evidence-based knowledge, tools and science-policy interfaces;
- competitiveness, sustainability and resilience of the economy are increased by more accessible and interoperable environmental observations as well as data technologies;
- productivity is boosted and transformative changes required by the European Green Deal are facilitated, leaving no one behind, thanks to enhanced digitalisation and flows of existing and new knowledge, solutions and skills among actors and communities.

This destination will support R&I activities in complementarity with the European Partnership on Agriculture of Data and those that continue for the Sustainable Blue Economy Partnership. To maximise the impacts of R&I, international cooperation and the integration of social sciences and humanities (SSH) disciplines are encouraged.

To ensure coordination at European and global levels and effective dissemination of user-driven Earth intelligence solutions to inform decisions and accelerate action on global environmental challenges, support will be continued for the annual subscription of the GEO secretariat.

R&I activities supporting digital and data-based innovation under Cluster 6 will complement activities supported by Cluster 4 (Digital, Industry and Space) and the Digital Europe Programme, bringing benefits for citizens, businesses, researchers, the environment, society at large and policymakers. Synergies will be carefully considered in particular with Copernicus, the Common European Data Spaces and the Destination Earth programme.

The destination will ensure synergies with the CAP instruments aimed at strengthening AKIS in all Member States across the EU, thereby deliver on the cross-cutting objective to foster co-creation and sharing of knowledge and innovation. Strong interaction between and integration of AKIS actors is key to this end, hence the CSA type of activities will prevail. The interactive innovation model will be supported via a reinforced multi-actor approach mainstreamed across Cluster 6.

Innovating with governance models and supporting policies

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-03-GOVERNANCE-01: Improving analytical capacity and understanding of the bargaining power and interactions of farmers with the operators of the value chains

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁴⁴.</p>

Expected Outcome: Reinforcing the position of farmers in the value chain is a key objective of the common agricultural policy (CAP). In line with this CAP objective, and other related policies²⁴⁵, the successful proposal will enhance knowledge and analytical tools useful to the development and implementation of effective governance and policy mixes aimed at improving the functioning of EU agriculture and food value chains (hereafter ‘value chains’). The successful proposal will contribute to support value chains that generate a fair income to farmers and create enabling conditions for the transition to sustainable, resilient and competitive farming systems.

Project results are expected to contribute to all of the following expected outcomes:

- the capacity of the research community to analyse and model the EU agricultural and food sectors, their market structures, and the formation, transmission and distribution of costs, prices, risks and economic values along value chains is enhanced; likewise,

²⁴⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁴⁵ e.g., the EU Directive 2019/633 on unfair trading practices in business-to-business relationships in the agricultural and food supply chain, and the EU Regulation 1308/2013 establishing a common organisation of the markets in agricultural products.

policymakers, farmers and other value chain operators have a better understanding of the functioning of value chains and the formation, transmission and distribution of costs, prices, risks and economic values along them;

- policymakers at EU, national and local level have a better understanding of the impacts of policies on the functioning of value chains, and are therefore better equipped to design and support the uptake of existing and future policy tools strengthening farmers' position in them;
- farmers and consumers benefit from improved policy mixes, fair business interactions and tools reinforcing the bargaining power of farmers with upstream and downstream operators and supporting more sustainable, transparent and resilient value chains.

Scope: The understanding and the capacity to analyse the functioning of agriculture and food sectors, value chains ²⁴⁶ and market structures remain incomplete and oversimplified. This contributes to a knowledge gap on the relations between farm production costs and price transmission, from input prices faced by farmers to food prices faced by consumers. Market and value chain conditions and dynamics affecting farmers' bargaining power are important drivers of farmers decision-making and income. They define the prices of the inputs and services bought and the commodity and non-commodity outputs sold by farmers. Hence, they contribute to the choices of production and business model, investments, and to the adoption of sustainable practices. A better understanding of the composition and functioning of value chains and market settings, in a granular and comprehensive way, would support accurate assessments of the socio-economic impacts of policies and business operations. It would also support the development of effective, evidence-based policies and business strategies adapted to the diverse conditions faced by farmers and consumers that will improve the functioning of the agricultural and food markets.

Proposals should:

- provide an analytical framework and tools capturing the complexity and heterogeneity of EU value chain structures, in particular relative to:
 - o their length (number of intermediaries from the input industry to the consumers);
 - o their scale (global, EU, national or local);
 - o the degree and forms of vertical coordination;
 - o the degree and forms of horizontal coordination between farmers;
 - o the degree of concentration of operations at all stages;

²⁴⁶ The agriculture and food value chains encompass all operators from the producers of necessary inputs for agricultural production to the consumers, including farmers, food and bio-based industries (including processing), retail, wholesale, food service (including public procurement), as well as the suppliers of inputs and services such as seeds, pesticides, fertilisers, energy, machinery, packaging, repair, transport, finance, advice, and logistics.

- o the degree of product (quality) differentiation.
- the framework should include a consolidated conceptualisation such that it can be adapted to represent the diversity of cases within and between sectors. The framework should also be sustained with empirical evidence and data to the maximum extent;
- apply the developed analytical framework and tools to empirically model production costs, price formation, price transmission, risk, cost and economic value distributions, and profit margins along selected value chains, and to characterise sources of market failures and occurrence of unfair trading practices. Proposals should consider different economic contexts (e.g., high/low prices, different patterns of price volatilities, etc.);
- develop and/or improve adequate indicators and collect the necessary data to improve the assessment of farmers bargaining power with upstream and downstream operators of value chains in analytical tools and models;
- explore, characterise, and analyse the interactions between value chain operators and the characteristics of value chains affecting farmers' bargaining and decision-making power, in particular on the type of farm business and structural changes (e.g., farm size, legal form, etc.). The proposed activities should include the analysis of the transaction relationships between farmers and input suppliers, farmers and service providers, and farmers and buyers of agricultural products. Among others, this work should analyse the types of contracts, provisions, clauses, standards, indications and calculations of prices and volumes, and how economic value, costs, and risks are shared among the operators. Proposals are encouraged to analyse whether farmers' bargaining and decision-making power is affected by socioeconomic characteristics (e.g., gender, age, etc.).
- explore existing and/or propose new policy and business solutions and tools to reinforce farmers bargaining power in value chains. Identify good practices (governance, awareness raising, etc.) for their successful implementation and uptake. Among the possible solutions, proposals should explore:
 - o coordination approaches between farmers and/or between farmers and other value chain operators (e.g., form, size, contractual agreements, capacity building, etc.);
 - o tools (e.g., data tools, innovative technologies) to increase market transparency and the accessibility and use of information. This should contribute to better inform farmers and consumers on the distribution of costs, prices, economic value, and risks along value chains and improve the fairness and efficiency of agriculture and food markets.

Proposals should develop dissemination materials (e.g., policy briefs, research findings briefs, audio or visual presentations, etc.) summarising the results of key deliverables to facilitate the uptake of R&I outputs by decisionmakers in policy or business contexts.

Proposals should capitalise on existing relevant research findings and tools. Proposals should also ensure synergies with other relevant EU-funded studies, projects, initiatives, and processes ²⁴⁷.

This topic should involve the effective contribution of Social Sciences and Humanities (SSH) disciplines.

HORIZON-CL6-2025-03-GOVERNANCE-02: Upscaling innovative payments to support farmers in the delivery of agri-environment-climate public goods

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must use the multi-actor approach. See definition of the multi-actor approach in the introduction to this Work Programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: In line with the climate action and biodiversity objectives of the Green Deal and the common agricultural policy (CAP), the successful proposal will contribute to the development and uptake of effective governance and competitive business models. This will be based on the upscaling of innovative payment mechanisms with result-based and/or collective and/or spatially coordinated approaches supporting the provision of environmental services by farmers and the transition to more resilient and sustainable farming systems. The

²⁴⁷ e.g., producer organisations operational programmes, the EU Agri-Food Chain Observatory, fi-compass, etc.

successful proposal will contribute to the impact of this destination on just societal transformation, community empowerment and societal participation in support to the green transition.

Project results are expected to contribute to all of the following expected outcomes:

- policymakers, businesses, farmers, and other relevant stakeholders have a clear understanding of the role environmental services play in a flourishing society, and engage in payment for environmental services schemes with result-based and/or collective and/or spatially coordinated approaches with the governance perspective of ensuring long-term financing capacity at scale;
- policymakers, businesses, farmers, and other relevant stakeholders have improved knowledge and innovative tools to develop, implement and upscale payment for environmental services schemes with result-based and/or collective and/or spatially coordinated approaches adapted to the diverse contexts. Farmers and businesses from diverse farming contexts widely participate on a long-term basis in innovative payment for environmental services schemes with result-based and/or collective and/or spatially coordinated approaches;
- society at large benefit from more targeted support towards the delivery of agri-environment-climate public goods with positive social, economic, biodiversity and climate outcomes.

Scope: Payments for environmental services are economic incentives recognizing and supporting farmers for voluntary interventions that contribute to the provision of public goods²⁴⁸. Research and practical experiences from a diversity of initiatives from the public and private sector, provided evidence and guidance on cost-effective and well-contextualised design to support practitioners. Implementing more result-based, collective or spatially coordinated approaches in payment conditionality rules are among the key recommendations to best achieve impacts. While some Member States integrated such approaches in the design of some eco-schemes and agri-environment-climate measures in the CAP, important barriers to the upscaling and long-term implementation remain to be overcome. Building sufficient institutional, monitoring, funding and financing capacity are necessary to increase synergies between economic viability, environmental effectiveness and longevity. This strengthened capacity would support the achievement of more sustainable and positive social, economic, climate and biodiversity outcomes effectively contributing to the Green Deal objectives. Mobilising more the private sector in those innovative payment for environmental services schemes would contribute to address those barriers.

Proposals should:

²⁴⁸ e.g., climate change mitigation, soil functionality, biodiversity, water quality and water availability preservation and restoration, resilience to extreme weather events, animal welfare, etc.

- develop and/or improve, test, pilot and evaluate payment for environmental services schemes with result-based and/or collective and/or spatially coordinated approaches in real-life conditions considering a diversity of farming contexts;
- put a special focus on mobilising private funding (e.g., value chain approaches, market-based instruments, crowdfunding, bottom-up approaches, etc.) and assessing the social and economic implications of the schemes with the perspective of long-term implementation and financial viability under different scenarios and socio-economic contexts;
- based on an analysis of the role of agriculture and food value chains in supporting and valorising farmers' provision of environmental services, develop and/or improve approaches supporting a just and fair remuneration of farmers for these services;
- develop and/or improve and apply robust and cost-effective monitoring of the environmental services provided by farmers;
- identify barriers and enablers for the implementation and upscaling of payment for environmental services schemes with result-based and/or collective and/or spatially coordinated approaches and propose effective solutions to address them. Special attention should be given to not repeat but build on and complement the state-of-the art;
- support capacity building, training, reskilling, and education, in particular on the technical, financial, legal and administrative implications of contractual arrangements, enabling farmers and other involved practitioners, including the private sector, to implement the proposed solutions.

Proposals should ensure complementarities with ongoing relevant Horizon Europe projects including from the Mission “A Soil Deal for Europe” and capitalise on existing relevant research findings and tools. Proposals should also ensure synergies with other relevant LIFE projects, EU-funded studies, pilot projects, and processes ²⁴⁹.

Proposals should include a dedicated task, appropriate resources and a plan on how they will collaborate with other projects selected under this topic (e.g., by participating in joint activities, workshops, as well as common communication and dissemination activities, etc.).

The JRC participation could involve contributing to the testing of payment for environmental services schemes via experiments.

Proposals must implement the ‘multi-actor approach’, with a consortium based on a balanced mix of actors with complementary knowledge, including farmers, researchers, and businesses. Involvement of SMEs, in particular of farmers, for developing, improving, testing and/or piloting the proposed solutions is strongly encouraged. As an option, proposals may provide financial support to third parties (FSTP) to facilitate the engagement of SMEs in testing and/or piloting the proposed solutions. A maximum of 10% of the EU funding should be

²⁴⁹ e.g., rural development programmes, EU-wide certification scheme for carbon removals, etc.

allocated to this purpose. In this case, consortia need to define the selection process of entities, for which financial support may be granted.

This topic should involve the effective contribution of Social Sciences and Humanities (SSH) disciplines.

HORIZON-CL6-2025-03-GOVERNANCE-03: Boosting the attractiveness of agriculture and the connection between the farming community and society

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁵⁰.</p>

Expected Outcome: In line with the objectives of the Vision for Agriculture and food and the common agricultural policy (CAP), to support generational renewal, to promote fair jobs and social inclusion for farmers, the successful proposal will support the impact of this Destination related to the development of innovative governance models by providing strong evidence-informed knowledge and analytical capacity to support the development and implementation of effective policies, in particular the CAP post 2027.

Project results are expected to contribute to all of the following expected outcomes:

- the perception of and the communication on agriculture as economic activity and profession are assessed and enhanced to boost the attractiveness of the sector for new

²⁵⁰ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

entrants and young farmers and the connection between farming community and society is improved;

- knowledge on the socio-economic and other factors influencing the attractiveness of farming within the society, in particular among the young generation, is improved and disseminated to local, national and EU policymakers, business operators and other relevant actors;
- new strategies, solutions and practices to enhance the farming sector attractiveness are widely used by diverse actors, including farmers, businesses, policymakers, local or regional contracting authorities and society at large.

Scope: With the current challenges of climate change, biodiversity loss, resource scarcity, new working patterns and consumers' behaviour changes, there is the need for a more innovative, sustainable farming in the EU. However, the EU's farming sector is facing a steady decline of workforce in the last fifteen years, also depending on demographic challenges such as an ageing farming population. Thus, the need for attracting and supporting young and new farmers is critical. The motivations, commercial nature and business models for farming have changed due to the recent climate and environmental challenges and to the new opportunities offered by the technological and digital innovations, but at the same time, due to social and economic factors.

While it is a vital sector, farming still remains largely poorly understood by society, subject to many myths and misconceptions. To develop and implement effective policies and business strategies that enhance the attractiveness of the sector, it is essential to better understand how the perception of farming by society is determined by socio-economic and other factors (for example, but not limited to: income, labour conditions, land markets, use of sustainable practices, mental health, social wellbeing, social, economic and gender inequalities, generational renewal, etc...). Sound governance and policies creating an attractive environment, inclusive fair job conditions for farmers will enable the transition to more resilient and sustainable farming systems.

New interdisciplinary knowledge also stemming from disciplines such as social sciences and humanities is necessary to explore and better understand the ways in which agriculture is expressed and thought about, and its changing relationship with society. Activities under this topic should unlock the potential of cultural and creative industries to improve the communication about agriculture to society.

Proposals should:

- improve understanding of the socio-economic and other factors and conditions influencing attractiveness of farming as an economic activity and profession, and how farmers see and project themselves in the future of farming;

- examine the factors that influence the decision to become or to leave the profession of farm worker or farm owner in diverse regions across Europe, incorporating storytelling and narrative techniques;
- explore and analyse how farmers' interactions vary within the farming community and with the broad society based on different factors (e.g. historical, sectorial, territorial, farm size, age, education, gender, etc) and how those factors influence their social and economic roles;
- explore and assess the perception of and communication on farming across society at large according to different societal actors (individuals or groups that play a significant role in shaping and influencing societal norms, values, and institutions) and economic actors (individuals, businesses, or organizations that participate in economic activities, such as production, consumption, and distribution of goods and services) across the EU with different perspectives (e.g. historical, sectorial, territorial, size, age, education, gender, etc);
- map existing agricultural education and training programmes across Europe and provide recommendations, based on the evidence collected, on how they can be designed to appeal to a diverse range of individuals;
- improve societal perception of farming through the mobilisation of and cooperation between cultural and creative industries (CCIs);
- map, assess, promote existing and propose new solutions, good practices, initiatives, approaches, that aim at improving the attractiveness of farming sector and the connection between the farming community and society, and widely disseminate to policymakers, farmers, businesses and other relevant actors.

Proposals should support collaborative and interdisciplinary work. Thus, proposals should involve the effective contribution of Social Sciences and Humanities (SSH) disciplines, such as sociology, geography, demography, communication, behavioural science, anthropology or education. Proposals may involve digital media, traditional media, arts, marketing, cultural disciplines (and beyond) to contribute to improving attractiveness of the farming sector. Participatory foresight methods are encouraged.

HORIZON-CL6-2025-03-GOVERNANCE-04: Operationalisation of bioeconomy sustainability principles

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a

	proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>The following additional eligibility criteria apply: The proposals must use the multi-actor approach. See definition of the multi-actor approach in the introduction to this Work Programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁵¹.</p>

Expected Outcome: In line with the European Green Deal, the EU's climate targets for 2030 and 2050 and the bioeconomy strategy vision for an economic system that acts within planetary and social boundaries, the successful proposal will contribute to the impact of this Destination on effective policy mixes and multi-level governance to enable a just sustainable transition for all.

Project results are expected to contribute to all of the following expected outcomes:

- new and improved knowledge and better understanding of how bioeconomy sustainability principles for food and other bio-based value chains can be operationalised (e.g. cascading use of biomass or the food-first principle) in different environmental, social and economic contexts. Clarity on future projected sectoral availability and demand for biomass and biomass types will render improved clarity and transparency for businesses and consumers, thus enabling better-informed choices and policy- and decision making;
- new knowledge of how social sustainability, particularly related to distributional (international, intra-national and inter-regional) and inter-generational justice can be captured and operationalised in Bioeconomy Monitoring Systems;

²⁵¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- increased deployment of bioeconomies across Europe considering environmental, social and economic sustainability;
- improve knowledge of the impact of the bioeconomy on ecosystems, and provide options on how to protect /restore ecosystems, contribute to the reduction of biodiversity loss and to climate action, while developing the bioeconomy.

Scope: Bioeconomy²⁵² is a place-based policy framework. The application of sustainability principles in concrete contexts therefore depends on available (environmental and human) assets, challenges and priorities, as well as access to logistics, finance and infrastructure. It is therefore important that sustainability principles are developed both with high clarity of their intention as well as sufficient flexibility to enable implementation in differing contexts. In particular, it is important to assess the impact of bioeconomy on ecosystems and to develop options on how to protect /restore ecosystems while developing bioeconomy. The sustainability principles must be able to give clear direction how to manage situations of conflicting objectives, and ensure that no unintended environmental, economic social consequences follow, preventing unsustainable use of biomass.

Successful proposals are expected to:

- develop or improve the sustainability assessment of bio-based and food value chains, both from land and aquatic systems and their related value webs to increase transparency for businesses and consumers, enabling better informed choices;
- analyse the performance of bioeconomy innovation ecosystems with regard to social, economic, and environmental sustainability, and demonstrate their long-term feasibility (e.g. with regard to infrastructure, climate adaptation, biodiversity and ecosystem protection and restoration). Demonstrate the applicability of bioeconomy sustainability principles in regional case studies, based on the concept of Regional Innovation Valleys for Bioeconomy and Food Systems²⁵³;
- identify and address challenges for the EU, Member States and regions (e.g. public authorities) to deploy sustainability principles and providing policy recommendations to overcome them.

The possible participation of the JRC in the project would ensure that the approach proposed is compatible with the bioeconomy working streams of the Knowledge Centre for Bioeconomy.

International cooperation is encouraged.

²⁵² See definition: European Commission, Directorate-General for Research and Innovation, A sustainable bioeconomy for Europe – Strengthening the connection between economy, society and the environment – Updated bioeconomy strategy, Publications Office, 2018, <https://data.europa.eu/doi/10.2777/792130>

²⁵³ [Concept of Regional Innovation Valleys for Bioeconomy and Food Systems](#)

This topic should involve the effective contribution of Social Sciences and Humanities (SSH) disciplines, including gender studies²⁵⁴. Proposals must implement the 'multi-actor approach', with a consortium based on a balanced mix of relevant actors with complementary knowledge to achieve the objectives of the project, including for instance relevant rural actors.

Proposals should include a dedicated task, appropriate resources and a plan on how they will seek synergies with other with other EU programmes and funding instruments initiatives, and ensure complementarities with relevant activities carried out or to be carried out under other initiatives in Horizon Europe (e.g. funded projects under past ZEROPOLLUTION and CIRCBIO Cluster 6 calls).

Proposals should build on the findings of the “Global Resources Outlook ²⁵⁵” 2024 from the International Resource Panel.

HORIZON-CL6-2025-03-GOVERNANCE-05: Exploring options to resolve land and sea use competition

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 9.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the

²⁵⁴ See overview of gender and EU bioeconomy: [Infografías COOPID AP](#). See overview of gender in bioeconomy literature: [Gender and women in scientific literature on bioeconomy: A systematic review - ScienceDirect](#)

²⁵⁵ [Global Resources Outlook 2024 | UNEP - UN Environment Programme](#)

	Research and Training Programme of the European Atomic Energy Community (2021-2025) ²⁵⁶ .
--	--

Expected Outcome: In line with the European Green Deal, the EU's climate and biodiversity targets for 2030 and 2050 and the bioeconomy strategy vision for an economic system that acts within planetary and social boundaries, the successful proposal will contribute to the impact of this Destination on effective policy mixes and multi-level governance to enable a just sustainable transition for all.

Project results are expected to contribute to all of the following expected outcomes:

- identify direct and indirect implications of current and future regional, national and EU policies and targets on land and sea and biomass use that are relevant in the regional context (more than one region);
- further knowledge of existing and emerging trade-offs across environmental objectives (including climate mitigation and adaptation, and protection and restoration of biodiversity) and also between social and economic objectives in different regional ecological, economic and societal contexts;
- further development of deliberation tools (e.g. software tools) that will support better-informed policy- and decision-making processes on a national and regional level that comprehensively assess the European Green Deal related policy domains²⁵⁷.

Scope: A sustainable and circular bioeconomy relies on a management guaranteeing the preservation and restoration of biodiversity and healthy ecosystems while providing sufficient biomass for the production of food, materials and energy required for peoples' wellbeing. On one hand we see a decline of biodiversity, a gap in ecosystem carbon sequestration or lacking capacity of the biosphere to absorb pollutants; on the other hand the increasing competition of biomass use between food, materials, and energy indicates a potential sustainable biomass gap in Europe²⁵⁸. Projections indicate that this sustainable biomass gap could be exacerbated in the decades to come. To anticipate potential areas of conflicts and to develop holistic and coherent policy packages on biomass and land and sea uses requires tools that can inform policy makers how environmental, economic and social objectives can be met based on the available sustainable biomass, in order to close the biomass gap while assessing and minimizing the environmental, economic and wider societal impact and considering social justice and equality aspects on local, regional and EU levels. The Joint Research Centre is working on a deliberation tool on 'Integrated Bioeconomy Land Use Assessment' (IBLUA)²⁵⁹

²⁵⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁵⁷ [Report COM/2022/283: EU Bioeconomy Strategy Progress Report - European Bioeconomy policy: stocktaking and future developments | Knowledge for policy \(europa.eu\)](#)

²⁵⁸ [The European Biomass Puzzle — European Environment Agency \(europa.eu\)](#)

²⁵⁹ [Integrated bioeconomy land use assessment: Land system responses to bioeconomy-related policies | Knowledge for policy \(europa.eu\)](#)

at the European level. However, an assessment at such aggregate rough level is not sufficient for informing policies at national and regional level. This topic is encouraged to build upon the JRC's tools developed for the European-level approach and assessment to improve context-specific deliberation tools that can assess social and economic outcomes of policies at regional level and support regional policy makers in finding best context-specific policies related to land and sea and biomass.

Successful proposals are expected to:

- develop tools (including methodologies and processes) for national and regional policy- and decision-makers to carry out integrated bioeconomy land and sea assessments, with the objective to minimize the 'land/sea footprint' and provide different land and sea biomass uses solutions, considering their feasibility, viability, and societal desirability (e.g. region specific). The assessment shall consider natural, semi-natural, and managed (agricultural and forestry, fisheries and aquaculture) ecosystems and the impacts of land/sea use on ecosystem conditions, biodiversity and supply of ecosystem services and interlinkages, considering the System of Environmental Economic Accounting set of indicators and the JRC's EU-wide ecosystem condition assessment;
- assess and develop integrated and coherent policy objectives to improve land and sea biomass use in national and regional contexts, considering the inclusive approaches to developing a wide range of policy narratives (e.g. objectives) pursued by the JRC in the EU-level assessment (i.e. IBLUA). The different narratives described qualitatively will be quantitatively represented (e.g. reporting relevant social, economic and environmental indicators) in the deliberation tool, which should be able to capture different configurations of land and sea and biomass use, including dietary needs, energy uses, bio-based products expansion, and carbon farming; considering the challenges to land/sea ownership (e.g. private vs public) and the options stem from the tool to resolve them;
- demonstrate how the deliberation tool could be implemented in a network of regions covering different socio-economic situations and climate/ecological zones in the EU and associated countries to improve just and sustainable land/sea management, food security and circular biomass uses.

The participation of the JRC in the project is encouraged to ensure that the approach proposed is compatible with the bioeconomy working streams of the Knowledge Centre for Bioeconomy and with the various JRC's tools and methodologies developed for the EU bioeconomy assessment.

Proposals should include a dedicated task, appropriate resources and a plan on how they will collaborate with other projects funded under this topic and ensure complementarities with relevant activities carried out under other initiatives in Horizon Europe, including the Horizon Europe Mission "A Soil Deal for Europe", and seek synergies with other EU programmes and funding instruments.

Proposals should build on the findings of the “Global Resources Outlook²⁶⁰” 2024 from the International Resource Panel. Proposals are encouraged to consider, where relevant, the services offered by European research infrastructures. The catalogue of European Strategy Forum on Research Infrastructures (ESFRI) research infrastructures portfolio can be browsed from ESFRI website.

HORIZON-CL6-2025-03-GOVERNANCE-06: Strengthening and connecting bioeconomy networks

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.40 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.40 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁶¹

Expected Outcome: In line with the European Green Deal, the EU’s climate targets for 2030 and 2050 and the bioeconomy strategy vision for an economic system that acts within planetary and social boundaries, the successful proposal will contribute to the impact of this Destination on effective policy mixes and multi-level governance to enable a just sustainable transition for all.

Project results are expected to contribute to all of the following expected outcomes:

- better understanding and increased awareness of the bioeconomy for a fast deployment of bioeconomy potential benefits and solutions, across the Europe, in rural and coastal

²⁶⁰ [Global Resources Outlook 2024 | UNEP - UN Environment Programme](#)

²⁶¹ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

areas, cities, communities and governments, and in economic sectors among businesses, citizens, and especially young people;

- better coordination of European bioeconomy initiatives, including those funded by EU R&I framework programmes, and of relevant networks, with a view to strengthening knowledge exchange and synthesis on the bioeconomy for an increased uptake of bioeconomy actions and solutions in businesses, in education and in policy, and to accelerate the achievement of the EU bioeconomy strategy objectives with respect to social, economic and environmental sustainability, including climate action as well as biodiversity and ecosystem protection and restoration;
- enhanced networking and cooperation on European bioeconomy between relevant actors and stakeholders at European, national and regional levels, as well as outreach and support to relevant international networks and initiatives to foster fast deployment of bioeconomy and biotechnologies actions and solutions;
- increased buy-in from all relevant actors and stakeholders to collaborate and act as bioeconomy changemakers: including disadvantaged communities, people in vulnerable situations, women, and youth, but also underrepresented stakeholders like NGOs and investors, in and across sectors, communities, regions, and ministries.

Scope: There is a need to strengthen a Europe - wide network for the bioeconomy to exchange knowledge and to stimulate mutual learning of bioeconomy initiatives and solutions, on the transition to a sustainable and circular bioeconomy, and on its governance – in view of the review of the current EU bioeconomy strategy. Although some platforms for networking and cooperation on the bioeconomy exist, more can be done to strengthen relationship building across European sectors, stakeholder groups, generations, languages, levels of governance, or professions and advance the cross-cutting insights that drive bioeconomy solutions and improved governance. Barriers including insufficient understanding of the bioeconomy concept and its potential, language, limited capacities to engage in knowledge exchange, unsuitable engagement formats, or a lack of mutual understanding are some of the factors that contribute to this situation.

Efforts to strengthen and connect bioeconomy networks across Member States and Associated Countries will foster interconnectedness amongst stakeholders, across sectors, regions and disciplines, to strengthen policy coherence and implementation. It will accelerate relation building and transfer of knowledge on bioeconomy, help the development and implementation of the EU bioeconomy strategy in Europe, and contribute to scale-up place-based solutions that address EU challenges in different regional contexts.

Successful proposals are expected to:

- establish and develop an EU-wide platform (one-stop shop, multilingual) for networking and engagement on the bioeconomy, that brings together EU practitioners, researchers, investors, policy makers and education providers,

- support of international research and innovation bioeconomy networks and initiatives (e.g. International Bioeconomy Forum or International Advisory Council on Global Bioeconomy) to foster international research collaboration and Science-to-Policy interfaces for bioeconomy;
- develop communication strategies and tools, and organise events to inform EU, national and regional actors and stakeholders about bioeconomy deployment, successful bioeconomy initiatives and solutions (i.e., open access to industrial demonstrations sites), including from relevant EU-funded R&I projects, and other EU programmes (i.e., Interreg: European Territorial Co-operation);
- stimulate dialogue on bioeconomy solutions and initiatives, to build relations, exchange knowledge and support mutual learning, across European sectors, stakeholder groups, generations, languages, levels of governance, or professions; align these activities with needs under the EU bioeconomy strategy and related policies including on climate and biodiversity;
- implement lean business models to manage the platform (e.g. secretariat, operations, events) and its activities in a sustainable manner beyond the end of the project using public and private funding;
- liaise and collaborate with bioeconomy education institutes for improved skills development initiatives and networks to develop and deploy innovative interactive bioeconomy education material in support of both the informal and formal education at all levels;
- engage and train investors on the European bioeconomy to foster investment in bioeconomy sectors.

Proposals are encouraged to work together with relevant initiatives including those of the European Commission's Joint Research Centre (Knowledge Centre on Bioeconomy, Bioeconomy Monitoring System), the Circular Biobased Europe Joint Undertaking, the European Circular Economy Stakeholder Platform, and BIOEAST. Proposals are expected to build on results from EU R&I projects including BioVoices and ShapingBio.

HORIZON-CL6-2025-03-GOVERNANCE-07: Strengthening the European Research Area by enhancing the bioeconomy research and innovation ecosystem in BIOEAST countries

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a

	proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Procedure</i>	The procedure is described in General Annex F. The following exceptions apply: The evaluation committee will be composed partially by representatives of EU institutions.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁶² .

Expected Outcome: In line with the European Green Deal priorities, the EU's climate targets for 2030 and 2050 and the bioeconomy strategy vision of an economic system that acts within environmental and social boundaries, the successful proposal will contribute to the impact of this Destination on just sustainable transition for all by assessing research and innovation capacities in the bioeconomy for improved innovation ecosystems and aligned national R&I agendas in BIOEAST²⁶³ countries, Ukraine, Moldova, and the Western Balkans.

Project results are expected to contribute to all of the following expected outcomes:

- improved research and innovation capacities in the bioeconomy, by strengthening soil and water resilience, enhancing food systems security, and promoting sustainable biomass valorisation through the adaptation of modern biorefinery concepts and biomanufacturing techniques;
- improved coordination and collaboration among stakeholders within the macro-region to address regional challenges, to coordinate research efforts at local, national, macro-regional and European levels, fostering a shared vision for climate-neutrality and an inclusive, sustainable and circular bioeconomy;

²⁶² This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁶³ www.bioeast.eu The Central-Eastern European Initiative for Knowledge-based Agriculture, Aquaculture and Forestry in the Bioeconomy – BIOEAST – offers a common political commitment and shared strategic research and innovation framework for working towards sustainable bioeconomies in the Central and Eastern European (CEE) countries (Czech Republic, Hungary, Poland, Slovakia, Bulgaria, Croatia, Latvia, Lithuania, Estonia, Romania, Slovenia).

- strengthened macro-region's research and innovation ecosystem through integration of public and private stakeholders that lead to tangible projects which drive fair and sustainable socio-economic development and environmental sustainability, including contribution to the reduction of biodiversity loss and to climate action;
- strengthened European Research Area by outlining a roadmap and identifying emerging thematic areas for research and innovation cooperation through a multidisciplinary approach, incorporating, among other fields, environmental science, ecology, and biodiversity.

Scope: This topic targets proposals for the alignment of research and innovation agendas for sustainable natural resources, with a particular attention to soil and water resilience, food systems security, and sustainable biomass valorisation in the bioeconomy. The primary goal is to enhance research and innovation capacities, while fostering ownership in BIOEAST and EU accession countries, with special focus on Ukraine, Moldova, and Western Balkans. Based on the BIOEAST Initiative involvement and format, the proposal should be able to mobilise the research funders and managers, but also thematic networks from the macro-region. For establishing the knowledge transfer and good cooperation, consortia should include entities from EU Member States with significant experience of managing joint research initiatives and partnerships. Collaboration with the BIOEAST Initiative is expected to be instrumental in achieving the outcomes of the project.

Proposals should demonstrate the potential for impact and scalability of their proposed activities. Proposals should collaborate and ensure synergies with ongoing and past projects and initiatives on bioeconomy governance²⁶⁴, and collaborate with the Circular Bio-based Europe (CBE) JU and its widening strategy. The successful proposal will contribute to:

- engage ministries, research funders, and managers as well as thematic networks, to mobilise resources and create synergies between European, national and regional level funds;
- establish frameworks for communication and coordination among European and national bioeconomy related programme owners and managers to reduce fragmentation;
- enhance long-term cooperation in the bioeconomy to amplify research impact on socio-economic development while supporting widening and the EU enlargement process;
- address the region's geopolitical, research, and innovation challenges by achieving coherence across research, policy, and funding instruments in the bioeconomy. This includes fostering climate neutrality, contributing to the reduction of biodiversity loss, promoting an inclusive, circular, sustainable bioeconomy through an integrated macro-regional approach to research and innovation.

²⁶⁴ BIOEASTsUP, BOOST4BIOEAST

Deploying and adding value to environmental observations

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-03-GOVERNANCE-08: Effective environmental observing systems and associated governance

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio covering different use cases, grants will be awarded not only in the order of ranking, but at least also to one proposal that is the highest ranked within Area A and at least also to one proposal that is the highest ranked within Area B, provided that the applications attain all thresholds.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁶⁵.</p>

²⁶⁵ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link:

Expected Outcome: Successful proposals will contribute to the expected impact of this Destination on more accessible and interoperable environmental observations.

Project results are expected to contribute to all of the following expected outcomes:

- more cost-effective and user-friendly environmental observing systems serving the needs of science, as well as policy and decision makers at various levels, based on enhanced usability, accessibility, effectivity, interoperability and exploitation of environmental observations;
- improved international cooperation in support of EU and global climate and environmental monitoring policies and reporting obligations;
- more sustainable and resilient environmental observing systems based on advanced governance models and well-informed decision-making by national, European and international actors.

Scope: Efficiency and cost-effectiveness of observing systems will play a crucial role in global initiatives such as the WMO Global Greenhouse Gas Watch, or GEO initiatives and flagships, which are needed to support EU and international policies, like for example the Paris Agreement, the Montreal Protocol and its Kigali Agreement, the European Climate Law, the EU climate adaptation strategy, the EU's F-gas Regulation²⁶⁶, or the Regulation on ozone-depleting substances.

Proposals are expected to exploit the latest digital technologies (e.g. Artificial Intelligence, digital twins, IoT) and science (e.g. data assimilation and analysis, or models) to develop innovative, generic, quantitative, cost-effective and user-friendly tools to optimize current and future/emerging orbital (baseline and small satellite constellations) and non-orbital observing systems (e.g. autonomous systems, manned and unmanned aerial vehicles (drones), citizen science networks) and their combinations from a performance and investment point of view, using approaches like Observing System Experiments (OSEs) and Observing System Simulation Experiments (OSSEs).

Proposed activities should identify technical, as well as socio-economic, cultural, geopolitical, or other barriers on usability, accessibility (including at international level), effectivity, interoperability and exploitation of environmental observing systems, and propose and support the implementation of innovative, efficient and pragmatic solutions to overcome them. Towards this end, the inclusion of social sciences and humanities (SSH) disciplines is encouraged.

Innovative decision-making approaches should be investigated to support and facilitate international governance and negotiations at European and global level, as well as national actors on sustainable and resilient environmental observations matters, regarding investments,

https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁶⁶

Regulation (EU) 2024/573, <http://data.europa.eu/eli/reg/2024/573/oj>.

operations, accessibility, gaps and innovation. Inter-operability with European data spaces and other existing data infrastructures should be considered.

The approaches should be demonstrated in the context of one of the following specific use case areas (and proposals should identify which use case area they are addressing):

- Area A: monitoring global anthropogenic and natural greenhouse gas emissions and sinks, in support of the Paris Agreement;
- Area B: ozone depleting substances and F-Gases, in support of the Montreal Protocol.

Proposals are expected to demonstrate a good understanding of data requirements for policy implementation. The optimisation of the observing systems should identify and address in an iterative process the needs of well identified user groups, like for example modelling communities, Copernicus, Destination Earth, international organisations, and regional or national authorities.

Tools and approach should be flexible enough to be applied to other observing systems and examples. The project is expected to benefit from and leverage underlying work of ESA, EUMETSAT, Copernicus, or European Research Infrastructures (ICOS, ACTRIS, etc.).

International cooperation is encouraged.

HORIZON-CL6-2025-03-GOVERNANCE-09: Delivering Earth Intelligence to accelerate the green and digital transition

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 7.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 15.00 million.
<i>Type of Action</i>	Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 7-8 by the end of the project – see General Annex B. Activities may start at any TRL.

Expected Outcome: Successful proposals will contribute to the expected impact of this Destination on more accessible and interoperable environmental observations.

Project results are expected to contribute to all of the following expected outcomes:

- accelerate the green and digital transition of economic sectors through the development of end-user applications and decision support systems for operationalisation or commercialisation by public or private service providers;
- successful integration and consolidation of European and national GEO²⁶⁷ related activities across the EU Member States and Associated countries, that result in effective and operational contributions to the GEO work programme activities, with a clear path towards uptake in Europe and internationally in support of climate or biodiversity related policies and targets;
- contribute to the EuroGEO²⁶⁸ initiative and support the EC Knowledge Centre on Earth Observation (KCEO) on uptake of Environmental Observations (EO) for EU policy making.

Scope: This action is an application-oriented initiative, responding to the new GEO post-2025 strategy and is aimed at combining and advancing existing European Earth observation services and solutions, that were prototyped under relevant Horizon, Copernicus, and other EU and national projects and initiatives, and scaling them up with end-users and customers towards wide adoption. In support of the European Green Deal targets, the project should develop, test, demonstrate and customise 2 to 3 integrated solutions, using advanced digital technologies like Artificial Intelligence, including generative AI, with a clear path towards operationalisation that should correspond to some of the following selected focus areas of the GEO Post-2025 implementation plan:

- Sustainable Agriculture and Food Security;
- Water Resilience;
- Ecosystems and Biodiversity;
- Carbon Management;
- Disaster Resilience.

The solutions should be co-designed with relevant European users, including local, regional and national governments (such as through the Copernicus National User Forums), and mature business plans should be developed in the project to ensure operational uptake after

²⁶⁷ Group on Earth Observations (GEO, <https://earthobservations.org/>) is an intergovernmental partnership working to improve the availability, access, and use of open Earth observations, including satellite remote sensing and in situ data, to impact policy and decision making in a wide range of sectors.

²⁶⁸ https://research-and-innovation.ec.europa.eu/knowledge-publications-tools-and-data/knowledge-centres-and-data-portals/eurogeo_en

the project, including by public/private procurers or service providers, Copernicus services, or GEO flagships and initiatives.

The activity should leverage European infrastructures and where relevant integrate various remote sensing platforms such as satellites, manned and unmanned aviation (drones). It should further build on and contribute to the existing European digital ecosystem, including different research and service infrastructures, like European data spaces, citizen science initiatives and national, regional, and global databases of in-situ observation, and support their evolution. Clustering and cooperation with other selected projects under this call topic and other relevant projects should be ensured. To this end, proposals should earmark the appropriate resources for coordination activities accordingly in their work plan.

Outreach and training activities are expected to reach the wider European EO community and to support further the upscaling of European/national/sub-national EO services beyond this project and actively promote pan-European synergies. Efforts should be planned for active participation in relevant EuroGEO action groups and workshops as well as for engaging with the Copernicus stakeholder community at European (e.g. Entrusted Entities) and national level (e.g. Copernicus Ambassadors).

HORIZON-CL6-2025-03-GOVERNANCE-10: Improving and integrating polar observation systems in response to user requirements at local, regional, and international level

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 16.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p>

<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>To ensure a balanced portfolio covering different regions, grants will be awarded not only in order of ranking but at least also to one proposal that is the highest ranked within region ‘Area A’ and one proposal that is the highest ranked within region ‘Area B’, provided that the applications attain all thresholds.</p>
------------------	---

Expected Outcome: In line with the Green Deal, the EU climate action and adaptation strategy, the EU Arctic policy²⁶⁹, the Kunming-Montreal Global Biodiversity Framework, the UN 2030 Agenda for sustainable development, successful proposals will contribute to the expected impact of this Destination on more accessible and interoperable environmental observations.

Project results are expected to contribute to all following expected outcomes:

- major European contribution to improved and long-term coordination, governance, sustainability, and resilience of international environmental observing systems relevant for polar regions, to better understand their evolution and role in the climate system and the related impact on biodiversity;
- enhanced usability, accessibility, effectiveness, interoperability, and exploitation of environmental observing and data systems, that help improving Earth System and prediction models, as well as digital twins (the European Digital Twin of the Ocean²⁷⁰ and Destination Earth²⁷¹, and in particular support the evolution of the relevant Copernicus services and the Copernicus Arctic Hub²⁷²;
- support to sustainable management of the polar regions and to decision-making processes for civil society, local or national authorities and stake- and right-holders, as well as EU and international organisations, thereby supporting the related EU policies.

Scope: Long-term, integrated, and sustained observations, building on shared polar observation variables require the development of a “system of systems”. Proposals should address aspects such as carbon cycle, biogeochemistry, sea ice dynamics, ice shelves, freshwater flows changing marine waters and oceanic circulation, atmospheric composition and conditions, subsea permafrost, degradation of marine habitats and biodiversity.

Proposals should demonstrate how they will contribute significantly to:

- improving marine and cryospheric observing systems, in particular the non-space-based components, focussing on their optimisation, integration, coordination and governance,

²⁶⁹ [JOIN\(2021\) 27 final](#), “A stronger EU engagement for a peaceful, sustainable and prosperous Arctic”
²⁷⁰ https://research-and-innovation.ec.europa.eu/funding/funding-opportunities/funding-programmes-and-open-calls/horizon-europe/eu-missions-horizon-europe/restore-our-ocean-and-waters/european-digital-twin-ocean-european-dto_en
²⁷¹ <https://destination-earth.eu/>
²⁷² www.arctic.hub.copernicus.eu

building on available technologies or technologies in development, including Artificial Intelligence;

- harmonised, standardised and interoperable of FAIR and CARE Polar Data systems (e.g. data collection, processing and management, incl. also historical data), that are able to provide real time information when necessary; and make them openly available e.g. through the European Marine Observation and Data network (EMODnet)
- supporting the European polar science coordination efforts, including synergies with the objectives of the European Polar Coordination Office (EPCO) and through contributing to the implementation of its work plan;
- the development of strategies on the medium and long term to ensure the sustainability of the observing systems and of the delivery of products and services, taking into account, where relevant, the recommendations of Copernicus polar roadmap²⁷³.

Proposals are expected to focus their scope on only one of the following region ‘areas’:

- Area A: ‘Arctic Ocean and coastal regions’

Proposals focusing on this region need to additionally take the following into account:

- The improvements of the overall observing systems should include community-based monitoring and the local, traditional and indigenous knowledge and where relevant, be co-designed with local communities and Indigenous peoples and with other relevant stake- and right-holders with view to, inter alia, developing products and services needed for adapting to the changing Arctic.

- The action should support the EU Arctic policy and the implementation of the Roadmap for Arctic Observing and Data Systems Sustaining Arctic Observing Networks (SAON-ROADS),²⁷⁴ strengthen Arctic Ocean observations and their coordination, and ensure complementarities with the activities on societal benefit assessment of Arctic observing systems undertaken by the Joint Research Centre.

- Area B: ‘Antarctic shelves and Southern Ocean’

- Proposals focusing on this region should additionally support the establishment of the UN Ocean Decade programme Antarctica InSync²⁷⁵ and contribute to the activities of the Scientific Committee on Antarctic Research (SCAR).

In addition to the chosen regional scope (Area A or Area B), proposals should strengthen the coupling between the polar regions themselves, both for in-situ and satellite observations, for instance through harmonised observing strategies (including cost-effective and user-friendly methods to assess and optimize the design, investment in and operations of polar observing

²⁷³ https://joint-research-centre.ec.europa.eu/jrc-news-and-updates/copernicus-polar-roadmap-eu-satellite-observations-help-respond-emerging-polar-challenges-2024-09-03_en

²⁷⁴ <https://journalhosting.ucalgary.ca/index.php/arctic/article/view/74330>

²⁷⁵ <https://oceandecade.org/actions/antarctica-insync>

systems), harmonised measurement methodologies, the development of Shared Essential Polar Variables, and interoperable, Arctic and Antarctic data systems.

The proposal should also establish collaborations with other relevant projects such as HiAAOS,²⁷⁶ POLARIN,²⁷⁷ and other projects which are part of the EU Polar Cluster²⁷⁸, as well as with relevant European research infrastructures.²⁷⁹

It should also take into consideration and support the valorisation of future Sentinel expansion missions: CIMR, CRISTAL, ROSE-L, with the possibility to co-ordinate with pre-launch campaigns like CRISTALair and CIMRair. This topic is part of a coordination initiative between ESA and the European Commission on Earth System Science, which supports complementary collaborative projects funded on the EC side through Horizon Europe and on the ESA side through the FutureEO programme. Proposals should include dedicated tasks, appropriate resources and a plan on how they will collaborate with relevant ESA activities, including projects selected under the ESA Polar Science Cluster²⁸⁰ and under the Invitation to Tender “ESA Sentinel User Preparation Polar Science Foundational Experiment”²⁸¹.

This action offers an opportunity for Europe to continue playing a leading role in Polar research and knowledge provision at the international level, thereby contributing to the implementation of the G7 Future of the Seas and Ocean Initiative priority on Arctic Ocean Observing,²⁸² GEO Blue Planet Initiative, to the All-Atlantic Ocean Research and Innovation Alliance²⁸³, the Global Ocean Observing System (GOOS), the Global Climate Observing System (GCOS). International cooperation is therefore encouraged, also with view to the 5th International Polar Year (2032-33).

Digital and data technologies as key enablers

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-03-GOVERNANCE-11: Enhancing sustainability and resilience of agriculture, forestry and rural development through digital twins

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately.

²⁸³ www.allatlanticocean.org

<i>project</i>	Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 12.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>If projects use satellite-based earth observation, positioning, navigation and/or related timing data and services, beneficiaries must make use of Copernicus and/or Galileo/EGNOS (other data and services may additionally be used).</p> <p>The following additional eligibility criteria apply: The proposals must use the multi-actor approach. See definition of the multi-actor approach in the introduction to this Work Programme part.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve TRL 5-6 by the end of the project – see General Annex B. Activities may start at any TRL.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ²⁸⁴.</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: In line with the European Green Deal, the long-term vision for rural areas and the common agricultural policy (CAP), the successful proposal supports rural communities to benefit from digital twins and strengthen their capacities for the effective and efficient deployment of innovative solutions.

Projects results are expected to contribute to all of the following expected outcomes:

²⁸⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

- rural communities, farmers, foresters and other rural actors take advantage of digital twins available to help them meet sustainability and climate adaptation objectives while enhancing rural economy and resilience;
- rural communities are supported by digital and data technologies in exploring different pathways to make villages an attractive place to live for its residents, achieved through strengthened capacities in data-driven decision-making, monitoring and foresight;
- a stronger (digital) rural innovation ecosystem is in place bringing together public and private players and improving attractiveness of rural areas;
- collaboration across different rural actors is fostered through innovative smart governance solutions enabling data and evidence-based policy making.

Scope: Considering that approximately one third of EU citizens live and work in rural areas, it is key to empower rural communities – farmers, foresters and other rural actors - in the transition towards sustainability and resilience so that no one is left behind. In this context, digital twins' technology has gained attention in the past decade because of its potential in addressing challenges across numerous application areas and transforming the way businesses and public administrations operate. Nevertheless, research and innovation related to the use of digital twins in rural areas and relevant key economic sectors, in particular agriculture and forestry, is still limited. Digital twins require further exploration, innovation, testing and demonstration to fully exploit their potential, and reach higher level of maturity and scalability across different territorial and sectoral contexts.

Proposals should:

- design, prototype and test the use of digital twins to improve sustainability and resilience of rural areas and related key sectors (i.e. agriculture, forestry and other relevant sectors). Innovations should be co-created with rural actors to respond to their needs and tested for their feasibility for the territorial development opportunities or challenges that they bring;
- develop a detailed map of the villages in three-dimension employing digital and data technologies. The map should be freely accessible to local authorities, researchers, private companies and other relevant actors to monitor key parameters, test ideas and explore smart(er) and more competitive, sustainable and resilient forms of village development. Where relevant, focus should be given to the planning, monitoring and management of green areas as well as other natural elements in the village that can improve resilience to climate change;
- develop a public web-based platform allowing users to visit the 3D model of the village twins remotely, including through the use of immersive technologies (e.g. Virtual Reality). By integrating various technologies, the platform should allow the user to access information on selected elements of the cultural, historical and/or natural heritage

of the village for promotional purposes while establishing a mechanism for residents to provide feedback on existing and proposed initiatives of village development;

- assess the potential of the investigated digital technologies in promoting forms of collaborative, open and citizen-centric governance;
- measure and assess the costs and benefits of the implementation of digital twins in the rural areas and sectors of application, including enablers and barriers to their uptake and acceptance by the target groups, adequacy and availability of existing public/private funding opportunities, incentives, and new business models supporting their development beyond project duration;
- provide research, business and policy recommendations supporting the successful deployment of the developed digital twins in rural areas and relevant key sectors;
- support training and capacity building for local administrations and rural actors in order to share best practices, develop skills, create and maintain a rural innovation ecosystem enabling them to benefit from the innovations developed for the digital transition in rural areas.

The application of the developed technologies should support the implementation of the smart villages concept oriented towards relatively underdeveloped and remotely located rural areas and communities.

Proposals must implement the 'multi-actor approach', with a consortium based on a balanced mix of relevant actors with complementary knowledge to achieve the objectives of the projects, including for instance relevant rural actors (in particular end-users of the digital twins), universities, research and technology organisations.

Proposals must integrate the gender dimension in the implementation of the activities (e.g. to address gender-specific needs affecting design and testing of the developed technologies, when investigating benefits and limitations, gathering and analysing disaggregated data, in the development of training and communication material as well as research and policy recommendations).

Moreover, proposals should build on results and ensure complementarities with other Horizon 2020/ Europe as well as other relevant EU-funded initiatives and projects (e.g. EU Missions, project that may follow from the topic “HORIZON-CL6-2024-GOVERNANCE-02-01: European Partnership of Agriculture of Data”) and demonstrate adequate planning and use of resources for this purpose.

Proposals may involve financial support to third parties, e.g. to relevant rural actors (including farmers, foresters and other rural businesses), academic researchers, hi-tech start-ups, SMEs, to develop, test or validate the developed digital twins and/or to provide other contributions to achieve the project objectives. A maximum 30% of the EU funding should be allocated to this purpose.

This topic should involve the effective contribution of social sciences and humanities (SSH) disciplines. By integrating relevant SSH expertise (e.g. gender expertise), the successful proposal aims to produce meaningful results that enhance the societal impact of related research activities, while delivering locally-based solutions, engaging residents, rural actors and leading to behavioural changes.

Proposals should cover various biogeographical regions with a balanced coverage reflecting the various pedo-climatic zones in Europe in a representative way and taking into account different types of villages (e.g., different size, remoteness, degree of digital maturity, reliance on economic sectors, exposure and vulnerability to climate change etc.) and farming systems.

The possible contribution of the JRC could involve support in monitoring and modelling activities applied to rural areas, agriculture and forestry.

Proposals should develop diverse practice-oriented dissemination materials (e.g. audiovisual materials, brochures) presenting the digital twins and other R&I solutions developed within the project and feed them into communication channels most consulted by the potential end-users.

Strengthening agricultural knowledge and innovation systems (AKIS)

Proposals are invited against the following topic(s):

HORIZON-CL6-2025-03-GOVERNANCE-12: Increasing knowledge flows to practice within Agricultural Knowledge and Innovation Systems (AKIS) via thematic networks

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must use the multi-actor approach. See definition of the multi-actor approach in the introduction to this Work Programme part.</p>
<i>Legal and financial set-up of the Grant</i>	The rules are described in General Annex G. The following exceptions apply:

<i>Agreements</i>	Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁸⁵ .
-------------------	---

Expected Outcome: Successful proposal will support the EU policies related to agriculture, forestry and/or rural areas, including related climate, biodiversity, and other environmental policies. The focus will be on the cross-cutting objective of the common agricultural policy (CAP) to enhance knowledge flows among AKIS²⁸⁶ actors, in particular end-users²⁸⁷. The successful thematic network will support the objective by widely sharing existing and new knowledge in a language and format that is easy to understand and targeted to end-users and by building a more informed, interconnected and engaged AKIS community. It will address the need of end-users for impartial and tailored knowledge that is key to foster the transitions to more competitive, sustainable and resilient agriculture and/or forestry and/or rural areas.

Project results are expected to contribute to all of the following expected outcomes:

- collected practice-oriented research findings, innovative solutions and best practices, are presented in an attractive and understandable way, updated and maintained in the long-term²⁸⁸, and made easily accessible by using the most appropriate channels for end-users;
- practice-ready knowledge and solutions, both generated by research and innovation (R&I)²⁸⁹ and collected from practice, are widely disseminated to, shared and implemented by end-users;
- AKIS at EU and national/regional levels are more effective and the flow of practice-ready knowledge and solutions between end-users and all other relevant AKIS actors is increased across the EU in a geographically balanced way, improving cost-effectiveness of solutions and taking into account the differences between the territories.

Scope: The research findings, innovative solutions, practical knowledge and best practices, are not sufficiently known, shared and used in practice, despite the sustained investment in R&I to support farmers and/or foresters and/or rural communities in becoming more

²⁸⁵ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁸⁶ AKIS is defined in Article 3(9) of the [Regulation \(EU\) 2021/2115](#)

²⁸⁷ An “(end-)user” of R&I result(s) is a person who is him/herself putting the results into practice (i.e. practitioner); depending on the theme of the thematic networks, end-users could be farmers and/or foresters and/or other rural actors, or all of them.

²⁸⁸ i.e., beyond the duration of the thematic network.

²⁸⁹ Including CAP-funded EIP-AGRI operational groups innovation projects, Horizon-funded R&I projects and other R&I activities beyond those funded under CAP and EU R&I programmes

competitive, sustainable and resilient. Moreover, national/regional and sectoral AKIS are insufficiently connected and organised to intensify thematic collaboration between researchers, advisors, and end-users.

Proposals should:

- select the theme of the thematic network in a bottom-up way in order to respond to the most urgent need(s) from practice; explain the relevance of the theme in relation to end-users' need(s), clarifying the added-value of the proposal and how it avoids duplication in relation to the ongoing or completed thematic networks and projects²⁹⁰;
- collect and compile all up-to-date scientific and practical knowledge, best practices and innovative solutions, which are effective and ready for use in practice to address the end-users' needs, but not commonly known and/or used by the end-users; and, if needed, translate/adapt them to diverse local contexts;
- develop and share widely an extensive range of useful, applicable and appealing informative materials and training courses using the most effective approaches, formats, tools (including audio-visual) and channels to reach as many advisors and end-users as possible. The information provided should be easy to access and understand, and translated into at least all 24 EU official languages to allow dissemination across the whole EU. As much as possible, the outputs of the thematic network should serve education and training, knowledge exchange programmes, AKIS knowledge hubs, advisors providing targeted advice, peer-to-peer learning activities, etc.;
- provide a summary of the costs and benefits analysis of the collected practices for the end-users, and include these aspects explicitly in the informative materials and training courses;
- feed all the practice-oriented outputs directly into EU, national and regional AKIS dissemination channels that are most used and trusted by end-users in the diverse contexts, including (but not limited to) the EU and National CAP Networks²⁹¹, the EU-FarmBook online platform and the AKISConnect platform²⁹² and relevant advisory networks²⁹³;
- mobilise also relevant AKIS actors and use AKIS actions at EU/national/regional and European levels to share the outputs of the project widely across the EU.

The proposal should include a dedicated work package, providing adequate resources for collecting outputs from the EIP-AGRI Operational Group projects (OGs)²⁹⁴ on the theme

²⁹⁰ A theme already covered by a finished thematic network(s) is not allowed, unless the added value of the thematic network proposal is clearly explained and justified.

²⁹¹ [Innovation & knowledge exchange | EIP-AGRI | EU CAP Network](#)

²⁹² [EU-FarmBook \(eufarmbook.eu\)&akisconnect | Connecting all EU AKIS actors](#)

²⁹³ [Advisory networks – connecting advisors across the EU | EU CAP Network \(europa.eu\)](#), including projects selected under topic HORIZON-CL6-2025-03-GOVERNANCE-13

²⁹⁴ supported under the Rural Development Programmes (RDP) 2014-2022 and the CAP Strategic Plans (CSP) 2023-2027

chosen, as well as creating collaboration opportunities and fostering knowledge exchanges with and between them. The proposal should indicate which OGs could be relevant to the theme chosen.

The activities of the thematic network should complement with those organised by the EU CAP Network²⁹⁵.

Proposals must implement the 'multi-actor approach', with a consortium based on a balanced mix of relevant actors with complementary knowledge clearly activating advisors, farmers and/or foresters and/or rural actors in the identification of the most urgent needs from practice as well as in the planning and execution of the main tasks of the thematic network.

The resulting project should run for a minimum of 3 years. An initial plan on how the thematic network and its outputs will be updated and maintained in the long-term beyond the projects duration should be included in the proposal.

The consideration of social diversity (including gender and other categories) in the dissemination activities of the thematic networks is encouraged.

HORIZON-CL6-2025-03-GOVERNANCE-13: Strengthening knowledge and skills of advisors and integrating them within Agricultural Knowledge and Innovation Systems (AKIS) via an EU advisory network

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 10.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The proposals must use the multi-actor approach. See definition of the multi-actor approach in the introduction to this Work Programme part.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the</p>

²⁹⁵

[Innovation & knowledge exchange | EIP-AGRI | EU CAP Network](#)

	<p>Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).²⁹⁶.</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>
--	---

Expected Outcome: Successful proposal will support the common agricultural policy (CAP), in particular its cross-cutting objective²⁹⁷, and related climate, biodiversity and other environmental policies, by connecting impartial advisors across all EU Member States in an EU-wide network.

Project results are expected to contribute to all of the following expected outcomes:

- the organisation and integration of impartial advisors (both public and private) within the national/regional and European AKIS²⁹⁸ is strengthened, and the exchanges between them and other relevant AKIS actors are intensified²⁹⁹;
- the impartial advisors are better equipped with the practice-oriented and up-to-date knowledge, skills and tools enabling them to support farmers with high quality and impartial advice covering the three dimensions of sustainability – economic, environmental and social – in line with all objectives of the CAP³⁰⁰;
- the sharing and use in practice of existing and new knowledge and solutions by farmers is accelerated and widespread thanks to more competent, skilled and impartial advisors, supporting the transition towards more competitive, sustainable and resilient farming.

Scope: Advisors are best placed to encourage farmers to change their practices that improve the competitiveness, sustainability and resilience of farming. A novelty in the current CAP strategic plans³⁰¹ is that advisors should be integrated within the AKIS as well as be impartial, competent and up to date on scientific and innovation developments. They should be able to translate the knowledge and provide concrete, targeted and practical solutions for farmers adapted to specific local circumstances. They should be prepared to provide innovation

²⁹⁶ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁹⁷ Article 6(2) of the [Regulation \(EU\) 2021/2115](#)

²⁹⁸ AKIS is defined in Article 3(9) of the [Regulation \(EU\) 2021/2115](#)

²⁹⁹ To this end strong interaction with AKIS Coordination Bodies organising advice and knowledge flows within their Member States will be necessary and illustrated in the proposal.

³⁰⁰ In line with the Article 15(3) of the [Regulation \(EU\) 2021/2115](#), Member States shall ensure that the advice given is impartial and that advisors are suitably qualified, appropriately trained and have no conflict of interest. The proposals should aim to support Member States in fulfilling this obligation.

³⁰¹ Article 15 of the [Regulation \(EU\) 2021/2115](#), Article 15(4)(e) of the [Regulation \(EU\) 2021/2115](#), Article 127(3) of the [Regulation \(EU\) 2021/2115](#)

support services, based on the interactive innovation model. They should also be able to use diverse data sources to analyse the performance of farms over time covering the three dimensions of sustainability and accordingly provide informed, holistic advice to the farmers.

Against this background, proposals should:

- improve the organisation and concrete services provided by impartial advisors, both public and private, within Member States' AKIS in a collaborative way, including by (1) ensuring more networked structures, deepening the advisors' integration into AKIS at EU and national/regional levels, and (2) developing and advancing more effective and interactive working methodologies and tools;
- improve advisors' knowledge and skills across the EU in all areas of high interest to practitioners, covering competitiveness and the three dimensions of sustainability in line with all the objectives of CAP, at minimum by (1) enhancing the provision and management of knowledge useful for practice, and the sound thematic organisation and interaction of advisors and other relevant actors within AKIS in knowledge hubs, ensuring stronger links between research, education, advisors and farmers and encouraging the collection, wider sharing and use of available knowledge across the EU; (2) organising a substantial amount of activities to improve collaboration between advisors at the EU/national/regional levels, and enable them to effectively and widely share their knowledge, experience and skills, (3) creating and sharing tools, training courses and informative materials useful for advisors and their clients, as well as developing and applying approach(es) to motivate advisors to participate in and make use of them;
- improve and support the understanding and implementation of the interactive innovation model by the advisory community acting as innovation support services³⁰², including by (1) illustrating it with practical examples, (2) providing methodology and training for continued professional development, and (3) ensuring regular communication of research and innovation needs collected from practice to the relevant AKIS actors;
- create, regularly update and manage an online platform serving as a reference point for advisors and their clients that includes at minimum: (1) a database of advisors' contacts and profiles (at least including education, professional experience and specific field(s) of expertise), (2) diverse robust data sources and decision support tools (including tutorials), (3) training courses and informative materials, (4) best practice examples (taking account of the costs and benefits for end-users), and (5) other tools and materials relevant for the target audience. The online platform should integrate the practice-oriented outputs from Horizon and CAP-funded projects useful for advisory services, and its entire content (not only interface) should be translated into all 24 official EU languages.

³⁰² e.g., for the creation and implementation of the EIP-AGRI Operational Groups (Article 15(4) of the [Regulation \(EU\) 2021/2115](#))

Proposals should include a dedicated task and appropriate resources to collaborate with, ensure complementarities, avoid duplication of efforts and use efficiently the outputs and activities of the relevant past, existing and future AKIS projects³⁰³.

Proposals must implement the 'multi-actor approach'. Minimum 50% of the number of the participants involved in the project should be impartial advisors spending at least half of their time on giving advice to farmers. The partners within the consortium should be well networked with advisors overall and have the capacity to involve as many of the advisors professionally active in providing advice to farmers as possible across the EU into the activities of the project.

Proposals should cover a wide range of impartial advisors working on diverse themes of interest for practitioners from all EU Member States and improve collaboration between them, using the countries' AKIS structures (including the AKIS Coordination Bodies) as intermediaries. To this end, proposals may involve financial support to third parties to ensure the involvement of advisors from across the whole EU in the activities of the advisory network. Consortia need to define the selection process of the advisors / advisory services and/or other relevant AKIS actors.

The project should run for a minimum of seven years. An initial plan for financial sustainability and maintenance of the EU advisory network in the long-term beyond the project duration should be included in the proposal.

HORIZON-CL6-2025-03-GOVERNANCE-14: Preparing farmers, their workforce and advisors to the future of agriculture by providing the relevant knowledge, skills and competences at the right time and place

Call: Cluster 6 Call 03 - single stage	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 8.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply: The proposals must

³⁰³ In particular but not exhaustive the projects funded under Horizon 2020, Horizon Europe and CAP: advisory and thematic networks, [ATTRACTISS](#), [modernAKIS](#), [i2connect](#), [PREMIERE](#), [EU-FarmBook](#), the future project to be selected under the topic HORIZON-CL6-2025-03-GOVERNANCE-14, and relevant EIP-AGRI Operational Groups projects (notably on knowledge hubs)

	use the multi-actor approach. See definition of the multi-actor approach in the introduction to this Work Programme part.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025).³⁰⁴.</p>

Expected Outcome: Successful proposals will support the common agricultural policy (CAP), in particular its cross-cutting objective³⁰⁵, and related climate, biodiversity and other environmental policies, by enhancing the relevant knowledge, skills and competences of farmers, their workforce and advisors that they need for the transition to more competitive, sustainable and resilient agriculture.

Project results are expected to contribute to all of the following expected outcomes:

- lifelong learning (LLL)³⁰⁶, including various agricultural educational and training systems, are innovative, fit-for-purpose, more responsive to the diverse and fast-changing needs of the learners, and effective in preparing the current and future generations of farmers, agricultural workers and advisors to the future of farming;
- farmers, agricultural workforce and advisors have the relevant, comprehensive and up-to-date knowledge, skills and competences to cope with and benefit from the various drivers of change, and improve competitiveness, sustainability and resilience of their farms;
- introduction, spread and implementation by farmers in their practice of new knowledge and solutions are accelerated, leading to improved productivity and sustainability performance of farming systems in all three dimensions – economic, social and environmental.

Scope: Knowledge, skills and competences are key enablers for more competitive, sustainable and resilient agriculture³⁰⁷. However, there are growing concerns in many EU Member States

³⁰⁴ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

³⁰⁵ Article 6(2) of the [Regulation \(EU\) 2021/2115](#)

³⁰⁶ [Lifelong learning \(LLL\)](#) encompasses all learning activities undertaken throughout life with the aim of improving knowledge, skills and competences, within personal, civic, social or employment-related perspectives. The intention or aim to learn is the critical point that distinguishes these activities from non-learning activities, such as cultural or sporting activities.

³⁰⁷ [Strategic Dialogue on the future of EU agriculture - European Commission](#)

over the shortages and mismatches of knowledge, skills and competences among the farming community working in the diverse and fast-changing contexts³⁰⁸. To be prepared and benefit from the various climate, environmental, technological, socio-economic and other relevant drivers of change, the farming community, specifically farmers, their workforce, and advisors, should be able to learn and use in practice the relevant knowledge, skills, and competences, at the right time and place in a lifelong journey.

Against this background, proposals should:

- develop, improve and apply methodology to assess and foresee what knowledge, skills and competences farmers, their workforce and advisors currently have and need/will need in the future to improve competitiveness, sustainability and resilience of agriculture in light of the evolving context. This should enable the identification of potential gaps and opportunities for upskilling and reskilling, new LLL activities and methods, and serve as a baseline for future assessments of the actions aimed at enhancing the knowledge, skills and competences.
- map, assess and explore how farmers, their workforce and advisors are and should acquire knowledge, skills and competences (e.g., methods and tools, timing, frequency and place, incentives, etc.), as well as who is and who should be providing them in order for LLL to be practice-oriented, attractive, effective, timely and up-to-date; take into account also how the 27 Member States designed their CAP interventions related to LLL.
- investigate how to widely and effectively disseminate new practice-oriented knowledge and innovations, resulting from e.g. diverse research and innovation projects, among farmers, their workforce and advisors; in particular analyse what approaches/tools, communication materials and channels are preferred, trusted and used by farmers, their workforce and advisors; based on the analysis provide toolbox and guidelines;
- map, assess and compare agricultural LLL, including education and training systems, across the EU and beyond, explore and assess best practices on how to embed the knowledge collected within the Agricultural Knowledge and Innovation Systems (AKIS)³⁰⁹ structures to provide valuable input for LLL, including education and training systems, and provide recommendations for improving LLL, including educational and training systems, in view of making them more effective in supporting the transition to competitive, sustainable and resilient agriculture;
- co-create, pilot, test, and share new, interactive, effective approaches and tools (e.g., exploring the potential of generative AI and social innovation), to stimulate LLL, increase knowledge flows within AKIS and enable farmers, their workforce and advisors to quick, easy and affordable access to impartial and relevant knowledge, skills and competences supporting their decision-making;

³⁰⁸ [Policies for the Future of Farming and Food in the European Union | OECD.](#)

³⁰⁹ AKIS is defined in Article 3(9) of the [Regulation \(EU\) 2021/2115](#)

- explore potential synergies between EU instruments and develop new practical approaches to better connect Horizon-funded projects, EIP-AGRI operational groups projects and Erasmus+ projects to LLL in agriculture, including education and training systems, to maximise the impact of these projects for LLL and promote a more coherent approach to knowledge, skills and competences development;
- develop and test a system(s) compatible with existing EU-wide initiatives³¹⁰ that acknowledge(s) and reward(s) farmers, their workforce and advisors who engage in LLL. The system(s) should include different levels of recognition based on the extent and depth of LLL activity completed, as well as be visible, verifiable, and tied to tangible benefits, providing a strong incentive for continuous learning. The project should also assess how the system(s) can be of benefit for the knowledge, skills and competences development of the farming community.

Proposals should include a dedicated task and appropriate resources to cooperate with project that will be selected under the topic HORIZON-CL6-2025-03-GOVERNANCE-13, ensuring complementarities and avoiding duplication of efforts.

Proposals must implement the 'multi-actor approach', with a consortium based on a balanced mix of relevant actors, including farmers, advisors, agricultural educators and trainers, and other relevant AKIS actors with relevant knowledge and information, and ensuring inclusive co-creation in order to better understand their current and future needs for knowledge, skills and competences, and co-develop the best approaches to effectively address these needs.

Proposals should consider in the research and innovation activities national/regional and context specificities, evolving farm structures and labour organisation, as well as social diversity in a comprehensive way. This topic should involve the effective contribution of social sciences and humanities (SSH) disciplines.

³¹⁰ e.g., [micro-credentials](#), [individual learning accounts](#), [European Quality Assurance Reference Framework in VET](#), etc.

Other actions not subjected to calls for proposals

Grants to identified beneficiaries

1. Presidency events – Boosting and mainstreaming the bioeconomy and the transformative governance of the green transition for food systems and biodiversity

Denmark will take on the Presidency of the Council of the European Union in the second half of 2025. The foreseen Presidency events will be an opportunity to announce the next steps for the EU Bioeconomy Strategy and the EU's Food2030 initiative, and for mainstreaming the bioeconomy concept across different EU policies and instruments.

This action will cover the organisation by the Danish Presidency of two conferences with the following titles: “Boosting and mainstreaming the bioeconomy - Science and governance for the green transition” and “Transformative governance for food systems and biodiversity”. The European Commission will support the organisation of the events in cooperation with the entity designated by the Danish Presidency.

Conference: Boosting and mainstreaming the bioeconomy - Science and governance for the green transition

Expected outcome: This conference is expected to contribute to all of the following expected outcomes:

- an opportunity is provided to take stock of the work under the EU Bioeconomy Strategy, EU R&I Framework Programmes (including Partnerships, Missions, and Joint Undertakings) and the Food2030 initiative;
- recent developments, including a planned update of the Bioeconomy Strategy, are discussed.

Scope: The conference should address all the following activities:

- provide exchanges on the EU's strategic policies and on relevant insights from and for science, innovation and practice, at Member State and EU level.
- provide a space for the presentation of scientific achievements across disciplines, and for exchange of ideas and innovative solutions including bio-based solutions.
- further strengthen the science policy interface for improved and coherent governance and to advance circularity and a sustainable bioeconomy.

The event will bring together European Commission services, Member States, Members of the European Parliament and other EU Institutions, stakeholders, experts and interested citizens, including youth representatives, from across Europe.

Conference: Transformative governance for food systems and biodiversity

Expected outcome: This conference is expected to contribute to all of the following expected outcomes:

- the role of R&I in the existing and possible future governance for food systems and biodiversity is explored and discussed among a diverse range of stakeholders.
- a just, fair and inclusive green transition is supported, while at the same time contributing to achieve the climate targets.

Scope: The conference should address all the following activities:

- highlight the strong links between the transition towards healthy and sustainable food systems, and the transition to a sustainable circular bioeconomy,
- promote stakeholder collaboration and new partnerships across various disciplines and sectors at local, national and European levels,
- exchange results and good practices between ongoing Horizon projects, Missions and partnerships working on food systems and biodiversity,
- increase awareness and engagement from the public, media and other stakeholders about the importance of the transformative governance for the food system and biodiversity for a greener future.

The event will bring together all actors of the food system, such as European and national policymakers from different levels, farmers, academia, SMEs, NGOs, youth representatives, consumers and the private sector, collaborating on advancing policy and R&I on agriculture, food systems and biodiversity for a fair and sustainable future.

Specific conditions:

The starting date of the grant awarded under this action may be as of the submission date of the application.

Subcontracting is not restricted to a limited part of this action.

The evaluation committee will be composed fully by representatives of EU institutions.

Legal entities:

University of Copenhagen, Nørregade 10, 1172 København, Denmark

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: As of second quarter of 2025

Indicative budget: EUR 0.30 million from the 2025 budget

2. Presidency event - Advancing the bioeconomy strategy for sustainable food and bio-based systems

Research and innovation (R&I) are key enablers for the deployment of the bioeconomy and for developing sustainable food and biobased systems.

Ireland will take on the Presidency of the Council of the European Union in the second half of 2026. The foreseen Presidency event will be an opportunity to build on the new EU Bioeconomy Strategy that is expected to be published by the end of 2025, and the EU's Food2030 initiative, for advancing the bioeconomy across different EU policies and instruments, and for increasing private and public investment.

Expected outcome: this conference is expected to contribute to all of the following expected outcomes:

- The bioeconomy as a vehicle to address the challenges that the EU faces today, including climate change, fossil-fuel dependency and food security.
- The conference provides an opportunity to take stock of the new EU bioeconomy strategy, Food2030 initiative and Horizon Europe (including Horizon Europe Partnerships, Missions, and Joint Undertakings) and other bioeconomy-related EU policies. It will provide exchange on the EU's strategic challenges and on insights from science, innovation and practice, at Member State and EU level.

Scope: the conference should address all of the following activities:

- provide a space for the presentation of scientific achievements, real-world examples of the bioeconomy in action (such as those funded by the Circular Biobased Europe Joint Undertaking) and for exchange of practical ideas and innovative solutions;
- highlight the role of the bioeconomy for vibrant rural, coastal and urban areas, for mobilising primary producers in climate action and in the green transition, and for creating and maintaining jobs, growth, for primary producers, landowners, small and medium sized enterprises, and other rural actors, including through new value-added chains and business models. Possible synergies with the EU Clean Industrial Deal, the Agri-Fish and COMPET Council, the UN FAO, IACGB and the Global Bioeconomy Summit, the EU High Level Policy Forum on the Bioeconomy and the Standing Committee for Agricultural Research (SCAR) could be explored.

The event will bring together the European Commission, Member States, Members of the European Parliament and other EU Institutions, stakeholders, experts and interested citizens, including youth representatives, from across Europe.

The event will take place in Dublin during the Irish Presidency of the Council of the European Union. The European Commission will support the organisation of the event in cooperation with the entity designated by the Irish Presidency.

This grant will be awarded without a call for proposals according to Article 198(e) of the Financial Regulation and Article 24(3)(b) of the Horizon Europe Regulation to the legal entity identified below.

Specific conditions:

The starting date of the grant awarded under this action may be as of the submission date of the application.

Subcontracting is not restricted to a limited part of this action.

The evaluation committee will be composed fully by representatives of EU institutions.

Legal entities:

Department of Agriculture, Food and the Marine, Agriculture House, Kildare Street, Dublin D02 WK12, Ireland

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: As of second quarter of 2025

Indicative budget: EUR 0.30 million from the 2025 budget

Public procurement

1. Coordination and support service for Circular Cities and Regions Initiative (CCRI)

The transition to a circular economy is key to reducing pressures on natural resources. It is also a prerequisite to achieve the EU's 2050 climate neutrality target and to halt biodiversity loss. For these reasons, the circular economy concept should be a central component in local and regional economies, which have a suitable scale for closing resources loops, creating sustainable circular ecosystems and designing participatory community-based innovation

- (i) support the dissemination and exploitation of project results;
- (ii) contribute to the definition of future challenge priorities;
- (iii) carry out specific evaluations of programme parts;
- (iv) organise conferences, events and outreach activities.

Should existing framework contracts prove unsuitable or insufficient to support these activities, one or more calls for tender may be launched, as appropriate. The contracts envisaged cover the following subjects: studies, technical assistance, conferences, events and outreach activities.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: throughout 2025

Indicative budget: EUR 0.60 million from the 2025 budget

Expert contract actions

1. External expertise to assess and advise on EU research and innovation policy

This action will support the provision of independent expertise in support of the design, implementation and valorisation of EU research policies in the areas currently in scope of Cluster 6: i. environmental observation; ii. biodiversity and natural resources; iii. agriculture, forestry and rural areas; iv. seas, oceans and inland waters; v. food systems; vi. bio-based innovation systems in the EU's bioeconomy and vii. circular systems.

Individual experts will work on the assessment, analysis and valorisation of completed and on-going research and innovation actions and programmes and the identification of future research and innovation needs.

The assessment and advisory tasks of individual experts can include the following:

- analysis of the contribution of research results (at national, EU and/or international level) to EU policy objectives and emerging issues, including policy recommendations where appropriate.
- analysis of research results at national, EU and/or international level (e.g. portfolio analysis), which may imply quantitative assessments and/or qualitative assessments.
- identification of innovative solutions as well as potential gaps and synergies to be addressed by EU research and innovation policy.
- advice on the valorisation, communication, dissemination and exploitation of research results.

- participation in conferences and events, e.g. including the drafting of papers and reports on their conclusions.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 1.00 million from the 2025 budget

Subscription actions

1. GEO subscription 2025

The EU provides an annual contribution to activities of the Group of Earth Observations (GEO) Secretariat for 2025. As reaffirmed by the Cape Town declaration³¹² GEO is committed to advancing the implementation of the Paris Climate Change Agreement, the Sendai Framework for Disaster Risk Reduction, the 2030 Agenda for Sustainable Development, and the New Urban Agenda.

As a full member of the GEO, the Commission will pay a contribution on the EU's behalf to the GEO Trust Fund, which is the budgetary structure agreed by GEO members to fund the GEO Secretariat and some GEO activities, including GEOGLAM (hosted by the World Meteorological Organisation in Geneva, Switzerland).

This contribution will help ensure that the GEO secretariat operates according to its concept of operation and annual operations plan, agreed by the GEO Executive Committee (which the EU is co-chairing together with China, USA, and South Africa). At least EUR 0.20 million EUR of the contribution shall be used to support the function of a regional GEO coordinator in charge of the European caucus. Another EUR 0.30 million EUR of the contribution shall be reserved for the GEOGLAM directorate hosted by the GEO secretariat.

Type of Action: Subscription action

Indicative timetable: As of second quarter of 2025

Indicative budget: EUR 1.60 million from the 2025 budget

³¹²

DRAFT

Introduction

The European Union (EU) and the world face a series of profound and rapid changes including in the areas of climate, the digital transition, and geopolitics. The climate emergency, the slow economic growth and Russia's war of aggression in Ukraine are causing unique social and economic challenges calling for urgent action. These pressing challenges have spurred researchers, entrepreneurs, industry, public authorities and institutions, civil society organisations, and people across the globe into close cooperation to identify and co-develop innovative solutions to increase resilience and global environmental sustainability. In particular, deep tech¹ innovations, emerging from a growing cohort of innovative startups in the EU, have the potential to deliver transformative solutions in the face of these global challenges.

Collaboration for innovative solutions is also crucial to boost Europe's competitiveness. Despite the competitive advantages of the European innovation ecosystems, much of the knowledge produced by researchers working in Europe remains unexploited. As has been highlighted by the Draghi report, a key reason behind this failure is the fact that researchers in Europe are less well integrated into networks of universities, start-ups, large companies and venture capitalists, which account for a large share of successful commercialisations in high-tech sectors.² Strengthening the networks, providing them with the infrastructure and resources they need, is a crucial step to putting research and innovation at the heart of our economy, as stated in the Political Guidelines for the Next European Commission 2024-2029.³

To be effective and fair, this new role for research and innovation should be open to all stakeholders and citizens who wish to be part of the research and innovation cycle. In this spirit, the Letta report has called for the addition of a fifth freedom to the traditional four freedoms – the freedom of investigating, exploring and creating for the benefit of humankind without disciplinary or artificial borders and limitations.⁴ The fulfilment of such freedom clearly presupposes well-functioning and inclusive innovation ecosystems.

Against this background, the European Innovation Ecosystems work programme aims to create and expand more connected, inclusive, and efficient innovation ecosystems⁵ that support the scaling of companies and spur innovation with a view to addressing key

¹ Deep tech is technology that is based on cutting-edge scientific advances and discoveries and is characterised by the need to stay at the technological forefront by constant interaction with new ideas and results from the lab. Deep tech is distinct from 'high tech' which tends to refer only to Research & Development intensity. Deep tech innovation aims to provide concrete solutions to our societal problems by finding its source in a deep interaction with the most recent scientific and technological advances and by seeking to produce a profound impact in the targeted application areas.

² [The future of European competitiveness – A competitiveness strategy for Europe](#)

³ [Ursula Von der Leyen, Europe's Choice: Political Guidelines for the Next European Commission 2024-2029.](#)

⁴ [Enrico Letta - Much more than a market \(April 2024\) \(europa.eu\)](#)

⁵ Definition as per Article 2(47) of the [Horizon Europe Regulation](#).

challenges in a holistic and responsible way, as laid out in the New European Innovation Agenda⁶.

The work programme contains actions under two (2) destinations: CONNECT and INNOVSMES.

- The actions under the CONNECT destination focus on building interconnected and inclusive innovation ecosystems across the EU. Drawing on the existing strengths of national, regional and local ecosystems and encouraging the involvement of all actors and territories, this destination aims to reinforce network connectivity for sustainable business growth and to define and achieve ambitious collective goals for the benefit of society, including green, digital, and social transitions. It supports the flagship actions on *accelerating and strengthening innovation in European Innovation Ecosystems across the EU and addressing the innovation divide, funding for deep tech scale-ups and enabling deep tech innovation through experimentation spaces and public procurement* under the New European Innovation Agenda.
- The action under the INNOVSMES destination will support the European Partnership on Innovative Small and Medium-sized Enterprises (SMEs), which will help innovative SMEs to increase their research and innovation (R&I) capacity and productivity and successfully embed in global value chains and access new markets.

In addition, it contains a number of other actions supporting the policy and programme goals of European Innovation Ecosystems.

This work programme contributes to all key strategic orientations and impact areas of Horizon Europe⁷ and to increasing innovation cohesion. Furthermore, it works in complementarity with several other EU initiatives, including: the European Innovation Council (EIC), the European Institute of Innovation and Technology (EIT), including the Knowledge and Innovation Communities (KICs) and the Regional Innovation Scheme, the “Widening participation and strengthening the European Research Area” work programme and other innovative activities across Horizon Europe, the Interregional Innovation Investments (I3) instrument (European Regional Development Fund) under Cohesion Policy and the regional Smart Specialisation Strategies, Euroclusters under the Single Market Programme, the Digital Europe Programme, as well as other relevant funding and policy initiatives at EU, national, regional and local level⁸, such as the Enterprise Europe Network⁹ and the European Defence Fund/European Defence Innovation Scheme.¹⁰

At the policy level, the EIC Forum¹¹ will continue to work in a flexible manner to foster enabling framework conditions and flows of information, knowledge, talent and best practices among actors of innovation ecosystems and the EIC, to fully harness the potential of

innovation. Overall, it will enhance the exchange of best practices and coordination of national innovation policy initiatives, including by providing policy orientations. By promoting a coherent and inclusive approach to EU innovation ecosystems' policy, it operates in complement to the actions in this work programme.

The National Contact Points for the European Innovation Ecosystems work programme are supported under the EIC work programme.

Proposals are invited against the following three calls for proposals:

DRAFT

Calls

Call - Partnership on Innovative SMEs (2025.1)

HORIZON-EIE-2025-01

Overview of this call¹²

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)			Expected EU contribution per project (EUR million) ¹³	Indicative number of projects expected to be funded
		2025	2026	2027		
Opening: 06 May 2025 Deadline(s): 19 Jun 2025						
Destination: INNOVSMES - Partnership on Innovative SMEs						
HORIZON-EIE-2025-01-INNOVSMES-01: European Partnership on Innovative SMEs	COFUND	40.00	40.00	28.00	Around 108.00	1
Overall indicative budget		40.00	40.00	28.00		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and</i>	The criteria are described in General Annex

¹² The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

¹³ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

<i>exclusion</i>	C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Interconnected Innovation Ecosystems (2025.2)

HORIZON-EIE-2025-02

Overview of this call¹⁴

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ¹⁵	Indicative number of projects expected to be funded
		2025		
Opening: 14 May 2025 Deadline(s): 15 Oct 2025				
Destination: CONNECT - Interconnected Innovation Ecosystems				
HORIZON-EIE-2025-02-CONNECT-01: Preparatory action for setting up joint programmes among innovation ecosystems actors	CSA	5.00	Around 1.00	5

¹⁴ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

¹⁵ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

**Horizon Europe - Work Programme 2025
European Innovation Ecosystems (EIE)**

HORIZON-EIE-2025-02-CONNECT-02: Implementing co-funded action plans for connected regional innovation valleys	COFUND	35.00	5.00 to 8.00	5
Overall indicative budget		40.00		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.
<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Interconnected Innovation Ecosystems (2026.1)

HORIZON-EIE-2026-01

Overview of this call¹⁶

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution	Indicative number of
--------	----------------	-----------------------	--------------------------	----------------------

¹⁶ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.
The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

Horizon Europe - Work Programme 2025

¹⁷ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Destinations

Destination: CONNECT - Interconnected Innovation Ecosystems

Today's urgent challenges are inherently complex and systemic and will not be solved by individual actors or territories in isolation. Fostering enabling innovation ecosystems across the European Union (EU) requires a systemic approach that is inclusive and collaborative, involves diverse actors, institutions and territories, maximises the value of innovation to all, and ensures equitable diffusion of its benefits.

As highlighted in the European Commission Communication on a New European Innovation Agenda¹⁸, by increasing the inclusion and interconnection of less represented regions and actors into a more strongly integrated European ecosystem, the EU can capitalise on the experience, needs, visions, and perceptions of an increasingly diverse range of people, companies and territories. In doing so, it can also take forward a uniquely inclusive European innovation model that is sustainable, guards against substantial labour market and wage gaps, and associated threats to territorial and social cohesion.

Moreover, such well-connected and diverse ecosystems provide innovative companies with the necessary support and conditions to thrive, i.e. through additional capabilities, data, customers, knowledge, and talents. Network connectivity within and between innovation ecosystems greatly contributes to sustainable business growth with high societal value. Therefore, the actions of this destination aim at strengthening and expanding cooperation between innovation players to better support the next generation of innovative companies whose solutions will lead the shift towards a more competitive EU and a more sustainable, inclusive, and resilient world.

Besides stronger innovation performance, increased competitive sustainability, and more rapid transitions to a green and digital society, ecosystem integration can provide ecosystem actors and companies with access to new resources, markets, customers, and contribute to disruptive and innovative solutions. By being actively engaged in their local, regional, national, and European networks, companies can increase their overall growth potential.

This destination offers a holistic package of actions that:

- Strengthen innovation ecosystems across the EU through fostering more efficient, inclusive, gender diverse, and connected innovation ecosystems, by accelerating the development and deployment of innovation, including deep tech¹⁹ innovation and encouraging co-planning, co-implementation, and co-investments around European strategic priority areas;

¹⁸ [A New European Innovation Agenda, COM\(2022\) 332 final](#)

¹⁹ Deep tech is referring to technology that is based on cutting-edge scientific advances and discoveries and is characterised by the need to stay at the technological forefront by constant interaction with new ideas and results from the lab. "Deep tech" is distinct from 'high tech' which tends to refer only to Research & Development intensity.

- Ensure the inclusion of all key innovation players from across the quadruple helix²⁰, and all EU territories;
- Mobilise policies, funding instruments (EU, national, regional) and fostering synergies between them;
- Improve public and private buyers' capacity to procure innovative solutions and enhance coordination on innovation procurement initiatives within Member States and Associated Countries;
- Promote interregional collaboration and investments with a view to improving territorial cohesion;
- Ensure openness and cross-fertilisation of the innovation ecosystem within and beyond the EU's borders.

In particular, the actions under this destination should promote the creation of links:

- Ensure inclusiveness and diversity with the involvement of varied innovation actors from the quadruple helix, for example, individual inventors, industry, startups, scaleups and SMEs investors, innovation hubs, business associations, clusters, public and private buyers of innovative solutions as well as citizens and civil society organisations.
- Among 'innovation leaders' and 'strong innovators' with 'moderate' and 'emerging innovators' ²¹ across the EU and Associated Countries ²² to increase innovation cohesion²³;
- With networks such as National Contact Points, the European Institute of Innovation and Technology (EIT), Knowledge and Innovation Communities (KICs), and European Innovation Council (EIC) communities, the Enterprise Europe Network (EEN), clusters and Euroclusters, European university alliances, Missions, pan-European platforms such as Startup Europe, public and private regional or local innovation actors, in particular incubators and innovation hubs (e.g. European Research Area hubs and Digital Innovation Hubs);
- InvestEU financial instruments and advisory services bridging access to finance and de-risking projects beyond their upscaling phases, or
- any other EU programme that could interconnect innovators.

²⁰ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

²¹ [Regional Innovation Scoreboard \(RIS\)](#), [European Innovation Scoreboard \(EIS\)](#), [Global Innovation Index \(GII\)](#).

²² Associated countries are described in General Annex B.

²³ The work programme will act in complementarity with the "Widening participation and strengthening the European Research Area" work programme

Where appropriate, the applicants should consider and actively seek synergies with possibilities for further funding from other relevant EU, national and/or regional innovation programmes, including Cohesion Policy funds, the Recovery and Resilience Fund, the EU's External Action instruments, the Growth plan for the Western Balkans²⁴, the Growth Plan for Moldova²⁵ and the Ukraine Plan²⁶, and other public and private funds or financial instruments.

Expected impact

Proposals for topics under this destination should set out a credible pathway to strengthening robust interconnected innovation ecosystems and creating a favourable environment to promote the scalability potential of businesses, including in the deep tech sector, and more specifically to one or several of the following impacts:

- Interconnected, inclusive, and more efficient innovation ecosystems across the EU that draw on the existing strengths of European, national, regional, and local ecosystems and engage new, less well-represented stakeholders and less advanced innovation territories, including rural areas, to set, undertake, and achieve collective ambitions tackling challenges for the benefit of society, including green, digital, and social transitions, and advancing the European Research Area and the New European Innovation Agenda;
- Enhanced cross-border network connectivity and inter-regional collaboration for better innovation performance in the EU with reinforced connections between more and less innovative regions building on strategic areas of regional strength and specialization to create and renew European value chains in areas most relevant for the sustainable green and digital transition and the EU's open strategic autonomy, including the five “burning challenges”²⁷ as defined in the New European Innovation Agenda;
- Enhanced capacity building, experience sharing and cooperation fostering wider implementation of innovation procurement, to shorten the time-to-market for innovative solutions that respond to concrete procurement needs and societal challenges.
- Increase innovation co-investments, fostering synergies and other funding leverages;
- Improved innovation policy coordination and networking activities of the Member States and Associated Countries through the EIC Forum.

Proposals are invited against the following topic(s):

²⁴ COM(2023) 691 final <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=COM:2023:691:FIN>

²⁵ COM (2024) 470 final <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52024DC0470>

²⁶ COM (2022) 233 final <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52022DC0233#:~:text=In%20its%20conclusions%20of%20March%202022%2C%20the%20European,assistance%20to%20help%20Ukraine%20to%20implement%20necessary%20reforms>

²⁷ Reducing the reliance on fossil fuels, increasing global food security, mastering the digital transformation (including cybersecurity), improving healthcare and achieving circularity

HORIZON-EIE-2025-02-CONNECT-01: Preparatory action for setting up joint programmes among innovation ecosystems actors

Call: Interconnected Innovation Ecosystems (2025.2)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>This action requires the participation, as beneficiaries, of at least three (3) independent legal entities from three (3) different Member States or Associated Countries, of which at least one (1) is established in a 'moderate' or 'emerging' innovator region and at least one (1) in a 'strong' or 'innovation leader' innovator region.</p> <p>The Regional Innovation Scoreboard is taken as a reference, and in the case of entities representing national authorities, the European Innovation Scoreboard. The applicants must use as a reference the latest version of the documents mentioned above at the time of the call opening. Associated Countries which are not included in the European Innovation Scoreboard and are ranked below 25 on the latest Global Innovation Index are considered as 'moderate' or 'emerging' innovators. In cases of Associated Countries not included in any of the previously mentioned references, the participation rank of the country in the Horizon Europe programme (Horizon Europe country profile) will be taken as a reference and countries ranked below the average will be considered as 'moderate' or 'emerging' innovators.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for</p>

	Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ²⁸ .
--	---

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Open dialogue, prepare the ground and facilitate the agreement among Member States, Associated Countries, and/or their regions, in cooperation with public and private sector and research and innovation actors, towards more dynamic, inclusive, gender diverse, and connected innovation ecosystem, via co-planning, co-implementation, and co-investments around areas outlined in the New European Innovation Agenda²⁹;
- Prepare joint long-term programmes and action plans fostering collaboration, common innovation-support activities, and the creation of common knowledge assets among EU, national, regional and/or local level innovation ecosystems, enhancing synergies and complementarities of their programmes and encouraging the alignment of their innovation policies and related policies impacting innovation, for example, innovation procurement strategies, in line with the New European Innovation Agenda, establishing, if relevant, links to the Regional Innovation Valley³⁰. ;
- Ensure the inclusion of diverse innovation players from across the quadruple helix³¹, and several EU territories;
- Foster synergies with other EU funding programmes, including Cohesion Policy instruments and any other funding instruments, including national or regional public funds, and private funds, to complement Horizon Europe support for innovation ecosystems.

Scope: The topic will allow national, regional and/or local authorities in charge of innovation policies and programmes from Member States, Associated Countries and/or their regions, and other research and innovation actors, to prepare joint multi-annual programmes of activities and action plans with the aim of strengthening the performance and capacity of their innovation ecosystems, their efficient interconnection and their alignment towards EU-level priorities, in line with the New European Innovation Agenda³², to jointly tackle challenges at EU, national, regional, and local level.

²⁸ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

²⁹ [A New European Innovation Agenda, COM\(2022\) 332 final.](#)

³⁰ More information under [New European Innovation Agenda - Flagship 3](#)

³¹ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

³² [A New European Innovation Agenda, COM\(2022\) 332 final.](#)

The topic will allow applicants to prepare and agree on a common programme of activities and action plans. The applicants are encouraged to consider a project duration of 12 to 18 months and in their proposals they should:

- Identify areas and activities of cooperation to enhance the coordination and directionality of their research and innovation investments and policies and improve the efficiency and performance of the EU's innovation ecosystems, fostering their interconnection and scale-up:
 - o The proposals are encouraged to focus on one or several thematic/technological areas of common interest in line with one or more EU priorities, including the “burning challenges” specified in the New European Innovation Agenda, as well as the Green Deal, the RePowerEU Plan³³, circularity³⁴ and digital transformation³⁵ and the priorities set out in the Communications by the European Commission on biotechnology and biomanufacturing³⁶ and advanced materials³⁷;
 - o The proposals should take into account gender equality objectives³⁸.
- Explain their links to the New European Innovation Agenda and how the projects will contribute to its objectives;
- Plan their long-term action: the applicants are encouraged to consider planning of at least three (3) years towards engaging in the joint cooperation activities set out in the frame of the projects;
- Provide a justification on the need for those joint activities that should be scalable at European level and demonstrate their strong EU added value, explaining the potential for growth and competitiveness foreseen in the targeted sector
- Explain how the proposed action plans enhance synergies of EU, national and/or regional funds and programmes, and encourage the alignment of their innovation agendas;
- Explain the process that they plan to follow, with an open, clear, realistic, and impact-oriented approach, including relevant guidance mechanisms and tools;
- Present what common knowledge assets are expected from the proposed action plans, and the benefit of the intended beneficiaries of the plans;
- Design pilot schemes for specific actions, with the possibility to test them with non-compulsory FSTP schemes;

³³ [RePowerEU Plan, COM/2022/230 final](#)

³⁴ [Hubs for Circularity](#)

³⁵ [European Digital Innovation Hubs Network \(europa.eu\)](#)

³⁶ [COM\(2024\) 137 final](#)

³⁷ [COM\(2024\) 98 final](#)

³⁸ See for instance the [Horizon Europe regulation](#) for horizontal gender equality principles, the [ERA policy agenda 2022-2024](#), and the [Gender Equality Strategy 2020-2025](#).

- Present the targeted milestones to be achieved.
- Ensure inclusiveness and diversity with the involvement of varied innovation actors from the quadruple helix, for example, individual inventors, industry, startups, scaleups and SMEs investors, innovation hubs, business associations, clusters, public and private buyers of innovative solutions as well as citizens and civil society organisations.

The proposals for the development of a joint long-term action plan may include the following two (2) phases:

- A first phase to foster close dialogue among key stakeholders for strategy/partnership building, mapping, and analysis of existing national and/or regional and/or local innovation agendas/strategies/policies/plans/activities. Proposals are welcome to cover a diverse range of innovation actors that are relevant for the fulfilment of their goals and to foresee ways to motivate their inclusion. Activities are encouraged to consider existing tools, knowledge and expertise, including the methodology and governance tools tested and developed in the context of the Regional Innovation Valleys or the knowledge and expertise of the EIT KICs with place-based approaches to innovation;
- A second phase dedicated to the concretising, setting up, and finalising the joint action plan(s) and allocation of the activities over a period of the proposed action plans.

The implementation of the proposed action plans is not part of this topic, unless the project uses FSTP. For the implementation part, the successful proposals under the topic may seek further financial support from other EU programmes, including Horizon Europe and/or other public and/or private programmes.

HORIZON-EIE-2025-02-CONNECT-02: Implementing co-funded action plans for connected regional innovation valleys

Call: Interconnected Innovation Ecosystems (2025.2)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 5.00 and 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 35.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>This action requires the participation, as beneficiaries, of at least three (3) national or regional authorities, from at least three (3) different</p>

	<p>Member States or Associated Countries, of which at least one (1) is representing a 'moderate' or 'emerging' innovator region and at least one (1) is representing a 'strong' or 'innovation leader' innovator region.</p> <p>The Regional Innovation Scoreboard is taken as a reference, and in the case of national authorities, the European Innovation Scoreboard. The applicants must use as a reference the latest version of the documents mentioned above at the time of the call opening. Associated Countries which are not included in the European Innovation Scoreboard and are ranked below 25 on the latest Global Innovation Index are considered as 'moderate' or 'emerging' innovators. In cases of Associated Countries not included in any of the previously mentioned references, the participation rank of the country in the Horizon Europe programme (Horizon Europe country profile) will be taken as a reference and countries ranked below the average will be considered as 'moderate' or 'emerging' innovators.</p> <p>The consortium must allocate at least 50% of their total eligible costs to financial support to third parties and/or to the implementation of the PCP or PPI procurements.</p> <p>The consortium must provide a single letter of intent at the moment of submission of the proposal indicating the source of the required 50% of complementary funding (e.g. national and/or regional funding, EU funding, or private investments).</p> <p>The identical proposals submitted under call HORIZON-WIDERA-2025-05-ACCESS-01: Implementing action plans for connected regional innovation valleys in widening countries are not eligible.</p> <p>Subject to restrictions for the protection of European communication networks.</p>
<p><i>Legal and financial set-up of the Grant Agreements</i></p>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants.</p> <p>The maximum amount to be granted to each third party is EUR 600.000. This amount is justified since the cascading grants will support concrete interregional projects to be undertaken by research and innovation entities. Due to the nature of these projects (e.g. development or deployment of technological innovations) a threshold lower than EUR 600.000 would constitute an obstacle to establishing effective collaborations.</p>

	<p>The funding rate is 50% of the total eligible costs.</p> <p>Grants awarded under this topic will have to submit the following deliverable(s): Annual work plans subject to approval by the Commission. For the first year, the annual work plan needs to be submitted together with the respective proposal.</p>
--	---

Expected Outcome: In line with the New European Innovation Agenda's³⁹ flagship on *accelerating and strengthening innovation in European Innovation Ecosystems across the EU and addressing the innovation divide*, this action is intended to create connected regional innovation valleys across the European Union (EU), involving regions with lower innovation performances, by building on strategic areas of regional strength and specialisation (defined in their smart specialisation strategies), in support of key EU priorities. Regions represented by successful applicant national or regional authorities under this call will be recognised as "regional innovation valleys".

Projects results are expected to contribute to all of the following expected outcomes:

- Efficient, inclusive and interconnected innovation ecosystems across the EU in line with the New European Innovation Agenda, building on their diversities and complementarities, enhancing the joint definition of visions and strategies, involving actors from across the quadruple helix⁴⁰, based notably on their respective national/regional smart specialisation strategies, and strengthening their efficiency and potential to innovate;
- Enhanced synergies, complementarities and cooperation among European innovation ecosystems around strategic areas, technologies and challenges of common European interest, designing projects building on Smart Specialisation Strategies and, where applicable, on the, participation in, for example, Excellence Hubs⁴¹, Digital Innovation Hubs⁴², Hubs for Circularity⁴³, Circular Cities and Regions Initiative⁴⁴, Climate-Neutral and Smart Cities Mission⁴⁵, Enterprise Europe Network⁴⁶, Hydrogen Valleys⁴⁷, Renewable Energy Valleys⁴⁸ and Industry 5.0 System Innovation Hubs⁴⁹;

³⁹ [A New European Innovation Agenda COM\(2022\) 332 final](#)

⁴⁰ Ecosystem quadruple helix model requires the collaboration of academia, business, regional government and societal actors.

⁴⁹ HORIZON-CL4-INDUSTRY-2025-01-HUMAN-65: System innovation experimentation for Industry 5.0 (IA)

- The creation of common knowledge assets within regional innovation valleys, and support to their cross-border connectedness; including, for example, competitive advantages to strengthen their capacity for enhanced quality of their R&I ecosystems (e.g. biotech health security and biotech for food systems, applicability of bioeconomy sustainability principles in regional case studies, as described in the concept note on Regional Innovation Valleys for Bioeconomy and Food Systems⁵⁰);
- Increased innovation capabilities, including in deep tech, in Member States and Associated Countries, allowing innovators to bring their ideas to the market and enable innovations to be scaled up at EU level, and facilitating the link with the private sector, public and private buyers of innovative solutions and other research and innovation actors;
- Better links between innovation 'leaders' and 'strong' innovator regions with 'moderate' and 'emerging' innovator regions across the EU and Associated Countries⁵¹
- More innovation co-investments, mobilising other funding instruments, including European, national or regional public funds and/or other private funds, to complement Horizon Europe support;
- Increased participation of all innovation ecosystems actors across EU territories in technology and industrial value chains (existing and emerging ones) relevant to the EU twin green and digital transition to achieve broader sustainability, the EU's open strategic autonomy and competitiveness⁵².

Scope: The aim of this topic is to foster the creation of efficient, open, inclusive and interconnected European innovation ecosystems in line with the New European Innovation Agenda, notably in thematic/technological areas (including deep tech) that will be critical for EU value chains.

It will also contribute to the twin green and digital transition and a resilient society, and to the net-zero objective⁵³, particularly in the areas of reducing reliance on the fossil fuels, increasing global food security, mastering the digital transformation (including cybersecurity and Artificial Intelligence), improving healthcare, and achieving circularity.

The topic will support strategically oriented long-term programmes of activities (Annual Work Programmes) to enable authorities in charge of public national or regional innovation policies or programmes with the participation of the private sector and research and innovation actors, to implement joint activities towards innovation development and

⁵³ [The Green Deal Industrial Plan \(europa.eu\)](#)

deployment, possibly including innovation procurement, aimed at tackling challenges at EU, national and regional level.

The applicants are encouraged to consider a project duration of three to five (3-5) years and proposals should:

- Present the applicants' respective commitment to enhance the coordination and directionality of their research and innovation (R&I) investments and policies, their joint strategic visions, and their proposed joint innovation programme of activities; before the proposal submission the participants should have already selected a thematic/technological area and reached an agreement on what they want to achieve, in order to be able to present concrete action plans; the plans can be further detailed on an annual basis during the implementation of the projects;
- Describe the activities necessary, the process that will be followed, and the research and innovation assets that will be mobilised; activities should be open, clear, realistic, impact-oriented and ensure:
 - o Participation of private actors, either for the joint implementation of proposed activities, and/or their possible co-funding; for example, via links and cooperation with innovative SMEs, start-ups, industry, private entities supporting innovation and innovators, including clusters, associations, as well as investors and foundations;
 - o Complementarity and synergies with other funds (EU, public, and/or private) and innovation-related strategies/policies/programmes/plans at national and/or regional level, including their smart specialisation strategies, and where relevant, the participation in other relevant programmes. Applicants should outline the scope for synergies and/or additional funding, in particular, where this makes the projects more ambitious or increases their impact and expected results.
- Explain the need and the reasons for selecting the proposed Annual Work Programmes that should be scalable at European level and demonstrate their strong EU added value; Annual Work Programmes should:
 - o Include clear steps: (1) capacity building activities, including information exchange and common guidelines; (2) setting common strategy and joint work/action plans; (3) concrete joint activities (including staff exchange, visits, etc.); leading to (4) concrete joint innovation actions (design and implementation of joint funding programmes/calls to select interregional innovation projects).
 - o Include the provisions and modalities for the competitive selection and funding (joint open calls implemented via financial support to third parties - FSTP) of at least three interregional innovation projects in the selected thematic/technological area, including deep tech, linked to key EU priorities:

- These interregional projects are expected to be similar to HE Innovation Actions or close to market actions (TRL 6-8) and should focus on the development and/or deployment of technologies and innovations, including breakthrough and disruptive, through cooperation between research and innovation actors from the participating regions;
 - These interregional projects can also involve the implementation of a Pre-Commercial Procurement (similar as in Horizon Europe PCP grant actions, arriving also to TRL 8) or a Public Procurement of Innovative solutions (similar as in HE PPI grant actions, arriving to TRL 8). In this case the procurements should be implemented in cooperation between public procurers from the participating regions;
 - Each of these interregional projects should aim to deliver concrete and tangible outcomes during the project implementation, and ensure their dissemination and exploitation;
 - These interregional projects should be managed in a coordinated manner, as a portfolio of projects, and should identify and establish links among the projects and with other relevant EU, national or regional projects in similar thematic/technological area (horizontal integration) or complementary areas (vertical integration) with a view to integrate into and contribute to existing or emerging value chains.
- o Include a consistent set of core collaborative activities, for example: networking and coordination structures and tools to facilitate innovation development and access to and sharing of best practices, resources, research/technology infrastructures, talents, markets, expertise, services or knowledge, including open and collaborative knowledge bases and common knowledge assets (methods, data, processes);
- Support to interconnections between innovation hubs/local pockets of excellence; market analysis, development and activities towards better access to new markets and finance for innovative SMEs and start-ups;
 - Training and skills development; interconnection of open innovation infrastructures; supportive activities towards scale up, exploitation and dissemination of innovative solutions;
 - Reinforcing public and private buyers' capacity to procure innovative solutions; Networking of and assistance to public and private procurers to facilitate the implementation of joint or coordinated innovation procurement initiatives;

- Enhancing place-based social cohesion across EU territories, through networks such as European Social Economy Regions initiative⁵⁴, including social innovators and civil society integration, as interlocutors for society and important inputs to the development of innovations and promotion of gender equality and diversity⁵⁵.
- Explain the reasons for selecting the proposed strategic areas of cooperation, and how this cooperation will improve the efficiency and performance of the EU's innovation ecosystems. The joint innovation activities should focus on a specific thematic/technological area, in line with the smart specialisation strategies of the participating regions, and should highlight how it will contribute to innovation priorities of common interest, EU strategic priorities (including green, digital and social transitions, and open strategic autonomy) and, where appropriate, Horizon Europe Missions. It should clarify the potential for growth and competitiveness foreseen in the targeted sector and/or expected impact on EU challenge(s);
- Present and explain how the consortium plans to design and coordinate the implementation of these joint activities (e.g. resources to be mobilised, assets to be used, involvement of innovation stakeholders, such as innovation hubs, business associations, clusters, industry, startups, scaleups and SMEs);
- Include set of Key Performance Indicators (KPIs) in line with the proposed objectives to measures/activities underpinned by verifiable indicators (e.g. referring to the Sustainable Development Goals, European Commission Gender Equality Strategy 2020-2025⁵⁶, or other relevant policy frameworks);
- Ensure their long-term commitment towards engaging in the cooperation activities set up in the frame of their projects (a letter of intent as part of the proposal).

HORIZON-EIE-2026-01-CONNECT-01: European network of national competence centers for innovation procurement

Call: Interconnected Innovation Ecosystems (2026.1)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 4.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.50 million.

⁵⁴ [The European Social Economy Regions \(ESER\) \(europa.eu\)](https://europea.europa.eu/en/eu-social-economy-regions)

⁵⁵ [Horizon Europe guidance on gender equality plans - Publications Office of the EU \(europa.eu\)](https://europea.europa.eu/en/gender-equality-plans)

⁵⁶ [Gender equality in research and innovation - European Commission \(europa.eu\)](https://europea.europa.eu/en/gender-equality-research-innovation)

<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>This action requires the participation, as beneficiaries, of at least fifteen (15) independent legal entities, each established in a different Member State or Associated Country.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁵⁷.</p>

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Enhanced capacity of public procurers to carry out PCPs and PPIs;
- Increased amount of PCPs and PPIs taking place at national level and across borders by transnational buyer groups;
- Enhanced awareness among companies, in particular startups and SMEs, of the possibilities offered by innovation procurements to grow their business, by promoting national innovation procurement business opportunities to companies across other EU Member States and Associated Countries;
- Increased amount of EU wide published preliminary market consultations and calls for tenders for PCP and PPI procurements and active promotion of those business opportunities to innovators in EU Member States and Associated Countries;
- Increased recognition of the strategic importance of PCP and PPI by policy makers and in national policies, contributing to increase innovation procurement uptake;
- Expansion and intensification of innovation procurement support measures implemented by innovation procurement competence centers across Europe.

Scope: Many public buyers around Europe still lack experience on innovation procurement and need training and guidance. To tackle this challenge, several countries around Europe

⁵⁷ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

have set up national competence centers that cooperate with policy makers in their country to implement capacity building measures for innovation procurement. With support of Horizon 2020 funding, in the past, five new competence centers were set up and started collaborating with five existing competence centers across borders⁵⁸.

Europe wide benchmarking identified that there are still significant gaps in national capacity building structures for innovation procurement⁵⁹. This action therefore aims to support setting up a European wide network of national competence centers for innovation procurement⁶⁰, inspired by the experience and activities of the previous initiative, and extend it further to additional countries and reinforce its activities.

Activities undertaken by the network are expected to include the creation of new national competence centers for innovation procurement⁶¹ as well as the enlargement and deepening of the scope of activities of existing competence centers. The expected minimum participation is 10 existing national competence centers for innovation procurement plus 5 public bodies that have the mandate to setup 5 new national competence centers for innovation procurement in 5 different Member States or Associated Countries, with at least 2 of the 5 new ones in 'emerging' or 'moderate' innovator countries⁶². The network will thus start with participation from at least 15 different EU Member States or Associated Countries and it is expected to aim for participation of national competence centers for innovation procurement from all Member States in the network by the end of the project.

Activities undertaken by the network should also include experience sharing on the implementation of pre-commercial procurement (PCP) and public procurement of innovative

⁵⁸ The procure2innovate project funded a European network for competence centers on innovation procurement between 2017 and 2021: [procure2innovate: European network of competence centres for innovation procurement | Procure2Innovate | Project | News & Multimedia | H2020 | CORDIS | European Commission](#)

⁵⁹ The 30 countries analysed by the benchmarking have put in place just 27% of capacity building measures to support public buyers to mainstream innovation procurement: https://research-and-innovation.ec.europa.eu/strategy/support-policy-making/shaping-eu-research-and-innovation-policy/new-european-innovation-agenda/innovation-procurement/benchmarking-innovation-procurement-investments-and-policy-frameworks-across-europe_en

⁶⁰ A competence center on Innovation Procurement is an organization/organizational structure that has been assigned the task by the government of a Member State or Associate Country and has a mandate according to national law to encourage wider use of innovation procurement, that includes among others providing practical and/or financial assistance to public procurers in the preparation and/or implementation of PCP and PPI procurements across all sectors of public interest.

⁶¹ New competence centers can include both entities that want to setup a competence center that does not exist yet and still need to start up during the project their first capacity building activities as well as entities that are already providing a few ad hoc innovation procurement capacity building activities but are not yet a national competence center with a systematic and more comprehensive set of capacity building activities.

⁶² For the purposes of assessing which participant represents a 'moderate', 'emerging', 'strong' or 'innovation leader' country, the European Innovation Scoreboard (EIS) is the reference. The applicants must use as a reference the latest version of the documents mentioned above at the time of the call opening. Associated Countries which are not included in the European Innovation Scoreboard and are ranked below 25 on the latest [GlobalInnovation Index](#) are considered as 'moderate' or 'emerging' innovators. In cases of Associated Countries not included in any of the previously mentioned references, the participation rank of the country in the Horizon Europe programme ([Horizon Europe country profile](#)) will be taken as a reference and countries ranked below the average will be considered as 'moderate' or 'emerging' innovators

solutions (PPI) across Europe, promoting Horizon Europe funding and synergies with ESIF funding for PCP and PPI to public procurers in cooperation with NCPs as well as supporting public procurers in launching such procurements.

Cooperation among public procurers is important because potential market size is a key decision factor for firms to participate or not in a public procurement and to help them grow their business across Europe. Scaling up the impacts of completed innovation procurements by diffusing the uptake of innovative solutions to other public buyers is also vital to mainstream innovation procurement. Activities undertaken by the network are therefore also expected to facilitate the creation of national and transnational buyer groups that ensure wider diffusion of innovations from innovation procurements as well as the creation of transnational buyer groups that start new joint innovation procurements on new topics. In this context, attention should be paid to reinforcing procurements that involve strategic technologies that are key for safeguarding Europe's economic security. The network is also expected to promote national innovation procurement business opportunities to companies across other EU Member States and Associated Countries. It is encouraged to collaborate closely with the EIC business acceleration services and the Enterprise Europe Network to ensure a wide outreach among European startups and SMEs and raise their awareness on the business opportunities offered by innovation procurement across EU Member States and Associated Countries.

Planned activities are also expected to include collaboration with national policy makers that are responsible for the policies that support the uptake of innovation procurement, in particular R&I and public procurement policies. The competence centers should cooperate with such policy makers to develop and coordinate policy actions to mainstream PCP and PPI across Europe such as implementing action plans, targets, monitoring and incentive schemes that encourage public procurers to undertake more PCPs and PPIs.

The network is expected to maximize synergies with national and ESIF funding and focus the budget requested from Horizon Europe on activities/partners that cannot be funded from ESIF or for which national funding is not available. The network is expected also to cooperate with other Horizon Europe funded initiatives on innovation procurement to maximize impact and synergies where possible.

The expected duration for the action is 4 years.

HORIZON-EIE-2026-01-CONNECT-02: Expanding Investment Ecosystems

Call: Interconnected Innovation Ecosystems (2026.1)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>This action requires the participation, as beneficiaries, of at least three (3) independent legal entities from three (3) different Member States or Associated Countries, of which at least one (1) is established in a 'moderate' or 'emerging' innovator region and at least one (1) in a 'strong' or 'innovation leader' innovator region.</p> <p>The Regional Innovation Scoreboard is taken as a reference, and in the case of entities representing national authorities, the European Innovation Scoreboard. The applicants must use as a reference the latest version of the documents mentioned above at the time of the call opening. Associated Countries which are not included in the European Innovation Scoreboard and are ranked below 25 on the latest Global Innovation Index are considered as 'moderate' or 'emerging innovators'. In cases of Associated Countries not included in any of the previously mentioned references, the participation rank of the country in the Horizon Europe programme (Horizon Europe country profile) will be taken as a reference and countries ranked below the average will be considered as 'moderate' or 'emerging innovators'.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025) ⁶³.</p>

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Increased foreign⁶⁴ venture investments from funds from 'strong' or 'innovation leader' innovator regions and enabling later-stage growth for expansion to these regions of local

⁶³ This [decision](#) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under 'Simplified costs decisions' or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

⁶⁴ For the purposes of this topic, foreign should be understood as from a different EU Member State or Associated Country.

start-ups from less connected and developed innovation ecosystems ('emerging' or 'moderate' innovator regions);

- Increased foreign investors' awareness and access to the flow of local deals from 'emerging' or 'moderate' innovator regions;
- Improved foreign investors' knowledge on regulatory frameworks and networks/syndicates to support joint cross-border venture investment in the above characterised underserved markets.
- Improved start-ups' knowledge from 'emerging' or 'moderate' innovator regions on market and regulatory frameworks and expectations from networks in foreign 'strong' or 'innovation leader' innovator region to support their expansion and access to funding in these regions;
- Increased available and committed venture capital in less connected innovation ecosystems, enhancing their scale, diversity, breadth, openness and potential.

Scope: The lack of later-stage funding and partners for expansion to foreign markets is one of the most problematic aspects of business growth particularly for the startups from less developed innovation ecosystems. In order to scale to a leading business, startups need to expand to foreign markets beyond their region. At earlier stages start-ups are typically supported by local investors and partners. However, in order to expand inside the EU they would need access to the funding from actors with presence and knowledge in these new markets. The lack of partners for expansion to foreign markets beyond their region is harmful for local start-ups' growth and investor activity and the development of regional scale-ups, even more so for women-led companies. While the limited number of established European start-up hubs attract significant money and traction, the innovation ecosystems in other areas struggle to keep pace with fewer resources, including funds and technical expertise. In the struggle for resources, many start-ups face the choice to either forego growth and ultimately close their business or move elsewhere, while foreign investors struggle to enter new markets due to insufficient information about the market, its opportunities and regulatory frameworks.

If organised and structured, investments ecosystems should be able to attract foreign investors into "emerging" and "moderate" innovation ecosystems by raising awareness of local innovation ecosystems and their start-ups, as well as the potential of the whole region, to capital providers from across Europe. Foreign investors should be interested to support startups from these ecosystems to expand to other markets and increase their connectivity to relevant partners and market knowledge.

The action supports co-designed programmes of activities, of at least two (2) years, proposed by business acceleration service providers and/or investor networks and clubs, and/or innovation hubs⁶⁵ located in less developed innovation ecosystems ('emerging' and 'moderate') and more developed ones ('strong innovators' and innovation leaders'), to

⁶⁵ **Innovation hubs** encompass a wide range of stakeholders, including entities from both the private and public sectors, as well as incubators and accelerators.

facilitate the entry of foreign funders from ‘strong innovators’ and innovation leaders’ regions to less developed innovation ecosystems through activities, including at least five of the examples below:

- market orientation/introduction programmes for foreign investors, including establishment of central points of information for foreign investors providing them with knowledge on the ecosystem's establishment conditions, incentives, tax and local legislation;
- market orientation/introduction programmes of developed markets for local startups and funds, including establishment of central point of information providing them with knowledge on the ecosystem's establishment conditions, incentives, tax and local legislation;
- assistance to foreign investors during the whole process of investment, from the pre-entry stage until the exit, by ensuring support in administrative, legal, linguistic and cultural issues;
- roadshow to leading innovation hubs to showcase the potential of the local ecosystem, its promising start-ups and active local investors;
- organisation of European international business forums, conferences and events to attract and connect foreign investors with local investors;
- establishing cooperation with public and private buyers of innovative solutions and with the innovative companies they are buying from; peer-matching of investors and business angles and other networking activities to encourage joint ventures;
- a repository of best practices of market entry facilitation for foreign investors;
- a repository of best practices of market entry facilitation for startups from 'emerging' or 'moderate' innovator regions to markets of foreign 'strong' or 'innovation leader' innovator regions;
- a list of recommendations for local authorities and European regulators to better address investors' entry challenges and facilitate cross-border deals.

All of these activities should be targeted to one or several of the 5 burning challenges of the New European Innovation Agenda in order to ensure more targeted and tailored match between participants and more tailored services. The 5 burning challenges include: reducing the reliance on fossil fuels, increasing global food security, mastering the digital transformation (including cybersecurity), improving healthcare and achieving circularity.

To ensure that the impact of the action goes beyond consortium members and their respective countries, it is encouraged that the consortium works closely with innovation agencies and/or similar government organisations, supporting start-ups and development of innovation and entrepreneurship from their respective territories and beyond, and seeks synergies with

relevant EU initiatives such as the Enterprise Europe Network, as well as with the other projects funded under this topic.

HORIZON-EIE-2026-01-CONNECT-03: Scaling up deep tech ecosystems

Call: Interconnected Innovation Ecosystems (2026.1)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Proposals should include at least one ESFRI Landmark⁶⁶ or European Research Infrastructure Consortium (ERIC)⁶⁷ as beneficiary. In case of a distributed⁶⁸ ERIC, as an alternative to the ERIC participating as a beneficiary, a legal entity that is hosting one of its nodes or components may participate as a beneficiary. A declaration signed by the legal representative of the ERIC should confirm that the ERIC is informed about this participation and describe any further cooperation with the ERIC.</p> <p>At least 60% of the proposed total eligible costs must be allocated to financial support to third parties.</p>
<i>Technology Readiness Level</i>	Activities are expected to achieve Technology Readiness Level (TRL) 2-5 by the end of the project – see General Annex B.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The granting authority can fund a maximum of one project.</p>
<i>Legal and financial set-up of the Grant</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries should provide financial support to third parties (FSTP).</p>

⁶⁶ See the list of ESFRI 'Landmarks' in the 2021 ESFRI Roadmap: <https://roadmap2021.esfri.eu/>.

⁶⁷ [European Research Infrastructure Consortium \(ERIC\) | European Commission \(europa.eu\)](https://roadmap2021.esfri.eu/).

⁶⁸ The term 'distributed' research infrastructure typically refers to one or a few central hubs and several interlinked (national or institutional) nodes where many components of the research infrastructure may not be part of the same legal entity, the ERIC.

<i>Agreements</i>	<p>The support to third parties can only be provided in the form of grants.</p> <p>The maximum amount to be granted to each third party is EUR 500,000. This amount is justified since the projects funded will support the creation of an innovation ecosystem through concrete collaborative R&I projects, and research infrastructures will be engaged in different technological collaborations. Due to the nature of this action, a threshold lower than EUR 500,000 would hinder the engagement of research infrastructures with different partners; this would not allow for the creation of an ecosystem supporting the take up of technological innovations resulting from the use of research infrastructures.</p>
-------------------	--

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Enhanced development of deep tech⁶⁹ ecosystems around pan-European research infrastructures⁷⁰ to generate, scale and deploy breakthrough technologies with market and societal value;
- Increased involvement of industry, including SMEs, with research infrastructures to raise the technology level and competitiveness of companies and generate market opportunities, including through the generation of start-up or spin-off companies;
- Improved valorisation of the socio-economic impact of past investments in pan-European research infrastructures from the European Structural and Investment Funds;
- Foster the potential of pan-European research infrastructures for innovation training and education.

Scope: Pan-European research infrastructures are strategic assets to boost R&I, scientific discoveries and deep-tech developments at regional, national and European levels. They have a strong role in increasing the R&I potential of academia and industry in local and regional ecosystems, thus enhancing competitiveness, innovation in strategic areas and overcoming fragmentation. The Council conclusions on strengthening the competitiveness of the EU and overcoming the fragmentation of the European Research Area⁷¹ encouraged better use and deployment of Research Infrastructure facilities and services by academia and industry, including SMEs and start-ups across the entire EU.

As providers of advanced services and procurers of cutting-edge technologies, RIs have an innovation potential related to the development of components, instruments, services and knowledge that could be better exploited to push the edge of existing technologies and lead to their deployment for market-oriented or socially useful purposes.

⁶⁹ C.f. deep tech definition on footnote 18.

⁷⁰ ESFRI: www.esfri.eu

⁷¹ [Council Conclusions on Strengthening the competitiveness of the EU, reinforcing the European Research Area and overcoming its fragmentation](#)

The aim of the action is to respond to industry needs and to better valorise interactions that research infrastructures have with companies, facilitating deep collaboration and co-development.

The proposals should pilot the possibility to seed the development of innovation ecosystems around diverse technological areas related to pan-European research infrastructures by providing grants to pilot projects in three to five different technological areas.

The proposals should:

- identify deep tech innovations with breakthrough potential related to pan-European research infrastructures;
- assess the feasibility and scalability of the identified innovations;
- suggest a selection and clustering of those innovations that demonstrate sufficient maturity to provide a clear potential for industrial implementation and demonstrate the strongest market and societal value;
- run, evaluate calls and give convincing arguments to provide grant funding to pilot projects in the identified technological areas;
- assess the outcome of the pilot grants.

Destination: INNOVSMES - Partnership on Innovative SMEs

Small and medium-sized enterprises (SMEs) represent the backbone of the European economy. They represent 99.8% of all enterprises in the European Union (EU) non-financial business sector and two thirds of employment. However, SMEs in Europe face obstacles to growth, expansion and scaling up, including lack of skills, administrative burden, and access to finance. Many lack capacity for innovation and struggle to enter international markets.

Greater cooperation with partners in Europe and beyond can help to address many of these issues. However, opportunities for bottom-up, international collaborations are limited. European SMEs can struggle to find support for their internationalisation efforts. At national level, support is often limited to collaboration among partners within the same Member State. Levels of investment to support internationalisation in European innovative SMEs vary and there is suboptimal co-ordination of national schemes. Overall, these issues weaken the resilience of the European innovation ecosystem.

The objective of this call is to continue to provide support to the European Partnership of Innovative SMEs identified in the Horizon Europe Strategic Plan 2021-2024 and the Strategic Plan 2025-2027 and first implemented under the topic HORIZON-EIE-2021-INNOVSMES-01-01: European Partnership on Innovative SMEs, and in particular to fund additional activities (which may also be undertaken by additional partners) in view of its intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation.

The proposal for the topic under this destination should cover a specific niche that other EU, national and regional interventions do not address for the benefit of innovative SMEs in Europe: cooperation among European and/or international partners, with at least one innovative SME as the project leader. The proposed additional activities would help innovative SMEs to increase their research and innovation (R&I) capacity and productivity and to become embedded in global value chains and new markets. It would achieve this by supporting innovative SMEs in developing products, processes and services through funding market-led, cross-border, R&I collaborative projects and providing accompanying measures. It would enable global collaboration and the commercialisation of new knowledge. It would thereby strengthen the overall resilience of the European innovation ecosystem.

In line with the Horizon Europe objectives⁷² it aims to generate knowledge, support the access to and uptake of innovative solutions by SMEs (including to address global challenges), facilitate technological development, demonstration, knowledge and technology transfer, and strengthen deployment and exploitation of innovative solutions.

In line with Horizon Europe Strategic Planning, the Partnership aims to contribute to global and European policies, focusing on the strategic priorities of the new European Commission towards a new plan for Europe's sustainable prosperity and competitiveness, putting research and innovation in the heart of our economy.

⁷² [Horizon Europe Regulation](#), Article.3.2.(b), (c).

In line with the Global Approach to Research and Innovation⁷³, the Partnership aims to facilitate the internationalisation of European SMEs by establishing win-win international innovation Partnerships, such as networks of incubators and accelerators with countries that offer reciprocal openness to entrepreneurship and investment, promoting mobility of innovators in both directions. The envisaged activities will build on tools developed and experience gained. They will also create synergies with other supporting mechanisms.

Expected impact

The proposal for the topic under this destination should set out a credible pathway to contributing to the following impacts:

To help European innovative SMEs to grow and successfully access European and international markets and to embed in global value chains by:

- Contributing to the strategic priorities of the new European Commission with a special focus in promoting the new plan for Europe's sustainable prosperity and competitiveness as stated in the Political Guidelines for the new European Commission 2024–2029⁷⁴;
- Strengthening the innovation performance, output, potential and resilience of the European innovation ecosystem;
- Addressing the productivity and internationalisation gap between innovative SMEs and large companies and aiming to improve SMEs' global scale-up potential leading to increased employment and turnover;
- Leveraging investment for innovative SMEs.

Proposals are invited against the following topic(s):

HORIZON-EIE-2025-01-INNOVSMES-01: European Partnership on Innovative SMEs

Call: Partnership on Innovative SMEs (2025.1)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 108.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 108.00 million.
<i>Type of Action</i>	Programme Co-fund Action

⁷³ [COM\(2021\) 252 final.](#)

⁷⁴ [Ursula Von der Leyen, Europe's Choice: Political Guidelines for the Next European Commission 2024-2029](#)

<p><i>Eligibility conditions</i></p>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The proposal must be submitted by the coordinator of the consortium funded under HORIZON-EIE-2021-INNOVSMES-01-01 and HORIZON-EIE-2023-INNOVSMES-01: European Partnership on Innovative SMEs. This eligibility condition is without prejudice to the possibility to include additional partners.</p> <p>Subject to restrictions for the protection of European communication networks.</p>
<p><i>Procedure</i></p>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>If the proposal is successful, the next stage of the procedure will be grant agreement amendment preparations.</p> <p>If the outcome of amendment preparations is an award decision, the coordinator of the consortium of the grant funded under HORIZON-EIE-2021-INNOVSMES-01-01 and HORIZON-EIE-2023-INNOVSMES-01: European Partnership on Innovative SMEs will be invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.</p>
<p><i>Legal and financial set-up of the Grant Agreements</i></p>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>This action is intended to be implemented in the form of an amendment of the grant agreement funded pursuant to topics HORIZON-EIE-2021-INNOVSMES-01-01 and HORIZON-EIE-2023-INNOVSMES-01: European Partnership on Innovative SMEs.</p> <p>For the additional activities covered by this action:</p> <ul style="list-style-type: none"> • Beneficiaries may provide financial support to third parties (FSTP). The support to third parties can only be provided in the form of grants. • Financial support provided by the participants to third parties is one of the primary activities of this action in order to be able to achieve its objectives. • The maximum amount of FSTP to be granted to an individual third party is EUR 25.000.000 (also including any FSTP already provided for activities not covered by this action). This amount is justified since the provision of FSTP is the main and primary activity of this action in order to achieve the objectives of the Partnership, which are to enable innovation and foster internationalisation of SMEs through collaborative projects. This

	<p>amount is based on the extensive and justified experience under predecessors of this Partnership.⁷⁵</p> <ul style="list-style-type: none"> • At least two thirds (67%) of the projects supported through FSTP must involve at least two beneficiaries from Member States or Associated Countries. • The funding rate is 30 % of the eligible costs. <p>The starting date of grants awarded under this topic may be as of the submission date of the application. Applicants must justify the need for a retroactive starting date in their application. Costs incurred from the starting date of the action may be considered eligible, and will be reflected in the entry into force date of the amendment to the grant agreement.</p>
<i>Total indicative budget</i>	<p>The total indicative budget for the topic is EUR 108.00 million (EUR 40.00 million from the 2025 budget, EUR 40.00 million from the 2026 budget and EUR 28.00 million from the 2027 budget).</p>

Expected Outcome: Project results are expected to contribute to all of the following expected outcomes:

- Improved knowledge transfer in the European innovative Small and Medium-sized Enterprises (SMEs) ecosystem, through increased and sustained collaboration between SMEs, public research partners and academia;
- Mitigation of difficulties in access to finance for European innovative SMEs and thus contribute to enhanced growth and expansion of European innovative SMEs;
- Improved European innovative SME access to new international markets or value chains thus leading to improved market share and sales for European innovative SMEs increasing their employment capacity;
- Increased public research and innovation funding to European innovative SMEs, to spur more high-quality collaborations and more innovative solutions;
- Pull together national efforts to spur internationalisation and collaboration in European innovative SMEs, avoiding unnecessary duplication leading to a simplified offer to beneficiaries, achieving a more balanced geographic participation, ensuring complementarity and improved innovation ecosystems across Europe;
- Identify and better exploit existing or emerging opportunities in the global markets and establish win-win international innovation partnerships, such as networks of incubators

⁷⁵ However, if the objectives of the action would otherwise be impossible or overly difficult (and duly justified in the proposal), the maximum amount may be higher.

and accelerators with the help of the Innowide instrument and other existing support mechanisms.

Scope: The objective of this action is to continue to provide support to the European Partnership of Innovative SMEs identified in the Horizon Europe Strategic Plan 2021-2024 and first implemented under the topic HORIZON-EIE-2021-INNOVSMES-01-01: European Partnership on Innovative SMEs, and in particular to fund additional activities (which may also be undertaken by additional partners) in view of its intended scope and duration, and in accordance with Article 24(2) of the Horizon Europe Regulation.

The consortium which applied to and received funding under the European Partnership on Innovative SMEs topic of the European Innovation Ecosystems Work Programme 2021-2022 and 2023-2024 is uniquely placed to submit a proposal to continue the envisioned Partnership. Not only did this consortium submit the proposal leading to the identification of the partnership in the Horizon Europe strategic plannings for the periods 2021-2024 and 2025-2027, it has also implemented the Partnership through co-funded calls in 2021-2024 based on this planning and further to the European Partnership on Innovative SMEs topic. It is also deemed relevant that the same consortium was responsible for carrying out the Horizon 2020 predecessor programme EUROSTARS 2. In this context, the current consortium has particular expertise in relation to the objectives of the Partnership, the activities to be implemented and other relevant aspects of the action. In practice, another consortium could not continue the activities of the Partnership underway without significant disruption to the ongoing activities, if at all.

The proposal should cover additional activities which are not covered in the existing grant agreement. The proposal should address time, resources and activities building on the two main types of activities from the previous period. These are largely additional calls for proposals covering the 2025-2027 period (Eurostars and INNOWIDE projects) resulting in international collaborative research and innovation projects. The proposal should in addition include the lessons learnt and analyse results from at least the Eurostars calls of this Partnership in the period 2021-2024 of implementation, in order to potentially improve the activities during the forthcoming period. Furthermore, its results and lessons learnt from the previous Eureka-INNOWIDE calls should be analysed. These additional activities should contribute to the further development of the “Eureka-INNOWIDE” scheme. Coordination and support activities, the creation of synergies between and synchronisation of national programmes, and a better cooperation and knowledge exchange between national intermediaries should be continued through new or repeated activities and additional events during the forthcoming period.

Collaborative research and innovation activities and a strong focus on support to the internationalisation of European innovative SMEs should drive the additional activities and calls for proposals during the period 2025 to 2027 in line with the overall call schedule until the end of the partnership. There is a clear added value and ‘selling point’ for the continuation and additional calls under this initiative to further address gaps towards a better alignment and increased focus on internationalisation. This reflects the definition of European Partnerships

in Horizon Europe⁷⁶ as initiatives where the European Union and its partners ‘commit to jointly support the development and implementation of a programme of research and innovation activities, including those related to market, regulatory or policy uptake.’

The below list of specific activities, going beyond research and innovation activities, can therefore be implemented throughout the duration of the action (continuation of the Partnership) and are anticipated as expected outputs:

- Support transnational near-market collaborative research and innovation addressing technological and societal challenges;
- Enhance SME readiness (absorption capacities in all participating countries),
- Attract wide range of beneficiaries by country and SME type and age;
- Create synergies among national programmes by streamlining their implementation;
- Enhance cooperation and knowledge exchange at level of national intermediaries.
- Lessons learnt concerning proposals and project implementations for future improvements.

The proposed continuation of the initiative will help innovative SMEs to further increase their research and innovation capacities and productivity, shorten the time to market of their innovations and to become embedded in global value chains and new and/or expanded markets. It will achieve this through additional support to innovative SMEs in developing products, processes and services through funding market-led, cross-border, research and innovation collaborative projects and providing accompanying measures. The initiative addresses collaboration in Europe and beyond, and the commercialisation of new knowledge to public and private sector markets. Thereby it will strengthen the overall resilience of the European innovation ecosystem.

The overall objective of the initiative is to implement a co-funded European Partnership for Innovative SMEs to stimulate economic growth and job creation by enhancing the competitiveness of innovative SMEs while contributing to deliver a positive economic, societal and environmental impact in Europe and beyond.

In order to address that objective, the initiative should:

- Enable innovative SMEs to develop all forms of innovation, including breakthrough innovation, and strengthen market deployment of innovative solutions;
- Foster the internationalisation of European innovative SMEs;
- Connect national programmes to unlock the potential of all partners.

⁷⁶ Definition as per Article 2(47) of the [Horizon Europe Regulation](#)

While the award of a grant to continue the Partnership in accordance with this call should be based on a proposal submitted by the coordinator of the consortium funded under European Partnership on Innovative SMEs and the additional activities (which may include additional partners) to be funded by the grant should be subject to an evaluation, this evaluation should take into account the existing context and the scope of the initial evaluation as relevant, and related obligations enshrined in the grant agreement.

Taking into account that the present action is a continuation of the topics HORIZON-EIE-2021-INNOVSMES-01-01 and HORIZON-EIE-2023-INNOVSMES-01: European Partnership on Innovative SMEs, which entails an amendment to an existing grant agreement, the proposal should also include as an Annex the additional activities (including additional partners) to be covered by the amendments to the grant agreement.

Type and range of activities

A main activity is to run calls for proposals, organise the evaluation process and enable collaborative cross-border research and innovation projects. Beyond providing funding to innovative SMEs for cross-border research and innovation (R&I) collaboration, the calls should include further promotion of the programme in underrepresented Member States, including but not limited to, dissemination events, mutual learning seminars or roadshows.

Accompanying measures such as INNOWIDE should be included in the proposal.

Expected partner composition and geographical coverage

- National administrations and National Funding Bodies (NFBs).

The private sector and research actors would need to be mainly drawn from the activities of the national and/or regional funding organisations. The effort, networks and judgements of these organisations are key to initiate cross-border research collaborations, to help prepare applications and to fund successful participants. The success of the initiative depends largely on these organisations.

A dedicated implementation structure may notably support them through various activities and services such as to organise calls, manage funding, monitor payments and projects and implement dissemination events, roadshows, matchmaking events, webinars etc.

The initiative should have an extended geographical coverage beyond Member States and Associated Countries, and the potential to evolve towards a global programme under Horizon Europe, including through possible involvement of additional partners during the lifetime of the programme. Third countries are welcome to participate in the Partnership in line with the standard criteria related to co-funded Partnerships in Horizon Europe. The initiative should promote the ambition towards more projects involving other partners than those in geographical proximity and the sufficient utilisation of the potential of the extended Eureka network.

Types and levels of contributions from partners

Proposals should mobilise the necessary financial resources from participating national (or regional) research programmes with a view to implementing joint calls for transnational proposals resulting in grants to third parties.

Member States are invited to maximise the financial support provided to innovative SMEs through increased national funding during the selection process.

International dimension

Proposals should focus on supporting international projects led by innovative SMEs. They should enable international cooperation, enabling small businesses to learn, combine and share expertise and benefit from working beyond national borders.

In line with the ambitions of the Partnership to foster international collaboration and the provisions of the model grant agreement, projects involving one legal entity established in a Member State or Associated Country as beneficiary and one legal entity established in a non-associated third country as partner may be supported in the same manner as under Eurostars 2. As per Horizon Europe rules, projects with no participants from Member States or Associated Countries are not eligible for participation in the Partnership. At least two thirds (67%) of the projects supported must involve at least two beneficiaries from Member States or Associated Countries.

Synergies

Focussing on helping European innovative SMEs to grow and successfully embed in international markets and value chains by developing methodologies and technologies, the Partnership is expected to collaborate closely with other relevant European Partnerships, missions and the European Innovation Council in order to ensure coherence and complementarity of activities. Proposals must describe the methodology for their collaboration and the aims to achieve with this kind of collaboration.

It is encouraged to collaborate closely with Regional Innovation Valleys, EIT and KICs exploring synergies along the SME innovation and development pathways, EEN supporting info-days and partner-finding for different calls.

Other actions not subject to calls for proposals

1. European Assistance For Innovation Procurement

The New European Innovation Agenda highlights the need to stimulate the uptake of innovation procurement and recognizes the existing European Assistance for Innovation Procurement as a key initiative in this context⁷⁷. European Council Conclusions call for further improving in-depth knowledge and experience of public buyers, policy makers, companies and other key stakeholders on innovation procurement⁷⁸. The European Assistance For Innovation Procurement can contribute to achieve these goals.

This action funds a service contract for implementing the European Assistance For Innovation Procurement for the period 2026 - 2029, inspired by the activities of the existing European Assistance For Innovation Procurement and extending its scope. The tasks include updating the innovation procurement toolkit for procurers with new guidance and good practice examples, running the Q&A helpdesk, organizing workshops with procurers, policy makers, companies and other stakeholders and providing local assistance to public buyers across the EU Member States and Horizon Europe Associated Countries to kickstart new innovation procurements across all sectors in which public buyers are active.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Third quarter of 2025

Indicative budget: EUR 1.00 million from the 2025 budget

2. Benchmarking of national policy frameworks and investments on innovation procurement across Europe

European Council Conclusions call on policy makers to strengthen the policy support for innovation procurement and to encourage public buyers to increase investments in innovation procurement.⁷⁹ The New European Innovation Agenda highlights the importance of continuing the benchmarking of national policy frameworks and investments for innovation procurement across Europe. It provides a better understanding of what is the status across different countries of the implementation of policy measures that create a conducive ecosystem for innovation procurement, what are current levels of investment in innovation

⁷⁷ COM(2022)332 committed to establish specialist advisory services for innovation procurement and the associated SWD(2022)187 final recognised in this context the European Assistance For innovation Procurement (www.eafip.eu)

⁷⁸ 23 May 2024 Council Conclusions on Strengthening knowledge valorisation as a tool for a resilient and competitive industry and for strategic autonomy in an open economy in Europe: <https://data.consilium.europa.eu/doc/document/ST-10182-2024-INIT/en/pdf>

⁷⁹ 23 May 2024 Council Conclusions on Strengthening knowledge valorisation as a tool for a resilient and competitive industry and for strategic autonomy in an open economy in Europe: <https://data.consilium.europa.eu/doc/document/ST-10182-2024-INIT/en/pdf>

procurement across different sectors, what are good practices versus remaining barriers and how can they be overcome.

This action funds a service contract for implementing the benchmarking for the years 2027 and 2028. Regularly taking stock in a comparable way across Europe of the progress that different countries are making on innovation procurement, will enable policy makers to learn from each other to continue improving their performance and will help innovative companies that want to grow their business across borders to understand better the situation on innovation procurement in other countries.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Last quarter of 2025

Indicative budget: EUR 0.85 million from the 2025 budget

3. Studies and communication

Activities under this action should support the Commission with appropriate expertise in preparation of new policy initiatives in support of innovation ecosystems. These activities may include studies, support and communication activities that are needed to analyse and enhance the EU R&I environment. Contracts under this action may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Second quarter of 2025 and first quarter of 2026

Indicative budget: EUR 0.50 million from the 2025 budget

4. Use of individual experts on assisting with the monitoring of actions

This action will support the use of appointed independent experts for the monitoring of running actions (grant agreement, grant decision, public procurement actions, financial instruments) funded under Horizon Europe and previous Framework Programmes and where appropriate include ethics checks, as well as compliance checks regarding the Gender Equality Plan eligibility criterion.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.20 million from the 2025 budget

5. Use of individual experts in support of the EIC FORUM

The European Innovation Council (EIC) Forum provides a platform for fostering collaboration among stakeholders within Europe's innovation ecosystems. It promotes the exchange of information, knowledge, talent, and best practices to unlock the full potential of innovation across the region. By working closely with member states, associated countries, and various stakeholders, the Forum aims to enhance framework conditions for innovation. Through engagement with relevant Directorates Generals (DGs) from the European Commission, the Forum encourages a cohesive and inclusive approach to policy and instrument development, driving sustainable growth and competitiveness within the European Union's innovation landscape.

Experts will provide intelligence in support of the work of the EIC Forum and/or its working groups. Their aim will be to gather new or more robust evidence and / or to produce analyses in support of policy discussions.

A special allowance of EUR 450 in the form of a daily unit cost for each full working day spent will be paid to the individual experts appointed in their personal capacity who act independently and in the public interest.

In other cases where expertise required that goes beyond an individual expert acting in its personal capacity, a public procurement may be used.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.17 million from the 2025 budget

6. EUREKA membership fee

The European Union is a member of EUREKA and, as such, pays an annual contribution to the budget of the EUREKA Secretariat.

EUREKA is an international network established in 1985 as an agreement between 18 countries to foster European competitiveness and integration and to encourage Research & Development cooperation. Since then, it expanded to include over 45 countries in Europe and beyond who share the same goals and have national funding available to organisations who apply through our programmes.

Type of Action: Subscription action

Indicative timetable: First quarter of 2025

Indicative budget: EUR 0.33 million from the 2025 budget

Horizon Europe

Work Programme 2025

11. Widening participation and strengthening the European Research Area

IMPORTANT NOTICE:

This draft has not been adopted or endorsed by the European Commission. Any views expressed are the views of the Commission services and may not in any circumstances be regarded as stating an official position of the Commission.

This draft is made public before the adoption of the work programme to provide potential participants with the currently expected main lines of this work programme. Only the adopted work programme will have legal value.

The adoption of the work programme will be announced on the Horizon Europe website and on the Funding and Tenders Portal.

Information and topic descriptions indicated in this draft may not appear in the final work programme; and likewise, new elements may be introduced at a later stage. Any information disclosed by any other party shall not be construed as having been endorsed by or affiliated to the Commission.

The Commission expressly disclaims liability for any future changes of the content of this document.

Budget..... 73

Introduction

This part of the Horizon Europe Work Programme 2025 addresses the area “Widening participation and strengthening the European Research Area” (WIDERA). The work programme includes two components:

I: Widening participation and spreading excellence;

II: Strengthening the European Research Area (ERA) by reforming and enhancing the European research and innovation system.

The European Commission adopted **the Communication on a New ERA for Research and Innovation** (2020) to improve the European research and innovation (R&I) landscape, to accelerate the European Union's transition towards climate neutrality and digital leadership, to support recovery from the coronavirus crisis, and to strengthen resilience against future crises¹. **The Communication on the implementation of the ERA** (2024) takes stock of the progress made since 2020 and highlights areas for further action to achieve the objectives of the ERA².

Complementing the ERA Communication, **the Commission Communication on a New European Innovation Agenda** (2022) aims at mastering the twin green and digital transitions by fostering innovation in rapidly evolving fields, bridging the innovation gap between Member States and between regions, and harnessing the potential of all actors in innovation ecosystems while developing and attracting talents³. Furthermore, **the European strategy for universities** (2022) stresses that excellent education, research and innovation environments are an enabler for developing high-level skills, creating breakthrough knowledge and translating it into practical applications⁴.

Aligned with the **Competitiveness Compass** (2025), the ERA sets sights on a single, borderless market for research, innovation and technology across the European Union, that fosters Europe's competitiveness and accelerates the green and digital transitions⁵. It helps Member States to act more effectively together by aligning their research policies and programmes. The free circulation of researchers and knowledge enables better cross-border cooperation, building of critical mass and continent-wide competition. It also promotes inclusive gender equality, ethics, mobility, skills and career development opportunities within the European Union.

⁴ <https://education.ec.europa.eu/sites/default/files/2022-01/communication-european-strategy-for-universities.pdf>.

⁵ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex:52025DC0030>.

The Pact for Research and Innovation in Europe (Pact for R&I, 2021) demonstrates Member States' commitment to the ERA⁶. It defines priority areas for joint action, sets out ambitions for investments and reforms, and introduces simplified coordination and monitoring. It also outlines common values and principles to guide research and innovation in the European Union and its collaboration with the rest of the world.

The 2025 WIDERA work programme calls and other actions are designed to contribute toward the implementation of the four priority areas of the Pact for R&I:

Priority I: Deepening a truly functioning internal market for knowledge;

Priority II: Taking up together the green transition and digital transformation and other challenges with impact on society, and increasing society's participation in the ERA;

Priority III: Enhancing access to R&I excellence across the Union and enhancing interconnections between innovation ecosystems across the Union;

Priority IV: Advancing concerted R&I investments and reforms.

The component **“Widening participation and spreading excellence”** aims to tackle the R&I gap to move towards a truly integrated and cohesive R&I ecosystem in the European Union, addressing especially the third priority area of the Pact for R&I. Disparities between leading and less advanced countries in terms of R&I performance should be tackled through structural policy reforms at national and regional level aimed at, for example, improving the attractiveness of research careers, internationalisation, effectiveness of management and governance of R&I institutions or matching activities with EU initiatives (e.g., Seals of Excellence). Call topics are in principle bottom-up but applicants are encouraged to take into account key aspects of the political guidelines of the next European Commission published in July 2024⁷, such as the Clean Industrial Deal, the Energy Union, digital tech diffusion, artificial intelligence, the upcoming European Life Science strategy, Union of Skills and/or start ups.

In this component, the less advanced countries eligible for hosting coordinators of widening actions are Bulgaria, Croatia, Cyprus, Czechia, Estonia, Greece, Hungary, Latvia, Lithuania, Malta, Poland, Portugal, Romania, Slovakia, Slovenia and all Associated Countries with equivalent characteristics in terms of R&I performance (Albania, Armenia, Bosnia & Herzegovina, Faroe Islands, Georgia, Kosovo⁸, Moldova, Montenegro, North Macedonia, Serbia, Tunisia, Türkiye, Ukraine, and once associated Morocco), as well as the Outermost Regions (defined in Art. 349 TFEU). Hereinafter, these countries, including the Outermost Regions, will be named 'widening countries'.

The overall policy objectives of this component of the work programme are the following:

⁶ <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32021H2122>.

⁷ https://commission.europa.eu/document/download/e6cd4328-673c-4e7a-8683-f63ffb2cf648_en?filename=Political%20Guidelines%202024-2029_EN.pdf.

⁸ This designation is without prejudice to positions on status and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

1. Encourage institutional reforms and transformation processes of the R&I system at national and regional level in widening countries in line with ERA principles;
2. Mobilise national investments in R&I capacity in widening countries;
3. Raise the bar for excellence of R&I actors in widening countries in partnership with outstanding European and international institutions ('win-win situation');
4. Increase number of participations and success rates of widening actors in research and innovation projects in other parts of Horizon Europe (notably in Pillars 2 and 3);
5. Promote the creation of new innovation ecosystems, interconnect and scale up existing ones by a set of measures, which include place-based and international collaboration between academia and business in widening countries;
6. Foster brain circulation, including inter-sectoral mobility for researchers and innovators and turn it into brain gain for widening countries.

The component **“Strengthening the European Research Area by reforming and enhancing the European research and innovation system”** is designed to support the implementation of the first **ERA Policy Agenda**, which outlines 20 concrete ‘ERA Actions’ for the period 2022-2024, to advance in the four priority areas defined in the Pact for R&I⁹.

This component pertains to the destination “Reforming and enhancing the European research and innovation system”, aiming to build R&I capacity at the level of institutions and ecosystems by supporting the implementation of the different ‘ERA Actions’. It also fosters the adoption of shared EU values and principles outlined in the Pact for R&I, such as evidence-informed policymaking, freedom of scientific research, societal responsibility, gender equality, equal opportunities, diversity and inclusiveness.

The WIDERA work programme also supports the key strategic orientations of Horizon Europe presented in the **Horizon Europe strategic plan 2025-2027** by building up Europe’s R&I capacity to address global challenges and boost its competitiveness¹⁰. Synergies with national, regional and other European programmes, in particular under the cohesion policy, will increase the impact of actions implemented under this work programme.

It is recalled that selected calls and other actions funded by 2025 budget are also included in the work programme 2023-2025 (amendments adopted in April 2024) in order to ensure continuity of support¹¹. In the component “Widening participation and spreading excellence”, this included the 2025 Teaming call under the destination “Improved access to excellence” and the 2025 ERA Fellowships call under the destination “Attracting and mobilising the best talents”. In the component “Strengthening the ERA by reforming and enhancing the European research and innovation system”, a small number of actions not subject to calls for proposals

⁹ https://commission.europa.eu/system/files/2021-11/ec_rtd_era-policy-agenda-2021.pdf.

Call - European Excellence Initiative (EEI)

HORIZON-WIDERA-2025-01

Overview of this call¹³

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ¹⁴	Indicative number of projects expected to be funded
		2025		
Opening: 08 May 2025 Deadline(s): 20 Nov 2025				
Destination: Improved access to Excellence				
HORIZON-WIDERA-2025-01-ACCESS-01: European Excellence Initiative (EEI)	CSA	80.00	2.00 to 5.00	27
Overall indicative budget		80.00		

General conditions relating to this call

<i>Admissibility conditions</i>	The conditions are described in General Annex A.
<i>Eligibility conditions</i>	The conditions are described in General Annex B.
<i>Financial and operational capacity and exclusion</i>	The criteria are described in General Annex C.

¹³ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.

The Director-General responsible may delay the deadline(s) by up to two months.

All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

¹⁴ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Horizon Europe - Work Programme 2025
Widening participation and strengthening the European Research Area

<i>Award criteria</i>	The criteria are described in General Annex D.
<i>Documents</i>	The documents are described in General Annex E.
<i>Procedure</i>	The procedure is described in General Annex F.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G.

Call - Hop-on facility

HORIZON-WIDERA-2025-03

Overview of this call¹⁷

Proposals are invited against the following Destinations and topic(s):

Topics	Type of Action	Budgets (EUR million)	Expected EU contribution per project (EUR million) ¹⁸	Indicative number of projects expected to be funded
		2025		
Opening: 06 May 2025 Deadline(s): 04 Sep 2025				

¹⁷ The Director-General responsible for the call may decide to open the call up to one month prior to or after the envisaged date(s) of opening.
The Director-General responsible may delay the deadline(s) by up to two months.
All deadlines are at 17.00.00 Brussels local time.

The budget amounts are subject to the availability of the appropriations provided for in the general budget of the Union for 2025.

¹⁸ Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

Destination: Improved access to Excellence

Introduction

The ERA Communication established the need to improve access to excellence as one of the four main strategic goals. Striving towards excellence requires a stronger R&I system where best practice is disseminated faster across the European Union.

The European Union's R&I system needs to promote a more inclusive approach in which all can participate and from which all can benefit. Existing disparities between R&I leading and lagging countries should be tackled by introducing structural policy reforms. Closer links between research and innovation and institutional cooperation to produce high-quality knowledge are key to help bridge these disparities. By building on their excellence pockets and connecting them to broader networks of excellence less R&I advanced countries will be able to upgrade their R&I systems, making them stronger and allowing the European Union as a whole to advance together.

This destination will address “improving access to excellence” through a portfolio of complementary actions that aim to build up R&I capacities in widening countries, as well as through national and regional R&I reforms and investments, to enable them to advance to the competitive edge at European and international level. It will contribute to the development of a pan European innovation ecosystem and thus to innovation.

The **European Excellence Initiative (EEI)** addresses disparities in the performance of the European university sector by raising the overall level of excellence of research undertaken in higher education entities in European University alliances and beyond with a centre of gravity in widening countries.

The **EIC Pre-accelerator** call aims to boost the innovation potential of early-stage deep-tech startups in widening countries by enhancing their business, investor, and technology readiness to secure funding from the EIC Accelerator or other sources. The goal is to increase the competitiveness and investment appeal of these startups, facilitating their scale-up and market entry.

A call on **Implementing co-funded action plans for connected regional innovation valleys in widening countries** will improve the engagement of widening actors with the New European Innovation Agenda's flagship on *accelerating and strengthening innovation in European Innovation Ecosystems across the EU and addressing the innovation divide*. This action is intended to create connected regional innovation valleys across the European Union, with special focus on regions within the country group with lower research and innovation performance (widening countries).

The **Hop-on Facility** will open the opportunity for new participants from widening countries to join ongoing RIA projects under pillar 2 and the EIC pathfinder projects of Horizon Europe that have not yet any partner from a widening country.

The **Policy Platform for enlargement countries** will ensure continuation of the ongoing initiative for policy support to the Western Balkan countries and extend its geographical scope to enlargement countries.

In addition, particular attention will be paid to cross-cutting objectives set for Horizon Europe, such as gender equality and open science practices, through the different funded actions.

Expected impact

Proposals for topics under this destination should set out a credible pathway to contributing to improved access to excellence, and more specifically to one or several of the following impacts:

- Increased science and innovation capacity for all actors in the R&I system in widening countries;
- Mobilisation of national and EU resources for strategic investments;
- Higher participation success in Horizon Europe;
- Raised excellence of research undertaken in the higher education sector in widening countries;
- More inclusive consortia under pillar 2 and EIC pathfinder;
- Improved business opportunities for deep tech SMEs and start ups in widening countries
Interconnected, inclusive, and more efficient innovation ecosystems across the European Union;
- Greater involvement of regional actors in the R&I process;
- Improved outreach to international level for all actors;
- Improved innovation culture and opportunities for start-ups and SMEs in widening countries.

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2025-01-ACCESS-01: European Excellence Initiative (EEI)

Call: European Excellence Initiative (EEI)	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.00 and 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 80.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>In order to achieve the expected outcomes, participation as coordinators to the call is limited to legal entities established in Widening countries.</p> <p>Applications must be submitted by a consortium, including as beneficiaries, at least three independent legal entities, in three different EU Member States or Horizon Europe Associated Countries.</p>
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>The following rules for dealing with ex-aequo applications apply: in the first place, ex-aequo proposals will be prioritised according to geographical diversity criteria, defined as proposals with coordinators established in a Widening Country, not otherwise represented as coordinator higher up the ranking list. The method described in Points 1), 2), 3) and 5) of General Annexes Part F (Procedure/Evaluation procedure and ranking) will then be applied to the remaining equally ranking proposals in the group. This rule establishing the priority order serves to better spread the impact of the action and to strengthen the efficiency of the ‘Widening participation and spreading excellence’ programme.</p>

Expected Outcome: According to the recent report on the future of European competitiveness by Mario Draghi (published in September 2024)²⁵, ‘the EU boasts an excellent university system on average, but its presence among the top world-leading research universities is limited’. The EU higher education system is quite inclusive and provides a high level of education and training to a significant portion of its young people. However, there are very large differences among European universities, and some perform very well in many respects. This action addresses this challenge by dedicated measures to reduce these disparities by raising the overall level of excellence of research undertaken in higher education entities.

Furthermore, this action contributes to the implementation of the European strategy empowering higher education institutions for the future of Europe²⁶ of 5 April 2022 and the ERA Policy Agenda 2022-24²⁷; ERA action 13: Empower higher education institutions to develop in line with ERA, and in synergy with the European Education Area.

The objectives of this action are to:

²⁵ https://commission.europa.eu/topics/strengthening-european-competitiveness/eu-competitiveness-looking-ahead_en

²⁶ https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=OJ%3AJOC_2022_167_R_0003

²⁷ <https://data.consilium.europa.eu/doc/document/ST-14308-2021-INIT/en/pdf>

- Raise excellence in science and in knowledge valorisation through deeper and geographically inclusive strategic cooperation in alliances of higher education institutions, such as – but not limited to – European Universities alliances selected under Erasmus+, with a center of gravity in Widening countries;
- Improve global competitiveness and visibility of Europe’s higher education institutions, creating critical mass in key strategic areas stipulated in the political guidelines for the next European Commission published in July 2024²⁸ such as the Clean Industrial Deal, the Energy Union, digital tech diffusion, artificial intelligence, the upcoming European Life Science strategy, Union of Skills, etc.;
- Improve researchers career opportunities in line with the ERA policy agenda 2022-24, promoting a balanced circulation of talents, fair and modern research assessment practices in line with the Agreement on Reforming Research Assessment²⁹, diversity, gender equality and inclusiveness, use of open science practices as well as the acquisition of transferable skills.

Proposals are expected to contribute to the following outcomes:

- Modernisation and upgrade of higher education institutions in the R&I dimension, through integrated collaboration between institutions and with other actors in local ecosystems and/or internationally;
- Mainstreamed culture of excellence in science and knowledge valorisation amongst higher education institutions, and particularly in less research-intensive institutions and countries, in particular Widening countries;
- Accelerated institutional reforms in the R&I dimension and strengthened R&I capacities in higher education institutions, notably those located in Widening countries, in particular leading to better research careers including in non-academic sectors;
- Strengthened digital skills and capacities including artificial intelligence of the R&I dimension of the higher education sector;
- Increased global competitiveness and critical mass of research in the European higher education system;
- Contribution to implementation of the relevant ERA Policy Agenda 2022-24 actions in higher education sector (Action 13: Empower higher education institutions and actions 1 to 9 under the header ‘Deepening a truly functioning internal market for knowledge’, where relevant).

²⁸ https://commission.europa.eu/document/download/e6cd4328-673c-4e7a-8683-f63ffb2cf648_en?filename=Political%20Guidelines%202024-2029_EN.pdf

²⁹ https://coara.eu/app/uploads/2022/09/2022_07_19_rra_agreement_final.pdf

Scope: The European Excellence Initiative in its widening dimension aims to raise excellence in science and in knowledge valorisation of Europe's universities through cooperation. The action will engage with universities and empower them further to be actors of change in R&I.

By developing closer cooperation with economic and industrial partners within local and regional innovation ecosystems, academic researchers and support staff will be provided the opportunity to be trained in knowledge valorisation, entrepreneurship, access to finance, at any stage of their careers, and to take into account the variety of academic activities in their career assessment.

Cooperation of universities will be supported to create critical R&I mass and pursue specific objectives that contribute to accelerating key R&I areas of own choice with strategic relevance for the European Union.

The European Excellence Initiative in its widening dimension is, in terms of scope, open to any network or alliance of higher education institutions, such as – but not limited to – European Universities alliances selected under Erasmus+. In case of participation in this call such alliances may be represented by limited number of their members and may include entities outside the alliance for specific themes to pursue the objectives of this call especially in view of industrial co-operation and/or outreach to regional innovation ecosystems. Under this call the centre of gravity of the action is in Widening countries. Applicants are expected to convincingly demonstrate this geographical focus conceptually and by allocation of the major share of the budget (at least 51%) to participants from Widening countries.

Activities need to focus on research and innovation conducted in the higher education sector. Educational activities such as Master or doctoral programmes are out of scope of this call.

Projects should contribute to the implementation of ERA Policy Agenda priorities at the participating higher education institutions, notably the strengthening of research careers in academia and the reform of the assessment system for research and related careers;

Applicants are encouraged to implement the aforementioned European Research Area policy objectives and to consolidate institutional changes by means of a coherent package of activities structured into the following modules (underpinned with non-exhaustive examples of related activities):

1. Institutional modernisation and reforms

- Introduction of modern research assessment practices, in line with the Coalition for Advancing Research Assessment (CoARA);
- Application of modern management practices including improved research management and administration (RMA);
- Promoting interdisciplinary research entities.

2. Upskilling of research, technical and management staff

- Exchange of academic and non-academic staff for sharing good practices;
- Training and capacity building for research and innovation management including IPR and application of open science practices;
- Entrepreneurial and communication training.

3. Development of research excellence

- Sharing R&I capacities including infrastructures;
- Developing joint strategic R&I agendas;
- Seed R&I projects to test R&I agendas, explore new joint research stands and consolidate partnership.

4. Digital transformation

- Introduction of AI techniques in science and management;
- Concept studies for upgrading digital infrastructure;
- Data science and management.

5. Outreach

- Linkages with inspiring local/regional innovation ecosystems including industry;
- Engaging with citizens, cities, regions and other non-academic actors;
- Development of internationalisation strategies and partnerships.

Proposals should address at least four of the above modules and may propose concrete activities different to the examples given in the list above as long as they are in line with the objectives of this call.

Expenditures for research and innovation activities (see third activity under point 3, such as seed funding for collaborative research projects) cannot exceed a maximum of 20% of the total budget and need to be presented in a dedicated and distinct work package in the proposal.

The actions should envisage a duration appropriate to the ambition and complexity of the alliance of higher education institutions. The duration should not exceed 5 years.

HORIZON-WIDERA-2025-02-ACCESS-01: EIC pre-accelerator - Widening

Call: EIC pre-accelerator - Widening
Specific conditions

Horizon Europe - Work Programme 2025
Widening participation and strengthening the European Research Area

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.30 and 0.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 20.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Applications may only be submitted by one legal entity (mono-beneficiary).</p> <p>The following additional eligibility criteria apply:</p> <p>Beneficiaries must be a small and medium enterprise (SME) established in a Horizon Europe Widening country.</p>
<i>Award criteria</i>	<p>The criteria are described in General Annex D. The following exceptions apply:</p> <p>The following additions to the general award criteria apply:</p> <p>The proposals will be evaluated by 3 independent evaluators following the award criteria for EIC Transition Open at first evaluation step, EIC Work Programme 2025³⁰. These are:</p> <p>Excellence (Threshold: 4/5)</p> <p>Technological breakthrough: Does the technology have a high degree of novelty and higher performance compared to other technologies available or in development? Does the technology indicate high commercial potential?</p> <p>Objectives: How credible and feasible are the objectives for the planned technology development and maturation? How credible and feasible are the objectives and KPIs for the planned business development process?</p> <p>Methodology: Is the timing right for this technology/innovation (i.e., feasibility, minimum technological readiness level (TRL), unique selling points)?</p> <p>Impact (Threshold: 4/5)</p> <p>Credibility of the impacts: To what extent the expected commercial impact(s) described in the proposal are credible and substantial within</p>

	<p>the project and beyond (e.g., one or several sectors, setting new standards, etc.)?</p> <p>Economic and/or societal benefits: To what extent does the proposed innovation have scale up potential including high capacity to gain or create new European or global markets? To what extent is the proposed innovation expected to generate positive impacts for the European Union, Member States or Associated Countries (e.g., strategic autonomy, employment etc.)?</p> <p>Investment readiness and go to market strategy: To what extent the proposal and its activities contribute to make the technology and the team investment ready (including through IP protection and market validation)? Is there a well-defined and convincing go-to -market strategy and pathway, including what regulatory approvals may be needed (if relevant), time to market, possible business and revenue model?</p> <p>Quality and efficiency of the implementation (Threshold 3/5)</p> <p>Quality and motivation of the team: To what extent does the (project) team have the necessary high-quality capabilities and high motivation to move decisively towards market. To what extent does the applicant have the necessary expertise to create a unique commercial value from the emerging technology and develop an attractive business and investment proposition?</p> <p>KPIs and Milestones: Are both milestones and KPIs present, relevant and clearly defined (measurable, timed, comparable etc.) to track progress along the pathway towards objectives? Have the main risks (e.g., technological, market, financial etc.) been identified, together with measures to mitigate in order to achieve the project objectives?</p> <p>Workplan and allocation of resources: How appropriate and effective is the allocation of resources (person-months and equipment) between work packages?</p> <p>The following rules for dealing with ex-aequo applications apply: in the first place, ex-aequo proposals will be prioritised according to geographical diversity criteria, defined as proposals with coordinators established in a Widening Country, not otherwise represented as coordinator higher up the ranking list. The method described in Points 1), 2), 3) and 5) of General Annexes Part F (Procedure/Evaluation procedure and ranking) will then be applied to the remaining equally ranking proposals in the group. This rule establishing the priority order serves to better spread the impact of the action and to strengthen the</p>
--	---

	efficiency of the ‘Widening participation and spreading excellence’ programme.
<i>Procedure</i>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>Seals of Excellence will be awarded to applications exceeding all of the evaluation thresholds set out in this work programme but which cannot be funded due to lack of budget available to the call.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>The funding rate is 70 % of the eligible costs.</p> <p>Eligible costs will take the form of a lump sum as defined in the Decision of 7 July 2021 authorising the use of lump sum contributions under the Horizon Europe Programme – the Framework Programme for Research and Innovation (2021-2027) – and in actions under the Research and Training Programme of the European Atomic Energy Community (2021-2025). ³¹.</p>

Expected Outcome: This call will increase the innovation potential of deep-tech startups in the widening countries and enable them to better attract private investments and scale up. It will further strengthen the innovation dimension of the widening component and increase the overall competitiveness of these countries.

The specific outcome expected of this action is increased business, investor, and technology readiness of high potential deep-tech startups in widening countries to a level where they will:

1. be successful in applying and attracting the EIC Accelerator funding and/or;
2. manage to secure other private investment and/or;
3. attract successfully national or regional funding as alternative funding sources (e.g. through Seal of Excellence programmes).

Scope: This action focuses on early-stage deep-tech startups which 1) have high-impact innovation technology, product, service, or business model that could create new markets or disrupt existing ones, and 2) have the ambition and commitments to scale up.

The successful applicants need to work on deep tech innovation. Such companies often struggle to attract financing because the technology and investment risks are too high.

³¹ This [decision](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf) is available on the Funding and Tenders Portal, in the reference documents section for Horizon Europe, under ‘Simplified costs decisions’ or through this link: https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/guidance/ls-decision_he_en.pdf

In the framework of this call, **deep-tech**³² is technology that is based on cutting-edge scientific advances and discoveries and is characterised by the need to stay at the technological forefront by constant interaction with new ideas and results from the lab. Deep-tech innovations are understood to be those that have the potential to deliver transformative solutions, rooted in cutting-edge science, technology, and engineering, including innovation that combines advances in the physical, biological and digital spheres. Deep-tech is distinct from ‘high-tech’ which tends to refer only to R&D intensity³³.

This EIC Pre-accelerator - Widening call is designed to enable promising deep-tech startups to develop further their innovations (from TRL 4 to TRL 5/6)³⁴, attract the investment amounts needed for scale up in a shorter timeframe and successfully apply and attract funding from EIC Accelerator or other sources.

The applicants are expected to demonstrate in their application that they:

- have developed technology validated in the lab (at least TRL 4);
- possess the necessary Intellectual Property Rights to ensure freedom to operate and adequate protection of the idea;
- have a clear vision on the intended pathway and route to market. This includes specific milestones together with concrete and verifiable KPIs to assess progress towards the market.

The support will be awarded by grants max at 70% funding of the eligible costs. 30% co-funding to be covered by the beneficiary through its own resources.

An amount between EUR 300.000 and max EUR 500.000 in the form of a lump sum for a period of up to 2 years is considered appropriate.

Seal of Excellence will be awarded to all proposals that meet the evaluation thresholds but are not funded due to lack of available budget.

The requested grant is expected to be used for:

- addressing the investor and market readiness towards commercialisation and deployment (market research, value proposition, business case and business model, prospects for growth, intellectual property protection, competitor analysis etc.) and if relevant, aspects of regulation, certification and standardisation, aimed at getting both the technology and the business idea investment ready **and/or**;

³² Deep-tech ventures have the following characteristics: positioning at the knowledge frontier with long and uncertain R&I cycles; relates to tangible products and industrialisation processes; linked to the ecosystem and especially higher education institutions, problem orientated, or mission driven, focused on the creation of an option space and a dynamic de-risking cycle.

³³ Ratio of a firm's R&D investment to its revenue.

³⁴ Completed TRL 5 (Technology validated in relevant environment – industrially relevant environment in the case of key enabling technologies) or TRL6 (Technology demonstrated in relevant environment - industrially relevant environment in the case of key enabling technologies). For more information, see [EIC Work Programme 2025](#).

- the maturation and validation of novel technologies beyond proof of concept to viable demonstrators of the technology in the intended field of application (i.e., from minimum TRL 4 up to TRL 6).

At the end of the EIC Pre-accelerator project, it needs to:

- demonstrate that the technology component of their innovation has been tested and validated in a laboratory and other relevant environment (e.g. at least completed all aspects of TRL 5);
- be ready to apply for EIC Accelerator and/or to seek other investors or sources of funding, to enter licensing or collaboration agreements with third parties, or other routes to market deployment.

Successful applicants and those awarded the Seal of Excellence will be granted free access to the EIC Business Acceleration Services³⁵, such as coaching and specific events tailored to their needs (e.g. for improving investor and market readiness).

This will be complemented by access to the EIC Accelerator Fast Track³⁶ for submissions to the Accelerator programme following a project review in the second half of the project.

HORIZON-WIDERA-2025-03-ACCESS-01: Hop-on facility

Call: Hop-on facility	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.20 and 0.60 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 40.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply:</p> <ol style="list-style-type: none"> 1. The proposal must include only: <ul style="list-style-type: none"> • One legal entity, as a beneficiary, established in a Widening country. • One legal entity which is the coordinator of an ‘eligible already

³⁵ See EIC Work Programme 2025. More information is available also here: https://eic.ec.europa.eu/eic-funding-opportunities/business-acceleration-services_en.

³⁶ See Annex 3 Fast Track scheme to apply for the EIC Accelerator, [EIC Work Programme 2025](#).

	<p>funded action'.</p> <p>2. The proposal must be submitted by the coordinator of the 'eligible already funded action'. No more than 10% of the maximum grant amount can be allocated to the coordinator as a coordination fee for the integration of the new widening beneficiary. No less than 90% of the max grant amount must be allocated to the Widening beneficiary.</p> <p>An 'eligible already funded action' refers to an action stemming from a Horizon Europe grant agreement that also meets the following conditions:</p> <ol style="list-style-type: none"> 1. No legal entity established in a Widening Country is already a beneficiary, affiliated entity or associated partner in the Horizon Europe grant agreement. 2. At the time of submission of the proposal (and for any grant agreement signature), the granting authority of the Horizon Europe grant agreement is the European Commission or an Executive Agency. 3. The Horizon Europe grant agreement was awarded to Horizon Pillar II 'main' Work Programme or EIC Pathfinder collaborative R&I actions. 4. <i>The first reporting period of the Horizon Europe grant agreement is ongoing at the submission deadline. Furthermore, the ongoing grant agreement is between 1 to 12 months from its starting date by the submission deadline.</i>
<p><i>Procedure</i></p>	<p>The procedure is described in General Annex F. The following exceptions apply:</p> <p>In the first place, ex-aequo proposals will be prioritised according to geographical diversity criteria, defined as proposals with the additional beneficiary established in a Widening Country, not otherwise represented as a beneficiary higher up the ranking list. The method described in Points 1), 2), 3) and 5) of General Annexes Part F (Procedure/Evaluation procedure and ranking) will then be applied to the remaining equally ranking proposals in the group. This rule establishing the priority order serves to better spread the impact of the action and to strengthen the efficiency of the 'Widening participation and strengthening the European Research Area' programme.</p> <p>If the proposal is successful, the next stage of the procedure will be grant agreement amendment preparations.</p> <p>If the outcome of amendment preparations is an award decision, the coordinator of the consortium of the eligible already funded action will be</p>

	invited to submit an amendment to the grant agreement, on behalf of the beneficiaries.
--	--

Expected Outcome: The Hop-on Facility allows for legal entities from low R&I performing countries to join already funded Horizon Pillar II ‘main’ Work Programme and EIC Pathfinder collaborative R&I actions, subject to the agreement of the respective consortium and provided that legal entities from such countries are not yet participating as beneficiary, associated partner, or affiliated entity. The scheme aims to improve the inclusiveness of Horizon Europe. Selected consortia will be invited to submit a grant agreement amendment request of the eligible already funded action.

Project results are expected to contribute to the following outcomes:

- At system level, it mobilises excellence in the Widening countries, increases visibility of the beneficiaries from the widening countries, improves knowledge circulation, and reduces lack of participation of the widening countries in specific thematic domains;
- At consortium level, it opens up established networks to new connections and partnerships, improves research excellence of the Widening country’s institutions in specific fields, enlarges outreach of the participants’ R&I actions and provides access to new talent pools;
- At the level of the Widening beneficiary, new competencies and skills for working in transnational projects including research management and dissemination and exploitation are acquired.

Scope: The Hop-on Facility integrates one additional beneficiary from a Widening country to an ongoing project under Pillar 2 or the EIC pathfinder scheme who contributes a relevant task, work package or another visible and distinguishable activity.

Applications must demonstrate the R&I added value of the new beneficiary for the eligible already selected action. The proposal should include a detailed description of the profile of the new beneficiary and its R&I role and complementarity in the existing project.

The additional beneficiary and activities should be presented in a dedicated proposal template with the Description of the Action (DoA) of the ongoing action uploaded as an annex. In case of a successful evaluation, the consortia (coordinator) of the eligible already funded action (i.e. relevant existing grant agreement) will be invited to submit an amendment request for accession of the Widening beneficiary, modification of the description of the action. If budget is reserved for the coordinator, the proposal should justify the amounts in terms of integration efforts for the new participant.

HORIZON-WIDERA-2025-04-ACCESS-01: Support for R&I policy making in the EU enlargement countries

Call: Support for R&I policy making in the EU enlargement countries	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The coordinator must be a legal entity established in a Widening country. At least 50% of the budget must be allocated to beneficiaries established in Widening countries.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>

Expected Outcome: The actions funded under this topic will provide support to national and regional R&I and education³⁷ initiatives in line with the objectives of the Widening programme component by pooling resources and contributing to the alignment of national and regional research, innovation, and education policies for the countries Albania, Bosnia and Herzegovina, Georgia, Kosovo³⁸, Moldova, Montenegro, North Macedonia, Serbia, Türkiye, and Ukraine hereinafter named enlargement countries³⁹.

Project results are expected to contribute to the following expected outcomes:

- If relevant, support the Western Balkans Steering Platforms for Research and Innovation, Education and Training, and Culture as valuable instruments of policy

³⁷ Education initiatives refer to those that contribute to further deepening and integrating in the ERA and NEIA.

³⁸ This designation is without prejudice to positions on status and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

³⁹ https://neighbourhood-enlargement.ec.europa.eu/enlargement-policy_en: Albania, Bosnia and Herzegovina, Georgia, Kosovo, Moldova, Montenegro, North Macedonia, Serbia, Türkiye, Ukraine.

dialogue with the region (incl. support to the annual Ministerial meeting of the Western Balkans Steering Platforms);

- If relevant, facilitate the implementation of the Western Balkans Agenda on Innovation, Research, Education, Culture, Youth and Sport, in line and through synergies with the Growth plan for the Western Balkans⁴⁰, the Growth Plan for Moldova⁴¹ and the Ukraine Plan⁴² as regards human capital development, including research and innovation;
- Foster the further integration of the enlargement countries into the European Research Area and into the European Innovation Area:
 - o Highlight the strategic importance of the enlargement countries and facilitating actions aiming to support the region's EU integration process, in the area of research and innovation;
 - o Aim to promote regional economic growth and prosperity through planned investments, to be directed towards game-changing innovations and actions that create a sustainable and human centric development and digital future. Support the ongoing process of reforming research and innovation eco-systems with more and better opportunities for capacity building;
 - o Contribute to the closer integration of the enlargement countries with the EU's priorities, most notably the Green Deal, the digital transformation, including, if relevant, the enhancement of ICT and digital skills along the lines of the Digital Agenda for the Western Balkans and the renewed Digital Education Action Plan with an emphasis on research and innovation, and knowledge transfer;
 - o Contribute to reducing the divide in the innovation performance with the EU through targeted actions aiming at increasing the countries' performance in the European Innovation Scoreboard;
- Provide support to the accession process and facilitate the further integration of enlargement countries into relevant European programmes;
- Identify common priorities agreed among the participating national and regional R&I eco-systems, taking into account international developments where relevant;
- Contribute to joint initiatives, resulting in the funding of regional innovation actions, design/implement a portfolio of complementary actions which would enable stakeholders from enlargement countries and policy makers to better internationalise and integrate into EU R&I actions and policy making;

⁴⁰ COM(2023) 691 final <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=COM:2023:691:FIN>

⁴¹ COM (2024) 470 final <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52024DC0470>

⁴² OM (2022) 233 final IMMC.COM%282022%29233%20final.ENG.xhtml.1_EN_ACT_part1_v6.docx

- Implement and financially support other joint activities supporting R&I, regulatory or societal uptake of results.

Scope: Research and innovation play an important role in tackling challenges but also in ensuring a sustainable and inclusive growth while boosting the resilience of production sectors, the competitiveness of economies, and the transformation of the socio-economic systems across Europe. The enlargement countries are trying to advance in the fields of Research, Development and Innovation (RDI). Closer links between research and innovation, and institutional cooperation to produce high-quality knowledge, underpinning economic and societal solutions are paramount to help bridging the R&I gap between the EU Member States and enlargement countries. Actions stemming from this call will foster capacity building efforts in enlargement countries to advance R&I eco-systems, improve the Technology Transfer Process, promote networking of and access to excellence, thus optimising the participation in and impact of Horizon Europe (and successor programme) across the region. Activities from this call will strengthen and foster the development of the human capital base in the region, they will promote the establishment of open, inclusive and responsible national research and innovation eco-systems, support institutional reform through the development of inclusive gender equality plans in line with Horizon Europe and the ERA objectives, as well as support evidence-based policy making.

Underpinning the Western Balkans Agenda on Innovation, Research, Education, Culture, Youth and Sport, this action will foster a comprehensive policy approach, while seeking synergies across the entire Horizon Europe and related EU funding programmes. An action funded under this call will support the coordination and synchronised interaction among a multitude of instruments and programmes targeting enlargement countries in the fields of R&I. This should not only facilitate an increased participation of entities from enlargement countries in relevant European funding programmes, but also create economies of scale, complementarity, synergies, and avoid overlapping of actions.

An action stemming from this topic will support a platform for the co-ordination of various services addressing research, and innovation in enlargement countries in their programming and implementation. All these areas are key for finding new solutions to the challenges we are facing across the region. The actions should also aim to support the implementation of people-to-people cooperation projects with and within enlargement countries, supporting partnerships between higher education institutions as well as creative professionals and industries and European incubation networks for creativity-driven innovation.

This action aligns with ERA and Widening objectives in that it aims to strengthen links with EU partners and opens EU networks, contributes to improving research and innovation management capacities in enlargement countries, and it supports national policy reforms through targeted actions. A key element in this is the support to the development and implementation of Smart Specialisation Strategies and macro-regional strategies in cooperation with the JRC and the Policy Support Facility.

Initiatives in the fields of research, innovation, and skills development create new opportunities, reduce the skills mismatch, support sustainable economic growth, the

competitiveness of businesses and industries and the intercultural dialogue, help to tackle climate change, enable digital transformation, and provide better public services for all Europeans.

HORIZON-WIDERA-2025-05-ACCESS-01: Implementing co-funded action plans for connected regional innovation valleys in widening countries

Call: Implementing co-funded action plans for connected regional innovation valleys in widening countries	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 5.00 and 8.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 24.00 million.
<i>Type of Action</i>	Programme Co-fund Action
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>This action requires the participation, as beneficiaries, of at least three (3) national or regional authorities, from at least three (3) different Member States or Associated Countries, of which at least (2) two from a widening country and one (1) from a non-widening country. The action also requires that among the national or regional authorities participating as beneficiaries, at least one (1) is from a ‘moderate’ or ‘emerging’ innovator region and at least one (1) is from a ‘strong’ or ‘innovation leader’ region.</p> <p>The co-ordinator of the project must be established in a widening country and the major share of the budget has to be allocated to participants from widening countries.</p> <p>The Regional Innovation Scoreboard is taken as a reference, and in the case of national authorities, the European Innovation Scoreboard. The applicants must use as a reference the latest version of the documents mentioned above at the time of the call opening. Associated Countries which are not included in the European Innovation Scoreboard and are ranked below 25 on the latest Global Innovation Index are considered as ‘moderate’ or ‘emerging’ innovators. In cases of Associated Countries not included in any of the previously mentioned references, the participation rank of the country in the Horizon Europe programme</p>

	<p>(Horizon Europe country profile) will be taken as a reference and countries ranked below the average will be considered as ‘moderate’ or ‘emerging’ innovators.</p> <p>The consortium must allocate at least 50% of their total eligible costs to financial support to third parties and/or to the implementation of the PCP or PPI procurements.</p> <p>The consortium must provide a single letter of intent at the moment of submission of the proposal indicating the source of the required 50% of complementary funding (e.g. national and/or regional funding, EU funding, or private investments).</p> <p>Subject to restrictions for the protection of European communication networks.</p>
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants.</p> <p>The maximum amount to be granted to each third party is EUR 600.000. This amount is justified since the cascading grants will support concrete interregional projects to be undertaken by research and innovation entities. Due to the nature of these projects (e.g. development or deployment of technological innovations) a threshold lower than EUR 600.000 would constitute an obstacle to establishing effective collaborations.</p> <p>The funding rate is 50% of the total eligible costs.</p> <p>Grants awarded under this topic will have to submit the following deliverable(s): Annual work plans subject to approval by the Commission. For the first year, the annual work plan needs to be submitted together with the respective proposal.</p>

Expected Outcome: In line with the New European Innovation Agenda’s⁴³ flagship on *accelerating and strengthening innovation in European Innovation Ecosystems across the EU and addressing the innovation divide*, this action is intended to create connected regional innovation valleys across the European Union (EU), involving regions with lower innovation performances, by building on strategic areas of regional strength and specialisation (defined in their smart specialisation strategies), in support of key EU priorities. Regions represented by successful applicant national or regional authorities under this call will be recognised as “regional innovation valleys”.

⁴³ [A New European Innovation Agenda COM\(2022\) 332 final](#)

Projects results are expected to contribute to all of the following expected outcomes:

- Efficient, inclusive and interconnected innovation ecosystems across the EU in line with the New European Innovation Agenda, building on their diversities and complementarities, enhancing the joint definition of visions and strategies, involving actors from across the quadruple helix⁴⁴, based notably on their respective national/regional smart specialisation strategies, and strengthening their efficiency and potential to innovate;
- Enhanced synergies, complementarities and cooperation among European innovation ecosystems around strategic areas, technologies and challenges of common European interest, designing projects building on Smart Specialisation Strategies and, where applicable, on the, participation in, for example, Excellence Hubs⁴⁵, Digital Innovation Hubs⁴⁶, Hubs for Circularity⁴⁷, Circular Cities and Regions Initiative⁴⁸, Climate-Neutral and Smart Cities Mission⁴⁹, Hydrogen Valleys⁵⁰, Renewable Energy Valleys⁵¹ and Industry 5.0 System Innovation Hubs⁵²;
- The creation of common knowledge assets within regional innovation valleys, and support to their cross- border connectedness; including, for example, competitive advantages to strengthen their capacity for enhanced quality of their R&I ecosystems⁵³, (e.g. biotech health security and biotech for food systems, applicability of bioeconomy sustainability principles in regional case studies, as described in the concept note on Regional Innovation Valleys for Bioeconomy and Food Systems⁵⁴);
- Increased innovation capabilities, including in deep tech, in Member States and Associated Countries, allowing innovators to bring their ideas to the market and enable innovations to be scaled up at EU level, and facilitating the link with the private sector, public and private buyers of innovative solutions and other research and innovation actors;

⁴⁴ Ecosystem quadruple helix model requires the collaboration of academia, business, regional government and societal actors.

⁵³ Available online:

⁵⁴ To check at finalization: Reference to HORIZON-CL6-2025-03-GOVERNANCE-04: Operationalisation of bioeconomy sustainability principles and [Concept of Regional Innovation Valleys for Bioeconomy and Food Systems](#)

- Better links between innovation 'leaders' and 'strong' innovator regions with 'moderate' and 'emerging' innovator regions across the EU and Associated Countries⁵⁵;
- More innovation co-investments, mobilising other funding instruments, including European, national or regional public funds and/or other private funds, to complement Horizon Europe support;
- Increased participation of all innovation ecosystems actors across EU territories in technology and industrial value chains (existing and emerging ones) relevant to the EU twin green and digital transition to achieve broader sustainability, the EU's open strategic autonomy and competitiveness⁵⁶.

Scope: The aim of this topic is to foster the creation of efficient, open, inclusive and interconnected European innovation ecosystems in line with the New European Innovation Agenda, notably in thematic/technological areas (including deep tech) that will be critical for EU value chains.

It will also contribute to the twin green and digital transition and a resilient society, and to the net-zero objective⁵⁷, particularly in the areas of reducing reliance on the fossil fuels, increasing global food security, mastering the digital transformation (including cybersecurity and Artificial Intelligence), improving healthcare, and achieving circularity.

The topic will support strategically oriented long-term programmes of activities (Annual Work Programmes) to enable authorities in charge of public national or regional innovation policies or programmes with the participation of the private sector and research and innovation actors, to implement joint activities towards innovation development and deployment, possibly including innovation procurement, aimed at tackling challenges at EU, national and regional level.

The applicants are encouraged to consider a project duration of three to five (3-5) years and proposals should:

- Present the applicants' respective commitment to enhance the coordination and directionality of their research and innovation (R&I) investments and policies, their joint strategic visions, and their proposed joint innovation programme of activities; before the proposal submission the participants should have already selected a thematic/technological area and reached an agreement on what they want to achieve, in order to be able to present concrete action plans; the plans can be further detailed on an annual basis during the implementation of the projects;

⁵⁵ References available online: [Regional Innovation Scoreboard \(RIS\)](#), [European Innovation Scoreboard \(EIS\)](#), [Global Innovation Index \(GII\)](#);

⁵⁶ Aligned with the Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions "The 2024 Annual Single Market and Competitiveness Report", COM(2024)77: [EUR-Lex - 52024DC0077 - EN - EUR-Lex \(europa.eu\)](#)

⁵⁷ Available online: [The Green Deal Industrial Plan \(europa.eu\)](#)

- Describe the activities necessary, the process that will be followed, and the research and innovation assets that will be mobilised; activities should be open, clear, realistic, impact-oriented and ensure:
 - o Participation of private actors, either for the joint implementation of proposed activities, and/or their possible co-funding; for example, via links and cooperation with innovative SMEs, start-ups, industry, private entities supporting innovation and innovators, including clusters, associations, as well as investors and foundations;
 - o Complementarity and synergies with other funds (EU, public, and/or private) and innovation-related strategies/policies/programmes/plans at national and/or regional level, including their smart specialisation strategies, and where relevant, the participation in other relevant programmes. Applicants should outline the scope for synergies and/or additional funding, in particular, where this makes the projects more ambitious or increases their impact and expected results.
- Explain the need and the reasons for selecting the proposed Annual Work Programmes that should be scalable at European level and demonstrate their strong EU added value; Annual Work Programmes should:
 - o Include clear steps: (1) capacity building activities, including information exchange and common guidelines; (2) setting common strategy and joint work/action plans; (3) concrete joint activities (including staff exchange, visits, etc.); leading to (4) concrete joint innovation actions (design and implementation of joint funding programmes/calls to select interregional innovation projects).
 - o Include the provisions and modalities for the competitive selection and funding (joint open calls implemented via financial support to third parties - FSTP) of at least three interregional innovation projects in the selected thematic/technological area, including deep tech, linked to key EU priorities:
 - These interregional projects are expected to be similar to HE Innovation Actions or close to market actions (TRL 6-8) and should focus on the development and/or deployment of technologies and innovations, including breakthrough and disruptive, through cooperation between research and innovation actors from the participating regions;
 - These interregional projects can also involve the implementation of a Pre-Commercial Procurement (similar as in Horizon Europe PCP grant actions, arriving also to TRL 8) or a Public Procurement of Innovative solutions (similar as in HE PPI grant actions, arriving to TRL 8). In this case the procurements should be implemented in cooperation between public procurers from the participating regions;

- Each of these interregional projects should aim to deliver concrete and tangible outcomes during the project implementation, and ensure their dissemination and exploitation;
- These interregional projects should be managed in a coordinated manner, as a portfolio of projects, and should identify and establish links among the projects and with other relevant EU, national or regional projects in similar thematic/technological area (horizontal integration) or complementary areas (vertical integration) with a view to integrate into and contribute to existing or emerging value chains.
- o Include a consistent set of core collaborative activities, for example: networking and coordination structures and tools to facilitate innovation development and access to and sharing of best practices, resources, research/technology infrastructures, talents, markets, expertise, services or knowledge, including open and collaborative knowledge bases and common knowledge assets (methods, data, processes);
 - Support to interconnections between innovation hubs/local pockets of excellence; market analysis, development and activities towards better access to new markets and finance for innovative SMEs and start-ups;
 - Training and skills development; interconnection of open innovation infrastructures; supportive activities towards scale up, exploitation and dissemination of innovative solutions;
 - Reinforcing public and private buyers' capacity to procure innovative solutions; Networking of and assistance to public and private procurers to facilitate the implementation of joint or coordinated innovation procurement initiatives;
 - Enhancing place-based social cohesion across EU territories, through networks such as European Social Economy Regions initiative⁵⁸, including social innovators and civil society integration, as interlocutors for society and important inputs to the development of innovations and promotion of gender equality and diversity⁵⁹.
- Explain the reasons for selecting the proposed strategic areas of cooperation, and how this cooperation will improve the efficiency and performance of the EU's innovation ecosystems. The joint innovation activities should focus on a specific thematic/technological area, in line with the smart specialisation strategies of the participating regions, and should highlight how it will contribute to innovation priorities of common interest, EU strategic priorities (including green, digital and social transitions, and open strategic autonomy) and, where appropriate, Horizon Europe

⁵⁸

⁵⁹

[Horizon Europe guidance on gender equality plans - Publications Office of the EU \(europa.eu\)](https://ec.europa.eu/eu-ropa/eu-social-economy-regions/)

Missions. It should clarify the potential for growth and competitiveness foreseen in the targeted sector and/or expected impact on EU challenge(s);

- Present and explain how the consortium plans to design and coordinate the implementation of these joint activities (e.g. resources to be mobilised, assets to be used, involvement of innovation stakeholders, such as innovation hubs, business associations, clusters, industry, startups, scaleups and SMEs);
- Include set of Key Performance Indicators (KPIs) in line with the proposed objectives to measures/activities underpinned by verifiable indicators (e.g. referring to the Sustainable Development Goals, European Commission Gender Equality Strategy 2020-2025⁶⁰, or other relevant policy frameworks);
- Ensure their long-term commitment towards engaging in the cooperation activities set up in the frame of their projects (a letter of intent as part of the proposal).

⁶⁰

Available online: [Gender equality in research and innovation - European Commission \(europa.eu\)](https://ec.europa.eu/euipo/en/gender-equality-in-research-and-innovation)

Destination: Reforming and enhancing the European research and innovation system

The guiding policy framework of the destination “Reforming and enhancing the EU research and innovation system” is the Communication “A New ERA for Research and Innovation”⁶¹, the Council Recommendation on the Pact for Research and Innovation in Europe (Pact for R&I)⁶², and the first European Research Area (ERA) Policy Agenda (2022-2024)⁶³. More information on the policy context of the ERA can be found in the introduction to the WIDERA work programme 2025.

This destination focuses on building R&I capacities at the level of R&I institutions and ecosystems, with all expected outcomes and impacts explicitly addressing the four priority areas of the Pact for R&I and the ERA Policy Agenda and its ‘ERA Actions’, as presented below. It also supports the uptake of shared EU values and principles outlined in the Pact such as evidence-informed policymaking, freedom of scientific research, societal responsibility, gender equality, equal opportunities, diversity and inclusiveness. The [ERA Platform](#) highlights how projects funded under previous work programmes have contributed to the ERA policy priorities. Applicants to the current work programme are invited to propose outputs that can be showcased on the ERA platform, such as tools, resources and visual material, which can help broad stakeholder groups make progress in selected ERA policy areas.

The destination includes one call with 7 call topics and other actions that are designed to contribute to the Pact priorities and the related ‘ERA Actions’.

Priority area I (Deepening a truly functioning internal market for knowledge) is addressed with actions that target policy areas such as reproducibility of scientific results, open access publishing, research assessment reform, research careers and researchers’ mobility, gender equality and inclusiveness, academic freedom, and knowledge valorisation, corresponding to ERA Actions 1-7.

Priority area II (Taking up together the green transition and digital transformation and other challenges with impact on society and increasing society’s participation in the ERA) is addressed with actions that focus on connecting stakeholders, local communities and citizens around R&I policies and solutions, corresponding to ERA Action 14.

Priority area III (Enhancing access to research and innovation excellence across the Union and enhancing interconnections between innovation ecosystems across the Union) is addressed with actions that support capacity-building in research management and recognition and uptake of research management profession, corresponding to ERA Action 17.

⁶¹ <https://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=CELEX:52020DC0628&from=EN>.

⁶² <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32021H2122>.

⁶³ https://commission.europa.eu/system/files/2021-11/ec_rtd_era-policy-agenda-2021.pdf.

Priority area IV (Advancing concerted research and innovation investments and reforms) is addressed with actions that support analysis and evidence on the implementation of the ERA through the ERA monitoring mechanism and that facilitate cooperation between national and European R&I systems, corresponding to ERA Actions 19 and 20.

The destination will be implemented in synergies with the European Higher Education Area and the European Education Area, especially in relation to R&I careers and institutional changes in universities and research organisations. Several call topics and other actions will also contribute to the Council Recommendation on a “European Framework to attract and retain research, innovation and entrepreneurial talent in Europe” (2023)⁶⁴.

The topics under this destination welcome the effective contribution of social sciences and humanities (SSH) disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related project activities.

In line with the ERA-policy driven approach, the current work programme 2025 completes the contribution of this destination “Reforming and enhancing the European research and innovation system” to the first ERA Policy Agenda (2022-2024). The second ERA Policy Agenda (2025-2027) will be supported by the next work programme 2026-2027.

Expected impacts:

Proposals under this destination should set out a credible pathway to contributing to reforming and enhancing the EU research and innovation system, and more specifically to one or several of the following impacts across the four priority areas of the Pact for R&I:

Priority area I. Deepening a truly functioning internal market for knowledge

- Increased capacity in the EU R&I system to conduct open science and establishing it as the prevailing approach in modern research approaches;
- Sustainable high quality institutional non-profit open access publishing services indexed in research information systems adhering to national research assessment standards;
- More responsible assessment of researchers, research projects and research organisations based on a broader range of research outputs, practices and activities than publications and publishing;
- Improved quality, performance and impact of research, researchers and institutions due to more responsible research assessment systems;

⁶⁴ Council Recommendation of 18 December 2023 on a European framework to attract and retain research, innovation and entrepreneurial talents in Europe, <https://eur-lex.europa.eu/eli/C/2023/1640/oj>.

- Researchers benefit from attractive and sustainable careers, including better working conditions for early-career researchers, resulting from the implementation of the European framework for research careers and the Charter for Researchers⁶⁵;
- Reinforced mobility of researchers across sectors and balanced geographical mobility;
- More people are aware of diverse career opportunities in R&I;
- Strengthened gender equality and inclusiveness in the European Research Area;
- Greater quality of scientific production and stronger translation of R&I results into society and economy.

Priority area II. Taking up together the green transition and digital transformation and other challenges with impact on society, and increasing society's participation in the ERA

- Institutional change in line with the ERA priorities through targeted transformations in higher education, research, and innovation;
- Increased engagement of citizens with research and innovation;
- Increased alignment of research with society's needs, expectations and values.

Priority area III. Enhancing access to research and innovation excellence across the Union and enhancing interconnections between innovation ecosystems across the Union

- Increased inter-sectoral mobility/flow-through of R&I talents between sectors;
- Transformation of universities and their access to excellence and talent, including a better management of mobility of researchers to and from academia;
- Greater recognition and uptake of research management profession.

Priority area IV. Advancing concerted research and innovation investments and reforms

- A comprehensive, robust and quality tested monitoring system on the implementation of the ERA;
- Improved access to and exchange of information on the implementation of the ERA Policy Agenda and contribution to the principles and priorities set out in the Pact for R&I;
- Reformed national R&I policies and systems in line with the ERA;

⁶⁵ Council Recommendation of 18 December 2023 on a European framework to attract and retain research, innovation and entrepreneurial talents in Europe, <https://eur-lex.europa.eu/eli/C/2023/1640/oj>.

- Common priority setting and sustainable joint activities and funding programmes among national and regional R&I programmes.

Contribution to principles set out in the Pact for R&I

- A more robust and interconnected European Science for Policy ecosystem that better supports evidence-informed policymaking across sectors and governance levels.

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2025-06-ERA-01: Rolling out the ERA Policy Agenda results

Call: Enhancing the European R&I system	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 26.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Applications must be submitted by a consortium including participation, as beneficiaries, of at least three independent legal entities:</p> <ul style="list-style-type: none"> • Each established in a different Member State or Associated Country; and • Two of which are established in a Member State.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The financial support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.</p>
<i>Evaluation Procedure</i>	To ensure a balanced portfolio covering different ERA policy areas, as outlined in the expected outcomes and scope, grants will be awarded to proposals not only in order of ranking, but at least also to proposals that are the highest ranked within each ERA area, provided that proposals pass all thresholds.

Expected Outcome: This action aims at increased uptake by broad communities of R&I stakeholders of results developed in different ERA policy areas, including open science, research assessment, research careers, knowledge valorisation, and research management. Applicants are invited to select one of the areas outlined below.

Successful proposals will deliver on one or several impacts outlined in the introduction to the work programme destination “Reforming and enhancing the European research and innovation system”.

Project results are expected to increase uptake of ERA policy results and contribute to the outcomes specifically relevant for the area selected and identified by the applicants in their proposal, as listed below.

Area 1: Strengthen uptake of solutions for the reproducibility of scientific results

- Wider implementation of interventions in research performing organisations to increase the reproducibility of research results;
- Better understanding by researchers, policymakers, research institutions and scientific service providers of the effectiveness of policies, practices and tools for increasing the reproducibility of research results;
- Higher proportion of reproducible results from publicly funded research.

Area 2: Advance reforms to research assessment

- Increased awareness and trust among researchers and research organisations about reforms of research assessment;
- Increased uptake of good practices and recommendations from the Coalition for Advancing Research Assessment (CoARA) and other initiatives by researchers and research organisations;
- Increased knowledge by researchers, research organisations and policymakers about limiting factors and enablers of research assessment reforms.

Area 3: Establish communities of practice to strengthen research careers

- Inventory of good practices and lessons learnt for stakeholders at organisational level on the implementation of the various dimensions of the new European framework for research careers⁶⁶, including the Charter for Researchers;
- Increased number of academic and non-academic organisations implementing the new framework for research careers, resulting in stronger research careers for researchers;

⁶⁶ Council Recommendation of 18 December 2023 on a European framework to attract and retain research, innovation and entrepreneurial talents in Europe, <https://eur-lex.europa.eu/eli/C/2023/1640/oj>.

- Better working conditions and employability for researchers, with a special focus on early-career researchers.

Area 4: Establish a European network of knowledge valorisation intermediaries

- A network of European intermediaries is established, connecting academia, industry, society and policymakers, that provides increased recognition of the various profiles and different roles of knowledge valorisation intermediaries;
- New or improved shared resources and tools for knowledge valorisation intermediaries to support the uptake of the EU Guiding Principles for Knowledge Valorisation and the accompanying codes of practice⁶⁷;
- Enhanced capacities and skills of knowledge valorisation intermediaries to connect industry, academia, society and policymakers.

Area 5: Upgrade services of Knowledge and Technology Transfer professionals in universities and research performing organisations

- Enhanced capacities and skills for knowledge transfer professionals in Knowledge Transfer Offices/Technology Transfer Offices (KTO/TTO) (or similar) in universities and research performing organisations to detect the potential market and societal value of R&I results;
- Upgraded services of KTO/TTOs in universities and research performing organisations made freely available for R&I actors to facilitate multi-stakeholder business development activities, knowledge transfer and valorisation, including societal and policy uptake.
- New curricula and training modules for students and researchers by KTO/TTOs to be offered in universities and research performing organisations across Europe to facilitate greater uptake of R&I results, including for skills development and fostering an entrepreneurial mindset.

Area 6: Strengthen capacities and recognition for research management

- A collaborative network is established that enables research managers and their employers to exchange information and best practices with a view to develop better quality and more consistent research management practices across the ERA;
- Enhanced professional recognition and career progression and mobility for research managers by offering specialised training and mentorship programmes, coupled with robust career development tools and reinforced by communication and outreach activities;

⁶⁷ https://research-and-innovation.ec.europa.eu/research-area/industrial-research-and-innovation/eu-valorisation-policy/knowledge-valorisation-platform/guiding-principles-knowledge-valorisation-and-implementing-codes-practice_en.

- Increased availability and access to research management training and to good institutional practices on research management for a diverse range of organisations and staff within the ERA, with a focus on providing support to those that lack resources.

Scope: This action contributes toward the implementation of the European Research Area (ERA) with targeted interventions in selected policy areas focused on a broad roll-out of the results developed under the first ERA Policy Agenda (2022-2024)⁶⁸. It addresses areas including open science, research assessment, research careers, knowledge valorisation, and research management.

The EU Member States, Associated Countries, R&I stakeholders, and the Commission work in partnership to implement the ERA. This work is structured by the ERA Policy Agenda that identifies concrete ‘ERA Actions’, which address specific challenges faced by R&I communities in Europe. The first ERA Policy Agenda (2022-2024) has delivered many tools, practices, recommendation, and guidelines to help advance the ERA Actions, resulting from different EU, national, regional or local initiatives and projects. A number of results stem from projects funded under Horizon Europe. In particular, the WIDERA work programme has funded a range of coordination and support activities designed to support the implementation of the ERA Policy Agenda⁶⁹.

This action aims at a broader roll-out of these results to diverse ERA communities, including research performing organisations (RPO), research funding organisations (RFO), universities, researchers and innovators, policymakers, and many other actors in the European R&I ecosystem. Proposals should demonstrate the involvement of actors who have not yet partaken in those Horizon Europe-funded actions that specifically address the ERA Policy Agenda. The action supports a wide variety of activities that make use of existing results to enable progress in the implementation of selected ERA Actions in organisations, broader R&I ecosystems and at national level.

Proposals should select and clearly identify one area being addressed, choosing from those set out under the expected outcomes and scope of this action. Each area is designed to contribute toward the implementation of an ERA Action. Proposals should develop activities outlined for the selected area, as well as additional activities contributing to the expected outcomes for the same area. While focusing on one area, proposals may also consider complementarities and synergies with other areas. For example, proposals that choose Area 3 on research careers may develop links with Area 2 on research assessment or Area 6 on research management.

In all project activities, particular attention should be paid to promoting inclusive gender equality and addressing gender-specific challenges. Projects are expected to coordinate and collaborate with other projects funded under this action during implementation, including by way of annual status seminars where project work plans are presented to ensure complementarities and synergies across the areas.

⁶⁸ https://commission.europa.eu/system/files/2021-11/ec_rtd_era-policy-agenda-2021.pdf.

⁶⁹ See examples of how Horizon Europe supports the ERA policy priorities, <https://european-research-area.ec.europa.eu/era-horizon-europe>.

The funded projects should reach large communities of stakeholders (either a group of individual organisations, networks or alliances of organisations, or surrounding ecosystem actors), ensuring their needs are considered and addressed over the course of the project. Proposals should describe their target group in terms of its scope and size. A wide geographical coverage, inclusivity and broad participation should be ensured. The funded projects should remain open to new stakeholders and interested parties. The funded projects should provide open access to all relevant results, in a timely manner.

Proposals are expected to envisage a duration of up to 3 years without prejudice to a longer duration if duly justified.

Area 1: Strengthen uptake of solutions for the reproducibility of scientific results

This area addresses ERA Action 1 that aims to support open sharing, seamless access, and reliable re-use of research data, centred on the FAIR principles. Practices that increase the reproducibility of scientific results⁷⁰ contribute to higher reuse of these results and to increased efficiency, trustworthiness, and overall quality of research.

The area supports the uptake of state-of-the art tools, practices and methodologies that can increase the reproducibility of research results, drawing on activities and results of any relevant projects, networks and initiatives⁷¹. The project activities should involve actors such as RPOs, RFOs, researchers, scientific publishers, and scientific service and infrastructure providers. At least the following activities should be included:

- Deploy, demonstrate and upscale interventions in real-life environments to increase reproducibility of scientific results, targeting cross-discipline and discipline-specific factors that contribute to lack of reproducibility. Interventions may include the application of policies, engagement in practices, or mainstreaming the utilisation of tools, services and infrastructures that enable reproducibility of research results.
- Monitor and analyse the effects of the implemented interventions on the efficiency of research processes, the trustworthiness of results, the reuse of results in further research and/or innovation, and the overall quality of scientific production. Deployment and demonstrations should be of sufficient duration and scale to assess their effects.
- Support mutual learning, and exchange and dissemination of best practices across organisations in Europe and develop evidence-based recommendations for policymakers and research organisations.

Area 2: Advance reforms to research assessment

This area addresses ERA Action 3 that aims to support reform of research assessment toward recognising the diversity of research practices, activities and outputs, moving away from

⁷⁰ Practices that enable researchers and the scientific community at large to obtain confirming results as the originators of a research finding.

⁷¹ Including projects funded under [HORIZON-WIDERA-2022-ERA-01-41](#) and [HORIZON-WIDERA-2024-ERA-01-09](#).

relying mainly on the quantity of publications or the prestige of their publishing venues, to achieve higher quality and impact of research.

The area supports the uptake of good practices and recommendations that facilitate implementation of research assessment reform, building on activities and results of any relevant projects⁷² and initiatives, especially the Agreement on Reforming Research Assessment⁷³, the [Coalition for Advancing Research Assessment](#) (CoARA), and the [San Francisco Declaration on Research Assessment](#) (DORA). The project activities should involve diverse research organisations like universities, RPOs, RFOs, academies and learned societies, as well as researchers' organisations, researchers and support staff, from diverse disciplines and at various career stages. At least the following activities should be included:

- Identify and discuss barriers and enablers to reform at national level and shared implementation avenues, and maximise the roll-out of reforms through engagement with CoARA Working Groups and National Chapters⁷⁴ and other communities of practice.
- Support the development of change management strategies within organisations to facilitate the implementation of reforms and to build trust towards reformed research assessment systems.
- Develop and coordinate actions to raise awareness about good practices and support the implementation of reforms via workshops, training and associated materials, and/or dedicated conference(s) targeting researchers.

Area 3: Establish communities of practice to strengthen research careers

This area addresses ERA Action 4 that aims to strengthen research careers in all sectors, tackling aspects such as precarity and working conditions, skills, inter-sectoral and inter-disciplinary mobility, career development and progression.

The area supports the wide uptake by organisations of the provisions of the framework established by the Council Recommendation on research careers and the Charter for Researchers⁷⁵, and builds on the results and recommendations from the Mutual Learning Exercise on research careers⁷⁶ and any previous or ongoing relevant initiatives and projects at European or national level contributing to the implementation of the new framework⁷⁷. The project activities should involve universities, RPOs, RFOs, researchers' organisations,

⁷² Including projects funded under [HORIZON-WIDERA-2023-ERA-01-07](#) and [HORIZON-INFRA-2022-EOSC-01-01](#).

⁷³ https://coara.eu/app/uploads/2022/09/2022_07_19_rra_agreement_final.pdf.

⁷⁴ CoARA operates several working groups and national chapters that identify good practices and recommendations.

⁷⁵ Council Recommendation of 18 December 2023 on a European framework to attract and retain research, innovation and entrepreneurial talents in Europe, <https://eur-lex.europa.eu/eli/C/2023/1640/oj>.

⁷⁶ Funded by Horizon Policy Support Facility, <https://projects.research-and-innovation.ec.europa.eu/en/statistics/policy-support-facility/mutual-learning-exercise-research-careers>.

⁷⁷ Including projects funded under [HORIZON-WIDERA-2022-ERA-01-50](#) and [HORIZON-WIDERA-2024-ERA-02-03](#).

governmental organisations, and other employers of researchers in the public and private sector. At least the following activities should be included:

- Establish an intersectoral consortium of at least 15 partners with the objective of creating an inclusive community of practice that supports cooperation and exchange of good practices to implement the new framework to strengthen research careers at European, national, regional and organisational level. The consortium should demonstrate in the proposal how and to what extent it will involve stakeholders outside the consortium in the community of practice, with a view to maximising the impact of activities on strengthening research careers.
- Map challenges, exchange good practices, including by developing relevant platforms, organise mutual learning events, intra- and extra-consortium cooperation with stakeholders, and networking.
- Develop and disseminate recommendations for peers and for policymakers in relation to aspects covered by the new framework to strengthen research careers, on the basis of internal exchanges and practices, as well as significant outcomes from other projects.

Area 4: Establish a European network of knowledge valorisation intermediaries

This area addresses ERA Action 7 that aims to enhance knowledge sharing and valorisation in Europe. Intermediaries⁷⁸ are crucial for valorisation as they help connect researchers with actors who can drive economic and societal value from research results, data and knowledge.

The area supports the uptake of the new Guiding Principles Knowledge Valorisation and Codes of Practice⁷⁹ through upgrading the capacities of intermediaries. By improving their skills and services in line with the new guidelines, intermediaries can effectively increase connections between all R&I actors when it comes to intellectual assets management, standardisation, industry-academia co-creation and citizen engagement. The project activities should involve entities that typically act as intermediaries. At least the following activities should be included:

- Set up a European network of intermediaries to activate intensive and inclusive multi-actor collaboration and networking.
- Develop trainings and a knowledge valorisation toolbox based on the codes of practice, to be made freely available for all R&I actors.

⁷⁸ Intermediaries provide support services in various forms, such as guidance, networking, training and mentoring, to stimulate market and societal uptake. A broad range of institutions can act as intermediaries, e.g., incubators, science parks, European, national and regional innovation hubs or clusters, IP experts, consultants and innovation support professionals, science communication and policy engagement teams, and knowledge for policy and citizen engagement professionals.

⁷⁹ https://research-and-innovation.ec.europa.eu/research-area/industrial-research-and-innovation/eu-valorisation-policy/knowledge-valorisation-platform/guiding-principles-knowledge-valorisation-and-implementing-codes-practice_en.

- Support mobility and outreach, including cross-border secondments between intermediary organisations, replication of best practices, and novel awareness and outreach activities.

Area 5: Upgrade capacities of knowledge and technology transfer professionals in universities and research performing organisations

This area addresses ERA Action 7 that aims to enhance knowledge sharing and valorisation in the ERA, reaching large communities of stakeholders. Knowledge and technology transfer offices (KTO/TTO) in universities and RPOs require a broader range of skills to deliver fit-for-purpose services for R&I actors to achieve greater uptake of economic and societal value.

The area supports the uptake of the new Guiding Principles and Codes of Practice⁸⁰ through upgrading skills and services provided by KTO/TTOs. The action should involve KTO/TTOs, societal and industrial actors, and policymakers and contribute to closing the gender gap through the design of activities. By improving their skills and services in line with the new guidelines, KTO/TTOs can effectively increase connections between all R&I actors when it comes to intellectual asset management, standardisation, industry-academia co-creation and citizen engagement. At least the following activities should be included:

- Develop and coordinate actions for expanding and strengthening skills and capacities of KTO/TTOs, for example, through trainings, peer learning and workshops.
- Develop new services and adaptation of existing services in line with the Guiding Principles, as well as support new training needs, so that KTO/TTOs can respond to the requirements of researchers and students by designing and delivering high quality curricula for greater knowledge valorisation.
- Engage societal and industrial actors, as well as policy makers to ensure the new and adapted services correspond to the needs of these stakeholders, while developing appropriate links with other parts of the work programme, such as [EU Missions](#) and [EIC Business Acceleration Services](#).

Area 6: Strengthen capacities and recognition for research management

This area addresses ERA Action 17 that aims to enhance capacities and professional recognition of research managers in the ERA and address their challenges, such as a lack of professional accreditation, uneven distribution of expertise, and a constant need for new skills.

The area supports the uptake of good practices, recommendations and results stemming from any relevant projects⁸¹ and initiatives. The action should involve current and aspiring research managers and their employers, human resource departments, career advisors, educational institutions, and policymakers. At least the following activities should be included:

⁸⁰ https://research-and-innovation.ec.europa.eu/research-area/industrial-research-and-innovation/eu-valorisation-policy/knowledge-valorisation-platform/guiding-principles-knowledge-valorisation-and-implementing-codes-practice_en.

⁸¹ Projects funded under [HORIZON-WIDERA-2021-ERA-01-20](#).

- Create a centralised online hub for networking, collaborative learning and information sharing among research managers and their employers to standardise and enhance research management across the ERA.
- Provide research managers with tailored training programmes and career guidance services, from workshops to online courses, aligned with the development of the careers and competency framework for research managers (RM Comp), enhancing their skill sets and career progression opportunities.
- Execute a strategic communication plan that includes outreach activities, promotional campaigns, support to evidence-based policymaking, and advocacy efforts to raise the profile and recognition of research management as a vital and distinct profession within the R&I ecosystem, including developing and disseminating recommendations for RPOs and policymakers.

HORIZON-WIDERA-2025-06-ERA-02: Enable sustained coordination and guidance at the European level on institutional non-profit open access publishing

Call: Enhancing the European R&I system	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>Applications must be submitted by a consortium including participation, as beneficiaries, of at least three independent legal entities:</p> <ul style="list-style-type: none"> • Each established in a different Member State or Associated Country; and • Two of which are established in a Member State.
<i>Legal and financial set-up of the Grant Agreements</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries may provide financial support to third parties. The financial support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is</p>

	EUR 60 000.
--	-------------

Expected Outcome: The successful proposal will deliver on the following impacts: “Sustainable high quality institutional non-profit open access publishing services indexed in research information systems adhering to national research assessment standards” and “Increased capacity in the EU R&I system to conduct open science and establishing it as the prevailing approach in modern research approaches”.

Projects are expected to contribute to all of the following outcomes:

- Broader range of services for developing skills and competencies of institutional non-profit publishers, centrally offered at European and national level, providing access to relevant tools and technologies and supporting capacity-building in institutional non-profit publishing;
- Increased alignment of institutional non-profit open access publishing services across Europe to commonly agreed quality standards regarding aspects such as ownership/governance, editorial/publishing policies and practices, research integrity, open science, and technical service efficiency;
- Well-connected and effective European network focused on institutional non-profit open access publishing, with broad recognition across academic disciplines.

Scope: The conclusions on ‘high quality, transparent, open, trustworthy and equitable scholarly publishing’ that the Council of the European Union adopted in May 2023⁸² highlight the importance of equitable scholarly open access publishing models where authors can publish their work irrespective of their institutional affiliation or funding source, with no fees to them or their readers. EU Member States also called for supporting the development of publishing models led by public research organisations. In recent years, universities, research institutions and other organisations relevant to research have increasingly engaged in setting up their own open access publishing activities and services. This trend has been driven by technological advancements and a growing desire for open access, usually on a non-profit basis. As a result, new mission-driven and bottom-up institutional, non-profit open access publishing models have emerged in Europe and beyond. However, such publishing services have largely evolved without clear strategies for coordination, governance, or sustained funding, and without commonly agreed quality standards. Additionally, the research institutions and universities that host open access publishing services, in particular non-profit ones, often do not perceive them as core activities. As a result, researchers who are faced with a rich but fragmented landscape of institutional non-profit open access services often prefer more familiar and trusted publishing venues.

Therefore, it is essential to provide coordinated and ongoing central support to enhance the quality of the services offered by these institutional non-profit publishers. This support should

⁸² Council Conclusions on ‘high quality, transparent, open, trustworthy and equitable scholarly publishing’ 23 May 2023, 9616/23, <https://data.consilium.europa.eu/doc/document/ST-9616-2023-INIT/en/pdf>.

offer services, resources, activities, toolkits and coordination at the European level. It should visibly enhance the quality of services, align with commonly agreed publishing and technical standards, improve staff skills and competences, and foster network-building among institutional non-profit publishers.

The action supports the ERA Policy Agenda Action 1 – Enable Open Science, including through the European Open Science Cloud⁸³.

Proposals should address at least the following:

- Provision of services to institutional non-profit publishing initiatives, including guidance and support for quality assessment, access to tools and technology, and support in meeting technological standards (e.g., interoperability standards). Complementarity between activities at European, national, and institutional level provided by different types of actors must be ensured.
- Organisation of training programmes for all stakeholders in institutional non-profit open access publishing to support the further development of skills and competences, and facilitation of exchanges of electronic publishing specialists across the European Research Area. The activities should aim to achieve support for such publishing services within institutions and help embed them in national research assessment systems.
- Coordination of services and practices with the aim of exploiting synergies and creating efficiencies, including the pooling of resources at European level. Activities should aim to ensure that resources developed are available to all those who are managing institutional non-profit open access publishing in Europe, with attention to equitable access to and distribution of these resources.

The action may build on and valorise the results of earlier projects, in particular projects focused on capacity-building and global cooperation for institutional non-profit open access publishing, as well as of relevant national and European initiatives⁸⁴. The action should address articles, as well as monograph/book publishing.

The duration of this action should not exceed 3 years.

HORIZON-WIDERA-2025-06-ERA-03: Research and innovation to provide evidence that support reforms of research assessment

Call: Enhancing the European R&I system	
Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately.

⁸³ https://commission.europa.eu/system/files/2021-11/ec_rtd_era-policy-agenda-2021.pdf.

⁸⁴ Projects funded under [HORIZON-WIDERA-2021-ERA-01-43](#), [HORIZON-WIDERA-2022-ERA-01-42](#), [HORIZON-INFRA-2022-EOSC-01-02](#), and [HORIZON-WIDERA-2024-ERA-01-08](#).

<i>project</i>	Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: The successful proposal will deliver on the following impacts: “*More responsible assessment of researchers, research projects and research organisations based on a broader range of research outputs, practices and activities than publications and publishing*” and “*Improved quality, performance and impact of research, researchers and institutions due to more responsible research assessment systems*”.

Project results are expected to contribute to all of the following expected outcomes:

- Increased scientific knowledge on assessment tools and methods, their potential biases and limitations, and corresponding solutions;
- Increased scientific knowledge on methods to reform research assessment;
- Evidence supporting the implementation of the commitments of the Agreement on Reforming Research Assessment available to policy makers and research organisations involved in research assessment.

Scope:

A global movement is underway to significantly enhance the evaluation process for researchers, research projects and research institutions. [The San Francisco Declaration on Research Assessment](#) (DORA), [the Leiden Manifesto](#), [the Latin American Forum on Research Assessment](#) (FOLEC-CLACSO), and the Agreement on Reforming Research Assessment⁸⁵ and [the Coalition for Advancing Research Assessment](#) (CoARA) under Action 3 of the European Research Area Policy Agenda 2022-2024⁸⁶ are the main initiatives that strive to shift away from inappropriate reliance on metrics such as the Journal Impact Factor. Instead, they acknowledge the diverse range of research practices, activities and outputs that go beyond publications. They aim to reward practices, activities and outputs that contribute to a higher quality and impact of research, while also recognising and mitigating systemic biases, particularly gender biases, within traditional assessment metrics.

[CoARA Working Groups](#) carry out in-depth work to enable signatories of the Agreement on Reforming Research Assessment to exchange experiences, learn from each other and identify good practices, thus supporting their efforts to reform research assessment.

The identification of good practices and the implementation of changes to research assessment require solid scientific evidence. This concerns evidence about assessment tools and methods, and exploring issues across disciplines and types of research organisations, such

⁸⁵ https://coara.eu/app/uploads/2022/09/2022_07_19_rra_agreement_final.pdf.

⁸⁶ https://commission.europa.eu/system/files/2021-11/ec_rtd_era-policy-agenda-2021.pdf.

as: best practices in qualitative assessment; making peer review practices less bias-prone and more transparent; lessons learned from pilots with narrative CVs; inappropriate uses of metrics and alternatives for different levels of assessment (of research, of researchers and of research institutions); relevant indicators (that are open) for developing new assessment frameworks; infrastructures and tools needed to base research assessment on FAIR research digital objects (e.g., publications, data, software); ensuring that assessment methods promote diversity and inclusion across genders and underrepresented groups. This also concerns evidence about reform methods and about institutional changes and culture, investigating issues, such as: ensuring readiness and engagement of the scientific community and research organisations to changes; including different disciplinary perspectives; piloting actions that can lead to new assessment practices.

The action aims to provide the evidence needed for the practical implementation of research assessment reforms. It will gather and evaluate existing evidence and carry out additional research activities to support the implementation of the commitments of the Agreement on Reforming Research Assessment, in line with the 10 principles for reforms. The action consists of three parts, all of which must be addressed:

- Review existing literature, data and evidence on research assessment practices and evaluate their validity and robustness for implementing the Agreement on Reforming Research Assessment.
- Identify gaps in knowledge and prioritise areas that require further research activities to support reforms of research assessment in line with the Agreement on Reforming Research Assessment.
- Implement research activities in the prioritised areas.

The proposals should ensure synergies and complementarities, develop close cooperation, and share knowledge and evidence with CoARA and its Working Groups, the [CoARA Boost](#) project, DORA, and other relevant initiatives. The proposals should provide open access to all relevant results as early as possible, with specific efforts to ensure that these results are accessible and relevant to diverse and underrepresented groups.

This action may require the effective contribution of SSH disciplines and the involvement of SSH experts, institutions as well as the inclusion of relevant SSH expertise, in order to produce meaningful and significant effects enhancing the societal impact of the related research activities⁸⁷.

The duration of this action should not exceed 3 years.

⁸⁷ https://research-and-innovation.ec.europa.eu/research-area/social-sciences-and-humanities/ssh-integration_en.

HORIZON-WIDERA-2025-06-ERA-04: Investigating and addressing career barriers faced by underrepresented and marginalised researchers

Call: Enhancing the European R&I system	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: The successful proposal will deliver on the following impact: *“Strengthened gender equality and inclusiveness in the European Research Area”*.

Project results are expected to contribute to all of the following outcomes:

- Policy makers, research funding organisations, higher education and research performing organisations, researchers and other research and innovation stakeholders are more aware of the barriers faced by researchers from underrepresented groups and marginalised communities and have more knowledge at their disposal;
- Policy makers, research funding organisations, higher education and research performing organisations, researchers and other research and innovation stakeholders are equipped with concrete tools and measures to support fair career advancement of disadvantaged researchers from underrepresented and marginalised groups.

Scope:

Researchers from underrepresented groups and marginalised communities – including, e.g., racialised researchers, researchers with disabilities, LGBTIQ or refugee researchers – encounter structural, material, and cultural inequalities. The challenges and barriers they face include, but are not limited to, more working precarity, higher rates of gender-based violence and harassment, epistemic injustice and lack of recognition, unequal access to resources, mentorship and support networks, and other obstacles stemming from cultural or social stereotypes leading to conscious and unconscious biases. These disparities are furthermore often exacerbated due to the compounded effects of multiple and intersecting discriminations. Despite increasing efforts, there is still limited understanding of how these intersectional inequalities manifest themselves and how they can be and are being addressed at EU and national level and in research performing organisations and funding organisations.

Intersectionality has been put forward as a cross-cutting approach of the Commission's Union of Equality strategies⁸⁸. Gender equality and inclusiveness have been recognised as core values and principles of the European Research Area (ERA)⁸⁹, as reflected in Action 5 of the ERA Policy Agenda 2022-2024⁹⁰, and further reiterated in the new European framework for research careers and the new European Charter for Researchers⁹¹, stressing also the inclusiveness for researchers from all backgrounds including under-represented and marginalised groups.

This action supports the objectives of ERA Action 5, as well as of ERA Action 4 focusing on strengthening inclusive research careers in Europe. Therefore, a close cooperation with relevant ERA stakeholders, including the subgroup of the ERA Forum dedicated to ERA Action 5⁹², is required, as is the involvement of researchers from concerned underrepresented and marginalised groups and the involvement of community support networks.

Conducting research, carried out in dedicated work packages with specific objectives and tasks, should be the core component of the action. The action should also take into account national legal and policy frameworks, institutional practices as well as individual levels, and aim to contribute to promoting the inclusion of researchers from under-represented and marginalised groups in the EU research and innovation system.

Proposals are expected to address all of the following:

- Investigate the specific barriers faced by researchers from at least three underrepresented and marginalised groups at different stages of their careers, starting from the gender perspective and considering other discrimination grounds. This should build on existing research, as well as on other relevant sources⁹³, and be based on quantitative and qualitative data, including personal testimonies that should be gathered by the project in at least 10 Member States and Associated Countries.
- Develop tools (e.g., toolkits, guidance, training and dissemination materials) and deliver evidence-informed recommendations on how to design and implement inclusive, intersectional, and human-centred gender equality plans and shape policies in the ERA at the level of higher education and research performing organisations, research funding organisations, and national and EU research and innovation policy makers. Proposals

⁹² <https://ec.europa.eu/transparency/expert-groups-register/screen/expert-groups/consult?lang=en&fromMainGroup=true&groupID=103813>.

⁹³ E.g., Equality data collection, https://commission.europa.eu/strategy-and-policy/policies/justice-and-fundamental-rights/combating-discrimination/equality-data-collection_en; The Compendium of Practices on Equality Data, <https://fra.europa.eu/en/promising-practices-list>.

should develop interventions such as mentorship programmes, intersectional diversity training, policy changes, cultural competency initiatives, or structural reforms.

- Disseminate research results and project outcomes and materials to national and EU policy-makers, research funding organisations, higher education and research performing organisations, researchers, and other relevant ERA stakeholders.

Proposals should build on the knowledge and expertise developed through related actions funded under Horizon 2020 and the Horizon Europe WIDERA Work Programme⁹⁴. Proposals are also encouraged to explore potential synergies with projects funded under Horizon Europe Cluster 2⁹⁵ and by the European Research Council⁹⁶, particularly regarding their operationalisation and methodological approach to intersectionality.

The expected duration of this action is 3 years.

HORIZON-WIDERA-2025-06-ERA-05: Programme-level collaboration

Call: Enhancing the European R&I system	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply:</p> <p>Applications must be submitted by a consortium including participation, as beneficiaries, of at least three independent legal entities:</p> <ul style="list-style-type: none"> • Each established in a different Member State, Associated Country or non-associated third country; and • Two of which are established in a Member State. <p>Due to the scope of this topic, legal entities established in non-associated third countries are exceptionally eligible for Union funding.</p> <p>If eligible for funding, legal entities established in non-associated third</p>

⁹⁴ Projects funded under [SwafS-25-2020](#), [HORIZON-WIDERA-2023-ERA-01-09](#), [HORIZON-WIDERA-2021-ERA-01-80](#), and [HORIZON-WIDERA-2021-ERA-01-81](#).

⁹⁵ Projects funded under [HORIZON-CL2-2023-DEMOCRACY-01-07](#).

⁹⁶ For example, project [INTERMAPS](#), funded under [ERC-2021-STG](#).

	countries may exceptionally participate in this coordination and support action as a beneficiary or affiliated entity.
--	--

Expected Outcome: Successful proposals will deliver on the following impact: “*Common priority setting and sustainable joint activities and funding programmes among national and regional research and innovation programmes*”.

The proposals funded under this topic should coordinate national and regional research and innovation (R&I) funding programmes by pooling national and regional resources and align national and regional research and innovation policies, with the overall aim to enhance collaborative R&I efforts to address global challenges.

Projects are expected to contribute to all of the following expected outcomes:

- Identification of common research and innovation priorities among national and regional R&I programmes, with consideration given to relevant international R&I policy developments and trends, and leading to coordinated R&I funding agendas;
- Implementation of multiannual joint calls, resulting in the funding of transnational collaborative R&I projects;
- Implementation of additional joint activities supporting technology and regulatory policy, and societal and market uptake;
- Contribution to participating states meeting global challenges, including relevant contributions to the Sustainable Development Goals.

Scope: Since the introduction of the European Research Area (ERA) in 2000 and starting with Framework Programme 6 and the introduction of the ERA-NET scheme, programme-level collaboration among EU Member States and Associated Countries and their research and innovation funding programmes has become a cornerstone of the ERA. Hundreds of networks among research funders have been created over time, serving different research needs, but always coordinating public research investments across borders and allowing researchers to apply for calls for transnational research projects funded by the participating states.

Horizon Europe introduces a new approach to incentivise programme level collaboration. Concerted R&I initiatives, which mobilise efforts and resources of public and private actors, are implemented through [EU Missions](#) and the co-funded, co-programmed and institutionalised [European Partnerships](#). The ERA part of Horizon Europe complements this new strategic approach by providing the possibility for Member States, Associated Countries, their legal entities, including regional authorities and agencies and civil society organisations, to maintain existing and establish new collaborations on priorities of their choice, thereby continuing the spirit of the successful ERA-NET scheme, funded under Horizon 2020.

This action supports bottom-up initiatives that allow stakeholders to define new collaborations on chosen priorities, align national and regional research funding, pool resources, and ensure complementarity with the Framework Programme activities, European Partnerships, and EU

Missions, thereby supporting the ERA. The action contributes to the objectives of the Pact for Research and Innovation in Europe⁹⁷ to increase the share of national public research and development expenditure committed to the European Partnerships and EU Missions.

In order to achieve the expected outcomes, international cooperation is encouraged. The action allows to strengthen collaboration with third countries and promote shared European values and principles for research and innovation, including advancing gender equality and inclusiveness. Involvement of non-associated third countries must be clearly explained and justified in the proposal.

Successful proposals should align national and regional research funding programmes on agreed priorities common to the countries participating in the action and, where appropriate, implement joint calls for transnational R&I projects as well as other joint calls or joint activities.

Applicants should demonstrate clear commitments from participating programmes to pool resources. The necessary resources should be pooled from the participating national or regional research programmes as well as, where appropriate, leveraged from pertinent foundations, charities and transnational initiatives, with a view to implementing calls for proposals, either within the context of this action or in possible follow-up actions, resulting in grants to third parties without EU co-funding in this area.

Proposals should also demonstrate potential impact at national, regional and transnational level. Proposals should demonstrate that activities exclude overlaps with on-going actions co-funded by the EU under Horizon 2020 or Horizon Europe.

Proposals are expected to envisage a duration of up to 3 years without prejudice to a longer duration if duly justified by the ambitions and complexity of the proposed activities.

HORIZON-WIDERA-2025-06-ERA-06: Strengthening of the European Science for Policy Ecosystem

Call: Enhancing the European R&I system	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility</i>	The conditions are described in General Annex B. The following

⁹⁷ <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32021H2122>.

<i>conditions</i>	<p>exceptions apply:</p> <p>The Joint Research Centre (JRC) may participate as member of the consortium selected for funding.</p> <p>Applications must be submitted by a consortium including participation, as beneficiaries, of at least three independent legal entities:</p> <ul style="list-style-type: none"> • Each established in a different Member State or Associated Country; and • Two of which are established in a Member State.
-------------------	---

Expected Outcome: The successful proposal will deliver on the following impact: “*A more robust and interconnected European Science for Policy (S4P) ecosystem that better supports evidence-informed policymaking across sectors and governance levels*”.

Project results are expected to contribute to all of the following expected outcomes:

- Increased connectivity of S4P actors and networks that enhances interactions, mutual learning, collaboration, capacity building, and promotion of S4P practices and knowledge, while also strengthening pan-European and international ecosystems.
- S4P approaches are mainstreamed in national R&I policy institutions at all levels of governance through coordinated efforts and mutual learning across Europe.
- The concept of “Science for Policy” is further developed and widely adopted among S4P stakeholders and actors through identification of best practices, guides and frameworks at different levels of governance and across thematic sectors.

Scope: Science for evidence-informed policymaking or Science for Policy (S4P) refers to the use of the best available scientific evidence, knowledge, and expertise to inform policymaking, aiming to achieve better public policies. By integrating science into policymaking, governments and organisations can make better-informed decisions and develop effective strategies that are grounded in a deeper understanding of complex and interconnected issues.

The need for a structured scientific support to policymaking at EU, national and subnational levels is in line with the principle of evidence-based policymaking acknowledged in the Pact for Research and Innovation in Europe⁹⁸ and is underscored in several recent EU policy documents and initiatives⁹⁹. The summary conclusions on the Policy Debate “Towards a European S4P ecosystem” adopted in June 2022 by the European Research Area and Innovation Committee (ERAC)¹⁰⁰ and the Council conclusions on “Strengthening the role and

⁹⁸ <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32021H2122>.

⁹⁹ COM SWD (2022) 346 final of October 2022, Supporting and connecting policymaking in the Member States with scientific research, https://knowledge4policy.ec.europa.eu/file/staff-working-document-supporting-connecting-policymaking-member-states-scientific-research_en.

¹⁰⁰ ERAC Summary Conclusions of the Policy Debate ‘Towards a European Science for Policy ecosystem’, <https://data.consilium.europa.eu/doc/document/ST-13213-2023-INIT/en/pdf>.

impact of R&I in the policymaking process in the European Union” adopted in December 2023¹⁰¹ specifically call upon the Commission to play a key role in coordinating actions in this domain.

In line with what is outlined in the above-mentioned documents, this action aims to pursue the following objectives:

- Further develop the concept of “Science for Policy” and improve the cross-cutting integration of scientific evidence and knowledge in public policies.
- Advance and strengthen the European S4P ecosystem across sectors and governance levels.
- Promote the collaboration of networks of relevant actors and foster the identification and exchange of best practices and mutual learning.

Accordingly, the main focus of the funded project should be to carry out the following activities:

1. Nurturing and animating a Science for Policy Community of Practice that, working with other relevant existing networks and communities of practice, will identify and bring together interested S4P actors and stakeholders to enable the identification of common concepts, challenges and approaches, the exchange of information, ways of working and good practices; mutual learning and competence sharing and exchanges, and the promotion of S4P across Europe and beyond. The community of practice must engage and involve S4P stakeholders and actors (scientists, academia, intermediaries and knowledge brokers, science advisors, policymakers/political authorities, civil society organisations, etc.) at all levels of governance. The community of practice should also encompass an international dimension¹⁰².

The community of practice must be facilitated by appropriate digital collaboration tools, including an active online presence. It must remain open to new stakeholders and interested parties all along the process. A dedicated governance body should be set up to coordinate closely with the Commission to ensure good policy alignment and communication. Additionally, and in close collaboration with the community of practice, **events, training and peer learning activities** must be organised to strengthen skills and competences, enable the engagement and collaboration of S4P actors and networks, and to amplify the impact and reach of the community of practice.

2. Providing operational support to the Network of Science for Policy Correspondents, to be set up by the Commission in the second quarter of 2025. The network will bring together officials working on S4P in national R&I policy institutions across Europe with the aim to

¹⁰¹ Council conclusions on strengthening the role and impact of research and innovation in the policymaking process in the Union, 16450/23, <https://data.consilium.europa.eu/doc/document/ST-15118-2023-INIT/en/pdf>.

¹⁰² By involving relevant networks, including the European Science Advisors Forum (ESAF), the European Parliamentary Technology Assessment network (EPTA) and the International Network for Government Science Advice (INGSA) amongst others, as well as intergovernmental organisations (e.g., UN, OECD).

coordinate efforts to mainstream S4P approaches in their respective administrations at all levels of governance and foster mutual learning across countries. The support must include **logistical assistance** such as organising key meetings, agenda development, and facilitation of events employing effective participatory and inclusive methods.

3. **Creating an observatory of the European S4P landscape and its practices** with the collaboration of both the network and the community of practice. The exercise should map the institutional landscape by developing or making use of an appropriate taxonomy that builds on relevant existing initiatives, frameworks and Commission activities (see below). In addition, in the first half of the project, a repository of good **S4P practices and use cases** must be established, including a toolkit and an analysis of success factors and common challenges of operating at the science-policy interface, to be kept up to date throughout the project.

4. **Regularly convening the network, the community of practice, and other interested stakeholders** to discuss how to create the necessary conditions to enable effective engagement between research and policy and to support the production and uptake of scientific evidence, knowledge, and expertise in policymaking. This may focus on specific thematic areas to explore how S4P approaches are implemented in specific sectors (e.g., sustainable food systems, energy transition). Such dialogues are encouraged to also take place in alignment with Council presidencies.

5. **Developing publicly available outputs** (policy briefs, factsheets, resources and instruments for practitioners, etc.) in support of the above activities and **promoting and disseminating** the outcomes and results of the action to target groups through the deployment of a comprehensive communication strategy. These materials and tools should be widely disseminated and made available to the network and the community of practice.

Overall, proposals should implement a multi-actor approach and demonstrate a commitment to disciplinary and geographical diversity and gender-sensitive approaches in all activities. It is expected that the applicants have experience in the field of science for policy, as well as in organisation and facilitation of participatory multi-actor processes and events.

To ensure complementarity, proposals should capitalise and build on relevant Commission S4P initiatives, such as the Mutual Learning Exercise ‘*Bridging the Gap between Science and Policy*’¹⁰³ and the work of the Commission’s Joint Research Centre on S4P competencies and skills¹⁰⁴ and institutional capacity building¹⁰⁵, and other relevant initiatives like the Guiding

¹⁰³ Funded by Horizon Policy Support Facility, <https://projects.research-and-innovation.ec.europa.eu/en/statistics/policy-support-facility/psf-challenge/mutual-learning-exercise-bridging-gap-between-science-and-policy>.

Principles for Knowledge Valorisation¹⁰⁶. With its expertise in institutional, individual and community capacity building for S4P, the JRC may support the consortium in delivering the expected outcomes and assure complementarity of the project with public administration reforms conducted in several Member States under the Technical Support Instrument¹⁰⁷.

The duration of this action should not exceed 3 years.

HORIZON-WIDERA-2025-06-ERA-07: Science comes to town 2027

Call: Enhancing the European R&I system	
Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 6.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 6.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	<p>The conditions are described in General Annex B. The following exceptions apply:</p> <p>The following additional eligibility criteria apply: The participating city that the proposal designates as host for EUCYS 2027 must provide as part of the proposal the commitment from its respective National EUCYS Organiser to run the 2027 competition as part of the project (EUCYS National Organiser must either participate as a beneficiary or associated partner or provide a commitment letter).</p> <p>Applications must be submitted by a consortium including participation, as beneficiaries, of at least three independent legal entities:</p> <ul style="list-style-type: none"> • Each established in a different Member State or Associated Country; and • Two of which are established in a Member State.
<i>Legal and financial set-up of the Grant</i>	<p>The rules are described in General Annex G. The following exceptions apply:</p> <p>Beneficiaries must provide financial support to third parties. The</p>

¹⁰⁶ https://research-and-innovation.ec.europa.eu/research-area/industrial-research-and-innovation/eu-valorisation-policy/knowledge-valorisation-platform/guiding-principles-knowledge-valorisation-and-implementing-codes-practice_en.

¹⁰⁷ See the JRC initiative to build capacity for evidence-informed policymaking in 7 Member States, https://knowledge4policy.ec.europa.eu/evidence-informed-policy-making/topic/reforms-science-policy-7-member-states_en.

<i>Agreements</i>	<p>financial support to third parties can only be provided in the form of prizes.</p> <p>The maximum amount to be awarded to each third party (recipient) is EUR 60 000.</p> <p>Subcontracting is not restricted to a limited part of the action.</p>
-------------------	---

Expected Outcome: One ambition of the European Research Area (ERA) is to increase societal responsibility and trust in science and innovation by engaging stakeholders, local communities and citizens in the design and implementation of R&I policies and by enhancing communication of science to the public. This action provides an opportunity for cities in Member States and Associated Countries to take centre stage in implementing this vision. It invites a small group of cities to design and implement jointly a vibrant and engaging year-long programme of activities under the label “Science comes to town 2027”. It thus allows cities to bring together their citizens and R&I communities to showcase how science improves the wellbeing of people, economy and planet.

The successful proposal will deliver on the following impacts: *“Increased engagement of citizens with research and innovation”, “Increased alignment of research with society’s needs, expectations and values”, and “More people are aware of diverse career opportunities in R&I”.*

Project results are expected to contribute to all of the following expected outcomes:

- Strengthened capacity, networks and involvement of the participating cities in science communication and citizen engagement in science by showcasing the latest R&I developments, their societal impact, and their benefits to citizens and by experimenting with innovative approaches to engage diverse age and social groups in R&I activities and policies at local, regional, and European levels;
- Enhanced discussion and debate on the future of science and R&I policy in Europe, with emphasis on inclusive and participatory approaches, involving all relevant stakeholders (e.g., researchers, research funders, policy-makers, publishers, citizens, civil society organisations, business) within and outside the EU;
- Improved attractiveness of careers in R&I for younger generations (in academia, industry or starting own business) through organising European-wide science competitions, including the European Union Contest for Young Scientists (EUCYS), the European Union Contest for early-career researchers (EU TalentOn), and other initiatives.

Scope: The engagement of citizens, local communities and civil society are at the centre of the European Research Area (ERA), seeking greater societal impact and increased trust in

science, in line with the ERA Policy Agenda (2022-2024) Action 14 – ‘Bring science closer to citizens’¹⁰⁸.

The action supports a small group of cities to co-organise and host a joint 1-year programme “Science comes to town 2027”, with a robust concept and brand, that focuses on connecting citizens and scientists in the participating cities and beyond. Various events and activities should be organised, such as lectures, workshops, exhibitions, competitions or prizes, in the spirit of the European Capital of Culture or the European Green Capital, highlighting the contribution of science to society and the results of R&I projects supported by national/regional/EU funds, including the Horizon Europe programme.

In addition, the programme of activities should include the following two components:

- EUCYS (European Union Contest for Young Scientists) 2027 will be a science competition, awarding prizes and awards, for 14- to 20-year-olds who are first prize winners of national science contests for school science projects. The objective is to highlight student achievements in science and attract young people to careers in innovation, science, research and technology.
- EU TalentOn (European Union Contest for Early Career Researchers) 2027 will be a science competition, awarding prizes and awards, bringing together at least 100 early-career researchers, 21-35 of age, to work on scientific solutions to societal challenges. The objective is to promote entrepreneurship and research careers in academia and industry, and facilitate cross-border and cross-sectoral collaboration.

EUCYS and EU TalentOn will take place in the third quarter of 2027, customarily in September. More information can be found on the contest websites (see also specific organisational aspects in the respective background notes)¹⁰⁹.

Proposals should experiment with novel and engaging formats across the programmed activities. Special emphasis should be placed on exploring and supporting citizen science to promote both science education and multiple forms of public engagement with science.

Applicants are encouraged to establish synergies with the European Researchers’ Night (Europe’s largest science communication and promotion event which brings together over 1.5 million visitors across Europe every year) and with the Researchers at School initiative, funded by Marie Skłodowska-Curie Actions¹¹⁰.

¹⁰⁸ https://commission.europa.eu/system/files/2021-11/ec_rtd_era-policy-agenda-2021.pdf.

¹⁰⁹ https://research-and-innovation.ec.europa.eu/funding/funding-opportunities/eucys_en; https://research-and-innovation.ec.europa.eu/funding/funding-opportunities/eu-talenton_en.

¹¹⁰ <https://marie-skłodowska-curie-actions.ec.europa.eu/actions/msca-citizens>.

Programmed activities should create a link with the preceding¹¹¹ and subsequent edition of “Science comes to town”, fostering cohesion and growth of the concept and brand of the initiative.

The programme should take place in a small group of cities (minimum 3 and maximum 6) located in at least 3 different Member States and/or Associated Countries, with the majority being in Member States. Participating cities do not need to be geographically close. The consortium can comprise different types of legal entities that can represent the host cities and/or join them in designing and implementing the activities. Local partners that provide the link to science, research and innovation should be included.

Applicants should provide commitment letters from the public authorities of each participating city, signed by the highest authorities (mayor or equivalent city governance representative), demonstrating a strong commitment for the activities included in the proposal. The proposal should provide a clear explanation of how the city will contribute to the initiative and outline its specific roles, resources, and support.

The proposal should demonstrate the ability of the consortium to mobilise substantial resources beyond the Union contribution, including monetary or in-kind sponsorships, to support and broaden the programmed activities. Proposers may choose to further increase the impact and added value by incorporating additional events and activities, financed by other resources, by engaging ‘satellite’ cities to reach further communities. The consortium will report on the implementation of the programmed activities and events not covered by the grant, but will not report/declare the related costs to limit the administrative effort.

Proposals should include the overall concept for the programmed activities, including the focus and scope of activities, outreach strategy, and contribution to long-term vision for the cities, specifying clearly:

- a) events (including EUCYS and EU TalentOn) and activities (e.g., overall coordination and communication activities) that will be funded partially or fully by the Union contribution;
- b) activities and events that will be financed by the participating cities, ‘satellite’ cities, sponsorship and other resources (activities not funded by the Union contribution).

Proposals should present a breakdown of all additional resources. Annexes should only be used for commitment letters, not for extra budget related details.

Priority activity for the successful applicants will be to prepare the detailed draft programme of activities. This will be a deliverable, due not later than 3 months before the formal launch of the “Science comes to town 2027”, subject to the approval of the Granting Authority.

The financial support to third parties can only be provided in the form of prizes to the total amount of:

¹¹¹ See “Science comes to town 2026” in WIDERA work programme 2023-2025, https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/wp-call/2023-2024/wp-11-widening-participation-and-strengthening-the-european-research-area_horizon-2023-2024_en.pdf.

EUCYS: €70 000

EU TalentOn: €100 000

The expected duration of the project is between 24 and 30 months.

DRAFT

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANTS TO IDENTIFIED BENEFICIARIES

1. Presidency conferences with a European regional dimension - WIRE 2026

Expected Outcome: Organisation of a two-day conference (WIRE) in 2026, under one of the Presidencies of the Council of the EU. WIRE - The Week of Innovative Regions in Europe is the main European policy forum for innovation and regional development. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

Expected Impact: By bringing together diverse stakeholders, including education and research organizations, start-ups, clusters, and policy makers, the conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. The collaborative discussions are expected to advance regional development and improve the overall effectiveness of innovation across users and society at large.

Scope: The event will focus on innovation and regional development, exploring trends, best practices, and future visions. It will serve as a key European policy forum for stakeholders involved in the research and innovation ecosystem.

This grant will be awarded without a call for proposals according to Article 198(e) of the Financial Regulation and Article 24(3)(b) of the Horizon Europe Regulation.

Legal entities:

Responsible government department or ministry, or a government-owned legal entity of the incumbent Presidency of the Council, or a legal entity designated by the responsible government department.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 198(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2025

Indicative budget: EUR 0.25 million from the 2025 budget

PUBLIC PROCUREMENT

1. Development of new functionalities and maintenance of the one-stop-shop on tackling R&I foreign interference

The need for a one-stop-shop to tackle R&I foreign interference, both direct and through proxies, stems from several factors. Various sets of guidelines and tools currently exist on this topic, developed by different Member States and EEA countries, university associations, Research and Technology Organisations, and universities. This variety of supporting documents makes it difficult and time-consuming for end-users, such as researchers, universities, and research performing organisations, to navigate through all available resources. This situation may also lead to a duplication of efforts, as not everyone working on this topic is aware of what has already been produced. The lack of a clear overview of existing materials increases the risk of conflicting information.

The one-stop shop is a publicly accessible inventory of available reports, tools, and guidelines presented in a user-friendly manner¹¹². The user will express its needs, and the platform will provide an overview of all the existing guidance known to the platform. Also, it will make it easier for experts working on this topic to identify gaps in information and focus on them, hopefully avoiding duplication of efforts.

The Council Recommendation on Enhancing Research Security, adopted on 23 May 2024, recommends that the Commission develop and maintain a Union one-stop-shop platform on tackling research and innovation foreign interference¹¹³. The platform aims to consolidate all pertinent data, tools, reports, and other resources developed at Union, national, regional, organisational level, or outside the Union, while ensuring that they are presented in a manner that is both user-friendly, accessible and secure. Member States are recommended to proactively contribute to the EU's one-stop-shop platform on tackling R&I foreign interference by sharing tools and resources developed through public funding with the aim to facilitate the cross-border uptake of these tools and resources and deliver them in a user-friendly, and accessible and secure manner.

The purpose of this procurement action is to maintain and further develop the one-stop-shop platform. This includes developing new features and functionalities, creating content, and enhancing the platform's stability, performance, and security. Moreover, as the one-stop-shop will be using an open-source Large Language Model (LLM) to provide dynamic answers to a large variety of questions, the platform should be continuously monitored and modernised following the latest LLM developments, with sufficient focus on regulatory compliance, security, reliability of answers and cost-cutting measures.

¹¹² The platform will be made available by end of 2024.

¹¹³ <https://www.consilium.europa.eu/en/press/press-releases/2024/05/23/council-adopts-a-recommendation-to-enhance-research-security/>.

The procurement action supports the ERA Policy Agenda Action 6 – Deepening the ERA through protecting academic freedom in Europe¹¹⁴.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2025

Indicative budget: EUR 0.50 million from the 2025 budget

2. Implementation of ERA monitoring

The Council Recommendation on a Pact for Research and Innovation in Europe (Pact for R&I)¹¹⁵ has requested the Commission to set up a new ERA Monitoring Mechanism to provide European, national and regional policy-makers, R&I practitioners and all interested public with solid, European Union-wide analytical tools to help monitor and evaluate progress towards the ERA objectives (as set out on in the Pact for R&I) and assess the implementation of the ERA Policy Agenda Actions¹¹⁶. In that sense, the monitoring mechanism shall ensure a proper basis for evidence-informed policy making in the ERA by providing evidence and analysis. In addition, it shall underpin mutual learning and enhanced bilateral and multilateral dialogues between the Commission and the EU Member States. The action supports the ERA Policy Agenda (2022-2024) Action 19 – Establish an efficient and effective ERA monitoring mechanism.

The purpose of this procurement is, first, to support the implementation of the ERA monitoring mechanism, encompassing preparation of an EU-level Report on the state of play of the implementation of the ERA Policy Agenda every 18 months; regular reports on the progress in the implementation of the ERA of each Member State as well as, if appropriate, of countries associated to Horizon Europe; and, an ERA Scoreboard to assess the overall consolidation and collective progress of ERA priorities at EU and national levels.

Second, the procurement supports the development and maintenance of the [ERA Policy Platform](#) that has as its aim a consistent, robust and quality tested national reporting system. The Pact for R&I defines that the platform should inform on (i) the implementation of the ERA Policy Agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission, the Member States, and countries associated to Horizon Europe should share information through the online ERA Policy Platform on their current and planned policies and programmes that contribute to implementing the ERA Policy Agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a “hub” for sharing information around the new ERA and ease exchange between all actors. Moreover, the Platform provides for easy access

¹¹⁴ https://commission.europa.eu/system/files/2021-11/ec_rtd_era-policy-agenda-2021.pdf.

¹¹⁵ <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32021H2122>.

¹¹⁶ https://commission.europa.eu/system/files/2021-11/ec_rtd_era-policy-agenda-2021.pdf.

to and information on the priorities areas of the Pact for R&I, the ERA Policy Agenda, including its list of joint actions and their state of implementation, and on Member States and on countries associated to Horizon Europe.

The IT- and communication-related tasks will be implemented through several specific procurement contracts under a framework contract and will cover mainly the further development and maintenance the ERA Policy Platform (including improving the user experience, enhancing the visual appearance of the Platform, adding and efficiently arranging new content, and ensuring the Platform's security and data protection standards).

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2-Q4 2025

Indicative budget: EUR 1.25 million from the 2025 budget

3. Administrative management of the Human Resources Strategy for Researchers (HRS4R)

The Human Resources Strategy for Researchers (HRS4R)¹¹⁷ is the implementation mechanism of the European Charter for Researchers¹¹⁸, and is key to the career development of researchers as well as to generating, transferring, sharing and disseminating knowledge about Human Resources best practices. HRS4R supports the ERA Policy Agenda (2022-2024) Action 4 by contributing to the development of an attractive, open, and sustainable European labour market for researchers, enhancing the commitment of research organisations' leadership towards human resources as well as improving the researcher-employer relationship.

The HRS4R is a structured and monitored auditing mechanism centred on a continuous assessment in three-year cycles for recognising with the "HR Excellence in Research Award" the institutions that make progress in aligning their human resources policies to the 40 principles of the Charter for Researchers, based on a customised action plan/HR strategy.

To date, over 740 institutions from 39 EU and associated countries have obtained the award and every year several new institutions enter the process.

The contractor will be responsible, in collaboration with the Commission, the applicant institutions and the assessors, for organising the administrative management of the HR Excellence in Research process and for the applications' continuous assessment, including the organisation of desk-based assessments and site visits, the selection of assessors, the administrative validation of assessors' reports and institutions' submissions, as well as

¹¹⁷ HR Excellence in Research Award, <https://euraxess.ec.europa.eu/jobs/hrs4r>.

¹¹⁸ Charter for Researchers, annexed to the Council Recommendation of 18 December 2023 on a European framework to attract and retain research, innovation and entrepreneurial talents in Europe, <https://eur-lex.europa.eu/eli/C/2023/1640/oj>.

managing the communication with applicants, promoting the award and providing feedback to the Commission for policy purposes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2025

Indicative budget: EUR 1.50 million from the 2025 budget

4. Implementation of the Horizon Policy Support Facility - Framework contract 2025-2029

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon Europe in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. The PSF has demonstrated that it serves as an enabler for concrete policy changes.

A new framework service contract will be concluded for a duration of 4 years, covering the operation of the PSF from 2025 to 2029 with an estimated budget ceiling of EUR 10 million over the whole duration of the framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2025

IMPORTANT NOTICE:

This draft has not been adopted or endorsed by the European Commission. Any views expressed are the views of the Commission services and may not in any circumstances be regarded as stating an official position of the Commission.

This draft is made public before the adoption of the work programme to provide potential participants with the currently expected main lines of this work programme. Only the adopted work programme will have legal value.

The adoption of the work programme will be announced on the Horizon Europe website and on the Funding and Tenders Portal.

Information and topic descriptions indicated in this draft may not appear in the final work programme; and likewise, new elements may be introduced at a later stage. Any information disclosed by any other party shall not be construed as having been endorsed by or affiliated to the Commission.

The Commission expressly disclaims liability for any future changes of the content of this document.

EU Missions.....	24
Adaptation to Climate Change: Supporting the implementation of the EU Mission Adaptation to Climate Change.....	24
HORIZON-MISS-2025-01-CLIMA-01: Supporting regions and local authorities in assessing climate risks.....	26
HORIZON-MISS-2025-01-CLIMA-02: Supporting regional and local authorities in developing their Action Plans towards climate resilience	31

HORIZON-MISS-2025-01-CLIMA-03: Demonstrating solutions to help hotspots in coastal regions to adapt to climate change	36
HORIZON-MISS-2025-01-CLIMA-04: Testing and demonstrating innovative solutions to improve resilience to extreme heat, including addressing health impacts	39
HORIZON-MISS-2025-01-CLIMA-05: Better understanding incentives for private sector financing of adaptation solutions	43
HORIZON-MISS-2025-01-CLIMA-06: Pre-commercial procurement of breakthrough solutions for climate proofing of public buildings	46
Adaptation to Climate Change: Other Actions	50
1. Sustaining the Mission Implementation Platform for the Adaptation to Climate Change Mission	50
2. Studies, conferences, events and outreach activities	51
3. Support regional and local authorities in their efforts to conduct climate risks assessments.....	51
Cancer: Supporting the implementation of the Cancer Mission	53
HORIZON-MISS-2025-02-CANCER-01: Sustained collaboration of national and regional cancer funders to support the Cancer Mission through translational research.....	55
HORIZON-MISS-2025-02-CANCER-02: Understanding the effects of environmental exposure on the risk of paediatric, adolescent and young adult cancers.....	57
HORIZON-MISS-2025-02-CANCER-03: Innovative surgery as the cornerstone of affordable multi-modal therapeutic interventions benefitting cancer patients with locally advanced or metastatic disease.....	60
HORIZON-MISS-2025-02-CANCER-04: Investigator-initiated multinational early-stage innovative clinical trials for paediatric cancer	62
HORIZON-MISS-2025-02-CANCER-05: Pragmatic clinical trials to enhance the quality of life of older cancer patients (65 years and older) through nutrition	66
HORIZON-MISS-2025-02-CANCER-06: Support to the network of National Cancer Mission Hubs (NCMHs)	68
Cancer: Other Actions	71
1. Continuation of bus roadshow with focus on cancer prevention	71
2. Develop a monitoring system for all Mission objectives – technical assistance	71
Supporting the implementation of the Restore our Ocean and Waters Mission.....	73
HORIZON-MISS-2025-03-OCEAN-01: Blue Parks - Towards a coherent European network of strictly protected areas for restoring healthy and productive marine ecosystems	75
HORIZON-MISS-2025-03-OCEAN-02: A toolbox for public authorities to address marine plastics and litter from river-to-ocean	78
HORIZON-MISS-2025-03-OCEAN-03: Digital technologies and energy transition in fisheries and/or aquaculture	81
HORIZON-MISS-2025-03-OCEAN-04: Restoring Ocean and Waters in Regions	85

HORIZON-MISS-2025-03-OCEAN-05: Restoring Ocean and Waters in waterfront Cities and their Ports.....	89
HORIZON-MISS-2025-03-OCEAN-06: Restoring Ocean and Waters on Islands.....	93
HORIZON-MISS-2025-03-OCEAN-07: Mission Lighthouses coordination and support activities	97
HORIZON-MISS-2025-03-OCEAN-08: EU Digital Twin Ocean: Contribution to the EU DTO core infrastructure through applications for sustainable ocean management	101
Restore our Ocean and Waters by 2030: Other Actions	106
1. Presidency event - Mission Ocean and Waters conference.....	106
2. Services to Communities to support the achievement of the objectives of the Mission Ocean and Waters.....	107
3. Ocean Observation Platform	108
4. Study to provide evidence for EU actions on wetlands	109
5. Communication actions and events for Mission Ocean and Waters	110
100 Climate-Neutral and Smart Cities by 2030.....	111
HORIZON-MISS-2025-04-CIT-01: Coupling circularity and climate mitigation in industrial sites and their cities and regions.....	113
HORIZON-MISS-2025-04-CIT-02: Innovative, AI-based solutions for urban planning and management	117
HORIZON-MISS-2026-04-PCP-CIT-01: Boosting the transformation towards climate-neutral cities, the net-zero economy and open strategic autonomy through Pre-Commercial Procurement (PCP).....	123
100 Climate-Neutral and Smart Cities by 2030: Other Actions	127
1. Specific Grant Agreement to the FPA to reinforce the operations of the Climate-Neutral and Smart Cities Mission Platform	127
2. Financial advisory services and technical assistance to Mission cities.....	130
A Soil Deal for Europe: Research and Innovation and other actions to support the implementation of Mission 'A Soil Deal for Europe'	132
HORIZON-MISS-2025-05-SOIL-01: Living Labs for soil remediation and green redevelopment of brownfields.....	135
HORIZON-MISS-2025-05-SOIL-02: Social, economic and cultural drivers, and costs of land degradation	139
HORIZON-MISS-2025-05-SOIL-03: Increasing environmental resilience through a better knowledge and management of the soil-water nexus.....	142
HORIZON-MISS-2025-05-SOIL-04: Developing transfer functions for the Soil Monitoring Law	145
HORIZON-MISS-2025-05-SOIL-05: EU global footprint on soils	147
HORIZON-MISS-2025-05-SOIL-06: Quantifying the impact of farming practices on soil health in arable lands.....	149
HORIZON-MISS-2025-05-SOIL-07: Improved land suitability for soil health and sustainable biomass production.....	152

HORIZON-MISS-2025-05-SOIL-08: Support to the operation and further development of soil-health science-policy interfaces and national soil-health hubs	155
HORIZON-MISS-2025-05-SOIL-09: Citizen engagement for sustainable land management through local and regional authorities	158
HORIZON-MISS-2025-05-SOIL-10: Network on carbon farming and emissions reductions for agricultural and forest lands	160
HORIZON-MISS-2025-05-SOIL-11: Soil Salinity in Europe: Drivers, indicators, current levels and temporal changes.....	164
HORIZON-MISS-2025-05-SOIL-01-two-stage: Living labs to enhance soil health in Continental, Boreal and Alpine biogeographical regions	166
HORIZON-MISS-2025-05-SOIL-02-two-stage: Broadening the living labs approach for soil health in Africa and Latin America and the Caribbean (LAC)	171
A Soil Deal for Europe: Other Actions.....	175
1. Mission Implementation platform	175
2. Specific Grant Agreement for a Living Lab Support Structure	176
EU Missions' Joint Calls	180
HORIZON-MISS-2025-06-CIT-CANCER-01: Increasing walking and cycling: to reap health benefits, emission reductions and integrate active mobility and micro-mobility devices, with smart technologies and infrastructure	180
EU Missions' Cross-cutting activities	187
HORIZON-MISS-2026-07-CROSS-01: Strengthening skills and capacity for the deployment of EU Missions.....	188
HORIZON-MISS-2026-07-CROSS-02: Understanding and overcoming barriers to the scale-up of innovations supporting EU Missions.....	189
HORIZON-MISS-2026-07-CROSS-03: Advancing lead markets and proof-of-concept for deep tech solutions contributing to EU Missions.....	190
Other Actions	193
Public procurements	193
1. Strengthen EU Missions as a policy instrument.....	193
Indirectly managed actions	194
1. Strengthen evidence-informed policy making for mission-oriented innovation.....	194
Other budget implementation instruments.....	195
1. Commission expert groups: Mission Boards	195
2. Use of individual experts: Mission Board Chairs	196
Budget	198

DRAFT

Introduction

The mission-driven approach is a new trend in R&I policy making and was one of the key novelties brought by Horizon Europe Regulation¹ to address global challenges facing our society.

Horizon Europe identified five Mission Areas where challenges could be effectively addressed in a mission-based approach. The following five EU Missions were formally launched through a Commission Communication in September 2021², based on reports from dedicated Mission Boards that assessed the maturity of technological and social innovation in these areas:

- Adaptation to Climate Change: support at least 150 European regions, local authorities and communities to become climate resilient by 2030;
- Cancer: improving the lives of more than 3 million people by 2030 through prevention, cure and for those affected by cancer including their families, to live longer and better;
- 100 Climate-Neutral and Smart cities by 2030;
